REPORT

OF THE

ROYAL COMMISSION,

APPOINTED ON THE 21<sup>ST</sup> MAY, 1896,

To make a diligent and full inquiry touching all questions in any way raised in the Legislative Assembly of the Colony of New South Wales, whether specifically or in course of debate, as to any improper conduct in connection with the Contracts, past and present, of Messrs. Carter, Gummow, and Company, John Carter, D. G. Snodgrass, George Maddison, Peter Ewing, F. M. Gummow, George Forrest, and James Gillan with the Department of Public Works, and touching the truth of any charges so, as aforesaid, made in connection with the performance or variation (if any) of such Contracts, or the conduct of any Public Officer, or of the said Contractors, their Agents, or Workmen, in relation thereto; and to make the fullest investigation into any charge or matter in relation to the said persons and Contracts;

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,  
Defender of the Faith, and so forth,—

To our trusty and well-beloved—

CHARLES EDWARD ROBERTSON MURRAY, Esquire, one of the District Court Judges for the Metropolitan, Suburban, and Hunter District of Our Colony of New South Wales,—

Greeting:—

Know you, That We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorise and appoint you, to make a diligent and full inquiry touching all questions which have been in any way raised in Our Legislative Assembly of Our said Colony of New South Wales, whether specifically or in course of debate, as to any improper conduct in connection with the Contracts, past and present, of Messrs. Carter, Gummow, and Company, John Carter, D. G. Snodgrass, George Maddison, Peter Ewing, F. M. Gummow, George Forrest, W. J. Snodgrass, and James Gillan with the Department of Public Works, and touching the truth of any charges which have been so as aforesaid made in connection with the performance or variation (if any) of such contracts, or the conduct of any Public Officer, or of the said Contractors, their Agents, or Workmen, in relation thereto: We also authorise you to make the fullest investigation into any charge or matter in relation to the said persons and Contracts which may be brought before you during the course of your inquiry: And we do, by these presents, grant to you full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited; to visit and inspect any works executed or in course of execution under the said Contracts, and to inquire of the premises by all lawful ways and means: And We do give you power, at your discretion, to procure such assistance as you may deem necessary for enabling you duly to execute this Our Commission: And Our further will and pleasure is that you do, within two months after the date of this Our Commission, certify to Us, in the office of Our Chief Secretary, under your hand and seal, what you shall find touching the premises: And We hereby command all Government Officers and other persons whomsoever within Our said Colony, that they be assistant to you in the execution of these presents: And We do hereby declare this Our Commission to be a Commission for all purposes of the Act 44 Victoria No. 1, intituled, "*An Act to regulate the taking of evidence by Commissioners under the Great Seal.*"

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this twenty-first day of May, in the year of Our Lord one thousand eight hundred and ninety-six, and in the fifty-ninth year of Our Reign.

(L.S.)

HAMPDEN.

(L.S.)

By His Excellency's Command,  
JAMES N. BRUNKER.

For the Colonial Secretary and Registrar of Records,

(L.S.)

CRITCHETT WALKER,  
Principal Under Secretary.

## EXTENSIONS OF COMMISSION.

ROYAL COMMISSION to inquire into charges in connection with the contracts of Messrs. Carter, Gummow, & Co., John Carter, D. G. Snodgrass, George Maddison, Peter Ewing, F. M. Gummow, George Forrest, W. J. Snodgrass, and James Gillan with the Department of Public Works.

WHEREAS it is necessary to extend the time within which the Commissioner is to make his report in the above matter: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the said Commissioner is to make such report for the period of one month—to take effect from the 21st instant.

Given under my hand, at Government House, this 20th day of July, 1896,

HAMPDEN.

By His Excellency's Command,  
JAMES N. BRUNKER.

---

ROYAL COMMISSION to inquire into certain charges in connection with the contracts between Messieurs Carter, Gummow, & Co., John Carter, D. G. Snodgrass, George Maddison, Peter Ewing, F. M. Gummow, George Forrest, W. J. Snodgrass, and James Gillan, and the Department of Public Works.

WHEREAS the time appointed for the return of the Commission in the above matter was, by an instrument dated the 20th day of July last, extended for a period of one month: And whereas it is necessary to extend the same still further: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the Commissioner is to make his return to and for a further period of two months beyond the time in and by the aforesaid instrument appointed for the purpose—to take effect from the 21st instant.

Given under my hand, at Government House, Sydney, this 11th day of August, 1896,

HAMPDEN.

By His Excellency's Command,  
JAMES N. BRUNKER.

## LETTERS OF INSTRUCTION.

Sir,

The Treasury, New South Wales, Sydney, 19 May, 1896.

I have the honor to inform you that His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of your appointment as Royal Commissioner to inquire into the charges made against certain officials in the Department of Public Works with reference to the contracts between that department and Messrs. Carter, Gummow, & Co., and with power to investigate, to the fullest extent, all matters that may arise during the course of your inquiry with reference to such contracts, and the conduct of the contractors or their agents and workmen, and the conduct of any public officer in connection with the same.

His Honor Mr. District Court Judge Murray, Sydney.

I have, &amp;c.,

G. H. REID.

Sir,

Chief Secretary's Office, Sydney, 21 May, 1896.

I am directed by the Chief Secretary to forward to you, enclosed herewith, a Commission, issued by His Excellency the Governor, with the advice of the Executive Council, under the Great Seal of the Colony, appointing you to be a Royal Commissioner to make a diligent and full inquiry touching all questions which have been in any way raised in the Legislative Assembly, whether specifically or in course of debate, as to any improper conduct in connection with the contracts, past and present, of Messieurs Carter, Gummow, & Co., John Carter, D. G. Snodgrass, George Maddison, Peter Ewing, F. M. Gummow, George Forrest, W. J. Snodgrass, and James Gillan with the Department of Public Works, and touching the truth of any charges which have been so as aforesaid made in connection with the performance or variation (if any) of such contracts, or the conduct of any public officer, or of the said contractors, their agents, or workmen, in relation thereto; and authorising you further to make the fullest investigation into any charge or matter in relation to the said persons and contracts which may be brought before you during the course of your inquiry.

2. I am desired to add that you will be provided with the services of a shorthand writer from the Parliamentary Hansard Staff.

I have, &amp;c.,

CRITCHETT WALKER,

Principal Under Secretary.

Charles Edward Robertson Murray, Esq., District Court Judge.

Sir,

The Treasury, New South Wales, Sydney, 23 July, 1896.

I am directed by the Honorable the Premier to transmit to you, enclosed herewith, an instrument under the hand of His Excellency the Governor, extending the Public Works Inquiry Commission for a period of one month, to take effect from the 21st instant.

I have, &amp;c.,

F. KIRKPATRICK,

Under Secretary for Finance and Trade.

His Honor the Public Works Inquiry Commissioner, &amp;c.

Sir,

Chief Secretary's Office, Sydney, 13 August, 1896.

With reference to your letter of the 10th instant, addressed to the Prime Minister, and by him transmitted to this office, I am directed by the Chief Secretary to forward herewith an instrument, under the hand of His Excellency the Governor, with the advice of the Executive Council, extending the time within which the Report of the Public Works Inquiry Commission is to be made for a further period of two months beyond the time appointed for the purpose—to take effect from the 21st instant.

I have, &amp;c.,

CRITCHETT WALKER,

Principal Under Secretary.

Charles Edward Robertson Murray, Esq., District Court Judge.

Sir,

Chief Secretary's Office, Sydney, 21 October, 1896.

With reference to your letter of the 7th instant, addressed to the Premier, and by him transmitted to this office, I am directed by the Chief Secretary to transmit herewith an instrument, under the hand of His Excellency the Governor, with the advice of the Executive Council, extending the time within which the Report of the Public Works Inquiry Commission is to be made for a further period of one month beyond the time appointed for the purpose—to take effect from the present date.

I have, &amp;c.,

CRITCHETT WALKER,

Principal Under Secretary.

Charles Edward Robertson Murray, Esq., District Court Judge.

## PUBLIC WORKS INQUIRY COMMISSION.

---

REPORT.

---

To His Excellency the Right Honorable HENRY ROBERT, VISCOUNT HAMPDEN, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

Your Commissioner received, on the 21st of May last, your Excellency's Commission directing him to make a diligent and full inquiry touching all questions which have been in any way raised in the Legislative Assembly of the Colony, whether specifically or in course of debate, as to any improper conduct in connection with the contracts, past and present, of Messrs. Carter, Gummow, & Company, John Carter, David Graham Snodgrass, George Maddison, Peter Ewing, Frank Moorhouse Gummow, George Forrest, and James Gillan, with the Department of Public Works, and touching the truth of any charges so as aforesaid made in connection with the performance or variation (if any) of such contracts, or the conduct of any public officer, or of the said contractors, their agents, or workmen, in relation thereto; also to make the fullest investigation into any charge or matter in relation to the said persons and contracts. Your Commissioner, having executed, to the best of his ability, your Excellency's Commission, has now the honor to present his Report.

Your Commissioner has found it necessary to hold no less than sixty-six sittings, the whole of which have, with two exceptions, been devoted mainly to the examination of 114 witnesses, the minutes of whose evidence will be found to cover 725 pages. A necessarily careful review of this testimony has to some extent delayed the completion of the duty entrusted to your Commissioner.

The terms of your Excellency's Commission having empowered your Commissioner to make inquiry touching all questions "in any way raised" in the Legislative Assembly, "whether specifically or in course of debate," your Commissioner perused the whole of the *Hansard* reports of the debates which could be discovered to contain references to the contracts of Messrs. Carter, Gummow, & Company with the Department of Public Works. The speeches which appeared exclusively to contain allegations affecting the Department of Public Works in relation to the aforesaid contracts were those delivered by Mr. Varney Parkes on the 26th of September, 1895, and the 12th of May, 1896.

Before beginning the inquiry your Commissioner requested Mr. Parkes, for the convenience of investigation, to submit to the Commission, tabulated under the headings of the several contracts to which he had referred, a statement of the allegations he intended to rely upon, it being understood that he would be at liberty to prefer further charges in the same relation at any time during the progress of the inquiry. Mr. Parkes, on the 27th May, handed to the Commission a list of charges. It appears in the appended minutes of proceedings that, on various subsequent dates, Mr. Parkes added charges to this list, and that on the 4th of September he withdrew the entire list then before the Commission, and substituted therefor an amended list, from which some of the preceding charges were omitted, and in which others were amended in more or less important particulars. Further amendments were suggested by Mr. Parkes in the course of the lengthy address he delivered on the presumed termination of the evidence.

The

The charges, in the amended form in which they were put by Mr. Parkes on the 4th of September, appertaining to each contract, are placed in this Report at the head of that portion which deals with those particular allegations; and, where practicable, each charge is supplemented by Mr. Parkes's remarks made in Parliament on the same subject matter, extracted from *Hansard*.

Mr. Parkes does not appear, however, to have referred in his speeches to the matters contained in certain of the allegations which he afterwards laid before the Commission, nor does his final statement of those allegations include some of the matters to which he made specific reference in his speeches, which will be found recorded *in extenso* on the minutes of the proceedings of the Commission immediately preceding the record of Mr. Parkes's address.

An endeavour was made by Mr. Parkes to tender evidence relating to the various contracts in a given order; but this method of procedure was unfortunately found to be impracticable by reason of the necessity for consulting the convenience of some witnesses, and of calling others as soon as they could be summoned.

Although your Commissioner thought fit to request Mr. Parkes to specify the improper acts of which it appeared to him Mr. Hickson had been guilty, and although Mr. Parkes, in compliance with this request, tabulated the charges, your Commissioner has still kept in view throughout the whole course of the inquiry the duty imposed by the Commission of making a full investigation unrestricted by any expression of opinion on the part of Mr. Parkes, and therefore the necessity for independent examination of any matters that might appear from the evidence, or might in any way be suggested to your Commissioner, as calling for inquiry. Mr. Parkes, however, ably assisted by Mr. Christie in matters of account and of a general business nature, and by Messrs. M'Creddie and Thompson on questions of construction and engineering, has so completely exhausted all the fair possibilities of the subject matter as to leave no necessity for branching off into any lines of inquiry not coming under one of the various heads into which he has divided his charges; nor, when Mr. Parkes, seeing the great length to which the inquiry would extend, unless he confined himself, as he expressed his intention of doing during the course of the inquiry, to some particular contracts to which the persons named in the Commission were parties, expressed his intention of so limiting the investigation on his part, did your Commissioner deem it his duty to proceed into a further examination of any other of the contracts; being well aware that Mr. Parkes, in his zeal for the discovery of the truth, and with the assistance at his hand, would not have omitted to bring before the Commission any important piece of evidence appearing in or suggested by the history of any other contract.

Your Commissioner may also be allowed to explain that, though the Commission is general, in as far as the mention of the name of any officer of the Department of Public Works is concerned, still, from the tenor of the whole of the speeches made by Mr. Parkes in Parliament which led up to the granting of the Commission, it is abundantly evident that Mr. Robert R. P. Hickson, now Under-Secretary in that department, is the person into whose conduct it is the duty of your Commissioner primarily to inquire. It has been on that assumption that the whole course of the inquiry has been conducted; and, while your Commissioner kept in mind the duty of examining into, if necessary, the conduct of any other officer, still the attention of the Commission was directed most particularly to Mr. Hickson in that relation. And in the course of this Report your Commissioner has, in the same manner as has Mr. Parkes in the framing of his charges, directed his attention specially to this aspect of the question; the Inquiry having in effect resolved itself into an investigation into the conduct of Mr. Hickson in his dealings with and control of the contracts held by Carter & Co., and Carter, Gummow, & Co.

In reporting *seriatim* on the charges tabulated—as they appeared when Mr. Parkes began his address—your Commissioner cannot avoid dealing with some matters at great length. Considering the amount of evidence taken—21860 questions having been asked and answered—it is impossible to be brief. At the same time, your Commissioner, while deeming it his duty to rather fully explain some matters, either of public interest or having a very important bearing on the questions to be decided, has been compelled to omit all mention of, or to touch very lightly on, many subjects dealt with in the course of the inquiry. There are two of these to which a brief allusion may be made here. One is the history of Mr. Hickson's official actions in South Australia.

This

This subject was introduced thus: Mr. Parkes, in the course of his evidence, spoke, in justification of his own action in Parliament, of some information which he had received casting a reflection upon Mr. Hickson's conduct when in the service of the South Australian Government. This led to cross-examination of Mr. Parkes on the subject, and, finally, to the putting in as evidence, so as to have them before the Commission, and so before the public, the whole of the material facts that were to be found in print. They appear in the Appendix No. 63, page 118, and consist of Mr. Hickson's evidence given in the hearing of an arbitration matter between Wells Brothers, contractors, and the Government of South Australia (a case in which the award was absolutely in favour of the defendants), part of Mr. Thomas Higginbotham's evidence, and his Report on Harbour Works. Mr. Hickson was examined on these matters—page 561 of the evidence. It is quite outside of the province of your Commissioner to attempt to determine the question whether Mr. Hickson acted properly or improperly in his dealings with Mr. Cheesewright in the matter of the plans for the Rivoli Bay and Kingston jetties; it would be impossible to do so satisfactorily at this time and place. Mr. Higginbotham's report appears to exonerate Mr. Hickson of anything worse than imprudence. But the question is really not material. In dealing with the evidence adduced on this inquiry your Commissioner has in no way entertained the question of character. If there had been sufficient proof to raise a strong suspicion against Mr. Hickson, and if, in answer to that, there had been set up the improbability that so honorable a man could be guilty of such conduct, then it would have been quite legitimate to reply that his former history went to contradict the assertion of high integrity. This is not so here. It was—after Mr. Parkes's unnecessary assertion, made to justify himself—at the wish of both Mr. Parkes and Mr. Hickson that the evidence was put in. It is satisfactory to Mr. Hickson that the whole matter, as far as is practicable, should be cleared up: the verdict of those who read the evidence will probably be favourable to him.

Another matter that was quite outside the scope of the inquiry was Mr. Parkes' own *bona fides* in taking the action which he pursued in Parliament. Not being a witness of any facts that go to prove his charges, his credibility was not in issue. Therefore it was that your Commissioner at first disallowed cross-examination on that subject, as being immaterial and causing waste of time. Mr. Parkes himself raised no objection; he rather invited the inquiry. Your Commissioner, on reflection, decided to allow it; seeing that, though not material in relation to the questions to be dealt with by the Commission, it may become so in connection with another matter which your Excellency's advisers may think fit to consider. All that your Commissioner, having had a peculiarly good opportunity for observation, will venture to say upon this point is that, through the whole course of the inquiry, Mr. Parkes, in his words and by his manner, expressed, and appeared to be actuated by, a strong belief in the substantial truth of his allegations.

Your Commissioner will now proceed to deal with the charges *seriatim*, in the order—though it is unfortunately not chronological—in which they were arranged by Mr. Parkes—the numerical order borne by the contracts, not according to the respective dates at which they were let, but according to the sequence in which the several plans belonging to them were drawn. Before doing so, however, it will be convenient, for the purpose of reference, to give the three lists which follow, the first explaining shortly the offices held by Mr. Hickson and Mr. Darley; the second showing the various combinations of persons named in the Commission, as they joined together in carrying out contracts in New South Wales; and the third being an interpretation of initials appearing in minutes cited.

### CONTRACT 69 (MARRICKVILLE).

1. *With allowing Messrs. Carter, Gummow, & Co. to manipulate the department's schedule for Sewerage Contract 69 so as to give the contractors an advantage over the Crown in their contract to build a sewer in Marrickville, by which the contractors were paid upon the extravagant items of charge, and were conceded those items upon which they had a losing price.*
3. *With paying to the contractors large sums of money which they (the departmental officers) were not compelled to pay under Carter, Gummow, & Co.'s contract with the Crown.*

Let me show hon. members how the case stands as regards this contract, No. 69. The tenders sent in were—Carter, Gummow, & Co., £45,207; John Ahearn, £47,061; Kerle and Kerle, £52,735; H. McKenzie and Sons, £53,505; J. F. Carson, £57,239; Dean & Sons, £58,165; and so on. The completed work was much less than in the computed schedules, but Carter, & Co. were paid £52,400 instead of £45,000, or £7,400 over. They were paid, for instance, upon schedules numbered 1, 8, 12, 16, 19, 22, and so on. Supposing other contractors had had the same schedules passed for them to do the work under, there would have been a saving in the case of Ahearn, of £11,600; in the case of Kerle, of £5,000; in the case of Carson, of £10,052; in the case of McKenzie, of £8,700; in the case of Holloway Bros., of £5,700, in the case of Dean and Sons, of £4,520. Will hon. members dare to say that there was not some collusion between some officers of the department and Carter & Co., in order that they might fix their schedules? Yet the Minister paid this money away without taking the trouble to look into the schedules at all. He does not take the trouble to check the expenditure in any way. Let me show how these quantities are made out

out. I will take several cases to show hon. members how cleverly things are manipulated. Carter & Co.'s tender for excavations came to £15,500, John Ahearn's to £14,500, Dean & Co.'s to £17,000, and McKenzie's to £17,000: Carter & Co. undertook to do in open trenching 22,815 yards at 9d.; 9,780 yards at 27s. 6d., being blasting work; 1,465 yards, at 4s.; 170 feet of manual work, at 40s.; and 345 yards of blasting work, at 5s. Their schedules were so cleverly manipulated that the 9d., which was a losing rate to them, was reduced by 4,000 yards; and the blasting rate at 27s. 6d., double that of any other contractor, was increased from 9,780 yards to 13,294 yards. At the time this contract was going on there were three other members of the firm, who have since left it, and they tell me there was nothing like the amount of supposed excavation carried out; it would have to be exactly doubled to make up the increase. Again, if they had made the supposed excavation, they would have had to pay double the amount which they paid for concrete filling, which does not occur in the filling. The rates were so fixed that they could rob the state of money; and an officer who has been retired from the department, Mr. Bagge, in one minute, said that Carter, Gummow, & Co. were so fixing their schedules as to obtain an undoubted advantage over the Government. All through, this officer, Mr. Bagge, seems to have been making an effort against his superior officers, in order to secure justice to the country—

Mr. CRICK: By whom was Mr. Bagge retired?

Mr. PARKES: By the Minister, I think, upon the recommendation of the present under-secretary of the department. Then take the shafts. Carter, Gummow, & Co. put in so many shafts at a losing price. The sewers would not be any the worse for having the full number of shafts put in; but the number was reduced by seven, and then instead of being paid for blasting work at 4s. and 5s. they were paid for it at the rate of 40s. They substituted the manual labour rate for the blasting rate. It was clearly proved in the case of *Regina versus McLeod* that neither the Secretary for Public Works nor his officer had any power to in any way increase the cost of contracts by substituting a more costly material, or by adding to the price of any of the items. There is no doubt in my mind that by paying these moneys the Secretary for Public Works has illegally given away public funds. I now come to the item of "subducts." They are necessary in the case of every sewer for drainage purposes. They were estimated by the public officers at £600. One contractor contracts at £954, another at £668, another at £879, another at £1,366; another at £1,612. It will be seen that the amounts varied from £600 to £1,612. Carter & Co. put these drains in at 1d. each, or, upon the whole lot, they put down £8 16s. 8d. Eventually, however, the Government officer did not have these subducts built. There is no payment whatever for them, and as a matter of fact they were not put in.

Mr. CRICK: No wonder they were not put in when the contractors would have had to do £600 worth of work for £8 16s. 8d.

Mr. PARKES: Will hon. members tell me that this was not a prearranged affair? Do they suppose for one moment that this firm would have risked having to do £600 worth of work for £8 16s. 8d.? Was it not on the other hand a duty of the public officers to have these ducts put in at the cheap rate to the country at which they could have been put in under this contract?

Mr. ASHTON: Can the hon. member show me from the papers where the firm obtained permission to omit the subducts?

Mr. PARKES: No; but they did not do them, and they were not paid for them. Upon page 125 hon. members will see a letter written by one of the junior officers of the department to the Engineer-in-Chief for Sewerage. He says:

"As some of the man-holes on this contract are being constructed, I should like the engineer-in-chief's decision as to the kind of pitching, if any, which is to be put round the man-hole covers.

"Twelve square yards of squared bluestone pitching were included in the schedule of quantities, which the contractors have priced at £50 per square yard. The quantity likely to be used if the whole of the man-holes are to be pitched will be 35 square yards, which, at schedule rates, will amount to £1,750.

"Special bluestone concrete will answer the same purpose as bluestone pitchers, and will only cost—9 cubic yards, at 50s.—£22 10s.

"The fair price for bluestone pitching is about 25s. per square yard, and, as the schedule rate is so much higher than the market rate, the question arises whether the pitching should not be omitted. If, however, this course is considered to be unfair to the contractors, then only the quantity included in the schedule of quantities need be carried out."

The engineer-in-chief in his minute says this:

"We cannot in fairness omit an item for which, no doubt, the price is absurdly high, while we know that on other items the price is equally low. Where bluestone pitchers are shown on drawing contractors must be paid for same at schedule rates."

But I will show that they have selected all the high items on which to pay these contractors. To show the iniquity of this, I may say that they not only pay £50, but they increase it twofold by taking out the sandstone where it is provided and putting in bluestone. If that is not an act against the interests of the country, I should like to know what is. A certain number of sandstone pitchers are to be put in. These are withdrawn and bluestone substituted. That is to be seen in the payments made to the contractors. I can show that they have carefully manipulated every one of these items, so that the country suffers and the contractors gain.—*Hansard*, 12th May, 1896.

I see from the Government vouchers that the Minister paid away £6,200 in extras upon that contract. I should like to know if he ever inquired what this £6,200 was for? Did he know what it was for when he approved of it?

Mr. YOUNG: Where is the page upon which my minute approving of it appears?

Mr. PARKES: On page 134, the hon. gentleman will find this entry:

"Minister's approval for £6,200."—*Hansard*, 12th May, 1896.

Before the charges made under the head of this contract are dealt with, a clear understanding of the nature of what is known as "schedule rigging" is necessary. In England, as well as in the Colonies, a system known as "tendering by schedule" has almost universally prevailed as the accepted and proper mode, in all works of the general class to which sewer construction belongs, in which there is necessarily much uncertainty as to the kind and quantities of excavation, material, &c., that will actually be required; the nature of the ground to be excavated varying in itself, and thereby entailing variations in the extent of excavation, the mode of construction, the necessity for certain works which may or may not turn out to be required, the use and the withdrawal, or the burying in the work, of timber in shafts and tunnels, and in numbers of other ways. The usual mode of calling for tenders on this system that has been adopted in New South Wales is this:—First of all, it is determined what work is required to be constructed; then, by careful survey, the taking of borings, &c., the best available knowledge is gained of the nature of the country to be gone through, consistent, in the testing by bores, &c., with fair economy; then there is made as exact an analysis as, in the opinion of the engineer dealing with such matters, is thought expedient, of the various distinct kinds of ground that may be met with, and the different modes of working that may have to be adopted in each. There is worked out as good  
an

an estimate as the conditions will permit of the quantities, in cubic measurement, of the ground likely to be met with under each head; then every conceivable kind of material that may be required in the work is added to the list. These form the first column of the schedule; opposite each item is placed in the next column the unit of measurement adopted; and in another column is given the best estimate that can be made—sometimes necessarily little better than a guess—of the “probable quantity” or number of units that may be expected. The tenderer is asked to set his price per unit against each item; the prices multiplied by the quantities give the resultant cost under each head; the sum of all these amounts, added up at the bottom of the schedule, is the sum total of the tender. It is clear that, if all the probable quantities given are correct, then the sum total will finally agree with the actual cost of the work; this will be so, however inappropriate the respective prices given may be; and the acceptance of the lowest tender will prove to be the best bargain for the country. But a departure in the work from the quantities anticipated will—unless all departures happen to balance one another—necessarily cause a variation, in the final cost, from the sum total of the tender; either by way of increase or diminution, according as the more or the less expensive items are respectively increased or diminished; and, seeing that a difference of opinion may be expected in all tenderers as to the respective values of different kinds of work, it may finally turn out that the better bargain would have resulted from the acceptance of some other than the lowest tender. But, of course, the very object of the system is to find, by taking the sum total, which tender is presumably the lowest; and, necessarily, the practice has universally been—apart from other objections—to accept the lowest tender. It is because of the need for a comparison between tenders that “probable quantities” are inserted; otherwise, to save the raising of a question in the course of the work as to the price of an unspecified item—always a difficult and unsatisfactory matter to deal with, in spite of conditions designed to meet it in the contract—all work and materials might be tendered for per unit, without quantities being given. As it is, the Department guards itself carefully against being supposed to guarantee the quantities; leaving the tenderer to make, if he chooses, his own calculations, on the basis of the exhibited plans, which show all the information acquired by the Department.

As long as tenderers used their knowledge and experience in arriving at the best conclusions they could form of the price for which they could carry out each individual item, and attached their prices accordingly, this system worked well; at the first blush it appears to be as good a system as could be devised. Evidently the most obvious alternative, a plan of lump-sum tendering, would, where quantities are necessarily uncertain, have introduced a very great risk; and this would have necessitated a large balance of probable profit to the contractor, by way of insurance against heavy possible loss, and so would have raised generally the price of work to the country. The element of gambling must have been forced to enter largely into such a system of tendering. Big profits and bankruptcies might be looked for as the result. But every uncertainty in business induces speculation; and so there gradually grew up, from the schedule form of tendering, a system of “schedule rigging,” as it was called. It is worked thus: The tenderer increases beyond its legitimate amount the price per unit of each item in which he thinks or hopes the “probable quantity” will turn out to be less than the actual quantity, and compensates for the consequent addition to his price, so as to keep down the sum total, and secure the acceptance of his tender, by unduly lowering the prices of items that he expects to work out below their “probable quantities.” Of course, the most outrageous “rigging” will eventually make no difference if the probable quantities turn out to be correct; but, if the tenderer’s hopes are fulfilled, he makes an undue profit; if he is mistaken in his expectation, the Department probably gains. On the whole, the aggregate results of a long series of sewerage contracts tendered for on the schedule system appear to show that in the end gains fairly balance losses; but the practice of “rigging” is obviously objectionable, and some remedy was required. The evil was increasing; the filling in of schedules was becoming an art. One of the contractors most proficient in this art in Australia was Mr. Snodgrass, a member of the firm of Carter & Co., and, till the end of 1895, of the firm of Carter, Gummow, & Co. Of course the system deserves the name of gambling. It is more obviously so than are most forms of speculation looked upon as legitimate. It was coming to be recognised among contractors as something quite in the ordinary course of business; and

and it naturally led to the taking advantage of every peculiarity in a schedule, even an obvious clerical error. As far as success in this art is concerned Mr. Snodgrass yields the palm to Mr. Williams, one of whose tenders for pipe-laying at the Glebe, accepted by the Water and Sewerage Board, secured him a large illegitimate profit as the result of a remarkably speculative schedule. Yet Mr. Williams was a prime mover in the agitation which resulted in the granting of this Commission. He evidently thought his own smartness nothing to be ashamed of. Mr. Snodgrass' view of the matter will be found in his evidence on page 699, Q. 21218.

When tenders were invited for Contract 69, known as the Eastern Main Branch Sewer, running through Marrickville, and carrying the Western Suburbs drainage towards the Botany Sewage Farm, a very elaborate schedule was prepared by Mr. Bagge in order to distinguish perfectly every kind of excavation, and to prevent the risk of any sort of soil or rock falling under a wrong head. In tendering for the contract Mr. Snodgrass, who seems always to have performed this part of the work of the firm, adopted a remarkably simple mode of filling in his schedule. Appendix No. 52, page 82, shows the column of work in full; No. 43, page 71, shows all schedules, including Carter, Gummow, & Co.'s. For each of the four first items, excavation in open trenches, he put down the same price, expecting to find little but what would come under the first head—comparatively easy work, though even then cheap at the price. For each class of excavation in tunnels he again gave the same price, expecting that the work would turn out to be such as would fall mostly under head No. 5, for which the rate charged was high; or that, if it were "hard rock," it would, according to the usual practice of the department, come under head 11—blasting with four-inch charges. For work under most of the other heads the price, though a good one, was lower than the department's estimate; for excavation in shafts, again, Mr. Snodgrass gave low rates in two uniform classes for all the eight different heads, except one; for that he fixed a very high price; it was the class of ground that, considering the features of the country, of which he had very large experience, he naturally expected would prevail, in excess of what was given in the probable quantities; moreover—both in tunnels and in shafts—when, in the place of harder ground, this soft ground is met with, the result is that the total quantity of easy excavation is increased, because it belongs to the class which requires timbering; and the fixing of timber in a shaft or tunnel entails a very great addition to the quantity of soil to be removed; so that, while the increased facility of taking out the ground makes the profit greater, the advantage gained is added to—if the price is high—by the consequent addition to the total amount of such profitable work.

For these items of excavation, nineteen in all, the principal peculiarity in the tendering was uniformity, in four series; with the exception of a very high price for one item, in which an increase was reasonably to be expected; with very low rates for some items—the first four—in which evidently the tenderer hoped for a decrease, because he anticipated that so much timbering in open trenches as the department expected would not be required; good prices for tunnelling, which would turn out very profitable if the ground proved generally to be soft shale; and low rates for all shaft work, with the one exception noticed. There is nothing in these prices suggestive of special information derived from any one in the office, except in relation to Nos. 13, 14, and 15. The speculation indulged in as to all the rest appears quite natural—just what might fairly be expected under the circumstances. It must be remembered that the remarkable lowness of some prices was essential to keep down the total, increased by the other high rates. A high total would lead to a failure to secure the contract. Uniformity in items under one general head is an advantage to all concerned, as it saves the trouble, and often the friction, due to the necessity of classification; aggregate measurement being all that has to be agreed on. In the result the anticipation of the tenderer generally turned out correct. The excavation in open trenches was somewhat less than the quantity given in the probable quantities; in the tunnels in "less hard ground" it proved a great deal more; in those in "solid rock" a little more; in the shafts in "solid rock" very much less; and in "more or less hard ground" some 20 per cent. more, the item put down at the high rate (40s.) being exceptionally increased, and almost entirely merging the other heads—the addition to the total being due to the larger excavation required by the larger quantity of timbered ground. In reading this schedule it must be borne in mind that the descriptions "more or less hard materials," "solid rock," and "more or less

less hard ground," identify particular local parts of the work, so marked on the ground plan and longitudinal sections exhibited. There is no guarantee that any one division of these local parts will actually answer to such description; as indeed the forms of the detailed items themselves imply.

The diminution, in the result, of 12, 13, 14, and 15, (from an aggregate of 1,465 to 495 yards) was explained by an alteration of the scheme while the work was going on by reduction in the number and the size of shafts, and notably of what was to be a very large and elaborate shaft at Premier-street, sunk by another contractor, and intended to be very much increased in horizontal section, as part of the work of Contract 69, but finally, for the sake of economy, left as it was originally sunk. It might be suggested that someone in the office conveyed to the contractors information, before the tenders were sent in, that alterations would be made; on the other hand, it was well-known that economy was being studied in every way: and Mr. Snodgrass, with his long experience of such works, and his knowledge of Mr. Davis's very commendable habit of trying by every legitimate means to reduce expense without sacrificing efficiency, might well think it safe to make a set off against his high prices by lowering these, on the chance of the quantities being reduced. The prices would certainly have been losing ones, if the shafts had been carried out as they stood in the schedule.

The next item to which attention has been called is No. 31—timber left in excavations, 1d. a cubic foot. There is really nothing peculiar in this; in the result, a considerable increase in this item did take place, due to the quantity of timber used and not withdrawn in tunnels and shafts, the quantity, however, did not increase in proportion to the increase in the timbered excavation; this is explained by the fact that, as anticipated by Mr. Snodgrass, there was a diminution in the amount of timber used in open trenches, in comparison with the quantity estimated for that work. But the increase did not really represent a loss to the contractors, because their high prices for ground requiring timbering in tunnels and shafts really included—and was calculated originally to include—the timber; the 1d. was a mere nominal price.

The 1d. per lineal yard for subducts is the next striking item. In point of fact subducts are put in for the convenience of the contractor, when they are used at all. They have hardly ever been used in sewerage work about Sydney, as it has been found that they are very seldom required and are a source of weakness. They are drains running under the floor of the tunnel, carrying soakage water towards each shaft, from a point at about the centre of the distance between the two shafts, where it falls into the sump, a sort of temporary well at the bottom of the shaft. If subducts are made at all, obviously the work must be good, as it has to be permanent, the sewer being built over the subduct; and it is so provided in the specification. It is seldom practicable to carry away the subduct water by connecting the sump with some lower level. The practice is to empty the sump of water and fill it up with concrete when the sewer is built, and so put the subducts out of work; then they evidently become worse than useless, as they tend to collect water at the foot of each shaft—water which cannot escape. As they *may* possibly be required, they are put in the schedule, with probable quantities representing in the aggregate the length of tunnel; the different classes of subduct, suitable to different conditions of ground, having different lengths roughly apportioned to them. Of course the price, 1d. per yard, was nominal; but the excavation for subducts is also paid for. The schedule item "subducts" covers the cost of the earthenware pipes, and some other items of work, but not the excavation. Where the price for excavation in tunnels is high, the payment under that head fully covers the whole cost of the subduct. Mr. Davis's table on page 499—further explained on page 664—of the evidence, sets this out clearly, and shows that, if subducts had been ordered in this contract, they would really have been a profitable item to the contractors. The suggestion that the contractors put in a nominal price because they had private information that subducts would not be required has absolutely nothing in it, for the reasons given—that the price was not nominal under the circumstances, and that all contractors who knew anything of sewerage work were aware that subducts were almost universally an item put in merely to get a price. And it must of course be borne in mind that, while the existence of subducts was a disadvantage to the work, their cost—not nominal, because it would include highly-paid excavation—was so much saved to the department by their being left out.

The

The next head of work that calls for comment is No. 34—cement facing—carrying a high price, 5s. per square yard, 2s. being the departmental estimate. In this instance Mr. Snodgrass made a mistake; and the fact that he did so is some evidence to go towards rebutting the suggestion founded upon his correct anticipation of reduction of quantities in the low-priced shaft excavation. Of course the high rate set down for cement facing entailed an increase to the total amount of his tender that must have been compensated for somewhere—however it was distributed—by cutting down some other rate. The probable quantity given was 11,600 yards; the difference, which may presumably be taken as the over-charge, between the sum tendered at and the departmental estimate, is 3s. a yard, making a total of £1,740; this sum, at least, must have been worked out of the tender by unduly lowering some other items. The reason for the manipulation was this—the number of yards of cement facing was calculated on the assumption that only the lower half of the sewers—oval in section—was to be plastered or “rendered.” This was really the intention of the department, and was carried out. But it was more or less of an innovation. Mr. Snodgrass assumed that, according to the former practice, the whole of the internal lining was to be rendered. He supposed a mistake had been made. To make a large profit on what he expected would be an increase of several thousands of yards of rendering, he risked the result of making a serious reduction in the price of some other work. He was disappointed—the upper part of the sewers was not rendered; and, some alterations having been made in the work, the number of yards to be paid for ran out at only 10,683; so that this instance of speculative tendering probably caused a substantial loss to the contractors.

But the most extraordinary feature of Carter, Gummow, & Co.’s tender for Contract 69 was item 36—squared bluestone pitchers; which are used to surround, protect, and keep the road level to the edge of, the covers of manholes closing shafts in streets. By one of those mistakes that experience shows will escape the most careful revision, in the column of “probable quantities” opposite this item, instead of 38 yards, which would have been about the proper number, 12 yards came to be printed. Having examined the plans and counted the number of shafts, and having found that they all, with one or two exceptions, showed a ring of bluestone pitchers, Mr. Snodgrass saw at once that a mistake had been made; and—presumably—cutting off an equivalent of about £585, by lowering some other items, to compensate for the difference between £600 and £15 (which would have been about a fair price for the 12 yards), he attached to this item the ridiculous sum of £50, hoping thereby to gain some £1,200 of illegitimate profit. The first question that arises is this: Was the error intentional—made for the purpose of playing into his hands? This question answers itself: every contractor with his eyes open would be expected to see the mistake as well as Mr. Snodgrass, and no officer would be likely to venture on such a palpable act of fraud. Curiously enough, the very simple explanation of this error—the source of the suggestion, if it was intentional; more probably the cause of the accident—was not discovered till near the close of the Commission; it was a transposition of the quantities for bluestone and sandstone pitchers; the former should have been thirty-eight, the latter twelve; as the work involving the sandstone pitchers was, for convenience, transferred to another contract, attention was never called to the thirty-eight as excessive; and so the clue to the error in the quantities for bluestone pitchers was lost. The fact that Mr. Snodgrass did discover it certainly does not leave it to be presumed that he had any information on the subject. The next question is this: Was the peculiar tendering discovered in time for the Chief Engineer to be apprised of it before the tender was accepted? In the multiplicity of tenders that he had to deal with he would not be likely to notice it. Mr. Bagge swore that he did call Mr. Hickson’s attention to it, and that Mr. Hickson said nothing could be done (Question 13110). Mr. Hickson denied this (Question 17143). Most of the surrounding circumstances negative Mr. Bagge’s statement; and his recollection on various other matters is so obviously at fault that, without imputing to him any wish to misrepresent facts, your Commissioner regrets to say that he cannot place much reliance on his accounts of matters that happened a few years ago. It is probable that in fact no one noticed the peculiarity in this item till Mr. Millner, early in May, 1894, discovered it in making out a progress voucher. He naturally thought pounds was a mistake for shillings in his copy of the schedule. Mr. Snodgrass assured him it was not so. The matter was referred to Mr. Davis, who had himself up to that time been misled by a mistake in his  
copy,

copy, no doubt innocently made by a clerk, showing shillings instead of pounds ; the original document was referred to, and £50 was found to be correct. It was then that Mr. Davis's minute, which appears as No. 11 on page 111 of the Appendix, was written. Mr. Davis suggested the substitution of special bluestone concrete, for which the tendered price was fair (50s. per cubic yard)—at any rate for everything beyond the 12 yards appearing in the schedule of quantities. The matter was referred to Mr. Hickson. A discussion took place in the office, at which the contractors were present. Mr. Snodgrass has given the clearest account of this interview on page 693 of the evidence, Q. 20991. Mr. Hickson's opinion then formed was embodied in the minute which follows Mr. Davis's, expressing the opinion that the department could not in fairness omit an item for which the price was absurdly high, knowing that on other items the price was equally low ; and deciding that, where bluestone pitchers were shown on the drawings, the contractors must be paid for them. At the very conclusion of the evidence—page 721—Mr. Davis more clearly explained this matter of the omission from the plan of the pitchers on some shafts. Every shaft was supposed to be so finished ; but, by accident, the Prussian blue, indicating bluestone pitching, had been left out of the plan in some cases. This mistake—fairly set off against the mistake in numbers taken advantage of by Mr. Snodgrass—Mr. Hickson insisted on. Thirty-eight was the original number of yards intended. When Mr. Davis wrote his minute, this was reduced to about thirty-five by some of the shafts having, for convenience, been transferred to M'Sweeney's Contract 62. Afterwards some other changes were made, and supplementary drawings were sent down to the contractors. This was almost certainly after the work had passed out of Mr. Hickson's control. In these supplementary drawings the blue colour was put in, in ignorance of Mr. Hickson's limitation, where on the original plan it had been left out. Moreover, it seems that the pitching was again increased by one of the changes made ; therefore, in the end, although one shaft was left unpitched, because it was on vacant land, the number of yards actually paid for,  $36\frac{1}{2}$ , was about equal to the whole quantity (with the exception of one shaft) that was intended to appear on the original schedule, and Mr. Hickson's reservation, by means of all these various changes, seems to have been defeated. The question is, whether Mr. Hickson's action is evidence of favouritism. Under clause 16 of the "general conditions" of the contract (page 20 of the Appendix—these same general conditions being attached to Contract 69), it would appear that the Engineer has extensive powers of substitution ; but Mr. Hickson might well have had grave doubts on this point—whether the clause empowered him to substitute one material for another for the sake of choosing the cheaper according to schedule rates, the obvious intention of the clause being to enable the Engineer either to meet unexpected contingencies or to introduce improvements, or otherwise to vary the work for the purpose of more beneficially carrying it out ; such a thing as picking out cheap items on the schedule never having been contemplated, and being contrary to the spirit, if not outside the letter, of the clause. It was in this former aspect that Mr. Hickson, in whom a sense of justice appears to your Commissioner to constantly prevail over any inclination to take advantage of technicalities, seems to have viewed the question, though no doubt a regard for what he considered the legal construction was also present to his mind. In such a peculiar case as this, where advantage was taken by a tenderer of what was evidently a clerical error, and where no actual loss could fall on the contractor—in all fair intendment—by a refusal to add to the probable quantities of work to be done at an utterly ridiculous price, the legal effect of the clause, if it really did enable such a course to be pursued, might well be insisted on as fitting in with the justice of the case ; but it should not, your Commissioner thinks, be taken as a fair conclusion from Mr. Hickson's action that it was the result of undue bias ; he appears to have decided against the contractors as far as he really thought proper—and safe—when he refused to extend the right to supply the pitchers beyond the amount actually shown on the plan—which certainly formed a part of the contract. If, before the tender was accepted, the peculiarity had been discovered, then this other question would have arisen—would it have been proper to reject the tender or to call upon the contractors to amend it. The difficulty, as put by various witnesses—notably Mr. Chamier, on page 547 of the evidence—would have been where to draw the line, if once the real or apparent disproportion of prices in tenders had been taken as a ground of objection to them ; and, if amendments were allowed, how to avoid charges or suspicions

suspicious of tampering, and, generally, improper interference, favouritism, &c. At any rate, the balance of evidence is strongly in favour of the view that it has not been the practice—though Mr. Bagge said something of the kind had been done in Victoria—to depart from the simple rule of accepting the lowest tender, so long as the tenderer is otherwise eligible; the Department calling for tenders trusting to its own ability to get as near as possible to correctness in probable quantities, so as to leave as little scope as may be for gambling on the schedule. But it appears to have been this incident of the bluestone pitchers, added to the extensive speculation successfully indulged in on some of the excavation items of Contract 69, that induced Mr. Hickson, after much reflection and consultation, to adopt the present system of percentage tendering. This system was not in itself new—it had for some time been in use in the Water Branch of the Water and Sewerage Board, and in the Works Department in annual contracts for the supply of stores—but it had never, in Australia certainly, been adopted on general construction contracts until Mr. Hickson introduced it; and, whether or not its introduction was in effect an original idea on his part, it was clearly his act. The system is this: The Department prepares a schedule of all the heads of work to be done under a proposed contract. At first, probable quantities were given; now they are not. Opposite each item is set the best estimate of price per unit that the Department can arrive at; then the tenderer is asked to say at what rate, compared with these estimates, he will do the work, either at par or at so much per cent. above or below. Under this system no “schedule rigging” can take place; though, of course, it does not follow that a tenderer may not be actuated in his offer by a hope of increase or decrease in items that appear to him to be assessed relatively too high or too low by the Department. On the assumption that the Department makes the prices bear a proper proportion to one another, then the system seems to be as nearly perfect as it is possible for one to be contrived. And it cannot be doubted that this innovation was directed principally against those firms of contractors who were most expert in the art of “schedule-rigging”. It came into force some time in the year 1894. The firm of Carter, Gummow, & Co. had probably more, and more scientific, knowledge of sewer construction than any other firm of contractors in New South Wales, or, perhaps, in Australia. In the person of Mr. Snodgrass they possessed a partner most expert in arranging schedule prices. Their success in the art had been remarkable. Therefore, undoubtedly, during the time when Mr. Hickson’s son was in the employment of the firm, and before it was understood that he was to leave it, Mr. Hickson, by his action, and apparently on his own initiative, dealt the firm of Carter, Gummow, & Co. a severe blow, that deprived them largely of the benefit of their knowledge and experience in contending with other contractors, and finally, if Mr. Snodgrass is to be believed, induced him in disgust to leave the business of contracting in New South Wales.

Therefore, as to the first charge under the head of this contract, your Commissioner is of opinion that there was no such manipulation or other unfair action or favouritism on the part of Mr. Hickson, or other officers of the Department. The excavation quantities stood, in the final voucher, as nature had arranged them: it was no action—no manipulation—of the Department, but it was Mr. Snodgrass’s perception, that resulted in the coincidence of that arrangement with the contractors’ interest: Mr. Bagge was mainly responsible for the “probable quantities”: no one has suggested that he was in league with the contractors. It is quite beside the question how other tenders, necessarily not accepted, might have worked out.

2. *With allowing the contract to be taken up by Carter, Gummow, & Co. with an insufficient bond, and by ultimately breaking that bond by remitting the retention money, and writing a minute by which the Minister was deceived and induced to consent.*

Now, the very first contract I turn up here, although the specification provides for a cash deposit to be put down, on the Secretary for Public Works’ authority they are allowed to substitute two sureties of a very doubtful nature. One of the sureties is a supplier of cement and the other is a supplier of iron. By an act of the Minister’s, he actually cancels this particular bond, which these two people sign. He does this by returning the retention money, and thus breaks the contract.—*Hansard*, 12th May, 1896.

Now I come to the contracts, and I am going to ask the hon. gentleman who administers the Public Works Department whether he was aware, when he signed remission of refund of money, that he was breaking a surety bond? Does he know that when he agrees to the contractor’s having back his surety funds, he is breaking the surety bond, and so letting the surety go free? I want to show the hon. member, if he never took the trouble to look into it, how he stands in this matter. Now, in the conditions of contract, in page 119, there is a paragraph which says:

“Progress payments may be made once in every month, unless the same shall become not payable by reason of anything contained in these conditions, on the certificate of the engineer, as the work proceeds, in the proportion of 80 per cent. of the value of the work returned, until the sum retained reaches the amount of the deposit provided, for in the preceding clause, when no further deductions will be made. The amount of the retention money will be held by the

Minister, in addition to the cash security, unless otherwise provided for in the specification, until the engineer has certified that the whole of the works have been satisfactorily completed, and the period specified for the maintenance of the said works has expired."

That is three months. In connection with this contract, it was provided in specifications that the contractors should put down £4,000 security bond, in order that, if at the conclusion of the work it was found to be defective, or if there was any roguery, this £4,000 would pay for it. On the engineer's advice, the Secretary for Public Works substituted two surety bondsmen, namely, Mr. Scrutton, who supplied the iron to these contractors, and Mr. Henty, who supplied the cement. As we go further on we find a minute in which the Minister is advised to return the retention money, on the security of these two individuals—not specifying the individuals, but specifying the firms. On page 127, the minute says this in reference to the application of Messrs. Carter, Gummow, & Co. for the return of their retention money.

"Having now completed a considerable portion of the above contract, for the performance of which your department hold security to the extent of about £6,800, being £4,500 as guaranteed by our sureties and £2,300 retention money for work already done, we have the honor to ask you to allow the payment to us of £1,000 from the latter amount, leaving £5,800 still remaining as security for the due fulfilment of the remaining portion of the work."

The minute goes on to say that the Minister has these firms as sureties while he had only the individuals. The Minister thereupon agreed to the return of the retention money.

Mr. YOUNG : It is only fair to read the whole of the letter !

Mr. PARKES :

"We would remind you that our sureties are two of the most reliable firms in the city, namely, Parbury, Henty, & Co., Pitt-street, and R. L. Scrutton & Co., Clarence-street, and also that the amount of security required, had the contract been accepted in the ordinary way, would not have exceeded £4,500."

Mr. YOUNG : Read the minute upon that !

Mr. PARKES : That does not affect the question. The officers deceived the Minister by stating that they have the firms Scrutton & Co., and Parbury, Henty, & Co., when they have only the individuals.

"Personal security has been given on this contract for double the usual amount of cash security ; so that, in addition to the retention money, which amounts to nearly £2,300, the department has security for £4,520, making a total of personal and cash security for the due performance of the contract of £6,820. The amount of the contract is £45,207, of which there has been about £30,000 worth of work done. This being the case, and the personal security being Messrs. Henty & Co. and Mr. R. L. Scrutton (firms, I suppose, which are safe), I think £1,000 of the retention money might be returned.—J.D., 21/9/94. Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage. Recommended.—R.H., 21/9/94. Under Secretary. For approval.—J.B., 21/9/94. Approved.—J.H.Y., 21/9/94."

The effect of the hon. gentleman's giving back the retention money made the agreement with Scrutton and Henty null and void, because part of the hon. gentleman's agreement with them was that he should keep the retention money until three months' maintenance from completion of contract.

Mr. COPELAND : In the interests of the country !

Mr. PARKES : Quite so ; but it appears to have been given up in the interest of the contractors. The hon. gentleman then had no hold upon them.—*Hansard*, 12th May, 1896.

\* \* \* \* \*

4. *With advancing to the contractors sums of money improperly and in violation of the terms of the contract, and without sufficient security.*

5. *With incompetency in carrying out and administering the contract.*

6. *With failing to comply with the orders of Parliament, and placing documents on the Table of the House in a manner calculated to mislead Honorable Members of the Assembly.*

I am going to make a charge against the hon. gentleman's department of deliberately attempting to deceive this House in connection with this document. The hon. gentleman should have examined this document. Does he know that it includes 180 useless printed forms? The hon. Member has placed on the Table of the House 180 sheets of printed tender forms, and has asked the House to incur the cost of printing them.

Mr. YOUNG : If I had kept any of them back the hon. member would have blamed me for that !

Mr. PARKES : But there was no need for the hon. gentleman to insert practically blank sheets that do not bear on the document at all, whilst the officers of the department cleverly abstracted three sheets of schedule prices and comparisons, and in their stead filled this document with blank forms and plans not connected with this matter—in one case numbering sixty-four, in another twenty-seven, and in another thirty, and so on, making 180 altogether. Does the hon. member know that every important minute bearing on an important matter in connection with this case has been abstracted? Does he know that that information which the House ordered to be printed, and which would not have been half as bulky, has been withdrawn, and rubbish put in its place?

Mr. YOUNG : I am sure it has not?

Mr. PARKES : Well, look at the document—it proves that itself. Does the hon. gentleman know that, where plans are moved for in connection with contracts, they are abstracted, and the plans of neighbouring jobs, which are not even going on, are put in? What is the good of saying "Nonsense"? The plan of Contract 69 was moved for ; but the plan of a sewer in Canterbury, which is not even in course of construction, is put in, and the other is abstracted. It is no good saying "Nonsense"—there are the papers.

Mr. YOUNG : As a matter of fact, the hon. member did not move for plans at all !

Mr. PARKES : My motion was for

"copies of all papers and correspondence in connection with the contracts of Messrs. Carter, Gummow, & Co. at Marrickville, Balmain, North Sydney, Johnstone's Creek, and Stanmore, including the specification, schedule, &c., for original contracts, and for substituted ones, and all vouchers paid, and details of same, and such other matter included in the transactions from commencement to the present date."

What does that cover? I am told on very good authority that while the public works officers were compiling this document, the utmost hilarity was taking place, and the one most facetious was Mr. Joseph Barling, the Under Secretary for Public Works, as regards the manner in which these documents were to be placed before the House. There has been the most glaring attempt to deceive the House. The object was to have a mass of documents which no one would look through, and which would be cast aside. If these documents had been prepared in a proper form, instead of costing £500 they would have cost, I suppose, only about £250. Let me show hon. members what is omitted, in order to show the reason for the omission. In connection with Contract 69, sixty pages of blank tender forms, which might have been omitted, are put in ; but the sheets of tenders and estimates are withdrawn, and wrong plans are put in.—*Hansard*, 12th May, 1896.

\* \* \* \* \*

7. *With allowing defective work to be put in the works, by which a loss is sustained by the Crown.*

I will prove that the most defective work has taken place upon this job.—*Hansard*, 12th May, 1896.

2. The second charge first alleges that an insufficient bond was taken. There is really no evidence in support of this ; and your Commissioner can see no substantial ground for the charge. Mr. C. J. Henty and Mr. F. Lassetter were the bondsmen named in the first place. In consequence of Mr. Lassetter's departure for England, Mr. J. Leneve Scrutton was nominated and accepted in his place. The acceptance

acceptance of sureties in lieu of cash deposit was adopted in many other contracts let about the same time, in consideration of the contractors' agreeing to be paid in Funded Stock instead of cash—a very fair arrangement. Secondly, it is alleged that the bond was broken by a remission of the retention money. The contract was accepted on 27th December, 1893. The history of this affair is shortly told in the following correspondence:—

Messrs. Carter, Gummow, & Co. to The Engineer-in-Chief for Sewerage.  
Contract No. 69, Western Suburbs Sewerage.

Sir,

North Sydney, 20 September, 1894.

Having now completed a considerable portion of the above contract, for the performance of which your Department hold security to the extent of about £6,800, being £4,500 as guaranteed by our sureties, and £2,300 retention money for work already done, we have the honor to ask you to allow the payment to us of £1,000 from the latter amount, leaving £5,800 still remaining as security for the due fulfilment of the remaining portion of the work.

We would remind you that our sureties are two of the most reliable firms in the city, viz., Parbury, Henty, & Co., Pitt-street, and R. L. Scrutton & Co., Clarence-street; and also that the amount of security required, had the contract been accepted in the ordinary way, would not have exceeded £4,500.

We have, &c.,

CARTER, GUMMOW, & CO.

Personal security has been given on this contract for double the usual amount of cash security; so that, in addition to the retention money, which amounts to nearly £2,300, the Department has security for £4,520, making a total of personal and cash security for the due performance of the contract of £6,820. The amount of the contract is £45,207, of which there has been about £30,000 worth of work done. This being the case, and the personal security being Messrs. Henty & Co. and Mr. R. L. Scrutton (firms, I suppose, which are safe), I think £1,000 of the retention money might be returned.—J.D., 21/9/94, Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage.

Recommended.—R.H., 21/9/94. Under Secretary. For approval.—J.B., 21/9/94. Approved.—J.H.Y., 21/9/94. Mr. Millner to include in next progress return.—J.D., 21/9/94. Included.—W.J.M., 24/9/94. Accountant.—J.D., 26/9/94. Voted.—O.C. (*per* E.H.), 2/10/94. Mr. Piper.

From this it would appear that the release, in September, 1894, of the sum of £1,000, part of the retention money, was just such an ordinary act of grace as any contractor might ask for, any officer might recommend, and any Minister might sanction. The papers in this matter appear on page 12 of Appendix as No. 18. Whether the sureties could in law have claimed that such a waiver of the strict rights of the department under clause 30 of the "General Conditions" (page 22 of Appendix) had the effect of releasing them seems to be immaterial, in the face of clause 27, which, perhaps not to the mind of a lawyer, but certainly to that of a layman, would convey the impression that no danger could result from this payment, and clause 34, the last two lines of which clearly contemplated advances from retention money: but it appears to your Commissioner that the point did not occur to any person concerned in the transaction; if it had, the sureties would have been communicated with as a matter of course, and would, of course, have assented, as was done when, on 6th July, 1894—Appendix, page 12 (No. 14)—the right to pay either in cash or in Funded Stock was given to the department in lieu of the rigid condition for payment only in the latter form, and the sureties were naturally asked to join in this radical variation in the agreement. The minute "by which the Minister was deceived and induced to consent" was Mr. Davis' minute. How the Minister could be deceived your Commissioner is at a loss to imagine.

One argument that barely deserves mention, much less discussion, relied upon to show a want of good faith in Carter, Gummow, & Co., and also in Mr. Davis, and, through him, in Mr. Hickson, was the use by the contractors of the expression "Parbury, Henty, & Co.," and "R. L. Scrutton & Co.," and Mr. Davis's allusion to "firms, I suppose, which are safe," whereas the individuals, and not the firms, were the bondsmen.

The next charge,—“Paying to the contractors large sums of money which they (the Government officers) were not compelled to pay under Carter, Gummow, and Co.'s contract with the Crown,” so far as it alludes to the peculiarity of the Schedule, has already been dealt with. So far as it may be taken to refer to some filling, as to which a concession was made in consideration of the contractors' agreeing to the substitution of one sewer for two, involving a reduction of work, a substantial saving of expense in Contract 69, and a much larger future saving, your Commissioner has gone carefully into this matter, the details of which need not be set out here, and is satisfied of the absolute *bona fides* and fairness of the whole transaction. The papers fully explaining this matter appear in the Appendix, pages 113 to 118; at the head of page 117 is to be found the minute which mentions the filling.

4. The charge of advancing sums of money has already been dealt with in relation to the retention money; there appears to be nothing peculiar in the amount of advances on cement, only extending to £450 at any one time. As appears in Mr. Christie's evidence, page 382, a memorandum was signed for an advance of £1,000; the minute and memorandum appear on page 76 of the papers laid before Parliament, in compliance with order of 10th October, 1895, thus:—

*Minute-paper.*

*Subject:—*Advance on Cement Contract, No. 69, Sydney Sewerage.

Department of Public Works, Bonds and Contract Branch, Sydney, 29 March, 1894.

THE memorandum herein, duly prepared, has been executed by the contractors, Messrs. Carter, Gummow, & Co., and stamped, and might now be forwarded to the Commissioner and Engineer-in-Chief for Roads and Bridges and Sewerage.

The other papers herein are with Sewerage.

The Under Secretary.

HAROLD F. NORRIE,  
Officer-in-charge.

Roads.—D.C.M'L. (for U.S.), B.C., 21/3/94. Mr. Davis. Scen.—J.D., 30/3/94.

"A."

MEMORANDUM.

IN consideration of the Minister for Public Works, in and for the Colony of New South Wales, advancing to us the sum of £1,000, and of any future advances to be made to us, we hereby agree to repay to the said Minister for Public Works the said sum of £1,000, and future advances, together with interest at the rate of £6 per centum per annum on such sums respectively from the date of advance, on demand, and we hereby charge all moneys due or payable, or becoming due or payable, to us under a certain contract for the construction of the Eastern Main Branch Sewer, Western Suburbs Drainage, Contract No. 69, Sydney Sewerage Works, in the said Colony, entered into by us with the Government of the said Colony; also all cement, building materials, and every other thing already used, or to be used, in connection with our said contract; with the repayment of the said sum of £1,000, and any future advances, and interest at the rate aforesaid; and we hereby undertake to give, whenever called upon to do so, a valid bill of sale to the said Minister for Public Works over the said cement, building materials, and every other thing used in connection with our said contract, now stored in our premises at Illawarra Road, Marrickville, in the said Colony, or elsewhere, such bill of sale to contain a power of sale, and such other powers, provisos, and agreements, as the said Minister for Public Works may be advised. Also further undertake to give immediate possession of same to the said Minister, or any person appointed by him for that purpose, whenever called upon to do so.

As witness our hands, at Sydney, this 27th day of March, A.D. 1894.

Witnesses to the signatures of John Carter, Frank }  
Moorhouse Gummow, and David Graham }  
Snodgrass,—

JOHN CARTER.  
F. M. GUMMOW  
(By his attorney, J. CARTER).  
D. G. SNODGRASS.

HAROLD F. NORRIE, J.P.  
JOSHUA J. FARR, J.P.

Witness to the signatures of Peter Ewing and }  
George Maddison,—

GEORGE MADDISON.  
PETER EWING.

J. T. WARLOW DAVIES.

This is memorandum marked "A," referred to in the annexed declaration of John Carter, made before me this 29th day of March, A.D. 1894.

HAROLD F. NORRIE, J.P.

Under the head of Contract 79 the whole question of advances on material is fully dealt with.

5. Your Commissioner can see no evidence to support the charge of incompetency.

6. The matter involved in this charge,—in failing to comply with the orders of Parliament, &c., have been explained—notably by the evidence of Mr. Barling, on p. 202 of the evidence, questions 7432–5, and by Mr. Davis and Mr. Hungerford, who also gave evidence on this question; Mr. Barling, when called the second time, spoke further on the same subject—p. 443. As to Mr. Hickson, he had nothing to do with the matter; the officers engaged in it used their utmost diligence and exercised their discretion to the best of their ability—not their discretion as to how far they would carry out the order, but as to what the order meant; your Commissioner is satisfied that they acted honestly and properly; and, if some papers that ought to have appeared were omitted, such omission was due to accident—was certainly not intentional. The omitted papers appear in Memo. 13 by Mr. Christie, on page 380 of the evidence. The earlier of those which bear a date preceding the order of Parliament deal with a matter which occurred before tenders were received; the  
later

later were written after Mr. Hickson had given up charge of the works; no motive for Mr. Hickson's withholding these particular papers could reasonably be suggested; no doubt the various changes made in administration and location of office account for their omission.

7. The last charge under the head of this contract—"allowing defective work to be put in the works"—will, so far as the question of shortage of cement is concerned, be found dealt with under the head of Contract 79A. The direct evidence of defective work—outside of the question of cement on this contract—was, first, that of Benson, p. 3 of the evidence, satisfactorily explained by Husband on p. 554; Dawson's evidence on p. 2, as to packing a tunnel with shale, having absolutely nothing in it; it was afterwards fully explained that this work was properly done, and led, compared with concrete packing, to a large saving of expense to the country. Then there is the evidence of Darcus, p. 63, Question 2183, &c., explained by Mr. Griffiths on p. 535—an exaggeration of a trifling error in the laying out of a penstock chamber, the sides of which were placed perpendicular to the axis of the outlet siphon pipe, instead of to that of the sewer; the angle—of only forty-four minutes, in a horizontal plane—between the axes had to be transferred from the junction of the siphon and the chamber, where it was to be, to the sewer, causing an almost imperceptible bend. The incident was absolutely immaterial; the mistake was, under the circumstances, excusable; but the exaggeration apparent in Darcus' story is important, because it discounts largely either his intelligence or his credibility as a witness, insomuch as to make his vague accounts of sundry acts of misconduct on the part of the contractors of no substantial value. The general question of shortage of cement applying to all the contracts later than Contract 72 will be found dealt with under the head of Contract 79A. But, assuming for the sake of argument that some work, defective for want of the use of a due proportion of cement, has been done on Contract 69, your Commissioner can see no evidence that it has been in any sense allowed by Mr. Hickson or any other responsible officer of the department. On the contrary, your Commissioner is convinced that every reasonable effort has been made by all these officers to secure the very best class of work. The papers printed as Appendix No. 61, p. 108, show the remarkable care taken by Mr. Davis to secure economy, combined with efficiency, in the construction.

### CONTRACT 72 (SHEA'S CREEK).

1. *With paying away large sums of money to the contractors, Carter, Gummow, & Co., which they (the departmental officers) were not obliged to do under the contract conditions; and with settling a claim without a proper test as to the liability of the Crown for a sum of £4,050 9s. 6d. by obtaining the Minister's consent granting the contractors Contract 79 without retendering for that contract, when, in the interest of the Crown, it was the clear duty of the department to do so.*

In Contract 72, in which there are no particulars shown, a claim was made by the contractors for something like £4,000. In this contract we have simply the papers given to us—the specification and the payments. But in the schedule there is provision made for the excavation, which is to be done according to the schedule of the contractor, which he undertakes to carry out, and it shows that he has a contract to excavate 26,200 cubic yards, and 12,000 cubic yards of filling. When we come to the payments we find that the contractor, instead of being paid for 26,000 yards of excavation, is paid for 53,000 yards of excavation at 2s. 6d. Then instead of being paid for 12,000 yards of filling he is paid for 27,000 yards of filling or something more. Now there are no papers whatever to show why this extra is paid, nor is there any paper to show why another claim of £4,000 is granted in addition later on. But I was told by a member of this firm who has left it that the Government stopped this work to get possession of some land, or for some purpose, and although there is a provision in the contract which throws the whole obligation on the shoulders of the contractors for all these delays, that while the work was stopped there came a very heavy flood and it washed out their works to double the extent to which they had been carried on, and I was told, and I believe it to be true owing to the authority from which it comes, that the Government officer has not only paid them for the work they did, but paid them for all the flood-water washed out, and then paid them to fill it up again.

Mr. YOUNG: What contract is that?

Mr. PARKES: That is Contract No. 72. There is just another little item to which I will refer to show how these things are manipulated. There is one item of wrought-iron girders. The trade price for wrought-iron girders placed in position is from 11s. to 13s. per cwt. A few years ago the price was 13s. a cwt., but it is 11s. at present. In the schedule provided by the contract the Government are to get a certain quantity—that is 74 cwt. The contractors give the price at 25s. per cwt., that is 100 per cent. over the proper value. Without rhyme or reason the quantity is increased from 74 cwt. to 400 cwt., and they pay for that at 25s. per cwt. That is, the contractors are given a neat little sum of £280. Every effort has been used in the settlement to give Carter, Gummow, & Co. an advantage over the Government.—*Hansard*, 12th May, 1896.

\* \* \* \* \*

These contractors were not the lowest tenderers, by a long way. A firm of contractors named Bond and Hudson sent in a tender to do the work for £3,000 less than the contract of Messrs. Carter and Gummow. I will show how cleverly the department acted in getting rid of Messrs. Bond and Hudson's contract. The minutes bear out everything I say. Messrs. Bond and Hudson's tender was accepted by the Board of Reference; but Messrs. Bond and Hudson were not notified of that for three months. They then wrote to the department, and asked if their deposit money might be returned. One of the conditions is that the contractors' money shall not be returned if they fail to take up their contract. But in this case Bond and Hudson's cheque was returned, in order that they might be got out of the way. Instead of having tenders called for, the Engineer-in-Chief said—Messrs. Carter and Gummow having a claim for £4,000 on Contract 72, he recommends them to forego this claim, and says they can have a preference to the amount of £3,000 over the other contractors. That is a cool way of settling a claim, and the beauty of it is that the claim has never been tested by the law authorities. It was the duty of the Government officers to see whether it existed—whether there was a claim at all; but  
the

the claim was admitted, and Messrs. Carter and Gummow received the preference over other contractors if they would forego their claim, as to which one of the late partners told me they had not a shadow of a leg to stand upon. Their own solicitor told them that; but this claim was accepted as being correct, and the claim was put in when No. 72 was only half finished, and not a month before they received the preference in regard to the other job. There cannot be the slightest doubt that, if the work had been tendered for, it could have been let 30 per cent. cheaper.

Mr. COPELAND: What was the amount of the contract?

Mr. PARKES: It was £35,000 when it started, and it was increased to about £45,000, I believe.

Mr. COPELAND: Were they the lowest tenderers?

Mr. PARKES: No. Messrs. Bond and Hudson were the lowest tenderers. I am now speaking of Contract No. 79.—*Hansard*, 12th May, 1896.

2. *With proceeding with works not contained in the contract, and paying for same out of contract vote; and with using unauthorised, in connection with contract, money voted for other contracts.*
3. *With withholding from the papers laid upon the Table of the House such documents as would allow Honorable Members of Parliament to understand the nature of the contract, and the manner in which it was carried out.*

In connection with Contract 72, a list of other contractors' tenders and schedule have been omitted; all plans, correspondence, and minutes have been omitted; correspondence regarding a claim of £2,000 has been omitted, in fact every paper of importance has been omitted.—*Hansard*, 12th May, 1896.

The history of this contract, which dates back to early in 1891, has been somewhat difficult to trace: but the recollection of witnesses, imperfect when first endeavouring to recall the facts, became gradually clearer as the surrounding circumstances were presented to them: and your Commissioner has arrived at what seems to be the true account of the matter. It is shortly this: In 1889 Shea's Creek "ship-canal" was in course of excavation, the work proceeding from south to north. On April 30 of that year an injunction was granted by the Supreme Court against the Minister for Works, at the suit of one Macnamara, who had wool-scouring works on the margin of the swamp, restraining the department from continuing the excavation past a certain line running south-east and north-west, by reason of the risk of draining his dam. This injunction stood till March 20, 1894, when it was dissolved by consent, on the terms that Macnamara should receive compensation for any damage done to him by the works at Shea's Creek previous to March 4, 1894, the date of resumption of certain land by the Crown, the damage to be assessed by a jury. Meanwhile, about 1890, the necessity for extending a system of storm-water sewer construction through Alexandria became increasingly urgent. It was out of the question to attempt to begin the building of an underground system of sewerage in this low-lying locality; but storm-water sewers, which such a system would not eventually supersede, were absolutely necessary to carry off quickly the foul surface drainage for which the tortuous natural channels, with barely any fall, only acted as fever-breeding receptacles. Typhoid was increasing at an alarming rate. A sum of £8,000 was voted for the sewer constructed by Parry and Farley under Contract 75, running from north to south from Swanson-street to near Macdonald-street, and passing through Macdonaldtown Park. About the time the plans for this contract were being prepared, plans were also drawn for another sewer, to begin at Munni-street, and to run generally E.S.E. till it met the gutter known as Macdonaldtown Creek, close to the east of Contract 75, then to continue in a S.S.E. direction along the general course of that creek till it found an exit in the proposed Shea's Creek Canal, at a point about 32 chains above (N.N.E. of) the injunction line. A sum of £15,500 was voted for this work, known as Contract 72.

It was ascertained that there would be a balance left of the £8,000 vote for Contract 75, amounting to about £2,000, when that work was completed. As one contract was practically an extension of the other, this balance might legitimately be added to the £15,500 and applied to Contract 72. The sum available for No. 72 would, therefore, be about £17,500. But, when the quantities came to be taken out, it was found that, in the then state of the market, prices being high, it was not likely that a tender would be secured for so low a price as even £17,500. Under these circumstances, arrangements were made for reducing the cost of the work, without completely spoiling it. From a point about 27 chains from the proposed outlet in the canal (to be constructed) the sewer was designed as an open channel, lined with concrete. From this point downwards this channel would become a substitute for Macdonaldtown Creek. At another point, 14 chains further south, and therefore 13 chains from the outlet, Macdonaldtown Creek and the course of the open concrete channel began to part company, the creek eventually turning off to west of south. In order to reduce the cost of the work by either of two different and substantial sums, it was proposed to construct the upper part of it, if necessary, only as far down as the point 27 chains from the outlet at the canal, leaving the  
open

open channel out altogether, or, if again suitable to the conditions of tender and money available, to construct that channel only to the lower point, 13 chains from such outlet. It was then thought—a surveyor having been sent out to examine the ground for the purpose, and having reported favourably—that Macdonaldtown Creek would form a sufficient temporary outlet for the sewer from either of these two points. All this time the officers of the Sewerage Construction Branch of the department were hoping and expecting that the injunction would be dissolved, and that the work of excavating the ship-canal would be pushed forward, so as to be in time for the canal to form an outlet for the concrete channel, the level, as it stood, of the swamp through which the canal was to be cut being too high for that purpose. But, when it was determined to call for tenders for Contract 72, the injunction was still standing; consequently there was seen to be no chance of finding an outlet at the extreme south end of the proposed concrete channel: either one of the two schemes for shortening the work must be adopted, or an outlet must be somehow provided in the swamp. With this object a survey was made, and a plan was drawn with cross and longitudinal sections, and added to the original site-plan of Contract 72, showing an earth channel, to be excavated to the depth of the concrete channel, and of sufficient width, along the centre line of the proposed ship-canal. And, when it was determined to go on with the work, instead of a resumption being made for the purpose, arrangements were come to with Mr. Hill, agent for Mr. Cooper; owner of the land (to whom Macnamara was tenant), who agreed to the cutting of the earth channel, but insisted upon the concrete channel's being covered where it passes through a sand ridge between Macdonaldtown Creek and the swamp; on the making of a flume just to the south of the sand ridge, to carry across the concrete channel the water of a sort of old water-race that has been misnamed Shea's Creek; and the providing, at a point where Macdonaldtown Creek and the concrete channel leave one another, of an outflow and stop boards, to be used, if required, for the purpose of throwing the discharge of the channel into the creek, and so supplying Macnamara's dam, into which the creek water finally flows, with storm-water that the earth channel would otherwise carry off. It is to be observed that all these works—which would probably cost the country less than compensation on resumption—made additions to the original quantities, which were taken out on the basis of an open concrete channel through the sand ridge, discharging into the ship-canal. It would appear that, before these additions were made, the contract and specification had been prepared, with the quantities. Whether the specification from the first contained the clause No. 3 (*Appendix 76*, page 151), providing for the possible omission of the 13 or 27 chains, is not very clear. On the form of the specification, however, it would seem that it did originally contain this proviso, as the numbering of the clauses runs on consecutively; clause 3 containing this, and only this, peculiar condition: while the only clause to be found, either in the contract or the specification, dealing with, or in any way introducing, the earth channel, is the second part of No. 39 (*Appendix 76*, page 153), and seems, from the way in which it is inserted into that clause, to have certainly been added after the drafting of the specification. It would therefore appear that, as narrated by Mr. Davis, the idea of making the condition for excision of part of the work was earlier than the discovery of the necessity for providing the earth channel: yet clearly the making of that channel was part of the work contracted for, if required.

But, beyond all doubt, from first to last, the probable quantities were never altered to include any of the extra works, though these amounted to a very large addition, both in the excavation of the earth channel and in the building of the brick jack-arches on iron girders covering the concrete channel under the sand ridge. Naturally, your Commissioner sought an explanation of this. The explanation given, though more as a surmise than as a fact in any person's recollection, was this:—That, considering that the department had estimated the whole work at about £20,000, and that only, at the most, some £17,500 would be available, the chance of securing a tender that would enable the work to be carried out in its entirety was so remote that it was not thought worth while to alter the quantities; as the tender was to be at schedule rates, it was thought of no consequence even if eventually, but contrary to all expectation, these quantities should be much increased by the carrying out of work that seemed certain to be omitted. Unfortunately, Mr. Bagge—the witness who might have thrown light on the subject, as these matters were peculiarly within his knowledge—began by showing, when asked about Contract 72, such a

lamentable

lamentable want of recollection—or, rather, such an inverted memory—of the whole affair that it was evidently useless to press him further. Certainly, in your Commissioner's opinion, the omission to alter the quantities to fit the altered conditions was a very unwise and irregular proceeding; but, considering his duties in relation to the matter, it would not be likely that Mr. Hickson would have any personal knowledge of this—as it would seem to be—failure of duty on the part of some subordinate officer. The omission was a serious one, as it might have led to a mistake on the part of a tenderer who was not careful to take out his own quantities. He would see the plans, of course, and he ought to notice such an incongruity as a deficiency of 27,000 yards of excavation; but still—in fact, Mr. Carter said he thought Mr. Snodgrass, tendering rather carelessly, had been so misled—a tenderer might have assumed that the quantities were correct, and so have named a higher price per yard than that which he would have asked for a larger quantity.

When tenders were invited the lowest turned out to be Carter & Co.'s, for £20,650 on the quantities shown. Of course, the sum total of tender would work out very much higher on the quantities that ought to have been shown. When, however, the tenders came before the Under Secretary, Mr. Barling, a new difficulty was apparent. The amount was in excess of the limit provided by the Public Works Act. The work was very urgently required. Mr. Barling referred the matter to Mr. Hickson, asking if any reduction could be made. The answer was "Yes; about £3,000." The Minister minuted the paper "Reduce accordingly." The ready way in which Mr. Hickson's answer was given confirms Mr. Davis's account of the preparation which had been made for the emergency, namely, a deficiency of money to carry out the whole scheme.

When, however, the work came to be started, it seems peculiar that the very first thing done was to prepare for the excavation of the earth channel. The journal of the contract shows this: and there appears in it no explanation of how it was that, there being clearly—not by £3,000, but in fact by about £7,000—a deficiency in the amount of money available to complete the work from the injunction line to Munni-street, and the reduction appropriate to such deficiency having been provided for, an inconsistent course should have been at once adopted. Mr. Davis's explanation is this:—although it had been reported by the surveyor, who had formerly been sent out to examine Macdonaldtown Creek, that it would form a sufficient exit at either of the suggested points, yet, as soon as Mr. Davis went to see about starting the work, he discovered that a mistake had been made, and that the level of the bottom of that ditch—as it really is—was too high by some feet to make a proper exit: if it had been utilised at all, it would have had to be deepened for a long distance down—the fall of the ground being very slight: this work would, when—in the future—the concrete-channel came to be completed up to Shea's Creek, be all wasted: therefore, unquestionably, if the work was to be done at all—and the tender had been accepted—the only practicable, and, in the end, economical, way was to begin from the injunction line, to work up as far as possible—as long as funds held out—and then to take advantage of the general power in the contract—under the last words of clause 3 of the specification, and the last paragraph of clause 4 of the general conditions—enabling the department to cut off some of the upper part of the work. Of course, as soon as it was decided that Macdonaldtown Creek was not an outlet, and therefore that the outlet must be through the injunction line, it became necessary to begin the work from that point; the levels absolutely prevented any other course. In such a flat piece of country, sewer work must be begun at the outlet, to avoid flooding. In justice to the surveyor, who appears to have made a mistake as to the relative level of the bottom of Macdonaldtown Creek and the sewer, it is fair to mention the fact that Mr. Snodgrass, in his evidence, said that he considered that the contractors had been allowed, by some thousands of cubic yards, short measurements in the excavation in the line of the creek, because the department had paid them on the old cross-sections, which had altered much by siltage since they had been taken. If this is correct, then the same siltage may account for Mr. Davis's finding the creek-bed higher than the surveyor had placed it: heavy rains cause very sudden changes in such sandy country as that about Alexandria, especially when it is being disturbed in various ways by extending settlement.

Work started on Contract 72 on March 10, 1891. By October in the same year it became apparent that there would not be money enough to complete the scheme:

scheme: Mr. Hickson wrote to the contractors a letter (*Appendix* No. 34, p. 68), stopping the work at a convenient point—the junction with the Macdonaldtown Park storm-water sewer. He relied ostensibly on clause 3 of the specification. In applying the funds available to the portion actually carried out up to this stoppage, the department had certainly succeeded in doing the most serviceable work: the part left out was a distinct section of the scheme; and the part completed was a satisfactory and complete job in itself.

After the stoppage, no work went on on the contract, except so much as was required to finish the part which the contractors were allowed to complete. The last certificate was dated January 20, 1892. Mr. Abbott, M.P., Mr. Molesworth, M.P., and the Macdonaldtown Council, were urging the Minister for Works—then Mr. Lyne—to continue the sewer; on March 23, Mr. Barling informed Mr. Abbott that the sum required would be placed on the Estimates, but that Mr. Lyne desired him to say that he would not be able to deal with the matter till they were passed, which would, the writer presumed, be in a short time; and to a request from the Macdonaldtown Council that a deputation might be received to speak on the subject of the stoppage of the Munni-street sewer the reply was given that there was no need for it; that as soon as the additional money required was voted the work would be proceeded with: from which it clearly appears that the department was aware of the intention of the Government to get the necessary money, if possible, and to continue the work as soon as practicable. The Loan Act passed the Assembly on March 24. On April 5, Mr. Hickson recommended that Carter & Co. should be allowed to finish their contract. They did so, and completed it. The work, therefore, in as far as a substantial continuation of the contract was concerned, was suspended for about six months. Up to the latter part of February it stood in the position of being either discontinued altogether or hung up for an indefinite, but probably not a very long, time. Thenceforth it was almost a matter of certainty that the stoppage would be only temporary.

Meanwhile, in May, 1891, tenders had been called for Contract 79, a large and expensive work of sewer construction at the North Shore. Seven tenders were received, of which the lowest, at £36,900, was that of Bond and Hudson; the next was Carter & Co.'s, £39,890; Gummow and Gillan's came next, at £40,840. The extraordinary disparity of tenders, and therefore of estimates, for the same work, is exemplified by the fact that the highest tender was at £58,011, bearing the proportion to the lowest of 1.57 to 1; and the average amount of the tenders would imply that Bond and Hudson were offering to do the work at a dangerously low rate. These tenders were received on June 10, 1891. On the same day Mr. Hickson recommended acceptance of Bond and Hudson's tender. They were not, however, notified of the acceptance, because of the condition of the public finances, which made it clearly inexpedient to go on then with so large a work. On 10th June the following letter was received by the President of the Tender Board, Mr. Hickson, from Carter & Co. and Gummow and Gillan, who, up to that time, had been adversely competing contractors, each firm regarding the other as its most powerful opponent:—

Sir,

Sydney, 10 June, 1891.

We have the honor to enter our protests against the acceptance of the tender of Messrs. Bond and Hudson for Contract No. 79, North Shore sewerage, on the following grounds:—

1. That the tender of Messrs. Bond and Hudson for Contract No. 56, Potts' Point sewerage, was accepted by your Board and not taken up by them.

2. Upon fresh tenders being called, the tender of Mr. G. E. Hudson was the lowest, but was not accepted by the Board, in accordance with their rules and regulations.

Upon these grounds we, as tenderers for the North Shore sewerage, beg to protest against the tender of Messrs. Bond and Hudson being now accepted.

We have, &c.,

GUMMOW AND GILLAN.  
CARTER & CO.

Let me have papers *re* Bond and Hudson's tender for Contract 56.—R.H., 10/6/91. Here-with.—J.C.P., 10/6/91. Mr. Hickson for report.—J.B., 10/6/91.

In January, 1890, C. S. Bond (afterwards Bond and Hudson) tendered for sewerage contract No. 56, at a ridiculously low figure, and, as anticipated, had to throw up the contract and forfeit deposit. They were the lowest again when fresh tenders were invited, but did not get the work, they being ineligible under the Tender Board Regulations, clause 14. The same firm now (some sixteen months later) are the lowest tenderers for sewerage contract 79, and it is contended by the writers of the within letter that their tender should not be accepted. I cannot recommend that this course be taken. It is true, under clause 14, they can be excluded from competing for other works at the pleasure of the President. But in all fairness there must be some limit (when no fraudulent action has taken place) to this prohibition; and it seems to me, after sixteen months, all bar to their tendering should be removed. In recommendation on face of tender.—R.H., 10/6/91. Under Sec.

Resubmit when we deal with the tenders.—J.B., 30/12/91.

Mr. Hickson looked up the history of contract 56, and then wrote the minute which follows the letter. This minute contains a correct epitome of the facts. The papers were endorsed by Mr. Barling, "Re-submit when we deal with the tenders." On July 30 and August 18, 1891, Mr. E. M. Clark, M.P., wrote to the Department, urging that the work should be gone on with. He was informed that the matter must stand over till the question of further loan expenditure had been determined. Mr. Barling, in his evidence, to be found on page 439, described the state of affairs at that time. The work had in fact to be kept back till February, 1892; but on September 28, 1891, the following letter was received by the Minister:—

*In re* Contract No. 79, Sydney Sewerage Works.

Dear Sir,

88, Sussex-street, Sydney, 28 September, 1891.

On 10th June of this year, we had the pleasure of submitting a tender for the above works, and, we believe, were successful in being the lowest tenderers.

We have been anticipating the acceptance of our tender for some months, but, not hearing from your department, we have, in the meantime, entered upon other obligations, and must consequently respectfully ask you to permit us to withdraw our tender, and to return us the deposit attached thereto now lying in your hands, viz., £369.

We are, &c.,

C. B. BOND

(Bond and Hudson).

The delay would, of course, appear quite sufficient to explain this action on the part of the tenderers. The deposit was returned. Mr. Hickson recommended that fresh tenders should be invited; the recommendation was submitted at once to the Minister, on October 9, 1891. The matter continued in abeyance till February 22, 1892, when the Minister approved of calling for fresh tenders, and the advertisement was at once sent to the *Gazette* inviting tenders for March 9, 1892.

It is necessary here to go back to the time when Bond and Hudson threw up Contract 56. The next lowest tenderers for that contract were Gummow and Gillan. Fresh tenders were called; and in the second tendering Carter & Co.'s tender proved to be the lowest. In the opinion of contractors, it is much fairer to give a contract, under ordinary circumstances, to the next lowest tenderer, when the lowest throws it up. Re-tendering is looked upon as unjust, because in the first tendering the schedules have been exposed; and this gives an advantage to the less expert firms, who, in the second tendering, having studied the schedules, have a chance of using the knowledge disclosed by them, and so pricing their tenders as to bring them just under the lowest of the former competitors. Although Carter & Co. were successful they sympathised with Gummow and Gillan in their annoyance at losing a contract to which they thought themselves entitled; and both firms naturally doubted the good faith of Bond and Hudson in tendering, especially when it was seen that Hudson—evidently the same firm under a different title—again tendered for the same contract and again came out lowest. His tender, however, was of course rejected. These considerations account for the fact that Gummow and Gillan and Carter & Co. joined in the protest against Bond and Hudson when they proved to be the lowest tenderers for Contract 79. This was a job that Carter & Co. were particularly anxious to get, as they were just about finishing work of a very similar nature at Waverley—Contract 53—involving, as the North Shore work did, very deep shafts through sandstone; they had, therefore, the necessary plant; they had also, according to Mr. Carter's evidence, a large quantity of cement on hand; and, although some facts tend the other way, the balance of probability is in favour of the correctness of this account, which is touched upon under the head of Contract 79A. Through the agency of Mr. Kenwood, Mr. Bond's son-in-law, Mr. Carter, finding that the protest sent in was of no avail, and taking advantage of the suspension of the work, induced Mr. Bond, who supplied the money for the firm or partnership of Bond and Hudson, Hudson finding the knowledge and experience—very limited as far as sewer construction was concerned—to withdraw, in consideration of a payment of £750 cash and a promise of a promissory-note for £750 if Carter & Co. succeeded in getting the contract. As they were successful, and as Mr. Carter, in addition to the total sum of £1,500 paid to Mr. Bond, gave Mr. Kenwood £200 for his trouble in negotiating the matter, this transaction cost Carter & Co. in all £1,700. It would seem from Hudson's evidence that he was kept in the dark as to this business, and thought that when the deposit was repaid the payment was made without prejudice to the tenderers' right to the contract, only to be deferred till the Government should be in a position to start the work; he, however, placed the fullest confidence in Mr. Bond, from whom no doubt he received in account

his

his share of the £1,500. He deposed to going on several occasions to the Works Department and being told it was not likely that the contract would go on for two years, and that he could get his deposit back without prejudice. This is not improbable, as the money difficulty appeared to be a very serious one for a time. Hudson's manner was that of an honest witness, rather confused as to the exact history of the matter. He remembered Mr. Snodgrass, seeing him and telling him that he and his partner would make nothing out of the contract. His own expectation was that there would be a profit of £5,000. The agreement for withdrawal was not arrived at without some difficulty and a good deal of haggling, according to Mr. Carter. The probability is that Hudson thought he had a profitable contract, that Bond doubted it, and that Kenwood had much stronger doubts; but certainly Carter & Co. must have had great faith in their own ability to get a profit out of their tender prices, and a fair expectation of success in inducing the department to finally accept their tender. A comparison of the date of Bond and Hudson's letter of withdrawal—September 28—with that of Mr. Hickson's notice to terminate Contract 72—October 13—would tend to show that this expectation was not founded upon a knowledge of the possession by the contractors of a powerful lever in the claim afterwards set up for compensation for loss caused by the stoppage; though, as Mr. Carter swore, this claim was used for that purpose; and it was not improbably set up to be so used.

This, however, being the position of affairs:—Carter & Co. having actually paid £750 for the chance of Contract 79, which sum would be absolutely lost if they failed to secure the contract—whether they had or had not foreseen the stoppage of Contract 72, and the advantage over the department which they would thus indirectly gain—that stoppage took place. They at once, it appears from the correspondence, through Mr. B. C. Simpson, wrote to complain of what they alleged was a breach of contract (*Appendix*, page 168, No. 14; 169, No. 18), though it was not till their statement of account (No. 33, page 67, of *Appendix*) was sent in to the department that this claim was made in a tabulated form. The loss for withdrawal of contract set out in that claim amounts to £4,050 9s. 6d. It bears date February 15, 1892.

It was at this stage that the history of these two contracts—No. 72 and No. 79—came to be connected. Carter & Co. were pressing their claim for compensation for stoppage of No. 72, no doubt with the object of securing No. 79. There can be no question that an offer was made by them to this effect, viz.:—If the department will accept us as second tenderers for No. 79, in the place of Bond and Hudson, who have withdrawn, we will waive all claim for stoppage of No. 72. The advertisement calling for fresh tenders for No. 79 was in the hands of the Government Printer; presumably Carter & Co. knew, or guessed, this, and made a special effort to secure their end before it was too late. Re-tendering might have resulted in their losing their chance, at any rate they would probably have been compelled to reduce their prices to give themselves any chance of success. Mr. Lyne's recollection of the facts—naturally imperfect, considering the date—will be found on pages 259—61 of the evidence. Mr. Hickson's account appears on page 564, 5, from question 17099. There then follow Mr. Hickson's and Mr. Lyne's minutes of February 23, 1892. These and the preceding minutes on Bond and Hudson's letter of withdrawal, appear thus in the papers laid before Parliament.

How does this matter stand?—D.C.M'L., 30/9/91. Messrs. Bond and Hudson's tender was recommended for acceptance on 10/6/91. Papers herewith.—F.C.P., 1/10/91. Return deposit.—J.B., 2/10/91. Accountant to return deposit, 2/10/91. I recommend that fresh tenders be invited.—R.H., 6/10/91. Under Secretary. Submitted.—J.B., 9/10/91. Approved.—W.J.L., 22/2/92. Insert notice, 22/2/92. Notice to *Gazette*, 22/2/92. Tenders for 9th March, 1892.

Since writing my minute of 6/10/91, complications have arisen with Carter & Co., *re* their contract No. 72 having been stopped. They have made large claims on this account, some of which no doubt could not be entertained; but on some items they have made a good case. They are prepared, if they obtained this work, to waive all claims on No. 72. As their tender is a reasonable one, and some £3,600 below the estimate, I think it might fairly be accepted. If this course were adopted, work would be given at once to a large number of men.—R.H., 23/2/92. Under Secretary. Important.

As Mr. Hickson thinks Messrs. Carter & Co. could make good a claim for something like £2,000 as compensation on Contract 72 (Moni-street, partly), should they be willing to forego this claim, their tender may be accepted for construction of the main outfall sewer, North Sydney—£39,890, as worked out at schedule rates. If this firm will not agree to the condition imposed, fresh tenders to be invited.—W.J.L., 23/2/92.

Mr. Hickson.—D.C.M'L., (for U.S.), B.C., 23/2/92. Please see me with Messrs. Carter & Co.—J.B., 23/2/92. Mr. Hickson.

In a matter of such importance, it is only reasonable to suppose that Mr. Lyne and Mr. Hickson had a conversation on the subject before these minutes were written, and that Mr. Lyne went into the question himself before he determined what course it was best to take. But Mr. Hickson might, if he were so inclined, by misrepresentation of facts or the strong expression of an assumed opinion, have succeeded in improperly procuring the assent of the Minister, in itself undoubtedly honest and impartial. The question is whether the circumstances justify such a charge of partiality exercised in favour of Carter & Co.

First, it is necessary to inquire into the apparent right of the Contractors to any compensation. Clause 3 of the Specification to Contract 72, provides "that the lower 13 or 27 chains of the channel shall not be constructed until the Engineer gives a written order to that effect; and the Engineer shall have power to suspend the execution of those portions of the work, or any other part of the Contract, or to reduce the length of the Contract by the extent of the said 13 or 27 chains, or any other part of the sewer shown on the drawings that he may consider necessary; and the Contract shall not thereby be invalidated, nor shall the Contractor be entitled to any compensation on account of such temporary suspension of any part or parts of the contract, or permanent reduction of same." The second part of clause 39 reads thus:—"If the 13 or 27 chains of the outlet end of proposed storm-water sewer (as provided in clause 3) should not be excised from the present Contract, then, pending the completion of proposed ship canal to its junction with proposed storm-water sewer, an open channel, when ordered, to be excavated to such gradients, depths, and cross-sections, from the junction of the two channels to the present head of said ship canal, a distance of about 32 chains, as shown on drawing No. 1, and as shall be determined at the time." The last paragraph of clause 4 of the "General Conditions" is as follows:—"The Minister, or the Engineer acting on his behalf, may, from time to time, by writing under his hand, require the omission of any particular portion or part of the works described in the specification, or shown on drawings; and the Contractor shall have no claim for loss of profit, sustained damage, or other compensation, on account of any such omission." Finally, the fifth paragraph of clause 10, of these conditions, runs thus:—"On receiving a written notice to that effect from the Engineer, Contractor shall suspend the whole or any portion of the works, as may be directed in such notice. He shall have no claim for loss or damage on this account, unless the suspension exceeds one month; and such suspension shall in nowise vitiate the contract, but a commensurate extension of time for completing the works will be granted to the Contractor." When the order stopping the works was given, it was in the form of a complete stoppage. When the question of granting the Contractors No. 79 was settled, it must have been evident that, in all probability, the stoppage would be converted into a suspension for some period exceeding four months. The Department might be in a position to offer to allow the Contractors to finish the work, and so turn the stoppage into a suspension; though, on the form of the notice, the Contractors might object to this and refuse to go on. So they would clearly have some substantial claim, unless the conditions of the contract should be construed to justify such an excision as had been made. Without expressing any definite opinion on the point, your Commissioner has very grave doubts of the right of the Engineer, under the terms of this contract, to adopt so radical a course as the cutting off of a substantial part of the subject-matter of the agreement, especially in the face of the fact that he was expressly permitted to leave out one of two defined parts, distinct from that which he attempted to excise. It seems to be a case to which the principle "*expressio unius, exclusio alterius*" might apply. The exercise of the apparent power in the way in which it was sought to be taken advantage of is so absolutely opposed to the sense of the contract, and might so completely deprive the Contractor of any benefit to be derived from it, that, even without the giving of the expressly defined right, there would be a question; and the doubt would be much increased by the defining of the parts which might certainly be cut out. The reasonable construction of the paragraph of Clause 4 of the General Conditions is that it applies to details. The paragraph in Clause 10 may be read as merely limiting the Contractor's right to compensation for suspension; the leaving of the clause as it stood instead of altering it to suit clause 3 of the specification was clearly an oversight; if, however, an attempt were made to read it in conjunction with that clause, then it would appear, by implication, to clash with it. On the whole

whole the point was such as would leave so much doubt on the mind of anyone as to suggest the inexpediency of allowing it to go before a Court. And, of course, if, as a matter of law, the Department should be held to be in the wrong, then Mr. Hickson could have no hesitation in avoiding the folly of leaving the question of damages to a jury; a man of his experience would be justified in making any reasonable concession rather than risk the danger of such an excessive verdict—with the addition of enormous costs—as any person suing the Government might fairly—or unfairly—hope for. As to the reasonableness or otherwise of the claim, if the case was to be taken as one of suspension, then, certainly, all the larger items would go for nothing, and a comparatively small proportion would remain. But, even so, it does not follow that a conversion of the stoppage into a suspension would have saved the Department. The notice of 13th October had expressly terminated the contract; if this was a breach, then it could not be supposed that the Contractors would consent to take the work up again except on terms; the experience of other cases showed that for the mere delay a heavy charge might be made, and some considerable sum would practically, to save the risk of an action, have to be allowed; aggrieved as the Contractors, against whose protest Mr. Hickson had decided, would probably feel, they might be expected to make every effort to enforce their alleged rights. What might reasonably be expected was this: that they would either, if their offer were refused, do their utmost to recover the whole sum of £4,000, or they would only consent to carry on and finish Contract 72, assuming that the necessary funds were available, on the terms that they were paid some large proportion of this sum by way of compensation for delay. Then came in the other considerations relating directly to No. 79. The department had estimated the cost of this work at £43,494 10s. 6d.; the amount of Carter & Co.'s tender was £39,890, £3,600 lower. Gummow and Gillan offered to do the work for a sum exceeding this by £950; but the average of the tenders of the four remaining contractors was over £52,000. Leaving Bond & Hudson's tender out of the question, Carter & Co.'s appeared exceedingly low. And in the light of Bond & Hudson's former conduct in tendering so low that they had to throw up their contract, then again in trying to evade the rule of the Tender Board by untruly varying their title; lastly, in tendering for No. 79, and then, as it appeared to the department, taking the opportunity of delay to withdraw; in view too of the fact, probably known to Mr. Hickson, that Bond had absolutely no knowledge, and Hudson very little, of the work to be done; it was only reasonable to neglect their tender—nearly £6,600 below the estimate—in trying to arrive at the fair value of the contract. Certainly, the lapse of time—over eight months—was a reason for refusing to accept the second tender; the strongest reason, the great difference between the lowest and the second, disappears if the lowest deserves no consideration. The want of proportion in the prices of Carter and Co.'s Schedule might have been taken exception to; but Mr. Bagge was supposed to have gone over the quantities with his usual care; if they proved correct no such irregularity would affect the total sum; and Mr. Hickson's attention does not appear to have been directed to these peculiarities. Mr. Bagge's evidence,—so far as his recollection can be trusted at all—on page 404, question 13,106, must refer to Contract 69. It was evidently that contract that called for special notice in relation to schedule-rigging. The great depth of the shafts in No. 79 would explain high rates for excavation in shafts; and the general features of the part of the North Shore through which the sewer runs denote a close approach of the solid sandstone rock to the surface. Other peculiarities that would be likely to catch the eye are the disproportion—too small a difference—between excavation by guttering and gadding and by blasting, the nominal price for timber left in the work for subducts, and for hand-packed filling, and the great difference between the rates for brickwork in two rings and in one ring. The reasons for all these peculiarities are obvious. The contractors surmised that an unnecessary proportion of the ground had been placed under the head "guttering and gadding," that therefore there would in the actual work be a decrease in this mode of excavation and a corresponding raising of quantities in the blasting, which increase again, with the "margin" addition, would cause the total of highly priced sandstone concrete to be greater; that, in the generally solid rock, hardly any timbering would be required; that in such country subducts would not be used, and so there would be barely any hand-packed filling paid for; lastly, that in ground of that class no two-ring brickwork in tunnels would be ordered; and, if it were, the comparative lowness of the price would be compensated

compensated for by an increase in well paid excavation. It might also be noticed that the high price of excavation in shafts would have the effect of raising the amounts of the early vouchers above the average, and so putting the Contractor in funds to carry on the works—a dangerous position, perhaps, in which to put untried men, who might throw up the work in an unfinished state, but not involving the same risk in the case of established and capable firms. On the whole, it may be said that this was a cleverly drawn Tender, a good example of Schedule-rigging, but with no very outrageous peculiarities, and not showing those violent disproportions which made the Schedule of Contract 69 so conspicuous.

As has been remarked, Carter & Co. stood to lose £750—paid to Bond—in any case; it would only be on their succeeding in gaining Contract 79 that they would have to pay the balance, £750, and, presumably, to give some bonus to Mr. Kenwood. A question arises:—Had Carter & Co. some assurance from the Department, or some sort of promise, that they would receive assistance in that quarter? £750 was at stake. Here it is important to consider the nature of the men. Mr. Carter's remarkably free-handed way of dealing with money, indicating an absence of that strong disinclination to part with it without more or less certain consideration, which is not uncommon in "business men," strongly affects the probabilities. Mr. Snodgrass, by his peculiar mode of filling in schedules, shows that the tendency to gamble is strongly developed in him; and the consequences are not repudiated by his partners. Mr. Forrest, who was not to be a party to Contract 79, but who appears to have shared in the profit and loss on that venture, evidently trusts implicitly to his partners; personally, his manner certainly does not suggest wild speculation as a failing. Contracting for important works of construction involves so much risk and uncertainty, and the dealing with such large sums of money, that, under pressure of what may almost be called the necessity of procuring the right to carry out a certain undertaking, men may well stake even so large a sum as £750 for the purpose of removing an obstacle, without having any certain assurance that they will finally gain their end. There is absolutely no evidence to show that the officers of the Department knew or suspected that Bond & Hudson had been paid off; nor has there been suggested any reason why Mr. Hickson should favour Carter & Co. in carrying out such an arrangement. His connivance in it would be, and would appear clearly to him to be, a scandalous departure from duty and honor; he began by standing out against the protest of the firm. It is only fair to infer from all the circumstances that the dealing with Bond & Hudson was carried on behind his back, and was suggested by the delay that was unavoidable in the acceptance of their tender. It appears to your Commissioner to be hardly the province of this commission to inquire into the conduct, independent of the Department, of Carter & Co.; but inasmuch as they were allowed a *locus standi* throughout the inquiry, and their actions were necessarily brought under review, some comment may be made on this peculiar transaction. There is no doubt that an indulgence in such practices would defeat the whole object of tendering, and that a sale of the right to a contract is very like a conspiracy to defraud the Government, and that, therefore, such a course of conduct is most improper. But still, on the question how the parties to that particular proceeding looked at it; having regard to what Carter & Co. knew of the chances of success of Bond & Hudson, and of their own ability to do the work properly, and knowing what a common thing in business is the assignment of rights of every kind, without a thought of dishonesty entering into the minds of the parties, your Commissioner is inclined to believe that, in removing from their path what they probably regarded as an obstruction, as useless to the country as it was inconvenient to themselves, Carter & Co. did not imagine they were doing an immoral or dishonest act. But after the experience now, it would appear, for the first time gained by the Department from the evidence on the inquiry, and in the light of the various comments made on the transaction, it is to be hoped that every care will be taken by the Department to prevent, and by the Contractors to avoid, a repetition of what would be a most dangerous precedent.

Putting together all the facts, with the additional circumstances that, as far as is disclosed by the evidence, Mr. Hickson had not even seen Mr. Carter till the work on No. 72 had started, and was unacquainted with other members of the partnership; that he had no reason of any kind, apparently, to favour the firm, unless it be that he had found them capable and trustworthy; and that up to this

time

time there was no idea whatever in his mind of retrenching his son; the only fair inference is that Mr. Hickson, in recommending Mr. Lyne to take the course accepted by him, was acting in absolute good faith, and, as he believed, in the best interests of the country. Applying this conclusion (which is the finding of your Commissioner on the facts) to the second clause of the first charge under the head of Contract 72, your Commissioner is of opinion that that charge should be taken as disproved, though it is rather difficult to determine what the words "without a proper test" should be taken to mean: if they imply that the question should, under all the circumstances, have been left to the decision of a Court of law, then your Commissioner certainly comes to a different conclusion; if they mean that a legal opinion ought to have been taken before a decision was arrived at, then your Commissioner thinks that might have been a wise and proper course to pursue, but that the omission to do so was not the result of any unfair bias on the part of Mr. Hickson. As to the first clause of the charge, that must be taken to relate to the expenditure on the earth channel, and on the covering of the concrete channel under the sand ridge, adding to the quantities for girders and brickwork; the former expenditure was for work forming a necessary part of the contract, and was therefore proper: the latter was justified by the conditions imposed by Mr. Hill shortly before the contract started.

This finding also appears to include the allegation in the first sentence in the second charge. As to the use of unauthorised moneys, it would seem that the only moneys applied to the purposes of Contract 72, before the suspension, were the sum of £15,500, specially voted for it, and the balance of the sum of £8,000, left after Parry and Farley's Contract 75 had been paid for. This latter sum was legitimately applied to Contract 72, inasmuch as that work, so far as it was partly paid for by this balance, was actually a necessary extension of No. 75, for which the £8,000 had been voted. If there was any irregularity in this course, then it was one merely in form, and not in substance, and one moreover for which Mr. Hickson was not responsible in his capacity of Engineer.

The third charge relates to the withholding of papers. In the first place, as has already been pointed out, Mr. Hickson had, personally, nothing to do with this matter. But, as far as the action of those concerned in it was concerned, the order of the House must be considered. The papers to be laid on the table are thus described:—"Copies of all papers and correspondence in connection with the contracts of Messrs. Carter, Gummow, & Co., at Marrickville, Balmain, North Sydney, Johnston's Creek, and Stanmore, including the specification, schedule, &c., for original contracts, and for substituted ones, and all vouchers paid and details of same, and such other matter included in the transactions, from commencement to the present date." This order mentions specifically contracts carried out in particular localities; it does not by any means include all the contracts held by any combination of the names of these contractors. It can only be intended to cover contracts situate in the districts named, though not necessarily nominally held by the firm of Carter, Gummow & Co., *e.g.*, North Shore contracts were held by Carter & Co. Therefore No. 72, being in Macdonaldtown and Alexandria, is clearly excluded; No. 69 satisfies the order as far as Marrickville is concerned; No. 72 is altogether outside of that district. But an examination of the Contract of No. 79 discloses the fact that No. 72 is involved with it in this way:—that, while Carter and Snodgrass are the contractors in No. 79, they are joined in the contract with Forrest for the purpose of a release executed by all three contractors for No. 72. The agreement recites the general facts concerning the claim and the compromise. The release of the claim, and the contract by Carter and Snodgrass for No. 79; are thus contained in one document, executed by Carter, Snodgrass, and Forrest. Mr. Barling, on page 443, Question 13,963, has explained how these papers came to be produced at all. Further on, in answer to Questions 13,974 to 13,982, Mr. Barling gives a full account. This explanation your Commissioner takes to be quite satisfactory.

Taking together, finally, the whole of the facts proved in relation to Contract 72, your Commissioner is of opinion that they do not support the charges made under the head of this contract.

One other matter, which was touched upon in the course of the evidence, but which is more particularly noticeable because it appears to have formed the ground of a complaint against Mr. Hickson made by Mr. Parkes in Parliament, should be mentioned here. It is not clear under which of the divisions of the charge made in relation

relation to this contract it was intended to fall, if under any of them; and your Commissioner gathers from Mr. Parkes's address that he does not now attach any importance to it. The facts appear on page 167 of the Appendix (No. 12). After the earth channel was completely finished, a quantity of sludge was washed into it—breaking down the bank of the channel at its northern end, and cutting away a gutter up stream from it—by a heavy fall of rain, which, by itself, might not have caused the mischief, but the effect of which was aggravated by the action of the wool-scourers further up the creek—or swamp—in opening their sluices to allow the rush of water to clear out their dams. This was explained by Mr. Davis—page 470 of the evidence, Q. 14,783. Mr. Bagge, as the papers in the Appendix show, reported that it would be unfair to ask the Contractors to remove this silt. His view appeared to be a just one, and it was accepted. The stuff was left, and finally cleared out by day labour. The Contractors were therefore never paid for this work in any way. On page 453 of the evidence, Q. 14,333 to Q. 14,345, Mr. Davis gives further particulars of this matter. It discloses no ground of complaint against Mr. Hickson.

### CONTRACT 77 (ANNANDALE).

1. *With calling public tenders for Contract 77 upon plans for elaborate and costly work, and allowing Messrs. Carter, Gummow, & Co. to submit a plan of their own upon a patent held by them and an officer of the department, and at their own price, unchecked by the department as to real cost, by which Messrs. Carter, Gummow, & Co., got an advantage over the Crown of £4,000.*

I think I have clearly proved that a concession was made to this firm by which the country lost a considerable sum of money. If the work had been properly tendered for there would no doubt have been a saving of at least £2,500.—*Hansard*, 26th September, 1895.

\* \* \* \* \*

In my speech I stated that cheap material was substituted for what was provided in the Government scheme. I said that a cheap class of concrete was used, instead of the concrete which was specified. In reply to that the Engineer-in-Chief says:

“The materials used in the Monier arches and sewer, substituted for brick and concrete, was not sandstone and concrete; it was three to one compo., and was estimated by the department at from 80s. to 90s. per cubic yard, not at 28s., as stated.”

Now, as a matter of fact, it was nothing of the sort. It was estimated as being of a lower value, as will be seen by these papers. But it will easily be understood by hon. members that a compo. three of sand to one of cement is not as costly as a compo. of two of sand, three of blue-metal, and one of cement. Three of sand to one of cement is what you call cement mortar, and it makes a very light material.—*Hansard*, 12th May, 1896.

\* \* \* \* \*

Now, I come to Contract 77, which is for the Balmain sewerage. The papers are at page 205. That is a contract in which part of the work was to be a tunnel and the rest an aqueduct. Under the Government plan the aqueduct was to be superior concrete with brick and cement arches. It was to be self-supporting—that is to say, sufficiently strong for vehicles to go overhead, if that had been the purpose. It was to be brickwork of the very best description, and the bricks were to be patent kiln burnt. It was thus to be a work of the most permanent nature. Yet the Government, under the Secretary for Public Works, allowed the contractors for a saving of £250 to substitute a scheme of their own consisting of cement arches which would not stand unless supported by tie-rod iron. The best description I can give of that to hon. members is to take this Chamber, and to suppose that the walls are so weak that they cannot sustain the roof, and the weight of the roof is sufficient to push out the walls. The first thing to be done under such circumstances would be to put in iron tie-rods. These arches are so weak that they cannot sustain themselves, and have to be tied with iron tie-rods. That is what the Minister allowed the contractors to substitute for his own good, permanent, plan.

Mr. YOUNG: Will the hon. member be fair enough to read the advice on which I acted?

Mr. PARKES: I cannot read everything in these documents.

Mr. YOUNG: The hon. member will not read what is fair!

Mr. PARKES: I will show on what advice the Minister acted. This patent, with regard to the Monier arch—this useless, risky, thing—was invented in Germany thirty years ago for ornamental work in gardens, and it was never intended for such work as I am referring to. This cheap thing was reported on by Mr. Bagge, and he shows that it is 50 per cent. cheaper than the Government scheme. Now, in the first instance, in 1893, Carter, Gummow, & Co. offered this thing to the Government for £1,500. They offered to sell it to the Government, but in this one contract the Government leave them their patent and give them a preference of £3,000—that is, the whole of the contract for the use of this patent in the grave losing job. In his report, on the 21st September, 1894, Mr. Bagge says:—

“The sewerage aqueducts have hitherto been constructed here in such a manner, method, and of such materials, that any competent tradesman, in his special line, obtainable in the Colony, could do the work.”

“Now, however, as it is a matter of the greatest importance to reduce the cost of the works, there seems to be no other way of accomplishing this object than to adopt for this Colony a more or less experimental system of construction for these aqueducts—of increasing the spans of arches, introducing arches with joints, of constructing the whole in concrete, and of constructing the whole of the work of concrete and mortar and iron.”

Then he goes on to say:—

“In the old home countries these novel systems of construction have caused in the commencement failures, owing to the works being carried out by more or less inexperienced and untrained engineers and artisans; hence the various State governments would not entertain and construct works on these novel methods until special companies established themselves, who made it their special business to carry out such works with artisans who had had time to gain the necessary experience, and who had been practically and specially trained in the construction of such work.”

“It was only to such companies that works, which are termed purely and simply specialties, were entrusted, after they had given adequate security for the faithful, careful, and competent, execution of same.”

Now, when this work was submitted to the Secretary for Public Works, Mr. Bagge reported in this manner: He sent in a report in which he drew a comparison between Mr. Ahearn's contract on the sewage farm, and he showed clearly by his figures that this work was 50 per cent. cheaper than the work specified by the Government. I ask hon. members to mark how the Secretary for Public Works was so cleverly outwitted.

Mr. YOUNG: Where does Mr. Bagge make those statements in his report?

Mr. PARKES: He says this:

“The plans for the White's Creek and Johnstone's Creek aqueducts as designed in this office, for which tenders were invited, were prepared with a view to securing the most substantial and enduring structure at the most reasonable cost. At the time that this design was made, I had as full particulars regarding the 'Monier' principle as it was possible to obtain in the Colonies. I would also like to point out that in Europe this class of work is made a specialty, being patented,

patented, and is wholly in the hands of private companies, who are required to give a substantial guarantee for the stability of their work. I think it would not be advisable to construct at the outset a work of such importance on the 'Monier' principle.

"The total for the office design amounts to ..... £15,757  
 "The total for the contractor's Monier design ..... 15,500

"Difference..... £257"

Mr. YOUNG : The Honorable Member said it would cost 50 per cent. less !

Mr. PARKES : This is in a report laid on the Table of the House on the 5th October, 1895. Now, let me show you what the Engineer-in-Chief says. This will show how these officers catch the Minister. The Board of Reference, on the report of the Engineer-in-Chief and on his advocacy, sent in this report to the Minister :—

"The Board, in view of the fact that Messrs. Darley and Hickson are satisfied that the principle is a sound one, and that the adoption of the plan will result in considerable economy, are prepared to endorse the recommendation of these gentlemen, and now submit the matter for the Minister's consideration."

It goes on to the Minister, and he writes :

"Before approving of this proposal, I should like an estimate of the actual value of the work to be carried out by the contractors under the substituted scheme."

That is very fair. Listen to the report of the Engineer-in-Chief :

"To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm estimates were made for the work on the Monier system, as well as on the department's designs. The result was that the estimate of both works was practically the same."

But there is an estimate, according to Mr. Bagge, that it is 50 per cent. cheaper.

Mr. YOUNG : Who is to be believed—Mr. Bagge or the Engineer-in-Chief? It is simply a matter of opinion !

Mr. PARKES : But Mr. Bagge's report is the one referred to, and here we have a report submitted to the Minister by the Board of Reference recommending the adoption of this substituted work on the ground that it is cheaper but the next day he obtains a report from the Engineer-in-Chief telling him that the cost of the two methods is the same. Then he says, "That is sufficient for me ; I will authorise the substitution." Then the Minister accepts this "cheap-John" thing on a report of that description. Why, if he were charged the same price, there was the more reason that he should stick to the good and substantial work of his own office.—*Hansard*, 12th May, 1896.

\* \* \* \* \*  
 In connection with this contract, there is no doubt, from estimates I have made, and which I challenge anyone to refute, that the works saved to these contractors by the substitution of their own plans and specifications are equal to about £4,000. Instead of the saving to the contractors being only £275, as the Government put it, it is from £3,500 to £4,000.—*Hansard*, 12th May, 1896.

\* \* \* \* \*  
 In the first place, they competed for some sewerage works which were going on at Balmain. Hon. members are well aware that these contracts are tendered for nowadays at schedule prices, that is to say, quantities are taken out and the Government officers place schedule prices upon each of the items. Fifteen firms of contractors tendered for the works at Balmain at schedule prices, and the lowest tenderer was the firm of Messrs. Carter, Gummow, & Co. These contractors sent in a price ridiculously low as compared with the fourteen other firms tendering. Their tender was 28½ per cent. under the schedule prices. The next was 18½ per cent. After their tender was accepted, and after they were notified of the acceptance, they were enabled to place plans in the department for the carrying out of the work upon an entirely new plan, called the Monier system. The other contractors had no opportunity of competing with the firm for the carrying out of the work upon this system. I am assured by other contractors that whereas Messrs. Carter, Gummow, & Co. obtained a contract at £15,500, they would have been willing to carry out the job at £12,500 to £13,200, effecting a saving of from £2,300 to £3,000. Under the schedule prices of which I have spoken there is one item put down for brickwork and cement arches, 2,020 yards, at £2 10s. a yard. That was substituted under the Monier system by sandstone and concrete, put down at £1 8s. per cubic yard. There was that difference in the prices for the 2,020 yards. On that item alone a concession of £1,650 was made to these contractors. Hon. members will see that when such concessions are allowed other contractors must be quite within the mark in saying that if they had had the opportunity they could have carried out the job at a figure from £2,300 to £3,000 below that paid to this particular firm.—*Hansard*, 26th September, 1895.

\* \* \* \* \*  
 I think I have clearly proved that a concession was made to this firm by which the country lost a considerable sum of money. If the work had been properly tendered for there would no doubt have been a saving of at least £2,500.—*Hansard*, 26th September, 1895.

- \* \* \* \* \*
2. *With deceiving the Minister as to the true cost of the Monier patent by minutes written by Robert R. P. Hickson, the then Engineer-in-Chief of the Department.*
  3. *With deceiving the Minister, by which he (the Minister) accepted of certain security, which was of an improper and useless nature, for the stability of the patent for a term of three years, the deception being contained in minutes written by Robert Hickson, the then Engineer-in-Chief for Public Works, knowing that the security was not of a proper nature to submit.*

There is an exceedingly clever piece of business, and hon. Members ought to follow it. Messrs. Carter, Gummow, & Co., in submitting their tender, said that they were prepared to find sureties for £6,000 each to guarantee the maintenance of this work for five years. Their specification is here—it is not an office dictation, but their own submitted undertaking. Carter and Gummow write :—

"We have the honor to draw your attention to the conditions upon which the acceptance of our tender depends for Contract No. 77, Balmain sewerage works, and to our conversation with you of even date in connection with security required for its due performance.

"We respectfully submit that our personal sureties for the amount necessary should be taken for its completion and maintenance, and as a sufficient guarantee for the proper carrying out of the work.

"We are a firm of sound financial standing, well and favourably known to your department as contractors for many large and important contracts extending over a period of eight or nine years under the Departments of Harbours and Rivers, and Roads, Bridges, and Sewerage, which facts we trust will satisfy you as to our *bona-fides* in this matter."

That is, they offer their own firm as their sureties instead of a personal undertaking. Mr. Hickson, in reporting on this, commences by saying :—

"The accompanying letter of 4th April, 1895, from Messrs. Carter, Gummow, & Co., is a protest against the stringent supplementary specification prepared by Mr. Norrie, at my suggestion, with regard to the alteration in the design of Contract No. 77."

It is not a protest ; it is an offer in substitution of the contractors former offer.

The last paragraph of this specification states :—

"And the contractors shall enter into a bond to Her Majesty the Queen in the penal sum of £12,000, with two sufficient sureties in the penal sum of £6,000 each, to secure the removal of so much of the said works as shall have been constructed on the Monier system, &c., &c.

"The amount of £12,000 is the sum it would cost the department, at departmental rates, to renew that portion of this sewer which is built on the Monier system.

"It is right, however, to say that the tendered rates for this portion of the work would only come to £9,000 ; but, prices being abnormally low, I think it is only right to put in a sum at which the department really values the work.

"Messrs. Carter and Gummow ask that their own 'personal sureties for the amount named,'—that is, £12,000 (an amount which they do not dispute)—'should be taken for its completion and maintenance, and as a sufficient guarantee for the proper carrying out of the work.

"They go on to say that they are 'a firm of sound financial standing, well and favourably known to the department as contractors.' This is quite true. They are a firm in which I have every confidence. They have done a great deal of work under me, and I can testify that their aim always has been to turn out the very best class of work possible."

I may tell honorable Members that before this minute was written Mr. Hickson had to put a new bottom to the Pott's Hill reservoir which these contractors built, and also a new bottom to the Waterloo sewer. I want honorable Members particularly to mark what I am now going to read :

"At the same time, misfortunes happen to the very soundest firms of contractors, and the department must look a little way into the future. Their own bond for £12,000 would be really of no use if they were unfortunate enough in the meantime to become bankrupt.

"I think, therefore, it is right that the sureties should be insisted upon. They give the names of two men—Mr. George Forrest and Mr. James Gillan. From inquiries made, I believe these men to be financially sound, and I think if their names were accepted as the sureties in the penal sum of £6,000 each the department would be secured as far as it is reasonably possible to be."

When Mr. Hickson wrote that letter he knew that these two men, Forrest and Gillan, were members of the firm to which his son was the acting engineer.

Mr. YOUNG : Will the hon. Member read the last sentence ?

Mr. PARKES :

"This work will be carried out under Mr. Darley, and I recommend that the whole of the papers be sent him, to give his opinion thereon."

Mr. YOUNG : Now let us have Mr. Darley's report !

Mr. PARKES : Why ?

Mr. YOUNG : It is only fair to Mr. Hickson !

Mr. PARKES :

"I concur with Mr. Hickson. I think in accepting a new patent of this kind, and adopting it in a large and costly contract, that the department cannot be too careful in securing its position by leaving all the risk in the hands of the contractors and patentees. I, therefore, recommend that the personal names be required for further security. The names mentioned may, I think, be accepted."

I expect that Mr. Darley, without bothering himself, and relying upon Mr. Hickson, indorsed Mr. Hickson's minute. That letter was written on 5th April, and Mr. Hickson's son came up from Adelaide with Mr. Gillan to sign that bond as an independent surety, and the Secretary for Public Works accepted it.

Mr. CRICK : Does the honorable Member mean that the Secretary for Public Works knew that these men were members of the firm ?

Mr. PARKES : He must have known it, because they signed contracts two years before as members of the firm, and Mr. Hickson's son was engineer for the firm at Adelaide, and was along with Mr. Gillan. He knew that when he wrote that minute this was the case—it is a gross piece of deception on his part. That minute was written on the 5th April, 1895 ; and on the 13th April, 1895, this notice was published in all city papers :—

"Notice is hereby given that the partnership lately subsisting between us, the undersigned, John Carter, David Graham Snodgrass, George Forrest, Frank Moorhouse Gummow, James Gillan, George Maddison, and Peter Ewing, as contractors, carrying on business in Adelaide (South Australia) and Sydney (New South Wales) under the name, style, or firm of Carter, Gummow, & Co., was on the 1st day of April, 1895, dissolved by mutual consent in so far as regards the said George Maddison and Peter Ewing, who retired as from that date from the said firm. All debts due or owing by the said firm will be received and paid by the said John Carter, David Graham Snodgrass, George Forrest, Frank Moorhouse Gummow, and James Gillan, who continue the business under the same style of Carter, Gummow, & Co."

I ask the Secretary for Public Works what is the good of that surety bond ? The Engineer-in-Chief says he could not think of accepting the whole firm as their own sureties, and then he goes on knowingly and recommends that two members of the firm—that is, part of the whole—shall become sureties for the job. Is that not deception ? It is deception perpetrated with intention. I will show how clearly the intention is made out. In all other contracts the specifications contain this paragraph :—

"In submitting a tender the full Christian name of the tenderer must be given, or, when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses, must be stated in the tender. The omission of this information will render the tender liable to be declared informal."

Now, that item is omitted in the contracts for this No. 77 job. In addition to that, the statutory declarations which Messrs. Forrest and Gillan made are in these words :—

I, George Forrest, of Marrickville, in the Colony of New South Wales, householder, do hereby solemnly declare and affirm—"

Hon. Members will see that from this statutory declaration is omitted the place of residence or the fact that Forrest is a contractor. The other declaration says :—

"I, James Gillan, of Dulwich Hill, in the Colony of New South Wales, householder—"

Although he lives in Adelaide it is not so stated. It omits the fact that he is a contractor. It is fixed up so as to leave Forrest and Gillan open to sign this bond. There is no doubt about it that the whole matter is bogus ; for if the contractors become insolvent, and the whole thing bursts up, and they have no estate to come upon, what security is there to cover this risk ? I quote this to show how the Minister has allowed himself to be hoodwinked by the officers of the department.—*Hansard*, 12th May, 1896.

that they have by minutes hoodwinked the Minister—and minutes of such an extravagant nature that he ought himself to have been able to see them, because I, not a Minister but with these incomplete papers, was able to see these things in ten minutes. For instance, what Minister could make a mistake in a case of this kind ? Mr. Bagge reports to the Minister that the work on the Monier arch can be done at £6 per lineal foot as against £10 per lineal foot on Abeam's sewer work at the Sewerage farms, under the Government Engineer's scheme and plan ; and the Engineer-in-Chief states that he has made a comparison between the two, and he finds that it will cost exactly the same as the other, his reference being to this very report. Yet here is a paper showing that the test when made was 50 per cent. cheaper.—*Hansard*, 12th May, 1896.

The case which I am about to cite will illustrate the position I take up. There is a set of contractors whose names or titles are Messrs. Carter, Gummow, & Co. They contract for various works in this country—at present most of them are about Sydney. This firm of contractors are identified with the Government in the most suspicious fashion. During last week, or the week before, I asked the Secretary for Public Works whether Messrs. Gillan and Forrest were not sureties for the proper fulfilment of the contracts of this firm of Carter, Gummow, & Co. The reply I got was that Messrs. Gillan and Forrest were the sureties for those contractors. I wish hon. Members to closely follow this matter. What I am about to read is a notice which appeared in the *Sydney Morning Herald* on the 13th of this month—that is, last Friday week—not very long ago. The notice shows that a dissolution of partnership took place, and that the very sureties for Carter, Gummow, & Co.—Messrs. Gillan and Forrest—are members of this business. The following is the notice :—

"Notice is hereby given that the partnership lately subsisting between us, the undersigned, John Carter, David Graham Snodgrass, George Forrest, Frank Moorhouse Gummow, James Gillan, George Maddison, and Peter Ewing, as contractors, carrying on business in Adelaide (South Australia) and Sydney (New South Wales) under the name, style, or firm, of Carter, Gummow, & Co., was on the 1st day of April, 1895, dissolved by mutual consent in so far as regards the said George Maddison and Peter Ewing, who retired as from that date from the said firm. All debts due or owing by the said firm will be received and paid by the said John Carter, David Graham Snodgrass, George Forrest, Frank Moorhouse Gummow, and James Gillan, who continue the business under the same style of Carter, Gummow, & Co.

"As witness our hands this 1st day of April, A.D., 1895.

|           |                  |                  |
|-----------|------------------|------------------|
| "(Signed) | F. M. GUMMOW.    | GEORGE FORREST.  |
|           | JOHN CARTER.     | GEORGE MADDISON. |
|           | D. G. SNODGRASS. | PETER EWING.     |
|           | JAMES GILLAN."   |                  |

That

That is a nice state of affairs. I wish to point it out to hon. Members, if they do not quite realise it. If the Government accept sureties consisting of persons who are members of the firm of contractors, supposing the contractors go insolvent, or cheat the Government by defective work, suppose they enter into fraud to defeat the Government in large contracts of £30,000 or £50,000, what check is there upon them? The very specification which the Government issue makes it imperative that these sureties shall be disinterested persons altogether. The object of having sureties is to have men of means at the back of the contractors, so that if anything goes wrong—if the contractors go insolvent, or defraud the Government, if they carry out bad work, the Government can come down upon the sureties. But here is a case where these contracts total nearly £100,000, with sureties of their own partnership. This is a nice state of affairs. I wish to go further, and to show that there has seldom been a case, taking it in this way, in which any private business would offer to give away contracts to the extent of £20,000, without offering them to competition and to tender. No private individual would ever dream of going into such a business transaction such as that. Yet this firm of contractors, Messrs. Carter, Gummow, & Co., have received between £45,000 and £50,000 of Government contracts without any tender.—*Hansard*, 26th September, 1895.

I do not at all blame the Secretary for Public Works in this matter; we know him to be a gentleman of the strictest integrity; but there can be no doubt that the Engineer-in-Chief and the Under Secretary for Public Works have led him into various mistakes.—*Hansard*, 26th September, 1895.

The greatest mistake into which he has been led was that of putting Mr. Hickson in the position of Engineer-in-Chief and putting out of the department a man infinitely his superior—I mean Mr. Darley—to take charge of the Water and Sewerage Board.

Mr. YOUNG: He agreed with the recommendation!

Mr. V. PARKES: Of late years he has done almost anything that the Engineer-in-Chief asked him to do. There can be no doubt that as an engineer he is infinitely superior to Mr. Hickson. The Secretary for Public Works I find made a query upon the report of the Board of Reference.

Mr. YOUNG: Read it!

Mr. V. PARKES: "The tenders for this work were submitted to the Board to-day. In doing so, Mr. Hickson pointed out that fifteen tenders had been received, the lowest being that of Carter, Gummow, & Co., at 28½ per cent. below schedule rates, amounting approximately to £15,757 1s. 9d. The same firm also submitted a lump sum tender for carrying out the work according to a plan sent in by them for the sum of £15,500. The plan submitted is for constructing the work on the Monier arch principle. This system has been extensively used during recent years on the continent of Europe with successful results, and Mr. Hickson sees no reason why, under certain restrictions, the opportunity should not be taken to introduce the system in the public works of this Colony. The advantages claimed by the patentees are that works can be carried out at a much cheaper rate wherever this method of construction is used. Mr. Hickson said he had no doubt that the design submitted was thoroughly suitable and likely to be effective; and, as the main principles as regards size and inclination of sewer were as provided for in the departmental design, he was prepared to recommend it for adoption; but, if it was decided to accept the tender, a short specification of the work should be included in the bond, and provision also made for the maintenance of the work by the contractors for a certain period after completion.

"Mr. Hickson further said that, as Mr. Darley would be the responsible officer for carrying out this work, he had gone into the matter very thoroughly with that gentleman, and Mr. Darley was quite prepared to indorse his views.

"The Board, in view of the fact that Messrs. Darley and Hickson are satisfied that the principle is a sound one, and that the adoption of the plan will result in considerable economy, are prepared to indorse the recommendation of these gentlemen, and now submit the matter for the Minister's consideration."

The Board having, in support of the Engineer-in-Chief and the President of the Water Supply and Sewerage Board, agreed to substitute this system, the Secretary for Public Works wrote a business-like minute, for which I give him credit:

"Before approving this proposal, I should like an estimate of the actual value of the work to be carried out by the contractor under the substituted scheme."

That is a very wise minute. The hon. gentleman expressed a desire for schedule rates under the Monier system corresponding with those which had been furnished in the case of the ordinary sewerage works. One would have imagined that there would be no trouble in getting out that schedule; but the Engineer-in-Chief said:

"To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter & Gummow. This would take at least a week to do."

What did that slight loss of time matter when it would be two months before the contractors could start the contract? Why should not the quantities have been taken out? The sole reason was that quantities so much less would have been shown, and instead of the contractors making a profit of £2,000 they would have been cut down to a proper estimate of the value of the work.

"I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm, estimates were made for the work on the Monier system as well as on the department's designs. The result was that the estimate of both works was practically the same. Applying that comparison to this case, it would mean that the departmental estimate for the work under consideration would be £22,000."

You cannot make a comparison between two different public works of this kind. The duty of the head of the department when a Minister asked him for a further sheet of quantities was to make them out, and the Minister ought to have insisted upon that being done; but he said in effect that the engineer's reply was quite sufficient for him, and that he should approve of the recommendation of the Board being carried out. There is no reason why the head of the department should not have had a new estimate taken out for an entirely new piece of work. So much for the case of the Balmain sewerage works.—*Hansard*, 26th September, 1895.

#### 4. *With withholding the proper information concerning the above transaction from Parliament, by not laying plans and other papers upon the Table of the House when ordered to do so by Parliament.*

In connection with Contract 77, forty-one pages of useless matter has been stowed in, being blank schedule forms issued by the office, while the sheet of comparative tenders is withdrawn. No plan or figures are given concerning the Monier arch—that construction which was substituted for the Government scheme. That which was of so much importance, in order that we might be able to make a comparison, has been entirely removed from the records, and there is nothing to show what the quantities were, or what the nature of the work was, or anything about it.—*Hansard*, 12th May, 1896.

In considering the charges laid in relation to this Contract, the nature of the patent held by Carter, Gummow, & Co. is in the first place a material question. This patent, bearing date November 3, 1892, secures to the patentees in New South Wales, for fourteen years, the use of what is known as the Monier system, a peculiar mechanical association of iron and concrete, or cement mortar, whereby the high tensile strength of iron and the power of cement mixtures to resist crushing strains are very effectively combined. For many years it has been a common practice to imbed iron in the form of girders, bars, hoop-iron, &c., in concrete, with the object of strengthening the concrete body, and preventing its cracking after, or in, setting, through strains  
due

due to unequal expansion or contraction. It has also been known that the adhesion between cement and iron, and therefore between these cement mixtures and iron, is very great, insomuch that the iron becomes in effect one body with the imbedding material; that iron so imbedded is absolutely protected from oxidation; and that the ratios of expansion and contraction, due to changes of temperature, of iron and of these cement mixtures are so nearly equal that the elasticity of the two is sufficient to compensate for the difference, so as to save the combined body from risk of fracture caused by stresses set up by variations, even very great, in the temperature of the whole; the comparatively low conducting power—for heat—of the cement mixture, even though only a thin layer of it covers the iron, saving the metal from the relatively too rapid change of bulk to which, if it were unprotected, its high conducting power would lead. But, though a knowledge of these facts, and a more or less erratic application of them in practice, formerly existed among engineers and the better instructed of architects and builders, they could not be said to be reduced to a regular system or in any true sense formulated till one Monier, of Paris, accidentally discovered the effectiveness of the mode of construction now known by his name. With the help of qualified engineers, his scheme was properly worked out and placed on a scientific basis; and its use was gradually extended till it included the building—most material in relation to the present subject—of bridges of considerable span and extraordinary lightness, and of constructions—such as aqueducts—for holding water: in fact tanks of large capacity were made in this way at a comparatively early stage in the development of the system. The peculiarity of Monier's plan is this: that the iron or steel is used—in the form of a lattice—in light bars laid parallel to one another imbedded in the cement mixture at intervals of a few inches, the position, in the structure, of these bars being so chosen that, while they are fully covered and protected by, and form one body with, the cement mixture, they lie as nearly as practicable in the theoretically best position to take, and resist, the tensile strains that are likely to result from the use to which the structure is intended to be put. Across these main bars, generally, but not necessarily, at right angles to them, are laid parallel to one another, at similarly short intervals, still lighter bars, the primary object of which is to equalise and distribute across the structure unequal tensile strains that may be imposed upon the main bars, so that they may more effectively relieve one another of irregularly imposed stresses. A comparatively trifling element in the Monier patent, as it appears to your Commissioner, notwithstanding the opinion of an expert to the contrary (p. 173 of the evidence), is that the two sets of bars are tied at their intersections, for convenience in construction, while the concrete or cement mortar is being placed and pressed into position. These ties thenceforth cease to operate, the adhesion of the cement mixture to the iron constituting the real connection between the bars, and, an overlap being provided sufficient to enable the adhesion of the cement to the iron to be an equivalent for the tensile strength of the bar itself, this adhesion constitutes a perfect joint between two lengths of bar, care being at the same time taken to so lay the bars as to break joint across the lattice work. The final result is, that a structure of great efficiency, in proportion to its weight and cost, is formed. The compressive strength, which is very high, up to 2,000 lb. to the square inch, of the cement mixture operates to resist the crushing strains; the tensile strength of the iron, added to that of the imbedding material immediately surrounding it, is applied in the most effective and most completely distributed manner; moreover, the intimate adhesion between the metal and the cement mixture, and the general distribution of the former, ensure the dispersion and relief by elasticity of stresses due to unequal contraction or expansion in the setting of the cement, and so prevent the cracking at intervals which is common in masses of concrete. The comparative smallness of the cross-section which the strength of the Monier system justifies also helps the elasticity, low though it be, of the cement mixture to operate to save rupture, by strains induced in setting, as well as by those afterwards due to variations of temperature.

In its primary aspect, this system of locating and counteracting tensile and compressive strains is applicable to a compound body of concrete and iron considered as a girder. The simplest case is that of a plate supported at each end, and bearing a vertical strain. In such a structure the main bars run longitudinally, and are placed near the lower surface. The vertical strain induces tension near the lower surface, resisted by the bars, and compression in the upper part of the plate, resisted by the body of cement mixture, and, whether the structure be straight or curved, the same principle

principle applies in fact. But its action in arches, in which relation it is most in question herein, is less simple than it is in structures of the girder form. An arch, considered as such, depends for its strength on the immobility of its piers, and on the compressive strength of its materials. Taking the abutments to be rigid, an arch, as such, is assumed to be so constructed that the resultant of all the strains imposed upon it at any point shall lie, as a compressive force, within the centre third of the arch ring, and shall act approximately in the line of the tangent, at that point, to the curve of the arch; and that the compressive strength of the materials composing the arch shall be at least a fair multiple—say 10—of the maximum strain to be borne at that point; 10 being then called the “factor of safety”:—it would be a very satisfactory factor. In an arch, as such, the principle of the girder is ignored: ability to withstand cross strains is not admitted. A well built arch of brick or stone laid in cement mortar is certainly a monolith in fact, and has the qualities of a girder to a great extent; but it is unsafe to allow this in calculation—the assumption may be negatived by an imperfect joint. The same principle applies to a concrete arch, though it may be in fact a true monolith; it is safe to trust only to compressive strength of material. And, in making calculations for a Monier arch, the principle is primarily the same. The arch should have a factor of safety of considerably more than one due to the compressive strength of its principal material, the cement mixture. But in this system the quality of a girder is effectively added to that of the true arch by the insertion of a curved lattice of iron bars near the lower surface—or “intrados”—of the arch, the main bars being laid longitudinally, and extending into the piers at the skewbacks or springings of the arch. By conferring great tensile strength in the intrados, this plan enables the arch to withstand a severe cross-strain imposed upon it at any point, acting downwards. And thus it gives the arch, as a whole, power to resist a general opening strain, so as to reduce the horizontal thrust on its abutments, while the vertical pressure at the springing, of course, remains the same. In addition to this, the iron adds to the compressive strength of the arch, considered simply as an arch, and not as a girder. In the case of a bridge, a load coming on to one end may cause at the other end a bending strain, tending to increase, instead of to flatten, the curve of the arch, and putting a tensile stress on the upper part of its section. To resist this, it is the practice to imbed, for a short distance from each springing, a lattice of iron bars close to the upper surface or extrados of the arch. In the case of the arch of an aqueduct, this lattice is unnecessary; no such strain can be imposed, as the flow of the water ensures a practically equal distribution of weight from pier to pier, the curve of the arch and the points of bearing of the aqueduct having been so designed as to ensure the absence of any tensile strain on the upper side of the arch, with a nearly equally distributed load.

A Monier arch being thus designed to resist strains which cannot safely be imposed upon an ordinary arch, may, although calculated to withstand, with a substantial factor of safety, the utmost stress which it is intended to bear, on the assumption that all imposed forces are resolved into compressive strains, may be reduced to a very great extent in bulk below what would be the safe minimum, if the iron bars had not been imbedded in it. It may be treated, in fact, as a monolithic arch, with an enormous reserve of strength in its relation of girder; and, not only by reason of the binding effect of the iron, but by its action in preventing the formation of cracks in the setting of the cement mixture, this form of arch seems, as nearly as is practicable, a perfect monolith; moreover, the lightness of structure thus made permissible gives an amount of elasticity which is of great service in safely compensating for expansion and contraction under changing conditions, and unequal distribution, of temperature.

In relation to the question, connected with the use of the Monier system in aqueducts, whether such a form of construction can be made watertight, it has been satisfactorily proved in evidence that, though concretes of various richnesses are more or less permeable by water—being more permeable the poorer they are—still, a well-made “rendering” or facing of one of cement to one of sand is recognised by experts as watertight. The principal risk of leakage lies in the cracking of the body of concrete on which the rendering is laid, thereby causing cracks in the rendering; this is less likely to occur when that body is a Monier plate than when it is a more solid, and therefore less elastic, mass of unbound concrete. And it has been proved that, when oozing does take place through concrete (probably through hair cracks),  
the

the pores will soon get filled up, and the seepage will cease, especially where the permeating water contains sewage matter in suspension. Your Commissioner can also state from personal examination that a section of the carrier of the White's Bay Aqueduct (Contract 77) that had been bricked up at each end so as to convert it into a water-trough, and filled with water, and kept full for some weeks, up to the time of inspection, showed on the outside surface no sign whatever of percolation; in fact it was impossible from without to detect which section it was that had been so treated.

Mr. Baltzer, a draughtsman in the Sewerage Construction branch of the Works Department, a young man who had had a good training in engineering in Germany, became, through information received from his brother in Europe, strongly impressed with the value of the Monier system. Thinking it worth patenting in New South Wales, he communicated with Mr. Carter; the result was that the patent was applied for, and granted to Messrs. Carter, Snodgrass, and Baltzer. Though the date of registration is March 1, 1893, the letters patent bear date November 3, 1892, the day on which the application was made. About the time the Monier patent was under consideration, Mr. Baltzer was preparing a sort of treatise on the system, with illustrations. Appendix 57 is a copy of this. It was shown by Mr. Carter, after the granting of the patent, to various persons, among others to Mr. Hickson, who, as an engineer taking an interest in his profession, and with progressive ideas, naturally found a pleasure in investigating, and felt it his duty to examine into, so important a departure in engineering. He had already considered the Monier system before the taking out of the patent; but no doubt Mr. Baltzer's treatise directed his attention to it more particularly. Mr. Hickson was in possession of the treatise for some time; and the subject evidently impressed him strongly. Shortly after the registration of the patent, namely on April 3, 1893, Mr. Armstrong, as agent for the patentees, but, it would appear, acting without express instructions, under a misapprehension of his principals' actual wish—page 617 of evidence; question 18916—offered to sell the patent right to the Government for the sum of £1,500. Mr. Bagge, who was then Engineer-in-charge of Sewerage Construction, employed in the office, being asked to report on the offer, expressed himself strongly in favour of the Monier system, but doubted whether there was sufficient expert knowledge in the Colony to carry it out successfully. He also suggested that, if the patent did not differ from the Monier system—and no doubt it is identical—it would be free to public use, as it had been known in the Colony for some years. Mr. Hickson thereupon wrote a minute refusing to recommend the purchase, but suggesting that a small fee per bridge might be granted if it were intended to erect any others besides the small culvert which he said he had arranged to have built, as an experiment, without a patent fee. On page 33 of the Appendix, Mr. Bagge's report and Mr. Hickson's minute are set out in full. It would appear that it was after the taking out of the patent, but just before the offer of sale, that Mr. Carter lent Mr. Baltzer's book to Mr. Hickson; as Mr. Hickson had it for some considerable time, and was very busy, having to deal with a large number of contracts, the probability is that he had not carefully perused it before the minute of April 12, 1893, was written. After the writing of this minute he would have a better opportunity of studying the subject and becoming convinced of the merits of the Monier System. In May, 1894, the experimental culvert contemplated by Mr. Hickson was undertaken; it was begun about the end of June, and was completed about the end of July, under the general superintendence of Mr. W. A. Smith, District Engineer. It is situated at Strathfield, at the intersection of Wentworth Road with the Parramatta Road. Before the final completion of this culvert, but probably after the whole of the arch work was finished, and after part of it had by mistake been subjected to, and had successfully resisted, a very severe strain, which, in its then condition, it ought not to have been required to bear, Mr. Hickson wrote the following minute, which alludes to an offer, made in writing by Mr. Carter to Mr. W. A. Smith, and submitted by him to Mr. Hickson on his return from the country. It was first seen by Mr. Hickson on the 16th.

Divisional Engineer.—August, 1894.—Metropolitan Division.  
Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 18 July, 1894.

*Minute Paper.*

*Subject* :—“ Monier System of Concrete Arching.”

THE Monier system of concrete arching has been patented in the Colony by Messrs. Carter & Co. Where applicable, it reduces the cost of spanning an opening by about 50 per cent.

The

The patentees are willing to allow the Department to use the patent on payment of a royalty of 15 per cent. on the cost of the arch. I recommend this for the Minister's approval.

I might state I have just completed (with the permission of the patentees) a culvert on the Parramatta Road, built on this principle, with most satisfactory results, financially and otherwise.

ROBT. HICKSON.

Mr. Hickson's recommendation approved.—J.H.Y., 6/8/94.

Divisional Engineer.—2 July, 9.—Metropolitan Division.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 2 February, 1894.

Sir,

Referring to our conversation *re* the use of our patent system of bridge and culvert building, we hereby inform you that the royalty we require for the use of the same by your Department will be 15 per cent. on the cost of construction.

We are, &c,  
CARTER & CO.

There is no doubt that Mr. Hickson, in saying that the use of the Monier system reduces the cost of spanning an opening by about 50 per cent., fairly expressed the result of his general inquiries into and consideration of the peculiarities of the system. There is also no doubt that the statement contained in the last paragraph of the minute was true throughout from Mr. Hickson's point of view, and true in fact as to the mechanical success of the experiment. Whether Mr. Hickson was not misled by Mr. Smith, upon whose report he relied, on the question of expense, is not so clear; but the conclusion to which your Commissioner has arrived on this point, on which there was an extraordinary conflict of testimony, is that, at any rate as to the cost of the arch itself, the words "with most satisfactory results financially" are, in fact, correct. As to the recommendation, this appears to be consistent with the suggestion made in Mr. Hickson's former minute of April, 1893, upon which no doubt Mr. Carter acted in his interview with Mr. Smith. Mr. Hickson carefully—the words "on the cost of the arch" being added in his handwriting to the type-written body of the minute—limits the 15 per cent. royalty in such a manner that no suggestion of *mala fides* can fairly be founded upon the circumstance that at the first blush the percentage seems a high one; and the Minister approved of the recommendation, which in no way bound the Department to use the Monier system, but merely recognised the validity of the patent and fixed the price at which it might be used if it should appear expedient to apply it in public works.

It follows from a consideration of the mode in which the Monier system had formulated and beneficially applied mechanical and chemical conclusions, arrived at before, but never systematically put into practice in that peculiarly effective way, that the original patentees were fully justified in their applications for the patent which had been actually granted in France and Germany. When Messrs. Carter, Snodgrass, and Baltzer, made their application, the Examiner of Patents at first declined to pass it, on the ground that it had been anticipated; but, it would appear rightly, he withdrew his objection on further explanation and consideration. The history of the granting of the patent appears in Appendix No. 18, page 47. It might be contended that the patent was invalidated by the fact known to and mentioned by Mr. Hickson, and insisted on by Mr. Bagge, that the system had been the subject of common knowledge for some years in New South Wales before the patent was applied for; but, seeing that the Examiner had recommended it, and the Governor had signed it after it had passed all proper investigation, and seeing also that Mr. Hickson was not a lawyer, it cannot in justice be said that he was showing undue favour to the patentees, because he waived; by his action—or, rather, suggested the waiver of—the doubtful chance of successfully resisting legal proceedings for infringement; only binding the Department to a charge that it might choose never to incur, while he had already declined to be a party to the paying away of the substantial sum of £1,500, for what, on scantier knowledge than that upon which he acted in writing his later minute, he thought might turn out to be useless to the Department.

It was about this same time that plans for an extension of the western outfall sewer had to be provided to carry the western suburbs sewerage over the Botany Sewage Farm. It was to be one contract of about 40 chains in length (No. 112), joining on to Contract 101, then in course of construction by Ahearne. As an improvement upon what appeared to Mr. Hickson to be the cumbersome and costly plans hitherto adopted, Mr. Bagge was instructed to make out

out new ones, to be submitted to Mr. Hickson. No doubt the discussion, of which the Monier system had formed a prominent feature, had led up to this idea of departing from the type of heavy brick archway with short spans, generally in use, and the substitution of some lighter form of concrete arch construction. Mr. Bagge, in his report dated September 21, 1894 (the first of the papers laid on the table of the House in accordance with promise given in answer to Question No. 11, Votes No. 249, October, 1895, and printed as Appendix No. 9 hereto, page 28) proposes three alternative schemes, the characteristic features of all of which are these:—"increasing the spans of arches, introducing arches with joints, constructing the whole of concrete, and constructing the whole of the work of concrete and mortar and iron." The first plan involves concrete arches of 50 feet span, with elastic asphalt joints over piers, spandrels with lozenge-shaped openings, and concrete carriers, strengthened by imbedded longitudinal iron bars, with an elastic joint over each pier. The second scheme is similar, but with lighter arches, and much lighter work in the carrier, which is strengthened by vertical iron bars, and longitudinal channel-irons, as well as longitudinal bars, imbedded in the walls, and transverse iron braces. The third scheme was on the Monier principle, with arches of 75 feet span, and much lighter work throughout, the haunches of each main arch carrying small spandrel arches, to support the carrier between the piers and the crown of the principal arch. The main arches were to contain a continuous iron lattice, imbedded three quarters of an inch above the intrados, and a similar lattice at the same distance below the extrados, extending for about 29 feet from each springing, the small arches containing only the lower lattice. The carrier was to have an expansion joint over each pier: it was to be constructed in Monier work throughout, with lattices in the walls and below the invert. The material was to be cement mortar—1 of cement to 3 of sand—except in the piers, which were to be built of bluestone concrete. In each case the main piers and footings were of similar construction, but varying in strength according to the weight to be borne.

The comparative estimate at the end of the report shows the respective cost per lineal foot of the three schemes to be £9 11s. 5d., £6 16s. 11<sup>3</sup>/<sub>4</sub>d., and £6 6s. 8<sup>3</sup>/<sub>4</sub>d. And the respective factors of safety appear as 8.7, 10, and 5.618. As to these, however, it is most important to consider that, in the calculating of the strength of the Monier arch, the effect of the iron lattice was omitted. 5.618 is the factor of safety due to the cement-mortar—commonly called *compo.*—alone. The addition of the iron makes so great a difference that it is safe to say that the arches in No. 3 scheme are really very much stronger than in No. 2. Mr. Bagge evidently had at this time a prejudice against—or it may perhaps be called a fear of—the Monier system, founded upon what appear to your Commissioner to be quite unreasonable grounds; and, on his recommendation, No. 2 scheme was selected for Contract 112, which was let in February, 1895.

Mr. Bagge, being aware that Mr. Baltzer had some knowledge of the Monier system, had entrusted to him the working out of No. 3 scheme. This work was done, of course, in the office. Having done it, Mr. Baltzer was in a position to work out similar plans, if required, for another purpose. Mr. Baltzer had, there can be no doubt, and still has, an unbounded faith in the system, added to his personal interest. As to whether it was proper for an officer in a Government department to be allowed to hold such an interest as this may be a debatable question. Your Commissioner, however, agrees with the opinion expressed by Mr. Hickson, that, in the case of a junior officer, it would be unfair and inexpedient to hamper the free action of his intellect, and check his professional ambition, by invidious restraint.

For some three or four years before tenders were called for Contract 77, for constructing a section of the sewer which will connect Balmain with the main system, having its outlet at Ben Buckler, plans had been prepared for the aqueducts forming part of this work. These aqueducts were to stand out in a peculiarly prominent position, crossing, at a considerable height, the hollows through which the gutters known as Johnstone's Creek and White's Creek respectively flow into Roselle Bay. The people of Forest Lodge, Annandale, Leichhardt, and Balmain, all had a certain interest in preventing a disfigurement of these depressions. Representations were made to the Department asking that ugly sewers should not be constructed. The result was that rather ornamental plans were drawn. But Mr. Hickson thought these too expensive. Various changes were made. Finally the work was cut down to the still fairly artistic scheme, consisting of comparatively light elliptical brick arches,

arches, generally of 48 feet span, and brick carrier, with sandstone string-course, the specification of which forms No. 1 of the appendix hereto, the elevation being also shown in the appendix.

Tenders for Contract 77 were invited for March 13, 1895. Meanwhile, the plans prepared in the office for No. 3 scheme for Contract 112 being useless, it struck the patentees that, if that scheme were modified to suit the aqueduct work to be done on Contract 77, that would afford a suitable occasion for applying the Monier system on a large scale. Mr. E. M. Clark, at Mr. Carter's request, waited with him upon the Minister for Works, Mr. Young. Mr. Carter requested the Minister to direct that, if the firm put in an alternative tender for No. 77 on the Monier principle, it might not be rejected as informal—that it might be considered. Mr. Young replied that he saw no objection to this: that the tender might be put in and might stand on its merits. Plans prepared by Mr. Baltzer, out of office hours, of which he made no secret, were ready—in fact barely ready in time—and were handed in on the same morning on which Carter, Gummow, & Co.'s tender, at  $28\frac{1}{2}$  per cent. below schedule rates, for the Departmental scheme, and the alternative tender on the Monier principle, were put into the tender-box. Mr. Carter had some difficulty in getting anyone to accept the plans. Ordinary tenders are, of course, unaccompanied by plans, being made out on the basis of those prepared and exhibited by the Department; under the circumstances of this tender, plans necessarily formed part of it. There is no provision made for putting in plans as part of a tender; they cannot go into the tender-box; hence the difficulty, to meet which no preparation had been made, though there is little doubt that it was generally expected by the officers of the Department that an alternative tender would be put in. Anticipating that there would be no chance, especially in the face of Mr. Bagge's known prejudice, of the acceptance of the alternative scheme unless they succeeded in making out the lowest tender for the departmental plans, Carter, Gummow, and Co., really Mr. Snodgrass, consulting to a certain extent with Mr. Gummow, tendered at a rate that they calculated would just enable them to do the work without loss. This proved equivalent to a reduction of  $28\frac{1}{2}$  per cent. below schedule rates, the percentage system being in force for Contract 77. The Department's schedule estimate for the whole work was £22,037 17s. 8d.; if  $28\frac{1}{2}$  per cent. be taken from this the remainder is £15,757 1s. 9d.\* The presumed cost of the work therefore on Carter, Gummow, and Co.'s tender was this amount. Their alternative tender on the Monier system was for a lump sum of £15,500. The next lowest tender was McSweeney's, at  $25\frac{1}{2}$  per cent. below schedule rates; the next Carson's, at  $20\frac{1}{10}$  below; eleven more followed in gradual decreasing reductions and increasing totals, till the highest was Spencer's, at 5 per cent. below schedule rates. McSweeney's works out at an apparent total (see note) of £16,418 4s. 6d., and Spencer's at £20,935 19s. 9d., showing, apart from the Department's estimate and Carter, Gummow & Co.'s tender, a difference of £4,517 15s. 3d. in the estimates made by two independent and presumably competent experts of the value of this work, the utmost limit of which may be set down at £22,000. This is by no means an extreme instance of the uncertainty of estimates; speculation as to the exact nature of the ground in the tunnels and in the foundations for the piers of the aqueducts may account largely for the great difference in the tenders; the arch and carrier work if tendered for alone might have called forth less diverging offers; but experience shows that, even where every item of a work is above ground, and certain in its nature, the most extraordinary variation will be found in tenders, the amount and price of labour required to do the work being one large element of uncertainty.

The tenders were referred to Mr. Bagge in the ordinary course; he reported against the acceptance of the Monier scheme—Appendix, page 31 (No. 2). His principal expressed objection was, as before, the fact that the work was a "specialty," implying want of confidence in the ability of Australian managers and workmen to carry it out properly.

This occurred in the middle of March; in April, Mr. Darley was to relieve Mr. Hickson as Engineer-in-Chief for Metropolitan Sewerage Construction. The next step in the history of this contract appears in the following report, which your  
Commissioner

---

\* NOTE.—In carrying out an item of £4 in the addition of the schedule items a mistake of £36 was made, 40 having been put down in the pounds column instead of 4. The correct total, therefore, is £22,001 17s. 8d., and the total of the tender should be £15,731 6s. 11d. This error was only discovered during the holding of the inquiry. It is really immaterial.

Commissioner finds to be a true account of what occurred, followed by the Minister's minute, and Mr. Hickson's reply :—

Report of Board of Reference.

Board of Reference.—Tenders for Contract No. 77, Main Northern Sewer, Annandale and Leichhardt Sections.

THE tenders for this work were submitted to the Board to-day. In doing so, Mr. Hickson pointed out that fifteen tenders had been received, the lowest being that of Carter, Gummow, & Co., at 28½ per cent. below schedule rates—amounting approximately to £15,757 1s. 9d. The same firm also submitted a lump sum tender for carrying out the work, according to a plan sent in by them, for a sum of £15,500. The plan submitted is for constructing the work on the "Monier" arch principle. This system has been extensively used during recent years on the Continent of Europe with successful results, and Mr. Hickson sees no reason why, under certain restrictions, the opportunity should not be taken to introduce the system in the public works of this Colony. The advantages claimed by the patentees are that works can be carried out at a much cheaper rate wherever this method of construction is used. Mr. Hickson said he had no doubt that the design submitted was thoroughly suitable and likely to be effective, and, as the main principles as regards size and inclination of sewer were as provided for in the Departmental design, he was prepared to recommend it; but, if it was decided to accept the tender, a short specification of the work should be included in the bond, and provision also made for the maintenance of the work by the contractors for a certain period after completion.

Mr. Hickson further said, that, as Mr. Darley would be the responsible officer for carrying out this work, he had gone into the matter very thoroughly with that gentleman, and Mr. Darley was quite prepared to endorse his views.

The Board, in view of the fact that Messrs. Darley and Hickson are satisfied that the principle is a sound one, and that the adoption of the plan will result in considerable economy, are prepared to endorse the recommendation of these gentlemen, and now submit the matter for the Minister's consideration.

J. BARLING,

Chairman.

C. W. DARLEY,

Engineer-in-Chief, Harbours and Rivers.

ROBERT HICKSON,

Commissioner for Roads.

H. DEANE,

Engineer-in-Chief, Railway Construction.

J. W. HOLLIMAN, Secretary,  
20 March, 1895.

W. L. VERNON,

Government Architect.

Submitted.—J.B., 27/3/95. Before approving of this proposal I should like an estimate of the actual value of the work to be carried out by the contractors under the substituted scheme.—J.H.Y., 27/3/95.—Mr. Hickson.—J.B., 28/3/95.

To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm, estimates were made for the work on the Monier system, as well as on the Department's designs. The result was that the estimate of both works was practically the same. Applying that comparison to this case, it would mean that the Departmental estimate for the work under consideration would be £22,000.—ROBERT HICKSON, 28/3/95. Under Secretary.

Submitted.—J. BARLING, 28/3/95. This is quite sufficient for me, and I now approve of the recommendation of the Board being carried out.—J.H.Y., 29/3/95. Accept.—D.C.McL. (*pro* U.S.), 29/3/95.

The question is whether this minute was made in good faith, or whether it was an untrue statement, made with the intention of misleading the Minister, and enabling the contractors to make an unfair profit out of this substitution of a scheme of their own for the departmental scheme.

The facts which may be taken as having been present to Mr. Hickson's mind at the time he wrote this minute are the real data upon which to found an answer to this question. A vast amount of evidence has been produced for the purpose of showing what would be the fair cost of the Monier work contained in the Contract; being given by experts, of course it varies enormously; the absolute value of work, its value relatively to that contained in the departmental scheme for the same aqueducts, and its value compared with that of the work in Contracts Nos. 101 and 112, these have all been gone into; such evidence could not be excluded, as it was more or less remotely material; but its value is generally very small, inasmuch as the working of Mr. Hickson's mind, with the facts probably and properly present to it on that day, March 28, 1895, when he replied to the Minister's minute, is what has to be sought out.

It is only as far as these conclusions and comparisons can be presumed to have been present to, or within the reach of, his mind that they can in any way bear upon the question in issue. Now the plans which Mr. Hickson alludes to in his minute

minute as having been prepared for the extension of the sewers on to the sewage farm were certainly those attached to Mr. Bagge's report already mentioned—No. 9 of Appendix, page 28. At the foot of the "Summary" at the end of the report are these words :—

|  | Cost per lin. ft. | Cost per lin. yd. |
|--|-------------------|-------------------|
| Mr. Ahearn's present outfall sewer, Contract No. 101, if calculated for two sewers of 6 feet diameter, would cost ... .. | £10 16 1          | £32 8 3           |

and in the first paragraph of the report—page 28—this comparison is explained by the reference to "two six-foot diameter outfall sewers." At the same time, it is quite likely that a careful reader of the report, keeping his attention fixed on the principal subject of comparison, that between the three suggested schemes, might fail to notice this further comparison between them and a distinct and very different work. To the writer that comparison was very important. To a stranger to sewerage aqueduct building it would be necessary, to give a basis of calculation of the economical aspect of the proposed schemes ; but to an Engineer with such a basis in his mind, the result of experience and special knowledge, it might be unnecessary, and so he might pass it over and forget its existence, if he had ever for a moment noticed it. Contract 101 is a heavy aqueduct, of concrete piers, brick arches of small span, with solid spandrels, and massive concrete superstructure, carrying three parallel sewers each of circular section 6 feet in diameter (section, therefore, 28·27 square feet). In the nature of its materials it is of inexpensive construction ; but the quantities used are very large, and the general character of the design may be described as cumbrous. It was originally intended to be banked up and hidden, a treatment for which its architectural features eminently fit it ; in the end the bank was omitted as unnecessary. At the end of this aqueduct, where Contract 112 begins, there is to be an off-take, of capacity equivalent to that of one of the three cylindrical sewers. No. 112 had, therefore, to carry the contents of two of these sewers only. For the purpose of comparison, inasmuch as he was making an estimate for an extension of No. 101, with two-thirds of its capacity, Mr. Bagge very naturally calculated the cost of an aqueduct similar to 101, but of the proportionally reduced size, and used this as a basis of comparison. This comparison, it will be seen, works out thus :—No. 101 reduced being taken as the standard 1, and No. 1 proposed scheme being neglected as immaterial, No. 2 works out approximately at ·63 ; and No. 3 (Monier), at ·59. So that while the Monier scheme appeared to be likely to cost nearly the same as No. 2, which had been applied to Contract 112, being only about one-twelfth less expensive, the cost of each of these proposed plans of construction came to less than two-thirds of that of an aqueduct similar to No. 101 ; and, if the departmental scheme for No. 77 was not less expensive than the aqueduct in No. 101, it would follow that Mr. Bagge's third scheme, on the Monier system, ought to be built for not more than two-thirds of the cost of such aqueducts as appear on the departmental plans for 77. Therefore, unless by the 5th of April Mr. Hickson had acquired further information, inasmuch as the fourth paragraph of his letter of that date (in reference to security) stated that, on Carter, Gummow, & Co.'s tender for the departmental scheme, the aqueduct work would come to £9,000, it would follow that, supposing he had these several data clearly in his mind, he might have concluded that the aqueducts constructed on the Monier plan would probably cost the contractors some £3,000 less than those built on the plans of the Department. If this were so, then his action in writing the minute would lay him open to grave suspicion. As to a comparison between the two schemes—the Monier aqueducts in No. 77 and Mr. Bagge's No. 3 scheme—it may on the whole be taken as if they were similar and proportionate when viewed generally without critical examination, though in fact there was a difference. On the one hand the lattice near the extrados of each arch provided in Mr. Bagge's scheme was omitted in the Monier scheme for No. 77 ; this would be a slight comparative cheapening of the latter. Moreover, Mr. Bagge's No. 3 scheme was worked out for an area of carrier of 56·54 square feet, while the aqueducts in No. 77 have a mean area of only about 12·5 square feet ; yet, on the other hand, the arches in the latter, as compared with the former, have actually been slightly increased in thickness, partly, as Mr. Baltzer explained, out of deference to popular prejudice, partly because the exposed position, the height, and the narrowness of the construction, rendered it necessary to provide an unusually large margin of strength to resist wind pressure.

The

The question how in fact the Departmental aqueducts in No. 77 compare with that in No. 101 has been gone into by two witnesses, thoroughly expert, and of unimpeachable integrity—Messieurs McCredie and Thompson. Their estimates of the price per foot run of an aqueduct with one carrier, sectional area 28·27 feet, built on the principle of No. 101, very nearly agree, and are so close to their estimates of the cost of the Departmental scheme for the aqueducts in No. 77 as to be—allowing for the necessary elasticity of all estimates—practically identical; from this it would follow that, inasmuch as the sectional area of the carrier of No. 77 is only, on an average of the two aqueducts over Johnstone's and White's Creeks, 12·5 feet, those aqueducts are more costly for a given carrying capacity than No. 101. Therefore, the facts appear to justify the conclusion of bad faith, on the assumption that they were clearly before Mr. Hickson's mind when he wrote the unfortunate and ill-advised minute under consideration. Everything, now critically examined, seems to point to the conclusion that he ought to have insisted on the taking out of quantities, as requested by the Minister. But, after hearing the witnesses, and carefully considering their evidence, your Commissioner has come to the conclusion that Mr. Hickson did not regard the data before him in the light in which they now appear. When examined on the real meaning and effect of Mr. Bagge's minute, Mr. Hickson appeared to your Commissioner to be really puzzled. He seemed never to have noticed, or, at any rate, to have fully grasped, the intention of the comparison between the three proposed schemes and Ahearn's contract; his attention appears to have dwelt almost entirely on a comparison between No. 2 and No. 3 of these three schemes, the difference between which—the cost being nearly as 12 to 11—was so small that Mr. Hickson, with his extensive experience of the vagueness and elasticity of estimates, would naturally, and apparently did, regard them as equal in expense. Then he seems to have had in his mind that No. 101—if he thought of it at all—was a wasteful and unnecessarily expensive, though ugly, piece of work, while the aqueducts in No. 77, which he had caused to be reduced in cost more than once, were, with their elliptical arches, saving material in the spandrels, and their general lightness, though graceful, and in fact ornamental, on the whole fairly inexpensive structures. And so he came to make, honestly, though, in your Commissioner's opinion, erroneously, the comparison of identity of cost between Mr. Bagge's No. 2 and No. 3 schemes, assuming that No. 2 was fairly comparable with the aqueduct work in the departmental plans for No. 77, and so concluding that, on the whole, the proposed Monier aqueducts would compare approximately in cost with the Departmental aqueducts in that Contract.

But it was contended, and with some show of reason, that Mr. Hickson's minute was also inconsistent with his former statement in his minute recommending the acceptance of the proposal for allowing royalty at 15 per cent., when he asserted that, in spanning an opening, the Monier system would generally effect a saving of 50 per cent. Mr. Hickson explained, in evidence, that, in a form of construction in which the full benefit of the system was gained, this was a fair expression of the truth. And indeed the data that Mr. Hickson had had an opportunity of perusing fully justified this statement. But, under the peculiar circumstances of the aqueduct, the saving would be very much less. In the first place, there were all the unfavourable conditions—the experimental nature of the work, with the heavy responsibility to be thrown on the contractors, and the probable cost of the guarantee—the fact that, to satisfy as well the hesitation of the department in accepting so novel a scheme, popular prejudice against what would certainly be called a risky experiment, if built any lighter, and the contractors themselves, to whom failure would be almost ruinous, the work was designed very much more massive than it really need be; and, moreover, there was the peculiarity already alluded to which made the application of the system less relatively advantageous in saving material. As put by Mr. Hickson and other witnesses, a broad road bridge hardly requires any calculation for lateral strength to resist wind pressure beyond what it necessarily has incidental to its vertical stability, while such structures as these aqueducts must be built with so much regard for resisting horizontal thrust as to compare in weight with brick and stone designs of the same carrying capacity very much less favourably than where strength in a vertical plane has practically alone to be considered. The 50 per cent. saving, therefore, hoped for under the best conditions could not be expected here. The truth, as your Commissioner finds it,

was

was this: Mr. Hickson had a firm belief in the new system; in the face of Mr. Bagge's steady opposition he was anxious to give it a fair trial; he knew that the plan proposed to be adopted was almost certain to be a success; he was satisfied that the result would be to give the country a structure at least as strong as that designed by the Department, more graceful in design, and probably more durable; he found that the cost would almost certainly be at least £257 less, and probably less by a larger sum, than it would be if, and when, No. 77 came to be finished at schedule rates as designed by the department; he was anxious not to lose this chance of putting into practice a new departure in engineering of which he was honestly and enthusiastically in favour, under conditions that ensured an almost absolute freedom from risk to the country. He knew how difficult, if not impracticable, it would be to call for tenders for work on the Monier principle, seeing that Carter, Gummow, & Co. held the patent; he must have known that in tendering at 28½ per cent. below Schedule rates, carefully made out by Mr. Bagge, the Contractors had cut their tender down to the very lowest possible limit, so that even if the Monier plans did work out somewhat cheaper than the departmental scheme, the Contractors' alternative tender must be a low one: if, under all these circumstances, Mr. Hickson possibly acted with less discretion or less careful reflection than he might have exercised, in opposing the taking out of quantities, his conduct was at least excusable, and appears to your Commissioner to be free from all suspicion of dishonesty or consciously unfair bias.

The various estimates of how much the alternative scheme ought to have cost, or how much it is costing, are interesting, but really have little bearing upon the question really in issue; they severally go to show that the Monier scheme ought to cost from £4,000 less than the departmental scheme up to something in excess of it; they are all more or less speculative—like tenders in general, which of course are estimates, and yet vary so remarkably. The most reliable, because they are those founded upon the best actual observation, come closest to the lump sum of £15,500, at which sum Mr. Gummow and Mr. Snodgrass have explained how, leaving a moderate margin for profit, they came to fix their tender—p. 647, Q. 19,598, p. 695, Q. 21,073. As to whether they really meant to carry out their first tender at 28½ per cent. below schedule rates, if the alternative tender was refused, your Commissioner is satisfied that they did intend to do so; the very slight evidence to the contrary is utterly unsubstantial. Your Commissioner does not consider it necessary to go in detail through the various estimates alluded to, except to point out where they are to be found in the evidence or Appendix.\*

For the purpose of showing Mr. Hickson's bad faith or incompetence in approving the use of concrete or compo. where a water-tight structure was required, a quantity of evidence was given as to Ahearn's Contract, No. 101. The expansion and contraction to which concrete, in common with all other known bodies, is subject, in changes of temperature, has undoubtedly affected this aqueduct. Contraction, in the exceptionally cold winter of 1895, first caused cracking, at intervals, of the main body of the superstructure. The fact that the upper part of the superstructure, from the horizontal diameters of the carriers upwards, being built of sandstone concrete, contracted more than the bluestone concrete, of which the lower part was built, aggravated probably by the greater fall of temperature in the upper part due to the high radiating power of the black asphalt roadway exposed to the clear winter sky, caused a series of short diagonal cracks in the sides of the carriers, and very noticeable parting on the outer faces of the superstructure, wherever the concrete work, as it progressed, was stepped back and then carried on again. Probably this would have been averted or reduced to a trifle, by the carrying out of the original idea of earthing up the aqueduct. If the carriers had been in use the flowing sewage would have had a great effect in equalising the temperature and preventing the contraction. As it is, your Commissioner is satisfied—see reports on page 509 of the evidence—that no serious consequences will ensue; a few slight repairs, and the action of the sewage, will probably prevent any serious leakage. If the use of the aqueduct begins in the summer, when expansion has closed the cracks, it may be hoped that the next winter will have very little effect in re-opening them. But a comparison between the rigid mass of concrete in No. 101, and the open elastic  
Monier

\* Evidence—W. Gilliver, p. 138: Professor Warren, p. 319: G. McCredie (amended report), p. 343: T. Williams, p. 361: B. Rhodes, p. 368: J. Davis, p. 506: T. Clymer, p. 532: G. Chamier, p. 548: F. M. Gummow, p. 639. Appendix 15, p. 39, G. McCredie's estimates: 17, p. 42, W. Thompson's.

Monier work, with its expansion joints, in 77, is absurd. A fall of temperature in these open arches and in the carriers might be expected to act, in a general way, thus :—the bow of the main arch would become shorter, and the crown would descend ; at the same time the carrier would, by radiation, and also by the equalising effect of the sewage in the lower part of it, contract more above than below ; this would tend to curve each section of the carrier so as to be concave on the upper line ; this curvature would work in with the flattening of the arch ; the expansion joints would allow for the movement of the carrier ; the elasticity of the very light spandrel arches would give compensation in the spandrels ; no serious fracture need be feared. Expansion would be counteracted in an exactly converse way. No. 77 may as well be compared with No. 101 as a racing sulky with a bullock dray. All the evidence given has also satisfied your Commissioner that the contractors have taken an earnest and intelligent interest in the question of construction and material, using everything of the very best, and sparing no expense to make the work successful. In spite of some remarkable evidence as to sand and its qualities, your Commissioner finds that the crushed sandstone used for the compo. and concrete is eminently suitable for the purpose.

It was originally intended that the carrier-walls, as well as the arches, should be built of compo. ; but, after a short section had been so constructed, Mr. Darley considered that for the carrier walls a very rich bluestone concrete, consisting of five parts of bluestone screenings, three of sand, and two of cement, would be better. This has been used since, the contractors freely assenting, though the cost of this concrete is greater than that of compo. Seeing that elasticity is especially essential in the arch work, and that it acts most beneficially in a material of uniform composition, the compo.—a more homogeneous body than concrete—is considered most appropriate for the arches.

As doubts have been raised of the value of the compo. used in the arches, it is proper to state that very successful experiments were made at Johnstone's Creek, before the aqueduct work was begun. Experimental arches were made of the same materials as those afterwards used in the aqueduct. They are very light in build ; their hardness and elasticity are most remarkable ; they are still to be seen on the southern side of the eastern end of the Johnstone's Bay aqueduct. And, before the question of Contract No. 77 arose, experiments had been made, with satisfactory results, both by the Department and the patentees, on Monier arches and plates ; so that, apart from European and American experience, and beyond that of the Monier culvert, the use of the system in the aqueducts, in so far as strength and solidity are concerned, was far from speculative.

In considering the general strength of the aqueducts, it must be borne in mind that, though the arches are calculated (Mr. Cutler's evidence, page 556, Q. 16865), to bear the weight of the carrier when full as if it were distributed over every point, in fact as if it had no power to hold itself up, yet really, constructed as it is with a continuous vertical lattice on each side, and another horizontal lattice under the invert, and with longitudinal imbedded channel irons in the lower corners of its cross section, connected by bars, also imbedded, the carrier forms an enormously strong girder, capable at least of holding itself up between the piers and the crown of each main arch, if not from pier to pier ; and also possessed of great lateral stability, the base of the carrier being very strong to resist horizontal pressure, and each side, with its imbedded lattice close to its outer face, having good power to resist a force imposed on the opposite side ; while the two sides are enabled to help each other in this relation by means of the compressive strength of the fixed Monier plates covering the carrier.

One objection that was raised by certain witnesses to the use of the system here was the assumed severity of the climate. This is absurd. The seasonal range of temperature in Australia is very much smaller than in places at similar distances from the sea in Europe. Near Sydney the diurnal range is also moderate. Extremes of heat in inland Europe run very near to the highest readings known in the neighbourhood of Sydney, and these last occur at rare intervals. On the other hand Sydney may be said to suffer from no extremes of cold. The position of the summer solstice of the south in the earth's orbit, and the relatively low latitude of Sydney, compared with even the south of Europe, give Sydney more and more effective radiated sun's heat than even Naples ; but a body of concrete would almost certainly rise to a higher temperature in July in Naples, than in January in Sydney, on account of the higher mean air temperature of summer in Naples ; in January in Naples it would certainly  
become

become much colder than in July here. The climates of inland Germany and France are more extreme than that of Southern Europe, and would try these aqueducts very much more than the climate of Sydney. The flow of sewage in the carrier will act as an effective equalizer of temperature; and, generally, the hotter the weather the larger the flow. In so many different ways were attempts made to discredit and stultify the department in relation to this work, and to shake the confidence of the public both in the management of the Sewerage Construction Branch and in the works that have been and are being carried out by it, that your Commissioner has felt it his duty to express these opinions, founded upon the evidence and on general knowledge accessible to all. What has been represented as dishonest, foolish, or inconsiderate, action appears to your Commissioner to have been honest, sensible, and well considered; and, although unforeseen failure may attend any human effort, your Commissioner believes that the chances of success in this particular scheme are very near to certainty. The balance of expert testimony is strongly in favour of the ample sufficiency of three years as a test of the permanence of the work.

The next question to be considered in dealing with Mr. Hickson's good faith is his action in relation to the sureties. In reporting on the tenders Mr. Bagge had drawn attention to the fact, that a substantial guarantee was required in Europe for the stability of these works. The Board of Reference had suggested that provision should be made for maintenance for a certain time after completion. When the Minister finally decided to accept the tender, very stringent terms were imposed—a contract for maintenance for three years after the expiration of the ordinary maintenance period of three months, with a bond by the contractors in the penal sum of £12,000, and two sureties in £6,000 each, to secure the removal of the Monier work during that term, if the engineer shall be dissatisfied with it, and the re-erecting of the aqueducts according to the original specification. The contractors demurred to these terms, and asked to be relieved of the necessity for finding sureties. Mr. Hickson reported on this request. The following report and minutes explain exactly what took place:—

The Engineer-in-Chief for Sewerage to The Under Secretary for Public Works.

*Minute Paper.*

Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 5 April, 1895.

THE accompanying letter of 4th April, 1895, from Messrs. Carter, Gummow, & Co., is a protest against the stringent supplementary specification prepared by Mr. Norrie, at my suggestion, with regard to the alteration in the design of Contract No. 77.

The last paragraph of this specification states:—“And the contractors shall enter into a bond with Her Majesty the Queen in the penal sum of £12,000, with two sufficient sureties in the penal sum of £6,000 each, to secure the removal of so much of the said works as shall have been constructed on the Monier system, &c., &c.”

The amount of £12,000 is the sum it would cost the Department, at Departmental rates, to renew that portion of this sewer which is built on the Monier system.

It is right, however, to say that the tendered rates for this portion of the work would only come to £9,000; but, prices being abnormally low, I think it is only right to put in a sum at which the Department really values the work.

Messrs. Carter and Gummow ask that their own “personal sureties for the amount named,” *i.e.*, £12,000 (an amount which they do not dispute), “should be taken for its completion and maintenance, and as a sufficient guarantee for the proper carrying out of the work.”

They go on to say that they are “a firm of sound financial standing, well and favourably known to the Department as contractors.” This is quite true; they are a firm in which I have every confidence. They have done a great deal of work under me, and I can testify that their aim always has been to turn out the very best class of work possible. At the same time, misfortunes happen the very soundest firms of contractors, and the Department must look a little way into the future. Their own bond for £12,000 would be really of no use if they were unfortunate enough in the meantime to become bankrupt.

I think, therefore, it is right that the sureties should be insisted upon. They give the names of two men, Mr. George Forrest and Mr. James Gillan. From inquiries made I believe these men to be financially sound; and, I think, if their names were accepted as the sureties in the penal sum of £6,000 each, the Department would be secured as far as it is reasonably possible to be.

This work will be carried out under Mr. Darley, and I recommend that the whole of the papers be sent him to give his opinion thereon.

ROBT. HICKSON,  
Engineer-in-Chief for Public Works.

Mr. Darley for report.—J.B., 5/4/95. I concur with Mr. Hickson. I think in accepting a new patent of this kind, and adopting it on a large and costly contract, that the Department cannot be too careful in securing its position by leaving all the risk on the hands of the contractors and patentees. I therefore

therefore recommend that the personal names be required for further surety. The names mentioned may, I think, be accepted.—C.D., Engineer-in-Chief, Metropolitan Sewerage Construction, 8/4/95.

For Minister's approval as to course suggested in regard to sureties.—J. BARLING, Under Secretary for Public Works, 9/4/95. Approved.—J.H.Y., 10/4/95. Mr. Norrie.—J.N.O. P., 10/4/95.

Messrs. Forest and Gillan were at this time, and had been for some years—in fact, they are still—members of the firm of Carter, Gummow, & Co. The deed set out in Appendix No. 19, page 49, explains the terms of the partnership, Mr. Forrest having been a member of the firm of Carter & Co., and Mr. Gillan of the firm of Gummow & Gillan, which firms amalgamated on August 25, 1892.

It was as members of this firm carrying on contracts in South Australia that Mr. Hickson knew these two gentlemen. His evidence given before the Commission, on pp. 176, 177, explains this. Appendix No. 25, p. 57, which gives in a tabulated form a list of contracts held by the various combinations of persons connected with Carter, Gummow, & Co., shows that since the formation of that firm neither Mr. Forrest nor Mr. Gillan had actually joined as contractors with the Government in any contract. Whatever business relations persons may in fact have with one another, it is clear the department only recognises the contractors named in the contract. So many various combinations occur among the different contractors who from time to time carry out Government works that the mere fact that certain names have been associated at one time hardly leads to any presumption that their owners, years afterwards, stand in the relation of partners. At the end of 1893, Mr. Hickson appears to have been aware that, for the purpose of the Adelaide contract, Messrs. Forrest and Gillan were partners in the firm. It was as such that he formed a favourable opinion, on Mr. Kane's authority, of their commercial standing. He had never heard of their leaving the firm. On the other hand, he must have known that they were not principals in Contract No. 77. The circumstances might certainly have suggested an inquiry whether they were not continuing partners in the same contracting business. It would have been wiser to make such inquiry; but this seems not to have struck anyone concerned. The usual forms were gone through in the office; and no one thought of asking the important question: What, if any, is the business relationship between the contractors and the proposed sureties? To draw from these facts the conclusion that Mr. Hickson was unfairly favouring the contractors by intentionally allowing them to slip in as bondsmen their own partners, whose stability depended on that of the firm, and who, therefore, may, in the event of its bankruptcy, turn out to be worthless, would, under all the circumstances, be improper. At the same time your Commissioner would suggest that more care should be taken in determining the ability of sureties to answer to their bonds than appears to be exercised according to the usual practice of the department. No doubt the necessary inquiry is always invidious, but the practice of justifying bail in courts of law may be recommended as an example to Government Departments when they find it proper to rest the interests of the public on personal security. What, in fact, was the position of Messrs. Forrest and Gillan, what property in New South Wales, New Zealand, or elsewhere, they actually held, is so slightly material as to be unworthy of comment. It was their repute at the time that the department had to do with. It would have been well to find what property they were possessed of; the investigation not having been made, and the department being certainly ignorant of their actual position in that respect, neither Mr. Hickson nor anyone else concerned can be judged by reference to the value of their real or personal property, as it stands now or as it stood then.

The last charge under the head of Contract 77 has reference to the withholding of plans from Parliament. The order runs thus:—"Copies of all papers and correspondence in connection with the contracts of Messrs. Carter, Gummow, & Co., at Marrickville, Balmain, North Sydney, Johnston's Creek, and Stanmore, including the specification, schedule, &c., for original contracts, and for substituted ones, and all vouchers paid and details of same, and such other matter included in the transactions, from commencement to the present date." This order not only does not include, but impliedly excludes, plans. The general question of withholding papers has formerly been dealt with in this report.

On the whole, your Commissioner is of opinion that the charges laid under the head of Contract No. 77 have not been substantiated, either in the form and to the extent in which they are expressed by Mr. Parkes in the tabulated list or, more generally, in his speeches in Parliament.

CONTRACT

### CONTRACT 79 (NORTH SHORE).

1. *With improperly granting to Messrs. Carter, Gummow, & Co., without re-tendering, Contract 79, by which a loss was sustained by the Crown.*
2. *With allowing Messrs. Carter, Gummow, & Co. to manipulate the items in the schedule prepared by the department, so as to increase the profits of the contractors to the loss of the Crown.*

Now, let us take Contract 79—the North Shore contract. This contract was let to Carter and Gummow on a schedule in the same manner as the others—that is, they undertook to do what is called guttering and gadding work—that is manual labour, to the extent of 1,300 yards. If Honorable Members will turn to page 333, they will see that Carter, Gummow, & Co. in their schedule undertook to excavate 1,300 yards, at 63s. for manual labour. They then undertook to excavate 3,000 yards and 2,500 yards blasting work, which was to be done at 60s. and 78s. Other contractors estimated for the gadding work £6 and £7, but the estimate of Carter, Gummow, & Co., was 63s.; and for blasting they estimated at 78s., whilst other contractors estimated at about 60s. The Government substituted the blasting work for the manual labour, and by that means gave the contractors about £4,000 or £5,000. As Honorable Members go further down they will find that the firm were paid in excess £1,598 and £600, that is £2,198 altogether. This was paid for concrete to fill up defects, in spite of the understanding being that they should not be so paid.—*Hansard*, 12th May, 1896.

I have pointed out that the schedules have been adjusted so as to allow the contractors to blast, and that blasting has been the cause of all that defective work; and the workmen told me that in some cases the cavities left have been so great that a man could walk along them. This state of affairs ought to receive a severe check at the hands of the House. If I were to read everything that has taken place, as disclosed by the minutes, the House would be astonished at the looseness with which our Ministers administer the public funds. As regards Contract No. 79, there can be no doubt that if the same concession had been given to other contractors as to Carter, Gummow, & Co., as disclosed by the papers, the country would have been benefited to the extent of £10,000 on this job. Since I moved the adjournment of the House on the subject upon a former occasion, the Water and Sewerage Board have called for tenders for a third section. Two sections were given to Carter, Gummow, & Co. without tenders, but the third tender was accepted at 40 per cent. under the schedule prices of Carter, Gummow, & Co.'s contract. That is conclusive evidence of the concessions that have been given to these contractors.

Mr. McMILLAN: What interval of time elapsed?

Mr. PARKES: About four months.

Mr. McMILLAN: And what was the alteration in prices?

Mr. PARKES: I have pointed out to Honorable Members that blasting was substituted for manual labour in the excavations, and now I want to point out that all this has been done against the repeated protest of the residents of the district. There were letters constantly pointing it out. This contract was carried on during the nighttime, and one officer pointed out in his report that the work was not supervised during the nighttime. He says, "This work has been carried on at nighttime, when no supervision could be given."—*Hansard*, 12th May, 1896.

I will read the report of Mr. Bagge, who tried to save the department from entering upon that scheme of the Monier patent. Mr. Bagge points out where they were proposing to allow the contractors to substitute blasting for manual labour. He says:—

"Messrs. Carter, Gummow, & Co. have undoubtedly fixed their schedule prices speculatively to increase their profits on the contract as much as possible; and, if so, to the loss of the department." There is no doubt that there is evidence of what the officer says right through the job. If we look through the whole of the papers we shall find that these contractors have in every case received thousands of pounds, which, if the matter were tested under proper regulations, they could not claim from the State.—*Hansard*, 12th May, 1896.

Again, in the Contract No. 79, that old trick of subducts is played. These subducts are simply drains, which are put under the beds of the sewers where there may be waste rock or imperfect earth of any description. The object is to drain into each shaft any water which may accumulate, and which may damage the beds of the sewers. They are absolutely essential to the sewer, but if they are not put in it can never be found out afterwards that they were not put in. Messrs. Carter and Gummow estimated these subducts at £4 5s., whereas other contractors estimated them at £452 and £666. This is a nice state of affairs! It is fair to assume that Messrs. Carter and Gummow must have been told by the officers that the subducts need not be built. The whole of the schedule is treated in the same way. If the work had been carried out conscientiously by the department, on this job alone there would have been a saving of at least £10,000. If I had been the engineer who had had to settle this contract I should have had the work carried out in such a manner that the country would certainly have been saved £10,000.—*Hansard*, 12th May, 1896.

3. *With returning the cash security and the retention fund to the contractors, in violation of the contract agreement and to the advantage of the contractor, and hazarding the interests of the Crown.*

In another place the Engineer-in-Chief says, in answer to me, cash security of £4,000 was taken in the case of the North Shore contract. I will show by the papers directly that although a cash deposit of £4,000 was taken in this contract that cash deposit was returned to the contractors six months before the job was completed.—*Hansard*, 12th May, 1896.

The Minister, although a bond was accepted for £4,000 for the due completion of the work, and he ought to have kept back the retention money, six months before the job was certified for, and before it was completed, returned the whole of the bond money.

An HON. MEMBER: What security had he for the completion of the work?

Mr. PARKES: None.

Mr. YOUNG: Because the work was done.

Mr. PARKES: It was not done, and the contract said clearly that the money must be retained in hand three months after the certificate that the work was satisfactorily completed by the contractor. The retention money has been returned, and I want to produce an affidavit made by one of the workmen on this job to show what risks the Administration took in returning the bond money. That money might still be in hand to repair the damage disclosed in this affidavit; but the Government have returned it all, and have no remedy. This affidavit is sworn by a labourer who is still working for Carter, Gummow, & Co. He says:—

"I am a labourer on Contracts 79 and 79A, putting in brickwork and concrete as packing. From shaft No. 13 of Contract 79 the blasting has blown out large cavities from 4 feet to 4 feet 6 inches over the top of the brick lining, which under the contract should be tightly packed with cement, but which have not been packed with cement, except here and there where the rock comes close to the brickwork.

"To my own knowledge this defective work commences from 270 feet down stream from shaft 13 to 380 feet; and to my firm belief, from the conversation between myself and several others, the whole work is of a similarly defective nature; and in all the links in which I have worked none of the packing is done as required to specification." That document was sworn to, and cannot be refuted. The action of the Administration in giving up the cash bond, which no engineer, no business manager in any capacity, would have done, has left the Government with only one resource, namely, that of going to law with the contractors. If that this affidavit says is true, they have no remedy otherwise than the costly remedy of an action at law. Actions of that sort ought to condemn the Administration who allow them. Why should they take these risks? Everything is done as against the State.—*Hansard*, 12th May, 1896.

4. *With the discharging of Inspector Reid from the above contract for simply doing his duty in the interest of the Crown by insisting upon good work and material.*

Another clerk of works who was doing his duty, and who could tell the country a great deal if put under oath, discreetly says that he will not give any information unless he is put under oath. He is right in that. He will not give me information; but I have gathered sufficient to know that there is a very wrong state of affairs going on. This man has been dismissed. Why? Not because he has done anything wrong, but for quarrelling with the contractors' foreman because they would not supply good material. He tells me that he wants to get back into the department, and, having been a fool once, he does not want to be a fool a second time. Here is the report upon his case. He says:

"I beg to report that on several occasions I have had to complain about the time the sandstone concrete is mixed for packing brickwork in shafts. To-day two 20-foot mixings were made up at 2 p.m. at No. 5 shaft. This concrete will not be put down shaft for use till 5.30 p.m. I have instructed Connors (foreman), who has charge of this work, not to have the concrete mixed so long before being used. He states to me that he has to take his instructions from the firm. I saw Mr. Snodgrass last Friday, and complained to him about this matter, when he promised it should not be mixed until one hour before it is required to be used. I spoke to Reid (contractors' representative) to-day, and he states that they shall mix the concrete when convenient for themselves."

"Inspector Reid informs me that on Saturday last, 17th February, about 1 p.m., at No. 6 shaft, it required half mixing 10 feet of sandstone concrete to finish brickwork packing in shaft. Henderson, bricklayer working in shaft, was on mixing board, and started to assist labourer gauge the stone. Inspector Reid instructed Henderson to use the fork in place of shovel in filling gauge-box, as the stone, which is broken close to the mixing-board, is not free from refuse. Inspector Reid asked Henderson the second time to use fork. Henderson replied that it did not want forking. Connors, foreman, came on the scene, and said to Henderson, 'Go on; do not take any notice of him, he's only a damned big buck navy.'" The man was subjected to this insult for doing his duty, and doing his utmost to prevent the contractors from cheating the Government with bad material. What was the result? From the minutes you will see that he was taken from that job, and in a few months dismissed. The only reason is that he quarrelled with the contractors' foreman; but you must recollect that he quarrelled with the foreman in the interests of the country, to save the money of the country.—*Hansard*, 12th May, 1896.

5. *With improperly paying an account of £350 6s. 8d. to the contractors for removing material, which work they never performed.*
6. *With placing improperly to the account for payments on Contract 79 various items of payments for work done at Bondi.*
7. *With advancing, without sufficient security, the sums of money upon contract materials not in the possession of the Crown.*

#### CONTRACT 79.

The first charge under the head of this contract has already been considered in dealing with those which concern Contract 72. In the view of the matter taken by your Commissioner, the allegation that a loss was sustained by the Crown becomes immaterial. Possibly, if Bond and Hudson had carried out the contract at their schedule prices, the work as a whole would have been done more cheaply: possibly, if fresh tenders had been invited, one lower than that of Carter & Co. would have been accepted: possibly, if Carter & Co.'s claim on Contract 72 had been resisted, it might have been successfully opposed: but, if what honestly appeared to be the best course to adopt under the circumstances was taken, then no blame attaches to any officer of the department.

The second charge, "with allowing Messrs. Carter, Gummow, & Co. to manipulate the items in the schedule prepared by the department, so as to increase the profits of the contractors to the loss of the Crown," is founded on the fact that the contractors were allowed to take out nearly the whole of their rock excavation in shafts and tunnels by means of blasting, instead of by guttering and gadding. The cheaper, and by far the more expeditious, mode of excavating rock is by blasting. There were two methods of blasting approved by the department—in one, 4-inch charges of powder were used; in the other, 2-inch charges. The former was by far the more effective, and therefore more profitable for the contractor, unless he had a considerably higher price for the latter. In addition to these, for shaft excavation, there was gadding, or cutting away the rock with a short pick, without the use of powder, and, in soft ground, the usual pick-work. Blasting with 2-inch charges justified, of course, a higher price than that with 4-inch charges. It was occasionally prescribed for the sake of reducing the detonation and vibration in the neighbourhood of houses, and saving fracture of the surrounding country in some kinds of rock. But it was not satisfactory, by reason, as Mr. Davis explained, of the special supervision required to prevent the men from using the larger charges, which they could provide themselves with and slip in when the inspector's back was turned. In tunnels, the third mode of excavation was called "guttering and gadding." This consists of laboriously chipping away the rock with a short pick or gad: the work is very slow, progressing by inches where blasting would go forward by feet: it is very objectionable because of the terrible risk to the health, and indeed to the life, of the men engaged in it. Every blow of the gad on the hard face of "Hawkesbury sandstone" found about Sydney brings out a shower of fine angular particles of silica that the very best possible ventilation, blocked by the dead end of the tunnel, cannot remove in time to prevent their being breathed in by the miner, cramped up in a confined space—perhaps only 4 feet by 3—which his body almost fills, and working under such conditions of hardship and difficulty that the wearing of a respirator is an  
additional

additional source of discomfort that he can hardly be expected to submit to. The result is that the sharp and absolutely insoluble dust passes into his air passages and sets up an irritation that frequently degenerates into—or provides conditions for the development of—some form of phthisis, and the man soon dies or becomes a wreck. Mr. Carter had, and has, a very strong opinion on this subject; and, whether or not his own self-interest ran with his natural sympathy for his men, he was certainly moved by that opinion to object strongly to the use of guttering and gadding, wherever it could be avoided. Mr. Snodgrass, on page 692 of the evidence, Question 20941, deposed to the fact that there was shown to Mr. Hickson and Mr. Davis a list of the names of men who had died from the effects of guttering and gadding. The only use of the system is to save the noise, and the risk of injury to buildings and to the surrounding rock, likely to be caused by blasting; which, of course, with so small an outlet for the generated gases as a narrow tunnel affords, may be considerable; though, in Contract 79, the tunnels are generally so far below the surface, and the rock is so hard, that these objections apply in a less degree than in most cases of sewer excavation; moreover, the course of the sewer is not, as a rule, thickly inhabited.

Mr. Bagge was, perhaps, rather over-cautious, a feature in his character as an engineer that was very noticeable in his evidence, and was spoken to by Mr. Davis; and he had apportioned his quantities, in making up the schedule of Contract 79, in such a way as to give to the head of guttering and gadding, as well as to that of 2-inch charges of powder, quantities that Mr. Snodgrass saw were excessive. The clever way in which he filled in his prices has already been touched on. There appears to have been no question raised as to how the shafts were to be excavated, except in relation to the hours and conditions under which blasting was to go on; blasting with 4-inch charges was permitted, as of course. It was more profitable to the contractors, because the difference of price received by them, as between gadding and blasting in this way, being five shillings per cubic yard, was considerably less than the difference in cost would have been; it was also cheaper for the department by the five shillings, and it was very much more expeditious; so, as long as no harm was done, it was to the advantage of both parties to the contract to adopt the 4-inch mode of blasting; the 2-inch system would have cost the department only another shilling a yard, but it would have entailed more supervision; the contractors, on the other hand, would probably have made less out of it.

When, however, the tunnel excavation was to begin, a question arose how it was to be carried out. The correspondence appears on page 139 of the Appendix. An explanation, however, is required to make this correspondence intelligible. The "lining" of a sewer, which is really the shell completely surrounding it, is composed of various materials. The section is oval, the longer diameter of the oval being vertical, and the circle of smallest radius being in the "invert" or bottom of the sewer. In solid rock the usual construction is this: the lower lining, up to a point rather more than half-way from the invert to the crown, consists of bluestone concrete not less than  $4\frac{1}{2}$  inches thick; the upper curve is a brick arch, of one ring of radiated bricks (shaped like the "voussoirs" of an arch) laid longitudinally in cement mortar; it is, therefore, of the same thickness— $4\frac{1}{2}$  inches—as the lower part. Any space there might be—beyond a mere joint, to be filled with mortar—between the lining and the rock was packed with sandstone concrete. When the rock is removed by guttering and gadding, it can be, and is supposed to be, taken out to the exact dimensions required for the lining: in every case (except where soft ground requires timbering, when a special allowance is made for the space taken up by the timber) no excavation is paid for beyond these dimensions. But, where blasting is adopted in tunnels, it was the practice to make an allowance—not in the payment for excavation, but of a thickness of 4 inches in the concrete—if, and so far as, the measurements known as cross-sections, taken before the lining was put in, justified it, to compensate the contractor, to some extent, for the sandstone concrete that would be used in the upper part, and the excess of bluestone in the lower, in filling the inequalities and irregularities incidental to excavation by blasting. Thus, in settling payment, the half-ring of bluestone concrete below would be increased by 4 inches in thickness, and a half-ring 4 inches thick of sandstone concrete would be allowed above. For this 4-inch ring, at the most, the department paid at schedule rates; the rest of the concrete, necessary to fill up  
excavation

excavation exceeding given measurement, had to be put in at the contractor's own cost. This practice—to pack the space over the brick ring with sandstone concrete, less expensive than bluestone—was in force when Contract 79 was carried out. The object of this packing was fourfold—1st, to increase the chance of the sewer's being watertight, by covering porous bricks or bad joints with a solid material; 2nd, to support the rock roof and prevent the risk of faults causing it to fall on and crush the sewer; 3rd, to strengthen the sewer, and enable it to resist a bursting strain, in the event of its being choked, or in case of explosions of gas; 4th, to prevent seepage in the rock from working a passage along the crown of the sewer, and so, finding ingress by open joints, overflowing the sewer and doing other damage. It is to be understood that sewers are not supposed to run more than two-thirds, or at the most three-quarters, full. Careful calculations are made to this end, and overflow outlets are provided to prevent such an accident as choking; but an extraordinary rainfall, aggravated in its effects by some accident causing a block, might upset the best calculations. In reference to the packing with shale, in one case on Contract 69, which has been alluded to, Mr. Davis, on page 665 of the evidence, Questions 20130 to 20138, has explained how it came about that packing with concrete was generally discontinued and sand was finally substituted, a practice with which Professor Warren is quite satisfied, though Mr. Bagge is very strongly in favour of concrete. No doubt it makes a stronger job, but expense is an important element in sewer construction; and, as long as all the joints of the brick arch are perfectly filled, sand probably answers the purpose quite as well as concrete, and, as it is cheap and easy to ram in, there is less risk of scamping with it, and leaving vacant spaces, than there is when concrete is supposed to be used.

If it had not been for this rule as to "margin" there could have been no question, on the basis of cost of the work, that blasting would have been the cheaper way of excavating the tunnels; cheaper to the department by only 3s. a yard on the schedule prices, but to the contractors by a very much larger sum. But Mr. Davis saw that the cost of the margin allowance of concrete would probably come to more than the saving in the price of excavation. He, therefore, directed Mr. Boys to make the elaborate calculations which appear on page 138 of the Appendix. It may be observed, to avoid confusion, that Mr. Boys has inadvertently used the expression "lining" instead of "packing" or "margin" in the first line. "Lining" properly means the concrete or brick wall of the sewer—the periphery of the barrel. It is the packing, an expression which will be found lower down in the calculations, which was in issue. From these calculations, which are no doubt accurate, Mr. Davis found—certainly correctly; a simple examination of the figures will prove this—that excavating the tunnel by guttering and gadding would cost about £1,250 less than it would by blasting. But if, instead of paying for the usual 4 inches margin of concrete, the department only paid for 2 inches, then Mr. Boys' calculations show that the saving would almost exactly balance the £1,250. Mr. Davis suggested such a compromise. Mr. Bagge endorsed it. The contractors were sent for. Mr. Hickson put it to them; and they were practically forced to consent. Mr. Carter said they always looked upon this as a very smart bit of dealing on the part of the department—in fact, that the contractors, being in a cleft stick, got the worst of the bargain. It certainly does not look like an act of favouritism. It has an exactly opposite appearance. In their letter agreeing to the arrangement—No. 28 of Appendix, page 58—they call attention to the fact that an error has been made as to one-eighth of an inch. Here the expression "lining" is used to express the whole thickness of—1st, measuring from the inside of sewer,  $\frac{5}{8}$ -inch of rendering; 2nd,  $4\frac{1}{2}$  inches of brick; 3rd, 2 inches of sandstone concrete packing—making altogether  $7\frac{1}{8}$  inches; or, in the lower half section,  $\frac{5}{8}$ -inch rendering,  $4\frac{1}{2}$  inches of bluestone concrete, and 2 inches of bluestone concrete margin. The bluestone concrete margin of measurement is, of course, placed in position in one body with the rest; the sandstone concrete over the arch is packed in from the open end at short intervals as the work proceeds.

Up to this stage, the modification made in the quantities was clearly a proper one, in which remarkable care was shown to secure the public interest; that it had the effect of increasing the contractors' profits was no reason for not adopting it: the result being that, while the department paid away no more money, the work was more expeditiously done, and the scandal—not to say the crime—of compelling men to risk their lives in guttering and gadding was avoided. The small amount

of this work actually done—21·22 yards, instead of 80·0—was presumably unavoidable. As it would appear from Mr. Davis's minute of 19th May, 1892, that he began by taking steps to enforce this dangerous system, through the whole length of tunnel, in assumed exercise of the right of substitution, it is fair to suggest that he, at the same time, knowing how averse from carrying it out the contractors were, contemplated just some such compromise as was afterwards arrived at. It is also proper here to comment on the absurd suggestion raised on the evidence of the witness Owen (page 179 of the evidence) that blasting is, with bad ventilation, as unhealthy work as guttering and gadding. Of course, some explosives cause deadly fumes that must be expelled before the men return. These are outside the question. Gunpowder has to be dealt with as the explosive contemplated in this contract. The nitrogen and carbon dioxide—the principal gaseous products of its combustion—are certainly poisonous, and should be blown away. The principal solid product—potassium sulphide—infinitesimally divided in the form of smoke, would probably have no injurious result. It is idle to compare the effect of these, and whatever other minute quantities of various compounds the explosion may produce, with the constant breathing in of sharp particles, of appreciable size, of absolutely refractory silica, nearly, if not quite, as bad as the notorious powder from glass grinding, and met with by the workman under much worse conditions. A question of ventilation cropped up in the course of the inquiry. It is very remote from the issue. All that need be said on the subject is this: that on the whole it would appear that the contractors took all usual measures to provide ventilation, according to Mr. Snodgrass's evidence on page 692, Q. 20942; but the men themselves failed to take advantage of them according to the usual practice, though it is quite possible that Manager Reid acted in this relation, probably without instructions, in a characteristically disagreeable way.

With reference to this John Reid, who was spoken of by several witnesses as a man who would do, and order to be done, bad work when he had an opportunity, your Commissioner is inclined to think that it would have been better if the officers of the Department had insisted on his removal while Contract 79 was being carried out. This, however, considering that he was undoubtedly an able manager, who thoroughly understood the details of the work of which he was in charge, would have been an extreme measure. It is quite possible that his natural infirmity of temper, partly the result of a complaint from which he suffered—asthma—and aggravated by occasional indulgence in strong drink, may have accounted for remarks, in the nature of admissions of dishonesty, attributed to him, made perhaps without any real meaning, and also for the dislike with which some of the witnesses evidently regarded him.

The next step in the history of the change in the mode of excavation in tunnels dates from more than fourteen months after the settling of the main question. It is disclosed in the letter of 10th August, 1893, No. 65 of *Appendix*, page 139, followed by Mr. Davis's minute, No. 66, with Mr. Bagge's note, passing it on without comment, and Mr. Hickson's minute of approval. Mr. Bagge's note should precede Mr. Hickson's minute instead of following it, as it is printed. The facts are so clearly set out in these documents and in the letter by Mr. Davis—*Appendix* No. 67, page 140—that it is unnecessary to repeat them here. Certainly a concession was made to the contractors which might have been refused; but it is coupled with a reservation, on the last paragraph but one of Mr. Davis's letter; and, on the whole, it is such a fair arrangement as, to the mind of any person viewing the matter in the light of common experience, unaffected by any foregone conclusions of partiality, would not suggest any such idea.

Your Commissioner therefore sees no ground for charging Mr. Hickson or any officer of the Department with allowing Messrs. Carter, Gummow, & Co. to "manipulate" the items in any way—the word manipulate being of course taken to mean improperly re-arrange, or to involve some such allegations of trickery.

The third charge under this head runs thus:—"With returning the cash security and the retention fund to the contractors, in violation of the contract agreement and to the advantage of the contractors, and hazarding the interests of the Crown."

The cash security lodged on this contract was, according to the usual scale, £2,000. It was in the form of a fixed deposit receipt given by the Bank of New Zealand. This receipt was renewed from time to time, the interest being paid to

Carter

Carter & Co.'s account. According to the terms of the contract, the work should have been completed on March 10, 1894. The "period of maintenance" was to be three calendar months from date of final certificate. The deposit was to be held as security until the period of maintenance had elapsed. On February 24, 1894, Mr. McLachlan, acting for Mr. Barling, wrote this minute to Mr. Hickson:—"The Bank fixed deposit receipt for £2,000, held in respect of the above contract, will mature on the 10th proximo. Should the deposit be renewed; and, if the security is to be returned, should it be handed to Messrs. Carter & Co.?" Mr. Hickson referred the minute to Mr. Davis. He wrote: "It will probably be two months before the whole of the works on this contract will be finished, after which there will be the three months' maintenance. The contractors might be asked if they wish to renew the deposit, (say) for another three months." Whereupon Mr. Hickson, on the same day, wrote: "Deposit should be renewed for three months." This would be till 10th June, 1894. On May 1, Carter & Co. asked for an extension for four months, on the ground of the additional work. This was granted as a matter of course, carrying on the time of completion to July 10, and the end of the maintenance period to October 10, 1894. Meanwhile, on March 29, 1894, the Minister had decided to give Carter & Co., on certain terms, Contract 79A, an extension of Contract 79 from Mount-street to Milson's Point. The amount of the cash deposit on this contract was to be £650. The date of formal acceptance of the tender was June 16, 1894. On June 9 Mr. McLachlan wrote: "The Bank fixed deposit receipt for £2,000 held in respect of the above contract will mature on the 10th instant. Should the deposit be returned; and, if the security is returnable, should it be handed to Carter & Co.?" Mr. Hickson's minute thereon runs thus:—"This deposit might be returned conditionally on Carter & Co. making a deposit of £650 on the extension of this contract." The Minister approved; the £650 was received; and the £2,000 was returned, some four months before the department was bound by the agreement to return it—in fact, shortly after the time at which it would presumably have been repaid if the contract time had not been extended. That there was nothing unusual or unprecedented in the fact that deposits were returned to contractors was proved by Mr. Davis on page 502 of the evidence. There is given a list of fifteen similar cases, in one of which, the Kiama to Nowra Railway, a sum of £10,000 was so returned. As Mr. Davis says, every case was considered on its own merits. Seeing that when the repayment was made the whole of the work on Contract 79 was practically finished, and that there was immediately put into the hands of the department a sum of £650 as security on the extension, and that it was fair to give the contractors every reasonable facility for moving their plant on to the new line and buying material, the merits of this case appear to be exceptionally in favour of the concession.

With regard to the retention money. The history of this transaction is contained in the following letters and minutes:—

Sir,

5, Spring-street, Sydney, 23 March, 1893.

Referring to contract now in course of construction by Messrs. Carter & Co., sewer construction, North Shore, I have the honor to direct your attention to the fact that the retention money now held by the Government is in excess of the amount originally lodged with tender, and that such amount is adequate security for the Government to ensure the just and proper fulfilment of the contract.

I have, therefore, on behalf of my clients, to apply for a return of the deposit of £2,000 held by the Crown.

I have, &c.,

W. ARMSTRONG,  
Agent for Carter & Co.

The Secretary for Public Works.

B.C. Mr. Hickson for report.—J.B., 23/3/93. Mr. Bagge.—F.C.P., 24/3/93. Mr. Davis.—C.H.O.B., 24/3/93. Report herewith.—J.D., 24/3/93.

*Minute Paper.*

*Subject*:—Contract No. 79, North Sydney Outfall Sewer.—Contractors ask that fixed deposit be returned.  
Department of Public Works, Roads and Bridges and Sewerage Branch,

Sydney, 24 March, 1893.

THE tender for this contract amounted to £39,890, of which £20,709 14s. worth of work has been executed, or about half the total quantity. The fixed deposit in all cases is held until the completion of the work, as a guarantee for the due fulfilment of the contract; and I do not think in this instance an exception should be made. On some occasions the Minister has approved of retention money being returned after the amount in hand, including the fixed deposit, has reached 10 per cent. of the amount of the tender; but, as much of the work remaining to be done is put down in the schedule of prices at very low rates, and the work finished, in some instances, at high rates, I could not recommend that any of the retention money be returned.

At

At present the department holds the following:—

|                        | £      | s. | d. |
|------------------------|--------|----|----|
| Fixed deposit ... ..   | 2,000  | 0  | 0  |
| Retention money ... .. | 2,070  | 19 | 5  |
|                        |        |    |    |
| Total ... ..           | £4,070 | 19 | 5  |

10 per cent. of tender would amount to ... .. £3,989 0 0

The Secretary for Public Works.

J. DAVIS.

For the approval of the Engineer-in-Chief.—C. H. OHLFSEN BAGGE, 25/3/93.

All that contractors would be entitled to if the new general conditions were in force would be £70 19s. 5d. As these are not yet in force, and contractors have good prices for work done, whereas work to be done is put down at low figures, I cannot recommend that their application be granted.—R.H., 25/3/93. Under Secretary.

List to refuse.—J.B., 27/3/93. Approved by Minister, W.J.L., order No. 867.—D. M'L., 11/4/93. J.B. Roads, B.C., 12/4/93. Seen.—J.D., 14/4/93. Armstrong informed, 17/4/93.

Sir,

Public Works Department, Sewerage Branch, 17 April, 1893.

In reply to your letter of 25th ult., applying, on behalf of Messrs. Carter & Co., for return of deposit money on contract money No. 79, North Shore Sewerage, I have the honor to inform you that it is a rule of this department to hold the "fixed deposit" until the contract is finished, and in this case no exception can be made. Moreover, as the "fixed deposit" and retention money do not amount to more than 10 per cent. of the tender, at present no portion of the retention money can be returned.

I have, &c.,

ROBERT HICKSON,

Engineer-in-Chief for Sewerage.

The Agent for Messrs. Carter & Co.

Sir,

5, Spring-street, Sydney, 21 April, 1893.

I have the honor to ask reconsideration of your refusal to allow a return of part of the retention money held on account of Contract No. 79, North Shore Sewerage, and to point out that, in addition to deposit of £2,000, retention money now amounts to £2,000, and that Messrs. Carter have plant and machinery on the contract amounting to £3,500, and also materials to the value of £800, making a total of security value of upwards of £8,000.

I respectfully submit that the Department will hold very ample security after a deduction of £2,000 from the retention money.

I have, &c.,

W. ARMSTRONG.

The Secretary for Public Works.

Mr. Hickson—D.C.M'L. (*pro* U.S.), B.C., 21/4/93. Mr. Davis, 21/4/23. Please attach previous papers.—J.D., 21/4/93. Papers herewith.—F.C.P., 22/4/93. A voucher has been signed to-day for work done amounting to £1,453 9s.—R.H., 27/4/93.

Sir,

North Sydney, 28 December, 1893.

Our tender for contract No. 69, Western Suburbs Sewerage, having been accepted with the provision that payment shall be made for the same in funded stock, a condition to which we have agreed, we have to ask you to be good enough to assist us in our financial arrangements by paying the retention money (£2,000) held on contract No. 79, North Sydney Sewerage, on our next progress certificate for the same.

The balance of the work to be completed on this contract will not exceed £4,000, against which you have our fixed deposit for £2,000 as security.

We find that some trouble will be experienced in making satisfactory arrangements for the disposal of the stock which will be paid to us during the first few months, and we therefore hope that you will be good enough to grant our request.

We are, &c.,

CARTER & CO.

The Engineer-in-Chief for Sewerage.

There is about £4,000 worth of work yet to be done to complete the contract, and as the Department holds a fixed deposit of £2,000, in addition to £1,988 19s. 7d., retention money, and as I consider the fixed deposit is sufficient to ensure the due completion of the contract, I recommend that the retention money, amounting to £1,988 19s. 7d., be returned to the contractors.—J.D., 3/1/94. Commissioner-in-Chief for Roads, Bridges, and Sewerage.

Recommended. These contractors have taken up the eastern branch extension sewer. £46,000 payment to be made in funded stock. Every consideration, therefore, should be shown to men who thus show their willingness to meet the Department.—R.H., 4/1/94. Under Secretary.

For approval.—J.B., 4/1/94. Approved.—W.J.L., 5/1/94. Mr. Hickson,—J.B., 5/4/94. Seen.—R.H., 5/1/94. Noted.—J.D., 5/1/94. Accountant. Noted voucher to Treasury this day.—O.C. (*per* E.H.), 8/1/94.

These papers do not quite clearly express the full history of the matter. Mr. Christie, on page 295 of the evidence, in his last memo. on that page, has called attention to Mr. Hickson's minute on Mr. Armstrong's letter of April 21, 1893, as not disclosing the fact that, in the sum of £1,453 9s., for which a voucher had been signed on that day, April 27, 1893, a portion of the retention money,

£222

£222 17s. 7d., had been returned ; or, in other words, that amount, which, according to the letter of the agreement, might have been retained, had not been so, partly kept included in, and partly added to, the retention money. Then, taking Mr. Christie's tabulated statement on page 296 of the evidence, it is quite clear that what followed was this : that from that time forth the amount of retention money, being allowed continually to stand at £1,989, was so estimated as to conform with the concession said to have been approved on some occasions alluded to in Mr. Davis's minute of March 24, 1893, viz., that, when the retention money and deposit added together became equal to 10 per cent. of the amount of the tender, the excess of the retention money should be returned—that is, that no more should be deducted from the amount on vouchers. As Mr. Davis pointed out, £3,989 was 10 per cent. of the tender amount. The deposit was £2,000; therefore, £1,989 was, under the practice mentioned, the limit beyond which retention money might cease. £1,989 was the actual amount retained on each occasion—an unvarying sum—from 27th April. Consequently, although the papers do not disclose the steps by which this system came to be adopted, it is clear that it was taken as legitimate, and carried out in conformity with Mr. Davis's minute. Seeing that what Mr. Armstrong had asked for was a return of the whole deposit, £2,000, and that it was that request that Mr. Hickson had reported against, Mr. Hickson's action in allowing only a concession of the excess of retention money over a total sum, including the £2,000, of £3,989, can hardly be said, as Mr. Christie puts it, to be at variance with his minute of a month before. In his second application, of 21st April, Mr. Armstrong had put his case more strongly. As Mr. Hickson's minute, commented on by Mr. Christie, bears date six days later, it is probable that in the meanwhile the matter was looked up, and the limited concession was made.

Mr. Davis has explained the matter in various parts of his evidence. A special clause of the new general conditions for contracts was passed by the Board of Reference as early as December 28, 1891, though the whole body of new general conditions was not formally approved till February 4, 1894. This is the clause which is found in Contract 69 and later contracts, providing that progress payments shall be made at the rate of 80 per cent. on value of work done till the amount retained becomes equal to the amount of the deposit, viz., 5 per cent. of the total (nominal or presumptive) value of the contract, and that then no more retention money shall be kept back—in other words, the retention money shall accrue at the rate of 20 per cent. till it amounts to 5 per cent. of the value of the contract, and shall then cease. Such a provision was not contained in Contract 79, which had been prepared before December 28, 1891. The condition for progress payments in that contract was that they should be at the rate of 90 per cent., with no limitation to the total amount of retention money, which thus accumulated at the rate of 10 per cent. As the new and very fair concession—due to Mr. Bruce Smith's broad-minded suggestions, when Minister—had been acted upon in drawing contracts from the time the clause was passed, it became customary—page 596, Q. 18089—to return, on contracts in the old form, the excess of retention money over the 5 per cent., and then to pay vouchers in full. This is how the £227 17s. 7d., excess of retention money, came to be returned. Mr. Davis's explanation on page 501, last paragraph, thus appears clear. When he says 5 per cent. only was kept back, he means that when 5 per cent. of the value of the contract was reached, 10 per cent. having in progress payments been kept back, the excess was returned and further retention ceased; the result being that 5 per cent. was finally retained as long as it was thought expedient to hold the retention money.

The return of the whole balance of the retention money in January, 1894, appears, on the face of it, to be a very reasonable concession. Holding a fixed deposit equal to 50 per cent. of the value of the work remaining to be done, the Department had such ample security that it was quite legitimate to concede, when the concession could safely be made, the power of handling cash to contractors who had agreed to accept payment for another large contract in stock. To keep the money still locked up, at a rate of interest hardly more than nominal, would, under the circumstances, seem a harsh and narrow-minded proceeding. Mr. Davis, on page 501 of the evidence, has, in the last paragraph but one on that page, given instances of similar concessions to other contractors. He speaks of the general practice in the preceding paragraph. In making these various concessions, it is admitted by the  
Department

Department that the contract was not always adhered to. The Department did not rigidly compel the contractors to comply with the strict letter of every clause; and, where they saw that latitude might fairly and safely be given, its officers treated the contract as elastic, without imperilling the rights of the Crown. And such action is evidently proper in the interests of the country. The less narrow and rigid, the more fair and considerate, is the treatment of contractors by the Department, the better content will they be with moderate profits, and the more fairly and harmoniously will the work be done, if only due care is taken to prevent dishonesty or carelessness on the part of contractors or their workmen.

As to this charge No. 2, therefore, your Commissioner is of opinion that the evidence does not support it, inasmuch as the concessions made cannot be said to be in violation of the contract, being within the fair spirit of its administration, and in that the interests of the Crown were not appreciably hazarded.

The fourth charge—"With the discharging of Inspector Reid from the above contract for simply doing his duty in the interest of the Crown by insisting upon good work and material"—deals with the transfer from Contract 79 of Inspector Reid. This inspector was employed to superintend, on behalf of the department, the sewer construction work on Contract 79. He had occasion, or thought he had occasion, to complain several times of the way in which the work was being done. He was finally removed to another contract at Lewisham. As he was then living at the North Shore, he felt aggrieved. Apparently he was doing his duty honestly and to the best of his ability. An inquiry had been held by Mr. Davis on the subject of one of his complaints. At the same time that Reid was transferred the contractors were required to remove two of their men. Reid's transfer was made the subject of consideration, and determined on. There was evidently a great deal of friction between the men and the inspector, much more than is usual; so much so that it seemed impossible for the work to go on satisfactorily. If this had been caused by the mere fact that he was determined to prevent them from doing bad work, it would have been proper to keep him on. In his place was sent an inspector, Eyre, supposed to be equally good, or better. Having heard the various opinions expressed of Reid by several witnesses, and having carefully observed his demeanour and listened to his evidence, your Commissioner has formed the opinion that, to a very large extent, the friction was caused by his peculiar manner and mode of carrying out his duties. There were probably also faults on the other side; but the conduct and tone of Reid were undoubtedly so irritating that, though in some cases he might happen to get through a job with fair success, the chances of his setting the men against him were very great. It was evident that the workmen on Contract 79 were in such a state of annoyance caused by his conduct at the time he was removed that his transfer was the best course for the department to take; and, in acting as they did, your Commissioner thinks that both Mr. Hickson and Mr. Davis took what they honestly thought the best course under the circumstances.

The fifth charge—"With improperly paying an account of £350 6s. 8d. to the contractors for removing material, which work they never performed"—has been withdrawn by Mr. Parkes. Your Commissioner agrees with the view he has taken of the evidence, and it is therefore unnecessary to allude further to this charge. The whole of the papers in connection with the matter are shown on pages 329 to 331 of the papers laid on the Table of the House in pursuance of the order of October 10, 1895.

As to charge No. 6—"With placing improperly to the account for payments on Contract 79 various items of payments for work done at Bondi"—Mr. Parkes expressed, impliedly, the opinion that, as evidence on this inquiry, the facts were not worth comment. He wished it to stand, however, as he thought it was not right that moneys, to however small an amount, paid on one account should be placed to debit of another. A small sum—£11 1s.—became payable to Carter & Co. on account of some work done on a culvert at Bondi connected with the Sewerage Construction Branch. As Carter & Co. were carrying on Contract 79, and the department had to find plant somewhere, it was borrowed from Carter & Co., who also let the department have a few casks of cement at schedule rates. The cartage of the plant and the price of the cement made up the total. For convenience, these items were added to a voucher of Contract 79, the accounts to be adjusted afterwards. There seems to have been no irregularity worth mentioning, and there was certainly no dishonest intention, in this proceeding.

As to the last charge, No. 7—"With advancing, without sufficient security, the sums of money upon contract materials not in possession of the Crown,"—it has been the regular practice of the department to make advances to contractors on materials brought on to the ground. As an example of a condition of every contract, the first paragraph of clause 14 of the general conditions of Contract 79 thus provides:—"All approved materials, plant, and prepared work, brought upon the ground for use in or on the works shall be considered and shall be the property of Her Majesty the Queen until completion of contract."

Clause 5 of the general conditions provides for the land, possession of which shall be given by the Minister to the contractors. The principal "approved material" on every sewer construction contract is cement, which has to be approved by the Engineer after being subjected to a very rigorous test, conducted by an officer of the Works Department in the office in Phillip-street. Clause 20 of the specification deals with this. Bricks also, the quality of which is specified by clause 13, are an important form of material. As soon as the excavation work is sufficiently advanced to enable construction to begin, it is necessary for the contractors to have ready on the ground a large stock of these materials, to prevent any chance of delay; or of anticipated delay, which has a discouraging and retarding effect on workmen. On such a contract as 79, where some of the shafts are over 200 feet deep, and the average depth is great, very expensive plant had to be provided, said by Mr. Davis to be probably worth £3,000. Under these circumstances, and especially as the contractors had to begin by placing at fixed deposit a sum, for security, of £2,000, and as—until, as has been explained, it reached £1,989—there was deducted from their schedule price for work done 10 per cent. for retention money, it was not unreasonable that the department should make advances on their approved material to a substantial extent. Of course, as Mr. Parkes very forcibly contended, it is not the province of the Government to finance contractors; such help they should arrange to receive from other sources; nor should the Treasury be treated as a great loan institution for their benefit; but there is a fallacy in assuming that this is the position in which the action of the Works Department, in making these advances, places the country. The Government has in effect bought, not only all the material upon which advances are made, but all other approved material that is on the ground, payment for it to be made after it is put into the work, at a certain retention rate below, or, at a later stage of the contract, at, schedule prices; and, therefore, advances on material are only really in the nature of payment for goods sold at an earlier date than that on which the purchaser is compelled, by the letter of his agreement, to pay for them. If these payments should exceed the actual market value of the goods in respect of which they are nominally made, then they certainly would be in the nature of advances, and would be unjustifiable if made by an agent—the engineer—without the express consent of his principle—the people; but if, though the advances are nominally made on certain goods, the excess of value is really and beyond all doubt amply covered by the value of other goods of the vendor also purchased and not paid for, then, though the form of the transaction is open to objection, in its spirit and its essence it is free from blame.

It was the practice, in calling for tenders on the schedule system, to add, at the end of the list of items showing real probable quantities, a list of other items under the head "General," with nominal quantities—understood to be nominal. This was done for the purpose of fixing a price for these items, which might happen to be required. Among others is cement, per cask. The price attached to this item in the schedule for Contract 79 was 16s. This price was about 2s. over the market price—for quantities—in June, 1891, when the tender was made out; though, with the exception of Bond and Hudson and Taylor & Co., each of which firms fix the same price—18s.—all the other tenderers put down 20s.; all adding something, no doubt, to cover cartage. But, at the time advances on cement were made under Contract 79, the fair market value per cask, delivered on the work, was under 12s. Whatever the schedule price might be for small lots to be purchased from the contractor, if required—his price for cement used in construction being included in his prices for concrete, brickwork, and rendering, or "cement facing"—when the question of making advances on cement arose, then the value to be put upon the security would of course depend on the market price at the time, the schedule price being quite immaterial in this relation.

On August 3, 1893, the following agreement was entered into, minuted to the Engineer-in-Chief by the Clerk-in-Charge of Bonds and Contracts, Mr. Norrie.

*Minute Paper.*

*Subject* :—Main Outfall Sewer, North Sydney.

Bonds and Contract Branch, Department of Public Works, Sydney, 3 August, 1893.

MEMORANDUM herewith duly signed by the contractors, Messrs. Carter & Co., agreeing to repay advances made from time to time on material not on the contract site.

The original agreement is also sent herewith.

HAROLD F. NORRIE.

Seen.—R.H., 4/8/92. Mr. Davis to note.—F.C.P., 4/8/93. Noted.—J.D., 4/8/93.  
 Accountant to note.—F.C.P., 4/8/93. Noted.—O.C., 4/8/93. Final return forwarded to Treasury for payment this day. Bond 92-538 and agreement 93-974, attached herewith, may now be filed with the papers.—O.C. (*per* E.H.), 13/12/94.  
 The Engineer-in-Chief for Sewerage.

MEMORANDUM.

In consideration of the Minister for Public Works in and for the Colony of New South Wales advancing to us the sum of £1,360, and of any future advances to be made to us, we hereby agree to repay to the said Minister for Public Works the said sum of £1,360 and future advances, together with interest at the rate of £6 per centum per annum on such sums respectively from the date of advance on demand. And we hereby charge all moneys due or payable, or becoming due or payable, to us under a certain contract for the construction of the North Shore main outfall sewer from near Long Bay to Mount-street, in the said Colony, entered into by us with the Government of the said Colony, also all cement, building materials, and every other thing already used or to be used in connection with our said contract, with the repayment of the said sum of £1,360, and any future advances, and interest at the rate aforesaid. And we hereby undertake to give, whenever called upon to do so, a valid bill of sale to the said Minister for Public Works over the said cement, building materials, and every other thing used in connection with our said contract, now stored in our premises at Alfred-street, North Sydney, in the said Colony, or elsewhere, such bill of sale to contain a power of sale and such other powers, provisoes, and agreements, as the said Minister for Public Works may be advised. Also, further undertake to give immediate possession of same to the said Minister, or any person appointed by him for that purpose, whenever called upon to do so.

As witness our hands, at Sydney, this 3rd day of August, A.D. 1893.

Witness,—

HAROLD F. NORRIE, J.P.  
 H.F.N.; 3/8/93.

JOHN CARTER.  
 D. G. SNODGRASS.

It was explained in evidence, as the minute itself sets out, that the object of this memorandum was to cover the case of materials that might happen not to be actually on the ground, as provided for by the general conditions, and, therefore, as to which it might be contended that, though they were approved, the property in them had not passed to the Crown; it was evidently at the time that the first advance was made that this step was taken. It does not appear that any bill of sale was ever given by the contractors; it is to be inferred that no necessity for it arose. There is no evidence that any of the cement advanced on was stored outside of the contract site. This document was sent on to Mr. Hickson for his inspection. Whether the arrangement for an advance had been made in accordance with his instructions or not does not appear; it must be presumed that he gave authority; it would rather seem that the business was done as a matter of course. There is no evidence of Ministerial sanction for these advances. On page 366, however, of the Parliamentary papers, the following appear:—

*Minute Paper.*

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 26 July, 1894.

*Subject* :—Contract No. 79A, North Shore—Recommending that advance be made on approved cement.

THE contractors have asked that an advance be made on approved cement on this contract. It is usual for this to be done, and I recommend that the request be complied with to the extent of 75 per cent. of the amount of the fixed deposit (£485), at the rate of 75 per cent. of the value of the cement on the ground, on condition that the contractors sign the usual agreement. J. DAVIS.

Approved.—R.R.P.H., 26/7/94. Mr. Davis.—F.C.P., 26/7/94. Seen. Mr. Norrie for usual agreement.—J.D., 27/7/94. Who are the contractors, and where is the cement stored?—H.F.N.B., 27/7/94. Sewerage. The contractors are Carter & Co., and the shed is in Alfred-street, opposite to the Town Hall.—J.D., 30/7/94. Mr. Norrie. Memorandum herewith, duly signed and stamped. Original agreement also sent herewith.—H.F.N., 7/8/94. The Commissioner-in-Chief for Roads, Bridges, and Sewerage. Seen.—R.R.P.H., 8/8/94. Mr. Davis to note.—F.C.P., 8/8/94. Seen. Mr. Weeden to note.—J.D., 9/8/94. Noted.—S.H.W., 11/8/94. Accountant.—J.D., 15/8/94. Noted agreement placed with bond.—E.H., 16/8/94.

These are connected with Contract 79A. No Ministerial sanction appears here either, and in this case the whole course of the application is traced. In allusion

allusion to this matter, Mr. Davis, in his evidence on page 502—second paragraph of memo. No. 3—says there was no rule as to the extent to which advances were made. He goes on to explain the high rate at which they were allowed in Contract 79. Mr. Norrie, bond clerk, in his evidence on page 220, spoke of these advances as customary, formerly without any written undertaking. He prepared a form for the purpose. Whether there was any Ministerial sanction or not generally required he could not say; it would appear that there was not. He could not say how the sum of £1,360 came to be fixed; nor has this been explained. On page 615, Mr. Davis touches again on the question of Ministerial sanction for advances. He says it was not obtained in every case—"it was such a usual thing." The conditions of Contract 79 appear to have justified the advances from the point of view of actual security; but your Commissioner cannot approve—in itself, as proper or business-like—in fact, as even logical—the valuation, for the purpose of advancing on it, of cement at schedule rates, or—as appears to have been done—the extending of the advance to the full value of the cement, whether arrived at on that basis, or on the proper basis of market price. There appears to have been a certain amount of carelessness and looseness in these transactions which was hardly creditable to the Department. It may be observed that, according to Mr. Davis's same evidence, a somewhat stricter system was enforced on 79A. As Mr. Christie points out, on page 215 of the evidence, when the maximum advance of £2,160 was reached upon 2,700 casks, it exceeded their actual value, at 11s. 6d., by £607 10s. Whether there was at that time a further actual security in bricks on the ground does not appear. It must be taken that there was a very large value in plant, upon which the Crown might have exercised its right as owner under the contract. Still the advance in form was made upon cement, and should, to avoid possible risk and possible complications, have been kept well within the real value of the cement. Your Commissioner does not see any fair reason to infer favouritism or consciously improper action from these circumstances; but, as business arrangements, they are not to be approved.

On the whole, your Commissioner draws from the history of Contract 79 no conclusion adverse to the integrity of Mr. Hickson or any other officer of the Department.

#### CONTRACT 79a (NORTH SHORE).

1. *With inducing the Minister, on the plea of urgency, to let the above Contract 79A to Carter, Gummow, & Co. without tender, and upon departmental estimate, by which a loss is liable to be sustained by the Crown.*

After they had received the first contract the member for the district, no doubt with the best intentions and with the object of finding work for the unemployed, recommended that a certain extension should be carried out. The Engineer-in-Chief reported that as a matter of urgency certain extensions to the contract should be carried out along various streets. How is it possible that the work could have been urgent, seeing that the outlet into the ocean for the whole of the sewerage scheme has not even been taken in hand? Until the outlet had been completed, how could the urgency of constructing branch lines of sewerage arise? Without any contract tendering, without any preparation of plans, without an effort to save the country unnecessary expenditure, a contract of £35,000 was given to this firm without competition for this extension work. It is no wonder that the contractors of the city complain of this contract being given. In connection with this contract, I wish to point out that the Engineer-in-Chief, upon the 22nd March, 1894, wrote this minute:—

"There is no reason why this extension should not be gone on with at once. I cannot, however, see my way to recommend that it be carried out as an extension of the existing contract, which, at schedule rates, would amount to £16,307 17s. 8d., whereas the office estimate is £12,831 19s. 6d. The greater part of this difference lies in one item, 'excavations in shafts,' which in present contract, owing to their great depth, carries a very high price, namely, 78s. per cubic yard. This Messrs. Carter & Co. are prepared to reduce to 40s. per cubic yard, which would reduce the total cost to £13,700, or about £1,000 above the office estimate. I believe, however, if tenders were invited, we could get the work done under the office estimate.—R.R.P.H., 22/3/94."

It was about this time that Mr. Hickson, junior, became a member of the firm. I find this minute by the Engineer-in-Chief on the 29th of the same month:—

"Referring to the Minister's intimation this morning, that he was prepared to let Messrs. Carter & Co. carry out this work as an extension of their present contract, provided they agreed to do so for the departmental estimate of £12,831 19s. 6d., no claims whatsoever to be made for extras, and all payments to be made at the allowed schedules rates."

That means that they might be allowed as extras—

"I have had an interview with Mr. Carter, who is prepared, on the part of his firm, to comply with the Minister's decision. Submitted for formal approval.—R.R.P.H., 29/3/94."

This was on the 30th March, 1894. How sudden a change! It is not the Minister who has to do with this. The Minister is generally led by the head of the department; it does not matter whether it is the present or the last Minister. The heads of these departments ought to be above reproach. There ought to be the greatest possible check put upon them. When we see a rapid change like this in a minute in a few days, after a son of the gentleman concerned has taken office under the contractors, then there is some suspicion. It is impossible to make definite charges, but the case looks so grave that it ought to be filtered out in this House.

Mr. YOUNG: Does the hon. gentleman assert that the engagement of young Mr. Hickson took place in the meantime—during those two or three days?

Mr. V. PARKES: I believe it was during that time.

Mr. YOUNG: Does the hon. member assert that?

Mr. V. PARKES: I believe it was. This circumstance shows the imperative necessity of holding an inquiry into the system of letting out public contracts with the view of establishing some method of check of which the country would get the benefit.—*Hansard*, September 26th, 1895.

\* \* \* \* \*

2. *With*

2. *With advancing the sums of money of the moneys of the Crown to the contractors upon insufficient movable security, and in violation of the contract between the contractors and the Crown.*
3. *With failing to place upon the Table of the House the papers ordered by Parliament, by which Honorable Members might be misled as to the nature of the transactions.*
4. *With permitting defective work to be executed by the contractors, by which a loss is sustained by the Crown.*

1. The first of the charges made under the head of this contract—"With inducing the Minister, on the plea of urgency, to let the above Contract 79A to Carter, Gummow, & Co. without tender, and upon Departmental estimate, by which a loss is liable to be sustained by the Crown"—involves the history of the extension of Contract 79 from Mount-street to Milson's Point. When Contract 79 was approaching completion, Mr. E. M. Clark, M.P., wrote to the Under Secretary for Works the letter of March 6, 1894, which appears as No. 77 on page 184 of the Appendix (where are set out all the important papers connected with this matter) urging, on very good grounds, the extension of the work to Jeffrey-street. The matter was referred to Mr. Hickson, and by him for report to Mr. Bagge, who expressed an opinion that the second section of the work should be the "outlet works," and the third section, which might be carried out at the same time, the extension asked for, including some minor branches. He at the same time prepared an office estimate of the cost of the work, at the then ruling prices, and another at the schedule prices of Contract 79. The former came to £12,831 19s. 6d. and the latter to £16,307 17s. 8d. Mr. Hickson reported in favour of the carrying out of the work, but not as an extension of Contract 79. He pointed out the difference in the estimates on the two bases of schedule and office prices, and went on to say that the main difference lay in the high cost of excavation in shafts—in Contract 79—viz., 78s. per cubic yard (excavation in soft ground; and in hard rock by blasting with 4-inch charges), and that Carter & Co. were willing to reduce this to 40s., whereby the total cost would be brought down to £13,700. But, he continued, his belief was that, if tenders were invited, the department could get the work done at less than office prices. The Minister, Mr. Lyne, was inclined to go on with the extension. There was an interview at which the Minister, Mr. Clark, and Mr. Carter, were present. It was finally agreed that the work should be done by Carter & Co. for the amount of the office estimate—£12,831 19s. 6d.—as a lump sum; no claims whatsoever to be allowed for extras, and all progress payments to be made at the schedule rates shown in the office estimate. Mr. Lyne, in his evidence on page 262, Question 9224, gave his account of the transaction, and completely exonerated Mr. Hickson from any imputation of having attempted to influence him in favour of Carter & Co., the opposite being the fact. Mr. E. M. Clark's evidence on page 667, Question 20160, &c., is to the same effect. It would be a most strained conclusion to draw from such evidence that because Mr. Hickson did not further urge the opinion he had expressed, and try to convince the Minister that he was making a mistake—and there is nothing to show that he was not in fact acting for the best—Mr. Hickson was, therefore, actuated by feelings of undue favour to Carter & Co. The only reasonable inference is that he was acting in absolute good faith.

2. The question involved in this charge—"With advancing the sums of money of the moneys of the Crown to the contractors upon insufficient movable security, and in violation of the contract between the contractors and the Crown"—has been partly dealt with in considering the last charge under Contract 79. The minute paper has been set out on page lix of this Report. The following memorandum of agreement was made out and signed by the contractors:—

*Agreement.*

MEMORANDUM.

IN consideration of the Minister of Public Works in and for the Colony of New South Wales advancing to us the sum of £485, and of any future advances to be made to us, we hereby agree to repay to the said Minister for Public Works the said sum of £485 and future advances, together with interest at the rate of £6 per centum per annum on such sums respectively from date of advance, on demand. And we hereby charge all money due or payable, or becoming due or payable, to us under a certain contract for sewerage works, called or known as contract No. 79A, Sydney Sewerage Works, in the said Colony, entered into by us with the Government of the said Colony, with the repayment of the said sum of £485 and any future advances and interest at the rate aforesaid. And we acknowledge that we now hold all cement now stored in out shed in Alfred-street, opposite Town Hall, Sydney, in the said Colony, or elsewhere, and plant, materials, and every other thing already used or to be used in connection with or under the

the said contract, for and on behalf of the said Minister for Public Works, as representing the said Government. And also further undertake to give immediate possession of same to the said Minister, or any person appointed by him for that purpose, whenever called upon to do so.

As witness our hands, at Sydney, this 6th day of August, in the year of our Lord 1894,—

JOHN CARTER.

Witness to the signature of John Carter,—

HAROLD F. NORRIE, J.P.

D. G. SNODGRASS.

Witness,—W. BARNETT SMITH, J.P.

The sum of £485 was fixed as 75 per cent. of £650—or, rather, that proportion less £2 10s. It may be observed in this memorandum that Mr. Davis's intention expressed in his minute is overlooked. That minute recommends a fixed and a variable limit for advances, the fixed maximum being £485, the variable one being 75 per cent. of the market value of cement from time to time on the ground, the quantity varying from month to month as the cement was used in the work and fresh supplies came in. The memorandum, on the other hand, though it does not necessarily bear that construction, implies that a sum of £485 has actually been advanced, and that future advances may be made exceeding that sum; moreover, it omits all mention of the variable limit of 75 per cent. on the market value of cement; and it seems as if the advances afterwards made, seeing that they did frequently exceed the amount of £485, were so made under a mistaken impression of the meaning of the arrangement suggested by Mr. Davis. They also ignored the variable limit, being evidently made on the basis of 100 instead of 75 per cent. of the market value. They exceeded the fixed maximum on each of four occasions by the sum of £171, and on one occasion by £54. Exactly the same thing seems to have occurred in relation to Contract 79. In the memorandum touching advances on that contract, no doubt the sum of £1,360 was fixed upon some principle—it is 68 per cent. of the deposit of £2,000. In the amount of the advances it was much exceeded, on one occasion by the sum of £800. It would really seem as if on both occasions the memorandum misled the Resident Engineer in charge of the work; but all through there appears no reason for suggesting dishonesty, or for supposing that Mr. Hickson had any personal knowledge of the way in which these accounts were being kept on the progress vouchers. Unless he made special inquiries or gave special instructions as to how these were to be made out, he would have no actual cognizance of them. As far as the real sufficiency of the security went, the advances being kept within the market value of the cement, and the Crown having the power of seizing the plant and whatever other materials there might be on the ground, there was probably no risk in the course adopted. Still, as on Contract 79, there appears to have been a want of that strict business-like adherence to prescribed rules of action which should be enforced on every Government contract. Fair elasticity in the reading of specifications and in the construction of conditions is beneficial; but, when concessions, proper in themselves, are made, their terms should be religiously adhered to; to allow concessions on concessions is to introduce most dangerous laxity. The numbers of the vouchers upon which Mr. Davis's recommendation was exceeded in advances show that, when the management of the work passed into the hands of Mr. Smail, acting for Mr. Darley, in his absence, the excess was first reduced, and then disappeared.

3. This charge—"With failing to place upon the Table of the House the papers ordered by Parliament, by which Honorable Members might be misled as to the nature of the transactions"—has been dealt with in a general way already. The papers of any moment omitted from those relating to Contract 79A will be found mentioned in Mr. Christie's evidence on page 455, question 14397. They are set out in the Appendix No. 77, pages 188, 189, and 190; unfortunately, in printing these, the order of date has been transposed in some cases. Most of them consist of the ordinary complaints about blasting; there is one relating to an inquiry by workmen for their mate, who had disappeared with their money; the only important papers in relation to the financing of the contract are the contractors' letter of July 1, 1895, and the minutes thereon, on page 188; these disclose such very reasonable action on the part of the department that there could be no possible object in keeping them back. It will be observed that, when it was estimated that only £1,800 worth of work remained to be done, the payment asked for and made still left £1,167 19s. 6d. balance of contract money (lump sum) and cash deposit, added together, in the hands of the department, over and above the amount of such

such estimated value. As these last papers bear dates of several months later than the time when Mr. Hickson ceased to have any control of the contract, this fact may be taken both to explain their being missed in the making up of the papers for Parliament, and to show that there could have been no object on the part of Mr. Hickson in omitting them.

4. The evidence on this charge—"With permitting defective work to be done by the contractors, by which a loss is sustained by the Crown"—is necessarily twofold. In the first place, it is directed to the question whether or not bad work was in fact done; and secondly, if it was done, whether this was with the permission of the department, either express or tacit. To prove that bad work was done, the evidence again is classed under two distinct heads. One body of evidence is called to show that bad work was actually done, another to prove by inference that it must have been done. The whole of the evidence of bad work said to have been done under this contract relates to the use of cement; the object of the contractors being—as it has been suggested—to make unfair profits by using less than the proper quantity, in one or other of two ways, namely, either by mixing, in concrete or cement mortar, a smaller proportion of cement than that prescribed by the specification, or by using less concrete in the work than the quantity that should have been used and was actually paid for. The evidence called to show that bad work was in fact done is that of workmen and others who depose to having helped to do it, or to having seen others do it. The proof that less than the proper quantity of cement must have been used consists in a comparison between the amount of work involving the use of cement upon different contracts carried out by Carter & Co. or Carter, Gummow, & Co. within a certain period, and the number of casks which they appear to have bought for use on those contracts. This comparison rests upon a basis without which it could have no existence, namely, on the relation between the bulks of certain materials—firstly, the ratios of the bulks of concretes of various kinds, and, secondly, the ratios of the bulks of different classes of brickwork built in cement mortar, to the bulks of cement respectively used in each case.

As far as the immediate object of this inquiry is concerned, there are certain of the questions involved which, if decided in one way, would make it unnecessary to consider the others; but, inasmuch as your Commissioner has no power of ultimate decision, but is merely required to report and express an opinion on the evidence, it is necessary to deal with each and all of these matters; moreover, they are so involved and interwoven in the evidence that it would not be proper to take any one by itself, and, weighing by itself so much of the evidence as bears upon it alone, to attempt to segregate and settle it independently. The question also of defective work charged to have been allowed to be put in the works of Contract 69 will, so far as the use of cement is concerned, be dealt with, as well as the general question whether, throughout the contracts carried out by the contractors named in the Commission, there has been a deficiency in the use of cement.

The first question, whether bad work was actually done on Contract 79A, is, to a certain extent, conclusively proved. George Dawson, a labourer, the first witness called on the inquiry, was employed by Carter & Co. as a bricklayer's labourer on that contract. Part of his duty was to pack the space, varying in depth, between the brick arch of the sewer and the rock with sandstone concrete. This has to be done at short intervals, the length of packing put in at one time depending on the size of the space and the form of the rock, though the ordinary length is one "drum"—*i.e.*, the wooden centering used to support the brick arch in building: it is generally about 2ft. 9in. long. The concrete is put in with a shovel and rammed horizontally with a flat-ended wooden rammer till the space is filled up to the face of the brickwork. Dawson deposed to his having put in very defective work, large cavities being left over the brick arch, where the rock had been blown away—spaces which should have been filled tightly with concrete. He named especially the interval between shafts Nos. 12 and 13—No. 12 being at the intersection of Alfred and Mount Streets, 13 the next shaft to the south—as a place where a big cavity would be found, about five drums in length; and he gave, approximately, the position of this space. He said there were also, at intervals, spaces aggregating about 500 feet where similarly defective work had been done. An examination, made by Professor Warren, on behalf of the department, and Mr. M'Credie, on behalf of Mr. Parkes, disclosed the fact that, not far from the spot indicated by Dawson, there was such a cavity,

cavity, about 7 feet 6 inches long, 3 feet wide, and 1 foot deep. Mr. M'Credie made a further examination afterwards of the whole length of the sewer, from the end close to Milson's Point to near the northern extremity of Contract 79. On the former occasion the air was so bad and the conditions were so unfavourable that a more exhaustive test was out of the question. On this second examination Mr. M'Credie was provided with a truck to lie on; and though the arrangements were not luxurious—the sewer having a vertical diameter of 3 feet 3 inches, and a horizontal diameter of 2 feet 2 inches—Mr. M'Credie was able to arrive, by tapping, at a fairly satisfactory conclusion. The result was that, with one exception besides the place already discovered, he found all the work apparently good and sound, though with here and there a suspicion of a small cavity not worth breaking into; the test being the sound made by a hammer struck on the roof, the best test, though not quite conclusive, that was practicable. But, again, between the same two shafts, and not far from the place indicated by Dawson, there turned out to be another large unpacked length 9 feet long, with an average depth of 9 inches. After this Dawson persisted in saying that the largest cavity was still undiscovered. It is a curious fact that Dawson was working on this particular length in December, 1895, after Mr. Parkes's first speech in the House on the subject matter of this inquiry had become a common topic of conversation, that Dawson had apparently felt aggrieved a few months before at losing a fortnight's wages which he thought he ought to get, and that he had made threats—as to which he only gave a qualified denial—that he would make it hot for the Company, or some such expression. His avowed object in volunteering information to Mr. Parkes was a sense of duty to the public. He would not swear that he had received any specific instructions to do this bad work, but he said Carter & Co.'s manager (Reid) evidently approved of the saving of cement by any improper means, though the supplies were always ample, and indeed in excess of requirements. The bricklayer (Crawshaw) who worked with Dawson could hardly have been ignorant of what was going on. He, however, was not called; it did not appear that he could be found. Dawson's animus was further indicated by his describing the packing with shale instead of cement of the tunnel on Contract 69, with the evident intention of making this appear to be an act of dishonesty, when he must almost certainly have known, or could easily have ascertained, that it was duly authorised; and by his also trying to make it appear in his later evidence (page 182) that condemned bagged cement had been fraudulently put into casks, whereas it was—no doubt truly—explained, and he ought to have known, that this was simply the transfer, by permission, of passed cement (the bags containing which were too much damaged to stand carting) into casks openly used for the purpose. Taking all the facts together, it does seem by no means improbable that the leaving of these cavities was the result either, possibly, of Dawson's independent action, or, more probably, of a conspiracy between him and the bricklayer, with the idea of afterwards informing, and so having revenge, and gaining some reward which loomed in the future all the more grandly for its vagueness. Certainly the value of Dawson's evidence—which went also to general bad mixing of concrete—appears to your Commissioner to be infinitesimal.

No other witnesses spoke to bad work on Contract 79A; but the evidence of those who deposed to improper mixing of concrete on other contracts of the same contractors' is indirectly material to that particular contract, and directly to those others. William Darcus, a carpenter, whose examination appears on page 62, gave some evidence of bad mixing. His testimony has already been mentioned under the head of Contract 69; and reasons have been given for distrusting his accuracy. Wright, also a carpenter—his evidence begins on page 68—gave a similar, but vague, account. He also swore to the use of condemned cement. His most definite story was to the effect that the concrete put in the invert near the outlet of a storm-water sewer at Alexandria, Contract 61, was barely half the thickness that it should be. A very careful examination was made here, with the result that there appeared to be no shadow of truth in Wright's story. He was discharged years ago by Carter & Co., and evidently thought himself much aggrieved. In the face of the positive disproof of his accuracy in one important particular, it would be most unwise to attach weight to any other part of his evidence. It is very probable that Wright meant to tell the truth, but that his recollection has become confused. His imagining that everyone else was drunk on a certain occasion (Questions 2485–2534) may give a clue to this defect in his own memory.

Mr.

Mr. Chiene, a surveyor, whose evidence begins on page 129, and who was employed for about two years by Carter & Co., on Contracts 65 at the Glebe, 53 at Waverley, and 72 at Shea's Creek, said he never saw a gauge fairly mixed anywhere—that the blue metal and sand were always heaped up, and in plastering the cement was short in quantity. He said that, though it was not his duty to watch the mixing of concrete, he was absolutely certain that bad work was going on on these contracts. He said he never tried to look to see if it was so; but that Reid, manager for Carter & Co., was “everlastingly talking to” him about it. Mr. Chiene admitted that whatever bad work there was was done behind the backs of the inspectors. Considering the remarkably generous way in which this witness was treated by Mr. Carter, both on an occasion when he had to go to hospital on account of a tram accident, which occurred when he was not on duty in any sense, and after he had left the service, when he was making a collection for himself, it seems strange that he should give untrue testimony against the firm. On the other hand, there is evidence to suggest that his mind may have suffered from the accident. There is the account of his transactions with Mr. Eaton, in which, if the latter is telling the truth, Mr. Chiene showed a marked want of rectitude; and, generally, it cannot be said that implicit reliance should be placed on the evidence of this witness.

The next witness on this question was Melville, who had been an inspector, and had been dismissed on the ground that he had allowed bad work to be done. His evidence is on pages 247-9. It is principally of value to show that Reid, contractor's manager, being then under some of the contractors named in the Commission, was a man who had to be watched, and that Bandeen, another of the firm's employees, a very good workman, had to be checked when gauging cement; also that Mr. Gummow persisted in keeping on a man named Shellback after he had attempted to put in scandalously bad concrete. If anyone was to blame for this, it would seem to be Inspector Gledhill. Whatever action there may have been by the Engineer-in-Chief does not apparently concern Mr. Hickson, as the Hyde Park Contract, No. 30, bears date 30th June, 1887; he was appointed Engineer-in-Chief for Sewerage on 1st July, 1889. Melville's memory may or may not be accurate. He distinctly showed animus by his manner against both Mr. Davis and Mr. Gummow.

Green's evidence (page 430) is really hardly worth noticing. It goes to show that small stone, which, in the opinion of some witnesses, ought not to go into concrete, was allowed to be used for that purpose on Contract 72. Certainly sand and dirt should not be put in as part of what is supposed to be the stone. And the “historical piano-case” (a legend of the sewers), supposed to be buried in a sump somewhere, heard of vaguely by some witnesses but never seen by any, again came up in Green's evidence,—it may be allowed to pass with a few remarks. Piano-cases are used on works as tool-boxes. A piano-case whole, which is improbable, or the wreck of one, may—either dishonestly or as a joke of the workmen, or (the pieces of it) in a generally careless way—have been lowered or thrown down a sump and covered with concrete. Your Commissioner—especially after the result of the search to verify Wright's story—saw no ground for breaking up the inverts of sewers in use, at great expense and risk of irreparable damage and the propagation of typhoid, to hunt for these buried treasures of evidence. Even if the whole piano-case is in a sump under a solid roof of concrete, it is much better to leave it where at present it is doing no harm; and if the layers of stone that have been deposed to as forming the bottoms of other sumps are dishonestly doing their equally effective work on Contract 65, they certainly ought not to be disturbed.

William Caughey is the next witness on this point (page 444). He does not believe in the piano-case at all. That may be taken henceforth as permanently buried. But he says the concrete was “not too well” mixed. “The gauges were sometimes rather filled over, and sometimes a bit more was thrown in than ought to have been.” It was this witness who deposed to putting stone down two sumps at the foot of shafts No. 11 and 12 on the Glebe contract. It was done by order of one Humphreys—since dead—who was in charge, after hours, when the Inspector had left, the depth of stone being from 1 foot to 18 inches. This would, of course, effect a considerable saving of concrete; if, as is to be presumed, the whole measurement of the sump was paid for as concrete, there would be a substantial fraud in the substitution of stone of no value.

In addition to the evidence of these witnesses, Mr. Bagge gave evidence of an occurrence which is rather remote from the inquiry, as limited by the charges relied upon by Mr. Parkes, but still comes within the general scope of the Commission, and is doubtfully material to the question whether the firm was in the habit of doing defective concrete work. The evidence is to be found on pages 195, Q. 7206; 406, Q. 13134; 410, Q. 13211; 464, Q. 14657, &c., Q. 14700, &c. It is to the effect that some concrete arches on the Waverley contract—53—collapsed with their own weight. This was absolutely contradicted by Mr. Davis, who explained that what did take place was a piece of faulty brick laying—leaving the joints of the upper bricks in the arch open, and grouting them in afterwards, by permission or direction of the Inspector, who was consequently disrated. Mr. Davis's evidence, on page 460, clearly explains the matter. Mr. Bagge's recollection of the collapse of the arches was founded evidently upon a small substratum of fact—the settlement, to a trifling extent, of one end, or rather corner, of a concrete culvert which ran through one of the arches of the aqueduct under the bank of earth in which they were enclosed, and a slight cracking away of one end of the aqueduct from the sewer; this was afterwards explained. His idea also about the sand, said by him to have been found in the brickwork, was evidently another flight of imagination, without any intentional deceit, arising from the discovery of the grouting. Again there is no doubt that his story about the ogee curve in the sewer at Alexandria Park—page 465, Q. 14669, &c.—was almost equally inaccurate. Mr. Davis's evidence on page 468, Q. 14743, &c., touches on this matter.

In answer to these various witnesses, the contractors deposed that they always gave instructions to have the work properly done according to the specifications, and that they were not aware of any scamping or shortage in the use of cement, of which they generally had large stocks, and always sufficient, except on rare occasions when supplies unexpectedly ran out. John Reid, who was called by the Commission in the course of what may be described as the case for the prosecution—page 148—gave evidence to the same effect. He had been employed by Carter & Co. as manager on several contracts for about seven years, till he was discharged early in 1896, there being no longer sufficient work to justify his being retained. That, at least, was the ostensible ground. He had managed a contract at Woolloomooloo, the Glebe and Waverley contracts, and the two at North Shore. His only duty with regard to other contracts of Carter & Co. was to make up pay sheets; he had nothing to do with the management. He said he was ordered to carry out the work according to specification and plans, and certainly was not told to improperly save material. He contradicted Dawson's assertion that he had done bad work with his—Reid's—assent. Connors, foreman of bricklayers, also gave evidence to the same effect: he was not working with Dawson at the time the cavities were left. Both he and John Reid spoke very strongly of the extraordinary idea that Inspector Reid had of his duty. Connors may be taken as the more independent witness of the two, and certainly appeared to be speaking the truth. It was he who narrated the remarkable words said to have been used by Dawson, to be found on page 176, Q. 6503, which, if they were used—and it is hard to believe that they were invented by Connors—go a long way to support the suggestion that Dawson and Crawshaw conspired to leave the cavities found between shafts 12 and 13, Contract 79A.

It may be noticed as a very important point that all the witnesses—except Dawson, who tried to insinuate that Inspector Eyre, who followed Inspector Reid on Contract 79A, kept out of the way on purpose—say that whatever bad work there was was done behind the backs of the inspectors and engineers, though Chiene attempted to suggest that some of the inspectors were bribed by the contractors; but, even if this were so, all the evidence points to the same conclusion—that the responsible officers of the department exercised the utmost care in having the work on each contract supervised by a large number of inspectors, kept under the eye of the Resident Engineer, and liable to be dismissed, disrated, or reprimanded, for any neglect of duty.

It was principally this suggestion of bribery, and Chiene's admission of the extremely liberal way in which he was treated by Mr. Carter, coupled with the evidence touching the Resident Engineers, Rudolph, O'Hanlon, and Weedon, and their business transactions with Mr. Carter, that impressed your Commissioner with the importance of determining what the truth was in relation to the question of Mr. Carter's liberality

liberality and good nature. Your Commissioner, therefore, took the perhaps unusual course of publicly asking for evidence on this subject. The witnesses who came forward in response to this invitation deposed to such facts as leave no possibility of doubt that Mr. Carter is almost quixotic in his generosity when he meets with any case of pecuniary difficulty, hardship, or distress; and the same habit of action appears to have pervaded the firm generally. It is, as all Judges unfortunately know too well, a very easy matter to procure evidence in favour of a man's character, and very difficult—unless he happens to belong to some unpopular, because objectionable, class—to find out the truth of his shortcomings and misdeeds; but, though full weight be given to this consideration, it remains, on such evidence as was volunteered, absolutely beyond dispute that the conclusion arrived at in relation to Mr. Carter is correct. Therefore, when he is found helping men who might by some possibility—or even probably—be able to further his or his firm's interests, even if he is found almost forcing favours upon them, the inference that might with some men naturally be drawn, that he is acting with an object—that the transaction is in effect one of bribery—is so weakened as in all logical fairness to disappear. And this argument applies not only to the man who grants, but to him who receives, the favour. A man who, being in need of temporary help, is, in a generous, evidently disinterested, spirit, freely asked to accept a loan, and who does not force himself, almost churlishly, to refuse it, cannot justly be charged with taking a bribe because he is aware that it may be in his power to return the favour in breach of his duty to his employer. It would, perhaps, be wiser for him to decline, and say why he declines; but it would hardly strike some men, from the very fact of their unconsciousness of evil intention, that there could be any harm in the transaction.

In connection with this phase of Mr. Carter's character, it is abundantly proved that neither the firm of Carter & Co. nor that of Carter, Gummow, & Co. kept any regular business books. Taking the evidence throughout, it is quite clear that they considered—and found—that their bank pass-books were sufficient as between themselves. On page 116, Q. 4307, will be found Mr. Carter's explanation of how the partnership affairs were conducted. It was only after the amalgamation of the two firms of Carter & Co. and Gummow and Gillan that the firm began even to bind together the pay-sheets—page 117, Q. 4318. In their dealings with sub-contractors and workmen there appears to have been generally the same implicit confidence placed in the contractors as is implied, from the absence of books, in their mutual relations as partners. These facts are material in this way. Generosity and honesty do not necessarily go together; but, when men are proved to be generous, and when they are also proved—by strong implication—to be honorable in their dealings with one another, the presumption that their generosity is real and not assumed for interested purposes is strong. And, seeing also that the good faith of the firm is, in several different aspects, in issue in this inquiry, this evidence is important in many relations; though it must be borne in mind, for what that consideration is worth—especially in connection with Mr. Snodgrass's action—that admittedly the firm had drifted into adopting, perhaps with no consciousness of its involving any moral wrong, the very objectionable practice of "schedule-rigging" already commented on.

The evidence of Mr. Chiene in relation to the suggestion of bribery is really of little importance: it will be found on pages 130-31-33. It was a remark made by Manager Reid that suggested to Mr. Chiene's mind the idea that there might be something wrong in Mr. Carter's giving Mr. O'Hanlon what turned out to be a wedding present. The bribes supposed to have been given to Inspector Corpe seem to have been a charitable gift after his discharge, and, later, a contribution to his funeral expenses. Reid contradicted Chiene's evidence, in so far as it was suggestive of bribery; however, Reid was not always sober—a remark that applies also, it would appear, to Chiene—many things may have been said; many things may seem to be recollected.

Before touching on the questions of Messrs. Rudolph, O'Hanlon, and Weedon, it is fair to Mr. Parkes to mention that these transactions were discovered on an inspection by Mr. Christie of Mr. Carter's bank-books, and that Mr. Parkes was anxious, and endeavoured, to prevent the names of these officers from being made public, for fear of their suffering in their reputation and in their position in the Service; but circumstances made it impossible to avoid such publication.

A full account of the loan by Mr. Carter to Mr. Rudolph will be found in Mr. Carter's evidence, page 212, Q. 7683. Mr. Rudolph's history of the transaction begins on page 572. It is clear—1st, that Mr. Rudolph had ceased to supervise work for Carter & Co. at the time of the loan, and that he has not done so since; and, 2nd, that the money was lent by Mr. Carter personally, notwithstanding the inference drawn by Mr. Christie, page 232, Qs. 8328-9, satisfactorily explained away by Mr. Carter's account. It is also evident that Mr. Rudolph repaid it as soon as he possibly could. No suspicion of conscious impropriety, or of this obligation's having been a reward for services rendered, arises from the transaction.

On page 212, Q. 7683, Mr. Carter also gives an account of his loan to Resident-Engineer O'Hanlon, whose evidence will be found on page 596. From about the middle of 1890 to the date of the transaction, June, 1894, Mr. O'Hanlon had never had anything to do with any contracts of the firm. The whole of the money borrowed was repaid within four months. It was undoubtedly a private transaction; and it bears no more appearance of bribery than does Mr. Rudolph's loan.

The transaction with Mr. Weedon was described by Mr. Carter on page 210, Q. 7624, &c.: Mr. Weedon gives his account of it on page 244. The transaction was a loan of £2,000 by Mr. Weedon to Mr. Carter, at 6 per cent. interest, made as an investment of the money, when Mr. Weedon failed to find any other satisfactory place for it. In point of fact the money went into the account of the firm; this application of it being, naturally, the only use to which Mr. Carter could put it. There is no reason, however, to doubt the fact sworn to that the loan was intended as one to Mr. Carter personally—so far as that question is at all material. At the time the transaction took place—June, 1895—Mr. Weedon had nothing to do with any work of the firm's. He had been employed temporarily relieving Mr. Boys, on 79, and constantly on 79A; but from April 1, 1895, Mr. Darley—or Mr. Smail—took charge of that contract, so that Mr. Weedon had finally left it some months before the money was lent. Evidence was given—page 293—for the purpose of showing that the transaction was really with the firm, and that the security was insufficient; though it is rather difficult to discover the bearing on the subject-matter of the latter fact; however, as to that point, land values are, now especially, so notoriously uncertain that it may be passed over; the deduction naturally to be drawn from the facts proved is that the members of the partnership, for whom Mr. Carter was trustee as to some of the parcels, assented to the charging of the land, of which he held the fee-simple, for the very good reason that they shared in the advantage of the loan. There is really nothing like bribery in the whole of this affair.

Merely observing that it would be wiser for engineers and other Government officers to abstain religiously from having any business transactions of any kind whatever with contractors with whose works they may by any possibility be brought into official relation, your Commissioner leaves the subject of the dealings of these three gentlemen with Mr. Carter, with the earnest hope that the matters disclosed by the Inquiry may not, in the least degree, operate to their prejudice with their superior officers or the Public Service Board.

Taking together the whole of the evidence touching the subject of bad work, otherwise than such as may be inferred from the purchases of cement remaining to be dealt with, your Commissioner finds that it is not improbable that some such cases as have been described or suggested, of partly filling sumps or packing sewers with improper material in the place of concrete, leaving cavities over the crowns of sewers, using undue proportions of stone, sand, and cement, in mixing concrete, or in other ways "scamping" work, may have taken place in the contracts carried out by firms consisting of combinations of the persons named in the Commission, and that such acts may have been done in some cases by direction of the manager, but that the evidence to prove the commission of such acts is very limited, and generally very unsatisfactory; and, further, that there is no evidence worthy to be considered to prove that any such defective work, if done, was carried out in such improper manner by order or with the permission of the contractors, and no evidence whatever to show that any officer of the department was cognisant of it; but that, on the other hand, there is proof to the contrary. Your Commissioner does not consider that it is a fair presumption, because on some occasions workmen, when not under the eye of an inspector, do bad work, that therefore such work is done according to instructions received from their employers; even though the fact that the work is badly done, by expediting the contract, lessens the chance of future employment for the

the workmen, whose credit, however, for smartness it may promote: but a man who will scamp his work is quite capable of wasting enough time to compensate for the saving that might result from the improper way in which it is done. And with the better class of workmen, including managers, a mistaken zeal will cause them, in their employers' assumed interests, to do acts which they know the contractors would not sanction.

On the question of general deficiency of cement, the first thing to be considered is that of the bulking of concrete. This is a vague and difficult matter to determine, and one upon which opinions of experts differ considerably. The two principal kinds of concrete used in sewer construction are the ordinary bluestone and sandstone concretes. The proportions of the former are—in bulk before mixing:—stone (“blue-metal”) broken to a  $1\frac{1}{2}$ -inch gauge, four parts; sand, two parts; and cement, one part. The latter consists of stone (hard Sydney sandstone), broken to a 2-inch gauge, five parts; sand, two parts; and cement, one part. The mode of mixing is to measure, in a gauge-box made for the purpose, in the case of bluestone concrete, 16, and in the case of sandstone concrete, 20, cubic feet of broken stone; on that, when spread out and washed, to place, similarly gauging it, 8 cubic feet of sand; and on the top of that to spread the contents of a cask of cement; or, if the contractor chooses to gauge the cement also, to do so in a gauge-box containing 4 cubic feet. The Government specifications allow a cask, of a specified weight, at 4 cubic feet, when unmeasured; but a contractor may measure it if he chooses: as a cask usually contains, forced into it by hydraulic pressure, cement measuring, when gauged, about  $4\frac{1}{3}$ , sometimes  $4\frac{1}{2}$  cubic feet, there is an advantage gained by gauging, which, however, appears to be overbalanced by the extra trouble involved: although, in the cases of bluestone and sandstone concrete respectively, the addition to the standard 4 feet of one-third of a cubic foot of cement would justify the addition, in the gauging, of  $1\frac{1}{3}$  foot of bluestone,  $1\frac{2}{3}$  foot of sandstone, and two-thirds of a foot of sand, this is not legitimate according to the specification, if the contractor prefers to break the cask on the heap of sand; though it may well be that workmen see no harm, in this view of the matter, in throwing in a few extra shovelfuls of stone and sand after filling the gauge.

Smaller gauges are used for small mixings of concrete (sometimes only a bucket), the cement being shovelled out of the cask: in all these cases the true bulk of the contents of a cask is necessarily taken.

After gauging, the whole heap is turned over twice dry, and then wetted and turned over twice or oftener wet till it appears to be thoroughly mixed: it is then ready to use, and should be used as soon as possible, as cement “sets” quickly; the setting consisting of various chemical combinations, which should take place *in situ*, and not begin beforehand to any marked extent, combinations into which most of the water of mixing either enters, in new chemical forms, or becomes water of crystallization—at any rate, it disappears as water and is no longer subject to evaporation. After the first setting, further chemical changes gradually go on, which, if the cement is good, make the concrete harder. In the first few months a marked improvement takes place; but the bulk is apparently determined in the setting, in which a slight shrinkage seems generally to occur (though pure cement expands in setting). Changes of bulk that take place afterwards are temporary expansion and contraction due to variations of temperature.

At first sight it might be supposed that 16 feet of stone, 8 feet of sand, and 4 feet of cement, would make a mixture of 28 cubic feet; and 20, 8, and 4, feet would come to 32; but the fact is that both the stone and the sand are full of interstices. The grains of sand are very small compared with the pieces of stone, and the particles of cement are still smaller compared with the grains of sand. The consequence is, that, in mixing, the cement practically disappears into the sand, filling, or partly filling, the interstices; and the sand and cement find more or less room in the cavities between the stones; and so, in some cases, the bulk of the mixture is actually the same as that of the stone alone; in other cases it is somewhat larger. The final shrinkage in setting seems to be due to causes quite outside of this mechanical disappearance. But various circumstances modify the bulking of similarly proportioned makings of concrete. The difference in the nature of the sand may be neglected, as making a comparatively trifling difference in bulk; but the form of the stone is a very important element. The shapes into which it is broken make a distinction in the aggregate size of interstices. Different varieties of the

the same kind of rock have different fractures; but the most effective of all varying conditions in determining bulk is the relation between the sizes of the pieces of stone. If it happens that, from the largest to the smallest, they can so arrange themselves that all the interstices between the larger stones are roughly filled with smaller ones, then the largest weight of stone is found in a given bulk, and the vacant spaces ready to receive a filling of sand and cement are least. It is obvious that this is the condition of largest bulking, although the bulk would vary according as the mixing of stones of various sizes is more or less regular. And, inasmuch as it is a cause of weakness in concrete to be porous or spongy—a peculiarity to a certain extent of all cement mixtures—it follows that the better the stones fit into one another the denser will be the mass when the sand and cement are thoroughly incorporated by mixing through it. In the minds of some of the witnesses there appeared to be a mistaken belief that, the more evenly the stone is broken to the gauge, the better is the work. The specification for concrete is opposed to this idea, as it provides that the dry stone shall be screened through (or more properly on) a screen of  $\frac{1}{8}$ -inch mesh, the evident intention being to remove little more than sand and earth, and to leave in the stone pieces of all sizes from that of a very small pea upwards to that of the prescribed gauge, which, instead of being intended as an average of size, is meant to be a maximum limit. There is no doubt that the forking of metal, which of course would have the effect of separating out nearly all the smaller stones, is sometimes insisted on by inspectors; but, unless this is the result of a wrong view of the specification taken by a particular inspector, it is accounted for by the fact that, in the absence of a screen, or on account of the difficulty in using it under the circumstances, the fork is the only instrument that will separate from stone that has been knocked about and trodden over, the sand and rubbish that are then to be found in it. And if even good, sharp, sand is allowed to be mixed with the stone, then of course the concrete is reduced in strength; as, the prescribed bulk of sand being also added, the cement is unduly diluted with an excessive quantity of sand; and, within certain limits, the more cement there is to a given bulk of sand, the stronger is the mixture, which forms the binding matter of the concrete and so gives strength to it. The proportions, in size, of the pieces of stone also vary with the mode of breaking. In stone broken by a crusher there are a larger number of small pieces than in stone “knapped” or broken with a hammer.

Another important factor in determining the bulking of concrete is the ramming. Concrete, put into work in a body between boards—as in the pier of an arch—is rammed vertically under most favourable conditions for compression, and will be found much less spongy when set than concrete placed in a narrow and uneven space over the crown of a sewer, where it has to be, without violence, the brickwork being hardly set, rather pushed in than rammed, horizontally. The bulking of these two classes of work would probably be very different. The bulk is also said to vary with the quantity of water used.

It is clear that, with all these unsettled conditions, to predicate generally that a certain bulk of stone, with fixed proportions of sand and cement, will give a certain bulk of concrete, is impossible. In other words, a rule cannot be laid down stating how many casks of cement will be required to make a given quantity of concrete. Averages may be struck—that is the best approach to accuracy that can be attained.

On this question a great deal of evidence was called. It was that of experts, and varied, as usual. At first sight, the best testimony of all would seem to be that of Messrs. McCredie and Thompson, straightforward, intelligent, and accurate, witnesses. They made experiments, by mixing their materials in a box, ramming it moderately, waiting till it was set, and measuring the result. The second experiment—the first having been made under the mistaken impression that the stone should be forked—gave certain results with knapped stone, shovelled from a heap and placed on a  $\frac{1}{8}$ -inch screen; it was washed on the screen, and all that did not pass through was shovelled into the gauge-box. This plan differed slightly from the specification, which provides that the stone shall be screened first and washed afterwards. It is possible that by such treatment as the stone received, the smaller particles would be sifted out more effectually than by the ordinary shovelling over an inclined screen. However, there was said to have remained a large proportion of stone the size of a pea. The results were these:—Sandstone concrete showed no increase

in

in bulk beyond that of the stone ; therefore every cubic yard of concrete would contain  $\frac{27}{20}$  or 1.35 of a cask of cement, if the cement were taken at 4 cubic feet to the cask, or 1.24 if the cask were considered to hold  $4\frac{1}{3}$  cubic feet. Bluestone concrete showed a slight increase in bulk, viz.,  $\frac{1}{24}$ , with the result that each cubic yard of concrete would contain 1.62 or 1.495 of a cask, according as a cask were taken to hold 4 or  $4\frac{1}{3}$  cubic feet. This test, in addition to the fact that the stone was knapped, and that the screening was probably very good, was made under the best conditions for ramming—conditions, therefore, unfavourable to making bulk, and tending to increase the proportion of cement in a given measurement of concrete.

The simplest way to compare the evidence of different witnesses is to take the number of cubic feet of concrete that they respectively say will contain a cask of cement. To begin with, therefore, the experiment of Messrs. M'Creddie and Thompson gives, as this number, 20 of sandstone concrete, and  $16\frac{2}{3}$  of bluestone. Mr. Gilliver, a contractor of great experience, puts the numbers at  $23\frac{1}{2}$  and  $19\frac{1}{2}$ . He said he had tested it (page 286, Questions 9853, 9887. Mr. Rhodes, also a contractor, gives 24 and 20. Mr. Butcher names about 24 and  $20\frac{1}{4}$ ; he speaks of knapped stone, forked according to a regulation of the Water and Sewerage Board, which differs in this respect from the Sewerage Construction Branch of the Public Works Department. If the mean of these several opinions be taken, the result is 22.9 cubic feet of sandstone concrete, and 19.1 of bluestone concrete, to a cask of cement; considered as equal to 4 cubic feet. If the cask be taken as containing  $4\frac{1}{3}$  cubic feet, then these numbers change to 24.8 and 20.7 respectively.

There were certain witnesses called on behalf of the department who gave evidence on this question. Mr. Griffiths, Assistant Engineer to the Water and Sewerage Board, put the quantities as 27 and 22. He says—page 526, Q. 16225—he has known sandstone concrete to go as high as 30 cubic feet to the cask of cement.

Mr. Spencer said his estimate was that a cask of cement would make a yard of sandstone concrete, 27 cubic feet, and a yard of bluestone concrete would take about  $1\frac{1}{2}$  cask; this would be equivalent to a cask to  $22\frac{1}{2}$  feet; 22 feet, however, is what he deposed to as the number accepted by the department as a basis of calculation for payment where it was impossible to measure the work, the number of casks of cement used being known. This evidence was very clear—page 623.

Mr. Greenwood, contractor, civil engineer by profession, gave, on page 624, valuable evidence in this connection. His opinion is that, in the case of stone broken by a machine, with all the "shivers" in it, a cask of cement should go to a cubic yard of sandstone, and 22 feet of bluestone, concrete.

Mr. Eaton, contractor, on page 625, gave very specific evidence that he had actually, on two contracts where the concrete was put in between boards, and where, therefore, the ramming was easy and the measurement accurate, calculated the averages from the known data of measurements and number of casks used, and had found the sandstone concrete to go 26, and sometimes a little over 26, feet to the cask, and the bluestone concrete 23.

Three of these witnesses, therefore, agree in the numbers 27 and 22; the fourth, on the best basis of experience, gives 26 and 23, speaking of conditions in which the bulking of the concrete, to a given quantity of cement, would be lower than might be expected in packing sewers; in other words, where, given the measurement of the concrete built in, the number of casks of cement used would be more than in the case of the latter kind of work. As to the bluestone concrete used in the building of the lower part of the sewer, it is probable that, in the large open storm-water sewers spoken of by Mr. Eaton, the ramming would be heavier, and therefore the compression greater, than in the confined space of a small-tunnel sewer; therefore, it might be expected that a less quantity of cement would, in the latter case, go to a given bulk of concrete in position than even the quantity founded on the basis of one cask to 23 feet.

The question is what, on this evidence, would be a fair standard to accept in determining an important problem, resting upon the assumption that a certain number of casks of cement ought to be used for the making of a certain number of cubic yards of concrete, placed in position under, to a very great extent, conditions adverse to solidity. Is it fair, when a charge of fraud is sought to be based on the conclusion that less cement has been used than would appear to agree with the accepted standard, to take for that standard the result of a single experiment such

as was made, or is it more proper to accept such a substantial practical test as that made by Mr. Eaton, corroborated by the strong evidence of the preceding witnesses? It would certainly seem more consistent both with probabilities and with the ordinary principles of justice to adopt the latter course, and to use such a reasonable basis of calculation as Mr. Davis has adopted on page 631—namely, one cask of cement to 27 feet of sandstone and 22 feet of bluestone concrete; in reference to which he says, on page 634, Question 19331, that he considers he has estimated the quantity (proportion of concrete to cement) very low. If this is a fair course to pursue, then the calculations made by Messrs. McCredie and Thompson, on page 308 of the evidence, must be treated, in so far as concrete is concerned, as showing an excessive number of casks of cement for the number that should have been used on the work in the making of concrete.

The next head of material for which cement is used is brickwork. As to this, it appears on examination that Mr. McCredie and Mr. Davis very nearly agree; but the former has worked out his figures on a wrong basis, and the latter on a correct one. Mr. McCredie made an experiment, and found out how much cement was used in building a cubic yard of brickwork in a tunnel arch. The result—half a cask of cement to a yard of brickwork—if a cask is taken to hold  $4\frac{1}{3}$  cubic feet—shows that, in such construction, the proportion of mortar to brickwork is about 16 per cent. The mortar consists of two of sand to one of cement; and both Mr. McCredie and Mr. Davis assume a total disappearance of the cement in the sand. Mr. Davis's estimate for double-ring brickwork is 15 per cent.; in approximate calculations, such as these must necessarily be, so near an approach may be treated as a practical agreement. Mr. McCredie has worked out the whole quantity of cement required for brickwork on the assumption that it was all double-ring work. Mr. Davis, on the other hand, has distinguished, by consulting the vouchers, between double and single-ring work; and, taking 15 per cent. for the former, he has adopted 10 per cent. for the latter. This ratio has not been shown to be incorrect; reflection would indicate that it is probably near the mark. In single-ring work the only mortar used is in the small  $\frac{1}{4}$ -inch joints, except in the cases—rare where blasting is the mode of excavation—in which the space between the brickwork and the rock is just large enough to take a joint of mortar, and is too small for a packing of concrete. In double-ring work there is an intermediate collar-joint, between the two rings of brickwork, half an inch thick, it is this which makes the difference in the proportion of cement supposed to have been used in brickwork between Mr. McCredie's and Mr. Davis's results. Mr. Davis's should certainly be preferred. In cement rendering the difference between Mr. McCredie's and Mr. Davis's estimates is small. It is apparently explained by assuming that Mr. Davis takes  $4\frac{1}{3}$  whereas Mr. McCredie assumed 4 cubic feet as the contents of a cask of cement. Mr. McCredie finally adds a substantial number of casks for grouting. This is supposed to conform to a clause of the specification which provides for laying concrete in layers and grouting between each two. Mr. Davis has explained that in sewer work this mode of building is not, in fact, and could not well be, adopted; the concrete forming the lower part being worked in behind and under the lagging boards till the top level is reached. The only grouting required would be that used on the stepped-back end of a length before another length is begun, as the work proceeds along the tunnel, and in a few other cases: but the whole quantity of cement used for this purpose would be too small to be worth notice. As to other questions, it was fairly contended that Mr. McCredie's quantities must be really within the mark for two reasons—first, that the "margin" allowance paid for on the vouchers in Contract 79 represented less concrete than was actually used; and, secondly, that nothing had been added for waste. To the former contention Mr. Davis, in putting forward his results as approximate, replied that the proportions of cement to concrete that he had taken were so large compared with the probable truth as to fairly allow for this difference. As to the argument founded on assumed waste, Mr. Davis explained that the waste is small. It would occur principally in the bricklaying and the rendering. Cement being valuable, contractors naturally do their best to prevent its being wasted, as the loss comes out of their own pockets. In bricklaying, the bricks in a tunnel being laid on the lagging boards of the centering, it is not easy to waste mortar at all, though it is found that some little has always to be cleaned out—perhaps dropped in pointing up the brickwork—before the rendering begins. In  
intending

rendering there can hardly be any waste. If the soffit is rendered—frequently it is not—then it is done first, the invert next, all in one job; and the whole has to be left clean and smooth, the plasterer working backwards: he cannot therefore leave any waste in front of him.

It may be that Mr. M'Creddie's estimates come nearer to the truth than Mr. Davis's; but it may be the reverse. So much uncertainty enters into all these calculations—the premises being to so great an extent mere assumption—that the fairest conclusion to come to is that, if the number of casks of cement proved to have been provided by the contractors nearly agrees with Mr. Davis's estimate of the number that ought to have been used, then there is no substantial ground for suspecting—much less for asserting—fraud in relation to the use of cement: if it be proved to fall short of this quantity by a considerable amount that then there is ground for suspicion.

Mr. Davis's calculations are to be found on page 631 of the evidence. Taking the three contracts to which particular attention has been drawn in relation to shortage of cement, he works out, as the total number of casks that ought to have been used on these contracts—69, 79, and 79A—15,606. As some evidence to show that that number of casks at least was actually used, he then gives the number that, according to the inspectors' returns, appear to have been used. This number is 15,512, practically—in so large a number—the same. These returns it was the duty of the inspectors in charge on the different contracts to keep and hand in to the Resident Engineer. As Mr. Davis explains, the principal inspector has to take some of them second-hand from other inspectors in actual charge of other sections of the works. A part of a cask may be used in one place and a part in another; and so mistakes will creep in, to the extent perhaps of 5 per cent. (probably by way of omission), but every inspector in charge of cement work has to keep a record of every cask or part of a cask used; and, therefore, the return is at any rate supposed to be correct. The full returns will be found on pages 89 to 94 of the Appendix. If the inspectors did their duty, these returns must show the number of casks actually used with a fair approach to accuracy, if they do not so show the number, then the cause must be either collusion between the inspectors and the contractors or their men, or carelessness in making entries, or in allowing themselves to be deceived by accepting from the workmen lying accounts of the number of casks used. This was suggested by Dawson (page 17, question 590). A comparison between Mr. Davis' estimated numbers and the inspectors returns appears thus:—

|  | Contract 69. | Contract 79. | Contract 79A. |
|--|--------------|--------------|---------------|
| Mr. Davis's estimate ... ..  | 8,387        | 4,642        | 2,577         |
| Inspectors' returns (taken from the Appendix—<br>Mr. Davis's figures were imperfect as<br>they appear on page 631 of the evidence) | 7,963        | 5,148½       | 2,400½        |
| Deficiency in returns compared with<br>estimate ... ..   | 424          | .....        | 176½          |
| Deficiency in estimate compared with<br>returns ... ..   | .....        | 506½         | .....         |

The differences being respectively 5 per cent., nearly 10 per cent., and nearly 7 per cent. These discrepancies appear remarkable; but the explanation that suggests itself is, in the first and the third cases, that the deficiency in returns compared with the estimate may be caused, partly by over-estimate and partly by omissions in the returns, or wholly by the latter; in the second, that the excess of returns over estimate represents—with something added for omissions—the large difference due to the non-allowance of as full a "margin" as fairly approached to the packing actually used. If Mr. Davis has not over-estimated the number, as far as proportion of cement to concrete is concerned, then the returns would indicate that some addition should be made to his total, to the extent of perhaps 750 casks, to represent the unpaid for packing in Contract 79—5 per cent. being added, for omissions, to the inspectors' return of 5,148. If he has made such an over-estimate, then it may still be that his aggregate is nearly correct. The great discrepancy that may be noticed between Mr. Davis's estimate and the returns (in the *Appendix*) in the relative quantities for concrete and brickwork, is explained by him on the ground that, as concrete packing is going on at the same time as the making of mortar for the sewer  
brick

brick lining, it is impossible to keep the quantities of cement used for each purpose distinct; and so a number of casks really used for concrete appear under the head of brickwork.

But Mr. Christie has gone into a very careful and exhaustive inquiry, directed to the discovery of the number of casks of cement actually purchased by Carter & Co., and Carter, Gummow, & Co., for, and brought on to the site of, these three contracts, extending his examination also beyond the scope of these contracts to other concurrent works carried on by the same firms. Whilst Mr. Davis's calculations lead him to the conclusion that about 15,606 casks should have been used, and the Inspector's returns show 15,512 as having been used, and whilst, with the addition deduced from a comparison, the former number may fairly be increased to about 16,350 (by adding the 750), and the latter may be assumed to represent about 16,300 (when the 5 per cent. is added for omissions), Mr. Christie can only discover that an aggregate of 13,431 casks was actually supplied to these three contracts, leaving a deficiency of about 2,900 casks. Mr. Carter having sworn that all purchases of cement were paid for by cheques, which would appear in the Bank pass-books supplied to the Commissioners by the firm, Mr. Christie was enabled to trace all these transactions; and, by examining also the books of the firms from whom the cement was bought, to discover the destinations of the several lots. As far as the deliveries to the contracts themselves go, there seems no reason to doubt the substantial accuracy of the conclusions arrived at by Mr. Christie. Assuming the deliveries proved to particular localities to indicate the quantities used on the contracts there situate, and taking the numbers based upon Mr. Davis's estimate, with the addition applicable to Contract 79, the comparison stands thus:—

|                        | No. of casks proper to be<br>used on Contract. | No. brought into<br>Contract. | Deficiency. |
|------------------------|--|-------------------------------|-------------|
| Contract 79 and 79A... | 7,969  | 6,702                         | 1,267       |
| Contract 69 ... ..     | 8,387  | 6,729                         | 1,658       |
|                        | 16,356   | 13,431                        | 2,925       |

But, in reply to this *prima facie* of shortage, there was produced abundant evidence of the fact that it has been a constant practice to cart cement from one contract to another, so as to cause great difficulty in tracing the final destination of any particular parcel. The practice is for contractors to have sheds on the work, as well as sheds off it and near to it. It is a rule, perhaps not always enforced, that cement which has failed to pass the test shall be removed off the site of the works; it may then be stored in one of the contractors' sheds not situate on the ground, but close by. Cement is bought subject to Government test, and is returned, the merchant paying cartage both ways, if it fails to pass. But it does not follow that because it has failed once it may not pass later. If it is, as it may be, the presence of an excess of unslaked lime in the cement that has disqualified it, then the lapse of a few months may cure that defect, and a second trial may be successful. Cement may therefore have been held by a contractor in his shed off the works pending a further test, while he is using another parcel that has passed; if the former lot finally passes it may have to be transferred to another contract. Carter & Co. and Carter, Gummow, & Co., it was sworn by several members of the firm, were in the habit of buying extensive stocks of cement to arrive, and, for the convenience of the merchants, storing, in sheds in which there happened to be room, large lots for which the contractors had no immediate use. Mr. Carter's evidence on page 235 touches on this subject. In October, 1891, when Contract 72 was stopped, it was sworn by Mr. Carter—page 243—that he had a large quantity of cement in stock, stored upon or near the site of that contract. In the claim made for compensation for stoppage of the works there appear two items—1,300 and 2,000 casks of cement: the first item evidently refers to passed cement on the ground, the whole price of which is claimed (no doubt one of the items that Mr. Hickson, in his allusion to the claim in his minute of February 23, 1892, said could not, in such form, be entertained. Mr. Carter however, contended that, as the department had accepted it, and so it became the property of the Crown by the terms of the contract, the contractors had a right on the stoppage to ask the department to keep it and pay for it); and the second to untested cement in a shed or sheds off the site, the two together making up an amount estimated to be sufficient to complete the part of the work withdrawn: in fact, Messrs. McCredie and Thompson—

page 263—calculated the quantity of cement required for this construction at about 3,430 casks : for the reasons already gone into, their estimate may be taken as excessive: Mr. B. C. Simpson, in working out Carter & Co.'s claim, would not be inclined to under-estimate the quantity; therefore it may be taken that his claim for loss of use of 1,300—2,000 (3,300) casks must certainly be intended to represent—and, unless an attempt was being made to defraud the department, does fairly but fully represent—cement on the ground or in the neighbourhood ready for use on, and estimated to be sufficient for, the countermanded work, exclusive of what would be required for finishing the work in hand up to Mitchell Road, for which, of course, no claim would be made; and about the time the upper part of the contract was withdrawn an application was made on behalf of the contractors to have 2,000 casks of cement tested, but was refused by the department for fear the testing might in some way (as Mr. Carter contends) prejudice the rights of the Crown in relation to the withdrawal. This action of the contractors bears out the same view of the then existing state of affairs. As soon as the contractors were allowed to go on with the upper end of Contract 72 there would be no longer any objection to their having cement tested as for that contract, even in excess of its requirements. A comparison of cement tests and inspectors' returns for Contract 72, on pages 194 and 195 of the Appendix, shows that there was a final excess of cement tested over cement used on that work of 2,466 casks, of which 1,222 remained over after the first part of the work was completed. This is a remarkable corroboration of the facts relied upon by the contractors, in two directions. Mr. Carter's evidence on page 602 is very positive on the question of the final excess of cement on Contract 72, and as to the fact that large quantities were carted away to the North Shore. Mr. Snodgrass's evidence on pages 689 and 690 is to the same effect—that there was a very great excess of cement on Contract 72, and that a large number of casks were carted to North Shore, there being in hand not only the quantity required to complete the second part of the work, but a good deal more. The contractors had expected, as Mr. Carter said, that there would be a further branch, for which they hoped to tender successfully, of this Shea's Creek storm-water sewer, which, in fact, was not gone on with.

In the course of the inquiry a witness named Burcombe was called by Mr. Parkes—page 448. He gave evidence to the effect that he had carted cement from Shea's Creek to the North Shore. If his evidence is correct he must have carted some 1,200 to 1,300 casks; and he deposed that Booth and Molloy carted some in addition to this. When he said his teams drew three loads a day, it seemed, considering the distance—a good 6 miles—as if he must be mistaken: 36 miles a day, at  $3\frac{1}{2}$  miles an hour even, would take over ten hours on the road, exclusive of delays in feeding, loading, and crossing on the steam ferry; but Mr. Carter afterwards deposed to the extraordinarily long hours that these draymen and horses worked—page 684, Question 20654—suggesting, however, that it was more probable that the trips would average two and a half, as he explains on page 683, Question 20653. This would bring down the number of casks by one-sixth—say to about 1,100. However, Burcombe's recollection of details was so uncertain that his account can only be taken to mean this, that he carted a large number of casks—probably over 1,000; and that other carters were also doing the same; as to the exact time at which he did it, he cannot recollect. There does not appear to be any ground for disbelieving Burcombe: his statement was made in answer to a question put by Mr. Parkes nearly at the beginning of his examination: he was in no way led up to his answer. As work on Contract 79 could not have begun till it was fairly certain that Contract 72 would be gone on with—that the withdrawal would only amount to a suspension—the carting of cement from Shea's Creek to the North Shore would be the result, really, not of the fact that there was just about sufficient cement on 72 to finish the whole contract to Munni-street, but that there was also a considerable excess, that had been stored there before Carter & Co. were certain of getting Contract 79—that is, before the end of February, 1892. Cement that had been bought for future delivery would from that time, of course, be delivered at the North Shore, to save cost of unnecessary cartage, even if the contractors had large sheds ready near the Shea's Creek works. The evidence of Inspector Fowle—page 539—shows that no cementing work was done on Contract 79 before June, 1893. Cement, if carted from Shea's Creek, may have arrived on or near the site of Contract 79 at any time either before or after this date. If untested it would have to pass after being brought there,

there, before it could be used. Unless it had been already tested in bond—which was proved to be a common practice, the cement being thenceforth kept under the control of an officer of the department, and branded only when it went out of the store for delivery—cement delivered by the merchants would stand in exactly the same position as untested cement carted from Shea's Creek; it would have to be tested after arrival.

When Inspector Fowle came on to Contract 79, he found, as he has proved—page 540, Q. 16376—853 casks in a shed in Alfred-street. There are some fairly strong grounds for presuming that this cement did not come from Shea's Creek, that it was in fact some of the cement included in the sales which go to make up the number traced by Mr. Christie to Contract 79. It is not, however, clear that there was not at the same time cement in other sheds of the contractors at the North Shore which may have come from Shea's Creek. But, at whatever time cement arrived, it might be expected to appear in the Contract Journal: one is kept on every contract: and its omission would seem to be evidence of its non-existence. This would certainly be so if the journal could be taken as a full and exhaustive account of all the cement that arrived. But there is evidence in the journal itself that this is not so. One of the very earliest entries in the journal—that of May 15—in which any mention is made of cement, alludes to some cement that *had been* advanced on, and yet of which no former notice whatever appears. Going carefully through the journal, your Commissioner could not find in that record anything to show the receipt (after deducting some cement sent away) of more than 4,082 casks, with the addition of a vaguely-mentioned lot, of which the number was not given, said to have arrived from Contract 69, presumably a small number. This would show a deficiency, when compared with the inspectors' returns for Contract 79 (5,148½) of over 1,000 casks, leaving, if the calculation as to apparent shortage on the aggregate of the two contracts is correct, only about 250 as the apparent deficiency on 79A. This looks improbable, and an examination of the entries in the book also discloses this fact:—that, with the exception of some small lots received towards the close of the contract, when particular attention was called to the want of cement, the work being stopped in consequence, apparently as the result of a miscalculation of the amount necessary to finish it, all the entries deal with cement in special relation to testing. The natural conclusion to draw is that it is impossible to gather from the journal, that begins by omitting mention of the cement actually advanced on, the number of casks of tested cement that may have arrived on the ground from time to time, as to the passing of which there could never be any question, and when there was no suggestion of delay arising from the want of it, and that the mere non-mention of the arrival or whereabouts of a lot of tested cement is no disproof of its existence.

Apparently, Contract 79 would not require, to make up the difference between the amount of cement that ought to have been used and the amount traced to it by Mr. Christie, the whole of the excess on Contract 72, shown by comparing the returns, amounting to 2,466 casks (possibly to be reduced somewhat by omissions in inspectors' returns for Contract 72). These tests do not limit the number, of course, as cement tested in bond may also have come on to the work. In fact, Mr. Christie has proved that about 13,400 casks were supplied to the three Contracts 79, 79A, and 69; yet he can only find that 11,740 were submitted for testing for use on these contracts. Of the excess on 72 some—208 casks—went to Waverley. It was suggested that 600 were sold to Danahar, Taylor, and Burton; this Mr. Carter positively denied, asserting that they came from the Glebe contract—pages 682, 684–5. But 800 casks sold to Flood and Rutherford may have come from this stock—Mr. Christie's evidence, page 676; and 207 casks appear to have been transferred from Contract 72 to Iron Cove Creek and the Glebe, making a total deduction of 1,007: this would still leave an apparent excess on Contract 72 of 1,459 casks. Contract 79 was the work to which these would naturally pass; and, if they constituted the whole excess on Contract 72, then it is apparent that from that source there might be made up more than the apparent deficiency on Contracts 79 and 79A.

As to Contract 69, in this relation, the tender was accepted in December, 1893. This would be about fifteen months after the completion of Contract 72. It would hardly be likely that any further balance of cement from Contract 72 would then remain over for the use of Contract 69, though it is just possible: no evidence has been given to explain the apparent deficiency of 1,659 casks on this contract.

Bad

Bad gauging might account for it if this were indulged in; as very little, if any, concrete packing in sewers was used on this contract, that opportunity for scamping was hardly present: the improper filling of sumps, if it took place, would not account for much. Then there is the fact that the inspectors' returns are only five per cent. short of the proper number of casks calculated by Mr. Davis; and the witnesses who spoke to bad work on this contract all—or nearly all—spoke well of the inspectors, saying that whatever scamping took place was done behind their backs.

Taken all together, the evidence of sales and deliveries certainly tends to raise a suspicion that a substantial shortage of cement took place on this contract. At the same time, the whole proof rests so much upon hypotheses, and is so full of uncertainties, that it would be very dangerous to draw from it anything like a definite conclusion. If it were really proved that there was shortage of such a substantial amount of cement as would be represented by about one-fifth—as suggested by the evidence on Contract 69—there would then be a strong suspicion, amounting almost to certainty, that this took place with the knowledge of the management, though it would still be quite possible that the partners not immediately concerned in looking after the work itself were unaware of the course of fraud that was going on. But, in any view of this matter, there appears no ground for suspecting the officers—much less the heads—of the department of any guilty knowledge or connivance.

Your Commissioner, therefore, is of opinion—1st, that this charge is unproved; and 2nd, that the finding on charge 7, under the head of Contract 69, is not affected by the evidence that has been produced touching the general deficiency of cement.

#### CONTRACT 118 (JOHNSTONE'S BAY).

1. *With allowing defective materials to be used by the contractors, by which a loss is sustained by the Crown.*

I will now refer to Contract 118. That is the contract in reference to which I complain, that unemployed labour was taken to do the work which they had to do under their contract. O'Neill & Co. were carrying out Contract No. 83, and they informed me that the whole of the sandstone which they brought for this work was condemned. That stone was returned to Mr. Ryan's quarry at Pyrmont. Then Messrs. Carter and Gummow were allowed by the Engineer-in-Chief to use that condemned stone at half price on Contract No. 118. You cannot get away from this statement, because O'Neill saw Ryan, the contractor, and Ryan says emphatically that he sold to Carter and Gummow, with the approval of the Government officials, the whole of that stone, to an enormous extent, which was condemned in O'Neill's Contract, No. 83. O'Neill in all probability is not a man of great means. He is not perhaps so much in favour with the department as are Messrs. Carter and Gummow. It is a serious thing if stone which is defective on one job is permitted to be used on another job. It was taken over to Contract No. 118, crushed in Mr. John Young's mill, and put into the contract holus-bolus as it came out of the crusher.

Mr. ASHTON: Was it the same class of work?

Mr. PARKES: If anything it was a superior class of work.—*Hansard*, 12th May, 1896.

2. *With allowing the contractors to have the benefit of labour performed by the unemployed, paid by the Crown, to drain the works of the contractors, which drainage the contractors have to take the responsibility of under their agreement with the Crown.*

Now, let me take another instance. These gentlemen have a contract at Johnstone's Bay for what they call storm-water channeling. This stormwater channeling is taken through a lot of mud flats. For four or five weeks the Government employed about forty or fifty of the unemployed to drain the water off this land for the contractors. The Government actually employed the unemployed for this purpose. I can bring plenty of evidence on oath that forty or fifty men were employed for four or five weeks draining the water off the land where these gentlemen had to carry out their contract. The effect of that was to put £280 or £300 into the pockets of the contractors.—*Hansard*, 26th September, 1895.

\* \* \* \* \*

3. *With omitting the necessary papers ordered to be laid upon the Table of the House of Parliament, by which Honorable Members were unable to judge of the manner in which the contract was conducted.*

In connection with Contract 118, all the plans and sheets of tenders, and all correspondence have been omitted, and twenty pages of deceptive padding have been put in.—*Hansard*, 12th May, 1896.

Mr. Parkes, towards the close of the inquiry, assented to your Commissioner's suggestion that he should no longer press the charges made under the head of this contract. This action being consistent with the view taken by your Commissioner as that towards which all the evidence clearly tends, it appears to be sufficient here to point out that there was no evidence given worthy to be considered of the use of bad materials on this contract; but, on the other hand, the contrary was amply proved. There was, further, conclusive evidence, the correctness of which a view of the ground fully corroborates, that the action taken by Mr. Hickson in having the drain in question cut was not only justifiable in relation to the rights of the contractors, but was properly taken in the public interest, as well for the purpose of properly carrying on the reclamation works in Rozelle Bay as to avoid serious risk of an action against the Crown for damages, or a claim for an injunction, at the suit of the contractors.

CONTRACT

## CONTRACT 65 (GLEBE).

1. *With allowing defective work to be done, by which a large loss of money was sustained by the Crown, and with not making any effort to recover such loss from the contractors, Messrs. Carter, Gummow, & Co.*

The evidence in support of this charge has already been considered in dealing with the question of defective work in relation to cement: it is unsatisfactory as against the contractors, and futile as against the department.

## ALLEGED CONCESSIONS BY THE DEPARTMENT TO CARTER, GUMMOW, &amp; CO.

*That Robert R. P. Hickson, while an officer of the Crown, viz., Engineer-in-Chief for Public Works, did allow of undue concessions being granted to Messrs. Carter, Gummow, & Co., contractors for sewerage works in the Colony of New South Wales, his son, George Hickson, being an interested party in the firm of Messrs. Carter, Gummow, & Co.*

1. *By permitting Messrs. Carter, Gummow, & Co. to obtain the monopoly of the Monier system in Government works by inducing the Minister to enter into an agreement to adopt their patent in public works, and to pay 15 per cent. royalty for use of same by an improper minute, inaccurately stating the cost of a special test made in connection with the same.*
2. *By permitting Messrs. Carter, Gummow, & Co. to obtain Contract No. 79 in an improper manner to the advantage of the contractor, and to the detriment of the Crown.*
3. *By permitting Messrs. Carter, Gummow, & Co. to obtain Contract No. 77 in an improper manner to the advantage of the contractor, and to the disadvantage of the Crown.*
4. *With allowing faulty supervision of the contracts carried out by Messrs. Carter, Gummow, & Co., by which inferior concrete was supplied, making defective work, there not being the specified quantity of cement used—more particularly in Contracts 79, 79a, and 69.*

I asked the Secretary for Public Works last week what connection Mr. Hickson had with the firm and with this work. I was told that Mr. Hickson was the engineer to these contractors; but I am informed, upon the most reliable authority, that of a Mr. Maddison, the contractor, who has left this firm, that Mr. Hickson took the position as a partner in the firm, he being a son of the Engineer-in-Chief. Now, it is an unfortunate position that this firm should have been allowed contracts under such circumstances as these; their engineer having to communicate with his father, who is in a position in the Public Works Department in which he could grant all sorts of concessions. This firm are the only contractors who during the last twelve months have received these numerous concessions. I have it upon the authority of Mr. Maddison, who has undertaken to produce a copy of the telegram, that a wire was sent in March, 1894, by one of this firm of contractors, Mr. Carter, to another member of the firm, Mr. Gummow, who was then in South Australia, to this effect: "Mr. Hickson must be taken into the firm at any cost." It was about this time that Mr. Hickson left the department, as his father said, on the score of retrenchment, and took up his position as an alleged partner in this firm; or, as I have been informed by the Minister, their chief engineer.

Mr. GARRARD: Has the hon. gentleman the telegram?

Mr. V. PARKES: The retiring partner assures me that he will produce a copy of the telegram. If it is not forthcoming a copy can be obtained from the Telegraph Department. He is willing to make a statement on oath, however, that this thing occurred. Having established this connection between the Engineer-in-Chief's son and the firm, I intend presently to show what concessions were given to these contractors.—*Hansard*, 26th September, 1895.

The same firm within the last eighteen months received a contract for sewerage works at North Shore. They received their contract under a schedule tender, and their sureties as usual were those of their own firm. No query is made as to whether they are in a good financial state or as to whether they can provide good disinterested sureties.—*Hansard*, 26th September, 1895.

I could cite other concessions given to these gentlemen, information as to which has been given to me not by one contractor, but by twelve or fourteen. Innumerable concessions have been given to them, and it would only be wearying the House to particularise them.

Mr. YOUNG: Let us have them all while the hon. member is about it!

Mr. V. PARKES: If an inquiry is made the House will find that there has been an undue amount of favouritism towards not only these contractors but many others.—*Hansard*, 26th September, 1895.

To show the artifice with which questions are answered by the Engineer-in-Chief, on the 19th instant I asked these simple questions of the Minister:

"(7.) What connection has a Mr. Hickson with this firm or with the works? (8.) Is this Mr. Hickson a son of the present Engineer-in-Chief?"

This was the reply:

"(7.) He is engineer to the contractors. (8.) He is the son of the Engineer-in-Chief for Public Works; but the Balmain contract referred to is being carried out under the supervision of the President of the Water and Sewerage Board and Engineer-in-Chief for Sewerage Construction, Mr. Darley."

Now, Mr. Darley has only been appointed to his present position about two months, and during all the time that this contract was being carried out it was under the Engineer-in-Chief.

Mr. YOUNG: No!

Mr. V. PARKES: The Engineer-in-Chief was the chief designer of it, and the contract was not carried out under Mr. Darley. I made sure of that fact. The answer I have quoted is a subterfuge. The question ought to have been answered by a simple "yes" or "no." The answer contains a misleading statement. The blame of employing these gentlemen has been put upon Mr. Darley. The Minister, in his reply, went on to say:

"In the case of the other contract referred to, namely, the sewerage works at North Sydney, which was carried out under the supervision of the Engineer-in-Chief for Public Works, I am informed that Mr. Hickson, junior, had no connection with that work, being at that time in South Australia."

But Mr. Hickson has been going backwards and forwards between here and South Australia. That makes no difference as to his connection with the firm. He is looking after their work in South Australia, and looking after their work here; and such an answer as that is, on the face of it, simply a blind, and it shows that there is some reason why there should be a full inquiry into the circumstances attending this contract.—*Hansard*, 26th September, 1895.

As far as I am informed there was a contract of £13,000, another of £10,800, and another of £11,000, all let without tender. My information has come from persons behind the contractors whose names I can give, and who will go before any committee and give evidence, and show that there is no equity in the dealings between contractors and Public Works officers.—*Hansard*, 26th September, 1895.

Some six months ago I moved for a committee, and made a statement to this House from hearsay, not from proof, and I took care to explain that to the House. That statement was given to me by ten or twelve contractors, who waited upon me and told me that it was useless for them to send in tenders to the Public Works Department on account of the favouritism shown to a particular firm.—*Hansard*, 12th May, 1896.

It will be recollected that in my speech six months ago I pointed out that this firm had received three contracts without tender. The only mistake I made was that I stated the sums wrongly and too largely. The Engineer-in-Chief says:

“The firm has received one contract only without public tender.”

The very documents in his own handwriting show that they received three contracts, one for £1,200, another for £2,000, and another for £12,000, without tender.—*Hansard*, 12th May, 1896.

The Engineer-in-Chief admits that his son is and has been the engineer of this firm since 1893. I want hon. members to bear that in mind. I am told by a man connected with these contracts, who has worked upon them, that the duties of Mr. Hickson, junior, are simply those of a sinecure. He has nothing to do but to walk about and take photographs. Now and again he uses a theodolite on the works to no purpose, and the inference from the Engineer-in-Chief's own statement is that his son is not in Sydney at all, that as a matter of fact, when he wrote this minute, he was not in Sydney, but in Adelaide. However, he was actually in this country, and I can prove by statutory declaration that he came over twelve months before with Mr. Gillan, one of the contractors.—*Hansard*, 12th May, 1896.

This charge, if it is to be read as having any tangible meaning, must be taken as an assertion, first, that George Hickson was at some time an interested party in the firm of Carter, Gummow, & Co.; and, second, that while he was in such a position the acts alleged to have been done by Robert R. P. Hickson took place, the motive, or at least a motive, for the doing of such acts being George Hickson's connection with the firm.

Each of the modes in which the alleged undue concessions are said to have been allowed to be granted has been, in substance, dealt with under the head of the contract to which it refers. As to the second—that which alludes to Contract 79—it also stands negatived by the fact that Mr. George Hickson did not leave the Government Service till May, 1893; while Carter & Co. obtained Contract 79 in February, 1892.

Mr. George Hickson's evidence, on page 98, and Mr. R. R. P. Hickson's, on page 562, Q. 17064, fully explain the circumstances under which the former left the department, and was taken into, and finally discharged from, the employment of Carter, Gummow, & Co. Mr. Carter's evidence, on page 104, Q. 3877, and Mr. Gummow's, on page 112, are directed to the same matter. It would be waste of time to go into a critical examination of the bearing upon this question of that most unsatisfactory of all kinds of evidence—a narration of conversations that took place years ago, in which some mention is said to have been made of a telegram, the very existence of which is more than doubtful. If it ever was sent, it cannot now be traced, as the original would have been burnt. It is quite possible that a real telegram, sent to Mr. Gummow to inform him of Mr. George Hickson's expected arrival, may have been the foundation upon which mistaken recollection, and imagination fostered by jealousy, built up the story that was carried to the ears of Mr. Parkes. The evidence proves that Mr. George Hickson did go into the service of the firm, and that the contractors had at the time work for him to do. It is quite possible that Mr. Carter's good nature may have led him to stretch a point in favour of a young man whom he would naturally regard as having been harshly treated. Carter, Gummow, & Co. being one of the few successful contracting firms, carried on by men whose education, training, and experience, explained their success, and were a guarantee of their stability, it was natural that Mr. George Hickson should try to get into their service: as long as they could do so, they employed him in another colony: the mere fact of his employment by a firm of contractors over some of whose works Mr. R. R. P. Hickson would have to exercise control, should not be charged against either father or son as an improper act, or as raising a presumption of unfair dealing, especially in view of the difficulty Mr. George Hickson would expect to find in procuring immediate employment anywhere, and the known fact that any large contractors in one colony may be said to be contractors in Australasia. It is clear also that Mr. George Hickson did throw out hints that he would like to become a member of the firm, which hints were discountenanced: probably he thought that, if the business could be worked with seven partners, it would get on equally well with eight; and he might, in a more modest way, be allowed to follow Mr. Gummow's example—supplying brains in lieu of capital: Mr. Gummow considered that seven partners

partners were too many already, and quietly "sat upon" Mr. George Hickson's overtures. He was not admitted: on the contrary, when the firm found they had no longer any need of him, he was discharged; he was certainly generously treated in his dismissal, but this generosity to employees appears to run through all the dealings of the firm.

The stories about his being a useless young man, kept by the firm in their employment for ornament or to please his father, amusing himself by wandering about taking photographs, appear to be groundless, except for the substratum of truth that he did use a camera on the works at Annandale when not actually working, instead of wasting his time.

Your Commissioner can see no evidence that Mr. Hickson allowed his mind to be influenced in favour of the firm of Carter, Gummow, & Co., by the fact of his son's connection with that firm. It is important to observe the sequence of events and their dates when dealing with this aspect of the question. First there were the two variable partnerships, Carter & Co. and Gummow & Gillan, competing with one another in obtaining contracts for sewer construction. In June, 1891, they were so far in unison as to join in the letter of protest against Bond and Hudson's being permitted to tender successfully for Contract 79. But it was not till August, 1892, that the firms coalesced, for the purpose of carrying on the South Australian contract. This was a heavy work, and no doubt their experience of each other gave them mutual confidence and suggested the expediency of joining their forces. There is no reason to suppose that they were in fact united in business before this: with all their trust in one another it could hardly be imagined possible that two such large firms would be in fact amalgamated before the date of their deed of partnership. Carter & Co. carried on Contracts 79-79A in their own name; but from the date of the amalgamation the new firm practically took up these works. After August, 1892, all contracts accepted in the names of any members of the partnership were shared in by all the continuing partners; these contracts were—69, date of signing, January 22, 1894; 79, June 20, 1894; 77, May 16, 1895; 118, June 15, 1895; 108 (North Shore Outfall Works), May 19, 1896. Mr. George Hickson entered the service of Carter, Gummow, & Co. in May, 1893, and left it at the end of April, 1896. Therefore the fact of his connection with the firm cannot have operated on Mr. Hickson's mind before May, 1893. Yet a number of the circumstances that have been relied upon as evidence of favouritism took place before this date. These comprise the whole history of Contract 72, and the letting of Contract 79, followed by the most important part of the history of that contract, including what is called in charge 2, under the head of that contract, manipulation of items, and the beginning of the return of retention money. On the other hand, there followed the employment by the firm of Mr. George Hickson the discharge of Inspector Reid, the letting without tender of Contract 79A—conclusively proved to have been the act of the Minister, contrary to Mr. Hickson's advice—the history of Contract 69, in which the only evidence of a concession worth notice is that concerning the blue-stone pitchers; the history of Contract 77 (the Monier question); and the account of Contract 118, admitted to disclose nothing like improper conduct. Against the history of Contract 69 is to be set off Mr. Hickson's act of establishing, before he can have anticipated his son's discharge from the service of the firm, the new system of tendering, which appeared to be intended as, and certainly was, an especially severe blow directed at the firm of Carter, Gummow, & Co.

If an examination of a series of events discloses an apparent continuing inclination in the mind of a man, and if a motive for that tendency is suggested, then it is important to discover when the motive began to operate: if the inclination appeared before the happening of the event that accounts for the motive, the fair conclusion is that the suggestion is unfounded. And if no motive at all can be discovered, then it is equally fair to infer from its non-existence that the inclination is only apparent, not real. Another very important consideration is this—if, on the basis of a foregone conclusion, or at least a strong suspicion, search is made through a history extending over several years for evidence to confirm the idea, and every fact is selected which may bear it out, those which tend to its disproof being passed by, it will, though utterly unfounded in reality, appear to have strong evidence to support it. This is how, as your Commissioner gathers from the history which led up to this inquiry, the contractors whose action brought it about came to hold the views which urged them on and justified them in their own opinion;

opinion; and it is upon this principle that the evidence in support of the charges made has been collated. Upon other matters lying still further back it is unnecessary to touch. Finally, in your Commissioner's opinion, none of the charges brought against Mr. Hickson have been proved by the evidence that has been produced. Your Commissioner has failed to discover in that evidence any grounds for further inquiry; and, in your Commissioner's opinion, Mr. Hickson and the other responsible officers of the Works Department stand exonerated from all suspicion of improper conduct in relation to the matter into which your Commissioner has been instructed to inquire.

In coming to this conclusion your Commissioner has not forgotten to give due weight to the consideration that, though several distinct pieces of evidence may, each by itself, be insufficient to prove the truth of a certain contention, still the whole of them taken together may satisfactorily bear it out.

Throughout this Report, as through the whole course of the inquiry, the question whether any one of the gentlemen who, during the time covered by the evidence, have held the office of Minister for Works has been implicated in any improper conduct in connection with the contracts of the firms or persons named in the Commission, has been ignored, for the reason that neither did Mr. Parkes at any time in the course of the inquiry raise such a contention, nor was any evidence whatever given by any witness that would suggest it. As disclosed by the testimony produced, the actions of each of the several Secretaries for Works who have from time to time presided over the department have shown a careful and conscientious regard for the public interest, unaffected by favour for any firm or person.

Before closing this Report your Commissioner wishes to bear testimony to the energetic, conscientious, and thorough manner in which Mr. Friend, Secretary and Shorthand-writer to the Commission, has carried out his manifold duties, giving most valuable assistance in the performance of the very laborious and difficult work imposed upon your Commissioner, who feels that it is impossible, in the time at his disposal, to embody in this Report anything approaching to such a complete analysis of the enormous mass of evidence taken as would fully do justice to the subject or would be adequate to the honor conferred upon your Commissioner by the entrusting to him of so responsible a duty.

I have the honour to be,

Your Excellency's obedient Servant,

(Signed) C. E. R. MURRAY.

B. HARRY FRIEND,  
Secretary,

Saturday, 21st November, 1896.

**PUBLIC WORKS INQUIRY COMMISSION.**

**MINUTES OF PROCEEDINGS.**

*FRIDAY, 22 MAY, 1896.*

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 2 p.m.

Mr. Varney Parkes, M.P., Mr. R. R. P. Hickson, Under Secretary for Public Works, and Mr. Carter, of the firm of Carter, Gummow, and Co., attended.

His Honor inquired whether any of the persons affected by the inquiry wished to be represented by counsel or solicitor.

Mr. Parkes said that he intended to conduct his case personally.

Mr. Hickson said that Mr. Ernest Smith, solicitor, would be present during the inquiry solely for the purpose of tendering him advice.

Mr. Carter intimated that Mr. W. Andrews, solicitor, would be present during the inquiry in a similar capacity in regard to the firm of Messrs. Carter, Gummow, & Co.

His Honor asked Mr. Parkes whether he was in a position to furnish a written statement of the charges he preferred, tabulated under the headings of the various contracts which formed the subject of inquiry.

Mr. Parkes undertook to furnish to His Honor and to Mr. Hickson on the following day a statement in accordance with His Honor's suggestion.

His Honor announced that he intended, for the time being, to sit on Mondays, Wednesdays, and Fridays, from 10 a.m. to 1 p.m.

Mr. Hickson said that the whole of the plans and papers respecting the contracts of Messrs. Carter, Gummow, & Co. with the Department of Public Works in the possession of the department would be handed over to His Honor on the following morning, and that the papers included in the return ordered to be printed by the Legislative Assembly on the 22nd October, 1895, were still in the custody of the Chief Clerk of the Assembly.

His Honor said the Clerk of the Legislative Assembly would be requested to obtain Mr. Speaker's authority to hand over the papers for use during the inquiry.

Mr. Parkes applied that he might have access to the plans and papers between the hours of 10 a.m. and 5 p.m. on the 23rd, 24th, and 25th instant.

Mr. Hickson also applied for permission to inspect the plans and papers on the 26th instant.

His Honor said the plans and papers would be available for inspection at any time during the inquiry.

His Honor at 3 p.m. adjourned the inquiry until 10 a.m. on Wednesday, 27th May.

C. E. R. MURRAY,  
Commissioner.

*WEDNESDAY, 27 MAY, 1896.*

His Honor, the Commissioner, sat at the Board Room, Chief Secretary's Office, at 10:30 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. R. R. P. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

The Secretary read His Honor's Commission.

Mr. Parkes handed in a list of charges, in compliance with the suggestion preferred by His Honor the Commissioner at the preceding sitting of the Commission as follows:—

CHARGES made in the Legislative Assembly of New South Wales as to improper conduct in connection with contracts of Carter, Gummow, & Co., and referred by the said Legislative Assembly to a Royal Commission for Inquiry and Report.

*Contract 69.*

1. With manipulating the schedule of Messrs. Carter, Gummow, & Co., the contractors for Sewerage Contract 69, so as to give the contractors an advantage over the Crown in their contract undertaking to build a sewer in Marrickville by paying them on the extravagant items of charge, and conceding those items upon which they had a losing price, and in defiance of the terms of Messrs. Carter, Gummow, & Co.'s contract with the Crown.
2. With allowing the contract to be taken up by Carter, Gummow, & Co., with an insufficient bond, and with ultimately breaking that bond by remitting the retention money and writing a minute by which the Minister was deceived and induced to consent.
3. With paying to the contractors large sums of money which they (the departmental officers) were not compelled to pay under Carter, Gummow, & Co.'s contract with the Crown.
4. With lending to the contractors £1,000 of State moneys improperly, and in violation of the terms of the contract, and without security.
5. With incompetency in administering the contract and carrying out the works generally.
6. With failing to comply with the orders of Parliament and placing documents upon the Table of the House in a manner calculated to deceive Honorable Members of the Assembly.
7. With allowing defective work to be put in the works, by which a loss is sustained by the Crown.

*Contract 72.*

1. With paying away large sums of money to the contractors, Carter, Gummow, & Co., which they (the departmental officers) were not obliged to do under the contract conditions; and with settling a claim, without a proper test as to the liability of the Crown, for a sum of £4,050 9s. 6d., by granting the contractors a preference over other contractors, and by not re-tendering for the contract, when in the interest of the Crown it was the clear duty of the departmental officers to do so.
2. With granting the contractors concessions in payments upon the contract, by which the Crown was a loser.
3. With withholding from the papers laid upon the Table of the House such documents as would allow Honorable Members of Parliament to understand the nature of the contract and the manner in which it was carried out.

*Contract 77.*

1. With allowing the contractors, after tenders had been received, to substitute for the Government plans and specifications a cheap patent aqueduct, styled the Monier system, of inferior material, without competition of any sort, by which a loss was sustained by the Crown.
2. With deliberately deceiving the Minister as to the true cost of the Monier patent, by minutes written by Robert Hickson, the then Engineer-in-Chief of the Department.
3. With deliberately deceiving the Minister, by which he (the Minister) accepted of certain security, which was of an improper and useless nature, for the stability of the patent for a term of three years, the deception being contained in minutes written knowingly by Robert Hickson, the then Engineer-in-Chief for Public Works.
4. With withholding the proper information concerning the above transaction from Parliament by not laying plans and other papers upon the Table of the House when ordered so to do by Parliament.

*Contract 79.*

1. With improperly granting to Messrs. Carter, Gummow, & Co., without re-tendering, Contract 79, by which a loss was sustained by the Crown.
2. With illegally returning the cash deposit lodged by Bond and Hudson for the good faith of their (Messrs. Bond and Hudson) acceptance of their tender.
3. With manipulating the items in the schedule of Messrs. Carter, Gummow, & Co., so as to increase the profits of the contractors to the loss of the Crown.
4. With allowing defective work to be done, by which a loss is sustained by the Crown.
5. With returning the cash security and the retention fund to the contractors, in violation of the contract agreement, to the advantage of the contractors, and hazarding the interests of the Crown.
6. With the discharging of Inspector Reid from the above contract for simply doing his duty in the interests of the Crown in insisting upon good material.
7. With improperly paying an amount of £350 6s. 8d. to the contractors for removing material, which work they never performed.
8. With allowing the contractors illegally to dispose, in anticipation of payment of £9,000 of funded stock.
9. With placing improperly to the account for payments on Contract 79 various items of payments for work done at Bondi.
10. With lending illegally, and upon no security, the sum of £1,360, upon materials not in the possession of the Crown.

*Contract 79a.*

1. With inducing the Minister, on the plea of urgency, to let the above Contract 79A to Carter, Gummow, & Co. without tender, by which a loss was sustained by the Crown.
2. With lending the sum of £485 of the moneys of the Crown to the contractors, illegally and upon insufficient movable security, and in violation of the Contract between the contractor and the Crown.
3. With failing to place upon the Table of the House the papers ordered by Parliament, by which Honorable Members might be deceived as to the nature of the transactions.
4. With permitting defective work to be executed by the contractors, by which a loss is sustained by the Crown.

*Contract 118.*

1. With allowing defective materials to be used by the contractors, by which a loss is sustained by the Crown.
2. With allowing the contractors to have the benefit of labour performed by the unemployed paid by the Crown to drain the works of the contractors, which drainage the contractors have to take the responsibility of under their agreement with the Crown.
3. With omitting the necessary papers ordered to be laid upon the Table of the House by Parliament, by which Honorable Members were unable to judge of the manner in which the Contract was conducted.

*Potts Hill Reservoir Contract.*

With allowing defective work to be done by Messrs. Carter, Gummow, & Co., by which a large sum of money was lost by the Crown, no effort at all being made to recover the same from the contractors.

*Alexandria Sewer Contract.*

With allowing defective work to be done by which a large loss of money was sustained by the Crown, and with not making any effort to recover such loss from the contractors, Messrs. Carter, Gummow, & Co.

*Glebe Contract.*

With allowing defective work to be done by which a large loss of money was sustained by the Crown, and with not making any effort to recover such loss from the contractors, Messrs. Carter, Gummow, & Co.

*Engineer-in-Chief for Public Works : Carter, Gummow, & Co.*

That Robert Hickson, while being an officer of the Crown, viz., Engineer-in-Chief for Public Works, did act collusively with his son, George Hickson, a partner of the firm of Messrs. Carter, Gummow, & Co., by which the said George Hickson obtained wrongfully money belonging to the Crown.

His Honor intimated that he had determined to exclude the representatives of the Press during the progress of the inquiry, and requested those present to consider the proceedings of a confidential nature.

His Honor inquired whether either of the parties desired, in connection with any inspection of works which might be considered desirable, to be accompanied by an independent expert with a view to the giving subsequently of expert evidence.

Mr. Hickson thereupon nominated Professor Warren.

Mr. Parkes nominated Mr. George McCredie.

Mr. Parkes said that he intended to call witnesses to prove that very defective work had been done in connection with Contracts 79, 79A, and 69, and that obstacles were thrown in the way of the discharge of the duties of the inspectors employed by the Department. He would also endeavour to prove that the inspectors had not received that fair consideration at the hands of their superior officers to which they were entitled in the public interest.

George Dawson, George Benson, and Robert George Reid were sworn and examined.

His Honor at 3:30 p.m. adjourned the inquiry until 10 a.m. on Friday, 29th May.

C. E. R. MURRAY,  
Commissioner.

*THURSDAY, 28 MAY, 1896.*

His Honor proceeded to the situation of alleged defective work upon Contract 79A, where an inspection was made by Professor Warren and Mr. George M'Credie.

C. E. R. MURRAY,  
Commissioner.

*FRIDAY, 29 MAY, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. R. R. P. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Robert Rowan Purdon Hickson, John Henry Harris, George Wagg, and William Henry were sworn and examined.

George Dawson was recalled and further examined.

Mr. Parkes handed in the following charge:—

*Contract No. 77.*

With allowing defective work to be done on Contract No. 77, by which money was lost to the Crown; and further, that no effort was made to recover the money, so lost, from the contractors, Messrs. Carter, Gummow, & Co.

His Honor, at 2:35 p.m., adjourned the inquiry until 10 a.m. on Monday, 1st June.

C. E. R. MURRAY,  
Commissioner.

*MONDAY, 1 JUNE, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. R. R. P. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Cecil West Darley, George M'Credie, Ernest Augustus Smith, Joseph Davis, and Christian Hansen were sworn and examined.

His Honor, at 12:30 p.m., adjourned the inquiry until 10 a.m. on Wednesday, 3rd June.

C. E. R. MURRAY,  
Commissioner.

*WEDNESDAY, 3 JUNE, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. R. R. P. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

The Secretary read a letter from Mr. A. C. Budge, Clerk of the Executive Council, informing His Honor that His Excellency the Governor, with the advice of the Executive Council, had approved of the inquiry being open to the press and the public, and requesting that His Honor would give the necessary instructions to that effect.

His

His Honor said he had regarded his Commission as in the nature of a confidential communication. He had not considered that he had any right to make public the evidence taken in the course of his inquiry. He had acted upon that principle on the previous occasion—the Fehon inquiry—on which he had held His Excellency's Commission, and no exception had been taken to its application. His Excellency having now requested him to admit the press and the public to the inquiry, he took that request to be practically part of his Commission. It at once removed all presumption of privilege and did away with the possibility of the question being raised that he was doing wrong in not treating his inquiry as of a confidential nature. Upon the mere ground of expediency, he had had some doubt as to whether it would be better to admit or exclude the press; but on the whole he concluded that it was better that the press should be excluded, and for that reason he had not asked for permission to allow the inquiry to be made public, which course he would have taken had he thought it desirable. Of course, he had known that the result of the inquiry, together with the evidence, would probably be made public in the end; but while the inquiry was proceeding he thought it was on the whole better that the evidence should not be made public. In the face of the fact, however, that a strong opinion the other way was held by persons quite as competent to form an opinion as he was; taking also into consideration one reason, which did not strike him at first, he would not now, of course, attempt to suggest that this direction from His Excellency was one which was not well founded upon expediency and public policy. He considered that it was no reflection upon his action that he was now directed to act in a way different from that in which he had hitherto acted; and he was only too glad to comply with the request, which he took to be practically a command from His Excellency. Therefore, the press had the right to be present. The public in theory had also the right to be present. As far as the public were concerned, the room was not sufficiently large to permit of their being present in great numbers, and he would request them not to come in such a way as to hamper the business incidental to the inquiry. The press were welcome to report the whole of the proceedings.

George Dawson, Robert George Reid, Christian Hansen, and Robert Rowan Purdon Hickson were recalled and further examined.

George Andrew was sworn and examined.

Mr. Parkes requested that His Honor would cause a communication to be addressed to Mr. George Hickson, son of Mr. R. R. P. Hickson, Under Secretary for Public Works, who was at present, he understood, in Perth, in the service of the Government of West Australia, intimating that his attendance was necessary.

His Honor said that all he could do in the matter would be to communicate with the Premier of West Australia, requesting that Mr. Hickson might be granted leave of absence, without prejudice to his official position, to admit of his attendance. That would be done at a later hour of the day.

His Honor, at 2:35 p.m., adjourned the inquiry until 10 a.m., on Friday, 5th June.

C. E. R. MURRAY,  
Commissioner.

---

*FRIDAY, 5 JUNE, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. R. R. P. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Robert Rowan Purdon Hickson was recalled and further examined.

Christian Herman Ohlfesen-Bagge was sworn and examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m., on Monday, 8th June.

C. E. R. MURRAY,  
Commissioner.

---

*MONDAY, 8 JUNE, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. R. R. P. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Robert Rowan Purdon Hickson and Cecil West Darley were recalled and further examined.

Justin M'Sweeney and Henry Deane were sworn and examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m., on Wednesday, 10th June.

C. E. R. MURRAY,  
Commissioner.

---

*WEDNESDAY, 10 JUNE, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. R. R. P. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes applied that an inspection of the whole of the tunnelling upon Contracts 79 and 79A might be made by Mr. George M'Credie.

Mr. Hickson having nominated Mr. Davis, Principal Engineer, Sewerage Construction, to represent the Department at the inspection, it was arranged that it should be made on the following day.

Mr.

Mr. Parkes applied that Messrs. Carter, Gummow, & Co. might be requested to produce the letters patent, or assignment of the letters patent, or such evidence as they might possess of their authority to hold or deal with the patent of the Monier arch system; also their account books, covering their transactions for the last three years.

Mr. Gummow explained that the firm had no partnership accounts, and that no books were in existence except the bank-books. He could produce a copy of the patent right for the Monier arch.

His Honor directed the production of the bank-books of the firm for the period named by Mr. Parkes; also a copy of the patent right for the Monier arch.

Mr. Parkes handed in to His Honor the following additional charges in reference to Contracts 60 and 61:—

*Contract No. 61.*

With allowing defective work to be performed, by which a great loss was sustained by the Crown; and with not making any effort to recover from the contractors, Messrs. Carter, Gummow, & Co. the moneys so lost.

*Contract No. 60.*

With allowing defective work to be performed, by which a great loss was sustained by the Crown; and with not making any effort to recover from the contractors, Messrs. Carter, Gummow, & Co., the moneys so lost.

Frank Moorehouse Gummow, William Darcus, Thomas Wright, Patrick Hartford Kenna, and William Henry Warren were sworn and examined.

His Honor, at 1:45 p.m., adjourned the inquiry until 10 a.m. on Friday, 12th June.

C. E. R. MURRAY,  
Commissioner.

*FRIDAY, 12 JUNE, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. R. R. P. Hickson (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction; Mr. Norrie, Bond Clerk; and Mr. Thomas Griffiths, Assistant Engineer, Water and Sewerage Board, also attended.

Robert Rowan Purdon Hickson and George M'Creddie were recalled and further examined.

William Thompson and Thomas Griffiths were sworn and examined.

His Honor, at 1:15 p.m., adjourned the inquiry until 10 a.m., on Monday, 15th June.

C. E. R. MURRAY,  
Commissioner.

*MONDAY, 15 JUNE, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. R. R. P. Hickson (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Mr. Gummow handed in, by His Honor's direction, two bank-books, purporting to show the banking transactions of the firm of Carter, Gummow, & Co., from 4th August, 1892, until the present day.

Mr. Parkes withdrew from the list of charges he had handed in to His Honor the following charge:—

"That Robert Hickson, while being an officer of the Crown, viz., Engineer-in-Chief for Public Works, did act collusively with his son, George Hickson, a partner of the firm of Messrs. Carter, Gummow, & Co., whereby the said George Hickson obtained wrongfully, money belonging to the Crown,"

and substituted therefor the following:—

"That Robert Hickson, while an officer of the Crown, viz., Engineer-in-Chief for Public Works, did allow of undue concessions being granted to Messrs. Carter, Gummow, & Co., contractors, for sewerage works in the Colony of New South Wales, his son, George Hickson, being an interested party in the firm of Messrs. Carter, Gummow, & Co."

Mr. Smith, on behalf of Mr. Hickson, requested that he might be furnished with a list of the concessions referred to in Mr. Parkes' substituted charge.

Mr. Parkes said he would furnish the list in the course of the inquiry.

George Stanley Brown was sworn and examined.

Thomas Wright and Robert Rowan Purdon Hickson were recalled and further examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m. on Wednesday, 17th June.

C. E. R. MURRAY,  
Commissioner.

*WEDNESDAY, 17 JUNE, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. R. R. P. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.  
Mr.

Mr. Smith said that Mr. Hickson had received from Mr. Parkes the following communication, having reference to the charge which he had substituted for the original charge concerning collusion between Mr. Hickson and his son:—"121, Pitt-street, Sydney, 15th June, 1896. To Robert Hickson, Esq. Dear Sir,—The concessions referred to in my charge, substituted this morning, are contained in Nos. 1, 2, 3, 4, and 7 of charges on Contract 69 and 1, 2, on Contract 72, and 1, 2, 3, of Contract 77, and 1, 2, 3, 4, 5, 7, 8, and 10 of Contract 79, and in 1, 2, and 4 of Contract 79A, and in 1 and 2 of Contract 118. Yours truly, VARNEY PARKES." He asked that a copy of this communication might be entered upon the minutes.

His Honor directed that this should be done.

Mr. Parkes requested that the bank-books of the firm of Carter & Co., as distinguished from the firm of Messrs. Carter, Gummow, & Co., might be produced.

His Honor directed Mr. Carter to produce the books referred to.

Mr. Carter, in reply to His Honor, said that he had retained in his possession only a few of the butts of the firm's cheque-books.

Mr. Parkes requested His Honor to obtain from the Auditor-General a memorandum of the payments made by the Treasury to the firm of Carter, Gummow, & Co. for the past ten years; also the dates of payment and the contracts in respect of which the payments were made.

His Honor said that he would request the Auditor-General to supply the required information.

Peter Ewing, George Maddison, and George Forster Hickson were sworn and examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m. on Friday, 19th June.

C. E. R. MURRAY,  
Commissioner.

---

*FRIDAY, 19 JUNE, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. R. R. P. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Mr. Carter handed in five bank pass-books in connection with the account of Carter & Co.

John Carter was sworn and examined.

George M'Credie, William Thompson, and Frank Moorehouse Gummow were recalled and further examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m. on Monday, 22nd June.

C. E. R. MURRAY,  
Commissioner.

---

*MONDAY, 22 JUNE, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. Ernest Smith (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

His Honor, having ascertained that Mr. Parkes did not desire further to examine Mr. Hickson, junior, released him from attendance.

Mr. Carter handed in certain books and accounts of the firms of Carter & Co. and Carter, Gummow, & Co., in part compliance with the request of His Honor that the production be made of pay-sheets, butts of cheque-books, and all other acknowledgments for payment as disclosed by the firms' bank-books for the past four years, viz.:—One pay-sheet book, two summary pay-books, one petty-cash book, two bundles of pay-sheets, two bundles of loose accounts, five butts of small cheques (commencing end of December, 1895).

John Carter and William Thompson and Christian Herman Ohlfsen-Bagge were recalled and further examined.

James Mitchell was sworn and examined.

His Honor, at 1.15 p.m., adjourned the inquiry until 10 a.m. on Wednesday, 24th June.

C. E. R. MURRAY,  
Commissioner.

---

*WEDNESDAY, 24 JUNE, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith, solicitor (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parfitt handed in, in compliance with a request by His Honor, cheques upon the accounts of Carter & Co. and Carter, Gummow, & Co., for the period from 1st January, 1892, to date; also deposit slips for the same accounts for the same period.

His Honor, at the request of Mr. Smith, representing Mr. Hickson, directed the production by Mr. Parkes of a written statement alleged to have been handed to him by a member of one of the deputations of contractors which waited upon him at Parliament House.

James Mitchell and Joseph Davis were recalled and further examined.

George Scott Chiene and William Gilliver were sworn and examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m. on Friday, 26th June.

C. E. R. MURRAY,  
Commissioner.

*FRIDAY,*

*FRIDAY, 26 JUNE, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes requested that His Honor would direct the production by Mr. Carter of a return showing the number of casks of cement purchased for use upon Contracts 79 and 79A and 69, the firms from whom the cement was purchased, and the amount paid for the same.

Mr. Carter said that he could not produce the particulars required of him; he could, however, hand in a list of the firms from whom the cement was purchased.

Mr. Parkes requested, with reference to the witness John Reid, who had been summoned to attend that day on His Honor's suggestion, that he should be first examined by His Honor, by Mr. Hickson or his representative, and by Mr. Gummow; and that he himself might be afterwards allowed to cross-examine him.

His Honor acceded to the request.

John Carter and James Mitchell were recalled and further examined.

John Reid, George Forrest, and Harold Francis Norrie were sworn and examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m. on Monday, 29th June.

C. E. R. MURRAY,  
Commissioner.

*MONDAY, 29 JUNE, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Mr. Gummow asked His Honor for permission to take from the custody of the Commission a book containing current pay-sheets, a book containing piecework payments, and also a petty-cash book, for use in the firm's current business transactions.

His Honor acceded to the request.

Frank Moorehouse Gummow, John Carter, and Harold Francis Norrie were recalled and further examined.

John Mann, Henry Armstrong, John Young, Walter Smith, and Norman Selfe were sworn and examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m. on Wednesday, 1st July.

C. E. R. MURRAY,  
Commissioner.

*WEDNESDAY, 1 JULY, 1896.*

His Honor sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith (appearing for Mr. Hickson), Mr. Carter, and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

James Connors and William Owen were sworn and examined.

Norman Selfe, John Carter, George Dawson, Cecil West Darley, and Robert Rowan Purdon Hickson were recalled and further examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m. on Friday, 3rd July.

C. E. R. MURRAY,  
Commissioner.

*FRIDAY, 3 JULY, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

The bank pass-books of the private accounts of Mr. Carter, Mr. Gummow, and Mr. Forrest were handed in by Mr. Carter.

His Honor, referring to a request which had been made by Mr. Parkes on the preceding day, that certain plans might be printed as appendices to the evidence, said that he had been doubtful whether it was fair to the public that the State should be put to the expense of having these plans printed, considering the enormous cost which would be entailed thereby; but now that the Premier and Colonial Treasurer had had a conversation with him, and had informed him that he need not study the question of expense of that kind, if the addition of the plans to the appendices would make the entire document more full and satisfactory, as of course would be the case, he was quite prepared to adopt the suggestion. Inasmuch as it appeared that the Government did not wish to save expense in any such way, he considered he was justified in ordering the plans to be printed. Under ordinary circumstances he should have been only too glad to direct that they be printed, because he would much rather have them printed than not; but at the same time he had thought it hardly fair to run the country into an expense of possibly £300 or £400 in connection with these plans. He was very glad that he had received the communication which had been made to him by the Premier and Colonial Treasurer, because it set the question at rest.

Mr. Parkes thought that His Honor was very wise in determining to have the plans printed, because there could be no doubt but that the evidence would be incomplete without them. Mr.

Mr. Parkes applied for an order to view some forty deposit slips in connection with the account of Mr. Hickson at the Bank of Australasia, as disclosed by his bank pass-books.

His Honor said that he would give the order applied for.

Mr. Parkes asked that Mr. J. Bryant, a witness who would be examined that day, might be allowed to peruse documents in the department having reference to payments on account of the Monier arch culvert on the Parramatta Road.

His Honor gave the permission asked for.

Mr. Smith inquired whether Mr. Parkes intended to call any further evidence with reference to the concessions made to Messrs. Carter, Gummow, & Co. by the department on account of the connection of Mr. Hickson, junior, with the firm.

Mr. Parkes said that he was doing his best to bring that particular part of his case to a close.

Mr. Smith said that it would be more convenient if Mr. Hickson could know from day to day the nature of the evidence which Mr. Parkes proposed to tender, because his duties in the department were of such a nature as to demand his close attention, unless it were absolutely necessary that he should be present at the proceedings of the Commission.

His Honor thought it would be impossible for this information to be furnished.

Mr. Smith said he would also like some information, if it could be supplied to him, as to the period over which it was probable the inquiry would extend.

Mr. Parkes said that he was certainly not wasting any time in the preparation of his case, and he feared that he could not get ready for the three weekly sittings of the Commission more evidence than was being then taken.

Robert Stewart Littlejohn, James Conley, and Thomas William Bryant, were sworn and examined.

George Forrest, George M'Credie, Cecil West Darley, William Thompson, Christian Herman Ohlfsen-Bagge, John Carter, and Harold Francis Norrie, were recalled and further examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m., on Monday, 6th July.

C. E. R. MURRAY,  
Commissioner.

*MONDAY, 6 JULY, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Richard Butler Rigg, George Alexander Wilson, William Joseph Larkin, Joseph Barling, James Henry Young, and Edward Hungerford, were sworn and examined.

Harold Francis Norrie was recalled and further examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m., on Wednesday, 8th July.

C. E. R. MURRAY,  
Commissioner.

*WEDNESDAY, 8 JULY, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

George Christie, Thomas Robert Steele, and James Symonds were sworn and examined.

John Carter, George McCredie, William Thompson, and Harold Francis Norrie were recalled and further examined.

His Honor, at 1 p.m. adjourned the inquiry until 10 a.m., on Friday, 10th July.

C. E. R. MURRAY,  
Commissioner.

*FRIDAY, 10 JULY, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. R. R. P. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews advising), attended.

Mr. Joseph Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes asked His Honor to direct the production by Mr. Carter of a statement showing all the properties held by the firm of Carter, Gummow, & Co.; also the mortgages (if any) upon the same, and the name of the mortgagees; also the private property of Mr. Carter mortgaged to Mr. Weedon, together with a statement of the fixed deposits in the name of the firm in any bank.

His Honor directed the production of the statement.

Mr. Parkes applied that Mr. Gillan might be requested to make an affidavit showing the same particulars with reference to his own private property.

His Honor directed that a letter be forwarded to Mr. Gillan, requesting him to furnish the desired information in the form of an affidavit.

Mr. Parkes applied for the production of the bank pass-books in connection with Mr. Hickson's private accounts from the years 1888 to 1891 inclusive.

Mr. Smith said there would be no objection to the production of the books.

His Honor directed that the books be produced.

Mr.

Mr. Hickson desired to know when the bank pass-books and cheque butts which he had left with His Honor for the use of the Commission would be returned to him. They had now been in the custody of His Honor for over ten days, and he thought that was long enough to permit of a thorough examination of them.

His Honor said he understood that Mr. Parkes required to make further use of the books referred to, and he could not, therefore, direct that they be returned to Mr. Hickson.

Mr. Smith applied that Mr. Christie, who had given evidence at the preceding sitting of the Commission with reference to the quantity of cement purchased by Carter, Gummow, & Co. from various merchants in the city, might be requested to produce the data upon which his returns were based.

Mr. Parkes objected to the production of these data until corresponding returns had been furnished by Messrs. Carter, Gummow, & Co., and said that the production of these papers by Mr. Christie at the present time might seriously interfere with investigations which were in progress.

His Honor said that Mr. Christie was liable to cross-examination as to every part of the return which he had furnished; but it would be much better for the witness to produce copies of the extracts from the account books and ledgers upon which he had founded his calculations. He would therefore direct Mr. Christie to produce copies of these extracts.

Mr. Parkes applied that the merchants named in Mr. Christie's report might be requested to produce the ledgers from which the extracts had been made.

His Honor said that unless the accuracy of the extracts was challenged he did not think it would be expedient to make such an order.

Thomas William Bryant, James Symonds, George Christie, and John Carter were recalled and further examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m., on Monday, 13th July.

C. E. R. MURRAY,  
Commissioner.

---

*MONDAY, 13 JULY, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith, solicitor (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes applied that His Honor would direct the production by the Bank of Australasia of copies of the banking accounts of Mr. George Forster Hickson with the branches of the Bank in Sydney and Adelaide, from the year 1890 to the year 1896 inclusive.

His Honor acceded to the request.

George Christie and John Carter were recalled and further examined.

Henry Melville, Stephen Henry Weedon, and George Edward Hudson were sworn and examined.

His Honor, at 1:30 p.m., adjourned the inquiry until 10 a.m., on Wednesday, 15th July.

C. E. R. MURRAY,  
Commissioner.

---

*WEDNESDAY, 15 JULY, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith, solicitor (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes asked His Honor to make an order for the production of the bank pass-books in connection with the banking account of Mr. Davis from the year 1890 to date.

His Honor directed the production of the books.

Mr. Parkes applied that the Public Works Department might be directed to produce the registers of all minutes and letters in connection with the Sewerage Branch from 1883 to 1890 inclusive; also the letter books of the branch for the years 1891-2.

His Honor directed the production of the books.

Joseph Davis, John Carter, George Edward Hudson, and George Christie, were recalled and further examined.

William Kenwood and William John Lyne were sworn and examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m. on Friday, 17th July.

C. E. R. MURRAY,  
Commissioner.

---

*FRIDAY, 17 JULY, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith, solicitor (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes applied that he might have access to papers in the custody of the Commission during any hours which might be considered necessary.

His Honor acceded to the request.

George McCredie, William Edward Warren, William Thompson, and Joseph Davis were recalled and further examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m., on Monday, 20th July.

C. E. R. MURRAY,  
Commissioner.

*MONDAY, 20 JULY, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr. Smith desired to ascertain whether it was the intention of Mr. Parkes to tender any further evidence in relation to the charge attributing to Mr. Hickson corruption in connection with the employment by the firm of Carter, Gummow, & Co. of his son. Mr. Parkes had intimated some days previously that he had intended to proceed at once with the whole of the evidence concerning that charge until it was completed, but since then he had called evidence in relation to other matters. The expense of being represented by a solicitor at the inquiry was a matter for serious consideration with Mr. Hickson, and if he understood that no further evidence would be adduced with reference to the charge referred to he would probably be advised that he should not be represented at the inquiry by a solicitor any further.

Mr. Parkes said that it would be impossible for him to say that he had completed the evidence relating to any portion of his case until the entire case was concluded.

His Honor said he could quite understand that Mr. Parkes was not in a position to say that he had definitely concluded any one part of his case, because he might possibly discover other evidence later on which he might consider it desirable to call. He understood that if Mr. Parkes failed to discover such evidence he had concluded the portion of the case referred to.

Mr. Parkes said he would undertake to give Mr. Hickson notice of the calling of any further evidence in reference to the portion of the case referred to, or in regard to any other important points.

His Honor said he thought that that was quite as much as Mr. Parkes could be asked to do.

George Dawson, John Carter, William Gilliver, and Walter Alexander Smith were recalled and further examined.

William Scarlett Delisle Roberts and Peter Parfitt were sworn and examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m., on Wednesday, 22nd July.

C. E. R. MURRAY,  
Commissioner.

*WEDNESDAY, 22 JULY, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Hickson (Mr. Ernest Smith, solicitor, advising); Mr. Carter, and Mr. Gummow, of the firm of Carter, Gummow & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

James Gregg was sworn and examined.

George Christie, Joseph Davis, and Thomas William Bryant were recalled and further examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m. on Friday, 24th July.

C. E. R. MURRAY,  
Commissioner.

*FRIDAY, 24 JULY, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising), and Mr. Carter, of the firm of Carter & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

The Secretary read an instrument under the hand of His Excellency the Governor, extending His Honor's Commission for a period of one month from the 21st July.

The Secretary read a communication from the Government Printer, drawing attention to the large quantity of type standing in the evidence taken before the Commission, and pointing out that, unless some of the type were released immediately, it would be impossible to keep pace with the work without seriously interfering with the ordinary business of the department.

His Honor said that the Secretary having made inquiries of the Government Printer, it appeared that it would be necessary for the purpose of releasing a quantity of type, to desist from taking evidence in connection with the Commission for some days. He hoped that he would be in a position to resume the taking of evidence on Wednesday next. If the printing of the evidence were allowed to fall into arrear injustice would be done to everyone affected by the inquiry, because in that case it would be impossible for them to follow the evidence from day to day, so as to ascertain in what position they stood in relation to the case, as it might be called. The best course under the circumstances, he thought, would be to adjourn for a few days.

Mr. Parkes said that, with reference to a letter which had been received from the Assistant Manager of the Bank of New Zealand, as to obtaining from the Adelaide Office of the bank a statement of the account of Messrs. Carter, Gummow, & Co., with that branch, and also the relative vouchers, and an intimation from the Bank that the manager of the Adelaide branch would probably decline to send his vouchers out of the Colony, but that Messrs. Carter, Gummow, & Co., might, at His Honor's request, be willing themselves to produce their Adelaide pass-book, and obtain for His Honor any voucher which might be specially desired,—he would apply for an order upon Messrs. Carter, Gummow, & Co., to produce for the use of the Commission their bank pass-books in connection with their Adelaide account.

Mr. Carter said he would like to know for what reason Mr. Parkes wished the books produced. There would be no difficulty in obtaining the books, but he might be able to give Mr. Parkes the information he desired directly without going to the trouble which would be involved in obtaining the books and vouchers. He might also state that no transactions between the firm and the Department of Public Works in New South Wales would be found to be included in the Adelaide bank-books.

His

His Honor said that if there was any information which Mr. Parkes could obtain directly from Mr. Carter he would ask him to mention what it was. He need not state the object of obtaining the information; but it would be simpler to procure it, if possible, in the way indicated, instead of going through a large number of documents.

Mr. Parkes said it would be difficult for him, without committing himself, to furnish the particulars of the information referred to. He wanted to follow certain payments and transfers of money from one account to another, and he could not go into those particulars without anticipating his case. He did not think Messrs. Carter & Co. should offer any objection to the production of the bank pass-books asked for.

Mr. Carter said there had been a great deal of investigation into the private affairs of the firm, and, while anxious to afford the Commission every assistance, and Mr. Parkes all the information he required, he thought there should be some limit to the investigation.

His Honor said that Mr. Parkes had shown no inclination to go into private matters which had cropped up in connection with the bank pass-books already produced, so that he did not think the fact that the books referred to might contain private matters would be sufficient ground for not asking for them. He would therefore ask for their production. If there were any special voucher which Mr. Parkes might find, upon an examination of the books, it was expedient he should see, he would ask Mr. Carter to request the bank authorities in Adelaide to hand over the voucher referred to.

Mr. Carter said that if it were thought necessary he would hand in a balance-sheet showing the state of Messrs. Carter, Gummow, & Co.'s affairs. From the trend of the inquiry a certain amount of doubt had been thrown upon the financial position of the firm, and any information which would relieve the public mind of that doubt he would be very glad to afford. The firm did not wish such an impression to get abroad.

His Honor said that if such an impression had been conveyed he presumed that the more the matter was ventilated the more the impression would be removed. He would not say anything at present as to the production of a general statement showing the position of the firm's affairs. He would merely ask for the production of the bank pass-books referred to.

His Honor said that he would not formally adjourn the proceedings of the Commission until Wednesday next. It was highly probable they would not be in a position to resume the taking of evidence then, and, if that were so, those affected by the inquiry would receive an intimation from the Secretary. In the meantime he would attend at the Board-room on Monday next to hear any applications which it might be thought expedient to make.

George M'Creddie and William Thompson were recalled and further examined.

C. E. R. MURRAY,  
Commissioner.

*FRIDAY, 31 JULY, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

William Scarlett DeLisle Roberts, George M'Creddie, James Symonds, John Carter, and Joseph Davis were recalled and further examined.

His Honor, at 1:10 p.m., adjourned the inquiry until 10 a.m. on Monday, 3rd August.

C. E. R. MURRAY,  
Commissioner.

*MONDAY, 3 AUGUST, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes requested His Honor to direct Mr. Carter to furnish the following books and papers in relation to Contracts 77 and 118, viz.:—One book (summary pay), one book (petty-cash), pay-sheets following No. 24 (since 1st June), and the paid and unpaid accounts. He would also like to know when Mr. Carter would be in a position to produce the bank pass-books of the firm of Gummow and Gillan, and also the bank pass-books of the firm of Carter, Gummow, & Co. in connection with their Adelaide account.

His Honor requested Mr. Carter to produce the books referred to as soon as practicable.

Mr. Carter said that he was expecting to receive from Adelaide the bank pass-books in connection with the account of Messrs. Carter, Gummow, & Co. in Adelaide. So far as the bank pass-books in connection with the account of the firm of Gummow and Gillan were concerned, he had not been aware that they were required. He would endeavour to obtain them, but it was quite likely that they were not in existence, seeing that firm itself had ceased to exist four years ago.

William Henry Warren, Joseph Davis, and William Thompson were recalled and further examined.

His Honor, at 1:20 p.m., adjourned the inquiry until 10 a.m. on Wednesday, 5th August.

C. E. R. MURRAY,  
Commissioner.

*WEDNESDAY, 5 AUGUST, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr.

Mr. Parkes requested His Honor to direct the production by the Department of Public Works of the last certificate in connection with Contract 77, and also the inspector's reports showing the state of the work up to date.

His Honor directed the production of the documents.

Mr. Parkes intimated that as the inquiry promised to occupy so great a length of time he had determined to limit it, so far as he was concerned, to the four contracts with which he had already dealt, viz. :—79, 79A, 69, and 77. In making this statement he would ask His Honor to bear in mind that he himself, in the examination of witnesses, had occupied not nearly one-half of the time which had been consumed. The officers representing the Department of Public Works, instead of waiting for the proper opportunity to reply to his case, had thought fit, in the examination of his witnesses, to introduce new matter, and that had occupied a great deal of time.

His Honor said that the course which had been adopted had been somewhat confusing, but had been very natural and proper, because it might happen that, unless a witness were examined at the present time, the opportunity to examine him might be lost to the department at a later date. He would ask Mr. Parkes to say whether he had any idea as to how long the inquiry would be likely to last, so far as his part of it was concerned.

Mr. Parkes said that the inquiry had thrown upon him a great deal of work of an exceedingly exacting nature, necessitating his application to it day and night, and he was afraid that if he were to enter into all the contracts concerning which His Honor was empowered to make inquiry, the investigation would last as many years as there were contracts. Having made this discovery, he had determined to curtail the inquiry as far as practicable.

His Honor said he asked the question in view of an application for a further extension of his Commission.

Mr. Parkes said that a great deal of the evidence of a purely technical nature which had been taken was necessitated by the contractors having no books, and this circumstance tended to materially lengthen the evidence. He thought it would take him about one month to conclude the examination of his witnesses.

His Honor said that under the circumstances he would be justified in asking for an extension of his Commission for two months, although, of course, the application might not be granted.

Mr. Parkes said he did not see how he could submit more evidence than he was submitting at the present time during the three-hour sittings of the Commission on Mondays, Wednesdays, and Fridays. He found that it took him the whole of the intermediate days to prepare his evidence for the next sitting of the Commission.

His Honor said that it was also obvious that the printing of a greater quantity of evidence than was being taken at the present time would not be practicable if the printing were to keep pace with the inquiry.

Joseph Davis, William Henry Warren, John Carter, George M'Creddie, and William Thompson were recalled and further examined.

His Honor, at 1:35 p.m., adjourned the inquiry until 10 a.m. on Friday, 7th August.

C. E. R. MURRAY,  
Commissioner.

---

FRIDAY, 7 AUGUST, 1896.

His Honor, the Commissioner, sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising) ; Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes inquired of His Honor whether the Commission was yet in receipt of the bank pass-books of the firm of Carter, Gummow, & Co. in connection with their Adelaide account.

Mr. Carter said that he was in receipt of a letter from Mr. Gummow in which he stated that he had instructed the bank to forward the pass-books fully a week ago. He was under the impression that the books might have been sent to the head office of the bank. He had expected that they would have been in the hands of the Commission on the last sitting day.

His Honor said it was not unlikely that the books would be sent to the head office of the bank, and he would ask Mr. Carter to make inquiry and ascertain whether that was so.

Mr. Davis said that he was in receipt of a communication from Mr. Smail, from which it was to be inferred that something in the nature of testing had been going on upon the northern main sewer at the Glebe. He did not know whether the work had been done at Mr. Parkes' instance or not. He would assume that he (Mr. Parkes) had no connection with it. At the same time, it was an improper thing that any work of that nature should have been done without the knowledge of the department. It had been found that someone had been testing the work at the Glebe contract by removing portions of the cement rendering and putting holes through the concrete.

Mr. Parkes said that he was in absolute ignorance of any tests of that description.

His Honor presumed that Mr. Parkes would not think of having such a thing done without asking his authority.

Mr. Parkes said that he had no knowledge whatever of the testing referred to. He had asked, some time ago however, that some steps should be taken by His Honor to obtain an inspection of this particular sewer.

His Honor said that, as the sewer was in use, there would be a certain amount of difficulty attending an inspection.

Mr. Parkes said that he was quite prepared to nominate a practical man who would make an inspection if Mr. Davis would nominate another, so that a joint inspection could be made.

His Honor said that if Mr. Parkes would localise the points where defective work was alleged to exist, he would consider an application for an inspection. In the meantime he did not see how it would be practicable for anything to be done which would prevent an examination from being effective.

Mr. Carter said that although he was not in a position to afford precise information on the point, it had been rumoured that certain persons had been down into some of the sewerage works constructed by his firm. This had probably been done without the knowledge of Mr. Parkes. It was quite possible that there was some connection between the rumours which had reached him and the complaint now made by Mr. Davis.

His

His Honor said that if the police found anyone interfering in any way with the sewers without his authority, he hoped proceedings would be taken against the offending persons at once.

William Gilliver, John Carter, and John Young were recalled and further examined.

Alexander Dean and Thomas Williams were sworn and examined.

His Honor, at 1:35 p.m., adjourned the inquiry until 10 a.m. on Monday, 10th August.

C. E. R. MURRAY,  
Commissioner.

*MONDAY, 10 AUGUST, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes said he would like to know when the bank pass-books connected with the Adelaide account of Carter, Gummow, & Co. and the account of Gummow and Gillan would be forthcoming.

Mr. Carter said that he was in receipt of a letter from Mr. Gummow under date of 5th August, in which he said that the pass-books had been on the preceding Thursday addressed to Carter, Gummow, & Co. at North Shore. He had made inquiry, and could not find the books anywhere. Whether the books were in the hands of the Sydney branch of the bank or not he did not know. He was sorry that the books had not been forthcoming, but he had done all that he could to obtain them.

Alexander Dean, George M'Creddie, and William Thompson, were recalled and further examined.

Benjamin Rhodes and Samuel Butcher were sworn and examined.

His Honor, at 12:30 p.m., adjourned the inquiry until 10 a.m. on Wednesday, 12th August.

C. E. R. MURRAY,  
Commissioner.

*WEDNESDAY, 12 AUGUST, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising), and Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

William Thompson, James Symonds, Joseph Davis, George Christie, and Thomas Griffiths were recalled and further examined.

His Honor, at 1:5 p.m., adjourned the inquiry until 10 a.m. on Friday, 14th August.

C. E. R. MURRAY,  
Commissioner.

*FRIDAY, 14 AUGUST, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

John Charlton Graham, John Driscoll, George Rogers, Thomas Kady, and John Moore Smail, were sworn and examined.

John Carter and Joseph Davis were recalled and further examined.

His Honor, at 1:15 p.m., adjourned the inquiry until 10 a.m. on Monday, 17th August.

C. E. R. MURRAY,  
Commissioner.

*MONDAY, 17 AUGUST, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising), and Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. Joseph Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Christian Herman Ohlfsen-Bagge, John Moore Smail, and Thomas Williams were recalled and further examined.

His Honor, at 1:10 p.m., adjourned the inquiry until 10 a.m. on Wednesday, 19th August.

C. E. R. MURRAY,  
Commissioner.

*WEDNESDAY, 19 AUGUST, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising), and Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. W. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr. Carter handed in two bank pass-books in connection with the banking account of Gummow and Gillan. He stated that he was in a position to produce these two bank pass-books as the result of correspondence with Mr. Gummow, and that they were apparently the whole of the bank books which could be obtained.

James

James Morrison Dean and William James Millner were sworn and examined.  
William Gilliver, Joseph Davis, John Carter, and Edward Hungerford were recalled and further examined.

His Honor, at 1:20 p.m., adjourned the inquiry until 10 a.m. on Friday, 21st August.

C. E. R. MURRAY,  
Commissioner.

*FRIDAY, 21 AUGUST, 1896.*

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. R. R. P. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); and Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. W. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Richard Green was sworn and examined.

Joseph Davis, George Christie, and Joseph Barling were recalled and further examined.

Mr. Parkes intimated to His Honor that he intended to bring his case to a close on that day week, when he would ask to be sworn in order that he might make a statement.

Mr. Hickson inquired if the statement Mr. Parkes desired to make would be in the nature of a speech.

His Honor expressed the hope that Mr. Parkes would not introduce any argument into the statement he intended to make.

Mr. Parkes informed His Honor that he would confine himself to a statement of facts.

His Honor, at 1:5 p.m., adjourned the inquiry until 10 a.m. on Monday, 24th August.

C. E. R. MURRAY,  
Commissioner.

*MONDAY, 24 AUGUST, 1896.*

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising), and Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. W. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

His Honor expressed his regret that the Secretary to the Commission, Mr. B. H. Friend, who had been doing his work with great ability and zeal, was suffering from an attack of pleurisy; and announced that Mr. Charles Robinson, the principal shorthand writer of the *Hansard* staff, had very kindly allowed Mr. S. K. Johnstone to act for Mr. Friend in his absence.

William Caughey and William Burcombe were sworn and examined.

George Christie and Joseph Davis were recalled and further examined.

Mr. Parkes asked His Honor if he would be good enough to order the production of the whole of the papers in connection with the case of *McNamara v. the Minister for Works*, which Mr. Hungerford on Friday last had undertaken to get.

Mr. Davis explained that Mr. Hungerford had looked everywhere for these papers, but that he had been unable to find them.

His Honor said that if Mr. Hungerford had looked everywhere for the papers it would be of no use for him to make a further order.

Mr. Parkes desired His Honor to make a further order for their production, as he wished to close his case.

His Honor said he supposed that Mr. Hungerford would do his best to find the papers.

Mr. Parkes expressed the hope that His Honor would not hold him strictly to his undertaking to close his case on Friday next, and would allow him to bring in any matter which might overlap.

His Honor acceded to the request of Mr. Parkes.

Mr. Parkes, at a later stage, made an application to His Honor for an examination of the Glebe sewer between the shafts Nos. 11, 12, and 13, and also the sumps, and of shafts Nos. 8 and 9. He stated that shaft 9 had been referred to by a witness named Chiene as a shaft at which a certain conversation took place between Byrne, Reid, and himself; that shaft No. 8 had been referred to that morning by a witness; and that the sumps at shafts Nos. 11 and 12 were supposed to have been improperly filled.

His Honor said he could hardly see the object of making an examination of these sumps. If it would mean taking out the concrete to a depth of 4 ft. 6 in. to try to discover whether there was stone in the bottom, below the limit of the concrete, it would be a very big job. There was very strong evidence to show that there were bits of bad work done. But, supposing that the work did not show any outward sign of bad filling, though that did not excuse the persons who did the bad work, still it would be rather a serious matter, in the interests of the public, to disturb the sewer. The question with which the Commission had to deal was only incidentally whether bad work was put in.

Mr. Parkes said His Honor had had evidence of bad work being put into the contract; and in view of the contradictory evidence which had been given he thought it would be well that some of this bad work should be tested. Dawson, a witness, had undertaken to take the Commission to a sump at Annandale, which was filled up with cement casks. The Commission had also had evidence, on hearsay certainly, that the work in the sewers was defective—for instance, in the Munni-street sewer, Alexandria.

Mr. Davis stated that he should be very glad to see the Munni-street sewer examined, as it would cause no inconvenience to anyone. He had intended to ask that it should be examined, if Mr. Parkes had not done so. In the case of Contract 65, beyond the evidence offered that morning that a few small pieces of shale were put in the bottom of a sump—which, if there, would not interfere in any way with the stability of the work—there was no direct evidence of bad work in the contract.

Mr. Parkes said it was most difficult to get workmen to give evidence as to defective work.

Mr. Carter said it was merely hearsay evidence. Men boasted of what they had done. Three parts of it was idle boasting.

His Honor said that if there was any direct evidence that a piano case had been put into a sump, and covered up with concrete, and the sump could be located, there would be something very definite to search for. There would be only a crust of concrete over the top of the defective work.

Mr.

Mr. Parkes said that if the sump was 7 feet deep, or even 6 feet deep, the piano case would take up only 4 ft. 6 in. He suggested to His Honor that where he had received evidence of defective work, and it turned out that there was defective work, it certainly should lead to the examination of the sewers affected.

His Honor said that where there was fair ground for locating the defective work it certainly should lead to an examination. As to examining the sump, was it difficult or practicable to do so?

Mr. Davis did not think it would be possible to do what Mr. Parkes asked should be done. Even supposing that all stone and no concrete had been put in, it did not interfere with the stability or utility of the work. It was quite out of the question to search for little bits of shale, which probably were put down behind the backs of the contractors.

His Honor: In point of fact it would be a swindle on the Department if done by the contractors; and, if done by the men, a swindle on the contractors and the Department to put shale in the bottom of the sump and cover that over with concrete?

Mr. Davis: Yes, your Honor.

His Honor: I suppose, if you were to rain shale or stone to within a foot of the surface, and to fill in with good concrete, practically the result would be very much the same?

Mr. Davis said it was Mr. Bagge's idea that these sumps should be filled with concrete. Since he left the Department they had been filled in with stone, with a course of concrete on the top. At the same time, if the stone was there, it was there, and it did not make any difference to the work. It was almost impossible to make the examination which Mr. Parkes desired; and, even supposing, when it was made, we found that what this witness said was correct, there was no object obtained.

Mr. Parkes said that his experience was that if bad work was put into one part of a work, it was put into all its parts.

His Honor said that as far as putting in the stone in the bottom of the sump was concerned, and as far as the suggestion went that pieces of timber, perhaps broken-up casks, were thrown into the sump, went, from the evidence he had heard, he was inclined to think that something of the kind did take place. Whether Carter, Gummow & Co., the contractors, had anything to do with it personally or not was another question; but that it did take place he was inclined to believe. It was hardly necessary to go searching in the bottom of these places for what probably he thought would be likely to be found. It was a very serious matter to break up the public sewers to the extent they would have to be broken up, and to go to this expense, which would have to be borne by somebody—by the country finally. He would appoint to-morrow at 10:40 a.m. for the examination of the invert of the storm-water channel at Alexandria. He would reserve his decision on Mr. Parkes' application until he had heard other evidence. On the whole he did not think an examination would be necessary.

Mr. Parkes said there would be no difficulty in examining the short shaft at Johnstone's Paddock.

His Honor did not think it would be safe or expedient to make an examination as the sewage was flowing in the sewer.

Mr. Parkes then desired His Honor to order the production of the Bank Pass-books of the firm of Gummow and Gillan from 1890 to date.

Mr. Carter said that in the absence of Mr. Gummow in Adelaide he had made a search in his house for bank-books in connection with the account of Gummow and Gillan, but that he was only able to find those which he had produced to the Commission.

His Honor desired Mr. Carter to make another search for the books.

His Honor, at 1:5 p.m., adjourned the inquiry until 10 a.m. on Wednesday, 26th August.

C. E. R. MURRAY,  
Commissioner.

*TUESDAY, 25 AUGUST, 1896.*

His Honor the Commissioner proceeded to Alexandria Park to examine the invert of the Sewer Contract, No. 61.

Mr. Varney Parkes, M.P., Mr. J. Davis, Engineer for Sewerage, Mr. Carter of the firm of Carter, Gummow, & Co., and Mr. Thomas Wright, attended.

According to arrangement several holes were drilled into the invert of the sewer by an employee of the firm of Carter, Gummow, & Co., the first hole being 6 feet from the outlet, the second hole 16 feet, and the third hole 36 feet.

C. E. R. MURRAY,  
Commissioner.

*WEDNESDAY, 26 AUGUST, 1896.*

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising), and Mr. Carter, of the firm of Carter, Gummow & Co. (Mr. W. Andrews, solicitor, advising) attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Thomas Wright was recalled and further examined. He stated that at the test of the depth of the concrete in the invert of the sewer, Contract 61, Alexandria, the drill was not worked in a proper manner; that a stone was kept in front of the drill; that he, with an experience of twenty years, could not have drilled the four holes, aggregating a depth of 3 ft. 4 in., through concrete in one-and-a-half hours; and that it would be more satisfactory if a small section of the concrete was cut out by two disinterested men.

Mr. Parkes asked His Honor to have a piece 1 foot square taken out.

Mr. Davis submitted that a very fair test of the sewer was made, and that if the shortness of concrete was there which Mr. Wright represented to be there, it would have been found.

His Honor said the drill seemed honestly to go down on to the bottom, and as to driving a stone in front of the drill through even very sound black soil, he did not think that was feasible.

Mr. Parkes thought the drill worked a wedge-shaped hole, and that there ought not to be a hard bottom at a depth of 11 inches if there was soil under the concrete.

His Honor said a contractor was bound to adopt 9 inches as a minimum; but it was quite possible that he might get 12 inches as a maximum occasionally.

Mr.

Mr. Parkes said that it would satisfy him beyond any possibility of doubt if a foot of concrete was taken out.

His Honor said of course it would be on the assumption that it was taken out in the right place, but that several distinct feet of the material would have to be taken out.

Mr. Parkes assured His Honor that he should be perfectly satisfied if a foot of the concrete was taken out in one position. He had been satisfied with yesterday's test until Mr. Wright made a statement to him that morning, backed up by a man who was used to concrete work.

His Honor asked if it was intended to call any witness to corroborate Mr. Wright's evidence.

Mr. Parkes said he did not intend to offer corroborative evidence. He thought it would be easy to test the statement without bringing other witnesses. Mr. Wright seemed to be very certain of his facts, and it would set all doubts at rest if His Honor would order a foot of the concrete to be cut out.

Mr. Davis said he would not object to the application if there was any reason to doubt the result of the work on the previous day, but, considering who the witness was, and believing, from his evidence, that he had a grudge against the Department, he did object.

Mr. Parkes expressed his willingness to have a foot of material taken out and replaced at his own expense.

Mr. Davis informed His Honor that Mr. Carter would prefer a foot of the concrete to be chopped out and brought to the Board-room.

His Honor said that if Mr. Wright was not present when it was done, and the concrete should turn out to be too thick, he might say that it had come from somewhere else.

Mr. Carter stated that he was willing to send out two men with Mr. Wright to take out the block.

His Honor asked Mr. Parkes at which point he would suggest that it should be taken out.

Mr. Parkes suggested that Mr. Wright should be allowed to put one point down.

His Honor stated that there ought to be present with Mr. Wright a man whose testimony could be taken without question of bias on one side or the other. Whatever might happen no one knew what Mr. Wright might say when he came back; he might tell the truth absolutely, or some new idea might come into his mind.

Mr. Parkes stated that he would at his own expense send out Mr. Thompson on his behalf, and would abide by his decision. If a block was cut out, and brought to the Board-room, there could be no doubt about the depth of the concrete.

His Honor said that, on that understanding, he would sanction its being done.

Mr. Parkes also undertook to pay the expenses of Mr. Carter's two men on the occasion.

Mr. Carter said he would not accept Mr. Parkes' offer.

John Brown was sworn and examined.

Thomas Williams, Joseph Davis, and Christian Herman Ohlfen-Bagge were recalled and further examined.

Mr. Norrie inquired of Mr. Parkes if he was to understand that his case would close on the next sitting day.

Mr. Parkes said it would, but that His Honor had agreed to allow him to bring in some evidence afterwards, which he had endeavoured to get, but which the delay in finding witnesses had prevented him from getting.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m., on Friday, 28th August.

C. E. R. MURRAY,  
Commissioner.

*FRIDAY, 28 AUGUST, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. Ernest Smith (appearing for Mr. R. R. P. Hickson); Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Edward Hungerford and Joseph Davis were recalled and further examined.

William Allen and Edward Moore were sworn and examined.

Mr. Parkes said he had no other witness to call, but he would like to make a statement on oath as to the reasons why he had asked for the inquiry. He anticipated from their examination of his witnesses that Mr. Hickson or his representative would desire to cross-examine him as to motives; and he wished to give them the fullest opportunity of doing so by making a statement.

His Honor said it would be better, on the whole, if Mr. Parkes would confine himself to facts, because his motives were not at all material. He did not assume that Mr. Parkes had any wrong motive, and, even if he had, it would not have anything to do with the question before the Commission.

Mr. Parkes observed that he wished to give a history of the information as laid before him.

His Honor said he understood that it would be a history of facts.

Varney Parkes was sworn and examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m., on Monday, 31st August.

C. E. R. MURRAY,  
Commissioner.

*MONDAY, 31 AUGUST, 1896.*

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith (appearing for Mr. R. R. P. Hickson); and Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr.

Mr. Parkes said that from the manner of Mr. Smith's cross-examination of himself it was clearly indicated that it was intended ultimately to take some action; and he submitted to His Honor that if Mr. Smith intended to take action for libel, or anything of that sort, the proper place for him to be questioned on certain subjects upon which he had been questioned was in a court of law.

His Honor said that what Mr. Parkes said before the Commission was absolutely privileged, except in the case of a prosecution for perjury. He did not suppose that Mr. Smith had it in his mind to take any civil action.

Mr. Smith and Mr. Hickson each answered that he had it not in his mind to do so.

His Honor said that on reflection he had come to the conclusion that it would be more proper that Mr. Smith should be allowed, on cross-examination of Mr. Parkes, to go fully into the question of motive and belief. Although he did not think that he would be entitled to deal with these questions in his report, still he thought that in this inquiry he ought to go into all questions which might in future have to be dealt with by the Executive, and it would be a pity to leave unsettled anything which the Executive might have to inquire into. In this relation he would call attention to the statement made by the Premier in the House relating to what might be called the question of costs. This cross-examination might be relevant to that question. Whatever answers might be given, or whatever deductions might appear proper to be drawn from such answers and from the facts—whatever his report might be, one way or the other—he might not feel justified in coming to a conclusion on this matter himself; but, as he had formerly stopped Mr. Smith from going into the question, he now concluded that it would be better, on the whole, to say that he would put no hindrance in the way of Mr. Smith's doing so.

Mr. Parkes said that, in accordance with the understanding with His Honor, he proposed to amend the charges, to withdraw some of them, and to put others in.

His Honor stated that he would allow Mr. Parkes almost any latitude by way of amendment or addition, and, at the same time, he would allow full latitude to anyone else to reply, at any stage, to any evidence which Mr. Parkes might have produced. He would again ask Mr. Parkes to try to keep the inquiry within reasonable limits.

Mr. Varney Parkes was recalled and further examined.

Mr. Smith desired to know at this stage which of the charges Mr. Parkes would like to withdraw.

Mr. Parkes said he would like the charges to stand for a week longer.

His Honor said he did not think it was fair to ask Mr. Parkes to withdraw any charges. It was for Mr. Smith and all the parties concerned to exercise their own discretion as to what evidence they would call to rebut a charge, or to modify the effect of evidence, or to explain away the effect of evidence which had been given.

Mr. Smith said that he had not asked Mr. Parkes to withdraw any charges, but that if it was intended to modify or withdraw any of the charges, he would like to know as soon as possible what Mr. Parkes proposed to do.

Mr. Parkes intimated that at a later stage of the inquiry he would state his intentions.

His Honor said that if at any time Mr. Parkes should make up his mind to modify or withdraw any of the charges he would like him to do so at once.

Mr. Parkes stated that if on looking through the charges he saw any which he thought he ought properly to relinquish he would do so. He would tell His Honor on Wednesday what he proposed to do.

His Honor understood that Mr. Parkes had now provisionally closed his case.

Mr. Parkes said that he had.

His Honor, at 12:36 p.m., adjourned the inquiry until 10 a.m. on Wednesday, 2nd September.

C. E. R. MURRAY,  
Commissioner.

---

WEDNESDAY, 2 SEPTEMBER, 1896.

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. R. R. P. Hickson (Mr. Ernest Smith, solicitor, advising); Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes said he would undertake to hand to His Honor not later than the following day the amended charges to which he had already referred.

Mr. Davis said that the examination of the sewer at Alexandria which had been directed to be made had been made on the previous morning. By means of a drill holes were made in what proved to be satisfactory concrete, going to a depth of 9 inches.

His Honor presumed that that would be without going through the full extent of the concrete.

Mr. Davis said that that was so.

His Honor asked how far from the mouth the holes had been made.

Mr. Davis said he was not in a position to say. He was not himself present at the examination, but Mr. Thompson might possibly be in a position to give evidence in regard to it, having been present.

Mr. Parkes asked for the production by the department of any correspondence as to sureties in the case of contracts carried out by Mr. Gilliver or Mr. Ahearn.

Mr. Norrie said he did not recollect any correspondence in regard to personal sureties in the case of either of the contractors referred to, but he would see if there was any.

Varney Parkes and Joseph Davis were recalled and further examined.

His Honor, at 1:5 p.m., adjourned the inquiry until 10 a.m. on Friday, 4th September.

C. E. R. MURRAY,  
Commissioner.

---

FRIDAY, 4 SEPTEMBER, 1896.

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. R. R. P. Hickson (Mr. Ernest Smith, solicitor, advising); and Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes handed in a list of charges, which he said he desired now to stand as containing the whole of his charges in an amended form.

His Honor asked whether the charges Mr. Parkes had now handed in contained anything by way of addition, or whether they were a repetition of the former charges in a modified form.

Mr. Parkes said that the charges which he now handed in were merely modified. There was nothing additional.

Mr. Hickson said he would like to know whether the charges contained anything to require the taking of fresh evidence.

Mr. Parkes said that the charges were practically the same charges which he had handed in before, except that they were in a different form.

The Secretary, by His Honor's direction, read the charges as follows :—

CHARGES based upon statements made in the Legislative Assembly of New South Wales as to the improper conduct on the part of the Public Works Department in connection with contracts of Carter, Gummow, & Co., and referred by the said Legislative Assembly to a Royal Commission for inquiry and report.

*Contract 69.*

1. With allowing Messrs. Carter, Gummow, & Co. to manipulate the Department's schedule for Sewerage Contract 69 so as to give the contractors an advantage over the Crown in their contract to build a sewer in Marrickville, by which the contractors were paid upon the extravagant items of charge, and were conceded those items upon which they had a losing price.
2. With allowing the contract to be taken up by Carter, Gummow, & Co. with an insufficient bond, and with ultimately breaking that bond by remitting the retention money, and writing a minute by which the Minister was deceived and induced to consent.
3. With paying to the contractors large sums of money which they (the Departmental officers) were not compelled to pay under Carter, Gummow, & Co.'s contract with the Crown.
4. With advancing to the contractors sums of money improperly and in violation of the terms of the contract, and without sufficient security.
5. With incompetency in carrying out and administering the contract.
6. With failing to comply with the orders of Parliament, and placing documents on the Table of the House in a manner calculated to mislead Honorable Members of the Assembly.
7. With allowing defective work to be put in the works, by which a loss is sustained by the Crown.

*Contract 72.*

1. With paying away large sums of money to the contractors, Carter, Gummow, & Co., which they (the Departmental officers) were not obliged to do under the contract conditions; and with settling a claim without a proper test as to the liability of the Crown for a sum of £4,050 9s. 6d. by obtaining the Minister's consent granting the contractors Contract 79 without re-tendering for that contract, when, in the interest of the Crown, it was the clear duty of the Department to do so.
2. With proceeding with works not contained in the contract, and paying for same out of contract vote; and with using unauthorised, in connection with contract, money voted for other contracts.
3. With withholding from the papers laid upon the Table of the House such documents as would allow Honorable Members of Parliament to understand the nature of the contract, and the manner in which it was carried out.

*Contract 77.*

1. With calling public tenders for Contract 77 upon plans for elaborate and costly work, and allowing Messrs. Carter, Gummow, & Co. to submit a plan of their own upon a patent held by them and an officer of the Department, and at their own price, unchecked by the Department as to real cost, by which Messrs. Carter, Gummow, & Co., got an advantage over the Crown of £4,000.
2. With deceiving the Minister as to the true cost of the Monier patent by minutes written by Robert R. P. Hickson, the then Engineer-in-Chief of the Department.
3. With deceiving the Minister, by which he (the Minister) accepted of certain security, which was of an improper and useless nature, for the stability of the patent for a term of three years, the deception being contained in minutes written by Robert Hickson, the then Engineer-in-Chief for Public Works, knowing that the security was not of a proper nature to submit.
4. With withholding the proper information concerning the above transaction from Parliament, by not laying plans and other papers upon the Table of the House when ordered to do so by Parliament.

*Contract 79.*

1. With improperly granting to Messrs. Carter, Gummow, & Co., without re-tendering, Contract 79, by which a loss was sustained by the Crown.
2. With allowing Messrs. Carter, Gummow, & Co. to manipulate the items in the schedule prepared by the Department, so as to increase the profits of the contractors to the loss of the Crown.
3. With returning the cash security and the retention fund to the contractors, in violation of the contract agreement and to the advantage of the contractor, and hazarding the interests of the Crown.
4. With the discharging of Inspector Reid from the above contract for simply doing his duty in the interest of the Crown by insisting upon good work and material.
5. With improperly paying an account of £350 6s. 8d. to the contractors for removing material which work they never performed.
6. With placing improperly to the account for payments on Contract 79 various items of payments for work done at Bondi.
7. With advancing, without sufficient security, the sums of money upon contract materials not in the possession of the Crown.

*Contract*

*Contract 79A.*

1. With inducing the Minister, on the plea of urgency, to let the above Contract 79A to Carter, Gummow, & Co. without tender, and upon Departmental estimate, by which a loss is liable to be sustained by the Crown.
2. With advancing a sum of money of the moneys of the Crown to the contractors upon insufficient movable security, and in violation of the contract between the contractors and the Crown.
3. With failing to place upon the table of the House the papers ordered by Parliament, by which Honorable Members might be misled as to the nature of the transactions.
4. With permitting defective work to be executed by the contractors, by which a loss is sustained by the Crown.

*Contract 118.*

1. With allowing defective materials to be used by the contractors, by which a loss is sustained by the Crown.
2. With allowing the contractors to have the benefit of labour performed by the unemployed, paid by the Crown, to drain the works of the contractors, which drainage the contractors have to take the responsibility of under their agreement with the Crown.
3. With omitting the necessary papers ordered to be laid upon the Table of the House of Parliament, by which Honorable Members were unable to judge of the manner in which the contract was conducted.

*Glebe Contract.*

1. With allowing defective work to be done, by which a large loss of money was sustained by the Crown, and with not making any effort to recover such loss from the contractors, Messrs. Carter, Gummow, & Co.

*Engineer-in-Chief for Public Works; Carter, Gummow, & Co.*

That Robert R. P. Hickson, while an officer of the Crown, viz., Engineer-in-Chief for Public Works, did allow of undue concessions being granted to Messrs. Carter, Gummow, & Co., contractors for sewerage works in the Colony of New South Wales, his son, George Hickson, being an interested party in the firm of Messrs. Carter, Gummow, & Co.\*

1. By permitting Messrs. Carter, Gummow, & Co. to obtain the monopoly of the Monier system in Government works by inducing the Minister to enter into an agreement to adopt their patent in public works, and to pay 15 per cent. royalty for use of same by an improper minute, inaccurately stating the cost of a special test made in connection with the same.
2. By permitting Messrs. Carter, Gummow, & Co. to obtain Contract No. 79 in an improper manner to the advantage of the contractor, and to the detriment of the Crown.
3. By permitting Messrs. Carter, Gummow, & Co. to obtain Contract No. 77 in an improper manner to the advantage of the contractor, and to the disadvantage of the Crown.

His Honor desired to know, the charges having been read, whether anyone interested in the inquiry wished to make any application founded upon them, or to ask him to take any course in consequence of their modification.

Mr. Smith said that he had not yet had time to consider the effect of the charges in their modified form. He suggested that the evidence should be proceeded with on this day, and that if, after thinking over the matter in the meantime, he thought fit to make any application it might be made on the following Monday.

His Honor said that that request was a reasonable one. The same right would be extended to Carter, Gummow, & Co.

Mr. Parkes desired to explain that some of the charges were introduced with the object of introducing further evidence, which might or might not be forthcoming. He, of course, reserved to himself the right to withdraw any of the charges later on.

His Honor said that if at any stage Mr. Parkes wished to withdraw any charge he would be at liberty to do so.

Mr. Parkes asked permission to call Mr. Christie as a witness, in order that he might furnish a report from the Commissioner of Taxation in New Zealand with reference to the financial position of Mr. Forrest. This communication had reached Mr. Christie from a private source.

His Honor said that he had made inquiry with a view to elicit information now referred to by Mr. Parkes, from another source. He had not actually applied for the information to the Commissioner of Taxation, but, under the circumstances, the sooner the evidence to which Mr. Parkes referred was put before the Commission the better.

George Christie, William James Millner, and Joseph Davis were recalled and further examined.

His Honor, at 12:30 p.m., adjourned the inquiry until 10 a.m. on Monday, 7th September.

C. E. R. MURRAY,  
Commissioner.

*MONDAY, 7 SEPTEMBER, 1896.*

His Honor the Commissioner sat at the Board-room Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. R. R. P. Hickson (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes said that if he understood that he had a right to bring forward evidence in reply to that tendered by the department, he would be able to save a certain amount of time in the cross-examination of Mr. Davis.

His Honor said that while Mr. Parkes might be in a position to call evidence in reply to that tendered by the department, Mr. Davis would still have the right to be called again.

Mr. Parkes said the object he had in view was to obtain from Mr. Davis the data upon which he intended to put forward certain evidence.

His

\* Mr. Parkes, on October 9th, amended the clause by the omission of the words "his son, George Hickson, being an interested party in the firm of Messrs. Carter, Gummow, & Co."

His Honor said that he would ask Mr. Parkes to cross-examine the whole of the witnesses who could be cross-examined when they were first called, because it might happen that some of them might admit the correctness of the facts which Mr. Parkes wished to prove.

Mr. Smith said that, with regard to the substituted or modified charges which Mr. Parkes had tendered to His Honor on the preceding Friday, he had looked through them, and it appeared to him that some seven or eight of the original charges had been abandoned, and that two entirely new ones had been put forward. He referred to charge No. 2, affecting Contract No. 72, and to charge No. 1 of the general charges. First of all, he would like to ask Mr. Parkes a few questions in further cross-examination as to these charges, and in the second place he would ask His Honor to call upon Mr. Parkes to state whether he intended to call any witnesses in support of the two new charges. If Mr. Parkes intended to call further evidence it might be convenient to deal with the matter at once, before the Department proceeded any further with the evidence which it was now calling.

His Honor said that if Mr. Parkes had any evidence to tender in reference to the charges referred to by Mr. Smith he might tender it at once.

Mr. Parkes presumed that if he gave Mr. Smith twenty-four hours' notice of his intention to call evidence it would be sufficient.

His Honor said that the sooner the evidence was proceeded with the better, and he would ask Mr. Parkes to be ready with it as soon as he could, and at the same time to give Mr. Smith notice.

Mr. Smith said that the Department had not much further evidence to tender, and he would therefore ask Mr. Parkes to give him the earliest notice possible of any further evidence which he might desire to call. The Department intended to call only two or three witnesses in addition to Mr. Hickson, and their case would probably be concluded on Friday.

Mr. Parkes said that he would be ready with any further evidence he might see fit to tender on the following Monday at the latest.

Joseph Davis was recalled and further examined.

Charles Clymer was sworn and examined.

His Honor, at 1:15 p.m., adjourned the inquiry until 10 a.m. on Wednesday, 9th September.

C. E. R. MURRAY,  
Commissioner.

---

*WEDNESDAY, 9 SEPTEMBER, 1896.*

His Honor, the Commissioner, sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. R. R. P. Hickson (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes intimated his desire to make verbal amendments in several of his modified charges, and also to add the following charge:—

“With allowing faulty supervision of the contracts carried out by Messrs. Carter, Gummow, & Co., by which inferior concrete was supplied, making defective work, there not being the specified quantity of cement used, more particularly in Contracts 79, 79A, and 69.”

Mr. Parkes desired to know when Mr. Davis would be able to produce the list of contracts he had undertaken to produce, in which the fixed deposits were returned.

Mr. Davis said that he understood that Mr. Norrie would produce the necessary documents.

Mr. Norrie said he would like to know whether Mr. Parkes wished the whole of the papers in each individual case, or merely the contract documents.

Mr. Parkes said that he would like to have the contract documents, showing the date of the refund and also the reasons for the same.

Mr. Parkes said that Mr. Davis had undertaken to produce a list showing any further cases which had occurred in the Sewerage Department in which the retention money and fixed deposit had been returned to the contractors, in addition to the two cases mentioned in the list which had already been handed in.

Mr. Davis said that he had not stated that there were any additional cases. What he had stated was that a clerk had prepared a list which fairly represented the practice of the office. He did not know whether there were any additional cases as far as the Sewerage Department was concerned. If there were any such additional cases he would cause to be prepared a list in which they would be shown.

Mr. Parkes said he had also requested the production of the journal in connection with Contract 72.

Mr. Davis said that every search had been made for the journal to which Mr. Parkes had referred, but it could not be found. Mr. Hungerford had spent some hours in searching for the book, but it had not been found, and he really did not know what had become of it. It was thought at the time the journals were sent down to the Commission with other documents, that all the journals in existence had been forwarded.

His Honor thought it would be well to examine Mr. Hungerford as to what steps he had taken in making a search for the journal.

Mr. Parkes said Mr. Davis had also undertaken to produce the papers in connection with Contract 93, the first contract let under the new system of tendering.

Mr. Davis said he was not aware that he had undertaken to produce these papers, but they could be produced.

Mr. Parkes said he would also like to have produced the whole of the correspondence and minutes with reference to that particular contract.

Mr. Davis said that the Department would produce whatever papers there might be in reference to the matter.

Mr. Parkes said that he would ask His Honor to direct the production of the whole of the Inspector's reports upon the contracts of Carter, Gummow, & Co., which had been dealt with in the inquiry as to the cement which had gone into the work upon the various contracts.

Mr. Davis said that the whole of the Inspector's reports which were in existence had already been produced.

Mr.

Mr. Parkes asked whether there were any further records in the possession of the Department showing the quantity of cement which had been delivered upon the various contracts, apart from the test book.

Mr. Davis said that the inspectors invariably noted the cement which went into the various contracts, and the quantity would be given in the inspectors' weekly or daily returns, as the case might be. The whole of these returns had already been handed in.

Thomas Griffith and Joseph Davis were recalled and further examined.

George Alfred Fowle and George Chamier were sworn and examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m. on Friday, 11th September.

C. E. R. MURRAY,  
Commissioner.

---

FRIDAY, 11 SEPTEMBER, 1896.

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising), Mr. R. R. P. Hickson (Mr. Ernest Smith, solicitor, advising), Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co (Mr. Andrews, solicitor, advising) attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr. Parkes said that the witness Maddison and Inspector Reid desired to make statements to the Commission, and he would like to ascertain whether His Honor would have any objection to the statements being received at the present stage of the inquiry.

His Honor said that if, as he understood, the statements of the witnesses referred to were volunteered, there would be no objection to their being heard.

George Chamier, Robert George Reid, Joseph Davis, and Varney Parkes were recalled and further examined.

Joseph Husband and Arthur Edward Cutler were sworn and examined.

Mr. Parkes said that, with reference to various matters affecting Mr. Hickson which had occurred in South Australia, he would ask His Honor to ascertain from Adelaide, as far as practicable, the facts of the case.

Mr. Smith said he would state the facts shortly, as he understood them. A motion had been made in the Legislative Assembly for a Royal Commission to inquire into the circumstances connected with certain public works. The Commission was issued, and there was an inquiry. Prior to that, however, there had been some arbitration proceedings in the matter of Wells Bros.' contracts for Rivoli Bay and Kingston jetties, in which the award was against the contractors. In connection with the Commission to which he had referred, a report was presented with regard to various railway matters; but he had been unable to discover that there was any report with regard to jetties. The Department had telegraphed down to Adelaide for particulars of the report with a view to ascertain if there were any report beyond that which they had already obtained. They had not yet this information. He was informed by Mr. Hickson that he had not been examined by the Commission at all. A further report was referred to in one of the Parliamentary papers, which, as far as he could understand, was connected with the Annual Report of the Treasury. He alluded to a special report by Mr. Higinbotham. Those were the whole of the facts as far as he had been able to discover them.

His Honor suggested that the most convenient course would be for both the Department and Mr. Parkes to hand to the Secretary of the Commission a statement of the facts, so far as they had been able to discover them, and if, after perusal of these statements, he came to the conclusion that any further particulars were required, he would endeavour to obtain them.

Mr. Smith said that with reference to the new charge which had been handed in by Mr. Parkes at the last sitting of the Commission, he desired now to state that the Department had virtually closed their case so far as the old charges were concerned, with the exception of calling Mr. Hickson. Concerning the two or three last additional charges in the list which Mr. Parkes had handed in, no evidence had yet been tendered, as far as he could see, and he would ask that Mr. Parkes be now called upon to complete his case before Mr. Hickson was examined, so that he might be in a position to answer, as far as possible, the whole of the evidence brought against him.

Mr. Parkes said that the necessary researches for the production of evidence occupied some time; but as regards two of the charges referred to by Mr. Smith, all the evidence which, in his opinion, was necessary had already been produced. With regard to the shortage of cement, he had yet to adduce further evidence, but it could not be got ready very quickly. He thought he could be ready with it at the end of the following week. If the evidence were ready before he would have it called. He did not think, however, that the Department would find any necessity to call Mr. Hickson himself in order to reply to that evidence.

His Honor said he would again ask Mr. Parkes to be as expeditious as possible in producing any further evidence which he had to produce. He presumed that after Mr. Hickson had been called by the Department, Messrs. Carter, Gummow, & Co. would have some evidence to bring forward.

Mr. Gummow said that the evidence which his firm intended to bring forward would occupy perhaps three sitting days.

His Honor said that in an inquiry of this kind he could not draw the line as to where evidence on either side should cease, because new facts might at any time be discovered by any of the parties concerned.

Mr. Smith thought that a limit should exist somewhere, and he would suggest that His Honor should adjourn the Commission until Mr. Parkes was in a position to call all the evidence he intended to call. With all respect to His Honor, he must decline to go on with the evidence which the Department desired to put forward for the completion of this case until Mr. Parkes had tendered such further evidence as he desired to tender. With regard to the charge Mr. Parkes had handed in at the last sitting of the Commission, he submitted that up to the present time there had been no evidence whatever of faulty supervision. He was quite prepared to call engineers and inspectors who had been employed upon various contracts, if it were necessary, but at present he thought it absolutely unnecessary for him to call these witnesses. When he had heard the evidence which Mr. Parkes intended to call in support of the charge to which he had just referred it might be necessary to call some of these witnesses. In the meantime, he would ask His Honor to adjourn the Commission until Mr. Parkes was in a position to go on with his case, instead of calling upon the Department to answer further than they had already done.

His

His Honor said that the course suggested by Mr. Smith would be a very inconvenient one to adopt. The evidence had proceeded now for a long time, and he did not think any injustice would be done by his hearing Mr. Hickson's statement, reserving the right to the Department, of course, to call him again at any stage if any further evidence should be forthcoming concerning which he wished to make any statement. It might simplify matters if Mr. Parkes would state more definitely the nature of the additional evidence he intended to call. It seemed to him that if the evidence was connected with, for instance, the shortage of cement in the work, no harm could be done by stating generally the nature of the evidence. The only danger in stating beforehand anything concerning the evidence to be called was, so far as he could see, in the case of workmen, because it might be difficult to get men afterwards to come forward, assuming that they could disclose certain facts regarding either Carter, Gummow, & Co., or the Department.

Mr. Parkes stated that he intended to call what he considered conclusive evidence on the question of the shortage of cement. He intended to connect the Department with the shortage, but he could not, as far as that point was concerned, disclose any of the evidence he intended to call.

His Honor said it might possibly be the case that the evidence to which Mr. Parkes referred might require to be answered, and, if so, he would allow Mr. Hickson to be recalled. As to the other witnesses to whom Mr. Smith had referred, he could, if he thought fit, call them at as late a stage as he thought fit. He might, for instance, call them after Messrs. Carter, Gummow, & Co. had brought forward the whole of the evidence they proposed to tender. There would, therefore, be no necessity to adjourn the inquiry.

Mr. Smith said he understood that it was only with regard to the charge as to the shortage of cement that Mr. Parkes proposed to bring forward further evidence, otherwise he should object strongly to calling Mr. Hickson to answer the allegations against the Department at the present stage.

His Honor said he understood that the whole of the evidence which was capable of being called had been called.

Mr. Parkes said that that was the case.

Mr. Smith said that in that event his best course would be to proceed with the examination of Mr. Hickson on Monday, leaving out of that examination, however, any matters affecting the charge relating to the shortage of cement.

Mr. Gummow presumed that his firm would be in the same position as the Department in tendering further evidence during next week with regard to the shortage of cement, and that they would be permitted to allow the examination of witnesses upon that point to stand over until Mr. Parkes brought forward the whole of the evidence he had to adduce.

His Honor said there would be no objection to that course.

His Honor, at 1:20 p.m., adjourned the inquiry until 10 a.m. on Monday, 14th September.

C. E. R. MURRAY,  
Commissioner.

#### MONDAY, 14 SEPTEMBER, 1896.

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising), Mr. R. R. P. Hickson (Mr. Ernest Smith, solicitor, advising), Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. Joseph Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

George Benson, Robert Rowan Purdon Hickson, and George Maddison were recalled and further examined.

George Christian Henry Rudolph and George Anselm Henry Rowney were sworn and examined.

Mr. Parkes said he thought that if the matters affecting Mr. Hickson's connection with the South Australian Government were gone into, the whole of the papers connected with them would have to be put before the Commission. In his opinion these matters had nothing to do with the inquiry. Mr. Hickson seemed to have come to misfortune as regards the Rivoli Bay and Kingston jetties in that Colony; but to show how little importance he attached to that matter, he might have made reference to it some eighteen months ago in connection with the Public Works Committee, but he did not. He foresaw that if these matters were entered upon it would be necessary for the Commission to obtain information from the various Ministers who had dealt with them in South Australia; also information as to what had taken place with regard to the jetties referred to since Mr. Hickson had left that Colony. There were also various witnesses now in New South Wales who had been connected with Mr. Hickson in South Australia at that particular time who would have to be called, and the whole process would involve a good deal of trouble and expense, to say nothing of the delay which would occur in closing the labours of the Commission. He thought it would be much better, therefore, if these matters were eliminated from the inquiry. If they were not eliminated the fullest particulars would have to be gone into.

His Honor said that he did not understand that the question of whether Mr. Hickson at some time or other in South Australia had made any engineering mistakes was in any way material to this inquiry. He understood that the reference which Mr. Parkes had made to matters which had occurred in South Australia suggested some improper conduct analogous to that which had to be inquired into by the Commission—that something of the kind had taken place in South Australia. That would be a different question altogether, and it might be considered in one sense material to the inquiry. But if Mr. Parkes now distinctly said that he made no suggestion of that kind at all, and that the whole matter of Mr. Hickson's connection with South Australia, as far as he could see, resolved itself into an inquiry whether Mr. Hickson did or did not make some mistake in engineering, then the question bore a very different aspect.

Mr. Parkes said that, as far as he could ascertain from the papers, the matters which had occurred in South Australia afforded a parallel to the matters connected with this inquiry. He did not know whether His Honor wished these matters to be gone into in that relation.

His Honor said he had no wish to go into them at all, and he thought it a great pity that they should be gone into.

Mr. Parkes said he was anxious to avoid it, because he could not afford the time and expense incidental to any material prolongation of the inquiry.

His Honor reminded Mr. Parkes that he had introduced the matters now referred to in the course of his evidence.

Mr.

Mr. Parkes said he had briefly referred to the matter to show how it was that he had first come to question the estimates and work of Mr. Hickson.

His Honor said that, whatever Mr. Parkes' intention may have been, the matter had been introduced, and Mr. Hickson wished to clear it up. He could only say that, if it were gone into at all, Mr. Smith, in his examination of witnesses, should confine himself as closely as possible to the question, not of Mr. Hickson's ability as an engineer, but of his rectitude as an officer of the South Australian Government. He took it that the question of Mr. Hickson's ability as an engineer was utterly outside the question into which the Commission had to inquire.

Mr. Parkes said that if Mr. Smith were permitted to take the course now suggested it would involve the production of a great many documents, and the calling of a great number of witnesses.

His Honor said it would depend upon what might transpire in the course of the evidence tendered, whether it would be necessary to call further evidence. As to opinions of Ministers of the Crown in South Australia, or any other persons, he certainly would not go into those matters at all. They would have to be altogether eliminated from the inquiry.

Mr. Parkes said it would be necessary that all the papers in connection with the arbitration case, in which Wells Brothers were concerned, as well as the report of the South Australian Commission upon Public Works, should be put in.

His Honor said that he could not refuse to allow Mr. Hickson to adduce evidence as to what had taken place in South Australia, considering that evidence had already been given, remotely but distinctly bearing upon that very question.

Mr. Smith said that the evidence was the more necessary in that Mr. Parkes now admitted that it had been given with the object of making a suggestion of improper conduct on the part of Mr. Hickson.

His Honor said that there could be no doubt that the question had first arisen in Mr. Parkes' statement prior to his cross-examination.

Mr. Parkes said he understood from Mr. Smith's method of cross-examination that he wished to go into the motives which had actuated him in making the statements which he had made.

His Honor said that if Mr. Hickson intended to go into the question he would allow him to do so. At the same time, he thought it would be a pity to introduce the subject, because it involved the opening of a great deal of evidence, possibly leading to a great deal more trouble and expense. The whole thing appeared to him to be very slightly, if at all, material. The great difficulty arose from the inquiry being of a public nature. Had it not been of a public nature it would have been open to them to say that the matters referred to were known entirely to those immediately concerned in the Commission, and that they would not go any further into the matter; but, the facts referred to having gone forth to the public, the matter stood in an entirely different position, and he considered that Mr. Hickson had a right to vindicate himself in the eyes of the public.

Mr. Smith understood that Mr. Parkes did not withdraw the suggestion that the matters that had transpired in South Australia raised the question of Mr. Hickson's integrity.

Mr. Parkes said that no doubt the matters which had happened in South Australia afforded a parallel to the matters involved in this inquiry.

Mr. Smith said that in the face of that declaration he thought it would be impossible to eliminate the matters referred to. It would be necessary to go into them.

His Honor said that, with regard to Rudolph, if it were the fact, as reported, that, in consequence of a partially-heard charge against him—because that was all that it could be called until the report of the Commission had been presented—certain action had been taken in relation to his salary, then he considered that a very great wrong, a very serious wrong, had been done, which afforded another reason for regret that the plan which he had originally intended to adopt of not making public the evidence given in the course of the inquiry until the inquiry itself was complete had not been adhered to. It might appear, for instance, that Rudolph had suffered because of something which had been elicited in the course of the inquiry but which might finally turn out not to throw the slightest suspicion of discredit upon him, or upon anyone else. If the action indicated had taken place he thought that Rudolph had been treated in a very improper way. Of course, if at the termination of the inquiry his report should be to the effect that Rudolph had done wrong—if that should come out, directly or indirectly—he might legitimately be called upon to show cause why he should not be even dismissed; but while the question was *sub judice* he did not think that any authority had any right to deal with him upon any inchoate question of fact which was not determined.

Mr. Smith said there had been a misunderstanding in the matter. When the evidence first came out with regard to the loan of money by Mr. Carter to Rudolph, the intention was to remove Rudolph from outdoor work to indoor work at a lower salary. It was then pointed out that that would be forestalling His Honor's report, and that that should be waited for. Through some mistake the lower salary had been placed upon the Estimates, as though Rudolph had been retained at his old work at that salary. That was the explanation of what had occurred.

Mr. Davis said that the placing of the reduced salary upon the Estimates was quite the result of accident, and was not intentional.

His Honor, at 1-20 p.m., adjourned the inquiry until 10 a.m. on Wednesday, 16th September.

C. E. R. MURRAY,  
Commissioner.

---

WEDNESDAY, 16 SEPTEMBER, 1896.

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising), Mr. R. R. P. Hickson (Mr. Ernest Smith, solicitor, advising), Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Robert Rowan Purdon Hickson was recalled and further examined.

William Julius Baltzer was sworn and examined.

His Honor, at 1 p.m., adjourned the inquiry until 10 a.m. on Friday, 18th September.

C. E. R. MURRAY,  
Commissioner.

FRIDAY,

## FRIDAY, 18 SEPTEMBER, 1896.

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. R. R. P. Hickson (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor) advising, attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Mr. Gummow said, with reference to Contract 79A, the contract on which some of the brickwork had been disturbed in the course of the inspection made by direction of the Commission, he would like to know whether the contractors were at liberty to make the work good. The period of maintenance in respect of the contract had expired, and in the meantime the contractors were being kept out of their money and deposit. He would also like to know whether, in respect of Contract 118, His Honor proposed to order an inspection which would in any way disturb the work, the period of maintenance having expired in that case also.

His Honor said that, as far as the Commission was concerned, there was no objection to the work upon Contract 79A being made good at once. He did not suppose that Mr. Parkes would raise any objection.

Mr. Parkes stated that he had no objection to that course.

His Honor said that in that case the matter was entirely one between the department and the contractors. As regarded Contract 118, no application had been made, and he saw no need for an inspection.

Mr. Gummow desired to know whether His Honor would like to see any water impounded in the carrier on Contract 77.

His Honor said that it might be satisfactory, if it were not a difficult thing to do, to block up the ends of a portion of the carrier and make a trough of it for the time being. If the water were impounded for some days, it would be, to some extent, a satisfactory test.

Mr. Gummow said a portion of the carrier was already blocked, and he would direct it to be filled with water to the level of the blocking.

George Christie, William Julius Baltzer, George Forrest, Frank Moorhouse Gummow, and Joseph Davis were recalled and further examined.

James Gillan and Charles O'Hanlon were sworn and examined.

His Honor at 12:55 p.m. adjourned the inquiry until 10 a.m., on Monday, 21st September.

C. E. R. MURRAY,  
Commissioner.

## MONDAY, 21 SEPTEMBER, 1896.

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

James Flood, Nicholas Ryan, Alexander M'Millan, Peter Hart, Charles King, and Sydney Booth were sworn and examined.

John Carter was recalled and further examined.

His Honor, at 12:52 p.m., adjourned the inquiry until 10 a.m., on Wednesday, 23rd September.

C. E. R. MURRAY,  
Commissioner.

## WEDNESDAY, 23 SEPTEMBER, 1896.

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); and Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Joseph Davis, John Carter, and William Henry Warren were recalled and further examined.

Thomas Edward Spencer, William Greenwood, and Andrew Eaton were sworn and examined.

His Honor said he understood that Mr. Parkes had made inquiry of the Secretary to the Commission as to whether addresses would be heard upon the conclusion of the evidence; and he desired now to intimate that when that stage of the inquiry was reached he would hear addresses, first, from a representative of the department, secondly, from a representative of the firm of Carter, Gummow, & Co., and finally, from Mr. Parkes himself. He would also direct that the addresses be recorded on the minutes.

Mr. Parkes said that if that course were allowed it was not his present intention to call any further evidence. His intention was, in the address he proposed to deliver, to connect the evidence which he had so far tendered to the Commission.

His Honor said that an address and the tendering of evidence were essentially different, and, if Mr. Parkes wished to make any statement as to facts, it should be as a witness, as distinct from the position he would occupy in addressing the Commission.

Mr. Parkes said there were certain inconsistencies and other matters in the evidence which he had left untouched, and if he were not allowed to address His Honor upon those points it would be necessary for him to tender evidence in regard to them.

His Honor said it would be more appropriate for Mr. Parkes to take the course he indicated in the form of an address by way of argument; but if there were any facts which he desired to produce they would come in as evidence in reply. Assuming that the evidence were altogether closed on Friday, he would be prepared to hear the department either through Mr. Smith or through Mr. Hickson himself, whichever might be thought desirable, on Monday. If the department desired a longer adjournment than the usual adjournment from Friday to Monday, in which to prepare an address, he would consider an application on Friday.

Mr.

Mr. Davis said he understood that His Honor would call upon the department to address him first. His Honor said that that was so. Of course, if arrangements were made for a different order of addresses, well and good; but the order he had indicated would be the proper order according to the practice of the courts of New South Wales.

Mr. Norrie said that the department would make an application on Friday for a postponement if it were considered necessary; but he did not, at present, anticipate that a longer adjournment would be required.

His Honor, at 1:25 p.m., adjourned the inquiry until 10 a.m., on Friday, 25th September.

C. E. R. MURRAY,  
Commissioner.

---

FRIDAY, 25 SEPTEMBER, 1896.

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. R. R. P. Hickson (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Joseph Davis, John Carter, and Frank Moorhouse Gummow, were recalled, and further examined. Charles James Henty and Henry Johnston were sworn and examined.

Mr. Smith said he had been given to understand that Mr. Parkes desired to address the Commission, and that His Honor had intimated that he would be prepared to hear him, at the same time announcing that the same privilege would be accorded to the department, and to Carter, Gummow, & Co. As to the department's addressing His Honor through a representative, having considered the matter with Mr. Hickson, it seemed to him from his point of view to be quite unnecessary for him to make any remarks, but he would like to ask His Honor whether there was any matter in the evidence to which any argument might be addressed, which His Honor would like to hear.

His Honor said he hardly liked to bind himself to any such statement at present, but he desired to go through the whole of the evidence very carefully. It would be necessary for him to do that before he began his report; but there was no special matter in respect of which he would now bind himself down to the extent of asking for an explanation. It might have the effect of putting the Commission and also the Department in a false position.

Mr. Smith said he thought there might have been some point which had struck His Honor as requiring explanation. Looking at the whole matter from a general point of view, he was quite prepared to leave it as it stood without saying one word in argument or by way of address. He thought that would be the conclusion to which the Department would finally arrive.

His Honor said he would leave it to Mr. Smith to consider between this and the following Wednesday, what course he would take.

Mr. Andrews said he quite agreed with the observations of Mr. Smith. He did not think that anything which might be said on behalf of the contractors would in any way assist His Honor. At the same time the contractors would be very glad to know whether there was any point upon which His Honor would like them to tender further evidence.

His Honor said that if any point struck him he would not hesitate to ask for further evidence if it were necessary.

His Honor, at 1:5 p.m., adjourned the inquiry until 10 a.m., on Monday, 28th September.

C. E. R. MURRAY,  
Commissioner.

---

MONDAY, 28 SEPTEMBER, 1896.

His Honor the Commissioner sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. Ernest Smith (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Frank Moorhouse Gummow and John Carter were recalled and further examined.

Mr. Andrews intimated that the evidence of Mr. Gummow would close the evidence which the contractors intended to call.

His Honor said he understood that no attempt had been made in the direction of securing the attendance of Mr. Snodgrass.

Mr. Andrews said that no such attempt had been made; but if His Honor thought it necessary to have Mr. Snodgrass called he would of course be subpoenaed. It would however be an expensive matter to bring him up from New Zealand, where he was carrying on a powder manufactory on the Thames goldfield.

Mr. Carter said that Mr. Snodgrass was himself in charge of the works, which were in connection with an outside speculation or patent, over which Mr. Snodgrass and the firm had dissolved partnership. Mr. Snodgrass had taken the New Zealand rights and had started for himself.

His Honor said he would like to know whether there was any further evidence which the department wished to call.

Mr. Smith said the department desired to call no further evidence.

His Honor said he would also ask Mr. Parkes whether he desired to call any further evidence in reply.

Mr. Parkes said he did not.

His Honor thought he would be hardly justified in bringing Mr. Snodgrass from New Zealand at great expense. He supposed he would speak as to facts which would probably be within the knowledge of other persons who had given evidence. He would ask Mr. Smith, as representing the Department, whether any decision had been arrived at by him as to whether he would address the Commission.

Mr. Smith said that on further consideration it seemed to him—and he thought Mr. Andrews would agree with him—that, inasmuch as Mr. Parkes had determined, with his Honor's leave, to address the Commission, it was only right to the Department and to Mr. Hickson that something should be said on their behalf, upon the evidence. He intended, with his Honor's permission, to briefly address the Commission on Wednesday. He thought that on the whole that was the right conclusion to come to, although the Department would have been perfectly content to leave the evidence entirely in his Honor's hands. However, as there would be an address upon one side, he thought there ought to be addresses on all sides.

Mr. Andrews said that either he or Mr. Gummow would be prepared to address the Commission at the conclusion of Mr. Smith's address.

His Honor said he would not bind himself not to call for any more evidence at any stage, but he did not at present see any reason for doing so. He intended to read through the proceedings, and had already partly done so, of the Public Works Committee in connection with the Pymont Bridge scheme. Mr. Hickson, it appeared, was examined before that body. He mentioned these proceedings, because he thought they were remotely and indirectly mixed up with the inquiry. He did not think, however, that it would be necessary to put in the proceedings as evidence. They might be alluded to in his report or they might not. Beyond that he did not see the necessity at present of calling for any further evidence. He wished it to be understood, however, that, even after the addresses had been concluded, if he thought fit to do so, he might call witnesses.

His Honor, at 12:55 p.m., adjourned the inquiry until 10 a.m., on Wednesday, 30th September.

C. E. R. MURRAY,  
Commissioner.

---

WEDNESDAY, 30 SEPTEMBER, 1896.

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising), Mr. Ernest Smith (appearing for Mr. Hickson), Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

Robert Rowan Purdon Hickson was recalled and further examined.

His Honor said there was one matter of which he would ask the Press to take note, and it was this—that the Commission could take evidence at any time, even after the addresses were concluded; and, if there were any persons who could in any way give the Commission information of any kind which was at all material to the question which had to be inquired into, he would request them to come forward. There was one question which had become material—curiously material—and which might not have been supposed originally to be material, and that was the question of whether or not Mr. Carter was, in fact, a man of remarkable liberality and generosity. It was a question which he thought very important, and especially in one particular relation, to inquire into; so that if anyone would come forward and would speak to that fact on either one side or the other he should be happy to hear that evidence, it being, of course, absolutely independent testimony. If any one who knew what Mr. Carter's character was in that relation would come forward and say what he knew, whether it were in favour of the suggestion that Mr. Carter was a very liberal man or to the opposite effect, he would be very much obliged to that person. It was an invidious thing for persons to give evidence in any respect derogatory to the character of another; but if any one wished to give such evidence with respect to Mr. Carter's character, believing that he was doing his duty in so doing—if anyone could show that evidence which had been given in favour of the suggestion he had referred to was mistaken or untrue—then, if that person wished to give that evidence, and not to have his name published, he would give the necessary instructions; although, of course, any person giving such evidence would be subject to cross-examination. He would undertake, however, that the names of the witnesses would not, if it were so desired, be published. He considered this matter to be such a very important one, especially in one particular relation, that he made this suggestion for the public generally to act upon.

Mr. Andrews said that he himself, as it happened, was in a position to give evidence in reference to Mr. Carter's well-known generosity; but he presumed that His Honor would prefer to examine some absolutely independent witnesses.

His Honor said that he would of course prefer independent witnesses.

Mr. Andrews desired to know whether His Honor would accept him as a witness.

His Honor said that Mr. Andrews was not interested except in so far as he was solicitor to one of the parties, and if he, speaking from his own personal knowledge, or of what might have been his experience, chose to give evidence of the nature suggested, he should be very happy to hear him. The fact that Mr. Andrews occupied the position of solicitor to one of the parties would not preclude him from giving the evidence, nor would it, to his mind, affect Mr. Andrews' credibility.

Mr. Andrews said he took it that His Honor would prefer other evidence if it could be obtained.

His Honor said he did not say that he would prefer it; but it would perhaps look better, so far as the public generally were concerned. He would now call upon Mr. Smith to address him on behalf of the Department.

*Mr. Ernest Smith:* May it please your Honor,—I had hoped, as I said the other day, to be relieved of the task which now lies before me, and that your Honor, also, would be relieved of the necessity of having to listen to me; but inasmuch as Mr. Parkes has expressed a desire to address the Commission, I think that, in justice to the Department and to Mr. Hickson, as the head of the Department, it is perhaps right that I, who represent the Department here, should place our view of the evidence before your Honor. In doing so I intend to be as brief as I can; but, as your Honor is aware, I have a great mass of evidence

to

to deal with, and there are a great number of charges. My best course, I think, will be to deal with the charges *seriatim*, referring to the evidence which has been tendered in support of them. First of all, I should like to draw your Honor's attention to the object of this inquiry. The Commission which has been issued to your Honor is—

To make a diligent and full inquiry touching all questions which have been in any way raised in our Legislative Assembly of our said Colony of New South Wales, whether specifically or in course of debate, as to any improper conduct in connection with the contracts, past and present, of Messrs. Carter, Gummow, & Co., John Carter, D. G. Snodgrass, George Maddison, Peter Ewing, F. M. Gummow, George Forrest, and James Gillan, with the Department of Public Works; and touching the truth of any charges which have been so as aforesaid made in connection with the performance or variation, if any, of such contracts, or the conduct of any public officer or of the said contractors, their agents or workmen, in relation thereto.

The charges which are here referred to, I take it, are comprised in speeches made in the Legislative Assembly on two occasions, the first occasion being the 26th of September, 1895, and the second occasion the 12th May, 1896. On the first occasion Mr. Parkes made two speeches, and speeches were also made by other Members of the House by way of comment upon Mr. Parkes' speech. On the second occasion, viz., the 12th May, there was only one speech delivered by Mr. Parkes, and upon that, I believe, this Commission was issued. Before I refer to the charges *seriatim* which have been by your Honor directed to be tabled, as it were—Mr. Parkes being required to put in at the opening of the Commission the particulars of the charges which he made in his speeches—before I refer to those there is one matter to which I will direct your Honor's attention. I should mention that although these charges have been tabled, as it were, your Honor has stated that Mr. Parkes was to be in nowise tied down or limited to these formulated charges—that he was to have the fullest liberty to add to them, to amend them, or to substitute others. That liberty Mr. Parkes has exercised to the fullest extent. Charges have been withdrawn; others have been substituted; charges have been added and afterwards withdrawn; charges have also been amended, until at last we have here a list of charges which I suppose I must take, for the present, to be final. At this stage it will perhaps be well for me to direct attention to what seems to me to be the gravamen, the substantial ground of complaint of all these charges, and I prefer to give it in Mr. Parkes' own words. In his speech in the Legislative Assembly, under date of September 26th, the speech being reported in volume LXXX of *Hansard*, page 1198, Mr. Parkes says:—

There is a set of contractors whose names or titles are Messrs. Carter, Gummow, & Co. They contract for various works in this country—at present most of them are about Sydney. This firm of contractors are identified with the Government in the most suspicious fashion.

Mr. Parkes then goes on, as I take it, to explain the way in which this firm of contractors are identified with the Government. Of course, when Mr. Parkes uses the expression “the Government,” I take it that he does not intend to refer—and he so stated in his evidence—to the Ministerial heads of any department, or to any member of the Government; in fact, in his second speech he told the House distinctly that he did not charge the Honorable Member who happened to fill the office of Secretary for Public Works with corruption. He said that that gentleman might be stupid or ignorant, or that he might have allowed his officers to catch him—I think that was the expression used—but that what he specially referred to, in using the expression, “the Government,” was the responsible officers of the Works Department. Who these responsible officers are he has not told us. That is left at large. But, at all events, from reading Mr. Parkes' speech, it is evident at which officer in particular his charges were aimed. He goes on to explain how it is that this firm of contractors is identified with the Government in a suspicious manner. He says, for instance, that he has it on the most reliable authority that young Mr. Hickson was a partner in the firm. He says:—

Having established this connection between the Engineer-in-Chief's son and the firm, I intend presently to show what concessions were given to these contractors.

He proceeds to deal with those undue concessions which form the subject-matter of the charge-sheet which he has formulated. I think your Honor will agree with me in my contention that the sum and substance of these charges is the allegation that young Mr. Hickson was a partner in the firm, and that by reason of that more than suspicious identification these undue concessions had been made. It is true that the charge of young Mr. Hickson's being a partner in the firm has now been withdrawn; but still, as your Honor has to inquire into the truth of the charges, not as formulated here, but as made in the House, I should like to draw your attention to the way in which the charges are made, and to the evidence, or so-called evidence, upon which they are founded. In the first place, it will be remembered that it was admitted by Mr. Parkes in his evidence that, previous to his speech of 26th September, 1895, he had asked questions in the House. He admits that he asked the Secretary for Public Works questions as to the connection

connection of young Mr. Hickson with this firm of contractors. The questions were put to the Minister by Mr. McCourt in Mr. Parkes' absence, although, as a matter of fact, they were Mr. Parkes' questions, and were indeed referred to by him in his speech. The questions consist of several paragraphs. Paragraph 7 is as follows:—

What connection has a Mr. Hickson with this firm or with the works?

The answer to that is—

He is engineer to the contractors.

The 8th paragraph is as follows:—

Is this Mr. Hickson a son of the present Engineer-in-Chief?

The answer to that is as follows:—

He is the son of the Engineer-in-Chief for Public Works; but the Balmain contract referred to is being carried out under the supervision of the President of the Water and Sewerage Board, and Engineer-in-Chief for Sewerage Construction, Mr. Darley. In the case of the other contract referred to, namely, the Sewerage Works at North Sydney, which was carried out under the supervision of the Engineer for Public Works, I am informed that Mr. Hickson, junior, had no connection with the work, being at that time in South Australia.

Those questions were answered in the Legislative Assembly, on 18th September, just one week before Mr. Parkes made his first speech on the question. Your Honor will, therefore, see that at the earliest stage clear and definite information was conveyed to Mr. Parkes as to the real connection between young Mr. Hickson and the present permanent head of the Works Department. He was stated to be, as he was in fact, engineer to the contractors. During the time the contracts referred to by Mr. Parkes were in hand, young Mr. Hickson was engaged by this firm of contractors as their engineer, in another colony, and had nothing whatever to do with those works. I think that has come out beyond the shadow of a doubt; in fact it is virtually admitted by the withdrawal of the charge, and the information thus afforded to Mr. Parkes was true in every particular. However, Mr. Parkes, for some reason or other, declined to accept these positive statements, made by the Minister from his place in the House. He said that he had it on the most reliable authority, that young Mr. Hickson was a partner in the firm. He further stated that he had been informed that there was in existence a telegram, sent from this Colony to Adelaide, by one member of the firm to another, to the effect that young Mr. Hickson must be taken into partnership at any price. He further stated that his informant, Mr. Maddison, had been a member of the firm; but that he had left it: and that he had undertaken to get a copy of that telegram. When he was asked by Mr. Garrard, by way of interjection, whether he had the telegram, Mr. Parkes said he was assured by the partner to whom he had referred that he could produce a copy of it. He went on to say:—

If it is not forthcoming a copy can be obtained from the Telegraph Department.

Your Honor will therefore see that we have a very distinct statement as to two things—first of all, that Mr. Parkes has it on reliable authority or evidence that young Mr. Hickson was a partner, and secondly that that same reliable authority had undertaken to produce a copy of the telegram to the effect stated. Your Honor will perhaps remember that, when Mr. Parkes' attention was drawn to this matter in cross-examination, his answer went rather to show that he was now unfortunate enough to find out that he could not obtain a copy of the telegram from the Telegraph Department, it being the practice of the department to destroy all telegrams after they had been in existence for a certain time. It will be seen, however, that the obtaining of a copy from the Telegraph Department had nothing whatever to do with the first allegation—a distinct and positive allegation—that Mr. Maddison had undertaken to produce a copy. We should not have heard anything at all about obtaining a copy from the Telegraph Department had it not been for the interjection of Mr. Garrard, following the statement by Mr. Parkes that Mr. Maddison had undertaken to get a copy. That was a distinct allegation by itself. Mr. Parkes alleged that he held in his hand complete evidence of the truth of his statement, and, in effect, that the specific and positive information which had been given to him by the Secretary for Public Works a week before was not to be relied upon—in other words, that his evidence was more reliable than that which had been put forward by the Minister. What does Mr. Maddison say? A great deal of the time of the Commission has been taken up by going into the question of what these contractors, who waited upon Mr. Parkes, said. For my own part I do not think the time of the Commission has in that respect been in any wise wasted. I think it is very satisfactory indeed that the thing has been sifted to the bottom, and I submit that we have now got down to the bed-rock so far as that part of the case goes. Mr. Maddison apparently was one of the first of the disappointed contractors, who had their various grievances, who went to Mr. Parkes. Mr. Maddison and Mr. Williams were apparently the two prime movers in the whole of this deputation business. Mr. Williams, I believe, said that he saw Mr. Parkes at least ten or twelve times, and Mr. Maddison states that he saw him on several occasions with others, to whom I need not refer. But what

what does Mr. Maddison, who was represented by Mr. Parkes in the House to be such a reliable authority, now say with regard to Mr. Parkes' statement? First of all he point blank denies that he ever undertook to produce a copy of the telegram, and then he says that he could never have undertaken to do such a thing, inasmuch as he had never seen such a telegram in his life. Further than that, he says that he never stated that young Mr. Hickson was a partner. We have, therefore, from Mr. Maddison himself, the authority upon which this statement was made in the House, an absolute and complete denial of it. I do not think I need waste the time of the Commission by referring to the evidence of the other contractors. Your Honor will see that each of the men had his grievance. Mr. Gilliver, for instance, seemed to think it a hard thing that the contractors were getting contracts let to them without tender. Reference was made to Contract 79A, which was an extension of Contract 79, at North Shore, and Mr. Gilliver thought it a very hard thing, so far as the other contractors were concerned, that Carter & Co. should have had that contract let to them without tender. But what happened in Mr. Gilliver's own case. He admitted that he had had a very large contract indeed in another part of the city, and that he had had an extension quite as big as the original contract granted to him without any tender at all. Here, then, was this man with his grievance, only too glad to get the same concession, if it be a concession, granted to him. Mr. Parkes, however, has now withdrawn his charge, in so far as it relates to young Mr. Hickson's being a partner, but although it is withdrawn I think I ought to show in what way the matter has been dealt with by Mr. Parkes right down to the present day. The next stage is this: We have a small set of papers laid upon the Table of the House in December, 1895. It is already in evidence, and I do not propose to refer to it at any length. I refer to it merely for the purpose of showing that when Mr. Hickson, senr., was given an opportunity, he very explicitly stated what was his son's connection with the firm. He repeats the allegation that he was simply employed by them as an engineer in Adelaide. He also contradicts another statement made by Mr. Parkes, to which I ought to have referred just now, viz., that although young Mr. Hickson was employed in Adelaide he was going to and fro constantly. Mr. Hickson, senr., denies that statement also, and he points out that from April, 1893, till August, 1895, young Mr. Hickson was wholly employed in Adelaide; that it was not a fact that he went to and fro between Sydney and Adelaide, or that he came up here with Mr. Gillan on one occasion, as alleged. He said, on the other hand, that he was here on only one occasion during that interval, when he came up on a holiday at Christmas time. Papers containing this distinct information were laid upon the Table of the House in December; but what notice does Mr. Parkes take of that. One would have thought that he would have made some inquiry of Mr. Maddison, in view of these repeated statements; but he made no inquiry of any kind apparently before he made his second speech on the 12th May, 1896. In spite of these repeated statements made to the House authoritatively on the subject of young Mr. Hickson's connection with the firm, Mr. Parkes made no effort to obtain the telegram from Mr. Maddison, or to confront Mr. Maddison with these statements in any way, before he made the second speech on the 12th May, 1896. When he did make that second speech, how did he deal with Mr. Hickson's remarks? He said that Mr. Hickson's memorandum was untruthful from beginning to end. It is hardly possible to conceive how anyone could have presumed to make such downright, definite, statements as these without using something more than ordinary care and caution to see that the statements were true. But not one step of the kind was taken between the 19th December, when the papers were printed, and the 12th May, when Mr. Parkes made his second speech, and when he had the hardihood to tell the House that Mr. Hickson's memorandum was untruthful from beginning to end. After the second speech we have the Royal Commission, and, as your Honor knows, on the first or second day of the meeting of the Commission, Mr. Parkes tabled certain charges. Among those charges was this one:—

That Robert Hickson, while being an officer of the Crown, viz., Engineer-in-Chief for Public Works, did act collusively with his son, George Hickson, a partner of the firm of Messrs. Carter, Gummow, & Co., by which the said George Hickson obtained wrongly money belonging to the Crown.

That charge remained before the Commission until the 15th June. It was on the 27th May that the original charges were formulated, so that for nearly three weeks that charge stood before the Commission. In the first place it is difficult to conceive how it was that Mr. Parkes brought himself to put forward such a charge, because, although he told us that before his speech of 12th May, 1896—his second speech—he did not interview the contractors again,—we are told that between the 1st May and the date of the sitting of this Commission he did see them; and one would have thought that before laying a charge such as that on the table he would have seen to some extent where he was in relation to it. Apparently when he made that charge he did not exactly know what evidence he was going to bring forward. I confess it is very difficult to understand how such a charge came to have been made. Mr. Parkes told the Commission in his examination that one of the reasons which influenced him in laying that—if I may use a strong expression—monstrous charge was this—that young Mr. Hickson was not in this Colony, that

he

he was at work in Western Australia, and that he was very anxious that he should come here. He deliberately tells this Commission that one of his reasons for laying that most serious charge—which has completely broken down—was that he might compel Mr. Hickson, senr., to get his son to come over. That is Mr. Parkes' own evidence. It seems to me that such conduct as that is simply playing with a serious matter. The idea of this serious indictment being made with an object of that kind. In my humble experience it is absolutely unheard of. Mr. Parkes is in a responsible position—in fact, he has told the Commission that he is appearing here as representing the public, and that a man in a position of that kind should take such an extraordinary course for a such purpose is almost inconceivable. However, the charge was laid, and it remained here, as I say, until the 15th June. Mr. Parkes seemed to insinuate that there was some kind of hanging back on the part of Mr. Hickson, senr., in bringing his son over. I merely mention it because I do not want such a supposition to go uncontradicted in any way. I do not wish it to be supposed for one moment that there was any thought or feeling on the part of Mr. Hickson, senr., in opposition to his son's appearing before the Commission. As Mr. Hickson himself told your Honor, his sole reason for doubting whether his son could come was this—that he was in Western Australia, on the verge of getting what might turn out to be a very good appointment under the Government of that Colony, and that if he were to leave the Colony at that critical time he might miss his appointment. That was the sole reason for any hesitation on Mr. Hickson's part in regard to his son's coming such a long distance at that particular time. Your Honor sees that there could not have been any other reason, so far as young Mr. Hickson is concerned. It was to the advantage of Mr. Hickson, senr., that he should be here. Your Honor has had the advantage, however, of seeing him in the box, and of seeing what style of young man he is. His evidence, together with the other evidence which has been tendered, has cleared up the whole matter so thoroughly that Mr. Parkes' only course was to withdraw the charge. That charge, therefore, is now, we trust, dead. And, as I contended in opening my address to your Honor, it is really the substantial ground of the whole of these charges—it is the gravamen of the charges. It is the main cause of complaint. As Mr. Parkes pointed out to the Legislative Assembly, having established the connection between the two individuals, viz., the head of the Works Department and his son, the engineer for this firm of contractors, he would proceed to consider what concessions the firm obtained by reason of that identification or connection. That charge has absolutely fallen to the ground, and has been abandoned. Therefore, I contend with absolute confidence that, so far as this Commission is concerned, the bottom of all these charges has absolutely fallen out. It is not for a moment to be supposed that if Mr. Parkes had simply alleged or informed the House and the country that there had been a mistake in a schedule, or that a contractor here or there had got an extension of a large contract without tendering, or that there had been an incautious application of a new and comparatively unknown method of construction, or anything of that kind—that if he had merely shown either mistakes or want of judgment, we should ever have heard of a Royal Commission. The main ground of this Commission, as I understand it, lay in a charge, not of incapacity or negligence, but a charge of a corrupt connection between the heads of the department and a firm of contractors. That was the reason why this Royal Commission was issued, and, that charge having fallen through, I contend that the bottom of the whole of these charges has absolutely fallen out. Having got rid of that main charge, I will come now to the next set. On the 15th June we had a new version of this charge. The partnership allegation was abandoned, and the charge was put in this way :—

That Robert Hickson, while an officer of the Crown, viz., Engineer-in-Chief for Public Works, did allow of undue concessions being granted to Messrs. Carter, Gummow, & Co., contractors for sewerage works in the Colony of New South Wales, his son, George Hickson, being an interested party in the firm of Messrs. Carter, Gummow, & Co.

That is the charge as it was formulated on 15th June. It remained in the charge-list until the 4th instant. Your Honor will remember that as soon as that charge was formulated I applied that Mr. Parkes should give us the particulars of the undue concessions referred to. Your Honor directed that those particulars should be furnished, and in pursuance of that direction Mr. Parkes supplied them in a letter dated 15th June, addressed to Mr. Hickson, as follows :—

R. Hickson, Esq.,—  
Dear Sir,

121 Pitt-street, Sydney, 15 June, 1896.

The concessions referred to in my charge substituted this morning are contained in Nos. 1, 2, 3, 4, and 7, of charges on Contract 69, and Nos. 1, 2, on Contract 72, and Nos. 1, 2, and 3, of Contract 77, and Nos. 1, 2, 3, 4, 5, 7, 8, and 10, of Contract 79, and in Nos. 1, 2, 4, of Contract 79A, and in Nos. 1, 2, of Contract 118.

Yours, &c.,

VARNEY PARKES.

It will be seen that the contracts affected are 69, 72, 77, 79, 79A, and 118. I may mention that the total number of charges in the charge-sheet at that date was something over thirty, and, as to those thirty odd charges, Mr. Parkes furnished particulars directly connecting young Mr. Hickson with twenty-three of them.

them. Twenty-three undue concessions are alleged to have been given to Carter, Gummow, & Co. Why? Because young Mr. Hickson was an interested party in the firm of Carter, Gummow, & Co. That was Mr. Parkes' allegation as it stood before this Commission from the 15th June until the 4th instant. In order that there should not be any doubt as to the real meaning of the charge, I asked Mr. Parkes whether it was his serious intention to allege that these concessions were granted to the firm of contractors because young Mr. Hickson was an interested party in the firm. Your Honor will see that from the way in which the charge is framed, it might have amounted only to an allegation that certain concessions were made, and that it was a curious coincidence that young Mr. Hickson was at that time an interested party in the firm. But in order that there might be no doubt upon the point, I asked Mr. Parkes whether the one thing depended upon the other, and his answer was that these concessions were made, in his opinion, because young Mr. Hickson was an interested party. There were twenty-three of those concessions at that time. We come down now to the 4th of September. On that date, by your Honor's leave, Mr. Parkes gave us an altogether new and revised version of his charges. First of all, in his revised version some half a dozen charges are withdrawn. Then four or five are altered, and we have two new charges, to which I will refer presently. With regard to the charge affecting young Mr. Hickson, the way in which it stands in the new list is this:

That Robert R. P. Hickson, while an officer of the Crown, viz., Engineer-in-Chief for Public Works, did allow of undue concessions being granted to Messrs. Carter, Gummow, & Co., contractors, for sewerage works in the Colony of New South Wales, his son George Hickson being an interested party in the firm of Messrs. Carter, Gummow, & Co.

That is substantially as it was before; but instead of there being twenty-three undue concessions, we are now limited to three. Two of these form part of the twenty-three concessions comprised in the former charges, and one is an entirely new matter. It will be seen, therefore, that between the 15th of June and the 4th September we had sufficient evidence before this Commission to satisfy even Mr. Parkes that, instead of twenty-three undue concessions being granted because of young Mr. Hickson's connection with the firm, only two were granted, twenty-one of them having to be absolutely abandoned by him. Mr. Parkes thinks also that he can establish another one—an entirely new undue concession, and that has been added. That brings me down to the list of charges as it stands, and I propose, with your Honor's permission, to deal with those charges as they appear seriatim. I intend to be as brief as I can. In the first place, I will take the charge relating to young Mr. Hickson. That charge rests upon this allegation—viz., that these concessions were made because young Mr. Hickson was an interested party. First of all let me direct your Honor's attention to the nature of the interest which is alleged to be the cause of these concessions. Perhaps I had better take, in the first instance, the evidence of Mr. Hickson, senr. He came here and he told your Honor, in his own words, without question or leading from me, how it was that young Mr. Hickson was brought up to follow his father's profession, and how he came to abandon that profession here. His leaving the Department amounted to abandoning it here, because, as your Honor knows, there is very little engineering work in the Colony outside of the Government work, the Government of the Colony carrying out most of the engineering work. Mr. Hickson, senr., had intended that his son should follow in his footsteps, as it were, but that idea had to be abandoned. Why was that? Mr. Hickson tells us that in 1893 he was charged with the duty of reorganising the branch of the Department of which he was the head. It was a vast undertaking, and Mr. Hickson found that in the exercise of his duty he had to retrench a certain number of officers. He saw no reason whatever for retrenching his son. He was a capable young man, and he had had a good start, having served under Mr. Moriarty, and also under Mr. Darley. He had had a good training, and his father saw no reason for retrenching him. His son, therefore, remained upon the list of officers retained, and it appears that something was consequently said to Mr. Barling, who was at that time Under Secretary for Public Works. A remark was made to him to the effect that it was a very strange thing that, while so many officers were being retrenched, Mr. Hickson's son should remain in the Department. It was one of those malignant pieces of gossip which so often do so much harm, if they are listened to. Unfortunately, this remark was conveyed to Mr. Hickson, senr., and unfortunately, to my mind, he listened to it. I submit that it would have been much better if Mr. Hickson had shut his ears absolutely to frivolous talk of that kind. He was strong in his position. Everyone knew his character, and a remark of that kind might have been allowed to pass for what it was worth, which was absolutely nothing. However, Mr. Hickson seems to have taken a very different view of it. He went home, slept on the matter, and returned to the office the next morning with a minute written to the effect that his son should be retrenched. That minute, as Mr. Hickson told us, was registered, so that there might be no possibility of his drawing back and altering his mind. Mr. Hickson then had to bring the matter before the Minister, Mr. Lyne. The Minister apparently remonstrated with him, and told him that if he had had any doubt at all he would not allow the thing to go any further, and would permit the minute to be withdrawn. Mr. Hickson remained firm, and the consequence was that young

Mr.

Mr. Hickson was retrenched. His father then sent for him and told him he had been retrenched. Mr. Hickson, junior, told his father that that did not matter very much; that he was young; and that he could take care of himself. At all events, the next thing we hear is that young Mr. Hickson, entirely on his own motion and without any assistance from his father—without any suggestion from his father—sees Mr. Carter, a member of this firm of contractors. The firm has a large contract in hand in South Australia, and they want an engineer there to lay out the levels of the tunnels and to do the alignments. An engagement is accordingly made between Mr. Carter and young Mr. Hickson, and, as your Honor sees, it is made without a single suggestion from and entirely without the knowledge of Mr. Hickson, senior. The first that Mr. Hickson, senior, hears or knows of it, is when he is told that the arrangement has been made, and that his son is starting for Adelaide at once. Mr. Hickson has told us that he had no conversation whatever with Mr. Carter or with any member of the firm before this engagement was made, and then he told us of the conversation he did have afterwards. I think he had one slight conversation on the morning of the day when the engagement was made. The effect of it was simply this—that when Mr. Carter began to talk about the firm's having engaged his son, Mr. Hickson, senior, at once said that he did not want to hear anything about it; that his son, being in the employ of the firm, all that the firm had to do was to give him what he was worth and nothing more. There was some further conversation some months afterwards which is not very material, if it be material at all. It will be seen, therefore, that Mr. Hickson, senior, had nothing whatever to do with his son's engagement by the firm. I may say that the evidence of Mr. Hickson upon this point is confirmed by that of Mr. Hickson, junior. Young Mr. Hickson told us, without any leading at all, that he applied for this post himself, and that he did not do so at his father's request. He said distinctly that it was an independent action of his own when he was cut adrift. What was the nature of the agreement? He was to look after a large job in Adelaide, and he was to get £200 a year. I think the amount was afterwards increased to £250 a year. He declares positively that beyond that salary and beyond a certain small sum which was specified—a certain allowance—he had no interest whatever in this firm, and that he had no interest whatever in this Monier patent, of which we have heard so much. The only interest he had in the firm was that he had to earn his salary of £200, or, in later times, £250. I think you will find that this salary was well earned. We had the evidence of Mr. Gummow, who superintended the work of young Mr. Hickson, on this point. Young Mr. Hickson himself told us the nature of the work he had to do. It was evidently pretty hard work, and he sometimes had to work during the whole of Sunday. Mr. Gummow confirmed what young Mr. Hickson said, and he added that he was thoroughly satisfied with the young man and with the manner in which he did this work. Mr. Gummow himself said that the work at times was very hard, and that he thought the salary which was paid to young Mr. Hickson was well-earned. That being so, it is clear that the only interest young Mr. Hickson had in the firm was that of a paid servant at the rate of £200 or £250 a year. Out of that amount he had to keep himself. Afterwards, when the contract in Adelaide was finished, he came out here and work was found for him on certain of the firm's contracts in Sydney. He was not employed by the firm here very long. He began work in August, 1895, and on the completion of the contract upon which he was engaged Carter & Co., being unable to find any more work for him, gave him three months' notice. He was paid up to April, 1896, when he left the firm's employment and had once more to strike out for himself. He went off to Western Australia, where, as your Honor has been told, he had the hope of obtaining an appointment under the Government. That is the history of young Mr. Hickson's connection with the firm, and it is the extent of his interest in it. It is because of that interest of young Mr. Hickson in the firm that we are now told that certain undue concessions have been made to the firm by the Department. These concessions, it is said, were made because the firm happen to have employed in another colony a young man, who was the son of the Engineer-in-Chief for Public Works in this colony. Because the firm were employing this young man, and were giving him a salary which was hardly adequate to the responsibilities and nature of the work he had to undertake, these concessions are alleged to have been made. I will now deal with the three concessions contained in the new list of charges. The first of them is as follows:—

By permitting Messrs. Carter, Gummow, & Co. to obtain the monopoly of the Monier system in Government works, by inducing the Minister to enter into an agreement to adopt their patent in public works, and to pay 15 per cent. royalty for use of same, by an improper minute, inaccurately stating the cost of a special test made in connection with the same.

I confess I am absolutely unable to understand that charge. I have read it several times and I confess I do not understand it—that is, upon the evidence. First of all, we are charged with permitting this firm of contractors to obtain a monopoly in Government works. I confess I do not see how the Department of Public Works can allow a firm to obtain a monopoly. The evidence is that two of these contractors had, with Mr. Baltzer, a patent. By that means no doubt they obtained the monopoly to which every patentee has a right—that is to say, they have the exclusive right to use the subject of the patent. I cannot

cannot see how the Department can have permitted Messrs. Carter, Gummow, & Co. to obtain a monopoly. This patent stands in the name of three persons to whom I have referred, and the charge goes on to state the way in which the alleged monopoly has been obtained—that is, by “inducing the Minister to enter into an agreement to adopt the patent in public works, and to pay 15 per cent. royalty for the use of the same by improper minutes.” In the first place, Mr. Parkes had in the charge the word “minute,” but he afterwards substituted “minutes.” I do not know what these “minutes” can be, unless it be the minute referred to by Mr. Hickson in his evidence on page 563, question 17073. The matter was also referred to by Mr. Barling in his evidence, question 7436. Your Honor will see that this minute was the outcome of a letter written by the contractors to Mr. W. A. Smith, he being the engineer in charge of one of the works. It appears that Mr. Smith, who had taken a great interest in this Monier system, had had—that is evidently the case—a conversation with these contractors as to the terms upon which, if the Government should see fit to use the patent upon any of their works, the patentees would be willing to allow it to be used. This conversation having evidently taken place the contractors wrote in this way:—

Referring to our conversation *re* the use of our patent system of bridge and culvert building, we hereby inform you that the royalty we require for the use of the same by your Department will be 15 per cent. on the cost of construction.

That letter is sent by Mr. Smith to his Chief, Mr. Hickson, and on that Mr. Hickson wrote his minute of the 18th July, to this effect:—

The Monier system of concrete arching has been patented in the Colony by Messrs. Carter & Co. Where applicable, it reduces the cost of spanning an opening by about 50 per cent. The patentees are willing to allow the Department to use the patent on payment of a royalty of 15 per cent. on the cost of the arch. I recommend it for the Minister's approval. I might state that I have just completed, with the permission of the patentees, a culvert on the Parramatta Road, built on this principle, with most satisfactory results, financially and otherwise.

Your Honor will see, first of all, if words in the English language have any meaning at all, that there is in that minute no inducing of the Minister to enter into any contract to adopt the patent. All that this minute asks for is the Minister's approval to this—that if it should be used in any case by the Government, this firm of contractors should be tied down to the charge of a certain royalty only. It was left perfectly open to the Government to use this patent upon any of their works or not; and, moreover, as Mr. Hickson points out in his evidence, it does not apply to the case of any contract made by the Government with other contractors, supposing contracts to be made in which the Monier patent might be used. It would be entirely for the contractors who were the successful tenderers to arrange with the patentees for the use of their patent; and as to the amount of royalty which should be charged, I presume that they would take that into consideration when making up their tender, and in estimating the cost of the work. There is no agreement on the part of the Government to adopt the patent. It would apply entirely and strictly to cases in which the Government by day labour carried out works of their own in which the patent might be used. Mr. Hickson simply asked the approval of the Minister to use the patent in such a case as that upon the payment of 15 per cent. royalty. Your Honor knows, as a matter of fact, that this patent has not been used at all in pursuance of this authority. It has been used by the contractors upon Contract 77, and also upon one small work on the Parramatta Road—a culvert at Strathfield. As I understand the evidence, the use of the patent reduces the cost of spanning an opening by about 50 per cent. I take that to refer to the cost of spanning a road. We have had a good deal of evidence as to the cost and the possibilities of this Monier system; we have been informed that it has been successfully carried out to a considerable extent in Europe, and upon the basis of what has been done there it is estimated that it will reduce the cost of spanning an opening by about one half. We have not at present got to anything like that reduced cost, because the work in the case of the aqueducts to which it has been applied has been made heavier in view of the fact that the patent had not hitherto been tried in the Colony in any work of the kind. Mr. Hickson says in his minute, “With the permission of the patentees, I might state I have just completed a culvert on the Parramatta Road, built on this principle, with most satisfactory results, financially and otherwise.” It will be in your Honor's recollection that a great deal of time was taken up in going into the question of the Strathfield culvert. It was a thing which was rather outside the scope of the inquiry at first, but it became necessary to go into it because of its connection with Mr. Hickson's minute and the allegation that was made that that minute was incorrect and misleading. What is the evidence with regard to this culvert at Strathfield? It was carried out under the District Engineer, Mr. W. A. Smith. His evidence is that it was completed about the 24th July, 1894—that is, just six days after Mr. Hickson wrote his minute of the 18th. Mr. Smith says that, this being the first work of the kind he had undertaken, he took a great personal interest in it from a scientific point of view, and that he continually referred to Mr. Hickson in the matter. There can be no doubt, from the evidence, that

that he and Mr. Hickson had been talking about the thing—how it was getting on from time to time; so that Mr. Hickson was posted up as to the exact position of matters without going into the details himself. He knew, practically, the state of the work and how it was panning out, and how the cost would come out. What is Mr. Smith's evidence as to the cost? There can be no doubt that what he told the Commission he told Mr. Hickson at the time. His evidence is that he made an estimate as nearly as he could at that time, because he wanted to see how much cheaper the work would be than ordinary work of the kind. In order that he might see what the real cost was, he took particular pains in checking it, and he tells us that he made it out to be £114. After that evidence was given, two gentlemen appeared upon the scene who knew, as they thought, a good deal more about the Strathfield culvert than did Mr. Smith. Those two gentlemen were Mr. James Symonds, the Road Superintendent, and Mr. T. W. Bryant. Mr. Symonds told us at first that, in his opinion, the whole thing was a piece of folly—that it was nonsense to have such a large culvert at all. He further told us that he was sure the total cost was over £238, and that if he could get at the vouchers he would be able to prove that that was so. Mr. Bryant, who was an accountant in the office, and who had never seen the work at all, also stated that it cost at least £238. He also said he would be able to prove that to be the case if he could get the vouchers. Your Honor made an order that they should have the vouchers and everything they wanted in connection with the matter, and you may remember that there was a good deal of trouble—that they alleged that they could not get the papers they wanted or which they thought ought to be there. They said they could not find authority for the original expenditure. They seemed to think there ought to be a minute of the Executive Council, the usual authority being, as a matter of fact, here in the papers all the time. However, they got the vouchers and they went through them, and they brought out the cost of the culvert at £238. That rendered it necessary for the Department to recall Mr. Smith, and after he had had an opportunity to check the vouchers—I will refer your Honor to his evidence dealing with them; for I submit that he dealt with them in such a way as to satisfy your Honor conclusively—it transpired that the actual cost of the work was only £109 18s. 9d., proving that Mr. Smith a little over-stated the matter—that is, by £5—when he first stated the cost was £114. Your Honor will see the importance of this evidence in this way: this calculation of Mr. Smith is arrived at in two different ways; in the first place his estimate of £114 was made at the time to satisfy himself and his chief upon the scientific question which they were investigating together. It was not made so much on the vouchers as by checking the time of the men, the cost of the material, and that sort of thing. Afterwards, when the statement by the Road Superintendent and Accountant had been made, Mr. Smith went over the ground again in a different manner. He got the vouchers which had been collected, and he was able to point out that, according to those vouchers, a great deal of the work which Mr. Symonds and Mr. Bryant had supposed to have reference to this culvert had nothing whatever to do with it, and that his original estimate was substantially right—that is to say, he was quite within the mark, the real cost being only £109. That is so beyond the shadow of a doubt. After all, what is the value of the evidence of such a man as Mr. Symonds in a matter like this? He was not superintending the work, whereas Mr. Smith was there personally superintending it. Mr. Symonds being the Road Superintendent, his duty was merely to pay the men. What also is the value of Mr. Bryant's evidence in a matter of this kind? He was simply an accountant sitting in the office. His duty was to pass certain accounts. What sort of man was he? When he had left the Department, so he told the Commission, the Department had to send for him to adjust Mr. Smith's accounts, leaving the insinuation that Mr. Smith was a bad accountant, or, at all events, that his figures were not worth much—that they could not be relied upon, and that they were in such a state of confusion that Mr. Bryant had to be sent for to put them right. What is the evidence? It is that a certain cheque for £7 12s., which was given to Mr. Bryant to pay into a certain bank, was not to be found as having been duly banked. Mr. Smith was a little anxious about the matter. He knew that Mr. Bryant had had the cheque, and the question was, what had become of it? He sent for Mr. Bryant with the object, as he stated, of getting him to put the thing right, if there was anything wrong or crooked about it. Mr. Smith having this uncomfortable feeling about the matter, Mr. Bryant was called in accordingly. The matter was investigated, and it was found that no one in the Department was at all to blame; that the cheque had been duly paid into the bank, but that the bank, falling into an error which unfortunately so often happens, as I myself find, mixed up one Smith with another, and this cheque for £7 12s., instead of going to the credit of Mr. W. A. Smith, went to the credit of some other more fortunate Smith. At all events the bank put the matter right, and there was an end of it. This is the witness who came here to speak as to these figures; and he was supposed to speak with accuracy, because, if he could not be accurate as to figures, there is an end to the matter at once. As a specimen of this man's accuracy, he tells the Commission, under the circumstances I have just narrated, that he came back to adjust Mr. Smith's accounts. With those few words I think I might safely leave the evidence of Mr. Symonds and Mr. Bryant, and pass on to another matter. I do not think their evidence will weigh with

your

your Honor. I submit that Mr. Smith's evidence is conclusive that the cost of this work was as stated to Mr. Hickson, and as stated by Mr. Hickson to his Minister, when he represented that the work just carried out had been so carried out with most satisfactory results, financially and otherwise. This brings me to the question whether this culvert was really a good structure or not. Some attempt was made to show that the minute was incorrect in that respect. We were told by Larkin, the foreman, that he had heard that the culvert had collapsed; and Mr. Bagge also seemed to have got it into his head—he did not know how—that the culvert had collapsed. But, as your Honor knows, evidence has been tendered to the effect that the culvert is all right; that it is standing there now; and that there never was any question of its collapsing. The only thing which happened, I believe, was this—a small part of the compositing got frozen, and had to be made good; and, as Mr. Smith told us, that was the extent of it. That is a small matter, but it is an illustration of the value of evidence which is based upon tittle-tattle—upon gossiping nonsense of this kind. Poor Mr. Bagge had evidently got it into his mind that something had happened to the culvert, but the evidence which has since been given illustrates the value of that sort of testimony. It shows that Mr. Bagge had been misled as other persons have been misled in other and graver matters. I do not think I need refer to this first undue concession, as it is called, any further. It seems to me that that minute of Mr. Hickson's was in every respect a proper and careful minute. It certainly did not seek to give Carter & Co. a monopoly. It simply sought to obtain the Minister's authority for an arrangement with the patentees in the event of the Government's thinking it well to use the patent at any time; and, moreover, there was no inaccuracy in the statement as to the cost. The matter was fairly stated, was fairly put before the Minister, who approved of the patent being used upon the terms suggested if his responsible officers thought it advisable to use it at any time. As a matter of fact the patent has never been used except in the instances I have mentioned. I will deal next with the third undue concession as it refers to this very same matter—that is to say, it involves the Monier patent. The third concession is stated as follows:—

By permitting Messrs. Carter, Gummow, & Co. to obtain Contract No. 77. in an improper manner to the advantage of the contractors and to the disadvantage of the Crown.

That charge, to my mind, if it involves anybody at all, involves five officers all holding very high offices in the State. The first officer involved is Mr. Barling, who is at present a member of the Public Service Board, and who was at that time Under Secretary for Public Works, and also the Chairman of the Board of Reference. The other officers involved are Mr. Darley, Mr. Deane, Mr. Hickson, and Mr. Vernon. If any body is responsible for this contract being let to Carter, Gummow & Co., it is these five officers, who at that time constituted the Board of Reference. Your Honor has before you the way in which the Board of Reference came into being. You have the minute of Mr. Bruce Smith recommending the appointment of the Board, taking the heads of all the sub-departments as members, with the object of dealing with and consolidating, as it were, the practice with regard to contracts. Special reference is made to the new general conditions, which Mr. Bruce Smith thought it advisable to have prepared, because up to that date the various branches had had sets of conditions of their own. That, therefore, was one of the first things with which the Board dealt. One of the other things with which the Board had to deal concerned the tenders. All the tenders came before them, and, if a contract involved a particular department, the officer representing that department, or branch, would no doubt be heard in reference to the contract. If there were anything special in connection with it, his remarks would no doubt carry greater weight than would those of other members of the Board. With that exception, this body of gentlemen, so constituted, were all equal. The tenders for Contract 77, among other matters, came before the Board. As your Honor is aware, when tenders were called, no less than fourteen were sent in at various percentages below schedule rates, Carter, Gummow, & Co. being the lowest tenderers at  $28\frac{1}{2}$  per cent. below schedule rates. In addition to that tender they sent in a lump sum tender of £15,500, with a design upon the Monier system. This matter having come before the Board, a report was written, which has been confirmed by every member of the Board who has been called here. I should have mentioned that four of these officers have been before the Commission, and have given evidence on the matter. The report of the Board upon this contract is to be found upon pages 206 and 207 of the Parliamentary return. It contains a clear account of how the thing came about. Mr. Hickson's own evidence, in conjunction with the report of the Board, makes the matter very clear. The Board say in their report:—

The tenders for this work were submitted to the Board to-day. In doing so, Mr. Hickson pointed out that fifteen tenders had been received, the lowest being that of Carter, Gummow, & Co., at  $28\frac{1}{2}$  per cent. below schedule rates—amounting approximately to £15,757 1s. 9d. The same firm also submitted a lump sum tender for carrying out the work according to a plan sent in by them, for the sum of £15,500. The plan submitted is for constructing the work on the "Monier" arch principle. This system has been extensively used during recent years on the Continent of Europe, with successful results, and Mr. Hickson sees no reason why, under certain restrictions, the opportunity should not be taken to introduce the system in the public works of this Colony.

The

The advantages claimed by the patentees are that works can be carried out at a much cheaper rate wherever this method of construction is used. Mr. Hickson said he had no doubt that the design submitted was thoroughly suitable, and likely to be effective; and, as the main principles as regards size and inclination of sewer were as provided for in the departmental design, he was prepared to recommend it for adoption; but if it was decided to accept the tender, a short specification of the work should be included in the bond, and provision also made for the maintenance of the work by the contractors for a certain period after completion.

Mr. Hickson further said that, as Mr. Darley would be the responsible officer for carrying out this work, he had gone into the matter very thoroughly with that gentleman, and Mr. Darley was quite prepared to endorse his views.

The Board, in view of the fact that Messrs. Darley and Hickson are satisfied that the principle is a sound one, and that the adoption of the plan will result in considerable economy, are prepared to endorse the recommendation of these gentlemen, and now submit the matter for the Minister's consideration.

That is the report of the Board of Reference on this matter as it came before them. It being a sewerage matter, Mr. Hickson was evidently the chief speaker with regard to it. The Board would naturally look to Mr. Hickson to explain the matter to them, but, as Mr. Hickson was about to hand over the sewerage works to Mr. Darley, he naturally did not wish to pledge his successor to anything in the way of what may be termed a new departure without consulting him. It appears, further, that Mr. Hickson took the precaution of going very fully into this matter with Mr. Darley, who was to succeed him, before it was brought before the Board of Reference. That is plain, both from the minute itself and from the evidence which is before your Honor. Mr. Hickson was asked some questions as to this matter, and this is the way in which he shortly describes it. I am quoting from his evidence on page 34, Questions 1287-8:—

1287. Will you please tell His Honor what you reported to the Board in reference to the Monier arch? The report of the Board of Reference, which you will find at the foot of page 206 of the Parliamentary paper, ordered to be printed 22nd October, 1895, is the result of the conversation which took place.

1288. What did you say to the Board? When this tender came in on 14th March, it was arranged that the work should be taken out of my hands and handed over to Mr. Darley. I brought the tender and the plans down to Mr. Darley, and we talked over the matter for a considerable time. The result of the conversation was that we both thought it desirable that an opportunity should be given of testing the Monier arch principle, which was acknowledged by all engineers on the Continent to be a very valuable engineering structure, and that the matter should be considered by the Board of Reference. The papers were then sent down to the Board of Reference without any direct recommendation from myself or Mr. Darley. We talked the matter over at the Board of Reference, and the paper to which I have referred you upon page 206 is the result of the conversation.

We, therefore, know exactly what did take place. Mr. Hickson, when this matter was brought before him, took a double precaution. He knew that he would not have the carrying out of the contract; and, as he was going to hand over the sewerage works to Mr. Darley, he took the precaution, when he got this plan and alternative tender, of seeing Mr. Darley, and discussing the matter with him for a considerable time. He took the precaution of thrashing the thing out with Mr. Darley before he moved at all. These two gentlemen considered the matter, and they came to the conclusion that it would be a good thing to take this opportunity of testing this comparatively new thing in this part of the world. What did they do then? As a further precaution, they refrained from writing any minute which might have the effect of influencing the Board, and to a certain extent binding them. If they had joined in writing a minute of recommendation the whole matter would not have been treated by the Board as at large when it came before them, it being peculiarly within the functions of these two gentlemen, one of whom was leaving the branch and the other of whom was taking up the duties. Naturally the Board would have said, "Here is your recommendation. We approve." Probably there would have been no discussion; but these two gentlemen having made up their minds, refrained from writing a minute which might amount to a recommendation, but simply brought the matter before the Board, the whole thing being thereupon discussed. The report which I have read contains, we are told, a true history of what took place at the meeting. It is to the effect that these two officers, Mr. Darley and Mr. Hickson, were looked to to advise the Board upon the technical part of the matter. The question of policy no doubt was considered—that is, as to whether it was a wise thing to introduce such a mode of construction—assuming it to be good. There is not a shadow of a doubt but that the question of policy was gone into; and the evidence of Mr. Barling, the Chairman of the Board, confirms that view. Mr. Barling, in his evidence upon  
page

page 202, said that as Chairman of the Board he looked to Mr. Hickson as the responsible officer to give evidence upon technical matters, but that he was one of those who arrived at the unanimous conclusion that the system was a good thing to recommend—not merely that it was a good thing to recommend the adoption of, but that, as a matter of policy, it should be adopted if it was a good thing. Then there is Mr. Darley's evidence. We know his opinion. He gave evidence on the point, which is reported on pages 57 and 58. He confirms what is said by other members of the Board. He goes into the question of cost, and he said that one of the things that influenced him was that in the substituted plan the company had an equally good structure for a less sum of money, the original contract sum being £15,757, and the substituted design being carried out for £15,500. He confirms what Mr. Hickson has told us with regard to what took place at the Board, and upon page 58 he explains why it was that he recommended that bonds should be taken, and why he endorsed the view of Mr. Hickson in the matter. He thought the Monier system a sound system, as far as he could judge, and he thought it would be a good thing to apply to this particular contract. He goes on to say that since that time he had had more opportunity to go into the matter, and that, having done so, he was still of the same opinion—that is, that the advice given was good sound advice. Mr. Deane, the Engineer-in-Chief of Railways, was also examined upon the point, and he confirms the evidence of the other two members of the Board who were examined. Mr. Deane's evidence is to be found on page 61. In answer to Question 2112, he says:—

Speaking for myself, my feeling was this: I was glad of an opportunity to see the principle tested. The reduction in price did not seem a very large one; still, in testing a new principle you cannot expect to get in the first instance so large a reduction as you would probably get afterwards. If the principle were once tested, and if it proved satisfactory, no doubt a large saving could be effected in the future. I understand that this patent was in the hands of these particular contractors. It was therefore a question of dealing with them. The work could not have been done by open tendering; so that the conditions were quite different from those which you would have in connection with an ordinary contract.

Then, in answer to Question 2122, he gives the following evidence:—

The report of the 20th March, 1895, of the Board of Reference, correctly states what took place at the meeting of the Board, does it not? Yes; I have not altered my opinion about the matter at all. In fact, it has been rather strengthened than otherwise as regards the advisableness of adopting the principle. The report is a correct account of what took place.

Your Honor will see that we have the evidence of four of the gentlemen who constituted this Board. We did not think it necessary to call Mr. Vernon, the Government Architect. He is an officer whose time is very much occupied, and had he been called he would merely have confirmed the evidence of his colleagues. That evidence, I submit, establishes this fact beyond any doubt whatever—that if there was any wrong action in this matter the responsibility for that action lies with these four gentlemen, and that responsibility they themselves are prepared to accept—that is, as regards those of them who have scientific training. Mr. Barling, of course, does not pretend to a scientific knowledge of these matters, as he told us. He is not only of opinion that the advice then given to the Board was sound, but he says that from inquiries he has made he would repeat the advice if he were again placed in the same circumstances. He thought a wise thing had been done in making this experiment, as it had been called. The report of the Board shows that the whole thing was threshed out very carefully. The nature of the work was probably thoroughly understood only by the two gentlemen who had given their attention to the matter, viz., Mr. Darley and Mr. Hickson; but to show how thoroughly the thing was thrashed out and the question of policy was considered, it was thought desirable that, as the thing was new, although the office had no doubt as to its stability, the whole risk of it should be thrown on to the contractors. Therefore it was that the Board recommended in their report that a short specification of the work should be included in the bond, and that provision should be made for the maintenance of the work by the contractor for a certain period after completion. That is the history of that report. That report went down to the Minister, and was submitted in the ordinary way through his Under Secretary. Upon that, Mr. Young, who was then the Secretary for Public Works, writes this minute:—

Before approving of this proposal, I should like an estimate of the actual value of the work to be carried out by the contractors\* under the substituted scheme.

Mr. Young asked, as your Honor sees, for an estimate as to the actual value of the work which was to be carried out under the new scheme, the plans of which had been prepared by the contractors themselves. That minute was sent down to Mr. Hickson, and one of the questions that at once arises is: Why was not that estimate made? That, no doubt, was the question which must have struck your Honor when this matter was first gone into. Why was not an estimate made at the time? I submit that on the evidence that question has received a complete answer. The evidence is that Mr. Hickson, as he states in his

his minute, had already had an opportunity to test the comparative expenditure involved in the work according to the Monier principle and according to the original departmental design. On the 28th March, 1895, he wrote the following minute:—

To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm, estimates were made for the work on the Monier system, as well as on the [department's] designs. The result was that the estimate of both works was practically the same. Applying that comparison to this case, it would mean that the departmental estimate for the work under consideration would be £22,000.—ROBT. HICKSON, 28/3/95. Under Secretary.

It will be perceived by your Honor that two considerations weighed with Mr. Hickson. He had paid some attention to this matter. He had already had an opportunity to estimate the cost of the work in these two schemes. He had already had that report of Mr. Bagge, which, as Your Honor may remember, formed the subject of so much discussion here, and in connection with which there were three plans of construction; two of them not upon the Monier system, but the third being upon that system. That was what Mr. Hickson, as I understand it, had in his mind when he wrote that minute. He was satisfied that if fresh estimates were taken out they would come, after all, to the departmental estimate for the work. He thought that if he took out those estimates at that time he must arrive at exactly the same conclusion. I think that the opinion of Mr. Hickson, formed at that time, is fully borne out by the evidence. The question of the cost of this work has been gone into very thoroughly indeed by your Honor; you have had all sorts of evidence as to the cost. Let me first draw your attention to Mr. Hickson's explanation, in answer to your Honor, of what took place. On page 37, in reply to question 1364, he says:—

*His Honor.*] Perhaps you had better make a statement as to the actual facts? The actual facts are these:—When we were arranging for the sewer in connection with the sewage farm three schemes were got out, in order that we might see which would be the most economical. No. 2 scheme—the one which is being carried out—was estimated to cost £6 16s. 11d. per lineal foot. The third scheme, upon the Monier arch principle, was estimated to cost £6 6s. 8d. per lineal foot, or, as I said to the Minister in my minute of 28th March, 1895, practically the same.

That, no doubt, is what was in Mr. Hickson's mind when he wrote this minute. That, no doubt, is the reason why he did not make out an actual estimate of the two works at that time. It would have taken some little time to do. As a matter of fact it would have taken a great deal of time, judging from the evidence of Mr. Davis, who told us that he spent a considerable time in arriving at an opinion as to the cost even when the work has gone as far as it has done now. No doubt these two things weighed with Mr. Hickson when he answered the Minister's minute in the way in which he did. There was the delay and trouble involved in getting out the estimates, and he thought he could safely dispense with putting his officers to the trouble of going through all these calculations, because they had already gone into the thing so thoroughly in connection with another matter, and he felt sure that if they went into it again it would "pan out" pretty much according to the departmental estimate. What is the evidence as to the actual cost of this work? In the first place Mr. Parkes was very much exercised indeed over the schedule upon which the payments were made upon this contract. As your Honor knows, when a lump sum tender is put in it is necessary, in carrying out the contract, that a certain basis should be arrived at upon which to make progress payments. Accordingly a schedule was prepared—as Mr. Parkes at first thought under the superintendence of Mr. Hickson. It was only when his attention was drawn to the papers that he was compelled to see that Mr. Hickson had nothing whatever to do with the schedule, and that it was prepared by Mr. Griffiths, who was the officer acting under Mr. Darley, who had taken over the sewerage works, and who had supreme control of them. It is, perhaps, hardly necessary for me to refer to this schedule, but it is referred to by Mr. Darley upon page 58—questions 2,044 to 2,052:—

2044. This schedule we have heard so much about was prepared by Mr. Griffiths? Yes.

2045. As I understand the matter, it was a schedule made out simply for departmental purposes? That is so.

2046. It is no part of the contract at all? No.

2047. The contractors had no say in the matter at all? No.

2048. The schedule was made out merely to enable your department to arrive at a conclusion as to what the amount of each progress payment ought to be? As a means of valuing the work monthly.

2049. I understand that in making out this schedule you have taken those items which do not involve the Monier system upon the schedule rates originally prepared by the department? Yes.

2050. But with regard to those items which did involve the Monier system you have made no special estimate, but have averaged them among the remaining items, so as to bring the total within the lump sum constituting the contract price? That is so. 2051.

2051. So that you did not go into the question as to the real value of those items which made up the Monier system? I did not.

2052. It is perfectly misleading to state that those items which do not involve the Monier system are being paid for at the rate of  $28\frac{1}{2}$  per cent. more than the contractors were prepared to give for them? Quite misleading.

That clears up the contention of Mr. Parkes that the department were paying this firm of contractors without deducting the  $28\frac{1}{2}$  per cent. which they ought to have got out of them, acting upon the lines of their other tender. That other tender had nothing whatever to do with this lump sum tender. I think it has been made perfectly clear that this schedule of Mr. Griffiths was simply a schedule such as is made up upon every lump sum contract to permit of payments being made as the work proceeds. Then with regard to the estimates which have been made as to the value of this work. On the one hand we have the evidence of Mr. Thompson and of Mr. M'Credie. They make out that the cost of this work is considerably below the departmental estimate, and that instead of the estimate being £22,000 it should amount to only something like £13,371. Mr. M'Credie told us that, as far as he could see, there was nothing special in the carrying out of the work. Those, I think, are the words he used. His estimate was based upon the assumption that there was nothing of a special character in the work. The same observation applies to Mr. Gilliver, who brought out the cost of the work at £2 19s. 11d. per cubic yard—that is so far as the Monier structure is concerned. He also said that there was nothing special in the work. Mr. M'Credie's figures are £1 10s. per cubic yard and Mr. Thompson's figures are also £1 10s. Mr. Williams, another contractor, brings the amount down to £2 5s. That is substantially the evidence which has been brought forward to show that Mr. Hickson was absolutely wrong when he told the Minister that the cost of the work would come up to the departmental estimate. There may have been further evidence in support of that contention, but I think that that is the main evidence on one side. Then, on the other side, we have had a very careful estimate prepared by Mr. Davis, which is to be found upon page 506 in his Memorandum No. 5. Your Honor may remember that that estimate was based upon quantities which had been agreed upon by Mr. M'Credie, Mr. Thompson, and Mr. Davis, so that there can be no dispute about the quantities there given. The only question is as to the value of the work in the Monier portion of the structure. Mr. Davis has gone into that matter very carefully, and he has shown us how he arrives at his results. His estimate of the cost of the Monier portion of the work per cubic yard is £3 16s. 10d. After deducting  $28\frac{1}{2}$  per cent., the total contract comes out at £15,494. This estimate we are further told is based upon the actual time expended by the men in doing the work. Your Honor may remember that that time was kept by Inspector Clymer, who came here as a witness, and whose evidence is to be believed. Mr. Davis, then, bases his estimate on the actual time taken in doing the work. Then we have Mr. Bagge, who told us in one of his minutes that £4 or £4 10s. would be the cost per cubic yard of this particular work. Then, again, there is Mr. Chamier's estimate, which comes out at £4 5s. 8d. per cubic yard. Included in that item, however, is 11s., which he put on for the patent and the risk. With regard to the item of labour, Mr. Chamier's estimate was some 2s. under that of Mr. Davis. He put it down at a lower figure than did Mr. Davis; but he explained that by saying that he had only made an estimate of the labour, and that he could not get at it actually without knowing the actual time spent on the work. He went on to say that if he were told as the result of accurate time-keeping that so much time had been expended upon the work, his estimate would be altered accordingly. His estimate came to £4 5s. 8d., and if the 11s., to which I have referred, is deducted from that amount, it will be found that he substantially agrees with Mr. Davis in every particular. Then we have the evidence of Professor Warren. His estimate will be found upon page 319. It will be seen that he brings out the cost at £15,691, or £4 1s. 2d. per cubic yard. We have also the evidence of Mr. Gummow upon this point, and I suppose he is to be believed, although he is one of the contractors. Upon page 641 he gives the actual cost. His evidence is not founded upon a mere estimate. It is founded upon what has actually been done—the time which it has taken to do the work, and the amount which the contractors have had to pay for it. His figures come out at £3 14s. 6d. per cubic yard, no profit at all being allowed in that amount. I think that that is substantially the case as it presents itself upon this one particular matter. I submit that the evidence is overwhelming, to the effect that, if Mr. Hickson had taken out the estimates at that time, the conclusion to which he would have arrived would have been exactly the same as before. There would have been further time occupied, and a great deal of further trouble. Perhaps, in the light of events, it is a pity that that time and trouble were not taken, so that those who are bringing forward any charge upon that point might have been at once silenced. At all events it was not done. Whether it was a mistake of judgment or not, it is, I submit, a very small matter after all; because any officer charged with such vast contracts and work as was Mr. Hickson, especially at a time when he was going from one branch to another, is liable to make errors of judgment. Perhaps

your

your Honor may think that it would have been better on the whole if Mr. Hickson had not relied upon what he thought quite sufficient to satisfy anyone, viz., upon what he had done before in considering this matter with Mr. Bagge, and that it would have been wiser, instead of relying upon that, since the Minister asked that an estimate should be taken out, to take out an estimate again. It is satisfactory to know, however, that if Mr. Hickson had acted on those lines he would have come to exactly the same conclusion, viz., that the cost of the work would pan out pretty much as he had informed the Minister it would. The Minister's approval would have been given after considerable delay, and the same results would have ensued. I do not think I need labour that part of the case any more, except to refer your Honor to Mr. Hickson's evidence upon page 565 :

17133. Are you satisfied, if you had complied with Mr. Young's request, and had gone into the matter fully at that stage, as to how the estimate would have worked out? I believe it would have worked out exactly in the way I indicated in my minute—in fact it would have been a little higher than the amount stated in Mr. Davis's memorandum, because I see that Mr. Davis's estimate is £3 16s. 10d. a yard, whereas Mr. Bagge, in making his estimate, put down the amount at £4. If I had sent the estimate back to Mr. Bagge, he would have put in the same figures again, so that it would have worked out a little higher than the estimate Mr. Davis has given.

17134. The experience you have gained from the actual construction of the work confirms you in the view you then laid before the Minister? Yes; and if I had the same circumstances before me to-morrow I should take exactly the same action.

That, in a nutshell, explains Mr. Hickson's position in that matter. He acted *bonâ fide* to the best of his judgment, in the firm belief that the figures would pan out in a particular way. He now says that, having heard all the evidence, and the work being almost completed—when the cost can be more accurately calculated—he was fully justified in giving the recommendation he did. I do not think I need say anything more upon the question of the cost of the Monier work in Contract 77. It only remains for me to draw your Honor's attention shortly to the nature of the work, and the question whether these officers were right in letting a contract involving work of this nature. Upon that point, I think the evidence has satisfied even Mr. Parkes that this Monier patent is not the useless risky thing which he told the House it was. Your Honor has seen the work.

*His Honor* : Yes. I really do not think it is necessary, Mr. Smith, to labour that part of the question.

*Mr. Smith* : Quite so. Your Honor has seen the work, and has had the advantage of the evidence of Professor Warren and of Mr. W. A. Smith. We have also the testimony of Mr. Baltzer, who fortunately just returned in time from Germany, where he has been giving the matter attention. He was able to produce, for your Honor's inspection, a number of photographs representing works which have been carried out upon the Monier system, and which certainly, if I may say so, seem very wonderful in their way. The system would seem to be a wonderful invention, and one which certainly deserves a good trial in this Colony if it can be done without any considerable risk.

*His Honor* : In relation to that, it has struck me that the photographs which Mr. Hickson originally produced were not in any way made evidence. These photographs, together with some particulars with reference to the system, had come under Mr. Hickson's notice before the tender of Carter, Gummow, & Co. for Contract 77 was entertained. I think, therefore, that they ought to be in evidence. I intended to ask for them for this reason : that the main question is the state of Mr. Hickson's mind, more than the actual facts which have since been proved. The question is, what had come to Mr. Hickson's knowledge at the time he made the recommendation he did make? I therefore think that those particular photographs, together with the other photographs which have been produced, ought really to stand in the position of evidence. Mr. Hickson produced a book containing some photographs, and in connection with it he gave the size of some of the arches which were represented.

*Mr. Smith* : In going through the evidence, I did not make a note of that matter. I confess that it did not strike me in the way in which your Honor has put it, in relation to what was in Mr. Hickson's mind. I had relied rather on outside evidence on that point. I would refer your Honor to questions 1575 and 1576; I presume that the book referred to in question 1575 is the book to which your Honor refers. Those two questions and answers are as follows :—

1575. Very much below the quantity which appears in Scheme No. 3? Considerably less. This is not mere theory. I can show you what was actually done. You will see in the book I hand you an illustration of a bridge which has actually been built. The span is 121 ft. 4 in., and the thickness of the crown is only 6 $\frac{3}{4}$  in., whereas our Monier arch at Johnstone's Creek has a 75-ft. span and is 12 in. thick.

1576. What weight is the bridge to which you are referring calculated to bear? The bridge I have shown you was tested on 14th November, 1890, in the presence of the President of the Zurich Association of Engineers, firstly, by submitting it to an evenly distributed load over one half of the arch, equal to 61 lb. to the square foot, and no measurable deflections could be recorded. It was secondly tested by a moving load of 5 tons being drawn across the bridge, when no vibrations were recorded by the gauges on the loaded or unloaded portions of the bridge, which results were considered satisfactory.

*Mr. Gummow*: I happen to be aware that Mr. Hickson, previous to writing the minute which is referred to, had seen the book which had been written by Mr. Baltzer, together with the photographs it contains. We are in a position to produce the negatives of the photographs which Mr. Hickson saw, and the manuscript from which the type-written matter in the book was taken. The book is dated the 1st January, 1896, but the original documents can be produced which Mr. Hickson saw.

*His Honor*: I understand that Mr. Hickson saw photographs of different structures, and the calculations which had been made in relation to them. If, Mr. Gummow, you are in position to produce the Mss. and photographs which Mr. Hickson saw, I should consider them material. I presume that the photographs which Mr. Hickson saw at the time to which you refer are the same as those which are contained in the book.

*Mr. Gummow*: Yes.

*His Honor*: I will allow the matter to stand over for the present, and you can proceed, Mr. Smith, on the assumption that what Mr. Hickson then saw is to be considered material evidence in the case.

*Mr. Gummow*: I will produce the original photographs and Mss. to-morrow.

*Mr. Smith*: I submit that there is ample evidence before the Commission to show that Mr. Hickson had studied this matter to a very great extent at this time, and that he and Mr. Darley, as I said just now, had discussed it very thoroughly. Mr. Darley tells us that, although he did not then know so much about the system as he does now, he was, at all events, satisfied to join Mr. Hickson in advising the Board that it would be a good thing to introduce if it could be done without any risk to the Government. That advice, I submit, has been fully borne out by the evidence which has since become available on this particular matter. It shows conclusively, moreover, that these two gentlemen were acting in the matter *bonâ fide*, and that their advice was perfectly sound. I will not say anything more on that particular matter now; but a good deal of reference has been made in the course of the evidence to the impropriety of allowing this plan which was sent in with the alternative tender for Contract 77 to be prepared by an officer of the department. I think I may take it that that matter has been pretty well cleared up now. Fortunately Mr. Baltzer, who made the plan, has returned to the Colony, and he has been able to explain to your Honor—although there was sufficient evidence as to the facts without his explanation—that this plan was really done by him out of office hours. Mr. Baltzer is a man who your Honor could see from his style and bearing takes an intense interest in his profession. He has a turn that way—in fact I think your Honor called him a “designing” man. He has been in the habit of making the most of his spare moments in preparing plans of this kind. Whether they were going to be used is another matter altogether. He was always preparing plans, so that no importance attaches to any suggestion of impropriety in his preparation of the particular plan which went in with this particular tender. There is no doubt whatever that Mr. Baltzer had nothing whatever to do with putting it in. He drew out the plan and handed it over to the contractors, who handed it in with their tender. I come now to the second undue concession alleged to have been made to this firm by reason of young Mr. Hickson being an interested party. It is as follows:—

By permitting Messrs. Carter, Gummow, & Co., to obtain Contract 79 in an improper manner, to the advantage of the contractors, and to the detriment of the Crown.

Contract 79, as your Honor is well aware, was one of the North Shore contracts. Tenders for that contract were received on 10th June, 1891. The lowest tenderers were Bond and Hudson, the amount of their tender being £36,900. Carter & Co. came next, their tender being £39,890—that is to say, their amount was about £3,000 more than the amount of Bond and Hudson's tender. Your Honor knows, according to the evidence, and according to the papers also, that this contract was not proceeded with by the Government by reason of the want of money. The Government were unable to go on with the contract, and the consequence was that, although Bond and Hudson's tender was accepted, the works were not proceeded with for some months. Bond and Hudson wrote a letter on 28th September, 1891,

asking

asking to be allowed to withdraw their tender, and also for a return of their deposit. That letter will be found on page 270 of the Parliamentary return. It is signed by Mr. Bond for Bond and Hudson, and is as follows :—

*In re* Contract No. 79, Sydney Sewerage Works.

Dear Sir,

88, Sussex-street, Sydney, 28 September, 1891.

On 10th June, of this year, we had the pleasure of submitting a tender for the above works, and, we believe, were successful in being the lowest tenderers.

We have been anticipating the acceptance of our tender for some months, but, not hearing from your Department, we have in the meantime, entered upon other obligations, and must consequently respectfully ask you to permit us to withdraw our tender, and to return us the deposit attached thereto now lying in your hands, viz., £369.

We are, &c.,

C. B. BOND  
(Bond and Hudson).

I find I was wrong in stating that their tender had been accepted. As a matter of fact there was no formal acceptance; but there is a minute which appears upon page 271 of the Parliamentary return to the effect that the tender had been recommended for acceptance on the 10th June. Mr. Barling at once says "Return deposit," and it was of course returned. Then the tender was allowed to be withdrawn. Of course these people had been kept on the string from the 10th June to the 28th of September, and having entered into other obligations, as their letter sets forth, they wanted their deposit money back. That being so, the Department had only one course open to them, viz., to return the money. The thing could not be kept hung up for ever, and the deposit money was returned. In the original charges which were made, there was a charge against the Department of allowing this tender to be withdrawn, and of returning the deposit money. That charge appears to have been abandoned. It is obvious to anyone that that is the only course the Department could have taken. Under these circumstances, Carter & Co. were left in the position of the second tenderers. Perhaps I had better say, now that I am dealing with Bond and Hudson's withdrawal, that, as your Honor will see from the papers, all that the Department had before them were these facts—That the tender had been sent in on the 10th June, and that from that date until September nothing was done. The Department then received a letter signed by the tenderers asking for a return of their deposit, and, as I have said, there was only one course to be taken in reference to that application. The Department had no knowledge whatever that Bond and G. Hudson had, as we are now told, been bought off. Mr. Hickson, in his evidence, told us that the allegation made before this Commission was the first that he had heard of it; that he had not heard a word of it until it came out here in the course of the inquiry. He had not the slightest idea that Mr. Carter had arranged with Mr. Bond for a withdrawal of this tender for a certain consideration. I submit that the Department has nothing whatever to do with that matter; it does not affect their action in any way whatever. It is quite evident from the papers, and also from the evidence, that their action was absolutely *bonâ fide*. They were asked to return the deposit of Bond and Hudson, because the firm had incurred other obligations, and in the ordinary course the deposit was returned to them. That was quite an ordinary course of things; but whether it was a proper thing for this firm of contractors to buy off the first tenderers or not is a matter for them to satisfy your Honor upon if necessary. It is not necessary for us to express any opinion upon that matter, either one way or the other. It is one which entirely concerns the contractors. All the Department knew was that the money had to be returned—and it was returned. There is no escape whatever from that position. On the 6th October, 1891, after the withdrawal of the tender, Mr. Hickson wrote a minute recommending that fresh tenders be invited. It appears that nothing at all was done with regard to this contract until 22nd February, 1892. On that date we have this recommendation of Mr. Hickson as to calling for fresh tenders, approved by the Minister. In the meantime trouble had arisen with regard to another contract of these contractors—No. 72, the Shea's Creek contract. Your Honor will remember that the evidence as to that contract is that Mr. Hickson, in the exercise, as he said, of a clause in the contract, virtually stopped it by writing his letter of 13th October, 1891. As a matter of fact, the Government had not money with which to go on with it. The contractors were therefore informed that after a certain date the contract would have to be stopped—that it was not to go any further. In giving that notice Mr. Hickson relied upon a certain clause in the contract which has been very much discussed here. That clause undoubtedly gives the engineer power to cut out a certain portion of the work—13 or 27 chains of the lower portion of the channel. That portion was not to be constructed at all unless the engineer gave written orders to that effect. But the stoppage of this work was a different and an altogether larger thing than was contemplated by that clause. Mr. Hickson, however, in seeking to do the best he could for the Department relied upon that clause in the service of his notice. The work was stopped, and it was not resumed again until the 1st April, 1892. Your Honor well knows what a serious thing it is to stop a contract of this kind. Anyone who has the slightest acquaintance with matters of this description knows that in stopping a work of this kind the Department renders itself liable to a claim for very heavy damages. There have been cases before the Courts again and again arising out of such claims, and your Honor knows what a difficult thing it is to meet them. Claims may be sent in,

as

as anyone who has had experience in these matters well knows, containing the most ridiculous items. The claims against the Government are made as large as possible; and they are perhaps put in with the object of making a good fight before a jury. However absurd they may be, they are fought, as everybody knows; and your Honor knows how difficult it is, when the department gets before a jury, to meet a claim of this kind, to get the Government out of it with any degree of success. That, at all events, was my short experience when I have had to fight these matters for the Government.

*His Honor*: That hardly needs argument, I think, Mr. Smith.

*Mr. Smith*: I will leave that point, if your Honor is of that opinion. Mr. Hickson must have known that, as soon as the notice to which I have referred went out, he would get back from the contractors a claim of some sort; and, surely enough, back came a claim, details of which were drawn up by Mr. B. C. Simpson, who is pretty well known in this community as an engineer, and as a very able man—a man who makes a very good witness indeed in these cases. However absurd some of these items may appear to your Honor to be—and there can be no doubt that if the claim had been contested some of them would have been knocked out—the fact remains that there would have been a difficulty in getting the Crown out of the matter without having to pay a very substantial sum of money. Mr. Hickson evidently had this in his mind; he had various considerations of that kind before him, and he thought that if by any means the thing could be settled on reasonable terms it would be a very good thing indeed. What was the result? When the Department were going to proceed with Contract 79 it was found that Carter & Co. were the second tenderers on the list. Mr. Hickson, it is true, had recommended that fresh tenders should be called, although it is not an unusual thing for a contract to be given to the second tenderer, without calling for fresh tenders, under certain circumstances. That, I say, is not an unusual thing; and if any evidence of that were wanted, perhaps I could not do better than refer to the case mentioned by Mr. Parkes of the contractor on one of the northern rivers who had taken up a contract which turned out to be a work of impracticability on account of the drift of millions of ages of sand. As fast as the contractor cleared it away it came down upon him again. It turned out afterwards, as your Honor may remember, that the matter had nothing to do with the sand, but that the man was not able to carry out the work. While he was trying to get a concession from the Government, he quietly withdrew all his plant from the site of the works and cleared out. Mr. Hickson, on being advised of this by telegram while the man was in his room, at once turned him out of the office, and very properly too. I refer to that case as an instance of a contract being given to the second tenderer as a matter of course. Papers were produced showing that this contract was given, as Mr. Parkes supposed, to a man named Foord. Mr. Parkes said that this man had been treated in a very harsh way, but it turned out that nothing of the kind was the case. Ford was the first tenderer, and threw up the work without signing the contract, forfeiting the small deposit. The contract was then given almost as a matter of course to the second tenderer, so that we could not have a better illustration of the practice than that which Mr. Parkes happened to light upon. Mr. Hickson's reason for not giving the work to the second tenderers, and for recommending that fresh tenders be called, as he himself stated, was, first of all, that some time had elapsed, namely, from the 10th June to 6th October, since tenders were invited; the other reason being that there was a considerable difference between the amounts of the first and second tenders, namely, some £3,000. That is why he wrote his minute of 6th October, recommending that fresh tenders be called. Nothing was done until 22nd February, and in the meantime the Shea's Creek trouble had cropped up. Here were the Government confronted with a serious claim. Mr. Hickson, from his experience, knew that, however good the answer might be to many of the items in the claim drawn up by Mr. B. C. Simpson, the Government stood the risk of being mulcted in damages to a heavy extent. Estimating on the basis that the contractors claimed £4,000, Mr. Hickson came to the conclusion that, at all events, the Government would stand to lose £2,000 over the matter—that they might be cast in damages to that amount. And, although he had written his letter of October, in which he stated that he had stopped the contract under certain powers which he thought he possessed, it must be apparent to anyone who reads that particular clause, that it would have been a very risky thing indeed to rely solely upon the powers contained in it. It was only put forward as a piece of bluff to keep the contractors from prosecuting such a claim as I have indicated; but, when it was seen that the contractors were not going to be bluffed off in that way, and that things were assuming more serious proportions, Mr. Hickson had to consider what was the best thing to do for the Government, and that was how it came about that he saw Mr. Lyne on the very day after the minute approving of the recommendation that fresh tenders be called. It was upon that that Mr. Hickson's minute of the 23rd of February, 1892, was written. He then wrote:

Since writing my minute of 6/10/91, complications have arisen with Carter & Co., *re* their Contract No. 72 having been stopped. They have made large claims on this account, some of which no doubt could not be entertained, but on some items they have made a good case. They are prepared, if they obtained this work, to waive all claims on No. 72. As their tender is a reasonable one, and some £3,600 below the estimate, I think it might fairly be accepted. If this course were adopted, work would be given at once to a large number of men.—R.H., 23/2/92. Under Secretary. Important.

According

According to the evidence of both Mr. Lyne and Mr. Hickson, Mr. Hickson saw Mr. Lyne, and that gentleman thereupon wrote the minute which follows, under the same date:—

As Mr. Hickson thinks Messrs. Carter & Co. could make good a claim for something like £2,000 as compensation on Contract No. 72 (Moni-street, partly), should they be willing to forego this claim, their tender may be accepted for construction of the main outfall sewer, North Sydney—£39,890, as worked out at schedule rates. If this firm will not agree to the condition imposed, fresh tenders to be invited.—W.J.L., 23/2/92.

That appears to be the history of how it was that this contract came to be given to Carter & Co. I think your Honor will come to the conclusion that it was a wise and reasonable course of action both on the part of the Minister and also on the part of the officer who was responsible for the advice given to him, and for the way in which the matter was put before him. If your Honor will refer to Mr. Lyne's evidence on page 260 of the minutes of evidence, you will see that he there refers to the matter. He shows the way in which he looked at it. Of course he could not be expected to remember all the details; but in answer to Question 9170 he gave the following evidence:—

9170. Do you recollect Contract 72 being re-started? I do not recollect it by the number. In any case, it is so long ago that I am afraid that I should not have a distinct recollection of what took place. I do remember writing the minute which you have read, and I remember that that amount of £2,000 was a consideration with me in determining whether the other contract should be proceeded with by this firm. I wished to avoid any litigation or trouble.

He could not be expected to go into the question of whether there was a good and valid claim in respect of the Shea's Creek contract; but he knew enough of such things to know that litigation was a very undesirable course if it could be avoided; and, with a view to avoid it, and without spending a single shilling of the Crown's money, he got a settlement. This settlement gave Contract 79 to the firm of contractors who were the second tenderers at the original calling for tenders. So your Honor will see, from whatever point of view you may look at it, that a reasonable course was taken. I do not think it was open to any contention other than this—that it was the best thing that could have been done for the Crown, and that both the Minister and the officer immediately responsible for it deserved praise and commendation rather than reproof of any kind. I do not think I need go into that matter any further. I have, perhaps, gone into it more fully than was necessary. Your Honor will bear in mind the dates which have been alluded to. This contract was let to Carter & Co. on the Minister's approval in February, 1892, and it is charged that it was so let because young Mr. Hickson was an interested party in the firm of Carter, Gummow, & Co. The evidence is, however, that it was not until April, 1893 (more than twelve months afterwards), when young Mr. Hickson was retrenched. So that at that time young Mr. Hickson had no connection whatever with the firm of Carter, Gummow, & Co., but was an officer in the department. There can, therefore, have been no possible connection between the employment of young Mr. Hickson by the firm and the granting to the firm of Contract 79. It is absolutely past comprehension how anyone in the position of Mr. Parkes, with all the evidence which has been tendered to the Commission in reference to this matter before him, could have included this charge in the amended list which he handed in as recently as the 4th September. In the face of the most convincing evidence to the effect that there could have been no possible connection between young Mr. Hickson's connection with the firm and the granting to the firm of this contract, this charge is put forward. I say that the whole thing is of a piece, and this is about the best illustration we could have of the utter recklessness—the utter want of consideration observed by Mr. Parkes in bringing forward these charges. I think I have now disposed of all the matters which we have under this charge relating to young Mr. Hickson. Perhaps I had better next deal with Contract 77, as I have already referred to it. There are one or two charges in connection with that contract which perhaps had better be dealt with at once. The first charge in relation to this contract is as follows:—

With calling public tenders for Contract 77 upon plans for elaborate and costly work, and allowing Messrs. Carter, Gummow, & Co. to submit a plan of their own upon a patent held by them and an officer of the department and at their own price, unchecked by the department as to real cost, by which Messrs. Carter, Gummow, & Co. got an advantage over the Crown of £4,000.

I think this charge appears to be pretty much the same as one of the others with which I have already dealt, except that it is in different words. I think I pretty well dealt with this matter in the few remarks I made as to the acceptance of the contract. The only point to which I perhaps ought to allude is the reference to this patent as being held by the contractors and an officer of the department. The words "and an officer of the department" and some other words were added to the charge when it was submitted in the amended list on 4th September. That is one of the numerous amendments which have been made by Mr. Parkes in the course of this inquiry. Whether any importance attaches to it or not I do not know. At all events, the department thought it necessary to clear the matter up, and for that purpose

purpose I asked Mr. Hickson some questions about the practice of allowing officers in the department to have an interest in patents. Your Honor may remember the evidence Mr. Hickson gave upon that point. He said that although he himself would not hold a patent against his employers he thought that, as a matter of policy, it would be unwise to check young officers of the department in the use of their brains, and in making the best they could out of any invention they might have been fortunate enough to light upon. I submit that that is a very reasonable thing to do, because it encourages them to work. We have had evidence as to the way in which Mr. Baltzer used to work in these matters. He appears to have taken infinite pains over the Monier system among other matters. He was not too highly paid as a Civil servant; and he had not the necessary funds to finance him in the getting out of a patent. He thought, however, that since he had taken so much trouble in the matter he certainly ought to take one out. He therefore approached Mr. Carter, who financed him through the thing, and, as far as I can make out, that is the whole history of the affair. I do not see that there is any objection to this patent's being held by two members of this firm of contractors and Mr. Baltzer. The firm appear to have found money, while Mr. Baltzer found the brains, and, together, they obtained the patent which stands in their three names. It was a perfectly honest and upright transaction. Mr. Baltzer at that time had no connection with the firm of Carter & Co., and was working in the office. The second charge under the heading of Contract 77 is as follows:—

With deceiving the Minister as to the true cost of the Monier patent by minutes written by Robert P. Hickson, the then Engineer-in-Chief of the Department.

That has already been dealt with, and for the life of me I cannot put my hands upon any evidence that tends to show that there has been deception of any kind. I must leave it to Mr. Parkes to point it out. We come now to the third charge in relation to this contract:—

With deceiving the Minister, by which he (the Minister) accepted of certain security, which was of an improper and useless nature, for the stability of the patent for a term of three years, the deception being contained in minutes written by Robert Hickson, the then Engineer-in-Chief for Public Works, knowing that the security was not of a proper nature to submit.

The words "knowing that the security was not of a proper nature to submit," were added on September 4th to the original charge. That is another of the numerous amendments to which I have already referred. As to the security which is here alluded to as being of an improper and useless nature, your Honor may remember that that question was made a strong point of when the matter was considered before the Board of Reference. This Monier system being a new thing, it was made a condition of the contract that the contractors should give security that the work would stand for a certain number of years. Carter, Gummow, & Co. seem to have objected to that course. A bond was, however, prepared, by which your Honor will see that the Contractors were bound to maintain the work for three years. Your Honor will see the following clause in the letter of the Under Secretary for Public Works, Mr. Barling, to Messrs Carter, Gummow, & Co., under date of 11th April, 1895:—

A fixed deposit receipt, in favour of the Secretary for Public Works, for the sum of £775, will be required as security for the due performance of contract within the stipulated time, and a personal bond in the sum of £12,000, and two bondsmen in the sum of £6,000 each, in connection with the maintenance as set out in the supplementary specification. Will you be good enough to notify to me your assent to these terms, and at the same time submit the names of two responsible persons who are willing to act as your sureties.

Messrs. Carter, Gummow, & Co. seem to have thought that requirement was a little bit too stiff. They did not see why, as they put it, a firm of their standing should be required to give sureties at all, and on the 4th April, 1895, they wrote the letter which will be found upon page 208 of the Parliamentary return:—

Sir,

North Sydney, 4 April, 1895.

We have the honor to draw your attention to the conditions upon which the acceptance of our tender depends for Contract No. 77, Balmain Sewerage Works, and to our conversation with you of even date in connection with security required for its due performance.

We respectfully submit that our personal sureties for the amount necessary should be taken for its completion and maintenance and as a sufficient guarantee for the proper carrying out of the work.

We are a firm of sound financial standing, well and favourably known to your department as contractors for many large and important contracts extending over a period of eight or nine years under the Departments of Harbours and Rivers, and Roads, Bridges, and Sewerage, which facts we trust will satisfy you as to our *bona-fides* in this matter.

We have, &c.

CARTER, GUMMOW, & CO.

Upon that letter Mr. Hickson wrote the long minute of the 5th April, 1895, which has been so frequently referred to in the course of the inquiry.

His Honor, at 1.5 p.m., adjourned the inquiry until 10 a.m on Thursday, 1st October.

C. E. R. MURRAY,  
Commissioner.

THURSDAY,

THURSDAY, 1 OCTOBER, 1896.

His Honor, the Commissioner, sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, bond clerk, also attended.

*Mr. Ernest Smith:* At the hour of adjournment yesterday I was dealing with the third charge which Mr. Parkes has preferred in connection with Contract No. 77, and I think I had drawn attention to the letter of Messrs. Carter & Co., objecting to the requirements of the Department that sureties should be given for the maintenance of the work in addition to their own names. Upon that letter Mr. Hickson wrote his minute of the 5th April, 1895, which appears upon page 209 of the Parliamentary Return. He says:—

Messrs. Carter and Gummow ask that their own "personal sureties for the amount named," *i.e.*, £12,000 (an amount which they do not dispute), "should be taken for its completion and maintenance, and as a sufficient guarantee for the proper carrying out of the work."

They go on to say that they are "a firm of sound financial standing, well and favourably known to the Department as contractors." This is quite true; they are a firm in which I have every confidence. They have done a great deal of work under me, and I can testify that their aim always has been to turn out the very best class of work possible. At the same time, misfortunes happen the very soundest firms of contractors, and the Department must look a little way into the future. Their own bond for £12,000 would be really of no use if they were unfortunate enough in the meantime to become bankrupt.

I think, therefore, it is right that the sureties should be insisted upon. They give the names of two men, Mr. George Forrest and Mr. James Gillan. From inquiries made I believe these men to be financially sound; and, I think, if their names were accepted as the sureties in the penal sum of £6,000 each, the Department would be secured as far as it is reasonably possible to be.

That minute was sent on to Mr. Darley for report on the same day; and three days afterwards he wrote as follows:—

I concur with Mr. Hickson. I think, in accepting a new patent of this kind, and adopting it on a large and costly contract, that the Department cannot be too careful in securing its position by leaving all the risk on the hands of the contractors and patentees. I therefore recommend that the personal names be required for further security. The names mentioned may, I think, be accepted.

That is sent on to the Minister for approval of the course suggested as to the sureties, Mr. Young approving on 10th April. Your Honor sees that that was how it came about that the security for the maintenance of this work, which was recommended, as you will see, by the Board of Reference in their report, recommending the acceptance of a lump sum tender, took this form, *viz.*, a bond to which the sureties, in addition to the contractors themselves, were Mr. Forrest and Mr. Gillan. It is to that, I presume, that exception is taken in this charge, which is to the effect that the Minister was deceived in accepting of certain security which was of an improper and useless nature. Whether this was a proper security to have taken or not will depend, as far as I can make out from the line of examination which has been adopted, upon the answer to two questions, *viz.*, whether the officers who were responsible for accepting these names had satisfied themselves as reasonable men should do with regard to the substance of the bondsmen, and, secondly, whether there was any other consideration arising from the position of these suggested bondsmen, by way of their connection with the contractors, which rendered them, on that account, objectionable. With regard to the inquiries which were made as to the means of these two bondsmen, we have had the evidence of Mr. Hickson, of Mr. Darley, and of some others. Your Honor may remember that, as his minute shows, Mr. Hickson was at this time handing over the control of these works to Mr. Darley, and therefore, although he had satisfied himself as to the fitness of these bondsmen, he took the precaution, as he did with regard to the recommendation of the acceptance of the tender itself, when it came before the Board of Reference, to have the papers sent on to Mr. Darley. As your Honor sees they were with Mr. Darley for three days before he sent on a recommendation that the names might be accepted. So far as Mr. Hickson is concerned, I think his action in this respect must meet with approval. He would not make any recommendation himself, although in his own mind he appeared to have been satisfied; but he sent the papers on to Mr. Darley, and upon them Mr. Darley wrote his recommendation. This charge, therefore,

therefore, if it involves anyone, involves these two officers, Mr. Hickson and Mr. Darley. They are jointly responsible for having advised their Minister that these names should be accepted. I should like here to say one word as to the method adopted in those cases in which names are submitted to the Department as sureties for any particular purposes. The evidence on that point is perfectly clear. The inquiries that are made are of necessity not made in writing. If the head of the Department who has to inquire into the matter had any doubt about the names submitted, the course usually adopted, we are told, was to send down an officer of the Department to the Government Bank—in this case the Bank of New South Wales—and through that bank to get inquiries made at the bankers of the individuals whose names had been submitted. That was always the course pursued. Naturally the Department would not go straight to the banks of the individuals and ask for information of this kind, because if they did they would most probably receive a very short and decisive answer. In other words, they would be told that the information could not be given. The practice therefore was always to make the inquiries through the Government Bank. Mr. Hickson apparently does not go so far as to say that he actually took that course in this case. What he relied upon as being satisfactory evidence in his own mind was more a general knowledge of the position of this firm in Adelaide. Mr. Hickson has explained that he knew that Mr. Gillan, at all events, was a partner of the firm in the Adelaide contract, and that he knew what the position of the firm was. He said that, some time before he had a conversation with the manager of the Bank of New Zealand in Adelaide, Mr. Kane, which had satisfied him that Mr. Gillan stood very well. He said in his evidence on page 177, questions 6527-8-9 :—

6527. What position do you say Mr. Kane occupied then? He was the manager of the Bank of New Zealand in Adelaide.

6528. When you accepted Mr. Gillan and Mr. Forrest as sureties did you know they had an interest in the firm? I knew that they had not an interest in that particular contract.

6529. Did you know that they had had an interest in the contracts of the firm generally? I knew that their names had appeared in connection with other contracts.

He went on to say that the opinion he then formed as to the soundness of the position of these men had been confirmed; and he said that he had seen the manager of the Bank of New Zealand here, who had confirmed his opinion. With regard to the conversation he had with Mr. Kane, he gave this evidence:

6546. Do you know how it came about? We were talking about the firm generally, and, as an official of the bank, he spoke in the highest terms of the firm; in fact the expression he used, as far as I can remember, was that he would trust any one of the firm to any extent, and that they were all well-to-do persons.

So your Honor sees that Mr. Hickson had a very clear and strong impression in his mind at that time as to the stability of the firm in Adelaide. He knew that these two gentlemen whose names were submitted were partners in the Adelaide transaction, and, that being so, he felt justified in forming the conclusion which was afterwards confirmed by the communication which he had with the manager of the Bank of New Zealand here. But, as I said, the matter was sent on to Mr. Darley, who, in his evidence, mentions the practice in cases of this kind. He points out that there was never any detailed inquiry as to the property of the individuals whose names were submitted, but that the inquiry was more of a general nature as to how they stood financially. Your Honor well knows, as a matter of business, how difficult it would be in every case to go into detailed inquiry in these matters. I suppose that if one were to go to a bank and ask for information they would not found their opinion upon any detail examination; but it would be a sort of general impression which business men can pick up as to how their fellow business men in the city stand; and it was more with reference to that that Mr. Darley spoke. He says distinctly that he made inquiries, and he explained the way in which it was customary to make those inquiries. They appear to have been made by sending an officer under Mr. Darley to the bank. Mr. Darley said he had no doubt that that course was taken in this case; but after leaving the room, and after questioning his officers, he found that not one of them could say that the inquiries had been made. He came back before the Commission a few days afterwards, and, after stating that his officers said they could not remember having made the necessary inquiry, he said—

I am still under the impression that inquiries were made by one of the usual officers, but I afterwards saw the officers who would be likely to make the inquiries, and none of them could recollect having done so. On looking up the matter, I find that the whole office was at that time in a state of chaos. Departmental changes were taking place. My chief clerk was taken away from me, and I had not him to refer to. Some temporary officer was acting in his place. Mr. Conley, the officer who used to make inquiries in such cases, does not recollect my asking him to do so. However, I would certainly say this—that I made the usual inquiries and obtained the necessary information.

information. I was at that time working partly in this office and partly in the Water and Sewerage Board Offices. I was going backwards and forwards from one office to another. Moreover, I was not at all well at the time; in fact, the doctor has ordered me to desist from further work, so that I have not a very clear recollection of what took place. I cannot tell you now who made the inquiries, but I am certain that I got the necessary information, because I was always most particular in obtaining it. We had a regular system of carrying out that part of our duty, and it certainly would not be likely to have escaped my attention at that time, because the names submitted were then quite unknown to me. I am certain that I did not regard the matter as one of form. I must have made the usual inquiries.

It will be seen that Mr. Darley there accepts fully and frankly the responsibility for the advice which he gave. Your Honor must know that it would be absolutely impossible for a man who has so many of these matters to deal with to remember exactly the way in which he came to a certain conclusion in a certain case, and to remember the exact details of the evidence upon which he formed his conclusion, especially in an affair of this sort. It is always a delicate matter to discover how a particular man stands financially, and it is not at all to be wondered at that Mr. Darley cannot now tell your Honor how it was that he came to draw his conclusion. But one thing he is perfectly certain about—that he did not treat the matter as one of form. He did make inquiries, and those inquiries led him to come to the positive conclusion that these men were sound. Then with regard to Mr. Hickson's statement that the opinion which he then formed had been confirmed, we had the present manager of the Bank of New Zealand and also the sub-manager called here. But of course they would not know anything at all about it, because it was not to either of these gentlemen that Mr. Hickson referred. Both of these gentlemen—Mr. Parfitt and Mr. Rigg—told us of the practice in such matters, and they said that no record was kept of such inquiries—that they were generally of a verbal kind, and that the inquiries must have been made through the Bank of New South Wales. They pointed out that it would be impossible for any one to say whether or not verbal inquiries had at that time been made. Then we had Mr. Wilson, at present a member of the Public Service Board, but who was at that time the manager of the Bank of New Zealand, which was the bank of this firm. Mr. Wilson, from his position, would be able to form a pretty good idea as to the standing of these men, who were his customers. I do not suppose it would be expected of a bank manager that he should be able to give absolute evidence as to the details of the property which he thinks his customers may have, but, as I have just said, one business man can easily form an impression of the financial standing of another business man with whom he is daily in contact. What did Mr. Wilson say? He did not know very much about Mr. Forrest, but with regard to Mr. Gillan he said:—

7295. Suppose the Bank of New South Wales had made inquiry of you as manager of the Bank of New Zealand, in March or April, 1895, as to the financial standing of Mr. Forrest, what would you have said? I could not have said much about Mr. Forrest, because I do not know as much about him as I do about Mr. Gillan.

7296. What would you have said supposing inquiry had been made of you concerning Mr. Gillan? I should have said that he was a thoroughly sound man financially.

Mr. Rigg, whose evidence appears upon page 197, says, with regard to Mr. Gillan:—

7262. But outside of that, and taking his repute for honesty and that sort of thing, how does he stand? I always looked upon him as what we should call a responsible and substantial man.

7263. And what have you to say concerning Mr. Forrest in the same relation? I happen to have known him for nearly twenty years. I think very highly of him. I knew him when he was a contractor in Dunedin.

7264. And how has his reputation stood? It has always been good as far as I know. I never heard of anything against him. I was going to add that I have not seen so much of Mr. Forrest here, but that I have had a good deal to do with him in New Zealand, when he was a member of the firm of M'Gill and Forrest.

There has been a good deal of evidence—in fact Mr. Parkes has sent down to New Zealand, and we have had a communication from the Land Tax Commissioner there—bearing upon the question of the means of one of these two bondsmen. I am not going into that part of the evidence, because it seems to me that so far as this department is concerned all that we have to satisfy your Honor about is that this matter was dealt with in an ordinary business-like and proper way, and that inquiries were made. What the exact nature of those inquiries were it is impossible to say at this stage. These inquiries must have led to information being given which justified the writing of these minutes; and in addition to that your Honor will remember that when these men came to sign the bond the officer in charge of bonds and contracts, Mr. Norrie, as it struck him that this was a transaction rather out of the ordinary course, took the extra precaution, whatever it may be worth, of taking a statutory declaration from each of them that they were worth £6,000, that being the amount of money for which they were each

each separately liable, so that, as far as the department was concerned, in addition to the inquiry that had been made by the heads of the department—the one the retiring head, and the other the incoming head—there was this further evidence, for what it may be worth, taken from each of the bondsmen when they came to the department to sign. Whether these declarations were absolutely true or not is a matter which I think it rests entirely with the contractors to explain. It is their business, and not ours, if the men have made a false declaration. I do not for one moment impute that, but it is for them to clear the matter up, if there be any doubt; and for that reason I submit that it is not at all necessary for me to go into the question of what was the property, whether real or personal, held by these individuals at the time they signed the bond. As to the other question, namely, whether they were fit and proper persons to take as bondsmen, seeing that they were connected with the firm who had entered into the contract itself, your Honor may remember that the contract was signed by Mr. Carter, Mr. Gummow, and Mr. Snodgrass. It is now alleged that the two sureties who signed the bond were partners in that contract with them. I submit that that again is a matter with which the department has nothing to do, and for this reason—the only three individuals the department knew in the matter were the three individuals who signed the tender, and who subsequently signed the contract itself. Whether the bondsmen, Mr. Forrest and Mr. Gillan, had an interest in this particular contract or not it would have been difficult to find out, and I do not think the department was in any way put upon inquiry as to what the exact relation between the bondsmen and the contractors was. That is a matter again upon which I think the contractors should satisfy your Honor. As far as I can understand the question, it seems to me to be pretty plain. At an early stage of this inquiry we had put in a document purporting to be a deed of partnership between these parties. There were several names—I forget now whose they were—to that deed. But if your Honor looks at it it will be clear to you at once what is the purport and effect of it. It is some time since I looked at it; but, speaking from memory, and subject to correction by Mr. Andrews, who will deal with this part of the case, it recited that this firm were about to go into a big contract in Adelaide for the Government of South Australia, in connection with which they joined in a deed which defined the various rights of the partners *inter se*. Furthermore, the deed was to comprise and to regulate the partnership with regard to any other contract the firm might take up, so that your Honor will see that it was an agreement of partnership with regard to one specific contract, and, further, an agreement defining the rights of the partners *inter se* as to any future contract they might among themselves agree to carry out, either in the colony of South Australia, in this Colony, or in any other part of the world. But, because two or three of the firm went into a contract here or there, that did not bring the contractors within the terms of that partnership deed unless there was at the time or subsequently a distinct agreement between the parties that that contract should be so considered. That, as I understand it, is the position of this so-called firm. It is not a firm in the ordinary sense of the term—namely, that all these individuals were a firm to carry on contracts and to divide the profits between them if there were any profits; but there was, as I say, a deed of partnership limited to one particular large matter at the time and to any further matter which might thereafter, by distinct agreement, be brought within the terms of the deed. That being so, it is not clear yet as to the particular time at which Mr. Forrest and Mr. Gillan became partners, if they are partners, in this particular Contract 77. Nor, to my mind, does it seem to be at all material. Mr. Carter, I think, told us that they came into this contract as partners shortly after the documents, viz., the bond and contract, were completed; but whether it was shortly afterwards or shortly before, to my mind, is absolutely immaterial; because it will be seen by your Honor that, as Mr. Chamier told us, it is a very common practice indeed when men lend their names as bondsmen for them to receive something in return. Men do not do these things for nothing—at least, business men do not. Unfortunately, some of us do so in outside matters; but business men do not do these things without expecting some sort of a return—a commission or something of that kind; and a very common way—in fact, the ordinary way—of giving a return to men who run the risk of putting their names to a bond, is to give them a share, a percentage in the profits of the concern, if it should turn out at a profit. The man who puts his name to a bond runs a risk, and he naturally says, “If you are going to make a profit, I shall expect a share of it.” That is a reasonable and business-like arrangement to make. Quite independently of the fact whether Mr. Carter, Mr. Gummow, and Mr. Snodgrass, had already signed this general deed of partnership, which gives the partners the right to come into any contract taken by any individual two or three of them—supposing that deed had never been in existence—supposing the men had never been together in any venture before—it would have been a reasonable arrangement if Mr. Carter, in approaching Mr. Forrest and Mr. Gillan, had said “If you will sign that bond, you can come in and share the profits as partners.” If that arrangement had been made, I submit that Mr. Carter, Mr. Forrest, and Mr. Gillan, would have been perfectly justified in making it. As far as the department is concerned, that matter has nothing whatever to do with it. All that the department had to do was to look at the matter in this way: “We have these three men signing this contract. It is a special contract. What is the character, and what is the position, of

these three men?" The department had to satisfy itself upon that point, and the other point they had to consider was, who were the two bondsmen. As I have shown, or attempted to show, inquiries made were sufficient to satisfy the two officers to whom I have referred as to their substantial position; but, with regard to their connection with the firm, all that was known to the department was that these men had been associated with the contractors in other ventures. They had no knowledge of the association in this particular venture; and I submit that that is not material—that it does not affect the conclusion to be arrived at. The department had these three names of persons who were primarily liable to the Crown if anything wrong happened, and it is absurd to contend—I do not know if it will be contended—that by taking the names of two persons who were partners in this venture the security was taken no further; because, although it is true, as a matter of law, that you can make secret partners liable on a contract when you discover them, that is a very different thing from getting a hold over a man from the fact that his name is put to a bond—a hold over him from the fact that he is a secret partner in a transaction in which others are mixed up. So that it seems to me that in taking these two names—even supposing the men were partners—there was a very substantial addition to the security given to the Crown for the due performance of the work. I submit, on all the facts of the case, that it is beyond the shadow of doubt that every precaution was taken by the department in seeing that the recommendation of the Board of Reference in their report, that this security should be taken, was given effect to. One point which was made by Mr. Parkes in his speech, was that a notice had appeared in the newspapers in connection with the dissolution of this partnership as regards two of the individuals who were connected with it, Mr. Maddison and Mr. Ewing, and that that notice of dissolution was dated 1st April, 1895, the contract and bonds being completed in May. But, although that notice of dissolution was dated on the 1st April, your Honor will see that Mr. Parkes states that the advertisement in connection with it did not appear until the 13th September—that, although the notice was signed, for some reason or other best known to the contractors—I daresay there was a good reason—the advertisement of the dissolution as regards these two individuals did not appear to the public until long after the contracts and bonds were signed—not that, to my mind, it affects the matter one iota whether the advertisement appeared before or after the signing of the contract, and for the reason, as I have already stated, that I do not think the department was bound to go into that matter. It was bound only to deal with the papers as they were submitted. I think that disposes altogether of Contract 77, with the exception of the charge preferred by Mr. Parkes with reference to the Parliamentary papers. I come now to Contract 79. The first charge under the heading of that contract is one which has already been dealt with under the charges relating to Mr. Hickson. It is—

With improperly granting to Messrs. Carter, Gummow, & Co. without re-tendering Contract 79, by which a loss was sustained by the Crown.

That I have already dealt with, and I need say nothing further in reference to it. The second charge, which is now withdrawn, had reference to the improper withdrawal of Bond and Hudson's tender. Upon that point I may mention that we have one of those highly interesting memoranda of Mr. Christie's, which tends to show that it was a very improper proceeding on the part of the Crown to allow these unfortunate men, who were kept on a string, as it is alleged, all the time, to withdraw their tender and get back their deposit. The memorandum to which I refer appears upon page 295 of the evidence, but since the charge is withdrawn I may leave that matter alone. The next charge is—

With allowing Messrs. Carter, Gummow, & Co. to manipulate the items in the schedule prepared by the department so as to increase the profits of the contractors to the loss of the Crown.

This charge, as it originally stood, was a charge of direct manipulation. Now the department is told that it did not manipulate the items, but that it allowed the contractors to do so. What is meant by that I am not quite sure, but I take it that the manipulation is that referred to in the memorandum by Mr. Christie, which is to be found upon page 297. Mr. Christie calls it "Memo. *re* the re-arrangement and substitution of schedule items, Contract 79." I suppose we may take it that that is the manipulation referred to—the re-arrangement and substitution of the items in this schedule, as pointed out by Mr. Christie. It is a long memo., your Honor, which sets forth the various minutes relating to this matter, and I do not propose to take up the time of the Commission by going through it. Mr. Christie concludes by saying—

From a perusal of the specification, and particularly of clauses 58 and 59, I cannot see that the contractors were in the first place entitled to the 2-in. margin.

I am very sorry we cannot satisfy Mr. Christie on the point, but I am sure your Honor will be satisfied in the matter if you will turn to Memo. No. 6, by Mr. Davis, which appears upon page 508 of the evidence, and also to his evidence upon page 276. The particular items referred to by Mr. Christie were those items with regard to guttering and gadding. I should mention that Mr. McCredie also made certain statements upon this point, which are to be found upon page 306. I was not here at the time, but I believe

believe a report was read by Mr. M'Credie. I understand that in answer to your Honor, on a subsequent occasion, as appears from the evidence on page 310, Mr. M'Credie admitted that he had made a mistake. He said:—

10396. *His Honor.*] Having looked at the papers, you think you must have made a mistake in assuming that the prices appearing upon page 339 of the Parliamentary papers were the office estimates for Contract 79? I was under the impression that they were.

10397. But, having looked at the papers, you conclude that there is possibly a mistake? Yes, possibly.

I need not refer further to Mr. M'Credie's evidence upon this point, but I will ask your Honor's attention to memo. No. 6 by Mr. Davis, upon page 508. Without going into the matter very fully, I may say that it is plain, beyond the shadow of a doubt, that Mr. Davis took the right course here. The result of his action was that out of the concrete for which these contractors were paid as much as £1,302 was knocked off in consequence of blasting having been substituted for the guttering and gadding. I think that is a fair statement of the effect of the evidence. I will call your Honor's attention to Mr. Davis' evidence upon page 276, where you will see that he gives a concise statement as to how the thing took place:—

9531. What took place? The contractors pointed out that if my recommendation were carried out the contract would not be completed under three times the contract time—that is to say, that it would take three times as long to drive a tunnel by means of guttering and gadding as by blasting. While they saw the force of what I had written from the departmental point of view, at the same time they wanted to get the concession of doing the excavation by means of blasting. To get over my difficulty they said they were prepared to allow for the concrete lining a sum equal to £1,250, which would mean the 2 inches referred to by Mr. Hickson; and that being so it was to our advantage to let the work be carried out by blasting, as we should have done under ordinary circumstances. In this case, however, as I point out in my minute, in consequence of the prices—that is the way in which the contractors had fixed their prices—I considered it my duty to call attention to the matter.

It will be seen that so far from the action of the department having increased the profits of the contractors to the loss of the Crown, the very opposite took place, and that the whole thing was dealt with in a proper and strictly business-like way. We come now to the third charge, which relates to the return of the retention money and of the deposit. The charge is in these words:—

With returning the cash security and the retention fund to the contractors, in violation of the contract agreement and to the advantage of the contractors, and hazarding the interests of the Crown.

First, with regard to the return of the cash security, which, I suppose, means the deposit. The amount of the deposit, I am told, in this case was £2,000, and the evidence clearly shows that it was not returned until the work was practically finished. Let me refer your Honor to Mr. Davis' evidence, on page 502. You will find there Mr. Davis' memorandum, No. 2, and under the heading of "fixed deposits, Contracts 79 and 79A," Mr. Davis says:—

In June, 1894, when the whole of the works comprised in Contract 79 had been practically finished, and there only remained the extension (Contract 79A) to be carried out, the question of the fixed deposit was brought forward for consideration. It was not thought necessary to retain £2,000, and the contractors were allowed to substitute another fixed deposit, for the sum of £650, for the works comprised in the extension. In addition to this, the sum of £531 10s. 6d. was held until the expiry of the maintenance period set out in the main contract.

Your Honor sees that that deposit, the return of which is said to have jeopardised the interests of the Crown, was not returned until the work was practically finished; and it was considered a fair thing, after all these matters had been dealt with—and these things must be considered if business is to be done at all—that these contractors should have back this money, so that they could make use of it. Then, with regard to the retention money, we have the evidence about the new conditions. Your Honor may remember that minute by Mr. Bruce Smith, suggesting the appointment of the Board of Reference. One of the first things to be dealt with by the Board was the new conditions, and one of the first matters involved in those new conditions was this very matter of the retention money. That minute (if I may say so, it is a very business-like minute) points out how necessary it is in dealing with these matters—I am speaking from memory—while being on the one hand very strict, and taking every care and precaution to guard the interests of the Crown, that is of the public, in these matters, to at the same time handle things of this kind so as to deal with contractors in a fair and business-like way, and, in proper cases, one might go so far as to say, in a liberal way: that is the only way in which business can be carried

carried on in a satisfactory manner to both parties. Mr. Bruce Smith was fully alive to that, and in his minute he suggests that a certain concession, if I might so term it, should be made to contractors with regard to this very matter of retention money. In accordance with that recommendation, as we know, the Board of Reference was constituted, and went to work at once upon the new general conditions. One of the first things they dealt with was this very question of the return of the retention money. The drawing up of the new conditions involved a vast amount of labour, because of the different sets of conditions in the different branches of the department. All of these had to be brought together, and the whole thing had to be focussed. The conditions, as I personally know, were revised again and again, until at last what was considered a fair and safe form had been arrived at. But that, of course, took a great deal of time, so that the new conditions were not finally approved until the 4th February, 1894; that is to say, it was not until that date that they received formal Ministerial sanction. The evidence, however, is abundant that before that date—long before that date—the heads of the department, each having a seat on the Board of Reference, and knowing that this question of the return of retention money was virtually settled, acted upon it in many cases. It was thought to be only a fair thing in dealing with contractors whose contracts were limited by the old set of conditions to deal with them upon the same lines as those upon which they would have been dealt with had the new conditions been actually passed and annexed to their contracts. That, your Honor, is the explanation of the action that was taken in this particular instance with regard to the return of the retention money upon Contract 79. It was considered fair to put these contractors upon the same footing as were the other contractors, and when they first made application I think there was only a small sum of £60 to be returned. Subsequently they got back a further sum of £200 odd. It was really putting them on the footing of 5 per cent. retention instead of a retention at the higher rate. They also had back the sum of £2,000, as I pointed out. This matter is dealt with by Mr. Davis upon page 501 of the evidence in his memorandum No. 2, under the heading of retention money. He says:—

With respect to the retention moneys on Contract No. 79, regarding which Mr. Christie gave evidence on 22nd July, 1896, the explanation is that 5 per cent. only was kept back, so as to preserve uniformity of practice, the new general conditions, providing that the maximum amount of retention money should be an amount equal to 5 per cent. on the amount of the tender, being at that time incorporated in the greater number of the contracts then being let. The contractors having, on the 28th December, 1893, represented that they would experience some difficulty in making satisfactory arrangements for the disposal of the Funded Stock, with which it was proposed to pay them for Contract No. 69, which was accepted on the 11th of that month, and having asked for assistance in the matter of making financial arrangements by the return of the retention money on Contract No. 79, amounting to £2,000, the Minister, in consideration of the contractors having shown their willingness to meet the department (with regard to the acceptance of payment for Contract 69 in Funded Stock), agreed to grant their request, and the £2,000 was accordingly returned to them. The work then remaining to be done on Contract No. 79 did not exceed £4,000, against which the department held the contractors' deposit of £2,000 for its completion.

Your Honor sees, therefore, that the reasons for the return of the retention money were of a purely business-like nature. These contractors were asked by the department to take a certain course with regard to Contract 69—to accept payment in Funded Stock—which the Government at that time were anxious to get off, not having ready cash with which to pay for these works. These contractors met the Government in a business-like way. They said, "If you wish us to do so we will take payment in respect of this contract in Funded Stock." When they entered upon the work it would be a matter of convenience to them to get back some of the cash deposit in the case of Contract 79, and the Minister, looking at the matter in a fair way, and seeing that there was only £4,000 worth of work to do, said "You met us very fairly in the other matter in connection with Contract 69. If it will be a convenience to you, I think it will be perfectly safe in the interests of the Crown to comply with your request in the case of this contract." That is the whole matter. The Minister at the time being Mr. Lyne, it seems to me that, if this is a charge which is made out in any way, it is one which affects, not so much the permanent officers, but the Minister of the day. It is a responsibility which, I think, as far as I know Mr. Lyne, who was then the Minister, he will accept. We then come to charge 4 under the heading of Contract 79—

With the discharging of Inspector Reid from the above contract for simply doing his duty in the interests of the Crown by insisting upon good work and material.

In the first place we know now, as a fact beyond dispute, that Inspector Reid was never discharged in the strict sense of the term—in fact, he rather resented the expression when it was used by Mr. Parkes, and said that he had never been discharged; but, as a matter of fact, he had been removed from this contract and put on to other work. That matter has been thoroughly thrashed out, and I will not weary the

Commission

Commission by going over the ground again. The sum and substance of it all is that there was very good ground indeed for the removal of this inspector. He may be, and probably is, a very good and strict officer, but your Honor can see from the evidence that there was a great amount of friction between him and the men, and friction between inspectors and men is a thing which is bad for all parties concerned—for the contractors and their men, as well as for the Government and their officers. Therefore it was that when matters came to such a pass as they did with Inspector Reid—perhaps through no fault of his own, except the fault of his temperament—he was removed. He is a fidgetty man apparently, and he worried the men, as it seemed, unnecessarily—perhaps in a too conscientious discharge of his duties. I do not for a moment pretend to say anything worse than that against him. At all events there was this friction, and those who were responsible for the control of these matters thought it advisable to remove him to some other job. He was removed, and his removal has been magnified into a charge that Inspector Reid being found much too strict a man it was thought to be a good thing to get him out of the way, so that there might be a more easy-going man on the spot. That is what is implied by the charge. The implication is that it was done in order that these contractors might get their work done in a slovenly manner. That is the only way in which I can understand it, as a charge, at all. Charge No. 5 is,—

With improperly paying an account of £350 6s. 6d. to the contractors for removing material, which work they never performed.

I do not think I need go into that charge further than to refer to the papers upon page 329 of the Parliamentary return. They are set out in full in Mr. Davis's evidence upon pages 505 and 506 of the printed evidence. The history of that little matter is shortly this—the department, under this contract, were bound to pay the contractors for the removal of certain stuff that was taken out. The contractors were able to make an arrangement, which was probably a profitable one, with the local council for its removal. The council paid for the carting, and Mr. Davis points out in the minute under date of the 17th August, 1894:—

I cannot see what power we have to call upon these men to repay the money to the council, even supposing it would be advisable to do so.

I do not think I need labour that portion of the case any further. Then there is another little matter which is made a separate charge by itself:—

With placing improperly to the account for payment on Contract 79 various items of payments for work done at Bondi.

The amount, I am told, is £11 1s. The matter is explained by Mr. Davis upon page 305 of the printed evidence. Charge No. 7 is,—

With advancing, without sufficient security, sums of money upon contract material not in the possession of the Crown.

That charge I will leave until I have dealt with the other contracts, because it is common to two or three, and I will deal with them all together in this respect. Coming now to Contract 69, the first charge is,—

With allowing Messrs. Carter, Gummow, & Co. to manipulate the departmental schedule for Sewerage Contract 69 so as to give the contractors an advantage over the Crown in their contract to build a sewer in Marrickville, by which the contractors were paid upon the extravagant items of charge, and were conceded those items upon which they had a losing price.

That charge involves the question of which we have heard so much—the question of the rigging of schedules. I think it is now made pretty plain to the Commission what this rigging is. It has apparently been a universal practice. Mr. Chamier, in his evidence, read us a paper, which will be found upon page 516, in which he showed that the practice is not unknown in other parts of the world, and that, so long as this system of tendering continued, so long would the practice prevail. I am not going into the ethics of the practice from a contractor's point of view. With that I have nothing to do. People may think, after all, that it is only a natural thing for contractors who take up speculative contracts of this kind, namely, in sewerage contracts, where there is so much underground work. The tenders must be to a great extent speculative, and, for my part, I am not one to blame the contractors for taking every advantage they possibly can—not an unfair advantage, but every advantage they can in preparing their tenders so as to save themselves—in order that if they lose upon one item they may pull themselves round on others. Mr. Chamier has shown that that is the way in which contractors go to work all the world over. His experience is that, on the whole, the system has not panned out so badly for the departments with whom the contracts have been made; and the evidence is also in favour of the contention that the department generally has not suffered from this system of rigging. With regard to this particular Contract 69, Mr. Davis, in his evidence, on page 497, has shown that this same rigging was carried out by every one of the tenderers—I forget now how many there were—for this contract. Your Honor will find

a table which shows the various amounts, and the way in which Mr. Davis substantiates his statement. The department are well aware that in a contract of this kind such a course of procedure would be very likely to be adopted by tenderers in preparing their schedules; but, in this particular tender of Messrs. Carter, Gummow, & Co., there is no doubt one item which is a most extravagant one—and a great deal has been made out of it—I mean the item of bluestone pitchers at £50 a yard. There is no doubt also about this—that the department made a mistake. Their plan unfortunately did not agree with their schedule, and the contractors were cute enough to perceive this, the consequence being that they lumped the price on to this item, knowing that more of it would be required than appeared from the schedule. They had only to look at the plan to see that from necessity that must be the case. They therefore put in this big price of £50 a yard, which, we are told, is an absolutely monstrous price. For some time attention was not drawn to this matter at all. Mr. Hickson says that the first time he heard of it was a long time afterwards—that, as a matter of fact, it was not mentioned at the Tender Board. Mr. Bagge reported upon these tenders, and the matter evidently escaped him; at all events he did not report upon it, and presumably had he reported upon it at all he would have done so by way of a minute, a report of such a nature being always made in that way of necessity, and not, as Mr. Parkes supposed, by an officer running down to his Chief's room and saying "Look at this item." That is not the way in which they do business in the Public Works Department. The officers write proper minutes directing attention to any matter to which, in their opinion, attention should be called. It is clear that Mr. Bagge did not call attention to this item. The tenders were accepted and the contract was signed with this item of £50 in it, and this discrepancy between the plan and the schedule. A copy of the schedule, as is usual, was sent out to the Resident Engineer to work upon, and, unfortunately, a clerical error was made in the copy which went out to him, the item appearing as 50s. instead of £50 in that copy; so that it was not until a very late stage, when the work was far advanced, and when the contractors were getting down to this particular item, that the mistake was, for the first time, discovered. It was then discovered that the contractors had this large price of £50 against this item, and, further, that a great deal more of the work would be required than was set down in the probable estimate of the department. It is clear, I think, that the contractors here had got the best of it. There is no get away from that. The contract was signed, and it had to be carried out. If the department had made a mistake, it was bound by it. That was the view which Mr. Hickson took. He said, "This is the plan; we cannot get away from that; the plan is part of the contract; we must pay the contractors at their price for the amount of work required, according to the plan, but I will not authorise it beyond that." That substantially was the course taken, and accordingly the contractors were paid. It has been argued, first of all, that Mr. Hickson was wrong in that view, because under certain clauses of the conditions—clauses 16 and 17—he had the right to strike this work out, and to substitute other work. I do not think, however, that that is a matter for argument at all. I do not think there can be any idea that these conditions applied to a case like this. Mr. Chamier spoke very strongly upon the point when his attention was drawn to it. It does not, however, require an expert to tell us that the clauses to which I have referred do not apply to such a case, and that it would have been an abuse of the power conferred by the clauses to attempt to enforce them for the purpose of setting right the department's own mistake. I submit, therefore, that Mr. Hickson was perfectly right, and his opinion is confirmed by the evidence of Mr. Chamier, who said he would have taken exactly the same action in the matter. Another consideration to which it is worth while to refer is this—assuming that this monstrous item had been pointed out to the Tender Board at the time the tenders were being considered—what would have been the action of the Board in reference to it? Could the Board have thrown out the tender by reason of this extravagant charge? I submit that, on the evidence, it is clear that that course would be impossible, because, as Mr. Chamier very fully pointed out, if you once begin throwing out tenders for that sort of thing where can the line be drawn? It would be absolutely impossible to draw a line, and it would let in all sorts of suspicions of favouritism in this direction and that direction. Mr. Chamier was perfectly clear upon the point, and I submit that his opinion commends itself to every impartial mind that it would be impossible, in view of the general prevalence of this practice of rigging, for any department to take upon itself the responsibility of throwing out the tender merely on the ground of extravagantly priced items in it. Mr. Hickson was also asked some questions upon this point and his answers were to the same effect—that even if his attention had been drawn to the matter he could not have thrown out this particular tender. The only course he could have taken, he said, would have been to throw out all the tenders, to accept none, and to call for fresh tenders. There is a difficulty in taking a course of that kind for the simple reason that it is impossible to see where the thing would be likely to end. As I pointed out, it would be absurd to expect that any tenders coming in for work of this kind would not be open, to a greater or less extent, to a charge of rigging. That, as I understand it, is the whole position of the matter; and I contend, therefore, that Mr. Hickson's action in this particular case was the right and proper one to take—in fact the only one. I should like to draw attention to the way in which

which Mr. Hickson has dealt with this very matter generally. For a long time before this he had been exercised in his mind as to the practice which prevailed of rigging schedules ; and he had been considering how he could best obviate the evils which arose from it. He came to the conclusion that the only way to do so would be to introduce the new system of tendering, which he explained to your Honor in his evidence at a very early stage of the proceedings, when your Honor questioned him upon the matter. I need not refer to what that new system is, because it is already well known to the Commission. There was some question affecting the subducts which has been already fully explained. I do not know that there are any other items to which I need specially refer. I take it that the question of the bluestone pitchers was the main question upon which this charge was based. It is obvious that a mistake was made in the plan and schedule and in the copy of the schedule which went out to the resident engineer, and I am sure that your Honor will not impute to any officer of the department any intention of making a mistake of that kind with the object of giving these contractors any advantage. The idea, I submit, is too absurd to be entertained for one moment. There is no evidence whatever that that was the case. It was evidently a mistake ; and these mistakes will happen, especially in a large department such as this, which has to deal with such a vast number of contracts of all natures and sizes. I will proceed now to deal with the next charge.

With allowing the contract to be taken up by Carter, Gummow, & Co. with an insufficient bond, and with ultimately breaking that bond by remitting the retention money and writing a minute by which the Minister was deceived and induced to consent.

The bond, in this case, was signed by Mr. Henty and Mr. Scrutton. Some stress was laid upon the fact that these contractors were not bound to make a cash deposit. The reason for that has been explained. They were allowed to substitute personal security for cash, because they had agreed to accept payment on the contract in funded stock. Here is another of those arrangements which I submit are well within the powers and functions of the Minister, acting with his responsible officers under him, if he thought it was a proper and business-like arrangement to make. Such an arrangement was made. The bond was taken for double the amount, and I do not know what objection can be taken to the names of the two bondsmen. So far as the charge relates to the insufficiency of the bond, the evidence is all the other way—that the bond was a sufficient and proper one, such as is usually taken in such cases. Then with regard to the other part of the charge: “With ultimately breaking the bond by remitting the retention money, and writing a minute by which the Minister was deceived and induced to consent,” that minute in which we are charged with deceiving the Minister must be the minute which appears upon page 127 of the printed papers. It is written by Mr. Davis, and is under date the 21st September. As far as I can see, if there is any charge of deception in connection with that minute, it lies in the fact—upon which some little stress has been laid by Mr. Parkes in the course of his examination of witnesses—that Mr. Davis refers to one of the bondsmen, Mr. Henty, as the firm of Henty & Co., a firm which, I suppose, may be regarded as perfectly safe. It is too trivial a matter to discuss seriously—that, because Mr. Davis, in mentioning the names of the bondsmen, happened to refer to one of them by his firm’s name, when, in reality, the Crown only held as a bondsman the individual who happened to be a member of the firm ; there was deception. I will not say another word about that. It is too frivolous a matter. Then as to charge No. 4. That is another case of advance upon material with which I will deal in connection with the similar charge under the heading of other contracts. As to charge No. 3 :—

With paying to the contractors large sums of money which they (the departmental officers) were not compelled to pay under Carter, Gummow, & Co.’s contract with the Crown.

I must leave it to Mr. Parkes to point out from the evidence what these large sums of money are, because, at present, I do not quite know what it is we have to answer, and what these large sums of money which we are charged with paying to the contractors, but which we were not compelled to pay, can be. Then, in regard to charge 5 :—

With incompetency in carrying out and administering the contract.

That is one of those charges which are so vast and so vague that I do not quite know how to deal with it. At present, as far as I can see, there is no direct evidence in support of it. Perhaps Mr. Parkes will be able to call your Honor’s attention to evidence which shows that there has been incompetency on the part of the department in the carrying out of this work ; but as some slight evidence in the opposite direction I refer your Honor to papers—I am not quite sure whether they are in evidence or not, and if not I will ask if there be any necessity that they should go in evidence—upon pages 121 to 124 of the printed papers, commencing at paper No. 7 and continuing to paper No. 14 inclusive. Your Honor will there see an illustration of the care and foresight which was adopted by the officers of this department in the administration of this contract. It will be seen that the question arose as to the method of constructing

constructing the sewer and so on, wholly in concrete, or in brick and concrete. Mr. Davis wrote a minute, which your Honor will find upon page 121 of the Parliamentary papers, under date of the 18th January, 1894, in which he says:—

With a view of ascertaining which would be the cheaper method to adopt, I have had comparative estimates prepared at the contract schedule rates, which I attach.

Your Honor will see from the papers which follow how he deals with the whole matter, and how carefully the whole thing is gone into. Mr. Davis makes certain recommendations, and the whole thing is thoroughly thrashed out to find out what will be the cheapest way of doing this work for the country.

*His Honor*: I do not know whether these papers have actually been put in so as to form an appendix. They have been referred to more or less indirectly, and, perhaps, some of them have been put in; but, if you wish them all to go in as an appendix, Mr. Smith, I think it is quite fair that that should be done, because the papers are quite as much public property as are any other of the documents which have been put in.

*Mr. Smith*: I should like the papers to go in as an appendix, your Honor, inasmuch as they show the care which the officers of the department exercised in seeing that the work was carried out to the best advantage of the country. As a matter of fact, Mr. Davis did refer to the papers in his evidence.

*His Honor*: The whole of these papers might have been put in holus bolus, and perhaps that would have been the simplest way of dealing with the matter, had it not been for one great difficulty which is not at first obvious, and that is, the difficulty of afterwards making up the report. It is also a question of expense to some extent.

*Mr. Smith*: There is another matter which I submit shows what care was exercised, and that is, the saving made upon this contract by the substitution of one sewer for two. That is referred to by Mr. Davis in his evidence upon page 395, and it is also referred to by Mr. Hickson. The saving up to a certain date amounted to £1,100, and, as Mr. Davis pointed out, there was a prospective saving of some £9,500 more. I submit that there is no evidence at all to show that there was any incompetency, but that, whatever evidence there is, is all the other way, it appearing that every care has been exercised. I come now to Contract 79A, which, as your Honor knows, is the extension of the North Shore Contract 79. In connection with that contract we are charged,—

With inducing the Minister, on the plea of urgency, to let the above Contract 79A to Carter Gummow, & Co. without tender, and upon the departmental estimate, by which a loss is liable to be sustained by the Crown.

This is one of those extraordinary charges, which I confess I cannot understand, in the face of the evidence, and of the facts set before Mr. Parkes before there was any thought of the granting of this Commission. Mr. Parkes then had before him so plain a statement of the matter that I really cannot understand how such a charge can have been put forward at all in the first instance; and, Mr. Parkes having heard the evidence, it is still more incredible that such a charge should have been persisted in in the amended charge-sheet of 4th September. I will deal with the charge as shortly as I can, and perhaps I cannot do better than read to your Honor a portion of a speech made by Mr. Lyne, in the Legislative Assembly, on the 26th September. I think when your Honor compares that speech with the evidence given by Mr. Lyne, here you will see, not only that Mr. Lyne is responsible for the granting of the contract, and that he himself accepts that responsibility, but, further, that that fact was clearly pointed out to Mr. Parkes at the time he made his charges in the House on 26th September. When Mr. Parkes was examined here I asked him about this speech of Mr. Lyne. He told the Commission that he did not hear the speech—that he was not in the House at the time. He gave that evidence just before the adjournment of the Commission, and on the following day I pressed him upon this very matter, as to whether he was or was not in the House at the time Mr. Lyne made this speech. I referred him to the report of the speech in *Hansard*, page 1209, of the Session of 1895, from which it clearly appears that Mr. Varney Parkes interjected during the course of Mr. Lyne's speech a remark with regard to another matter. I drew Mr. Parkes's attention to this, and then Mr. Parkes told us that although he was evidently in the House at the time when Mr. Lyne was referring to the Johnstone's Bay matter, he was not there when this particular matter of the North Shore extension was dealt with by Mr. Lyne. Mr. Parkes was pressed upon the point again, and when his attention was drawn to it, he said, in reply to Question 15171:—

There is no doubt I was there during the first portion of his speech.

On being asked whether he was not there when Mr. Lyne referred to Contract 79A, he said,—

I do not think so. If I was, I did not hear him.

It is almost incredible, I submit, that a man in Mr. Parkes's position—taking the responsibility of making these charges—should come here and say that he was not in the House when Mr. Lyne was dealing with  
this

this very important matter. Mr. Parkes had just charged Mr. Hickson, by reason of his son's being a partner in the firm of Carter, Gummow, & Co., with giving this extension of Contract 79A to the firm, and when the Minister who gave the extension deals with the matter Mr. Parkes either was not in the House or, if he was there, he said he did not hear Mr. Lyne's speech. What does Mr. Lyne, himself, say with reference to this matter? At the bottom of the second column of page 1207, in *Hansard*, of the session of 1895, Mr. Lyne said:—

I shall deal only with the contracts at North Sydney. The honorable member for Canterbury said that £35,000 worth of work had been given to Carter & Co., at North Sydney, without tender, and he also referred to a contract involving £12,000 or £13,000. This is the only contract of which I know anything. As far as my memory serves me, Carter, having had the main contract, was carrying it out remarkably well, when an application was made by the honorable member for St. Leonards for an extension of the work, because of the number of unemployed to which it would give employment if it were carried out without the delay which would be caused by calling for fresh tenders and requiring new contractors to obtain new plant. The contractors required £16,000 or £17,000 for the work; but the Engineer-in-Chief reported that the Departmental estimate was, I think, some £2,000 or £3,000 less than the schedule rates. I then had an interview with the honorable member for St. Leonards, and, I think, with Mr. Carter, though I should not know that gentleman by sight now, the outcome of which was that the firm agreed to take the work at the Departmental estimate. In a case of this kind, when the Minister has a good man as a contractor and sees that needed employment can be given by extending his contract, he is entitled to use his power to extend the contract. There are contractors and contractors. There are contractors who do their work for the Department well, while there are other contractors whom, because of their past work, I would not allow to have another contract if I could prevent it. Speaking with an experience of a good many years, I would say that it is cheaper to let men who do their work well have contracts than to give these contracts to men who have no capital, who slum their work, and who are constantly a serious loss and drag upon the Department. If I remember rightly, on that occasion—I should state in fairness to the Engineer-in-Chief for Public Works—I do not think that he advised me to do this work. I think that his advice to me was in accordance with the minute which has been read to-night; and that was, if anything, against doing the work in this way. But I considered that I was justified in the course I took, and I therefore took it. I am responsible for it, and I am satisfied that the work is well done.

It would be impossible to have clearer evidence than we have in that statement as to who is responsible for granting this extension to Carter & Co. Your Honor may remember that, when Mr. Lyne was called here to give evidence on another matter, he, at the close of his evidence, referred to this very contract. In reply to question 9224, he said—

9224. You did not know of the existence of this paper? No; I did not. There is one matter to which I should like to refer. I have seen in the newspapers some reference to the extension of the North Shore Contract. That is a matter which applies to myself as well as Mr. Hickson. Carter & Co. were carrying out the North Shore Contract, and, when they had about finished the work, there was an extension to be done. At that particular time there was a good deal of distress about. The men who were employed upon the contract were likely to be turned adrift, and the question arose as to whether we should invite fresh tenders for the extension or not. I think that was the only time I ever saw Mr. Carter, or some other gentleman, whoever it may have been, connected with the firm. I inquired what the cost of the extension of the sewer would be, and I think they wanted £16,000 or £17,000. The Departmental estimate was about £12,000 or a little over, but they would not, for some time, take the lower sum, and I spoke to Mr. Hickson about it. He was certainly in favour of inviting fresh tenders, which I should have done had they not eventually taken the contract at the Departmental price. I think I did, in my minute, write that there was to be no claim of any kind for extras. I am not quite sure about it, but I think I made some minute of that kind. Even after I had practically made up my mind to do this, Mr. Hickson suggested that fresh tenders should be called; but I wished to get the work on as quickly as possible. Besides, Carter & Co. had a good record in the office. I looked upon them as one of the best firms of contractors we had for that class of work, and I decided to accept their tender at the Departmental estimate. What I wanted to say, however, is that Mr. Hickson never influenced me in the slightest degree to do what I did. The course I took was rather in opposition to the course which Mr. Hickson desired me to take. I knew all the circumstances in connection with the case, and I am quite prepared to take the responsibility for what I did.

That is Mr. Lyne's account of the matter given on two separate occasions, once in his place in the House, and once when he was here as a witness, and his statements are made, as your Honor sees, entirely from memory and without having the minute before him; but I should like to refer to the minute because, as I submit, and as I tried to get Mr. Parkes to see in his examination, it is clear beyond question from the minute itself that this was the true explanation of the affair. Upon page 335 of the Parliamentary return there is this minute by Mr. Hickson, of the 22nd of March, 1894:—

There is no reason why this extension should not be gone on with at once. I cannot, however, see my way to recommend that it be carried out as an extension of the existing contract, which, at schedule rates, would amount to £16,307 17s. 8d., whereas the office estimate is £12,831 19s. 6d. The greater part of this difference lies in one item, "Excavation in shafts," which, in present contract, owing to their great depth, carries a very high price, viz., 78s. per cubic yard. This Messrs. Carter & Co. are prepared to reduce to 40s. per cubic yard, which would reduce the total cost to £13,700, or about £1,000 above the office estimate. I believe, however, if tenders were invited we could get the work done under the office estimate.—R.H., 22/3/94.

That was submitted, and we then have a further minute. Mr. Lyne has explained what took place from memory, and I submit that that clearly agrees with the minute here. Mr. Hickson was inclined to recommend the calling of fresh tenders, as Mr. Lyne informed the House, and also informed your Honor. Mr. Lyne then had evidently seen the contractors, and they were willing, it appeared, to make a further reduction and to come down to the office estimate. Mr. Lyne says that as the contractors were willing to come down to the office estimate he determined to let them have the contract, because he wanted the work done at once. The contractors had all the necessary plant, and the work, it was pointed out, would give the unemployed employment. Thereupon the matter was sent to Mr. Hickson, and your Honor will see that that is the way in which he came to write his minute of 29th March, 1894:—

Referring to the Minister's intimation this morning, that he was prepared to let Messrs. Carter & Co. carry out this work as an extension of their present contract, provided they agreed to do so for the departmental estimate of £12,831 19s. 6d., no claims whatsoever to be made for extras, and all payments to be made at the allowed schedule rates, I have had an interview with Mr. Carter, who is prepared, on the part of his firm, to comply with the Minister's decision. Submitted for formal approval.—R.H., 29/3/94.

It is as clear as the noonday sun that the Minister gave a direct intimation to his officer that he had made up his mind—that he had come to a certain decision—and that, in spite of Mr. Hickson's recommendation as to fresh tenders, being called, the Minister's decision was to give the contract to these contractors for certain reasons which seemed to him to be perfectly sound and good ones. Mr. Lyne took the responsibility for what was done, and he still stands to it. Mr. Parkes was asked about that minute, and his attention was drawn to these very words, which to my mind, and to everyone else's mind, show that there was a clear intimation from the Minister. He was asked, at Question 15186—

15186. So that he clearly refers there to an intimation which he had had from the Minister? Yes; but I should have thought that he would have protested if he knew that the work could be got cheaper than the office estimate.

And then again, at Question 15193, he gives the following evidence:—

15193. Then Mr. Hickson goes on to say:—"I had an interview with Mr. Carter, who is prepared on the part of his firm to comply with the Minister's decision"—is that not so? Yes.

15194. So you see that the minute itself says that that was the Minister's decision which Mr. Hickson was instructed to communicate to these contractors—is that not plain? Yes, it looks to be so.

15195. That being the concession, how do you charge Mr. Hickson with a sudden change as you do in the next line? It is a sudden change, comparing these two minutes together. One cannot comprehend a man who writes a minute so positively as that first minute being so weak as to give away his position by writing the other, if they were sincere minutes; and they appeared to me not to be sincere minutes.

That is Mr. Parkes' explanation when his attention is drawn to this particular minute, which, as I contend, speaks for itself. Your Honor sees that he does not there complain—he could not dare complain in view of that document—that Mr. Hickson had induced, as his charge states, the Minister to give this contract to this firm of contractors. All that he complains of, when he is confronted with the minute, is that Mr. Hickson did not protest against the Minister's doing it, which is another thing altogether. This evidence was given before your Honor on the 31st August, so that Mr. Parkes' attention was drawn to this particular matter in a marked and pointed way some time ago. Still, in spite of that,

that, on the 4th September he hands in a new list of charges, persisting in this particular charge, which he made in the House on 26th September, 1895, and which was contradicted and explained conclusively there by Mr. Lyne on that date, that gentleman having also further explained it away by his evidence here. The minute itself has been pointed out here to Mr. Parkes. Still, in spite of that, he leaves before your Honor this charge, which it is apparent is absolutely without foundation of any kind. That, I contend, is another illustration of the absolute want of care and caution which has been observed in the preferring of these charges. There was a little matter arising under Contract 118 which is comprised in the second charge under that contract—

With allowing the contractors to have the benefit of labour performed by unemployed paid by the Crown to drain the works of the contractors, which drainage the contractors have to take the responsibility of under their agreement with the Crown.

I do not think it is necessary to go into that question at any length, but I would refer your Honor to the evidence of Mr. Davis upon pages 507 and 508.

*His Honor*: I should think that that charge could be no longer pressed—I should imagine not. Perhaps it is. If it is, you had better address yourself to it, Mr. Smith.

*Mr. Parkes*: I no longer press that charge, your Honor.

*Mr. Smith*: Then the next matter to which I have to refer is as to certain charges with regard to advances on material. These charges refer to three of the contracts—79, 79A, and 69. I would merely say this with regard to these charges—that this practice of advancing to contractors, in proper cases, on the security of material and plant has been shown to your Honor to be universal. This particular firm of contractors was not dealt with in any other way than were other contractors. The Government, when they see their way, always make these advances to contractors. Mr. Hickson referred to it in his evidence on page 576. He there referred to the reasonableness of the particular advances made in each one of these cases. I will do no more than refer your Honor to Mr. Davis' memorandum No. 3 upon page 502. In addition to that, I would point out that there is a clause in the contract itself, as your Honor is well aware—I think your Honor drew attention to it—under which all of the material and plant which comes on to the site of the contract becomes the property of Her Majesty, as soon as it is placed there, in virtue of the terms of the contract. In order to get over any question as to this plant and material being removed from off the site, in cases where it might be difficult to establish a hold over it, it has become the practice, and it was done in each one of these three cases, to take by way of further security at the time of advance a distinct memorandum which gives a charge over the plant and material wherever it may be. The contractors give this charge, and, under it, the Government have a right to follow the plant and material wherever it is. I know, as a matter of fact, that the question came up some time ago, and that this memorandum was framed and settled in the Crown Law Department to get rid of the objection that, although we had a hold over the material which was on the site, if it had been removed we might not be able to get it. When, therefore, these advances are made this particular form of memorandum is taken to get rid of that difficulty. With regard to defective work, there is a bunch of charges relating to it upon Contracts 69, 79A, 118, and the Glebe contract. As to Contract 69, the only evidence I am aware of is that of Benson, as to a certain short pipe. That, I think, has been explained by Mr. Griffiths and by Mr. Husband. Then we had the evidence of Darcus as to a certain syphon being out of line or something of that kind. That Mr. Griffiths has also explained. As to No. 79A, we have the evidence—the remarkable evidence—of Dawson, the workman who did this fraudulent work, as he himself admitted, knowingly. He did it behind the backs of the inspectors, as he admitted, so that it really does not concern the department a bit. Perhaps it is hardly necessary for me, as representing the department, to refer to this bit of bad work at all, because it was done behind the department's back, and, as your Honor knows, it would be absolutely impossible in underground work of this sort, if a man with fraudulent motives intends to do defective work, to stop him. It is impossible to check a man if he has made up his mind to do dishonest work in a case of this kind. You could not do so unless you had an inspector standing over every man during every working hour. The only remarkable feature of this evidence of Dawson's is this: that this work was done at the end of the year—in December—or after Mr. Parkes had made his first speech in the House preferring these charges. I think there is evidence showing that Dawson on several occasions—Mr. Andrews will probably refer to the matter—stated that if he did not get a certain thing he was going to make it hot for the contractors, or something of that kind, and that he would go and see one Varney Parkes, whoever he might be. This work was done deliberately by this man, who was cute enough to see that, in view of the statements made by Mr. Parkes in the House, if he went to him, it would be a lever to use in working the contractors. That, I submit, is a pretty good illustration of the misfortune which is found to arise if statements are made in the House on such matters on so little foundation. However, these statements have been made, and they have, I submit,

submit, been shown to have been made without foundation. In consequence of them it almost appears as if this man deliberately did this piece of bad work. The only other piece of alleged defective work is upon Contract 118, in reference to which there is some slight evidence as to some soft sandstone which is supposed to have gone into the work. As to the Glebe contract, there is evidence to the effect that some shale was flung down a shaft. That was the evidence of Caughey. I do not think there is any other charge in connection with defective work to which it is necessary that I should refer. I do not think I need labour the case as regards the charge as to withholding the papers from Parliament. As to the papers in connection with Contract 72, I think the allegation can be answered in one sentence, viz., that the papers in regard to that contract were never ordered to be printed by the House. The terms of the order speak for themselves, and there is no reference whatever to that particular contract. Mr. Christie has prepared another very elaborate memorandum, or minute, or whatever it may be called, from which one would come to the conclusion that these papers had been knowingly withheld. Mr. Christie refers to certain papers in that connection, and I submit, with the most absolute confidence, that your Honor will come to a totally opposite conclusion as to that—that, instead of the papers in connection with Contract 72 being required to be printed, they were not required at all. The reason why Mr. Barling thought it necessary to print the contract and the final voucher was, as he himself explained on page 439, that inasmuch as there was in Contract 79 a recital of the settlement of the claim with regard to 72, he thought it better to put in certain papers to show what was done. I may mention that the officers who were responsible for this return—Mr. Barling, who cannot be expected to go into detail, Mr. Davis, who was charged with the collection of the papers, and Mr. Hungerford—have all been examined before your Honor; and I think the conclusion is irresistible that no attempt was made to keep back anything which ought to have been printed. As to Contract 69, Mr. Christie again sets out in a memorandum upon page 380 the material documents which he thinks ought to have been printed. Upon this point Mr. Davis has given an explanation, which is to be found upon page 503. The explanation is a very simple one, and is perfectly plain and satisfactory. As to Contract 79A, Mr. Christie has written a memorandum, which is printed on page 452. That memorandum, I confess, had escaped me. I was not here when it was read, and, in going through the evidence, and seeing what it was that we had to meet, I missed that little document, so that we have tendered no evidence in regard to it. If your Honor, however, will just look at the memorandum itself, and will see what the papers are, I think you will conclude that there is no serious charge involved there. Of course, if your Honor should think it necessary, I will ask leave to call Mr. Davis now. Personally, I do not think it is necessary. Your Honor will see from the nature of the documents that they were documents of not very great importance, and no doubt the explanation is that they were in circulation, and that they were not with the records at the time Mr. Davis and Mr. Hungerford were going through them. With those few words I will leave that charge as to the withholding of papers from Parliament. We have the evidence of the officers concerned that every care was taken which could be taken in preparing the papers. The last matter I have to refer to—I have covered all the charges, with the exception of this charge, which was added quite recently—is a charge which seems to me to have been put in with the object of helping out the charge of defective work, which has so lamentably broken down—I mean the charge with regard to the shortage of cement. That charge was preferred after the new list of September 4th was put in. It was made on September 9th, and is to the following effect:—

With allowing faulty supervision of the contracts carried out by Messrs. Carter, Gummow, & Co., by which inferior concrete was supplied, making defective work, there not being the specified quantity of cement used, more particularly in Contracts 79, 79A, and 69.

It will be seen that this is a general charge, first of all of faulty supervision on our part by which these contractors have been able to get off with the use of a less quantity of cement, and that therefore we have an inferior sort of concrete to that which should have been put in under the contract; and, secondly, that that faulty supervision extends to all the contracts of Carter, Gummow, & Co., but in particular to the three contracts named—the two at North Shore, 79 and 79A, and the Marrickville contract, No. 69. First of all, if I may say so, there is absolutely no evidence before your Honor of faulty supervision on our part. The evidence, in fact, is all the other way. Mr. Davis gave some evidence as to the nature of the supervision exercised, and the way in which the returns were made by the inspectors. The department have put in, through Mr. Davis, a list of the engineers, resident engineers, and inspectors who supervised these three particular contracts named by Mr. Parkes in his charge. Some of these engineers and inspectors have been called here as witnesses, and if this charge had been before your Honor on the various dates upon which they were called opportunity might have been taken, if it were necessary, to elicit from them information as to the nature of the supervision they gave; but the charge came in afterwards, and I have not thought it necessary—I have taken the responsibility of that upon myself—to have these various engineers and inspectors called, because, as I submit, there is absolutely no evidence that

that there has been any faulty supervision. That being so, the question arises,—Upon what evidence is this charge based? It rests upon what Mr. M'Credie and Mr. Thompson told us, and upon certain memoranda written by Mr. Christie. With regard to Mr. M'Credie, your Honor will remember that he made certain tests, and that from those tests he came to the conclusion that for every cask of cement used we ought to get 20 cubic feet of sandstone concrete, and in the case of bluestone concrete 16 cubic feet, and no more. That, I believe, was supported by Mr. Thompson. Then Mr. Christie has been at infinite pains in searching the books, in connection with these contracts, for a great number of years, to find out the number of casks of cement purchased here, there, and everywhere. He has also been at infinite pains in making a calculation based upon Mr. M'Credie's tests, showing that there is a considerable shortage in the cement used. I submit that these tests of Mr. M'Credie, upon which the whole of this evidence is based, are absolutely unreliable. I submit that the evidence which we have here, which is opposed to them, is so conclusive that your Honor will not accept any arguments, founded upon tests of that kind, as having any particular weight. Mr. Davis has gone very carefully into the matter, and he speaks, not from similar tests made at the time, but from experience founded on the quantity of cement used upon contracts involving concrete. We have the evidence of certain contractors, who were called by Carter, Gummow, & Co. We have also the evidence of Mr. Griffiths, whom your Honor had before you on several occasions, and whom I think your Honor will regard as a capable officer and as a witness to be relied upon. The evidence which has been given by the witnesses to whom I have referred amounts to this—that, instead of the quantities of concrete being 20 feet and 16 cubic feet, it is nearer the mark to say that they are 27 and 22 cubic feet. Taking that as the more correct basis—according to the evidence it is the correct basis—Mr. Davis has prepared a memorandum, which is to be found upon page 631. In that memorandum he has dealt with the quantities of cement which should be used upon these contracts—79, 79A, and 69. This calculation he has made on the basis of 27 feet and 22 feet, and he has also taken the inspectors' returns, and those are tabulated, as your Honor will see, in connection with the three contracts. The total quantity used, according to Mr. Davis, should have been 15,606 casks, whereas the actual quantity appearing from the inspectors' returns to have been used is 15,619 casks. Mr. Davis is careful to point out that these returns cannot be relied upon absolutely, but he thinks they would be within about 5 per cent. of the quantity actually used. Then, inasmuch as Mr. Parkes's charge referred not only to these three contracts but to all the contracts of this firm of contractors, it was thought desirable to place before your Honor a statement of the quantity of cement which should have been used upon these contracts since the 1st of January, 1892, based, of course, on the previous data. That calculation appears upon page 632, and it shows the various contracts for that period. [It is shown that the total quantity of casks which should have been used on all these contracts amounted to 44,740, and that the inspectors' returns, so far as they are available, show the total quantity used upon the contracts to have been during the same length of time 44,630 casks. It will be seen that the calculations made by Mr. Davis agree substantially with the quantity shown by the inspectors' returns. There was some evidence, I believe, with regard to the amount of cement which these contractors had actually purchased during this time, and an infinite amount of trouble and pains has been taken by Mr. Christie in investigating this highly interesting matter. Certain evidence, as I say, has been given upon this point. What that evidence is, it is not for me to say. It does not concern the department in any way. It is a matter which concerns the contractors alone. All that I am concerned to do is to submit to your Honor that, on the evidence, it is clear, from our point of view, that there has been no faulty supervision of these contracts, and that, so far as we have been able to discover, there has been no deficiency of cement. I think that completes the whole of the remarks I intend to make upon these charges. But there is one matter to which I ought to address myself. I refer to three questions which have arisen in the course of this inquiry which are not involved in the charges, and which concern the action of three of the officers of the Department of Public Works. Perhaps your Honor will allow me to refer shortly to this question of the money transactions between these officers and Mr. Carter. There have been three instances. One was an advance of money by an officer to Mr. Carter, and in the other two cases there was an advance to the officer by Mr. Carter himself. The first case is that of Mr. Weedon, the engineer. In reference to that matter Mr. Carter was first of all examined, and he told the story very clearly upon page 210 of the evidence—how Mr. Weedon, having this money to invest, consulted Mr. Carter about it, the money being finally lent to Mr. Carter upon certain security which Mr. Carter gave him. The money was lent to Mr. Carter, and to Mr. Carter only, it having nothing to do with the firm's business. Mr. Christie has here been at work again, and the result of what must have been very trying and arduous labour is the memorandum which is to be found upon page 231, headed "Memo. *re* financial dealings of Messrs. Carter, Gummow, & Co. with Mr. S. H. Weedon, Government Resident Engineer, Sewerage Construction Department, and as to payments of interest." As Mr. Christie stated here, from his examination of the books and from what had been done with the cheques, which he appears to have traced all through, and from the then position of the firm, he could draw

draw only one inference, which was, as set forth at the top of the memorandum, that the transaction was not one between Mr. Carter privately and Mr. Weedon, but was one between the firm of contractors and Mr. Weedon. We also had Mr. Weedon called, and, in his evidence, which appears upon pages 244 and 245, we had the account of how it was that he came to lend the money to Mr. Carter. He states clearly and distinctly that the money was lent to Mr. Carter. A document was produced, and, as Your Honor may remember, there was great suspicion raised by Mr. Parkes at the time about the date of it, until Mr. Weedon proved conclusively that the document was executed on the date it bore, that it had been deposited with the Bank, and that he had only that morning, at my request, when I saw him outside, got the document away from the Bank. However, there was some suspicion, which was absolutely unfounded, about the date. In spite of Mr. Christie's calculations and inferences, it is quite clear, I submit, from the evidence that this was a transaction between two personal friends. Mr. Weedon was a personal friend of Mr. Carter, and he wanted to find an investment. The object to which his money was to be applied had not come off, and he spoke to Mr. Carter about an investment, finally lending the money to that gentleman, who gave him a charge over some private property. What Mr. Carter did with the money—whether he put it into the firm or not, is immaterial; but as a matter of fact, I believe it did go into the firm, as Mr. Carter himself stated in the first instance, so that there was really no necessity or use for the whole of this very elaborate investigation by Mr. Christie. I thought it right to refer to this matter, because I wish to accentuate the fact that this, like the other transactions, was simply one between two private individuals. I should mention that, at the time this transaction with Mr. Weedon took place, that gentleman had nothing to do with Mr. Carter's contracts with the Government, and that he has had nothing to do with them since. He is away, in fact, in another part of the country. As to the advance to O'Hanlan, at the time he had this money from Mr. Carter he was not in charge of any of his contracts. He was in charge of some of the work up to the year 1889 or 1890, but he has not since been in charge. His evidence will be found upon page 596. He there explains why he borrowed the money. He did so, it appears, to complete a house, he having been disappointed in getting the money from some other source. He appears to have mentioned the matter to Mr. Carter, and the money was lent to him for a short time and repaid. Then there is the case of Mr. Rudolph, who is also an engineer, and who has apparently got into some trouble with the Department, as your Honor knows, through some misunderstanding. He borrowed from Mr. Carter the sum of £250 to complete the purchase of the house. Oddly enough, the house was bought, I believe, from Mr. Reid, the Premier. Mr. Rudolph having borrowed the money it was given to him by Mr. Carter in the form of a cheque, that cheque being, I believe, paid into the credit of the account of Mr. Reid. One can imagine the flutterings in the mind of Mr. Parkes if his attention had been drawn to the fact that a cheque of Mr. Carter had been paid into the credit of the Prime Minister.

*Mr. Parkes* : As a matter of fact it was not so paid.

*Mr. Smith* : However that may be, that was the history of that transaction. Mr. Rudolph ceased to supervise any of Carter & Co.'s jobs after that date. With regard to these transactions, all that I wish to submit is that they were perfectly innocent. I do not think there can be the slightest doubt in your Honor's mind—if I may say so—now that you have heard all the evidence, that each one of these transactions was absolutely an innocent one. What I mean to say is that there was no corrupt notion in Mr. Carter's mind or in the mind of those who dealt with him in this way. Of course, as your Honor knows, it may be against the rules of the Department that any officer should have any monetary transactions, however innocent, with contractors who are mixed up largely with the Government, and perhaps your Honor may think that that is the only safe ground to take. I believe it is, and I believe that that is the ground taken by the Department—that in order to be absolutely above suspicion, their officers are not to have any monetary dealings with contractors whom they may have to meet professionally. It is a very safe and sound rule, and if there has been any departure from it in this case, I hope, at all events, that your Honor will hold that the action was innocently done. I think I have now dealt with all the charges *seriatim*, and I submit that the evidence conclusively proves that, as I contend, the main charge in Mr. Parkes' speeches—the charge as to the identification of this firm of contractors with the officers of the Department by reason of the fact of young Mr. Hickson being a partner in the firm—that that charge, upon which all the other charges hang to a very great extent, has absolutely broken down. It really never stood upon evidence, because there was no evidence to support it. With regard to the other charges which are now submitted, there is absolutely no evidence, in the proper sense of the term, which is sufficient to support them. I submit, therefore, that with regard to young Mr. Hickson, it is admitted that he was not a partner; and as to the charges in connection with his having an interest in the firm, instead of their being twenty-three in number, we have now only three. One of these charges, as I have pointed out, is absolutely absurd, because at the time at which that alleged concession was made, young Mr. Hickson was not interested in the firm in any way. As to the other two charges, it has been conclusively shown that young Mr. Hickson's slight connection

with

with the firm could have nothing to do with the action taken by Mr. Hickson in dealing with these important matters; in fact, the thing is too absurd to be seriously contended. I do not know whether Mr. Parkes is going to seriously contend it now. The charges, as I submit, having absolutely broken down one and all of them, and I venture to think, having been made, as I have said more than once, and have been able to point out more than once, without that due care and caution which every man with any sense of responsibility in dealing with a great and serious matter, such as the charging of a high officer of the State with corruption should take, I submit that it is a matter to be considered, how these charges came to be made at all. With regard to that I think we have not far to go to seek for the explanation. If your Honor will turn to Mr. Parkes' own statement made here on oath, and which appears on page 472, you will see that he gives us a history affording a clear explanation as to how it was that this thing came about, so far as the charges relating to Mr. Hickson are concerned. Bearing in mind, as I contend, that those are the charges which are the foundation of this Commission, it seems to me that the first movement at all in this direction, the germ of the whole matter, lies in one Webster. Webster's suggestion was the first which set Mr. Parkes' mind moving with regard to Mr. Hickson. Your Honor may recollect that Mr. Parkes stated that from 1890 to 1893 he had in his employment a man named Webster, and that it was he who gave him certain information with regard to Mr. Hickson's work in Adelaide. Mr. Parkes tells us that Webster had told him—

That Mr. Hickson, when he was employed at Adelaide, as an officer in charge of public works, had had misfortunes with those works which had put the Government of South Australia to a considerable loss of money. I made further inquiries about this matter, and I found that Mr. Hickson's works had come to grief in that colony. Then I became a little suspicious.

To my mind that was the germ of the whole matter. From that date Mr. Parkes became a little suspicious about Mr. Hickson. Mr. Parkes also tells us what his attitude was with regard to the Public Works Department. He tells us that at about this time—viz., 1891—he became a candidate for East Sydney, and that at the time of the election he heard from various sources, such as contractors' workmen, talk about defective work being done in the Sewerage Department. One can imagine the sort of talk which goes on at electioneering time. We all know that things are very likely indeed to be exaggerated, and we can imagine the sort of talk that went on in this case, and the sort of pledges which were given in return in the event of the candidate's being successful. We all know what goes on at electioneering time. At all events Mr. Parkes was elected, and we are told that he then turned his attention to the Works Department. He thought that the public works of the Colony should be managed upon a different footing altogether. He had made up his mind, from what he had heard, that very drastic measures were necessary to put the Department upon a proper footing. Your Honor will remember that Mr. Parkes told us that after his election he was sent for by the late Sir Henry Parkes, and that it was suggested that Mr. Varney Parkes should take the portfolio of Secretary for Public Works; but apparently the scheme for the reform of the Public Works Department which had been adopted by Mr. Varney Parkes did not find favour with the then Premier. At all events the portfolio of Secretary for Public Works was given to Mr. Young, and Mr. Varney Parkes did not become Secretary for Public Works. Mr. Parkes tells us that after that he tabled various motions in the House dealing with this very question of the reform of the Department of Public Works, but there was one motion which he did not mention to which I drew his attention in cross-examination. It is already in evidence before this Commission, and is set out upon page 399. It shows the nature of the reform for which Mr. Parkes was moving. His object apparently was the simplification of the machinery of Government, and for economy's sake to wipe away all the professional men in the departments. Engineers, surveyors, architects, lawyers, and photographers, were to be abolished, and the work was to be performed by independent competitors outside. There was another motion, as Mr. Parkes informed us, subsequent to that, and that was for a select committee to inquire into the method of contracting. It was dropped, because it was pointed out that it really amounted to a vote of censure upon the Reid Administration. Your Honor will see that that was the attitude of Mr. Varney Parkes with regard to the Department of Public Works at the time Webster came forward and gave rise to these suspicions in Mr. Parkes' mind as to the incompetency of Mr. Hickson. Who this Mr. Webster is, or where he is, nobody knows; but as, when I was pressing for this information, your Honor told us that it was not material to inquire further where he was, because Mr. Parkes had been good enough to tell us that, in turning to the official papers of South Australia, which were fortunately in the library at Parliament House, he found that Mr. Webster's statements were fully confirmed, I did not press the matter further. Mr. Parkes said, indeed, that Webster did not tell him as much as he found in these papers at Parliament House, so I think we may take it that the ground of these suspicions is to be found in the Parliamentary and other official papers which Mr. Parkes found. He was good enough to tell us where the books were to be found. They were produced here, and the consequence was, as your Honor will recollect, that we have attached to the evidence three documents extracted from these  
papers

papers which may be taken, I suppose, as the foundation of these disquieting rumours about Mr. Hickson. I should mention that particular reference was made to a particular work in South Australia—the Rivoli Bay Jetty. As to the papers put in, we had the evidence of Mr. Hickson, taken before the arbitration which arose out of the Rivoli Bay matter; and we had the report of Mr. Higginbotham, a report made, as explained by Mr. Hickson in his evidence, at the request of the Treasurer. We had also the evidence of Mr. Higginbotham, taken before a Royal Commission, or rather, certain parts of that evidence. These documents are, I understand, to be printed as appendices to the evidence. Mr. Parkes, in cross-examination, stated to me that he based his suspicions upon some evidence given by Mr. Hickson before the Royal Commission in South Australia. It turns out that that must be a mistake, because Mr. Hickson was not examined at all before the Royal Commission. I believe Mr. Parkes put that matter right afterwards, and it was stated that what he had in his mind was the evidence given by Mr. Hickson before the arbitrators. I shall not go into the arbitration matter in detail, but I will merely say that, if there be anything in the evidence of Mr. Hickson before the arbitrators which gave rise to the suspicion that any of his work had come to grief, or that, as Mr. Parkes put it when he was pressed upon the point, there was any action of Mr. Hickson's in South Australia of a similar nature to the matters with which he is charged before this Commission, namely, a corrupt connection of some kind or other with contractors—if there is any evidence, either of incapacity or of improper conduct of that kind, perhaps Mr. Parkes will be able to put his finger upon it when he addresses your Honor. At present I am utterly unable to see how any fair-minded man reading the evidence and the award of the arbitrators could have come to such a conclusion as to have had even the semblance of a suspicion in his mind. Your Honor knows what the contest in that arbitration case was. As far as I can make out, a great deal turned upon the question whether or not a certain plan was put in was the Government plan, and therefore bound the Government, or whether it was a plan which emanated from the contractors—whether it was their plan entirely, and whether, therefore, the Government was responsible for it. As Mr. Higginbotham points out in his report, Mr. Hickson, for the purposes of identification, and for those purposes only, had, on his arrival in the colony, affixed his name to the plan, and that gave the contractors a leg to stand upon in their contention. However, the arbitrators made their award, and it was to the effect that these contractors had no claim with regard to that plan. As far as I can make out from the report of Mr. Higginbotham and others, the signing of the plan was the only thing involving anything approaching to censure, so far as Mr. Hickson was concerned. There was no censure in the strict sense of the term, even as to that, because it is perfectly clear from the papers that Mr. Hickson arrived in the colony when the whole question of letting this particular contract was pretty well settled, and when the plans had been prepared by the contractors, as seems to be the practice in that colony. As Mr. Higginbotham points out, Mr. Hickson, without official experience, fell into the error of affixing his name to this plan, and that is the whole matter as far as I can understand it. With regard to the Commission which was appointed in South Australia, your Honor may remember that it was clearly pointed out by the President that it was not aimed at any individual officer, that there was no suggestion of blame attaching to any particular officer at all. He pointed out clearly what the object of the Commission was—that it was to inquire into the system of public works, as to whether they had, in that colony, got hold of the right method of going to work in such matters. Without blaming anyone in particular, the question which the Commission had to solve was whether the colony had got hold of the right method of carrying out its works. The report was not put in, because it does not relate to the branch of which Mr. Hickson was the head. As far as I can discover, there is no other report of the Commission affecting the department of which Mr. Hickson had control. That being so, I submit that, when your Honor reads the official papers which we have obtained from Adelaide, you will come to the conclusion that when Mr. Hickson left that colony, as he told your Honor, he left it with as clean and as high a record as he brought with him from the old country. We have in evidence the nature of the recommendations which he brought out with him. He brought out, among other documents, a letter from the Agent-General of the colony in London, and we have also in evidence a letter written to Mr. Hickson at the time the Government of South Australia found it necessary, in consequence of the reorganisation of the branches of the Works Department, to dispense with his services, and pointing out that it was in consequence of that reorganisation and for no other reason that that course was taken. I submit that that letter shows conclusively that at the time Mr. Hickson left the colony he possessed to the fullest extent the confidence of those he had to serve there. I am very glad the thing has been sifted to the bottom, because it shows that, after all, the suspicion which began in Mr. Parkes' mind from this circumstance, and which has kept growing and growing ever since, is, so far as it is founded upon the disclosures of these South Australian papers, absolutely without foundation. That must be the conclusion to which anyone approaching an examination of the matter with a perfectly unbiassed and judicial mind must arrive. Mr. Parkes tells us that he has no personal grudge against Mr. Hickson—in fact, he tells us that he did not know Mr. Hickson—that he did not meet him personally until he came in contact with him when he, Mr. Parkes, was a member of the

Public

Public Works Committee. We had before the Commission some evidence as to what took place in connection with that Committee. That evidence is shortly this: A certain trouble arose upon the Committee. Mr. Parkes had been the Chairman, and, in consequence of that trouble, he thought that the only course open to him was to resign. The trouble, I may mention, arose out of the Pymont Bridge question, which had been before the Committee for some time, and upon which the Committee had taken voluminous evidence, Mr. Parkes, as Chairman of the Committee, calling a great deal of outside evidence. This evidence having been called, Mr. Parkes, as Chairman, was permitted to make a statement before the Committee proceeded to consider its report, and in view of that statement it was thought necessary to recall Mr. Hickson and Mr. Darley, whose evidence, of course, would carry great weight with the Committee. These officers were both recalled, and the inquiry was virtually reopened. Mr. Hickson was cross-examined by Mr. Parkes at some length, and, the matter having been reconsidered by the Committee, they came to a certain conclusion. Portion of that report is set forth in Mr. Parkes' evidence upon page 474:—

The resolution which contains the present Committee's decision in their inquiry was passed on Wednesday, 7th November, but at the next meeting of the Committee, in consequence of certain statements made by the Chairman in condemnation of the proposed timber bridge approved of by the Committee, it was decided to reopen the inquiry for the purpose of further examining the Commissioner and Engineer-in-Chief for Roads and Bridges, and examining the Engineer-in-Chief for Harbours and Rivers. These officers were accordingly called before the Committee, and closely questioned on the points which had been raised by the Chairman. The evidence dispelled all doubt as to the stability of the bridge as designed, and confirmed the Committee in their decision to recommend its construction. The Commissioner and Engineer-in-Chief for Roads and Bridges pledged his professional reputation that the bridge will be thoroughly suitable—perfectly safe, containing no structural defects, and serving the probable traffic between Sydney and Pymont. He would prefer, he said, an iron bridge; but he recognised that it may not be desirable at the present time to erect such a bridge, seeing that his estimate of its cost is £220,000.

Your Honor knows, from a perusal of the documents, probably, that by a majority of eleven to four Mr. Parkes' contention was overruled, and a report was drawn up, based in a great measure upon the evidence given by Mr. Hickson and Mr. Darley. The Committee came to the conclusion that they would be right in relying upon the evidence given by these two officers—in fact, they say so in their report. Mr. Parkes then resigns, and he tells the public, through the press, that he had always thought the Committee was sworn to the salvation of the public funds, but that he found that the majority of the members were bent only upon the salvation of the interests of the official heads of the Public Works Department. That, he told us, was his experience of the Public Works Committee. Under these circumstances, and holding these views, he thought it right to resign his position as Chairman of the Committee. He seemed to think that his colleagues were acting more with a desire to save and to protect the officers of the department than with the object of protecting the interests of the public. I merely mention that as showing the nature of the conclusion which Mr. Parkes is so very hasty to draw. I need not refer to that part of the question except for that particular purpose. At all events, although Mr. Parkes has told your Honor that he has no personal grudge against Mr. Hickson, your Honor sees that he had had his suspicions aroused by that man Webster for a number of years; that he then made certain statements to the Public Works Committee, which Mr. Hickson's evidence apparently upset, the Committee agreeing with Mr. Hickson and disagreeing with Mr. Parkes, the consequence being that Mr. Parkes resigned. It will be remembered that when Mr. Parkes made his speech in the House he referred to the evidence of Mr. Hickson on that occasion as being so inconsistent as to amount almost to perjury; so that it was not only his late colleagues on the Public Works Committee who were charged with this, that, and the other thing, but also Mr. Hickson, upon whose evidence the Committee placed so much reliance. I have mentioned these circumstances because they tend to show the attitude of Mr. Parkes' mind towards Mr. Hickson without in any way contradicting his statement that he had no personal grudge. I would submit that these two things are perfectly plain: that Mr. Parkes had these grave suspicions as to the rectitude of Mr. Hickson—that is the only way to put it—and he also concluded that Mr. Hickson had committed something like perjury before the Public Works Committee. Furthermore, he had the feeling that his late colleagues on the Public Works Committee had preferred to believe Mr. Hickson, in spite of his own statement. Besides this we have clear evidence as to Mr. Parkes' attitude towards the Public Works Department generally. He was actuated at that time by a desire to sweep away altogether all the professional officers—to make a clean sweep and to begin on other lines altogether. That being the position of things, what happened? It appears that this firm of Carter, Gummow, & Co., as I

think your Honor will admit, is a firm which stands pretty well with the department. Not only the present Secretary for Public Works, but the late Minister, who is now leader of the Opposition—so that there is no political question at all in the matter—have come here and have spoken very highly of this firm of contractors. They are an enterprising firm—your Honor can see that—and apparently they were getting a little bit ahead of other contractors, and the feeling got about among some of these contractors that Carter, Gummow, & Co. were too much in the swim, as Mr. Parkes told the House in his second speech. He said that these contractors felt that Carter, Gummow, & Co. were so much in the swim, and that they were so much out of it, that they would like “to burst Carter, Gummow, & Co. up” I do not pretend to be able to give a definition of that elegant expression. Your Honor, I think, was inclined to take a limited view of it, and you were no doubt right in supposing that it did not mean that there was a desire to burst the firm up financially, but to break them up in their successful career with the department in getting contracts—nothing more than that. That may have been the intention, but, even putting that construction upon it, there is no doubt that these contractors were a bit excited, and we all know—Mr. Parkes certainly ought to have known—how very unreliable statements of this kind are in such cases. In his statement to your Honor, Mr. Parkes said :—

That brought about me certain contractors who gave me certain information. In every case I made an effort to find out the truth of their information. Of course I found out that a good deal of it was false, and that some of it was true.

Each of these contractors appears to have had his grievance, and one can quite understand how unreliable, in the circumstances, their statements were likely to be. One can quite understand that they would become excited. They had their grievances to start with ; but as they went on they exaggerated them to such an extent that the original germ of truth became absolutely unrecognizable. That seems to me to be the way in which this inquiry has come about. We have had evidence that this agitation was got up, in a great measure, by Williams. He was running to and fro between Mr. Parkes and the other contractors, and he afterwards brought in Maddison. One can quite understand how all these statements, one on the top of the other, got exaggerated. It is perfectly evident that there was no reasonable or systematic attempt made to get down to the truth of them. Unfortunately Mr. Parkes already had his mind biased by certain suspicions about Mr. Hickson, suspicions which, as I have pointed out, were perfectly unfounded ; in fact, Mr. Parkes has been a prey to suspicions all through. He suspects Mr. Hickson. He suspects his colleagues upon the Public Works Committee. And, working upon that bias, these contractors were able to instil into his mind the firm belief, when he made his speech on 26th September, that he was going to prove all these grave charges against Mr. Hickson. These contractors discovered, no doubt, that Mr. Parkes was a very willing listener : and that, to my mind, if I may so put it, seems to be the plain history of the circumstances leading up to this inquiry—a simple explanation as to how it is that Mr. Parkes now finds himself in the unfortunate position in which he is placed—the position of one who, from his public place in the House, and under the privilege rightly afforded to our members of Parliament, has brought charges against a high officer of State, which are not only absolutely untrue, but which never at any time had any reasonable or solid foundation in fact. I have no more to say except this, that I think there can be no doubt that there has been a most searching inquiry under this Commission, so that, whatever may be the result, at all events we shall know that no stone has been left unturned to get at the real truth of the working of our great Department of Public Works. There is only one point to which I wish to draw your Honor’s attention. I mentioned it, I think, at the beginning of my address. Although these charges have been formulated by Mr. Parkes, I conclude that your Honor will deal with the charges as made by him in his speeches, and with regard to those speeches I have assumed, all through, that they are formally in evidence before your Honor ; but, if there be any doubt about it, and if it should be necessary, I would ask that the speeches of the 26th September and the 12th May be recorded upon the minutes of proceedings of the Commission. Your Honor may remember that your Commission empowers you to deal with charges made in certain speeches.

*His Honor* : For the purposes of this Commission I take judicial notice of *Hansard* without the necessity of proof. No one, I presume, denies the substantial correctness of the reports. I hardly think, therefore, that it is necessary to include them in the minutes of proceedings of the Commission. I may or may not in my report allude to certain passages in those speeches. Perhaps I may feel myself bound to do so, because they may be taken to be the primary foundation of the Commission.

*Mr. Smith* : Then I have nothing to add except to say, on behalf of my client, Mr. Hickson, that with regard to those charges which affect his integrity, we leave the matter in your Honor’s hands with the most absolute confidence. With regard to the department generally, I may say that, with the exception of those few mistakes to which I have alluded, there is nothing chargeable at all against any one of the officers. On the contrary, as far as the evidence goes, they appear to have all done their duty and

to

to have dealt with these contractors to the best advantage of the country. It is quite evident that these contractors have been dealt with in a way exactly similar to that in which every other contractor who has dealings with the Department has been dealt with. I am much obliged to your Honor for having allowed me to address you at such length, I hope I have not labored the case unnecessarily. At the same time I hope your Honor will not think that in any of the remarks I have made I have expressed myself too strongly. I should like to say this in conclusion, so far as Mr. Hickson is concerned, that, Mr. Parkes having claimed here that he represents the public, I make the same claim on Mr. Hickson's behalf. He is at present the permanent head of the great spending department of this Colony—the Department of Public Works—and, acting in that capacity, I think he is fairly entitled to claim that he also represents large public interests, it being incumbent upon him to satisfy the public as to the way in which the public works of the Colony have been carried out under his control. This being so, I have endeavoured to keep that fact before my mind in dealing with these charges. Had it been a personal or private matter I might have, been tempted to make my remarks somewhat stronger, because I confess that Mr. Hickson has very strong feelings in this matter, and very naturally so, seeing that these charges have been hanging over his head since September last year. But whatever his personal feelings may be, I know his desire is that nothing should be put before your Honor except in a way which is perfectly fair and quasi-judicial. I have, therefore, endeavoured to adopt that line of conduct in dealing with the large mass of evidence which has been put before your Honor.

*His Honor*: I may say that I certainly do not think that, under the circumstances, Mr. Smith, you have exceeded what may be considered proper limits in regard either to the time occupied by, or the mode of, your address.

*Mr. Smith*: Perhaps your Honor will allow me to mention the printed papers under date of 19th December last. The papers contain Mr. Hickson's statement with reference to Mr. Parkes' speech of the previous September. I would ask that these papers be printed as appendices to the evidence.

*His Honor*: I will direct that that be done.

His Honor, at 1:20 p.m., adjourned the inquiry until 10 a.m. on Friday, 2nd October.

C. E. R. MURRAY,  
Commissioner.

---

FRIDAY, 2 OCTOBER, 1896.

His Honor the Commissioner sat at the Board room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. W. Andrews, solicitor, advising); attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, bond clerk, also attended.

Louis Blayney Mitchell, Henry Charles Mitchell, Trenham Old, John Alcock, and Richard Adams, were sworn and examined.

*Mr. Parkes*: Before Mr. Andrews commences his address, I should like to say a few words with reference to the application made by Mr. Smith at yesterday's sitting of the Commission, that the *Hansard* reports of the speeches, which are the foundation of this inquiry, might be placed on record upon the minutes. I endorse Mr. Smith's application, and for this very good reason—that there can be no doubt but that this Commission was based upon the speeches, and not upon the charges which I have handed in to your Honor. Mr. Friend, the Secretary of the Commission, waited upon me at the Legislative Assembly Chambers, by your Honor's direction, shortly after the issue of the Commission, and informed me that your Honor's proceedings would be greatly inconvenienced if I were to put certain charges before you. I told him that I was not a prosecutor in the matter, and that I need not have appeared before the Commission except as a witness. Mr. Friend explained to me that your Honor only required the charges which were contained in my speeches in the Legislative Assembly put into a definite form in writing. I gathered from what he said, that your Honor desired me to indicate the nature of the charges to be inquired into, and which I believed I had evidence to sustain. I put in the charges as I pointed out to Mr. Friend at the time, in compliance with your Honor's suggestion. I told him that I could not guarantee the evidence at that stage—that I could not guarantee the absolute truth of the allegations I made. Of course, could I have done that, there would have been no need for this Commission. This Commission was issued in order that full inquiry might be made into certain indefinite charges. I explained to Mr. Friend the position in which I was placed. I remember pointing out to him that without doubt if I failed to substantiate the charges I made they would be used as a weapon against me. However, he assured me that they were simply asked for as an indication of the course of inquiry I should prefer

prefer the Commission to take, it being left to me to bring forward evidence to sustain such definite charges as I might see my way clear to make. Under these circumstances I should prefer that the speeches which I made in the Legislative Assembly, and which are really the basis of this inquiry, should go in as well as these charges, particularly as reference has been made to various parts of those speeches, which references do not give the true purport of the words I used. I think your Honor will see the reasonableness of the application.

*His Honor* : It is a question of expediency,—that is, whether it would be better to make the speeches part of the material which will be bound together as forming the history of the Commission, or to leave them as they are, to be fished out of the proceedings of Parliament generally. Perhaps it would be more satisfactory to persons who read through the whole of the proceedings of the Commission from beginning to end, if any person should ever do so, to have these speeches before him, as part of the proceedings and attached to the other portions of the report. I think that, as you, Mr. Parkes, have applied that this should be done the speeches might, perhaps, be included in the proceedings. I can see that the application is a fair one. I will ask you to mark off what you consider to be the speeches having special reference to the matters before the Commission, so that no more of them than is absolutely necessary may be printed.

*Mr. Parkes* : I asked some questions with reference to the contracts ; but they are very limited in their scope, and perhaps it will not be necessary to include them. There are only two speeches, I think, which need be printed.

*His Honor* : I will direct, then, that such speeches as you may indicate be entered upon the minutes to come immediately before the beginning of your address. Of course, if the speeches are only to be obtained by turning to *Hansard*, any person reading the report might be put to some trouble in finding out what this important element in the proceedings actually was.

*Mr. Parkes* : One of my chief reasons for making the application is that extracts have been made from my speeches, by Mr. Smith and others, which might have a wrong effect, if separated from the context.

*His Honor* : I will now call upon Mr. Andrews to address the Commission on behalf of Messrs. Carter, Gummow, & Co.

*Mr. Andrews* : May it please your Honor,—I should like to preface my address with this observation that, inasmuch as Mr. Smith has gone fully into all these matters which may be said to be common to the case, as it affects the Department and as it affects my clients, it appears to me that it would be a waste of time upon my part to merely repeat the arguments which Mr. Smith has adduced, and which have been so clearly and eloquently put before you Honor. Mr. Smith's address then, to a certain extent, minimises the task which I have before me. It seems to me that the chief matters with which it will be necessary for me to deal will be the charges of defective work, of which there has been direct evidence tendered to the Commission, and of implied defective work by reason of the alleged shortage of cement. There is another question which the Department has not answered because they have considered it our duty to do so. It relates to the sureties given in connection with the Marrickville contract and the association of Bond & Hudson with one of the concessions alleged to have been made to my clients. This last question of Bond & Hudson's connection with my clients has been gone into thoroughly by Mr. Smith, and so far as that is concerned I do not think I need say very much. There are one or two little points with regard to Mr. Hickson, junr., upon which it will also be necessary for me to say a few words, inasmuch as they appear to me to be points which your Honor will have to take into consideration if it be necessary for you to go any further into the question whether that young gentleman was or was not a partner in the firm of Carter, Gummow, & Co. I propose to deal first with the question of defective work, and I will take first the defective work concerning which there has been direct evidence. I do not propose to deal with this work under the headings of the different contracts in connection with which it is alleged ; but I propose to take the evidence as given by each individual witness. I would impress upon your Honor that it has been sworn here absolutely by Mr. Carter, Mr. Gummow, and Mr. Forrest, the only contractors who are available, with the exception of Mr. Gillan, who had nothing whatever to do with the contracts in N.S.W., that they, to the best of their ability, endeavoured to carry out all the various works which have been entrusted to them by the Government during the last six years faithfully and well, and that they have extended to each and all of these works all reasonable personal supervision. Mr. Carter has told us that he personally superintended the purchase of material. He tells us that in every case he bought and paid for the very best material in connection with these various works. Your Honor will see that inasmuch as some of these works are carried out in both day time and night time it would be absolutely impossible for the contractors themselves to extend their personal supervision to every detail of the work which is done. To a certain extent they are relieved from the exercise of supervision such as would be exercised over ordinary contracts, because the  
Government,

Government, in their wisdom, have thought it right to employ men having a practical knowledge of the details of the work to supervise the whole of it. These inspectors are upon the ground during the whole of the time work is going on, whether it be by day or by night. I say, therefore, that my clients, under any circumstances, were entitled to place some reliance on this governmental inspection. They were entitled to assume that these inspectors would do their duty in a proper and businesslike way; and I submit, your Honor, that, as far as the evidence upon that point which has been tendered to this Commission goes, it shows that every one of these inspectors has carried out the duties imposed upon him by the department in a thorough and conscientious manner. If your Honor remembers the evidence concerning Inspector Reid, who was upon one of the North Shore contracts, it will enable you to form an idea of the faithful way in which some of these men have endeavoured to do their duty and to protect the interest of the department by which they were employed. Your Honor will also see that in large undertakings like these, which have extended over a period of from six to seven years, the contractors are to a certain extent at the mercy and in the hands of their workmen. No matter how careful the inspectors may be—no matter what may be the extent of the supervision exercised by the individual members of a firm of contractors engaged upon works of this kind—if a dishonourable and malicious workman is determined, for his own purposes, to do defective work there is absolutely no way of preventing him from finding the opportunity to do it. It must be borne in mind that during the period of years covered by these contracts my clients have employed considerably over 1,000 men. That brings me to this point—that out of that large number of men the only men who have come before this Commission to give evidence of defective work have been Dawson, Wright, Benson, Darcus, and Caughey. These are the only men who have come forward, and I hope to satisfy your Honor before I sit down that in most of these instances the evidence given is not to be relied upon. I would also point out to your Honor that the whole of the witnesses who have given evidence as to this alleged defective work have said that it was done without the knowledge of any one of the contractors. Dawson said that his bad work was done, not at the request of, but with the knowledge of, Reid, the contractor's foreman, at North Shore. Reid, the foreman, as your Honor may remember, absolutely denied that he knew that Dawson was doing this defective work. As to Wright, his evidence related principally to defective work in the sewer known as the Alexandria contract No. 61. He swore here positively that the concrete in that sewer was in some cases not put in to a greater depth than from 4 to 6 inches, the specification providing for a depth of, I think, at least 9 inches. The place which Wright indicated has been inspected by an independent witness, by a gentleman who has been brought here by Mr. Parkes to give evidence. I take it, however, that the whole of the witnesses who have come before your Honor may be said to be independent witnesses. What was the report of this gentleman in regard to this work? As far as he could ascertain, at the place pointed out by Wright, the concrete was put in to even a greater depth than was required by the specification. Wright also told us something about Mr. Forrest, who was supposed to be supervising, at one time, one of the North Shore contracts. He told us that Mr. Forrest was a gentleman who was addicted to drink, and, if my memory serves me rightly, he said that a very considerable portion of his time was spent in the absorbing occupation of pitch-and-toss. Your Honor has seen Mr. Forrest, and I venture to say that from the way in which he has given his evidence before this Commission you will arrive at the conclusion that he certainly is not a man who is addicted to drink. Furthermore, he has himself sworn that he does not drink and that he never pitched a coin in his life. I put it to your Honor, so far as Wright is concerned, that his evidence is not worthy of any credence. I come now to Benson, who gave some evidence as to a defect in a pipe-joint on the Marrickville contract. I do not think I need say much with regard to his evidence, because the department themselves have dealt with the matter in the evidence of Mr. Griffiths, who has told your Honor that the contractors are in no way responsible for any mistake or defect of the kind. It would seem to indicate that this witness, at least, came here to give evidence not knowing thoroughly what he was talking about. He may have thought in his wisdom that the mistake, if there was a mistake, amounted to defective work. It may have been Benson's opinion that this work should have been done in a way in which it was not done, but it was not his duty to determine that. That is a matter which rests with the responsible officer of the department, and he being satisfied with the way in which the work was done, that, in this instance, amounts to a perfect exoneration of the contractors. As far as I can remember, that is the only evidence which Benson gave in reference to defective work. Then we had Darcus before us. Your Honor will remember what style of man he was. I have been wondering ever since the man gave his evidence how my clients could have succeeded in any of their undertakings without his assistance. He led us to suppose that, at least as far as the Marrickville contract was concerned, he certainly found all the brains. What does his evidence amount to? He tells us that a siphon at the Illawarra Road was wrongly put in, and that this work was done by the contractors behind the back of the Government. The Government themselves, however, say, through Mr. Griffiths, the supervising engineer at that time, that the siphon was put in by his direction and at his request—that the work was done in a perfectly satisfactory

satisfactory and proper manner. That, it seems to me, is a complete answer to what Darcus may have thought on the subject. I think this witness also told us that some batches of concrete were mixed in an improper way. This gentleman was working up and down the contract, he tells us, supplying the brains for the whole of the work, and he had an opportunity, so he says, of seeing what was going on from the beginning to the end of the job. As the result of his acute observation, he says he may have seen five batches of concrete improperly mixed and used in the work. Suppose that all this genius tells us concerning the concrete is true, will your Honor, or will anyone else, say that, because a stone or two of a greater or less size than that specified is put into a batch of concrete—five batches if you like, five batches out of 6,000 or 7,000—that that is evidence of defective work on a job of such magnitude? The only conclusion to which any reasonable man can arrive is that a trifling thing of that kind—even admitting it for the sake of argument to be a fact—cannot in any way affect the stability of the work. Darcus also told us some story of an alteration of a chamber which was erected in a portion of this contract. A question arose as to what claim the contractors should put in by reason of the alteration. Darcus, it seems, was asked to value the wood required for the centering, and he valued it at from £5 to £6. He seems to have mentioned that valuation to Mr. Snodgrass, who was then a member of the firm, and Mr. Snodgrass, according to Darcus, said that he would have to charge £100 for the timber. Whether Mr. Snodgrass ever intended to charge £100 or not is immaterial from the fact that Mr. Millner, who went into this question, has told us that no claim was ever made by Mr. Snodgrass, and that he himself valued the timber at £16, that being the amount actually paid for it. I may point out that in cross-examination Darcus admitted that the £5 or £6 referred to in his evidence in chief was only a part of the timber which would have been used. I think that circumstance of itself tends to show that he is not a witness who can be relied upon, especially when it is considered that the defective work which he alleged was proved to be no defective work at all, and when he himself speaks of five batches of concrete out of 7,000 or thereabouts as forming substantially bad work. He led your Honor to suppose that my clients endeavoured to obtain £100 for timber which was worth £5 or £6, whereas it has been proved conclusively by the department that Mr. Snodgrass never asked for £100, and that nothing like that amount was ever paid. Mr. Caughey is the next workman to whose evidence I shall refer. What does he tell us? The only evidence he gave as to defective work is that at one of the shafts on the Glebe job there was put in at the bottom a small quantity of stone—he thinks about a foot—instead of concrete. That is like a great deal of the rest of the evidence we have had as to defective work. If this is the sort of evidence upon which the contractors are to be charged with doing defective work upon these large contracts, I think your Honor will have no hesitation whatever in dismissing that part of the case from your mind at once. Inspector Reid told us that at a shaft on one of the North Shore contracts he one day caught some men putting down dry stone. That allegation has been cleared up entirely by the evidence of both Mr. Davis and of Inspector Fowle. Those gentlemen looked into the matter thoroughly, and the result of their investigation was that, although dry stone may have been put down the shaft, it was used finally in the form of concrete. That statement of Reid therefore does not help forward in any degree the allegation of defective work. To remind your Honor of the sort of inspector Reid is, I will mention the circumstances, which transpired in the evidence, of his having discovered a chip upon one of the bricks, and his having in consequence of that discovery reported that defective brickwork had been done. When the department came to investigate that matter it was found that a chip about the size of a man's finger nail had been knocked off one of the bricks. Is it at all likely that this man, who was so particular as to report a chip off a brick the size of a man's finger nail as defective brickwork, would allow any really defective work to be done upon any job upon which he was an inspector. One would think that his eagle eye would be quite sufficient guarantee against anything in the nature of defective work. Reid, it has been shown—and my clients are of the same opinion—is a man who conscientiously endeavoured to do his duty according to the best of his lights; but although some men may endeavour conscientiously to do their duty, they manage to do it in such a way as to make it impracticable for other men who may have the misfortune to be associated with them in work or business to do theirs. I would remind your Honor of Reid's pathetic description of an interview which he had with Mr. Snodgrass just before 11 o'clock one evening. He seems to have thought that when he got to the top of a particular shaft he would have been murdered, but Mr. Snodgrass's murderous intentions seem to have resolved themselves into the very modest request that he would have a drink or sing a song. I think the evidence, as a whole, has gone to show that Reid is not by temperament fitted to be an inspector upon works of this class. It is found that the Australian working-man will not allow anyone to boss him in respect of any particular class of work of which he claims to have a thorough knowledge. As an instance of the indiscreet manner in which Reid performed his duties in the capacity of inspector, I need only refer your Honor to Inspector Fowle's report, and to the evidence given before this Commission by Mr. Spencer. The only other defective work of which Reid complained was this. He says that on one occasion the stone was not quite to his liking; that it was a little bit dirty, as he put it.

Well,

Well, that is so absurd an allegation in connection with a charge of defective work as applied to these large undertakings that I do not think I need say another word in reference to it. Some other evidence under this heading has been given by Chiene. Now, in connection with the question of the liberality of Mr. Carter, I should like to refer your Honor to Chiene's evidence in reply to Questions 4965-6-7 and 8. It will be seen there that, after Chiene had left the employment of Carter & Co., Mr. Carter gave him, for no apparent reason, a present of £20. Notwithstanding that gift, notwithstanding that act of kindness and generosity, Chiene comes here and imputes to his benefactor that he has, in connection with these contracts, done unreliable work. When your Honor comes to sift the evidence, you will find, I think, that Chiene knew nothing whatever about the matter of which he spoke. Someone appears to have told him that the work was done by certain persons for somebody else. That is the kind of evidence he gave. Moreover, he tells us that he saw one of the workmen going into the office with Mr. Carter, he—Chiene—being told to clear out. Because he was told to clear out, he assumed that Mr. Carter and the workman who went into the office with him were conspiring to defraud the Government. I think that is quite enough to illustrate the value of Chiene's evidence. The next gentleman who gave evidence under the heading of defective work was Mr. Bagge. This gentleman was an officer of the department for some years. Judging from his outside reputation, Mr. Bagge is a man of the strictest integrity. He has the reputation, moreover, of having always endeavoured to efficiently discharge his official duties. But there can be no doubt, I think, in the light of the evidence put before the Commission, that in regard to some of the matters of which he spoke he has been very much misled. His memory, also, as appears to be the case with all of us as we advance in years, appears to be getting defective. For instance, he has the idea in his mind—and it is really very difficult to form an opinion as to how it came there—that a culvert which was being erected at Strathfield, on the Parramatta Road—I mean the culvert known as the "Monier" culvert—collapsed while it was in course of construction. This idea on the part of Mr. Bagge was controverted by Mr. Smith. The allegation that the culvert had collapsed was proved to be utterly without foundation by the same witness, who had charge of that particular work. Mr. Bagge says that Mr. Davis afterwards took him out to the site of some contract and showed him some arches in the construction of which sand, instead of mortar, had been used. Your Honor will remember that Mr. Bagge could not even recollect the locality of this work. He had some idea that it was at Rose Bay, and it was only after the greatest difficulty that he could be persuaded to believe that the work to which Mr. Davis really took him was that known as the Waverley contract. In regard to that contract it has been proved—and this is the extent of the defective work—it was really not defective work at all—that the inspector had passed bricks which did not seem to Mr. Davis to come up to the requirements of the department. Mr. Davis condemned the bricks, not in the ordinary way, but in this way—that, although they had been passed by his own inspector, he did not consider them fit to be used. He insisted upon the use of a better class of bricks, and his request was willingly complied with by the contractors, the department paying no more for the work. If there had been, as Mr. Bagge suggests, any defective work in the contract, it is not probable that the department would have paid for putting it right. Mr. Bagge, who was at that time the responsible officer under the Under Secretary in regard to this class of work, said that certain arches out in that direction—here again his memory was very cloudy as to the exact locality—had collapsed, and that Mr. Davis and he saw them together. The strange part of the incident is that if, this grossly negligent work was done, Mr. Bagge made no report of it to his superior officer. Bearing in mind the reputation which Mr. Bagge bore inside, as well as outside, the department, I would put it to your Honor that it is improbable that he would have allowed defective work of that character to pass without making a report, or without seeing that Mr. Davis made a report to his superior officer. I think that circumstance goes to show that Mr. Bagge's mind is in a state of confusion in regard to that as it is in regard to several other matters. If there were any instances in which arches collapsed, there is no evidence to show that that accident occurred in connection with the contracts of my clients. Mr. Bagge is evidently confusing some other work with this particular job at Waverley. He, like many other men who are no longer young, is a firm believer in the old systems which he learnt in his youth. He could not see, in any system of construction, an improvement upon the methods which he was taught as a boy. Your Honor knows very well that in the profession to which I have the honour to belong, as well as in other professions, there is what might be termed a constitutional objection to new fangled ideas. Without meaning to cast any reflection upon Mr. Bagge, I would point out that he is another witness to the generosity of Mr. Carter. He himself admitted that, after he had left the department, and when he could under no possible circumstances have benefited the firm, they bought material for him, and supplied him with money, so that he might make himself comfortable at his residence at Minto. Mr. Bagge, I am sorry to say, like a great many other persons who have been similarly benefited, is now inclined to regard the transaction as of a purely business character. In his evidence on the first day on which he came here, Mr. Bagge said that, from his experience of Messrs. Carter, Gummow, & Co., he could say that they were a reliable firm, and that they carried out their duties in a proper and

satisfactory

satisfactory way ; that, so far as he was concerned, he would trust them with the carrying out of any work under his charge, in preference to any other firm of which he knew. If the idea, which he subsequently mentioned, of the collapse of arches and of the using of sand instead of mortar had been in his mind with reference to my clients, it is not at all likely that he would have given them the excellent character he did. Another witness, Henry, has said that inferior stone was used upon Contract 118. Mr. Millner, the supervising engineer on that contract, has given a most distinct and emphatic denial to Henry's testimony. He says that the man must have been in error when he stated that inferior stone was used on any part of the contract. I come again to Dawson, and I approach this part of the case with some little difficulty, because it is irksome and distasteful to most men, I think, to make public reference to the actions of another man, which they know to be distinctly and absolutely immoral. In regard to Dawson, I have no hesitation in saying that, for his own purposes, for his own ends—in order that he might have what he considered a hold over this firm of contractors—he deliberately and maliciously left certain holes in the brickwork at North Shore. I say that that was done by him maliciously and deliberately. The North Shore contract, upon which this defective work was done, was inspected by Mr. McCredie. His evidence goes to show that in no places except those pointed out by Dawson could he find any trace or indication of bad packing. Wherever Dawson said there was bad packing, there, surely enough, he found it. We had, at a later stage, the evidence of Hart and King, who told us that sometime in September last Dawson told them that he would make it very hot—damned hot, he is reported to have said—for my clients if they did not constantly employ him. I would, in this connection, direct your Honor's attention to the fact that it was somewhere between the 24th and 26th of September last that Mr. Parkes made one of his speeches in the House.

*Mr. Parkes :* I think you will find that the questions were asked at that time, and that the speech was delivered in October.

*Mr. Andrews :* According to *Hansard* the speech was delivered on 26th September, 1895, and at some time thereabouts Dawson, for some reason of his own, told Hart and King what he intended to do if he did not get his own way with these contractors. After that, somewhere about December or January, we have this defective work done, and I put it to your Honor, that it is clear beyond all doubt that the work was done for the purpose, and in the manner, I have stated—that it was done deliberately for Dawson's own purposes. The man himself has admitted that the contractors never asked him to do the work. As I said before, he stated that it may have been done with the cognisance and at the request of Reid, the manager. That statement, however, Reid has absolutely denied. Subsequently Dawson met a man named Booth, and he told him that he had "readied it up for the contractors," or used words to that effect. Then he came here and gave his evidence, for what reason we are not in a position to say. He told your Honor that his conscience had pricked him ; but it must be borne in mind that his accommodating conscience did not make itself unbearable until he had left the employment of the firm—until after he had done this disgraceful work. His conscience only became rebellious when he found that the contractors would not submit to his attempts to blackmail them. I submit that the evidence of King, Page, Booth, and Hart is quite enough, taken in conjunction with the surrounding circumstances, to convict Dawson of his malicious intention. Dawson himself admits that he may have mentioned the matter to Mrs. Hart ; and we have another witness swearing that Dawson told him that he had "readied things up for the contractors." Let me refer your Honor to what Dawson says in reply to Questions 6772 and 6773. He was just afterwards asked whether he ever said anything to a man named King, and he said that King might have been in the house at the time, but that he was not "in the company." Dawson practically admitted, your Honor will see, that he left these holes deliberately, and there can be no doubt, in the mind of any unprejudiced person, that he left them simply for the purpose of blackmailing the contractors. To show your Honor what a thoroughly unreliable man he is I will refer you to the evidence he gave with regard to what he called defective packing at Emily-street on the Marrickville contract. He said that the sewer there, instead of being packed with concrete, was packed with shale, and that he supposed the contractors were paid for packing with concrete, that having been approved by the Engineer-in-Chief. Mr. Griffiths has proved that the packing in shale was done at his own request, as he considered that packing with shale, when the excavation was through shale, was better than concrete packing. Dawson assumes not only that the officers of the department could not see that the sewer was packed with shale, but that the contractors must have so packed it with the deliberate intention of charging for the shale packing as concrete, in this way defrauding the Government of money. This same man also said something with regard to some condemned bagged cement being brought in casks from a shed on Contract 118 and used in the work on that contract. It has been proved by Inspector Clymer, and by the person who sent this cement to the board, that it was not condemned cement. I think it was the witness Kady who explained why that particular cement was transferred from the bags to the casks in the manner described by Dawson. I do not think I need say anything more with regard to this fraudulent

fraudulent workman. Your Honor has seen him. You have heard his evidence, and you have heard what has been said by other witnesses. I may point out that these contractors, within the last six or seven years, have carried out Government works to the extent of over a quarter of a million of money. Notwithstanding that, the only evidence of defective work on the part of their workmen which has been brought before the Commission is in relation to these holes at North Shore; that, in another place, there may have been a foot of stone instead of concrete at the bottom of a sump, and that, according to Darcus, some five or six batches of inferior concrete were mixed. Taking the extreme value of the saving effected by this defective work, what does it amount to? What would the contractors have gained by allowing this work to be done, supposing it to have been done with their knowledge? At the most they would not have saved £50, and it is absurd to suppose that this firm of contractors, who carried out public works to the value of a quarter of a million of money, would sacrifice their reputation and would tarnish their honor for a paltry sum of £50. Of course it may be said, as Mr. Parkes interjected on one occasion whilst evidence was being given, that when once contractors have been caught doing bad work they may be supposed to have done it generally. But we are not here, and I submit that your Honor will not find it your duty, to go outside of the evidence which has been given. If defective work has been done, it must be proved in the ordinary and proper way. It is not to be supposed because, one man, who, for his own purposes, has deliberately done defective work, comes here and swears that he did that work for his own purposes, that the whole or a great portion of the work in these sewerage contracts is defective. Mr. McCredie, after making a thorough inspection of two of the contracts, said that had he been the supervising engineer he would have passed the whole of the work, as far as he could see, with the exception of the holes of which he spoke, and which appeared to him to have been deliberately left. With that exception he said that the whole of the work appeared to him to have been well and faithfully performed. So much for the direct evidence upon the question of defective work. That brings me to the question of what may be called implied defective work. I take it that the evidence which has been given before this Commission as to the quantity of cement which would be required to carry out various contracts has been given with the idea of proving that there was defective work by reason of the specified quantity of material not having been put into it. I think your Honor will agree with me that we have had unquestionable evidence that the bulking of concrete varies in different circumstances—that hardly any two batches of concrete will make, when put into position, the same quantity of work. The Department, in their wisdom, have seen fit to establish a rule founded upon the experience which they have gained from the time these sewerage contracts were first undertaken up to the present time—a period of many years. What do the Department say? They say, from the experience of years, and not from the results of one or two tests made, nobody knows where and when, that sandstone concrete will bulk 27 feet, and that bluestone concrete will bulk 22 feet. Taking that basis, the Department have proved that, upon certain contracts, viz., 69, 79, and 79A, the quantity required to be used would be 15,606 casks. The inspectors' returns, in respect of those contracts—and they have been in no way disputed—show that the quantity actually used was 15,619 casks, or a quantity slightly in excess of the estimate of the Department. Mr. Christie, in one of his valuable reports, has shown that the contractors purchased for these particular jobs 13,431 casks of cement. It has been proved by the evidence of Burcombe that he himself carted from Contract 72, the Alexandria contract, to North Shore at least 2,000 casks; and that during the time he was carrying this cement other carters were also carrying some. If that be so, at least 2,200 casks must have been taken over from the Alexandria contract to North Shore, which would give a total of 15,631 casks, or an excess of about twenty casks upon the estimate, so far as these contracts are concerned. If your Honor believes the Departmental evidence—and no attempt has been made to gainsay it—you can arrive at only one conclusion, and that is, that the proper quantity of cement was used upon each of these three contracts. Furthermore, Mr. Greenwood, Mr. Spencer, Mr. Eaton, and other contractors, have shown that they have been paid upon the basis adopted by the Department. Mr. Gilliver said that upon some of his contracts he had been paid for sandstone concrete at as high a rate as 30 feet, and that he had often been paid at the rate of 28 feet. Mr. Christie leaves the matter at the point that I have indicated, showing from his standpoint a very large deficiency. But the Department have gone a step further, and they have shown to the Commission the quantity of cement required to be used upon the whole of the contracts carried out by this firm of contractors. When I say this firm of contractors, I mean Carter & Co., and Carter, Gummow, & Co.; because some of the contracts were those of Carter & Co. only. The Department has shown that the quantity of cement required for the whole of the work done by this firm was 44,740 casks, whereas the inspectors' returns show that the quantity used was 44,630. Mr. Carter, in his evidence the other day, swore absolutely that from the time he first commenced as a contractor up to the present time he had purchased about 48,000 casks, and that he had no doubt sold a certain quantity to other contractors. It has been shown, however, that he need not have purchased more than 44,700 casks to carry out the work in these various contracts; that would be sufficient to provide material for all classes of work required from the starting of these contracts up to

the present time. If that be true then a lot of this talk about the heaping up of metal and sand is so much idle tittle tattle. In this connection I would also refer your Honor to the evidence of Mr. Griffiths, who until lately had charge of the Water and Sewerage Board's works. He supports Mr. Davis by saying that when he makes an estimate of the work to be performed for that particular branch he proceeds upon the basis of 22 feet of bluestone concrete and of 27 feet in the case of sandstone concrete. I do not think I need labour this part of the case any more. I think we have unmistakeable proof that there has been no defective work whatever so far as my clients are concerned; that they have supplied for the whole of their contracts a proper and legitimate quantity of cement. The next point I propose to touch upon has reference to the sureties for Contract 77. From our point of view the only persons who have any connection with or responsibility to the Government are those who absolutely sign the contract. They are the only persons the Government can recognise, and, looking at the matter from that point of view, it does not matter whether Mr. Forrest and Mr. Gillan were partners a hundred times over. The Government would not in any way recognise them. It may be that as a dry matter of law these gentlemen were partners in this particular contract. It is doubtful to my mind whether they were or not; but assuming that they were partners at the time that bond was entered into, it has always been considered by us that the only persons with whom the Government had to do were Mr. Carter, Mr. Gummow, and Mr. Snodgrass. They had that fact in their mind, and knew that it was not reasonable to ask any person who took this enormous risk—for it is an enormous risk to become responsible for £6,000, the responsibility being continued for three years after the completion of the works—to do so, except upon some consideration; otherwise it would not be a fair and businesslike transaction. It could not be expected that any person who had not some interest in the firm would take up that position. We know that it is a most common arrangement to make when persons become sureties, that they shall receive a proportion of the profits by way of interest for the risk they have taken. That has been proved in many cases in the Supreme Court, and no doubt it has occurred in many cases which have come under your Honor's judicial notice. Under these circumstances the contractors submitted these names to the Department in a perfectly honest and *bonâ fide* manner, and the Department not knowing, as they said—and there can be no doubt I submit on that point—that these gentlemen were partners in this particular transaction, accepted the names. Mr. Christie, in one of his reports, endeavoured to make it appear to this Commission that these gentlemen were not worth the amount they said they were worth, but I submit that the question is whether they were worth £6,000, not when the matter was investigated by Mr. Christie, or according to the recent valuation of a well known auctioneer; the question is whether they did honestly believe at the time they made their declaration that they were each in a position to pay £6,000 if this job should fail. I think your Honor will agree with me that both of these gentlemen who have been before the Commission gave their evidence in a straightforward manner. They tell us that they considered at the time they entered into the bond, notwithstanding what may have been said to this Commission, that they were worth £6,000. There seems to have been some little confusion as to the position of Mr. Forrest's property in New Zealand. How that arose we are not in a position to say; but Mr. Forrest has produced accounts which he has received from his agent in New Zealand, which show unmistakably that the evidence he first gave, notwithstanding the report from the Land and Income-tax Department in New Zealand, was true—that is to say that he owned this property. There may have been a little confusion as to the exact position of matters.

*His Honor*: It all depends upon the will of Mrs. Forrest, I think. There has been a mistake which Mr. Forrest has explained. It is clear enough now how the misunderstanding arose.

*Mr. Andrews*: The facts were, I think, that the property stood in Mrs. Forrest's name, and that that circumstance was overlooked. It appears that she died, leaving the property to Mr. Forrest. Some comment has been made upon the circumstance of one of these gentlemen swearing that he was possessed of real and personal estate when he was not in a position to show that he had any real estate. I suppose I have had as extensive a practice as has any man in Sydney in getting documents signed, and I find that, as a rule, there is no difficulty in getting persons to sign documents if they are satisfied that they are substantially correct, and without going into the details of them; and I put it to your Honor that Mr. Gillan, at the time he made that declaration in which the words "real estate" occur, had this main fact in his mind—that he was worth £6,000. He was told that he had to make a declaration that he was worth that amount, and it did not perhaps strike him that real estate has the very definite meaning in law which it has. There is another peculiar circumstance in connection with Mr. Gillan's declaration, and that is another misconception which I find, from my own practice, often exists. Some men are too apt to think that houses which belong to their wives belong to them, and, perhaps for all practical purposes, they do. If Mr. Gillan, in making the declaration, thought of real estate at all—and it seems improbable that he did so—this circumstance must have slipped his memory. The house has been always talked of as his house, and he had always received the rent. It is quite conceivable, therefore, that he came to regard it

as his own property, although, from a legal point of view, it was his wife's. Quite independently of the question, however, whether this house was his own property or not, he was worth £6,000, and it is quite evident, to my mind, that he was unconscious of the term "real estate" being used in the declaration. Another point to which it is well, perhaps, that I should direct your Honor's attention is the position of Bond and Hudson in regard to one of these contracts. The facts gleaned from the evidence upon this point would seem to show that Bond and Hudson were originally the lowest tenderers for Contract 79. Prior to tendering for that contract, they had tendered for, and, indeed, were the lowest tenderers for, a job at Woolloomooloo. When they found that they were the lowest tenderers for the Woolloomooloo job, they, after considerable delay, refused to go on with it. Carter & Co. had a large stock of plant lying idle, and, rightly or wrongly, they conceived that it would be a good business transaction on their part—and it is certainly not an unusual one—if, in the case of Contract 79, instead of having to contend with a considerable delay and the final throwing up of the contract by Bond and Hudson, they induced that firm to withdraw from the contract upon the payment to them of a certain sum of money. This may be wrong from several points of view. Some persons may go so far as to say that it was morally wrong; but your Honor does not need me to tell you that a similar case is taken every day in connection with nearly every class of business. Hardly one large sale takes place in connection with which some such transaction does not occur. There is hardly an instance in which there are monetary transactions between business men in which it is not usual for persons to make an endeavour to remove competition at some small cost to themselves. My clients think that, if Bond and Hudson had gone on for some time and had eventually thrown up the job, they—my clients—would have been put in a very bad position, because their prices would have been known to the rest of the contractors, and in the process of re-tendering, some other contractor might—from a knowledge of those prices—contrive to just slip underneath them and deprive them of their legitimate rights. Assuming that Bond and Hudson had not been the lowest tenderers, my clients would have obtained the job on the first tendering. The peculiarity of the thing is that Carter & Co., when the Woolloomooloo job was re-tendered, cut out Gummow and Gillan. Both Carter & Co. and Gummow and Gillan, as your Honor will see from their joint protest, felt very sore that they should be called upon to re-tender for works after their figures had once been made known to the public. With regard to the concessions which are alleged to have been made to my clients, there are one or two matters which have not been emphasised by Mr. Smith, I think, as they might have been. It has been put forward, for instance, that the granting to the firm of Carter & Co. of the High-street and Ernest-street extensions at North Shore were concessions which the department should not have made to this particular firm. I do not think I need do more than refer your Honor to Mr. Davis' report upon page 509, showing how the giving of these small extensions to the firm—they were really part of the reticulation from the main sewer—came about. It will be seen that it was a matter of economy to the department as well as a saving of time. As one witness put it, it prevented injury to the sewer, which, if these particular contractors had not carried out the extensions, would have had to be tapped to permit of the extensions being made. With reference to the concessions in respect of Contract 69, Mr. Smith has gone very fully into that matter. All I need add to what he has said is this—that all the contractors who at that time accepted payment in Funded Stock were treated in exactly the same way as were Carter, Gummow, & Co.—that is to say, instead of giving a cash deposit they were allowed to find sureties for the due fulfilment of the work. Mr. Davis has handed in a list showing various contracts in the Department of Public Works which were let upon that basis. As to the rigging of the schedule in connection with this particular contract, I do not think that anything I could say would carry greater conviction to your Honor's mind than would the evidence of Mr. Gummow. He has explained fully the manner in which the schedule was made up. With regard to the Shea's Creek contract, Mr. Parkes, in his speech of 12th May last, asserted that the contractors were not only paid for the work they did, but that, on a portion of the work being washed out by flood water, they were paid for filling it up again. Mr. Parkes used these words—

I was told, and I believe it to be true owing to the authority from which it comes, that the Government officer has not only paid them for the work they did, but paid them for all the flood water washed out, and then paid them to fill it up again.

With regard to that allegation, I submit that not one iota of evidence has been forthcoming in support of it. I do not think, therefore, that I need address your Honor in regard to it. Coming to Contract 79A, I think it has been clearly demonstrated to your Honor that, so far as the giving of that contract to my clients was concerned, it was not a concession, but was a good business arrangement on the part of the department. The officers of the department were in no way responsible for it. Mr. Lyne, the Secretary for Public Works at that time, both in Parliament and before your Honor, has pointed out that he is prepared to take the entire responsibility for the letting of 79A without tender. I come now to deal with an entirely different matter—I mean some of the reports which have been made by Mr. Christie. If these reports mean anything, they mean that the financial position of my clients was, at least, unsound. If the reports do

not

not mean that, then all I can say is that Mr. Christie appears to have gone to an immense amount of labour in order to prove nothing. If he means only to insinuate that this firm, who at that time were carrying out various works—one job alone being worth £98,000—could do with money at a cheap rate, then his labour seems to have been wasted, because the proposition is so manifest that Mr. Christie certainly need not have taken pains to elaborate it. If, on the other hand, his reports mean, as I say they are intended to mean, that my clients were not in a sound position financially, then I say that, to that extent, they are disgraceful productions to emanate from a man who professes to be an accountant. One of these reports, which has been read to your Honor, shows that there was an amount of £2,000 of which Mr. Christie must have known at that particular time, and about which he says not a word in his report. That is the way in which we have been met before this Commission. Why should Mr. Christie completely ignore assets of the firm represented by this comparatively large sum of money? He must have known that the firm were at that time in possession of a very large quantity of plant, and that the Government of this Colony was indebted to them in a large sum of money. He must also have known, if he had taken the trouble to inquire—as he did take trouble in regard to every circumstance which could possibly tell against us—that the Government of South Australia at that particular time must have owed my clients nearly £10,000. Mr. Parkes, himself, protests now, I understand, that it was not the intention of any one of Mr. Christie's reports to show that the firm was not in a sound financial position. If that be so, perhaps Mr. Parkes, when he addresses your Honor, will have the goodness to explain what the intention of the particular report to which I refer was. I do say, with all respect to your Honor, that it is a pity that Mr. Christie should have been permitted to send broadcast over this country statements which he must have known were not true. Mr. Parkes, for some reason which is best known to himself, has insinuated that the £3,000 which was paid to Mr. Maddison and Mr. Ewing, respectively, was composed entirely of profits made by them upon the undertakings of the firm over and above the monthly allowance drawn by them as members of the firm. The insinuation is that this large amount of profit was made in respect of one contract, No. 69. Let me point out to your Honor, first of all, that of this amount the sum of £2,000 has been proved to consist of the return to Mr. Maddison and Mr. Ewing of their share of the capital which was put into the firm, and that the £1,000 remaining represents profit extending over Contracts 79A and 69, and also the Adelaide contract, which contract alone was worth £98,000. If, in respect of these three contracts, this firm of contractors cannot make a greater proportionate profit than that, I think it is quite conclusive that they cannot have engaged in the systematic defective work with which they are charged by Mr. Parkes, and that they cannot have received from the Government the concessions which they are alleged to have received. Mr. Gummow has sworn that at the particular time to which Mr. Christie refers the company was in an absolutely sound position, and that he was then, as he is now—if necessity should arise—willing to find a further sum of £5,000 for the benefit of the concern. That being so, what importance can be attached to Mr. Christie's investigations? They mean either what I say or they mean nothing. The only other point to which I intend to address myself relates to Mr. Hickson, junior. Mr. Christie has devoted an immense amount of labour, and no little time, and, from his point of view, I have no doubt, considerable ability, to the elucidation of various matters for the information of this Commission, and particularly to the investigation of the affairs of my clients. I take it that we should have had a very elaborate report from him had he been able to show that a single penny beyond his salary, and the small bonus of which we have heard, had ever been paid to Mr. Hickson, junior, by the firm. Mr. Christie has not only had access to the bank books of the firm, but he has had access to the private banking accounts of the different members of the firm. He has also had the benefit of a search through the private banking accounts of Mr. Hickson, senior, of Mr. Davis, of Mr. Hickson, junior, and of other persons. Notwithstanding the whole of these facilities at his disposal, he has not been able to trace—simply because it is not traceable—the payment to this young man by this particular firm of anything beyond his salary and the small bonus referred to in the evidence. It has been proved, beyond doubt, that when he was employed by this firm of contractors in Sydney he had at no time during that employment any business transactions whatever with the department. I do not think I need argue that matter any further. I join with Mr. Smith in regretting that Mr. Parkes, as a Member of the Legislative Assembly of New South Wales, as a public man upon whom are cast duties as well as privileges, should have been so grievously misled by the idle and, to some extent, malicious talk of disappointed contractors, and by the tittle-tattle of workmen, into the making of such serious charges against gentlemen who have administered various branches of the Department of Public Works for some years with honor to themselves and with profit to the country, and that he should have dragged before the world the affairs of the firm of Carter, Gummow, & Co., disclosing—not that my clients are ashamed at the disclosure—their whole business transactions, and exposing them to the broad light of day. My clients feel, within themselves, that they have been guilty of nothing which cannot be subjected to the most minute investigation, and they also feel it very deeply that Mr. Parkes, by listening to tittle-tattle, should have cast upon them such an enormous expense, combined with so much anxiety and trouble, the whole of which might have been avoided if Mr. Parkes had taken even ordinary precautions to ascertain whether the rumours and insinuations which reached him had any foundation whatever in fact.

[Extract

[Extract from *Hansard*, 26th September, 1895.]

Mr. V. PARKES (Canterbury): I bring this matter before the House in this form because it is necessary, in view of the fact that it is impossible to get an ordinary notice of motion placed so as to have it carried. During last Parliament I made every possible effort to have a motion carried which would insure a complete inquiry into the contract system of this Colony. That motion was opposed by the Secretary for Public Works as a vote of censure upon his administration of the department. It was therefore impossible for me to go on with my motion, because it would be inevitably defeated. I tried many other means of obtaining an insight into the methods of Government contracts, but I found that was also impossible to accomplish. You may make what representations you like to public officers and ministers, but they are referred to the public officers, and you can never get a truthful answer from those departments. I have made inquiries time after time since I have been a member of Parliament, in order to get an idea approximately of the position in which we stand with regard to these contracts, but you can get no truth whatever. I have taken that trouble, since I first gave notice of the motion to which I have referred up to the present time, in order to follow out some case which would allow me at least to place before Parliament the real reason why there is a necessity for an inquiry into the working of our public contracts. I first want to point out that this contracting in vast sums of public money must be conducted with the greatest purity possible, with the greatest equity, and with the greatest amount of daylight let into it which is possible. Unless it is regulated upon some proper principle, no contractors of any repute will feel secure in sending their tenders to the Government. When contractors tender for large public works they have to go to great expense in preparing their tenders. They will not do that if they have the slightest suspicion that there is favouritism shown by the officers of the department to any special contractors. You cannot get open tendering and the freest competition if there is a shadow of doubt that the utmost equity will be exercised in giving the contract to contractors according to their tenders. The case which I am about to cite will illustrate the position I take up. There is a set of contractors whose names or titles are Messrs. Carter, Gummow, & Co. They contract for various works in this country—at present most of them are about Sydney. This firm of contractors are identified with the Government in the most suspicious fashion. During last week, or the week before, I asked the Secretary for Public Works whether Messrs. Gillan and Forrest were not sureties for the proper fulfilment of the contracts of this firm of Carter, Gummow, & Co. The reply I got was that Messrs. Gillan and Forrest were the sureties for those contractors. I wish hon. members to closely follow this matter. What I am about to read is a notice which appeared in the *Sydney Morning Herald* on the 13th of this month—that is, last Friday week—not very long ago. The notice shows that a dissolution of partnership took place, and that the very sureties for Carter, Gummow, & Co.—Messrs. Gillan and Forrest—are members of this business. The following is the notice:—

Notice is hereby given that the partnership lately subsisting between us, the undersigned, John Carter, David Graham Snodgrass, George Forrest, Frank Moorhouse Gummow, James Gillan, George Maddison, and Peter Ewing, as contractors, carrying on business in Adelaide (South Australia) and Sydney (New South Wales) under the name, style, or firm of Carter, Gummow, & Co., was on the first day of April, 1895, dissolved by mutual consent in so far as regards the said George Maddison and Peter Ewing, who retired as from that date from the said firm. All debts due or owing by the said firm will be received and paid by the said John Carter, David Graham Snodgrass, George Forrest, Frank Moorhouse Gummow, and James Gillan, who continue the business under the same style of Carter, Gummow, & Co.

As witness our hands this 1st day of April, A.D. 1895.

|          |                  |                  |
|----------|------------------|------------------|
| (Signed) | F. M. GUMMOW.    | GEORGE FORREST.  |
|          | JOHN CARTER.     | GEORGE MADDISON. |
|          | D. G. SNODGRASS. | PETER EWING.     |
|          | JAMES GILLAN.    |                  |

That is a nice state of affairs. I wish to point it out to hon. members, if they do not quite realise it. If the Government accept sureties consisting of persons who are members of the firm of contractors, supposing the contractors go insolvent, or cheat the Government by defective work, suppose they enter into fraud to defeat the Government in large contracts of £30,000 or £50,000, what check is there upon them? The very specification which the Government issue makes it imperative that these sureties shall be disinterested persons altogether. The object of having sureties is to have men of means at the back of the contractors, so that if anything goes wrong—if the contractors go insolvent, or defraud the Government, if they carry out bad work, the Government can come down upon the sureties. But here is a case where these contracts total nearly £100,000, with sureties of their own partnership. This is a nice state of affairs. I wish to go further, and to show that there has seldom been a case, taking it in this way, in which any private business would offer to give away contracts to the extent of £20,000, without offering them to competition and to tender. No private individual would ever dream of going into such a business transaction such as that. Yet this firm of contractors, Messrs. Carter, Gummow, & Co., have received between £45,000 and £50,000 of Government contracts without any tender. Not that there were no contractors to tender, because we know that at the present time of dearth of employment there were any number of contractors to tender, in order to keep their plant from being idle. They were willing to tender for the smallest work possible; yet this work is given out without tender to this special firm of contractors. I asked the Secretary for Public Works last week what connection Mr. Hickson had with the firm and with this work. I was told that Mr. Hickson was the engineer to these contractors; but I am informed, upon the most reliable authority, that of a Mr. Maddison, the contractor who has left this firm, that Mr. Hickson took the position as a partner in the firm, he being a son of the Engineer-in-Chief. Now, it is an unfortunate position that this firm should have been allowed contracts under such circumstances as these; their engineer having to communicate with his father, who is in a position in the Public Works Department, in which he could grant all sorts of concessions. This firm are the only contractors who during the last twelve months have received these numerous concessions. I have it upon the authority of Mr. Maddison, who has undertaken to produce a copy of the telegram, that a wire was sent in March, 1894, by one of this firm of contractors, Mr. Carter, to another member of the firm, Mr. Gummow, who was then in South Australia, to this effect: "Mr. Hickson must be taken into the firm at any cost." It was about this time that Mr. Hickson left the department, as his father said, on the score of retrenchment, and took up his position as an alleged partner in this firm; or, as I have been informed by the Minister, their chief engineer.

Mr. GARRARD: Has the hon. gentleman the telegram?

Mr.

**Mr. V. PARKES:** The retiring partner assures me that he will produce a copy of the telegram. If it is not forthcoming a copy can be obtained from the Telegraph Department. He is willing to make a statement on oath, however, that this thing occurred. Having established this connection between the Engineer-in-Chief's son and the firm, I intend, presently, to show what concessions were given to these contractors. In the first place they competed for some sewerage works which were going on at Balmain. Hon. members are well aware that these contracts are tendered for nowadays at schedule prices, that is to say, quantities are taken out and the Government officers place schedule prices upon each of the items. Fifteen firms of contractors tendered for the works at Balmain at schedule prices, and the lowest tenderer was the firm of Messrs. Carter, Gummow, and Co. These contractors sent in a price ridiculously low as compared with the fourteen other firms tendering. Their tender was 28½ per cent. under the schedule prices. The next was 18½ per cent. After their tender was accepted, and after they were notified of the acceptance, they were enabled to place plans in the department for the carrying out of the work upon an entirely new plan, called the Monier system. The other contractors had no opportunity of competing with the firm for the carrying out of the work upon this system. I am assured by other contractors that whereas Messrs. Carter, Gummow, & Co. obtained a contract at £15,500, they would have been willing to carry out the job at £12,500 to £13,200, effecting a saving of from £2,300 to £3,000. Under the schedule prices of which I have spoken there is one item put down for brickwork and cement arches, 2,020 yards, at £2 10s. a yard. That was substituted under the Monier system by sandstone and concrete, put down at £1 8s. per cubic yard. There was that difference in the prices for the 2,020 yards. On that item alone a concession of £1,650 was made to these contractors. Hon. members will see that when such concessions are allowed, other contractors must be quite within the mark in saying that if they had had the opportunity they could have carried out the job at a figure from £2,300 to £3,000 below that paid to this particular firm. The Monier system is one which is specially recommended on account of its cheapness and lightness, and there would have been no object in adopting it unless on account of its economical character. I do not at all blame the Secretary for Public Works in this matter; we know him to be a gentleman of the strictest integrity; but there can be no doubt that the Engineer-in-Chief and the Under Secretary for Public Works have led him into various mistakes. The greatest mistake into which he has been led was that of putting Mr. Hickson in the position of Engineer-in-Chief and putting out of the department a man infinitely his superior—I mean Mr. Darley—to take charge of the Water and Sewerage Board.

**Mr. YOUNG:** He agreed with the recommendation!

**Mr. V. PARKES:** Of late years he has done almost anything that the Engineer-in-Chief asked him to do. There can be no doubt that as an engineer he is infinitely superior to Mr. Hickson. The Secretary for Public Works, I find, made a query upon the report of the Board of Reference.

**Mr. YOUNG:** Read it!

**Mr. V. PARKES:**

The tenders for this work were submitted to the Board to-day. In doing so, Mr. Hickson pointed out that fifteen tenders had been received, the lowest being that of Carter, Gummow, & Co., at 28½ per cent. below schedule rates, amounting approximately to £15,757 ls. 9d. The same firm also submitted a lump sum tender for carrying out the work according to a plan sent in by them for the sum of £15,500. The plan submitted is for constructing the work on the Monier arch principle. This system has been extensively used during recent years on the continent of Europe with successful results, and Mr. Hickson sees no reason why, under certain restrictions, the opportunity should not be taken to introduce the system into the public works of this Colony. The advantages claimed by the patentees are that works can be carried out at a much cheaper rate wherever this method of construction is used. Mr. Hickson said he had no doubt that the design submitted was thoroughly suitable and likely to be effective; and, as the main principles as regards size and inclination of sewer were as provided for in the departmental design, he was prepared to recommend it for adoption; but if it was decided to accept the tender, a short specification of the work should be included in the bond, and provision also made for the maintenance of the work by the contractors for a certain period after completion.

Mr. Hickson further said that, as Mr. Darley would be the responsible officer for carrying out this work, he had gone into the matter very thoroughly with that gentleman, and Mr. Darley was quite prepared to indorse his views.

The Board, in view of the fact that Messrs. Darley and Hickson are satisfied that the principle is a sound one, and that the adoption of the plan will result in considerable economy, are prepared to indorse the recommendation of these gentlemen, and now submit the matter for the Minister's consideration.

The Board having, in support of the Engineer-in-Chief and the President of the Water Supply and Sewerage Board, agreed to substitute this system, the Secretary for Public Works wrote a businesslike minute, for which I give him credit:

Before approving this proposal, I should like an estimate of the actual value of the work to be carried out by the contractor under the substituted scheme.

That is a very wise minute. The hon. gentleman expressed a desire for schedule rates under the Monier system corresponding with those which had been furnished in the case of the ordinary sewerage works. One would have imagined that there would be no trouble in getting out that schedule; but the Engineer-in-Chief said:

To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do.

What did that slight loss of time matter when it would be two months before the contractors could start the contract;—why should not the quantities have been taken out? The sole reason was that quantities so much less would have been shown, and instead of the contractors making a profit of £2,000, they would have been cut down to a proper estimate of the value of the work.

I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm, estimates were made for the work on the Monier system as well as on the department's designs. The result was that the estimate of both works was practically the same. Applying that comparison to this case, it would mean that the departmental estimate for the work under consideration would be £22,000.

You cannot make a comparison between two different public works of this kind. The duty of the head of the department when a Minister asked him for a further sheet of quantities was to make them out, and the Minister ought to have insisted upon that being done; but he said in effect that the Engineer's reply was quite sufficient for him, and that he should approve of the recommendation of the Board being carried out. There is no reason why the head of the department should not have had a new estimate taken out for an entirely new piece of work. So much for the case of the Balmain sewerage works. I think I have clearly proved that a concession was made to this firm by which the country lost a considerable sum of money. If the work had been properly tendered for there would no doubt have been a saving of at least £2,500. I will now deal with another contract. The same firm within the last eighteen months received a contract for sewerage works at North Shore. They received their contract

Under

under a schedule tender, and their sureties as usual were those of their own firm. No query is made as to whether they are in a good financial state or as to whether they can provide good disinterested sureties. After they had received the first contract the member for the district, no doubt with the best intentions and with the object of finding work for the unemployed, recommended that a certain extension should be carried out. The Engineer-in-Chief reported that as a matter of urgency certain extensions to the contract should be carried out along various streets. How is it possible that the work could have been urgent seeing that the outlet into the ocean for the whole of the sewerage scheme has not even been taken in hand? Until the outlet had been completed, how could the urgency of constructing branch lines of sewerage arise? Without any contract tendering, without any preparation of plans, without an effort to save the country unnecessary expenditure, a contract of £35,000 was given to this firm without competition for this extension work. It is no wonder that the contractors of the city complain of this contract being given. In connection with this contract, I wish to point out that the Engineer-in-Chief, upon the 22nd March, 1894, wrote this minute:—

There is no reason why this extension should not be gone on with at once. I cannot, however, see my way to recommend that it be carried out as an extension of the existing contract, which, at schedule rates, would amount to £16,307 17s. 8d., whereas the office estimate is £12,831 19s. 6d. The greater part of this difference lies in one item, "excavations in shafts," which in present contract, owing to their great depth, carries a very high price, namely, 78s. per cubic yard. This, Messrs. Carter & Co. are prepared to reduce to 40s. per cubic yard, which would reduce the total cost to £13,700, or about £1,000 above the office estimate. I believe, however, if tenders were invited, we could get the work done under the office estimate.—R.R.P.H., 22/3/94.

It was about this time that Mr. Hickson, junior, became a member of the firm. I find this minute by the Engineer-in-Chief on the 29th of the same month:—

Referring to the Minister's intimation this morning, that he was prepared to let Messrs. Carter & Co. carry out this work as an extension of their present contract, provided they agreed to do so for the departmental estimate of £12,831 19s. 6d., no claims whatsoever to be made for extras, and all payments to be made at the allowed schedule rates.—

That means that they might be allowed as extras—

I have had an interview with Mr. Carter, who is prepared, on the part of his firm, to comply with the Minister's decision. Submitted for formal approval.—R.R.P.H., 29/3/94.

This was on the 30th March, 1894. How sudden a change! It is not the Minister who has to do with this. The Minister is generally led by the head of the department, it does not matter whether it is the present or the last Minister. The heads of these departments ought to be above reproach. There ought to be the greatest possible check put upon them. When we see a rapid change like this in a minute in a few days, after a son of the gentleman concerned has taken office under the contractors, then there is some suspicion. It is impossible to make definite charges, but the case looks so grave that it ought to be filtered out in this House.

Mr. YOUNG: Does the hon. gentleman assert that the engagement of young Mr. Hickson took place in the meantime—during those two or three days?

Mr. V. PARKES: I believe it was during that time.

Mr. YOUNG: Does the hon. member assert that?

Mr. V. PARKES: I believe it was. This circumstance shows the imperative necessity of holding an inquiry into the system of letting out public contracts with the view of establishing some method of check of which the country would get the benefit. Because if you look right through the history of public contracting, what do you see? Nothing but uprootings of corruption. Where we start railways we find them ending at double their original cost; where we start other works, we find that often bad material is put in, and the country is robbed right and left. This state of things will continue so long as we allow the present system to exist. If the Minister will grant me the committee I ask for to investigate these cases, I will undertake to establish a method by which we can easily get over these difficulties. Now, let me take another instance. These gentlemen have a contract at Johnstone's Bay for what they call storm-water channelling. This storm-water channelling is taken through a lot of mud flats. For four or five weeks the Government employed about forty or fifty of the unemployed to drain the water off this land for the contractors. The Government actually employed the unemployed for this purpose. I can bring plenty of evidence, on oath, that forty or fifty men were employed for four or five weeks draining the water off the land where these gentlemen had to carry out their contract. The effect of that was to put £280 or £300 into the pockets of the contractors. I could cite other concessions given to these gentlemen, information as to which has been given to me not by one contractor, but by twelve or fourteen. Innumerable concessions have been given to them, and it would only be wearying the House to particularise them.

Mr. YOUNG: Let us have them all while the hon. member is about it!

Mr. V. PARKES: If an inquiry is made, the House will find that there has been an undue amount of favouritism towards not only these contractors but many others.

Mr. LYNE: I should like the hon. gentleman to state more definitely when that Johnstone's Bay work took place, and what the work was?

Mr. V. PARKES: Owing to the difficulty of obtaining returns, I cannot at the present moment give the hon. member the information.

Mr. GARRARD: It took place about two months ago.

Mr. V. PARKES: The contract, as far as I know, is about two-thirds of the way towards completion, and the work has been very carefully prepared at the expense of the Government so as to facilitate the carrying out of the contract—after the contract was let, and not before. An hon. member of this House went to the trouble of looking through the evidence given by the Engineer-in-Chief before the Public Works Committee on the Pymont Bridge scheme, and, if I mistake not, he spent about 45 minutes of the time of the House in explaining the inconsistencies of the evidence given by that gentleman. The evidence was so inconsistent and so varying that, having been given on oath, it almost amounts to perjury. If any hon. member will take the trouble to look through the evidence taken before the Public Works Committee in reference to the Pymont Bridge, he will see that the statements made by this officer were contradictory from beginning to end, exhibiting on his part a want of knowledge of his business. To show the artifice with which questions are answered by the Engineer-in-Chief, on the 19th instant I asked these simple questions of the Minister:—

(7.) What connection has a Mr. Hickson with this firm or with the works? (8.) Is this Mr. Hickson a son of the present Engineer-in-Chief?

This

This was the reply :—

(7.) He is engineer to the contractors. (8.) He is the son of the Engineer-in-Chief for Public Works ; but the Balmain contract referred to is being carried out under the supervision of the President of the Water and Sewerage Board and Engineer-in-Chief for Sewerage Construction, Mr. Darley.

Now, Mr. Darley has only been appointed to his present position about two months, and during all the time that this contract was being carried out it was under the Engineer-in-Chief.

Mr. YOUNG : No.

Mr. V. PARKES : The Engineer-in-Chief was the chief designer of it, and the contract was not carried out under Mr. Darley. I made sure of that fact. The answer I have quoted is a subterfuge. The question ought to have been answered by a simple "yes" or "no." The answer contains a misleading statement. The blame of employing these gentlemen has been put upon Mr. Darley. The Minister, in his reply, went on to say :

In the case of the other contract referred to, namely, the sewerage works at North Sydney, which was carried out under the supervision of the Engineer-in-Chief for Public Works, I am informed that Mr. Hickson, junior, had no connection with that work, being at that time in South Australia.

But Mr. Hickson has been going backwards and forwards between here and South Australia. That makes no difference as to his connection with the firm. He is looking after their work in South Australia, and looking after their work here ; and such an answer as that is, on the face of it, simply a blind, and it shows that there is some reason why there should be a full inquiry into the circumstances attending this contract. Before I sit down, I am going to ask the Secretary for Public Works, whether, if I submit a motion again for an inquiry into the system adopted by the Public Works Department, and the dealings of the public officers with contractors, he will allow it to proceed as an ordinary motion ?

Mr. YOUNG : The honorable gentleman can have a committee of inquiry into this case !

Mr. V. PARKES : I am compelled on a motion of adjournment to confine myself to one case, and if I could get this inquiry I would undertake to show that while the system in the past has been bad, a good system may be introduced in the future with regard to carrying out these public works. Surely the Minister need not oppose a motion of that character by saying that he will regard it as a motion of censure upon his administration of the department. That is a foolish way to deal with the matter. If I had been allowed to have my motion carried last Parliament we should now have been able to initiate a system which would be free of all suspicion.

Mr. SPEAKER : The hon. member has exceeded his time.

Mr. LYNE : Before the hon. gentleman sits down perhaps I might be allowed to ask him a question. He said that the firm in question had contracts to the amount of £35,000, and be only referred to one of £13,000. What other contracts made up the total of £35,000 ?

Mr. V. PARKES : As far as I am informed there was a contract of £13,000, another of £10,800, and another of £11,000, all let without tender. My information has come from persons behind the contractors whose names I can give, and who will go before any committee and give evidence, and show that there is no equity in the dealings between contractors and Public Works officers. They will undertake to show before any commission that the present system is one of favouritism, and that unless they buy their way they have no chance.

Mr. V. PARKES (Canterbury) in reply : I intend to adopt the suggestion of the Secretary for Public Works, and to give notice of motion for the appointment of a select committee to inquire into this particular case. Since the hon. gentleman will not allow me a commission to inquire into the administration of the Department of Public Works generally, I must take this matter as one stage, and I will on Tuesday give notice of motion for the appointment of a select committee to inquire into this particular case. I am sorry that both the present and the late Secretary for Public Works condone the system of accepting sureties from members of a tendering partnership. Both the present and late Ministers are of opinion that there is nothing seriously wrong in allowing members of a firm of contractors to appear as sureties for the firm. I want to point out what a serious thing it is to accept such sureties. What possible good can result from their acceptance ? The only surety which is of use for the due fulfilment of a contract is an independent surety—the surety of persons altogether disinterested in the contract. It is useless to ask a contractor to become his own bondsman. He occupies that position when he takes up the contract. The object of sureties is to get some independent persons to guarantee that there shall be no defrauding of the Government, and that the work will be properly carried out. The department must have known that these particular gentlemen belonged to the firm. Advertisements have appeared in the name of the firm from time to time in the *Sydney Morning Herald*. On the 14th of this month an advertisement from the firm appeared with the names of the present and former members of the firm affixed. The names are those of Gillan, Thomas, Snodgrass, Carter, and Gummow. Two of these gentlemen are the only sureties for the carrying out of contract work which must run close upon £100,000. What would there be to prevent two members of the firm, if any trouble came, from handing the whole of their private means over to their partners, their wives or creditors, and in that way defrauding the Government ?

Mr. GARRARD : Even if the sureties were not partners they could do the same thing !

Mr. V. PARKES : Other sureties would be under special bond to the Government. It is the duty of the Government to discover sureties capable of sustaining their obligations. I have carried out many contracts, and I never carried out one contract of any extent without obtaining the bonds of disinterested parties. Another thing I wish to emphasise before sitting down is that no contract should be given out unless tenders are called in the ordinary way. The giving of contracts without tendering at once leaves the Government open to be robbed by contractors. The system is bad, and leaves an opening for corruption, because any officer of the department may advise the Government to accept a contract for a lump sum, and may enter into an arrangement for concessions subject to the payment of a certain amount of money. In that way you at once open the road to corruption. Contractors are complaining very much at the present time of the particular case to which I have referred. What they say is, "If Carter, Gummow, & Co. are clever enough to get this contract that is all right ; but we want also to be in this sort of swim. They are in the swim at the present time and we want to burst them up." They say this without any hesitation. Contractors who have come to me have stated that they were willing to go before any committee and give evidence establishing the facts which I have named. I shall move for a select committee, and shall endeavour to establish those facts, because I think that there is ample reason for advising the Minister to adopt some system of carrying out public contracts under which there cannot possibly be any inroad upon the public treasury.

[EXTRACT

[Extract from *Hansard*, 12th May, 1896.]

Mr. V. PARKES (Canterbury). It is at all times an unfortunate thing when a supporter of a big parliamentary party feels it incumbent upon him to take exception to the administrative acts of those who are at the head of that party. I am compelled in the performance of my public duties to take exception to many of the acts of administration of a government which I am supposed to support. If a member of this House, a representative of the people, discovers that matters are not going on alright in the administration of public affairs, it is imperatively his duty to expose that which he believes to be wrong, that which he believes to constitute a grievance, in the government of the country. Before coming to the matter which will form the serious part of my address to the House to-night, and speaking generally of the programme put before the House and the country at the present time by ministers, I may say that it is to my mind open to question whether there is any great amount of sincerity in it. How can there be said to be sincerity in the proposals of the Government when at the present time the greatest distress prevails all over the country, calling for immediate legislative action? It is useless for the Secretary for Public Works to tell us that the unemployed are all gone out of the city, and are in the country districts in employment. No man knows better than I do what a wrong statement that is. I know a large number of men who are engaged in mechanical trades, and I can assure the Premier that the administration of past governments, and particularly of his own, has had the effect of sending from 4,000 to 5,000 of the finest mechanics out of the country.

Mr. LYNE: Free-trade!

Mr. V. PARKES: It has been neither free-trade nor protection, but the apathy of the Government in not seizing the opportunity to occupy in this country a fine, able-bodied set of men. There is no shutting your eyes to the fact that thousands of these men have gone to South Africa, that thousands have gone to Western Australia, and that some thousands have also gone to New Zealand, America, and other countries, where they thought they could get work. They have left this country because its legislation would not enable them to make bread and butter for themselves. We have enumerated in the Governor's speech some twenty or thirty measures, and there is not the slightest chance of one-fourth or even one-tenth of them being passed into law during the present session. This being so, even those who wish to be good, candid supporters of the Administration are forced to the conclusion that an attempt is being made to humbug the public. For instance, we are told in the speech that bills dealing with matters affecting the public health, law reform, mining on private property, factories and workshops, fisheries, relief to selectors, the rabbit pest, stock routes, the Navigation Act, the church and school estates, and other measures will be brought forward. The very expression "and other measures" shows that the thing must be humbug. If the Government were sincere in presenting a programme to Parliament, they would say, "This session must certainly be a financial session; but we can at the same time pass through two or three good measures." There can be no doubt that the pettifogging, wretched administration of the Minister of Industry is bringing calamity upon this country. He seems to be concentrating all his energies upon giving poor unfortunate men what is called "tucker." The whole of the hon. gentleman's efforts seem to have been concentrated upon finding bread and butter for a number of good men belonging to various mechanical trades. The hon. gentleman has not initiated any scheme by which he can relieve the great distress which now exists in this country. The hon. gentleman has started a system by which men can get one day's work in seven on a railway work in the country or at Shea's Creek. By the time the unfortunate men have earned their one day's wages out of seven, it is found that the expenses to which they have been put in shifting their homes, in order to get the work, have eaten up the whole of their earnings. I will mention one case, which is particularly cruel. I know of fifty men who have never yet had to ask the Government for work, and who went up to Locksley. Being good navvies, they thought they would have no difficulty in getting work there. What were they told? That a paternal government required them to beg before they were able to work. They were told that they must tramp back to Sydney, and ask the Labour Bureau to give them permission to work on the job. The men walked back to Sydney, and, on arriving there, they found their places had been taken by privileged men, who had letters from members of Parliament.

Mr. GARRARD: That is not true!

Mr. V. PARKES: I will prove it. I say that not only these fifty men; but there are hundreds of men in the country who have had to ask the Government to be permitted to work—who have had to beseech members of Parliament to give them letters, it being known that the Labour Bureau would not give them work unless they had those letters.

Mr. GARRARD: That is not true!

Mr. V. PARKES: Any member of Parliament who has an office in the city knows that what I say is true.

HON. MEMBERS: Hear, hear!

Mr. V. PARKES: Ask any member of this House whether men do not come to him asking for letters for the Labour Bureau. If you tell them to go to the Labour Bureau, they say, "It is of no use my going there unless you give me a letter." There is only one way of overcoming the existing distress, and that is, for the Government to come down to Parliament with a proposal to construct immediately a number of reproductive public works, at the same time asking Parliament boldly for authority to borrow about £10,000,000 to carry them out. That is the best course.

Mr. REID: What sort of a political bribe would that be called?

Mr. V. PARKES: What is the use of hon. members saying that it would add to the national debt. Are we not spending thousands of pounds at the present time in an effectual endeavour to cope with the requirements of the labouring population? The Government provide the men with "tucker," and afterwards come down to Parliament and ask for a vote of £25,000. I will tell the hon. gentleman of another measure which might be passed in the present session, and which would open avenues of employment in all directions. I remember sitting on a public platform with the Premier when he said that for twenty years a local government bill had been dangled before the public of New South Wales.

Mr. SEE: It is not dangled before them now!

Mr. REID: Hon. gentlemen opposite killed it!

Mr. V. PARKES: The hon. gentleman said that if he had the reins of power for six months that measure would be placed upon the statute-book of the country. I admit that the hon. gentleman did bring forward this measure, because the municipalities cried out for it; but what sort of measure does he now

propose in substitution for it? He proposes to confer upon the councils the right to become indebted to the Government for a certain term of years, instead of working out of their present indebtedness. No measure of that kind can take the place of a local government bill. It will only harass the municipalities without getting rid of the difficulty. The Government might just as well take over all the municipalities and manage them themselves. It is of no use lending them money, unless at the same time you bring forward a scheme which will allow them to get out of their present indebtedness. The only measure under which that can be done is a local government bill. Why do not the Government propose to pass such a bill in the present session? Of course, we know that the Opposition are to blame for the destruction of the former measure; but when the hon. gentleman made the measure his second bill, during his first term of office, surely it must be worth his while to bring it forward at the present time. I come now to deal more particularly with the administration of the Public Works Department. There is no department requiring more skilled administration. The great amount of money from the loan and consolidated revenue funds which is expended in this country has all to be dealt with by the Public Works Department. Any robbery or trickery by means of which the public funds of this country could be misappropriated is liable to occur in this particular department, and there ought therefore to be a most exact administration of it. Not only that, but there ought to be a most wise administration. The Minister should be a man having a thorough grasp of the work necessary for the development of this country. Little pettifogging works here and there can easily enough be dealt with by anyone; but the administrator of the Public Works Department ought to be capable of far higher things; and through him, I presume, the Administration. Some six months ago I moved for a committee, and made a statement to this House from hearsay, not from proof, and I took care to explain that to the House. That statement was given to me by ten or twelve contractors, who waited upon me and told me that it was useless for them to send in tenders to the Public Works Department on account of the favouritism shown to a particular firm. I made my speech, and the Secretary for Public Works replied, stating that he would give me every opportunity to get a committee appointed. I made every possible effort in the House to get a committee appointed, but the Government allowed only two hours per week for private business last session, and the Secretary for Public Works would not on any occasion allow me to have a special night on which to move my motion, which was very short. In addition to that, I am not sure whether such a motion would not involve the Ministry itself. Therefore, it is that I have to-night to make the charge in the manner I am doing. The documents from which I will quote shortly will show conclusively that I can justify the complaints I have to make. I do not for a moment say that the Secretary for Public Works has done anything corruptly. I am sure that no hon. member will for a moment believe that the Secretary for Public Works would do anything corrupt; but, after all, it is quite possible for a Minister by stupidity or by negligence to do things which are worse than wrong. That is to say, through ignorance or carelessness he may do things on account of which the public funds are lost, and if that is done it is certainly as bad as corrupt action. There can be no denying that, because under such circumstances you can never know where you are if the administrator is not a man of great capacity and of a searching nature, and if he does not safeguard the public against wrongful expenditure. Following up what I have said, supposing I were to move this session for a committee, I should have to drag through the same game that I dragged through during last session, with the Administration always antagonistic and always ready with their whip if I placed any motion on the paper, to get some one to move the adjournment. I am too much alive to the tricks played under the rules of this House to allow that to be done. I consider that these things are of such a glaring character that they should be shown up. When I found that I could not get a committee of the House, I asked the Secretary for Public Works if he would grant me a royal commission, and allow me to be present at the meetings of that commission. It would be necessary for me to be present, otherwise how could I conduct a case in which I had made such charges? The Minister said no, he would not give me a committee of that sort at all. The only committee he would give me was one composed of officers of the department to inquire into their own conduct. I spoke to the Premier on the subject, but he gave me a cold ear. On the top of all these efforts of mine on the very last day of last session before Parliament was prorogued, the Secretary for Public Works laid on the table a report from the chief engineer. Not only that, but he asked all the newspapers to publish it, so that it should be a reflection upon me. I wish to point out that I told the House that the charges I was making I could not prove, that they were only hearsay, and, therefore, it was the duty of the Government to cause an inquiry to be made. I want to point out to hon. members that under the course pursued the Engineer-in-Chief is allowed to come into this House as if he were a member of it and abuse an hon. member who attempts to challenge his conduct as a servant of the State. If that is to be allowed, the privileges of every hon. member are gone. The Engineer-in-Chief says:—

Although it may be thought, as, indeed, it has been said, that I am making too much of this matter, and that no one really takes any serious notice of these statements, I need hardly point out what a serious matter it would be if they were believed.

Could anything be a greater reflection?

And either the Minister, my officers, contractors, or the general public lost confidence in me.

I can assure hon. members that by the time I have done with these documents a little confidence will be lost not only in this officer, but also in the Minister who blindly signed documents to pay away thousands of pounds without carefully looking into them. The Minister, in his minute, says:—

Mr. Hickson may be informed that the statements to which he refers herein have never had the effect of diminishing the complete confidence I, as Minister, have always had in him in the important office he holds.

That is written before any inquiry is made, and before any chance has been afforded to me of proving what I said. The Minister then goes on to say:—

That I cannot believe they will in the slightest degree affect his position with reference to his officers, contractors, or the general public, and that having consulted the Cabinet as to his request for a commission of inquiry, I am able to state that my colleagues agree with what I have above written. If Mr. Hickson desires to place any rebutting statement before the public I shall have much pleasure in laying it on the table of the Assembly.

There can be no doubt that the Administration there absolutely challenged me. They would not give me an inquiry, and they defy me to get an inquiry. I now appeal to hon. members, and to you, Mr. Speaker. I come to you with this complaint and lay it before you, and I ask this House to be judge in the case.

Let

Let me take up this report of the Engineer-in-Chief. It is untruthful from beginning to end. In the very first sentence he says :

With reference to Carter & Co.'s contracts with the Public Works Department, a cash deposit has in every case been taken.

Now the very first contract I turn up here, although the specification provides for a cash deposit to be put down, on the Secretary for Public Works' authority they are allowed to substitute two sureties of a very doubtful nature. One of the sureties is a supplier of cement and the other is a supplier of iron. By an act of the Minister's he actually cancels this particular bond, which these two people sign. He does this by returning the retention money, and thus breaks the contract. It will be recollected that in my speech six months ago I pointed out that this firm had received three contracts without tender. The only mistake I made was that I stated the sums wrongly and too largely. The Engineer-in-Chief says :

The firm has received one contract only without public tender.

The very documents in his own handwriting show that they received three contracts, one for £1,200, another for £2,000, and another for £12,000, without tender. What reliance is to be put on his statements? The Engineer-in-Chief admits that his son is and has been the engineer of this firm since 1893. I want hon. members to bear that in mind. I am told by a man connected with these contracts, who has worked upon them, that the duties of Mr. Hickson, junior, are simply those of a sinecure. He has nothing to do but to walk about and take photographs. Now and again he uses a theodolite on the works to no purpose, and the inference from the Engineer-in-Chief's own statement is that his son is not in Sydney at all, that as a matter of fact, when he wrote this minute, he was not in Sydney, but in Adelaide. However, he was actually in this country, and I can prove by statutory declaration that he came over twelve months before with Mr. Gillan, one of the contractors.

[Mr. Speaker left the chair at 6 p.m. The House resumed at 7 p.m.]

Mr. V. PARKES: When the House adjourned I was pointing out the inaccuracy of the statements made by the Engineer-in-Chief in his report. In my speech I stated that cheap material was substituted for what was provided in the Government scheme. I said that a cheap class of concrete was used instead of the concrete which was specified. In reply to that the Engineer-in-Chief says :

The materials used in the Monier arches and sewer, substituted for brick and concrete, was not sandstone and concrete; it was three to one compo., and was estimated by the department at from 80s. to 90s. per cubic yard, not at 28s., as stated.

Now, as a matter of fact, it was nothing of the sort. It was estimated as being of a lower value, as will be seen by these papers. But it will easily be understood by hon. members that a compo. three of sand to one of cement is not as costly as a compo. of two of sand, three of blue metal, and one of cement. Three of sand to one of cement is what you call cement mortar, and it makes a very light material. In another place the Engineer-in-Chief says, in answer to me, cash security of £4,000 was taken in the case of the North Shore contract. I will show by the papers directly that although a cash deposit of £4,000 was taken in this contract, that cash deposit was returned to the contractor six months before the job was completed. He also says :

Contract 79A, an extension of the preceding work to Jeffreys-street, was, as before stated, given to Messrs. Carter & Co., on the representations of the member for the district; but I strongly urged that tenders should be invited for the work, as I considered that it might be done more cheaply.

Later on, speaking of the same thing, he says :

In my second minute, quoted by Mr. Parkes, it will be seen that I distinctly stated that I forwarded the paper, on an intimation from the Minister that he (the Minister) was prepared to let the work to Messrs. Carter & Co., and I carefully abstained from making any recommendation, merely forwarding the paper for formal approval.

There is a contradiction in the two matters, and it is contradicted by the Minister preceding. Further on he says :

The sand-pump dredging at Roselle Bay, carried out by the department, flooded the land through which Messrs. Carter & Co. had to construct the Johnstone's Creek storm-water channel. As this would have given them a claim for compensation, a drain had to be cut to take the water off their works, and place the land in the same condition as when tenders were received, Messrs. Carter & Co. providing flood-gates at their own cost to keep the tidal waters out.

Later on I will show that under the specification the onus is entirely thrown on the contractors of keeping the water off their contract. Nevertheless, the department sent out the unemployed to keep the water off their works. Later on he says :

This contract was never under my supervision. It has, ever since the work commenced, been under Mr. Darley or Mr. J. M. Smail.

What a nice subterfuge! Mr. Hickson prepared the plans and the specifications; he let the contract, and he started to work; but because Mr. Darley came in after he had started the work, he says that he had nothing whatever to do with it, but that it was under Mr. Darley and Mr. J. M. Smail. These things can be proved by his own minutes. They are not my own making up, nor hearsay; but I prove them by his own minutes. He says of his son :

He has never communicated—directly or indirectly—with me, or the office, in connection with Messrs. Carter, Gummow, & Co.'s works, the whole of the transactions with the office having been carried out either through Mr. Carter or Mr. Gummow.

I want hon. members to take note of that, because that has an effect on other things I have to speak about. The only communication that Mr. Hickson had with this firm, which consisted of five or six members, was with Messrs. Carter and Gummow. The last part of this report is from Mr. Barling. Mr. Barling says :

It is, I think, proper for me, in submitting this to the Minister, not only as Under Secretary, but as Chairman of the Board of Reference, to express the entire confidence, which the Board have in Mr. Hickson as one of its members. Every matter relating to the contracts which are referred to the Board is most critically examined, and I have great pleasure in saying that Mr. Hickson, as well as every other member of the Board, shows the utmost desire to have every phase of the various questions which arise in connection with tenders thoroughly inquired into, and to this end they willingly give all facilities to the Board.

I fully agree with Mr. Hickson in saying that it is difficult to conceive of any practical method of applying further checks in connection with our tender system. I do not think there is any country in the world where such publicity is given to proceedings in regard to this very important matter.

The reason I read this minute is to show Mr. Barling's connection. Mr. Barling is, I consider, a most improper gentleman to appoint to such a position as that of a member of our Public Service Board. He induced

induced the Minister to do a number of things which I will point out to the House, and by which the State has lost money. Now, if this gentleman was not able to manage his own department, how can he be able to manage the great ramifications of the public service of this country? It is simply impossible. The kind of management which he carried on in the Public Works Department should illustrate his incapacity for judging who is a good servant in our public service. This point is worth emphasising. There can be no doubt that, although there was great necessity for retrenchment in the public service, the retrenchment that is going on now, and the readjustment of offices, will result in calamity, for I consider that the gentlemen who have been appointed members of the Public Service Board are quite incapable of exercising the great discretionary powers which they have to use under the Act. They have not shown the slightest discretion in the way they have gone wholesale to work, and their rearrangement of offices will, I think, fall as a calamity on the Government in their administrative work in the future. Mr. Barling, as hon. members will see, joins with the other gentlemen who are appointed as a board of reference. Instead of having a board of reference or any other board of that kind, this country should have a disinterested board of works; but here is a board of reference made up of these gentlemen who have to carry out the different works, and if one of them makes a mistake the others cloak it—if one prepares a wrong estimate, or plans, or anything goes wrong, the others assist him to cloak it. It is a most improper thing to have a board of reference consisting of those gentlemen who have to carry out the public works which they have themselves designed. I want to connect Mr. Barling with this minute, because, whilst in laying this document on the table of the House the Minister has certainly been advised by his officers, he ought to know that such a document should not have been laid on the table of the House until there had been an inquiry as to the pros and cons, the rights and the wrongs of the case. Now, I pass from that document which I shall require the Secretary for Public Works to withdraw from the records of the House, and I come to this bulky document, and I ask the Secretary for Public Works, in the first place, did he examine these papers before he laid them on the table of the House?

Mr. YOUNG: No, I did not; it would have been a year's work!

Mr. V. PARKES: Although they were moved for, two months elapsed before they were laid on the table of the House; and when charges like these were made I think it was the duty of the Minister, when he collected the papers, to at least see that they were correct. Hon. members have, from time immemorial, protested against the way in which the public departments prepare papers to be laid on the table of the House. Let any hon. member ask a question, and he gets a reply which blinds him entirely. Let any hon. member move for the production of papers, and they are put on the table of the House in such a form that there is no coherence in them. I am going to make a charge against the hon. gentleman's department of deliberately attempting to deceive this House in connection with this document. The hon. gentleman should have examined this document. Does he know that it includes 180 useless printed forms? The hon. member has placed on the table of the House 180 sheets of printed tender forms, and has asked the House to incur the cost of printing them.

Mr. YOUNG: If I had kept any of them back the hon. member would have blamed me for that!

Mr. V. PARKES: But there was no need for the hon. gentleman to insert practically blank sheets that do not bear on the document at all, whilst the officers of the department cleverly abstracted three sheets of schedule prices and comparisons, and in their stead filled this document with blank forms and plans not connected with this matter—in one case numbering sixty-four, in another twenty-seven, and in another thirty, and so on, making 180 altogether. Does the hon. member know that every important minute bearing on an important matter in connection with this case has been abstracted? Does he know that that information which the House ordered to be printed, and which would not have been half as bulky, has been withdrawn, and rubbish put in its place?

Mr. YOUNG: I am sure it has not!

Mr. V. PARKES: Well, look at the document—it proves that itself. Does the hon. gentleman know that where plans are moved for in connection with contracts, they are abstracted, and the plans of neighbouring jobs, which are not even going on, are put in? What is the good of saying "Nonsense"? The plan of Contract 69 was moved for; but the plan of a sewer in Canterbury, which is not even in course of construction, is put in, and the other is abstracted. It is no good saying "Nonsense"—there are the papers.

Mr. YOUNG: As a matter of fact, the hon. member did not move for plans at all!

Mr. V. PARKES: My motion was for

copies of all papers and correspondence in connection with the contracts of Messrs. Carter, Gummow, & Co., at Marrickville, Balmain, North Sydney, Johnstone's Creek, and Stanmore, including the specification, schedule, &c., for original contracts, and for substituted ones, and all vouchers paid, and details of same, and such other matter included in the transactions from commencement to the present date.

What does that cover? I was told on very good authority that while the Public Works officers were compiling this document, the utmost hilarity was taking place, and the one most facetious was Mr. Joseph Barling, the Under Secretary for Public Works, as regards the manner in which these documents were to be placed before the House. There has been the most glaring attempt to deceive the House. The object was to have a mass of documents which no one would look through, and which would be cast aside. If these documents had been prepared in a proper form, instead of costing £500 they would have cost, I suppose, only about £250. Let me show hon. members what is omitted, in order to show the reason for the omission. In connection with Contract 69, sixty pages of blank tender forms which might have been omitted are put in; but the sheets of tenders and estimates are withdrawn, and wrong plans are put in. In connection with Contract 72, a list of other contractors' tenders and schedule have been omitted; all plans, correspondence, and minutes have been omitted; correspondence regarding a claim of £2,000 has been omitted—in fact, every paper of importance has been omitted. In connection with Contract 77, forty-one pages of useless matter has been stowed in, being blank schedule forms issued by the office, while the sheet of comparative tenders is withdrawn. No plan or figures are given concerning the Monier arch—that construction which was substituted for the Government scheme. That which was of so much importance, in order that we might be able to make a comparison, has been entirely removed from the records, and there is nothing to show what the quantities were, or what the nature of the work was, or anything about it. There are nineteen pages which might have been omitted in connection with Contract 79, and all plans necessary have been omitted. In connection with Contract 118, all the plans and sheets of tenders and all correspondence have been omitted, and twenty pages of deceptive padding have been put in. Now I come to the contracts, and I am going to ask the hon. gentleman who administers the  
Public

Public Works Department whether he was aware when he signed remission of refund of money, that he was breaking a surety bond? Does he know that when he agrees to the contractor having back his surety funds, he is breaking the surety bond, and so letting the surety go free? I want to show the hon. member, if he never took the trouble to look into it, how he stands in this matter. Now, in the conditions of contract, in page 119, there is a paragraph which says:

Progress payments may be made once in every month, unless the same shall become not payable by reason of anything contained in these conditions, on the certificate of the engineer, as the work proceeds, in the proportion of 80 per cent. of the value of the work returned, until the sum retained reaches the amount of the deposit provided for in the preceding clause, when no further deductions will be made. The amount of the retention money will be held by the Minister, in addition to the cash security, unless otherwise provided for in the specification, until the engineer has certified that the whole of the works have been satisfactorily completed, and the period specified for the maintenance of the said works has expired.

That is three months. In connection with this contract it was provided in specifications that the contractors should put down £4,000 security bond, in order that at the conclusion of the work it was found to be defective, or if there was any roguery this £4,000 would pay for it. On the engineer's advice the Secretary for Public Works substituted two surety bondsmen, namely, Mr. Scrutton, who supplied the iron to these contractors, and Mr. Henty, who supplied the cement. As we go further on we find a minute in which the Minister is advised to return the retention money, on the security of these two individuals—not specifying the individuals but specifying the firms. On page 127 the minute says this in reference to the application of Messrs. Carter, Gummow, & Co. for the return of their retention money.

Having now completed a considerable portion of the above contract, for the performance of which your department hold security to the extent of about £6,800, being £4,500 as guaranteed by our sureties and £2,300 retention money for work already done, we have the honor to ask you to allow the payment to us of £1,000 from the latter amount, leaving £5,800 still remaining as security for the due fulfilment of the remaining portion of the work.

The minute goes on to say that the Minister has these firms as sureties while he has only the individuals. The Minister thereupon agreed to the return of the retention money.

Mr YOUNG: It is only fair to read the whole of the letter!

Mr. V. PARKES:

We would remind you that our sureties are two of the most reliable firms in the city, namely, Parbury, Henty, & Co., Pitt-street, and R. L. Scrutton & Co., Clarence-street, and also that the amount of security required, had the contract been accepted in the ordinary way, would not have exceeded £4,500.

Mr. YOUNG: Read the minute upon that!

Mr. V. PARKES: That does not affect the question. The officers deceived the Minister by stating that they have the firms Scrutton & Co., and Parbury, Henty, & Co., when they have only the individuals.

Personal security has been given on this contract for double the usual amount of cash security; so that, in addition to the retention money, which amounts to nearly £2,300, the Department has security for £4,520, making a total of personal and cash security for the due performance of the contract of £6,820. The amount of the contract is £45,207, of which there has been about £30,000 worth of work done. This being the case, and the personal security being Messrs. Henty & Co. and Mr. R. L. Scrutton (firms, I suppose, which are safe), I think £1,000 of the retention money might be returned.—J.D., 21/9/94. Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage. Recommended.—R.H., 21/9/94. Under Secretary. For approval.—J.B., 21/9/94. Approved.—J.H.Y., 21/9/94.

The effect of the hon. gentleman giving back the retention money made the agreement with Scrutton and Henty null and void, because part of the hon. gentleman's agreement with them was that he should keep the retention money until three months' maintenance from completion of the contract.

Mr. COPELAND: In the interests of the country!

Mr. V. PARKES: Quite so; but it appears to have been given up in the interest of the contractors. The hon. gentleman then had no hold upon them. I will prove that the most defective work has taken place upon this job. I see from the Government vouchers that the Minister paid away £6,200 in extras upon that contract. I should like to know whether he ever inquired what this £6,200 was for? Did he know what it was for when he approved of it?

Mr. YOUNG: Where is the page upon which my minute approving of it appears?

Mr. V. PARKES: On page 134 the hon. gentleman will find this entry:

Minister's Approval for £6,200.

Public tenders are called for in this manner: The contractor is asked to send in a schedule of so much brick work, so much masonry, so much carpentering, so much excavation, &c., at certain prices. Each item is marked down with a corresponding cost per yard or per ton. The object of that is that the Government officers may report upon the tenders and get the work done as cheaply as possible by taking it at the cheap-rate schedules, after communicating with the contractors and agreeing with them. Although the scheme, in the hands of honest men, is a very good one for effecting a saving to the Government in some cases, still if it be in the hands of dishonest men the State can be robbed right and left. Let me show hon. members how the case stands as regards this contract, No. 69. The tenders sent in were Carter, Gummow, & Co., £45,207; John Ahearn, £47,061; Kerle and Kerle, £52,735; H. McKenzie and Sons, £53,505; J. F. Carson, £57,239; Dean and Sons, £58,165; and so on. The completed work was much less than in the computed schedules, but Carter & Co. were paid £52,400 instead of £45,000, or £7,400 over. They were paid, for instance, upon schedules numbered 1, 8, 12, 16, 19, 22, and so on. Supposing other contractors had had the same schedules passed for them to do the work under, there would have been a saving in the case of Ahearn of £11,600; in the case of Kerle, of £5,000; in the case of Carson, of £10,052; in the case of McKenzie, of £8,700; in the case of Holloway Bros., of £5,700; in the case of Dean and Sons, of £4,520. Will hon. members dare to say that there was not some collusion between some officers of the department and Carter & Co., in order that they might fix their schedules? Yet the Minister paid this money away without taking the trouble to look into the schedules at all. He does not take the trouble to check the expenditure in any way. Let me show how these quantities are made out. I will take several cases to show hon. members how cleverly things are manipulated. Carson & Co.'s tender for excavations came to £15,500, John Ahearn's to £14,500, Dean & Co.'s to £17,000, and McKenzie's to £17,000. Carter & Co. undertook to do in open trenching 22,815 yards, at 9d.; 9,780 yards, at 27s. 6d., being blasting work; 1,465 yards, at 4s.; 170 feet of manual work, at 40s.; and 345 yards of blasting work, at 5s. Their schedules were so cleverly manipulated that the 9d., which was a losing rate to them, was reduced by 4,000 yards; and the blasting rate, at 27s. 6d., double that of any contractor, was increased from 9,780 yards to 13,294 yards. At the time this contract was going on there were three other members of the firm, who have since left it, and they tell me there was nothing like the amount of supposed excavation carried

carried out; it would have to be exactly doubled to make up the increase. Again, if they had made the supposed excavation, they would have had to pay double the amount which they paid for concrete filling, which does not occur in the filling. The rates were so fixed that they could rob the State of money, and an officer who has been retired from the department, Mr. Bagge, in one minute, said that Carter, Gummow, & Co. were so fixing their schedules as to obtain an undoubted advantage over the Government. All through, this officer, Mr. Bagge, seems to have been making an effort against his superior officers, in order to secure justice to the country —

Mr. CRICK: By whom was Mr. Bagge retired?

Mr. V. PARKES: By the Minister, I think, upon the recommendation of the present Under Secretary of the department. Then take the shafts. Carter, Gummow, & Co. put in so many shafts at a losing price. The sewers would not be any the worse for having the full number of shafts put in; but the number was reduced by seven, and then instead of being paid for blasting work at 4s. and 5s. they were paid for it at the rate of 40s. They substituted the manual labour rate for the blasting rate. It was clearly proved in the case of Regina *versus* McLeod that neither the Secretary for Public Works nor his officer had any power to in any way increase the cost of contracts by substituting a more costly material, or by adding to the price of any of the items. There is no doubt in my mind that by paying these moneys the Secretary for Public Works has illegally given away public funds. I now come to the item of "subducts." They are necessary in the case of every sewer for drainage purposes. They were estimated by the public officers at £600. One contractor contracts at £954, another at £668, another at £879, another at £1,366, another at £1,612. It will be seen that the amounts varied from £600 to £1,612. Carter & Co. put these drains in at 1d. each, or upon the whole lot, they put down £8 16s. 8d. Eventually, however, the Government officer did not have these subducts built. There is no payment whatever for them, and as a matter of fact they were not put in.

Mr. CRICK: No wonder they were not put in when the contractors would have had to do £600 worth of work for £8 16s. 8d.!

Mr. V. PARKES: Will hon. members tell me that this was not a prearranged affair? Do they suppose for one moment that this firm would have risked having to do £600 worth of work for £8 16s. 8d.? Was it not on the other hand a duty of the public officers to have these ducts put in at the cheap rate to the country at which they could have been put in under this contract?

Mr. ASHTON: Can the hon. member show me from the papers where the firm obtained permission to omit the subducts?

Mr. V. PARKES: No; but they did not do them, and they were not paid for them. Upon page 125, hon. members will see a letter written by one of the junior officers of the department to the Engineer-in-Chief for Sewerage. He says:

As some of the man-holes on this contract are being constructed, I should like the Engineer-in-Chief's decision as to the kind of pitching, if any, which is to be put round the man-hole covers.

Twelve square yards of squared bluestone pitching were included in the schedule of quantities, which the contractors have priced at £50 per square yard. The quantity likely to be used if the whole of the man-holes are to be pitched will be 35 square yards, which, at schedule rates, will amount to £1,750.

Special bluestone concrete will answer the same purpose as bluestone pitchers, and will only cost 9 cubic yards, at 50s. = £22 10s.

The fair price for bluestone pitching is about 25s. per square yard, and, as the schedule rate is so much higher than the market rate, the question arises whether the pitching should not be omitted. If, however, this course is considered to be unfair to the contractors, then only the quantity included in the schedule of quantities need be carried out.

The Engineer-in-Chief in his minute says this:

We cannot in fairness omit an item for which, no doubt, the price is absurdly high, while we know that on other items the price is equally low. Where bluestone pitchers are shown on drawing contractors must be paid for same at schedule rates.

But I will show that they have selected all the high items on which to pay these contractors. To show the iniquity of this I may say that they not only pay £50, but they increase it twofold by taking out the sandstone where it is provided and putting in bluestone. If that is not an act against the interests of the country, I should like to know what is. A certain number of sandstone pitchers are to be put in. These are withdrawn and bluestone substituted. That is to be seen in the payments made to the contractors. I can show that they have carefully manipulated every one of these items, so that the country suffers and the contractors gain. In Contract 72, in which there are no particulars shown, a claim was made by the contractors for something like £4,000. In this contract we have simply the papers given to us—the specification and the payments. But in the schedule there is provision made for the excavation, which is to be done according to the schedule of the contractor, which he undertakes to carry out, and it shows that he has a contract to excavate 26,200 cubic yards, and 12,000 cubic yards of filling. When we come to the payments we find that the contractor, instead of being paid for 26,000 yards of excavation is paid for 53,000 yards of excavation at 2s. 6d. Then instead of being paid for 12,000 yards of filling he is paid for 27,000 yards of filling or something more. Now there are no papers whatever to show why this extra is paid, nor is there any paper to show why another claim of £4,000 is granted in addition later on. But I was told by a member of this firm, who has left it, that the Government stopped this work to get possession of some land, or for some purpose, and although there is a provision in the contract which throws the whole obligation on the shoulders of the contractors for all these delays, that while the work was stopped there came a very heavy flood and it washed out their works to double the extent to which they had been carried on, and I was told, and I believe it to be true owing to the authority from which it comes, that the Government officer has not only paid them for the work they did, but paid them for all the flood-water washed out, and then paid them to fill it up again.

Mr. YOUNG: What contract is that?

Mr. V. PARKES: That is contract No. 72. There is just another little item to which I will refer to show how these things are manipulated. There is one item of wrought-iron girders. The trade price for wrought-iron girders placed in position is from 11s. to 13s. per cwt. A few years ago the price was 13s. a cwt., but it is 11s. at present. In the schedule provided by the contract the Government are to get a certain quantity—that is, 74 cwt. The contractors give the price at 25s. per cwt.—that is, 100 per cent. over the proper value. Without rhyme or reason the quantity is increased from 74 cwt. to 400 cwt., and they pay for that at 25s. per cwt.—that is, the contractors are given a neat little sum of £280. Every effort has been used in the settlement to give Carter, Gummow, & Co. an advantage over the Government. Now, I come to contract 77, which is for the Balmain sewerage. The papers are at page

205. That is a contract in which part of the work was to be a tunnel and the rest an aqueduct. Under the Government plan the aqueduct was to be superior concrete with brick and cement arches. It was to be self-supporting, that is to say, sufficiently strong for vehicles to go overhead, if that had been the purpose. It was to be brickwork of the very best description, and the bricks were to be patent kiln burnt. It was thus to be a work of the most permanent nature. Yet the Government, under the Secretary for Public Works, allowed the contractors for a saving of £250 to substitute a scheme of their own, consisting of cement arches, which would not stand unless supported by tie-rod iron. The best description I can give of that to hon. members is to take this chamber, and to suppose that the walls are so weak that they cannot sustain the roof, and the weight of the roof is sufficient to push out the walls. The first thing to be done under such circumstances would be to put in iron tie-rods. These arches are so weak that they cannot sustain themselves, and have to be tied with iron tie-rods. That is what the Minister allowed the contractors to substitute for his own good, permanent plan.

Mr. YOUNG: Will the hon. member be fair enough to read the advice on which I acted?

Mr. V. PARKES: I cannot read everything in these documents.

Mr. YOUNG: The hon. member will not read what is fair!

Mr. V. PARKES: I will show on what advice the Minister acted. This patent, with regard to the Monier arch, this useless, risky thing, was invented in Germany thirty years ago for ornamental work in gardens, and it was never intended for such work as I am referring to. This cheap thing was reported on by Mr. Bagge, and he shows that it is 50 per cent. cheaper than the Government scheme. Now, in the first instance, in 1893, Carter, Gummow, & Co. offered this thing to the Government for £1,500. They offered to sell it to the Government, but in this one contract the Government leave them their patent and give them a preference of £3,000; that is, the whole of the contract for the use of this patent in the grave losing job. In his report, on the 21st September, 1894, Mr. Bagge says:

The sewerage aqueducts have hitherto been constructed here in such a manner, method, and of such materials that any competent tradesman, in his special line, obtainable in the colony, could do the work.

Now, however, as it is a matter of the greatest importance to reduce the cost of the works, there seems to be no other way of accomplishing this object but to adopt for this colony a more or less experimental system of construction for these aqueducts—of increasing the spans of arches, introducing arches with joints, of constructing the whole in concrete, and of constructing the whole of the work of concrete and mortar and iron.

Then he goes on to say:

In the old home countries these novel systems of construction have caused in the commencement failures, owing to the works being carried out by more or less inexperienced and untrained engineers and artisans; hence the various State governments would not entertain and construct works on these novel methods until special companies established themselves, who made it their special business to carry out such works with artisans who had had time to gain the necessary experience, and who had been practically and specially trained in the construction of such work.

It was only to such companies that works, which are termed purely and simply specialities, were entrusted, after they had given adequate security for the faithful, careful, and competent execution of same.

Now, when this work was submitted to the Secretary for Public Works, Mr. Bagge reported in this manner: He sent in a report in which he drew a comparison between Mr. Ahearn's contract on the sewage farm, and he showed clearly by his figures that this work was 50 per cent. cheaper than the work specified by the Government. I ask hon. members to mark how the Secretary for Public Works was so cleverly outwitted.

Mr. YOUNG: Where does Mr. Bagge make those statements in his report?

Mr. V. PARKES: He says this:

The plans for the White's Creek and Johnstone's Creek aqueducts as designed in this office, for which tenders were invited, were prepared with a view to securing the most substantial and enduring structure at the most reasonable cost. At the time that this design was made, I had as full particulars regarding the "Monier" principle as it was possible to obtain in the colonies. I would also like to point out that in Europe this class of work is made a specialty, being patented, and is wholly in the hands of private companies, who are required to give a substantial guarantee for the stability of their work. I think it would not be advisable to construct at the outset a work of such importance on the "Monier" principle.

|  |         |
|--|---------|
| The total for the office design amounts to .....   | £15,757 |
| The total for the contractor's Monier design ..... | 15,500  |
| Difference .....                                   | £257    |

Mr. YOUNG: The hon. member said it would cost 50 per cent. less!

Mr. V. PARKES: This is in a report laid on the table of the House on the 5th October, 1895. Now, let me show you what the Engineer-in-Chief says. This will show how these officers catch the Minister. The Board of Reference, on the report of the Engineer-in-Chief and on his advocacy, sent in this report to the Minister:

The Board, in view of the fact that Messrs. Darley and Hickson are satisfied that the principle is a sound one, and that the adoption of the plan will result in considerable economy, are prepared to indorse the recommendation of these gentlemen, and now submit the matter for the Minister's consideration.

It goes on to the Minister, and he writes:

Before approving of this proposal, I should like an estimate of the actual value of the work to be carried out by the contractors under the substituted scheme.

That is very fair. Listen to the report of the Engineer-in-Chief:

To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm estimates were made for the work on the Monier system, as well as on the department's designs. The result was that the estimate of both works was practically the same.

But there is an estimate, according to Mr. Bagge, that it is 50 per cent. cheaper.

Mr. YOUNG: Who is to be believed—Mr. Bagge or the Engineer-in-Chief? It is simply a matter of opinion!

Mr. V. PARKES: But Mr. Bagge's report is the one referred to, and here we have a report submitted to the Minister by the Board of Reference recommending the adoption of this substituted work on the ground that it is cheaper; but the next day he obtains a report from the Engineer-in-Chief telling him that the cost of the two methods is the same. Then he says, "That is sufficient for me; I will authorise the substitution." Then the Minister accepts this "cheap-John" thing on a report of that description. Why, if he were charged the same price, there was the more reason that he should stick to the good and substantial work of his own office. There is an exceedingly clever piece of business, and hon. members ought to follow it.

Messrs.

Messrs. Carter, Gummow, & Co., in submitting their tender, said that they were prepared to find sureties for £6,000 each to guarantee the maintenance of this work for five years. Their specification is here—it is not an office dictation, but their own submitted undertaking. Carter and Gummow write :

We have the honor to draw your attention to the conditions upon which the acceptance of our tender depends for Contract No. 77, Balmain Sewerage Works, and to our conversation with you of even date in connection with security required for its due performance.

We respectfully submit that our personal sureties for the amount necessary should be taken for its completion and maintenance, and as a sufficient guarantee for the proper carrying out of the work.

We are a firm of sound financial standing, well and favourably known to your department as contractors for many large and important contracts extending over a period of eight or nine years under the Departments of Harbours and Rivers, and Roads, Bridges, and Sewerage, which facts we trust will satisfy you as to our *bona-fides* in this matter.

That is, they offer their own firm as their sureties instead of a personal undertaking. Mr. Hickson, in reporting on this, commences by saying :

The accompanying letter of 4th April, 1895, from Messrs. Carter, Gummow, & Co., is a protest against the stringent supplementary specification prepared by Mr. Norrie, at my suggestion, with regard to the alteration in the design of Contract No. 77.

It is not a protest ; it is an offer in substitution of the contractors' former offer.

The last paragraph of this specification states :—“ And the contractors shall enter into a bond to Her Majesty the Queen in the penal sum of £12,000, with two sufficient sureties in the penal sum of £6,000 each, to secure the removal of so much of the said works as shall have been constructed on the Monier system, &c., &c.”

The amount of £12,000 is the sum it would cost the department, at departmental rates, to renew that portion of this sewer which is built on the Monier system.

It is right, however, to say that the tendered rates for this portion of the work would only come to £9,000 ; but, prices being abnormally low, I think it is only right to put in a sum at which the department really values the work.

Messrs. Carter and Gummow ask that their own “ personal sureties for the amount named,” that is, £12,000 (an amount which they do not dispute), “ should be taken for its completion and maintenance, and as a sufficient guarantee for the proper carrying out of the work.”

They go on to say that they are “ a firm of sound financial standing, well and favourably known to the department as contractors.” This is quite true. They are a firm in which I have every confidence. They have done a great deal of work under me, and I can testify that their aim always has been to turn out the very best class of work possible.

I may tell hon. members that before this minute was written Mr. Hickson had to put a new bottom to the Pott's Hill reservoir which these contractors built, and also a new bottom to the Waterloo sewer. I want hon. members particularly to mark what I am now going to read :

At the same time, misfortunes happen to the very soundest firms of contractors, and the department must look a little way into the future. Their own bond for £12,000 would be really of no use if they were unfortunate enough in the meantime to become bankrupt.

I think, therefore, it is right that the sureties should be insisted upon. They give the names of two men, Mr. George Forrest and Mr. James Gillan. From inquiries made, I believe these men to be financially sound, and, I think, if their names were accepted as the sureties in the penal sum of £6,000 each, the department would be secured as far as it is reasonably possible to be.

When Mr. Hickson wrote that letter he knew that these two men, Forrest and Gillan, were members of the firm to which his son was the acting engineer.

Mr. YOUNG : Will the hon. member read the last sentence ?

Mr. V. PARKES :

This work will be carried out under Mr. Darley, and I recommend that the whole of the papers be sent him, to give his opinion thereon.

Mr. YOUNG : Now let us have Mr. Darley's report !

Mr. V. PARKES : Why ?

Mr. YOUNG : It is only fair to Mr. Hickson !

Mr. V. PARKES :

I concur with Mr. Hickson. I think in accepting a new patent of this kind, and adopting it in a large and costly contract, that the department cannot be too careful in securing its position by leaving all the risk in the hands of the contractors and patentees. I, therefore, recommend that the personal names be required for further security. The names mentioned may, I think, be accepted.

I expect that Mr. Darley, without bothering himself, and relying upon Mr. Hickson, indorsed Mr. Hickson's minute. That letter was written on 5th April, and Mr. Hickson's son came up from Adelaide with Mr. Gillan to sign that bond as an independent surety, and the Secretary for Public Works accepted it.

Mr. CRICK : Does the hon. member mean that the Secretary for Public Works knew that those men were members of the firm ?

Mr. V. PARKES : He must have known it, because they signed contracts two years before as members of the firm, and Mr. Hickson's son was engineer for the firm at Adelaide and was along with Mr. Gillan. He knew that when he wrote that minute this was the case—it is a gross piece of deception on his part. That minute was written on the 5th April, 1895, and on the 13th April, 1895, this notice was published in all city papers :

Notice is hereby given that the partnership lately subsisting between us, the undersigned, John Carter, David Graham Snodgrass, George Forrest, Frank Moorhouse Gummow, James Gillan, George Maddison, and Peter Ewing, as contractors, carrying on business in Adelaide (South Australia) and Sydney (New South Wales) under the name, style, or firm of Carter, Gummow, & Co., was on the 1st day of April, 1895, dissolved by mutual consent in so far as regards the said George Maddison and Peter Ewing, who retired as from that date from the said firm. All debts due or owing by the said firm will be received and paid by the said John Carter, David Graham Snodgrass, George Forrest, Frank Moorhouse Gummow, and James Gillan, who continue the business under the same style of Carter, Gummow, & Co.

I ask the Secretary for Public Works what is the good of that surety bond ? The Engineer-in-Chief says he could not think of accepting the whole firm as their own sureties, and then he goes on knowingly and recommends that two members of the firm—that is, part of the whole—shall become sureties for the job. Is that not deception ? It is deception perpetrated with intention. I will show how clearly the intention is made out. In all other contracts the specifications contain this paragraph :

In submitting a tender the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

Now, that item is omitted in the contracts for this No. 77 job. In addition to that the statutory declarations which Messrs. Forrest and Gillan made are in these words :

I, George Forrest, of Marrickville, in the colony of New South Wales, householder, do hereby solemnly declare and affirm —

Hon.

Hon. members will see that from this statutory declaration is omitted the place of residence or the fact that Forrest is a contractor. The other declaration says:

I, James Gillan, of Dulwich Hill, in the colony of New South Wales, householder —

Although he lives in Adelaide it is not so stated. It omits the fact that he is a contractor. It is fixed up so as to leave Forrest and Gillan open to sign this bond. There is no doubt about it that the whole matter is bogus; for if the contractors become insolvent, and the whole thing bursts up, and they have no estate to come upon, what security is there to cover this risk? I quote this to show how the Minister has allowed himself to be hoodwinked by the officers of the department. In connection with this contract, there is no doubt, from estimates I have made, and which I challenge anyone to refute, that the works saved to these contractors by the substitution of their own plans and specifications are equal to about £4,000. Instead of the saving to the contractors being only £275, as the Government put it, it is from £3,500 to £4,000. Now, let us take Contract 79—the North Shore contract. This contract was let to Carter and Gummow on a schedule in the same manner as the others—that is, they undertook to do what is called guttering and gadding work—that is, manual labour, to the extent of 1,300 yards. If hon. members will turn to page 333, they will see that Carter, Gummow, & Co. in their schedule undertook to excavate 1,300 yards, at 63s. for manual labour. They then undertook to excavate 3,000 yards and 2,500 yards blasting work which was to be done at 60s. and 78s. Other contractors estimated for the gadding work £6 and £7, but the estimate of Carter, Gummow, & Co. was 63s.; and for blasting they estimated at 78s., whilst other contractors estimated at about 60s. The Government substituted the blasting work for the manual labour, and by that means gave the contractors about £4,000 or £5,000. As hon. members go further down they will find that the firm were paid in excess £1,598 and £600, that is £2,198 altogether. This was paid for concrete to fill up defects, in spite of the understanding being that they should not be so paid. The Minister, although a bond was accepted for £4,000 for the due completion of the work, and he ought to have kept back the retention money, six months before the job was certified for, and before it was completed, returned the whole of the bond money.

AN. HON. MEMBER: What security had he for the completion of the work?

MR. V. PARKES: None.

MR. YOUNG: Because the work was done!

MR. V. PARKES: It was not done, and the contract said clearly that the money must be retained in hand three months after the certificate that the work was satisfactorily completed by the contractor. The retention money has been returned, and I want to produce an affidavit made by one of the workmen on this job to show what risks the Administration took in returning the bond money. That money might still be in hand to repair the damage disclosed in this affidavit; but the Government have returned it all and have no remedy. This affidavit is sworn by a labourer who is still working for Carter, Gummow, & Co. He says:

I am a labourer on Contracts 79 and 79A, putting in brickwork and concrete as packing. From shaft No. 13 of Contract 79 the blasting has blown out large cavities from 4 feet to 4 feet 6 inches over the top of the brick lining, which under the contract should be tightly packed with cement, but which have not been packed with cement, except here and there where the rock comes close to the brickwork.

To my own knowledge this defective work commences from 270 feet down stream from shaft 13 to 380 feet, and to my firm belief, from the conversation between myself and several others, the whole work is of a similarly defective nature; and in all the links in which I have worked none of the packing is done as required to specification.

That document was sworn to, and cannot be refuted. The action of the Administration in giving up the cash bond, which no engineer, no business manager in any capacity would have done, has left the Government with only one resource, namely, that of going to law with the contractors. If what this affidavit says is true, they have no remedy otherwise than the costly remedy of an action at law. Actions of that sort ought to condemn the Administration who allow them. Why should they take these risks? Everything is done as against the state. I have pointed out that the schedules have been adjusted so as to allow the contractors to blast, and that blasting has been the cause of all that defective work; and the workmen told me that in some cases the cavities left have been so great that a man could walk along them. This state of affairs ought to receive a severe check at the hands of the House. If I were to read everything that has taken place, as disclosed by the minutes, the House would be astonished at the looseness with which our Ministers administer the public funds. As regards Contract No. 79, there can be no doubt that if the same concession had been given to other contractors as to Carter, Gummow, & Co., as disclosed by the papers, the country would have benefited to the extent of £10,000 on this job. Since I moved the adjournment of the House on the subject upon a former occasion, the Water and Sewerage Board have called for tenders for a third section. Two sections were given to Carter, Gummow, & Co. without tenders, but the third tender was accepted at 40 per cent. under the schedule prices of Carter, Gummow, & Co.'s contract. That is conclusive evidence of the concessions that have been given to these contractors.

MR. McMILLAN: What interval of time elapsed?

MR. V. PARKES: About four months.

MR. McMILLAN: And what was the alteration in prices?

MR. V. PARKES: I have pointed out to hon. members that blasting was substituted for manual labour in the excavations, and now I want to point out that all this has been done against the repeated protests of the residents of the district. There were letters constantly pointing it out. This contract was carried on during the night time, and one officer pointed out in his report that the work was not supervised during the night time. He says, "This work has been carried on at night time, when no supervision could be given." Another clerk of works who was doing his duty, and who could tell the country a great deal if put under oath, discreetly says that he will not give any information unless he is put under oath. He is right in that. He will not give me information; but I have gathered sufficient to know that there is a very wrong state of affairs going on. This man has been dismissed. Why? Not because he has done anything wrong, but for quarrelling with the contractors' foreman because they would not supply good material. He tells me that he wants to get back into the department, and having been a fool once, he does not want to be a fool a second time. Here is the report upon his case. He says:—

I beg to report that on several occasions I have had to complain about the time the sandstone concrete is mixed for packing brickwork in shafts. To-day two 20-foot mixings were made up at 2 p.m. at No. 5 shaft. This concrete will not be put down shaft for use till 5.30 p.m. I have instructed Connors (foreman), who has charge of this work, not to have the concrete mixed so long before being used. He states to me that he has to take his instructions from the firm. I saw

Mr.

Mr. Snodgrass last Friday and complained to him about this matter, when he promised it should not be mixed until one hour before it is required to be used. I spoke to Reid (contractors' representative) to-day, and he states that they shall mix the concrete when convenient for themselves.

Inspector Reid informs me that on Saturday last, 17th February, about 1 p.m., at No. 6 shaft, it required half mixing 10 feet of sandstone concrete to finish brickwork packing in shaft. Henderson, bricklayer working in shaft, was on mixing board, and started to assist labourer gauge the stone. Inspector Reid instructed Henderson to use the fork in place of shovel in filling gauge box, as the stone, which is broken close to the mixing-board, is not free from refuse. Inspector Reid asked Henderson the second time to use fork. Henderson replied that it did not want forking. Connors, foreman, came on the scene, and said to Henderson, "Go on; do not take any notice of him, he's only a damned big buck navy."

The man was subjected to this insult for doing his duty and doing his utmost to prevent the contractors from cheating the Government with bad material. What was the result? From the minutes you will see that he was taken from that job, and in a few months dismissed. The only reason is that he quarrelled with the contractors' foreman; but you must recollect that he quarrelled with the foreman in the interests of the country, to save the money of the country. These contractors were not the lowest tenderers by a long way. A firm of contractors named Bond and Hudson sent in a tender to do the work for £3,000 less than the contract of Messrs. Carter and Gummow. I will show how cleverly the department acted in getting rid of Messrs. Bond and Hudson's contract. The minutes bear out everything I say. Messrs. Bond and Hudson's tender was accepted by the Board of Reference; but Messrs. Bond and Hudson were not notified of that for three months. They then wrote to the department, and asked if their deposit money might be returned. One of the conditions is that the contractors' money shall not be returned if they fail to take up their contract. But in this case Bond and Hudson's cheque was returned, in order that they might be got out of the way. Instead of having tenders called for, the Engineer-in-Chief said—Messrs. Carter and Gummow having a claim for £4,000 on Contract 72, he recommends them to forego this claim, and says they can have a preference to the amount of £3,000 over the other contractors. That is a cool way of settling a claim, and the beauty of it is that the claim has never been tested by the law authorities. It was the duty of the Government officers to see whether it existed—whether there was a claim at all; but the claim was admitted, and Messrs. Carter and Gummow received the preference over other contractors if they would forego their claim, as to which one of the late partners told me they had not a shadow of a leg to stand upon. Their own solicitor told them that; but this claim was accepted as being correct, and the claim was put in when No. 72 was only half finished, and not a month before they received the preference in regard to the other job. There cannot be the slightest doubt that, if the work had been tendered for, it could have been let 30 per cent. cheaper.

Mr. COPELAND: What was the amount of the contract?

Mr. V. PARKES: It was £35,000 when it started, and it was increased to about £45,000, I believe.

Mr. COPELAND: Were they the lowest tenderers?

Mr. V. PARKES: No. Messrs. Bond and Hudson were the lowest tenderers. I am now speaking of Contract No. 79. I will read the report of Mr. Bagge who tried to save the department from entering upon that scheme of the Monier patent. Mr. Bagge points out where they were proposing to allow the contractors to substitute blasting for manual labour. He says:

Messrs. Carter, Gummow, & Co. have undoubtedly fixed their schedule prices speculatively to increase their profits on the contract as much as possible, and, if so, to the loss of the department.

There is no doubt that there is evidence of what the officer says right through the job. If we look through the whole of the papers we shall find that these contractors have in every case received thousands of pounds, which, if the matter were tested under proper regulations they could not claim from the State. I will now refer to Contract 118. That is the contract in reference to which I complain, that unemployed labour was taken to do the work which they had to do under their contract. O'Neill & Co. were carrying out Contract No. 83, and they informed me that the whole of the sandstone which they brought for this work was condemned. That stone was returned to Mr. Ryan's quarry at Pymont. Then Messrs. Carter and Gummow were allowed by the Engineer-in-Chief to use that condemned stone at half price on Contract No. 118. You cannot get away from this statement, because O'Neill saw Ryan, the contractor, and Ryan says emphatically that he sold to Carter and Gummow, with the approval of the Government officials, the whole of that stone, to an enormous extent, which was condemned in O'Neill's Contract, No. 83. O'Neill in all probability is not a man of great means. He is not perhaps so much in favour with the department as are Messrs. Carter and Gummow. It is a serious thing if stone which is defective on one job is permitted to be used on another job. It was taken over to Contract No. 118, crushed in Mr. John Young's mill, and put into the contract holus-bolus as it came out of the crusher.

Mr. ASHTON: Was it the same class of work?

Mr. V. PARKES: If anything it was a superior class of work. Again, as regards Contract No. 118, I have to complain that there is no document given by which any proper estimate can be made. The plans were omitted and other plans were substituted, and the whole thing is so fixed up as to make it impossible for any hon. member to arrive at a proper conclusion as to what the works contain. Again, in the Contract No. 79, that old trick of subducts is played. These subducts are simply drains which are put under the beds of the sewers where there may be waste rock or imperfect earth of any description. The object is to drain into each shaft any water which may accumulate, and which may damage the beds of the sewers. They are absolutely essential to the sewer, but if they are not put in it can never be found out afterwards that they were not put in. Messrs. Carter and Gummow estimated these subducts at £4 5s., whereas other contractors estimated them at £452 and £666. This is a nice state of affairs! It is fair to assume that Messrs. Carter and Gummow must have been told by the officers that the subducts need not be built. The whole of the schedule is treated in the same way. If the work had been carried out conscientiously by the department, on this job alone there would have been a saving of at least £10,000. If I had been the engineer who had had to settle this contract, I should have had the work carried out in such a manner that the country would certainly have been saved £10,000. If a Public Works Committee should ever hold an inquiry, this schedule system will be proved to be a means of gross robbery of the public funds. If I were to go into all the details which I have taken out, the House would not bear with me. It would be useless for me to run right through all the details I have. But so gross are the acts which are disclosed in these contracts, and which are consented to by the minutes of the Minister, that I do not see how any inquiry possibly can take place without affecting his administration of his office. It would be useless to have an inquiry into the conduct of the officers alone when the officers are backed up entirely by authoritative minutes by the Minister to carry out these works. They simply fall back and say, "It was done by ministerial instruction," as the Engineer-in-Chief falls  
back

back and says he submitted a document in one case to the Minister, on which he did not make any comments, and which he left entirely to the Minister's discretion. They will turn back upon the Minister, and say, "It was by ministerial authority I did these works." There can be no doubt that if you want to get to the bottom of this system of contracting—this system of playing a game of chance catch with the funds of the people—you can only do it by having a thorough investigation of the department. The Minister has not only refused to consent to a thorough investigation of his department, but he has laid on the Table a report from the officer who conducts these works, making out that my statements were inaccurate; in fact, that I was speaking that which was a lie. From these documents I think honorable members can have no hesitation in authorising a Committee of inquiry. The Premier stated that he would be willing to give me a Committee; but when I proposed to him that it should be of such a nature that it could not fail to find defective work, he would not give me a Committee at all. The Secretary for Public Works, through incompetence, and through not looking up his papers and seeing into his contracts sufficiently, has led this country into expenditures which evidence gave negligent administration of his department. Whilst we are asking the country to pay fresh taxation; whilst we are asking the taxpayers to contribute the interest on the loan moneys which we are expending on these contracts if they are to be administered so that thousands of pounds are given away simply as a bonus to the contractors, we certainly ought to see that the administration of the Department of Public Works is exact in all its ramifications. I certainly feel compelled to vote against the administration after the manner in which the Secretary for Public Works has shown his incapacity to safeguard the great interests of this country. It is impossible for us to ask the people to pay new taxes if we are to waste the money in this fashion. From the calculations which I have made, and which would take me, perhaps, half an hour to describe to the house, I would guarantee to prove beyond any refutation that in these six contracts £40,000 has been paid away to the contractors improperly; that in a great number of the contracts there is no security, bond, or anything by which you can attach the contractors; that the contractors have substituted, through the knowing wrong-doing of the head of the department, their own partners as sureties for risky contracts; that they have by minutes hoodwinked the Minister—and minutes of such an extravagant nature that he ought himself to have been able to see them, because I, not a Minister but with these incomplete papers, was able to see these things in ten minutes. For instance, what Minister could make a mistake in a case of this kind? Mr. Bage reports to the Minister that the work on the Monier arch can be done at £6 per lineal foot as against £10 per lineal foot on Ahearn's sewer work at the sewerage farms, under the Government engineer's scheme and plan; and the Engineer-in-Chief states that he has made a comparison between the two, and he finds that it will cost exactly the same as the other, his reference being to this very report. Yet here is a paper showing that the test when made was 50 per cent. cheaper. The papers show such negligence on the part of the Minister in looking into what he was doing that I think the House, if it wants to safeguard the public expenditure, must come to some definite understanding that will compel the administration to do right. No one would dream of making a charge of corruption against the present Minister or any other Minister, but there can be no doubt that the moment officers put papers before a Minister, he signs the papers without making the slightest inquiry. In this matter the Secretary for Public Works has, I consider, been glaringly negligent of the public interest; and for the affront he has given this House by allowing reports to be laid upon the Table before there is any chance of an inquiry being made, I think he deserves the greatest censure. Nothing can so drag the privileges of Parliament through the mud as to allow of any intimidation against honorable members stating here their free thoughts on all subjects. If an honorable member hears outside something which is against the public interest, here is the place where he should divulge it, and if the Minister adopts a method of trying to intimidate an honorable member before he can possibly get an inquiry, after blocking all his efforts to get an inquiry in the past, he deserves the greatest censure. Let me refer here to the general manner in which this administration treats the people of this country. There can be no doubt that the way in which the Minister of Public Instruction—he who above anybody else should show the greatest amount of dignity and culture—receives deputations from the people whom he presumes to govern is something appalling. I took a deputation to the Minister of Public Instruction, and I retired from the room long before the deputation had finished. Fancy what a dignified, philosophical schoolmaster must think of the conduct of the Minister of Public Instruction, and the manner in which he conducts his office! I will give an instance of the way in which the Minister receives deputations. A deputation which I introduced to the Minister was received in this way: "Well, what d'yer want?" was the first question he asked, and before the chief spokesman for the deputation had a chance to state his case, the Minister was down his throat, and I left them there wrangling away with one another. I think that a cultured gentleman who presumes to be Minister of Public Instruction ought to administer his office with even more dignity than any other Minister administers his office. His administration of the Department of Public Instruction is likely to bring it into contempt. But a graver thing is the apathetic way in which he is allowing that fine system of technical education which we built up to fall to waste. This sort of administration cannot be long upheld, even by their staunchest supporters. If you put too many matters into an undertaking within a short space you will get nothing, and out of this programme which the Government now put before the country you will get nothing; but in the meantime we are to allow them to go on administering public affairs in the slipshod fashion in which they are doing. If the Minister of Public Instruction would but only go to the Colonial Secretary, or to the Secretary for Lands, and see the dignified manner in which those gentlemen receive deputations, he might learn a lesson. What has been the administration of the Secretary for Public Works? Nothing but a snapping at those people who are asking for public works from him. Until his late trip he has not endeavoured to increase the public works of this Colony in any judicious manner. No proposals of any wisdom for carrying out public works have come from him. There has been no progressive development of the country, unless it be through the Lands Department. But in a Colony like this the main thing ought to be to develop the country. The administration that is going on is one of State robbery by contractors and certain officers of the department, who, whether they are benefited or not, at all times assist to hoodwink the Minister in order to help the contractors to get money out of the department. It is with great regret that I move the amendment which I have foreshadowed. I intend to move my amendment because I have no other opportunity, under the manner in which I am treated, to get justice. It would be impossible for me to bring up the matter in any other way, either by asking for a Select Committee, or by moving the adjournment, without criticising the administration of the Minister, and the department generally. The Minister is in every way allied with his office, and I cannot help reflecting upon his department. Therefore, there is

but

but one courageous thing for me to do. If my amendment is ignominiously defeated, I trust that the exposures which I have made will bring about a thorough renovation of the administration of the Works Department, and that it will make it impossible in the future for contractors to rob the State as they do at present. I move :

That the address be amended by the insertion of the following words, to stand as paragraph 3 :—“ We desire to express the opinion that your Excellency's Ministers should at once invite Parliament to appoint a Select Committee to inquire into the administration of public works in this colony.”

*His Honor* : I will now call upon you, Mr. Parkes, to address the Commission.

*Mr. Parkes* : May it please your Honor,—I will not occupy more time than is absolutely necessary in replying to the addresses of Mr. Andrews on behalf of Carter, Gummow, & Co., and of Mr. Smith on behalf of the Department of Public Works. With reference to the motives which actuated me in asking for this inquiry, and also the loss of time with which I am charged through not obtaining, in the first instance, necessary information, I think it must be apparent to your Honor that I used every possible effort which either a public man or a man in a private position in life could exert to obtain the fullest information upon the subject matters of this inquiry. Let me point out to your Honor the methods I adopted. In the first place, I heard certain rumours from certain contractors. I questioned them very closely as to what they had to complain of. There seemed to me to be a reasonable probability of the truth of their statements. I then took action in the House, and ultimately this Commission was granted. I may point out that when I made the first speech which has been referred to I asked that a Select Committee of the Legislative Assembly or that a Royal Commission might be appointed to inquire into the matter, to ascertain whether the representations made to me were true or not. That request was declined; but the Minister, at my instance, placed upon the Table of the House certain documents. I refer to the documents which were laid on the Table on the 22nd October. I perused those documents during the recess, or rather between the months of October and May. I found the papers to be in an incomplete state; and, by reason of that very incompleteness, I think they are calculated to give rise to suspicions in the mind of any public man anxious to discharge his duty. Looking at the schedule, for instance, of Contract 69 and 79A, and at the prices contained in the various schedules which were included in the papers; having regard also to the circumstances surrounding the letting of Contract 79, when Messrs. Bond and Hudson had been drawn off; having regard also to the circumstances surrounding the letting of Contract 77, and to the partial information contained in many of the papers which were supplied, confirming the information which had been given to me from outside; how could I, as a public man, do otherwise than ask and press for an inquiry? If I could have obtained information which established absolutely in my mind the fact that the allegations which were made to me were true, I should not have been likely—and I think, taking my public life, that that assurance may be accepted—to have asked for a costly Commission of Inquiry. But it was because it is impossible for a private individual to obtain information of the kind required, or even to ask for information—because it would have been persecution on my part to ask for information before this Commission was appointed—that I took the course I did. It is impossible for a private individual to discover, in a matter of this kind, what is really the state of affairs. I had assurances from certain men, coupled with information from certain documents; and I asked in Parliament for a Commission upon the avowedly incomplete information which I was enabled to put before the House. The Government, thereupon, acceded to my request, and granted this Commission. I naturally looked to the Commission to elucidate the truth or otherwise of the information which I placed before the House, but which I could not guarantee. If the information given to me turns out to be incorrect, if the doubtful matters appearing upon the face of the various documents can be explained away, then I shall be very pleased indeed—I shall be sincerely pleased. I can assure your Honor that I had no other object in view than the promotion of the public interest in bringing this matter forward. In bringing it forward in the first place I obtained the fullest information which it was possible for me at that time to obtain; and, the Commission having been granted, I naturally should not then go out of my way in order to search up matters upon which to condemn the department or the firm of Carter, Gummow, & Co. I, myself, certainly do not care to see men get into trouble. The only object I could have in view would be to remedy a state of things which was, to my mind, exceedingly detrimental to the public interest. If that object be achieved, I say that that is all that can be expected. It is not at all a pleasant thing to see men get into trouble, or to come to misfortune through bad actions. I am sure your Honor cannot accuse me of having during the conduct of this inquiry gone out of my way to persecute anyone, or of having shown any vindictiveness. In the investigation of these matters I have throughout adopted what seemed to me to be the fairest course possible. I, of course, had to make a searching investigation from my point of view, but I have not prosecuted that investigation in anything like a vindictive spirit. I now come to the second portion of the complaint which is made of me, viz., that I laid charges before your Honor without giving them due consideration. I fully realise the gravity of the position in which I was placed when this Commission was issued. I can assure your Honor that I really felt, within myself, that I ought not to appear before this Commission otherwise than as a witness; but Mr. Reid said “ Since you have the Commission it is your duty to assist

as much as you can in the conduct of its proceedings." That I have done. In appearing before your Honor in the first instance I wished only to place before the Commission my speeches, as delivered in the House, together with such information as I could gather during the course of the inquiry, and to ask you to determine upon the truth or otherwise of the various matters which were brought before you. But, as I explained to you at an earlier stage of to-day's proceedings, when making a certain application, Mr. Friend, the Secretary to the Commission, called upon me, by your Honor's direction, at the Legislative Assembly chambers, and informed me that your Honor desired that, if possible, certain charges should be put down in writing. I pointed out to Mr. Friend that if I followed the course which your Honor suggested I should in my opinion place myself in the position of a prosecutor, whereas I considered that I ought not to be placed in that position, for I take it that this is not a court in which there is a prosecution and a defence; it is simply a court of inquiry as to the truth of certain statements which I made in Parliament upon certain information given to me, and which I believed to be true. Your Honor can see that in accepting your offer that I should place certain fixed charges before the Commission I was putting myself in a position in which, as I well knew at the time, I should expose myself to censure and abuse if I failed to obtain the whole of the information which I expected to obtain. I would much rather not have done so; but as your Honor, on your part, explained that you did not consider these charges to be fixed charges, but that they were simply a basis upon which to ask for evidence, I put in the statements which have been before you. I do not think Mr. Smith should complain, in that I have been unable to prove or to sustain some of these statements or so-called charges which I have laid before the Commission. After all, the basis of inquiry by your Honor is the speeches delivered in Parliament, and had I allowed the inquiry to proceed in the ordinary way your Honor would still have had to inquire into the various matters contained in those speeches. It would have been necessary for you, for instance, to bring young Mr. Hickson round here from West Australia, because it would have been impossible for your Honor to avoid inquiry into the relations between that young man and Carter, Gummow, & Co. If I were to set down at all in certain fixed words the nature of the allegations I wished to be inquired into, I could not do it otherwise than in the words I have used. Your Honor will recollect that I was very careful in the first place not to put in the charge affecting young Mr. Hickson, until I thought the Commission would not bring him from West Australia, unless a definite charge was put in—in fact, Mr. Hickson, senior, objected to his son's coming. I thought that in the interests of truth, whether the inquiry went against me or for me, it would be better that this young man should come here and give his evidence as to the true state of affairs. As matters turn out, that branch of the inquiry is against me. Many of the witnesses whom I have brought forward have been against me; and I freely admit that the portion of the inquiry in which young Mr. Hickson is concerned is against me; but my action was one calculated to remove suspicion from Mr. Hickson, as far as that charge is concerned, if it was untrue. I do not think, therefore, that any great complaint lies against me upon that score. I come now to Mr. Smith's complaint that I was actuated by motives of hostility of a very curious nature to the heads of the department. I do not think that that insinuation is at all justified by the circumstances or by the statement which I frankly made to this Commission, in order that Mr. Smith might see to what extent I was actuated by public motives. Mr. Smith ignores altogether my statement that I was actuated by public motives; and he takes my statement that on my election in 1891 for East Sydney certain comments were made by property-owners and by taxpayers as to the costly and defective nature of the sewerage works in Sydney, and he has transformed it into a statement that I had around me professional men, engineers, workmen, and others, who wished me to practically destroy the department as at present constituted, with the object of conferring some ultimate benefit upon them. It is long since I was a Member for East Sydney, and I cannot see how it is possible for Mr. Smith to fairly draw such an inference. What good is gained even by referring to the notice of motion which Mr. Smith says that I gave in April, 1892, and which is referred to upon page 399 of the evidence.

- (1.) That, in the opinion of this House, it is expedient, for simplifying the machinery of Government, and for economy, that all the permanent professional branches of the service, such as engineering, surveying, architecture, law, and photography, shall be abolished, and the work performed by independent practising competitors, acting under instructions direct from the Minister under whose control the particular matter may be, and for whose advice a consulting officer alone shall be retained.

Presumably the head of the department would be retained. But the notice of motion is used by Mr. Smith to show that I wished to shift Mr. Hickson. That would be a wrong inference, because, even if the projected changes were made, it would still be necessary to retain a consulting officer, and Mr. Hickson might have been that officer. As regards the other officers, I may point out that in the department itself there are numerous officers who favour such a motion as that, because they think they would, by their natural abilities, put themselves into a better position if the opportunity for competing were afforded them. So that the motion was not directed to the injury—and I never had such an intention—of the officers

officers of the department. The idea was running in my mind that it would be a better course to give the Minister a better opportunity to attend to State matters, and with that object, to relieve him of a certain amount of official duty. The Minister being relieved of a great deal of the official duty with which he is at present charged, would, I thought, be able to devote a larger portion of his time to statesmanship. However, I am dealing with Mr. Smith's statement that I had motives of an improper nature—that I had unnecessary or unfounded suspicions. I think your Honor will at once acquit me of having been actuated by improper motives, and, as to my being over-suspicious in the matter, I would ask your Honor whether, if you were a public man, having read what was contained in the official documents from South Australia, you would not have come to the conclusion that things were not quite right there; because it is apparent from those papers and from Mr. Hickson's own admission, that, although he knew that certain contractors were sending their plans into the department, after he had arrived in Adelaide, the South Australian Government instructed him to prepare plans of his own, and not to accept these contractors' plans. Instead, however, of preparing plans of his own, he still allowed the contractors to make their second plans in his offices, the plans being made so imperfectly that any engineer of capacity would at once see this—that on their being sent to England for other contractors to tender upon those contractors would be absolutely thrown out of the work. The particular work for which the plans were drawn by the contractors afterwards went to arbitration—in fact, it came to grief; and Mr. Hickson then came across to New South Wales, having served only four years in South Australia, where he had been specially sent for from England. That in itself looked somewhat suspicious. Mr. Smith has also referred to matters which transpired in connection with the Public Works Committee causing me unfounded suspicion. I will point out to your Honor in a few words how justified I was in becoming suspicious that the public funds were being wasted—that they were being expended in an improper fashion. There was a proposal put before the Public Works Committee, when I was chairman of the Committee, to reclaim the greater portion of Darling Harbour, almost the whole of the portion above the bridge if I recollect rightly. When I came to look into the question I saw what an enormous amount of compensation would have to be paid in respect of water-rights, damage to property, interference with thoroughfares, the interception of traffic, the taking away of business from hotels and shops, and other things. It was very clear to be seen that a million of money would not have ended the undertaking. I saw that a determined effort was being made to have this work accepted at a figure which would not have covered more than one-fifth of the cost of it, and I therefore set to work to combat the proposal. In doing that, and in looking through the structure of the bridge which was the alternative proposal, I saw that there were very elaborate foundations. There were two bridges, one at Glebe Island and the other at Pyrmont. The plans of the department for the Glebe, Island bridge showed an inferior bottom. The bridge was of almost the same length, and the price was something like £89,000. The Pyrmont bridge, on the other hand, which would have to take almost the same traffic, was estimated to cost £220,000. I went carefully into the estimates, and I obtained the assistance of engineers, and it was quite evident that a bridge, lasting hundreds of years, could be built at Pyrmont for from £100,000 to £120,000. I intended to have the reports of the engineers submitted to Parliament, showing that the bridge would cost that amount of money, when a wooden bridge, which I considered most unsuitable for the site, was brought in, altogether blocking the proposed construction of the iron bridge, and evidently with that purpose. I came to the conclusion that the whole matter was one which certainly should not be allowed to go on. I am very glad to say that the reclamation has not up to the present day been carried out. The evidence tendered by Mr. Hickson at that time seemed to me to be of a very contradictory nature, and was quite sufficient to engender suspicion. No doubt I was perfectly justified in my suspicions. I come down to the present time, when these papers came before me, and when I had also before me the information of various contractors. I do not think the slightest exception can be taken to my conduct in asking, under all the circumstances, that these matters should be ventilated. As I have said, I shall be sincerely glad if it should turn out that the information which has been given me is wrong and that the documents quoted in Parliament can be properly explained away. I come now to the substance of this inquiry, and, in doing so, I would draw your Honor's attention to the fact that we have had some twenty-two contracts into which to inquire. Such an enormous amount of labour, seeing what it has cost to inquire into some four or five of the contracts, would be involved, that I do not think it could be justifiably entered upon. I have therefore abstained from going into many of these matters. I presume your Honor will not think that it is because I am in any sense fearful of the issue or of the justice of the inquiry that I have not gone into the whole of these other twenty-two contracts. I have not gone into them before your Honor for the simple reason that the labour involved would not in my opinion be justifiable. I considered that the four cases which I brought prominently before Parliament were sufficient upon which to base this inquiry. I have produced evidence, which I will presently emphasise, which affords conclusive proof that things are not as they ought to be in this great Public Works Department. I would ask your Honor, in the first place, whether one out of the four contracts which have been specially made the subject of inquiry has been obtained

by

by honest, fair, straightforward, tendering. Take Contract 69. It was obtained by a schedule specially arranged, and differing peculiarly from any class of rigging which the department had theretofore known. It differed from any class of rigging which contractors had theretofore adopted, in as much as it constituted an absolute trap to obtain public money. That can be proved clearly by any fair-minded man who peruses the schedule. There was no intention in the framing of that schedule to ascertain the true value of the items in it. There was no intention to carry out the contract at a fair profit, but there was, on the other hand, a distinct intention to defeat competition by fixing the schedule in such a manner that, while it appeared that the accepted tender was £45,000, it came out really at £54,000. Such a tender as that, whether it be legal or not, could not be looked upon with anything like a condoning eye, and ought not in the first place to be entertained. If contractors are permitted, no matter under what system, to so fix their schedules that practically they receive, as did the contractors in this case, 500 per cent. and more over the value of certain articles, we have reached a lamentable state of affairs. I say that the tender, if it had been an honestly, truthfully, and faithfully, drawn tender—even allowing for the speculation which the contractors claim they were at liberty to make upon it, if there had been a fair speculation—would have offered no ground for complaint. Had there been an ordinary builder's speculation there would have been no reason to take exception to it, nor would I have done so. But it has been clearly pointed out that it was not so arranged, and I will deal with the matter more in detail in answer to the explanation of the department, as to their justification for accepting it, later on. I come now to Contract 77. Can it be said that that was obtained from the Government in a proper manner by fair tender? Under such circumstances the Government ordinarily say to contractors "We will treat you most honorably. We will prepare plans and schedules for every one alike. We ask you to give us the benefit of your experience and knowledge in submitting a tender for the carrying out of this particular work." The contractors generally responded to this information on the part of the Government in this particular instance. In the meantime Carter, Gummow, & Co. had an employee—because he can have been nothing else; he must have been an employee or a partner—one thing or the other—in the office. He obtained from the office-plans all the necessary information for the making out of a plan by which they could defeat the other tenders sent in to the department, and obtain an exorbitant value for their work. By this means they defeated the ostensible object of the Government—the obtaining of a true and fair competition for the work they were about to carry out. This is what these contractors succeeded in doing. No doubt such tendering could not be permitted in the public service unless it be publicly acknowledged that there is to be open competition both for the design and for the cost of the work, giving every man an equal chance. Let me come now to Contract 79. Can your Honor say that that was honorably obtained? In the first place, it was obtained by the contractors, Messrs. Carter, Gummow, & Co., proceeding to the successful competitors, and, as was proved conclusively by the evidence of Mr. Hudson, and also the evidence of Mr. Kenwood, endeavouring to so intimidate those men that they would be ready to throw up their contract, Carter, Gummow, & Co. then coming in in the position of second tenderers, with £3,000 of benefit, so far as their price was concerned. However, they could not intimidate these men, because they knew that they had an excellent price for the contract. There were very few competitors—considering the general run of tendering—for this particular contract; but Carter, Gummow, & Co. were £3,000 over the price put in by Bond and Hudson, and, knowing that, they had put enormous prices in their schedule, which was again in this instance rigged in the most improper fashion. They went, as I say, to Bond and Hudson, and, in the first place, tried to intimidate them, and, in the second place, bought them off for the sum of £1,700, including the amount which was paid to Kenwood. Then they persuaded the department to give them the contract at £3,000 over the lowest tenderer. The State must have been a sufferer to the extent of £6,000 by this back-door transaction, and I will prove to your Honor in what way. If you take the Parliamentary return and look at Contract 79, you will see from Bond and Hudson's tender that the excavation in shafts is put down at 30s., 50s., 49s., and 35s. The same excavation is put down in Carter, Gummow, & Co.'s tender, as you will see upon page 275 of the same return, at 78s., 83s., 79s., and 78s. If you turn to the last progress voucher upon this contract you will see that the excavation amounted to a considerable sum of money—to something like £9,000. Carter & Co. were paid at the rate of 78s. for this work, whereas if Bond and Hudson's tender had been accepted those tenderers would, in respect of that particular item, have been paid at the rate of 35s. As a matter of fact, the Government, by the non-acceptance of their tender, lost £4,000 upon that one item. The Government must have been, through the manipulation carried out by Carter & Co. in that transaction, defeated to the extent of something like £6,000 at the very least. Then what are the facts in connection with Contract 79A? That contract, also, cannot be said to have been obtained in a really proper manner. Perhaps very little exception can be taken to what was done, but the facts are that this firm of contractors obtained the services of a Member of Parliament and proceeded to work to get the contract, not at the contractors' tendered prices, but as an extension of Contract 79, upon departmental prices, the extension being a contract of a much cheaper nature. Now the extensions of

contracts

contracts which have been submitted to your Honor as affording parallels to this case are in no way parallel, and for the simple reason that they were extensions given at the contractors' prices, which were at a great percentage below the departmental estimates. In those cases, had there been competition, it is very probable that there would not have been any lessening of the cost, but in the case of Contract 79A the work was let without any contest at all upon the items, and at the prices which had been put into the departmental schedule. Mr. Hickson, I am aware, explained this matter by saying that Mr. Lyne compelled him to accept this contract; but it was not a matter of compulsion, because Mr. Lyne and Mr. Young, who were both Secretaries of Public Works, have stated in their evidence that they were altogether actuated by the advice of their officers. And there can be no doubt that if Mr. Hickson had said to Mr. Lyne "Well, these are office values, and if you take my advice you will call for tenders"—if he had in any way pressed him at all, after Mr. Lyne had shown an inclination to give the contract to Carter & Co.—in fact, if Mr. Hickson had made the slightest effort to have the work put up to competition, as you would think a man in his position would do—no doubt that would have been done, and no doubt the work would have been carried out at an immensely cheaper rate; because, if you look at the prices in the schedule to the work, you will see that they are enormously strung out upon this, as upon all the other contracts upon which I have touched. I may as well speak now of Contract 72, into which your Honor has not gone extensively. Contract 72 cannot be said to have been a work properly carried out under the system of calling for competitive prices, and for the simple reason that Carter, Gummow, & Co. in undertaking the contract must have seen clearly that there was no outlet provided, putting them in the position of gaining enormously upon the additional excavation. They accordingly put in the enormous figure of 2s. 6d. per yard for excavation in country of a very soft nature, and 1s. for the removal of the spoil. They had hardly started the contract before they obtained a channel, which was 50 feet wide by 5 feet 6 inches deep. This had to be made in very soft soil, and they received 2s. 6d. per yard, and 1s. a yard for shifting the spoil a distance of 25 feet, or £4,000. If tenders had been called for this work in the first place, with everything in it complete, no doubt it would have been carried out at a very much lower rate. I will deal more fully with that contract later on. I wish to deal now with the question of defective work, and I would like to say that, although Mr. Smith and Mr. Andrews have done their utmost to show that the defective work upon these contracts is an insignificant thing, this Commission has not been one which has gone about breaking up works and looking for defects; but it has, in a most difficult fashion, called for such evidence as could be obtained as to defective work upon these jobs. Your Honor knows full well that the very fact of Mr. Carter's being acknowledged to be such a generous, good-hearted, man would render it very difficult for anyone to obtain evidence which would do him any injury. Since I myself have been sitting upon this Commission I have come to the conclusion that Mr. Carter is a good, kind-hearted, generous, individual. In fact, I do not think anyone could come to any other conclusion; and, as I say, you could not obtain evidence which would go conclusively to prove that Mr. Carter was in any way a man who did defective work. The evidence which has been brought forward here, such as it is, has not been answered. Limited as I admit that evidence to be, no reply has been made to it, and it would lead one to suppose that certainly, where small portions of defective work had been done, there are graver cases hidden in the background. Your Honor received a notification from the police which showed how difficult it was, in the case of a man named Tremaine, whom the Commission endeavoured to find, to get these men to come forward. That case illustrates the difficulty which one would naturally expect to be experienced generally in obtaining such evidence. The police said that there was great unwillingness on the part of the men to give evidence against their masters, and it must be apparent to any reasonable man that that would be so. Let me come to the cases of defective work which have been brought before the Commission. I will take the evidence of Inspector Melville, which evidence has not been touched upon by the opposite side at all. He gave conclusive and undeniable testimony, which had to be admitted by the department itself, that he caught Gummow, Gillan, & Co.'s men one morning putting the greatest muck—the most wretched rubbish—going by the name of concrete, down one of the shafts on one of their contracts. I think it was the contract running across Hyde Park.

*Mr. Davis:* That would be Bennett and Canty's.

*Mr. Parkes:* At all events, Mr. Gummow was connected with the contract. That defective work was found there there cannot be the slightest doubt, nor can there be any doubt that there was a man upon that work, named Shellback, who, according to Melville's evidence, although caught doing this very defective work—the worst class of defective work, cheating in concrete—was still kept upon the job. Coming further, we find this man Melville speaking of Reid, who has continuously had charge of Carter, Gummow, & Co.'s work. Melville said that he had constantly had to warn Reid, and that Reid was the kind of man who would have put in defective concrete wherever he could. He said that Reid was a source of considerable annoyance to him, and that he was constantly causing him trouble; that he considered him to be a man who would do defective work of any description if he got the chance.

Let

Let me explain to your Honor that there is in sewerage work but one class of work which could with any effect, as far as money is concerned, be cheated upon, and that that is concrete work, the saving being effected in the cement. All that a contractor could gain upon, in that particular class of work, would be the cement, and it is naturally, from its price, a thing upon which it is most valuable and important to gain, the material being used to a very great extent. If, for instance, a work takes 10,000 or 12,000 casks of cement, and the contractors can save 4,000 or 5,000 casks, they make a great saving, because each cask of cement is worth 10s. Whether you consider the evidence of Inspector Fowle, of Reid, of Hansen, of Melville, of Darcus, of Caughey, of Green, or of Chiene, it is alike conclusive as to the fact of there being an insufficient quantity of cement put into the concrete, and as to the concrete being loaded up with the cheaper material. Even Kady, a most unwilling witness, stated that upon Contract 77, where they should be putting in a gauge of 10, 6, and 4, they were really putting in a gauge of 12, 6, and 4. I asked him whether he would swear to that, and he said, "Yes." It must be remembered that this man was in the employ of the contractors. In that case each additional 2 feet of metal in the concrete was a saving of money. Others of these men have emphatically sworn to the concrete's being loaded with metal or sand. While speaking upon this point, I would point out that concrete must be good in respect of its component parts. If you are to have good concrete you cannot afford to load it up with sand and small material of different kinds. The real value of concrete consists in its forming a uniform binding material. The sand, therefore, should be of an even grade, and the cement should be truly and properly distributed. It is held by the best authorities on concrete that coarse sand should be used, because when properly surrounded by cement in the interstices it goes to bind the concrete together. Close, loamy stuff, on the other hand, will leave the cement patchy here and there. It must be admitted that the only bond in concrete is that resulting from the use of good cement, combined with a proper, crisp, hard sand. I would like, in connection with this question of defective work, to refer your Honor to the most emphatic letters which have been put before the Commission, from which it would appear that inspectors have complained bitterly of this man Reid and of other men, and I also wish to point out that Mr. Davis himself has admitted that he has had to remove two inspectors from the works of Carter, Gummow, & Co. because the work was being improperly carried out under them. I submit—and I do so from a considerable amount of experience—that when you find contractors and contractors' men, in a small degree, and after limited searching only, inclined to cheat, you may rely upon it that they have done it to a greater degree. This brings me to Contract 79 and the evidence of Dawson. It is all very fine and nice for the contractors and for the department to trump up a tale about Dawson, and to bring circumstances to bear to prove that this man did certain defective work because he had a spite against the contractors. The first question he was asked by me when he came to me was, "Are you on Carter, Gummow, & Co.'s works now?" He said, "Yes; I am working now with them. I am working at Annandale." I pointed out to him very clearly that he would be for ever, as far as Sydney was concerned, blackballed by all the contractors as regards work; but he still said to me that he considered it his duty to point out this particular defective work. He said that he had done it some two or three months before, and that he had been considering whether he ought properly to call upon me and give me the information or not; that finally he had come to the conclusion, as a conscientious man—seeing all the things that were said about Carter, Gummow, & Co. and other contractors—as a matter of public duty, he ought to give me the information. Dawson is not a foolish man, and I put it to your Honor whether, knowing the position in which he would put himself, he would have come to me at all had he not been actuated by some strong impulse, that impulse arising from his conscience. It is possible, surely, that in a working man there may be such a thing as conscience. I believe from Dawson's frankness and openness—he said that if he got into gaol for it he would give me the information—from his knowing that in giving me the information he could be only injuring himself, he could not have come to me with a wish to injure the contractors. What would be his object in injuring the contractors? They were giving him work. He had been working for them for eight years or more, and they had invariably given him a good character, as do the inspectors and his fellow workmen at the present time. I think that even Reid, the manager for Carter, Gummow, & Co., gave him a good character. Dawson was working on and off for this firm for eight years. He admitted that there were periods when he had not been at work; but would he, in consideration alone of the fact that he had not been at work for one fortnight, commit an act which was calculated to injure employers with whom he might have remained for so long a time? Mr. Gummow said in his evidence that he employed the man because he considered that he was a good workman—that he was a useful man to the firm. He received wages which were enormously large for this period—8s. a day. Those are not wages which a man is likely to complain of. I believe the man had as frank and open and straightforward an object in coming to me as ever a man had, and that was to disclose the bad work he had been doing. That which he had in his mind, no doubt, was the wrong he had done. I said to him—and it must be apparent to anyone that such must have been the case—"You must have done bad work formerly." He said "I have done bad work formerly, but I could not locate it now." I asked

him whether he could not recollect where it was, and he said he could not lay his hand upon it at that lapse of time. He said, however, that there was a shaft on the job running through Camperdown—he could not remember the number, but he said he could walk to it—where there was defective work. He said, also, that there were other portions of the work which he could point out as having been done defectively a long time ago. Among other work he located that at North Shore, and your Honor put him through a close cross-examination to see whether he had actually marked the spots. To show you how little foundation there was for such a supposition, he said he knew where these spots were by the measurements of the Government engineers themselves. To show you that he could not have marked these spots—and had he wished to put the contractors away he would probably have marked them—the largest drum left unpacked upon Contract 79 has, according to him, not yet been discovered; he could not find it. Two unpacked spaces have been found by Professor Warren and by Mr. McCredie. Another space was afterwards found by Mr. McCredie himself. Dawson says, however, that there was still another unpacked space which was not found by these gentlemen. Mr. Andrews said that no important defects were found, but Mr. McCredie said he found various small holes where the bricks had been knocked up to the crown of the rock excavation—that it was possible that there may have been a great deal of the rock right down on the brick, but that, in some cases, he pushed up the bricks 1 inch, showing that there was no packing behind them. He assumed from this that there were some small holes in addition to the larger ones which he mentioned. Dawson went on to disclose bad work which had been done by a man named Hansen, and although Hansen, at first, denied having done bad work he ultimately admitted, on further examination, that the work was not of a character which could be considered good. Dawson said that cavities were left by Hansen on a section on which he worked on the High-street branch. I would point out to your Honor—I cannot avoid doing so—that it is a very suspicious circumstance that at an early part of this inquiry an inspector of the department, Inspector Board, should have spoken to Hansen, and should have asked him to alter the position of some shafts he had named in his evidence. The fact that the leaving of these cavities was not a new affair to Carter, Gummow, & Co., was clearly disclosed by the letter which I asked Mr. Davis to read—one of his own letters, showing that a 9-foot cavity had been left upon the Waverley contract some time previously. Inspector Vincent, it will be remembered, was dismissed for allowing that defective work to be done. What deduction can be drawn but that there was other work of the kind going on? The evidence shows that that kind of work was going on generally, and we know that there is no possibility of discovering it, under ordinary circumstances, when the brickwork has been once put in. I do not believe from the evidence which has been given before this Commission by Professor Warren and Mr. McCredie, by the departmental engineers themselves, by many witnesses—I do not believe it would be possible to tell whether a cavity had been left behind the brickwork by simply tapping it. Probably a certain amount of defective work has been done which will never be discovered. On the other hand, time may reveal the extent to which it has been done in an unfortunate manner. But that there has been defective work upon these contracts of Carter, Gummow, & Co., even in the limited number of contracts we have looked into, must be considered to have been proved to the satisfaction of every reasonable man. The great feature in the defective work upon these contracts would naturally lie in the shortage of cement in the concrete portion of the structures. There would be nothing else practically upon which scamping could be done. A very careful search has been made under the direction of this Commission into the Bank pass-books of Carter, Gummow, & Co., in order that it might be ascertained from whom they bought their cement. Mr. Christie, who has given evidence before the Commission on various occasions, has instituted a very careful search through the books of the merchants from whom the firm have purchased their cement. Mr. Carter, in his evidence, admitted that he did not borrow cement from any other contractor. As your Honor will see, he has admitted that every one of the cheque payments to cement merchants have been in the name of the payee. He admits that they sent a certain quantity of cement from one contract to another, and that a certain quantity has been sold. For instance, Mr. Carter admits that he has sold cement to the extent of 1,400 casks. He says the firm sold to Danaher, Taylor, and Britten, 600 casks; that they sold to Flood 800 casks, and, out of the purchase of Carson, no doubt 200 casks. In addition to this, Mr. Carter admitted that he has given cement for which he does not know whether he received cash or a return of cement. I will deal now with the researches which have been made by Mr. Christie. It will be clearly seen that the total of 13,431 casks of cement which have been ascertained to have gone to Contracts 79, 79A, and 69, must have been the sole cement which went to those works. In the first place, I would point out to your Honor that there is only one way of showing that more cement than those amounts so purchased went to these jobs, and that would be by showing that it came from other contracts. Now when Contract 79 was let in 1892 the only other contracts then in the hands of the firm which were going on were Contract 72, and that was starting at its second portion, the Waverley contract, and the Glebe contract. These copies of the merchants' sale-notes and the deliveries

which

which have been handed in to the Commission as Appendices disclose the fact that very small parcels of cement were being sent to Waverley and the Glebe job, which were completed at an early period of 1892. Parcels of 50, 100, or 120, casks were sent, proving conclusively that there could have been no stock upon those contracts towards the completion of the work. To show that in the case of the Waverley job there was no cement in stock at the latter end of the job, I may mention that such parcels as 15, 20, and 12, casks—it might be only one dray-load at a time—were sent there, towards its completion, from Contract 72, totalling altogether 208 casks. I come now to Contract 79, which was carried on as a solitary contract until Contract 69 was started in January, 1894, the contractors then having no other work in hand. Contract No. 79 was completed in October, 1894, and no cement came on to the works in the case of Contract 69 until eight months after it started, the completion being in October, 1895. Contract 118—the Johnstone's Creek contract—started on 24th May, 1895, but the first cement delivered from Parbury, Henty, & Co., as you will see from the papers, was on 10th September, 1895. Therefore, no cement could have come to Contract 79, and it could only have gone to 79A. A small portion might have gone from 69 to the Johnstone's Creek contract, but that does not affect our contention at all. We have a witness here named Burcombe. I knew that he was to be an adverse witness before I brought him here. He came here, no doubt, with a set purpose. Now he has sworn that he took 2,000 casks of cement—1,953 casks, I think, was the number—from Contract 72 to Contract 79 at the time of the suspension of Contract 72. Let me point out to your Honor that Contract 72 was suspended in October, 1891, and that Contract 79 started in March, 1892. No cement was delivered upon Contract 79, as is shown undeniably by Inspector Fowle's report and the contract journal, until twelve months afterwards, or in May, 1893. Your Honor, from your own great reasoning powers, must see the absurdity of evidence which says that three three-horse drays could deliver the alleged quantity of cement from Shea's Creek to North Shore, going by punt and making three trips a day, taking twelve casks of cement on each trip. That Burcombe should have employed three drays, making three journeys a day and carrying twelve casks of cement at each journey, is beyond all reason.

*His Honor*: The witness, in using the word "punt," I presume, meant the horse-ferry?

*Mr. Parkes*: Quite so, your Honor. It is evident, I think, that no cement came on to Contract 79 until May, 1893. Inspector Fowle's evidence is quite conclusive on that point.

His Honor, at 1.5 p.m., adjourned the inquiry until 10 a.m. on Tuesday, 6th October.

C. E. R. MURRAY,  
Commissioner.

---

TUESDAY, 6 OCTOBER, 1896.

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Smith (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising); attended.

Mr. J. Davis, Principal Assistant Engineer, Sewerage Construction, and Mr. Norrie, bond clerk, also attended.

Francis Antill Pockley, William Valentine Miller, George Lyell, and Frederick Joseph Cabill, were sworn and examined.

Frank Moorhouse Gummow, John Carter, and Joseph Davis, were recalled and further examined.

*Mr. Andrews*: With reference to witnesses as to Mr. Carter's character, we can produce a number more if your Honor deems it necessary.

*His Honor*: I think Mr. Parkes has practically admitted himself that the evidence tendered is indisputable as to Mr. Carter's liberality.

*Mr. Parkes*: I would not go out of my way to find evidence to dispute it, your Honor. I will at once admit it. Naturally, men would not come here to give a bad character to Mr. Carter; men will always come to say the best they can about a man of that kind.

*His Honor*: The question is, whether it is not a fact that Mr. Carter happens to be, naturally, a man with an idiosyncrasy.

*Mr. Parkes*: I admit that, your Honor.

*His Honor*: I will now call upon you, Mr. Parkes, to continue your address.

*Mr. Parkes*: When your Honor adjourned the inquiry on Friday last I had pointed out that there was only one contract from which it was possible for Messrs. Carter, Gummow, & Co. to have taken  
cement

cement to their contract at North Sydney, viz., No. 72. In that connection I have first of all to direct your attention to the minute of Mr. Engineer Boys, the Supervising Engineer upon Contract 72. His minute appears upon page 631 of the evidence, and is to this effect:—

Messrs. Carter & Co. have informed me that they have stored 2,000 barrels of cement on the Munnistreet to Shea's Creek Contract, and require it to be tested. This quantity is in excess of the amount required to finish the present work, and I have refused to bring the samples.

That shows that there would have been a surplus of 2,000 barrels after the stoppage of the work at Macdonald-street. At all events there is clear evidence before your Honor that work was still going on on the contract in January and February, as certificates were issued in each of which an addition was made to the item of cement rendering. That work must have consumed a certain portion of the 2,000 barrels of cement. Coming to Mr. McCredie's and Mr. Thompson's evidence, on the vouchers which appear in connection with the second portion of Contract 72, it is shown by these gentlemen that this quantity of cement was necessarily required, and would have been consumed. But if we take the evidence of Mr. Davis and compare it with Mr. Christie's evidence as to the quantity of cement supplied by Parbury, Henty, & Co. to this job, after the continuation of the second portion, it will be found from Mr. Davis' evidence, if worked out upon the totals of this addition, the quantity used, and the quantity supplied by Parbury, Henty, & Co., that the quantity remaining would come out at something like 1,500 barrels upon the completion of the contract. Evidence is before the Commission that Flood, from December, 1891, to June, 1892, paid for from 600 to 800 casks. It will be seen from the evidence of Mr. Carter upon page 211, also, that Danaher, Taylor, and Britton bought 600 casks; and Mr. Christie's evidence upon page 587 shows that 208 casks were sent in December, 1891, across to the Waverley contract, which was then completing. It will be seen, therefore, that 1,500 casks of any surplus which may have existed was consumed by these sales and by deliveries to the Waverley contract. I come again to Burcombe's evidence, upon which I commented on Friday last. He told us that he took 2,000 casks of cement from Contract 72 to Contract 79, and that he took it at the stoppage of the contract, when Mr. Hickson gave his notice of October, 1891. Now the peculiarity of Burcombe's evidence is this: he says he took three dray-loads three trips a day for three weeks, with twelve barrels to each dray. Working it out at six days a week, the quantity comes to almost exactly 2,000 casks, which, according to Mr. Boys' letter, were upon Contract 72. I wish to point out to your Honor that this cannot be true. It is simply impossible, in the first instance, that the alleged quantity could have been carried by Burcombe, as the distance would not permit of it. Then, again, the sales show conclusively that this quantity of cement had been disposed of. If the 2,000 barrels had been shifted at the time at which Burcombe says they were shifted, then we are brought face to face with the fact that Contract 79 was not even then let; for we are told—and the papers prove it—that it was not let until March, 1892. It follows, therefore, that the cement sheds could not have been upon the job, since no contract existed. Then there is the conclusive evidence of the returns which Mr. Christie has produced before this Commission—that the first delivery of cement upon Contract 79 was 999 casks which were delivered by Parbury, Henty, & Co., and advanced upon by the department in certificate No. 14. Now, I ask your Honor to consider whether, in all reason, supposing that 2,000 casks had been taken across to North Shore even at the completion of Contract 72—and having regard to the fact that an advance was so much wanted at that particular time, as has been pointed out during the course of this inquiry—an advance would have been given upon 999 casks or upon the 2,000 casks, which must have been stored for some time—nearly eighteen months—upon the contract if what is said be true. Let me refer your Honor, in this connection, to Inspector Fowle's evidence. He went upon this work in June, 1893. He has come before this Commission and has produced a carefully-kept notebook, and from that notebook he tells us that, when he took delivery of the works from Superintending-Engineer Boys, there were 850 casks of cement stored upon the contract. On the 11th October, 1892, there was an advance made under Superintending-Engineer Boys' certificates Nos. 13, 14, and 15, on 870 casks—upon the delivery of Parbury, Henty, & Co. When Mr. Boys made his report, the delivery had been 999 casks. This cement had been delivered on 21st and 24th October, 1892. This will be seen from reference to Parbury, Henty, & Co.'s accounts. Superintending-Engineer Boys has made an entry as to this cement in his contract journal, and I should like, at this stage, to have your Honor's permission to put in as evidence the journals to which I shall refer, and also the Inspectors' reports.

*His Honor:* Very well.

*Mr. Parkes:* Superintending-Engineer Boys' entry in the contract journal is under date of 15th May, 1893, and it appears from that that 130 casks were sent to Contract 90. The Inspectors' daily returns have already been quoted to this Commission by Mr. Davis, and they show that the cement used up to that date, from the very first use of cement, would be 16 casks. That would leave the 853 casks referred to in Inspector Fowle's evidence and quoted from his notebook. It seems to me to be absolutely conclusive on this point—it cannot be answered, and it also corresponds with the 870 casks advanced upon by  
Superintending

Superintending-Engineer Boys in his certificates 13, 14, and 15. I come now, your Honor, to the exact notes which were made by Mr. Fowle, not only at the moment of his going to the contract but also a month afterwards, and those notes are accounted for in this way. There were from 850 to 860 casks on the job when he took charge. The delivery of 300 casks by Mr. Try would make in all 1,150 casks. If you look carefully at the inspectors' daily returns, and if they are to be relied upon—and I presume they may be for the purposes of this argument—you will see that there were about 300 casks used up to that time, so that on the date of the 21st July—the date of Inspector Fowle's report—there were 1,150 casks on the works, that is, the 850 and the 300 casks. Between the date of his going there and the date of his making this note there were 300 casks used, which would leave the 850 casks which Inspector Fowle entered in his notebook. The cement tests also prove this because they coincide with and endorse the sale notes and the particulars taken from Messrs. Parbury, Henty, & Co.'s ledger. They endorse the information laid before the Commission by Mr. Christie in his evidence. The next test, according to the departmental book, which took place was of Wouldham cement coming from Parbury, Henty, & Co. on 30th June, 1893, 500 casks, and that also coincides with Inspector Fowle's report. The next test was 500 casks of Germania, and that also coincides with Inspector Fowle's report. He gave other particulars as to 180 casks which was portion of the parcel delivered by Henry Austin and charged as 1,002 casks. We come then to the 69 casks from the storm-water canal. It is possible that this may have come from Contract 69, but it is more likely that it came from Contract 78, a small contract at Long Cove, completed in the previous March. It will be seen that this entirely does away with the idea of Burcombe's having at any time taken across cement from Contract 72. There is no doubt that the residue upon that contract was sold in the manner I have pointed out. Here let me direct your Honor's attention to Mr. Davis' memorandum which is contained upon page 631 of the printed evidence. I might point out that Mr. Christie, who made the researches into the purchases of Messrs. Carter, Gummow, & Co. and Messrs. Carter & Co., has produced before this Commission a return showing the purchases from merchants which cannot be disputed. Mr. Henty was brought here with the object, I presume, of showing some little variation in the information produced before the Commission; but all that he could point out was some little discrepancy as to the actual delivery of some of the cement, which was afterwards satisfactorily cleared up. We find ourselves therefore in this position—that there was only delivered, after the completion of Contract 72, and from the commencement of Contract 79, to Messrs. Carter & Co., from that date to June, 1896, 21,000 casks of cement. Of this, as shown in Mr. Christie's evidence, 13,432 casks were delivered to Contracts 79, 69, and 79A. In answer to that statement Mr. Davis prepared a statement—very cleverly arranged no doubt, but which will not hold water—in which he took the inspectors' reports to begin with; and, at this stage, I should like to draw your Honor's attention to his own evidence. In reply to a question by Mr. Norrie, Mr. Davis said that very little reliance could be placed upon the Inspectors' reports.

*Mr. Davis* : I did not say that.

*His Honor* : I think that what Mr. Davis said was, that they might be relied upon up to about 5 per cent. or so of the quantity.

*Mr. Davis* : That is what I said, your Honor.

*Mr. Parkes* : We will allow that there may have been an error of 5 per cent. But let me show, your Honor, how Mr. Davis has made up his calculation. He has taken the inspectors' reports as being final only as to the quantity of cement used, and he has taken Mr. Christie's figures as being correct. For instance, he has taken the 13,432 casks, and has added to that number that 2,000 odd casks supposed to have been taken from Contract 72. That is the way in which he compiles his figures, and defends this charge. The quantity, according to the inspectors' reports, he runs out at 15,619 casks. The line he has taken is to show that on Contracts 69, 79, and 79A, there was a certain amount of concrete used upon the basis of one cask of cement to 22 feet, in the case of bluestone concrete, and of one cask of cement to 27 feet of sandstone concrete. He works this out in a return which is shown upon page 631. I will now make a comparison between the inspectors' returns worked out upon that basis, if that is the basis upon which the department has gone, and also upon the daily records, to show what a terrible inconsistency there is between these two statements. According to the inspectors' returns upon Contract 79, there were 5,383 barrels used. Mr. Davis works out the quantity, upon his basis, at 4,692. In Contract 69, however, upon Mr. Davis' basis, there were 8,387 casks of cement used. Upon Contract 69, upon the basis of the inspectors' reports, there were only 7,965 casks used. Upon Contract 79A, upon Mr. Davis' basis, there were 2,571 casks used, and upon the basis of the inspectors' returns 2,269. But greater discrepancies come in when you come to look at the different material to which these estimates were applied. Take concrete, for instance: The inspectors' returns for Contract 79 show that 2,569 barrels were used for the concrete. According to Mr. Davis' estimate, for the same contract, 3,992 barrels were used in the concrete.

concrete. In the brickwork upon Contract 79, according to the inspectors' returns, 2,158 casks of cement were used, and according to Mr. Davis' basis, 162 casks. In the cement facing upon the same contract, according to the inspectors' returns, 421 casks were used, and, upon Mr. Davis' basis, 488.

*Mr. Davis* : If your Honor will allow me to interrupt, I should like to make an explanation. Mr. Parkes is arguing upon a fallacy.

*Mr. Parkes* : I listened without making any interruption to the address of Mr. Smith, and I think that the least I am entitled to expect is that I, also, should be heard without interruption.

*His Honor* : Properly speaking, there is no right of reply to Mr. Parkes ; but if certain matter comes in—new matter which has not been touched upon by way of argument—I shall allow an explanation to be made at the close of Mr. Parkes' address, and I shall possibly allow Mr. Parkes, if necessary, to comment upon the explanation. Of course if you think, Mr. Davis, that Mr. Parkes is in any way mis-stating the evidence in the course of his address, you are right in objecting to the mis-statement.

*Mr. Davis* : What I say is that the return of which Mr. Parkes is making use has not been put in in evidence. Mr. Parkes is making, I do not say intentionally, an improper use of the return. In the return for the brickwork it has been customary for the inspectors always to give the quantity of cement used in the concrete packing, inasmuch as the bricklayer uses that cement. For that reason, therefore, I say that Mr. Parkes' argument is based upon a fallacy.

*His Honor* : Do you make that statement as a matter of evidence, Mr. Davis?

*Mr. Davis* : Yes ; and I say that, inasmuch as this return has not been put in as evidence, Mr. Parkes ought not to use it in the manner in which he is doing.

*Mr. Parkes* : The return has been put in evidence, and will be printed as an appendix, I understand.

*Mr. Davis* : It has not been put in as evidence to my knowledge. All that we have put in as evidence has been the tabulated results.

*His Honor* : If a detailed examination has not been made by you of this return, Mr. Davis, I shall allow you to make it, of course, so that you may be clear as to the results. It would take me a long time to go through the whole of these things, but I am afraid I shall have to do so in order to see whether these arguments are well-founded. It would be of great assistance to me if you would do so in the first instance, and we should then see what conclusions of fact you drew from them.

*Mr. Parkes* : I should like to have the return produced now before the Commission. A copy, I understand, has been made by Mr. Davis, and a copy has also been made for the use of the Commission.

*Mr. Davis* : What I say is that the return is no doubt compiled from the inspectors' returns, and that no doubt they correspond ; but, at the same time, the return does not bear the construction which Mr. Parkes places upon it.

*His Honor* : You say, Mr. Davis, that the return does not, in fact, show a distinction between the cement used in mortar and the cement used in the concrete packing, because these two things have been constantly put together in the inspectors' returns.

*Mr. Davis* : Yes ; and it would be utterly impossible to keep them separately, and for this reason : one bricklayer might use from a cask of cement two-thirds for packing and one-third for brickwork, or it might be the other way about.

*His Honor* : The two classes of work would most likely go on together, and, as far as I can see, it would be obviously impossible, Mr. Parkes, to distinguish between the two uses for the cement.

*Mr. Parkes* : There is a difference, your Honor, between brickwork, rendering, and concrete.

*His Honor* : The rendering, of course, can be kept separate, because it is done separately after all the brickwork is finished.

*Mr. Parkes* : So also is the bluestone concrete.

*His Honor* : It is the cement used in the sandstone concrete and in the mortar which I understand is mixed up together.

*Mr. Davis* : Yes.

*Mr. Parkes* : I protest against these interruptions to my address, your Honor, on the part of the department. I listened with every attention to Mr. Smith, and I think the same courtesy should be extended to me.

*His Honor* : If there be any wrong conclusion of fact upon which an argument is founded, it is quite legitimate that it should be pointed out as a fact.

*Mr. Parkes* : I heard many wrong conclusions, your Honor, during the addresses of those who preceded me, but I did not interrupt the speakers. *His*

*His Honor* : You had a right to do so, Mr. Parkes.

*Mr. Davis* : I had no wish to interrupt Mr. Parkes. I only desired to do what was right in the matter. I did not wish Mr. Parkes to draw false conclusions.

*Mr. Parkes* : Taking the concrete, the brickwork, and the cement facing, there is an enormous difference between the brickwork and the cement facing, the figures being respectively in the case of Contract 79, 2,158 barrels and 421 barrels, making a total of 2,579 casks. Compare this with Mr. Davis' totals of 162 casks for brickwork and 488 casks for cement facing. It will be seen that there is a great discrepancy. Then take the concrete : According to the inspectors' returns there should be 2,569 casks, and upon Mr. Davis' basis 3,992 casks. But putting the details aside, and taking the totals, Mr. Davis' total upon Contract 79 is 4,642, and the inspectors' total 5,384. Then take Contract 69. According to the inspectors' return there should be 7,965 casks, and upon Mr. Davis' basis 8,387 casks. If the inspectors' returns were accurate within 5 per cent. the necessary quantity of cement cannot have been supplied to Contract 69. That is clear upon Mr. Davis' own showing. But there is this peculiar thing which I want to point out to your Honor. Mr. Davis and other officers of the department have given evidence—not documentary evidence, but merely statements of their own—that the practice of the department has always been to put cement down as going at the rate of one barrel to 22 feet of bluestone concrete and one barrel to 27 feet of sandstone concrete. Now, if that be so, how comes it that the department, in making its own estimate of this class of material, should, upon Contracts 79, 79a, and 69, put in as their computed values 30s. for sandstone concrete and 50s. for bluestone concrete? Take Contract 77, in connection with which they submitted their own estimate for this contract to the Commission, you will see the price of concrete is there also put in as 50s. for bluestone and 30s. for sandstone concrete. If you take the proportions and pay for the value of each component material at the departmental value the sandstone concrete will be found to be worth only 19s. 6d. and the bluestone concrete only 31s., if you allow upon the basis of Mr. Davis' estimate that only one cask goes to the proportions given. That, I contend, cannot be denied. Concrete is not like other things, at the value of which you might jump, but it contains certain set materials which have a market value. It runs truly in its proportions, and there is no difficulty whatever in arriving at a conclusion as to the value of a yard of the material; but, as I have shown, according to the two estimates, there is a difference in the value of the sandstone concrete as between 19s. 6d. and 30s., and as between 31s. and 50s. for the bluestone concrete, according to the departmental estimate. That conclusively proves one of two things—either that they put a false value upon the materials or that they estimated them approximately on the basis of the proportions put forward by Mr. McCredie and Mr. Thompson, which, I contend, is the correct basis. Evidence has been put before your Honor—not documentary evidence or evidence from tests or anything of that sort—but evidence fixing these proportions; but I have, as against that, submitted to the Commission Mr. McCredie's and Mr. Thompson's double tests, which were most carefully made. There can be no doubt that that was the case—that they were not made with any intention of biasing the Commission in that way. According to these tests they computed the quantity of cement to be used upon contracts 79, 79A, and 69, as being 21,600 casks. Mr. Gilliver, another contractor who gave evidence, was also a practical man, and has probably had as much sewerage work to carry out in the Colony as has any other contractor here. He has given evidence to the effect that the proportions of cement to the bulking of the work are 1 to 19 for bluestone concrete and 1 to 24 for sandstone concrete. If the quantity required for these three contracts is worked out from that basis you will find that 18,532 casks would be required. Mr. Rhodes, another contractor, has also given evidence upon the point. Here let me say that these witnesses have come here, connected with the department as they are, doing work as they are for the department, and that there was certainly nothing which I could give them to encourage them to come. They have come here, as I say, expecting everything in the way of grace from the department. They having given their evidence with this freedom, I will ask your Honor to consider whether some value ought not to be attached to it. According to Mr. Rhodes' calculation the quantity required would be 18,171 casks. Mr. Butcher, whose evidence will be found on page 371, is another contractor who has carried out a considerable quantity of sewer work. According to his estimate the quantity required would be 18,040 casks. Mr. Davis, himself, gives a table of proportions upon page 631, from which it will be seen that the quantity is 15,600 casks. Now it is conclusive to my mind—absolutely conclusive—that there could have been no cement whatever taken from Contract 72 to this contract. It is quite evident, from documentary evidence which has been submitted to the Commission, that the total quantity supplied to the contracts 79, 69, and 79A, was only 13,431 casks. The particulars which make up that total are taken from the books of those who supplied the material. The cement could not have been taken from Contract 72 at its suspension, for the simple reason that these three contracts were not then in existence. On Friday last I pointed out the dates on which each of these three contracts was commenced and was completed. I took those particulars from the records. The particulars appear in the evidence itself, as well as in the various appendices, and,  
according

according to them, there would be—even according to Mr. Davis's table, which appears upon page 631—a deficiency of something like 2,200 casks. According to the evidence of many independent witnesses, the deficiency would be very much greater. How can it possibly be argued, upon the evidence which has been put before your Honor, that there has not been a systematic saving of cement throughout the various works upon these three contracts. I might point out, also, that, although Mr. Davis stated that the inspectors' returns were to be relied upon within about 5 per cent., Mr. Roberts, the cement tester for the department, in reply to Mr. Davis, who was at that time also anxious to shake the inspectors' returns, said that very little reliance could be placed upon them. The answer to question 9630 shows that pretty conclusively. While referring to the office records, I might also draw attention to the fact that the certificates given for tested cement upon these three contracts show a total of only 11,740 casks. There can be no doubt whatever that these were complete certificates, because they tally exactly with the books produced by Mr. Roberts, the cement tester to the department. Now we come to the grand total given. It might be argued—in fact it has been stated before this Commission—that cement is taken from job to job, that it was changed about from place to place wherever contracts might be starting or finishing. This could not have taken place to any great extent, having regard to the dates of starting and completion of the several contracts with which I am dealing. No. 79, for instance, is an isolated contract; and if you come to consider the whole of the contracts you will find that there would have been no great interchange of cement between them. As to the taking of any cement from the Annandale job, there could only be one contract to which, from the dates of starting to completion, it could have been supplied, and that would be Contract 79A. The contractors had delivered 1,200 casks of John Try's cement, which, according to Mr. Roberts, had been condemned, and it will be clearly seen by your Honor, if you look at the inspectors' returns, that it would be absolutely necessary for the contractors to use every available cask which was there outside of the condemned cement, excluding the condemned material of John Try. The total required for Contract 77, according to Mr. M'Credie's evidence, would be 3,464 casks, and for Contract 118, 8,144, there being purchased and delivered for these jobs 7,770 casks, as will be seen from Mr. Christie's evidence setting forth the purchase. I might here refer to a curious coincidence. I do not put it forward as an argument; but, if it be true, as Mr. Davis says in his memo. having reference to the change of schedule upon Contract 79, that there was a saving of 1,300 yards of concrete—concrete that had to be used on the job but not paid for—then, according to Mr. Davis's own statement, it ought to appear that at least 500 or 600 casks were not allowed in that particular quantity, his total being therefore increased to that extent. Now, having pointed out these facts as they appear from the evidence, I will come to the nature of the testimony which has been given as to the saving of cement. It must be admitted that numerous witnesses have come before this Commission who have all coincided in their evidence as to the various methods of cement saving upon the very limited number of jobs into which this Commission has inquired. Take Dawson's evidence first of all. Before going into the details of his evidence, however, I should like to point out that reflections have been cast upon him; and, with a view to shake his testimony, it has been stated by several witnesses that he made threats against these contractors. Two men, Hart and King, have been brought here in order to prove that he stated to them that he intended to put the contractors away, to make it hot for them, or something of that sort. Dawson, in his evidence, says that he did not say that, but that he thought this sort of cheating on the contracts of Carter, Gummow, & Co. should be put a stop to, it being his intention when the proper time came—by which, I presume, he meant the inquiry which was then anticipated—to expose the nature of the work which had been done. In complete answer to this charge brought against Dawson, in connection with which an emphatic endeavour has been made to show that he did this work of his own accord and without Manager Reid's knowledge, I should like to quote Reid's evidence upon pages 153, 154, and 155. Mr. Gummow elicited this evidence from him:—

5685. You have said that you heard Dawson had said that bad work was done—that he had left some bad work, and that he had made some threat about giving the company away? Yes; he said he would put the company away. Those are the words I heard.

5686. Did he ever come to you for blackmail? Never.

5687. He was off the job for nearly a fortnight, you say? Yes.

5688. Did he ask for full pay for that fortnight? No.

5689. When you heard of this bad work was the contract still in the company's hands? Yes.

5690. Could the company have got this work put right if they had thought it was there? Very easily.

Reid formerly had given evidence to the effect that Dawson told him that he intended to put the company away on account of this bad work, and, in answer to Mr. Gummow, he admits that, before the contract was handed over, and not long after the work was done, he knew all about it, and did not tell the contractors anything at all about the matter. Had he done that the work could easily have been put  
right

right. Now, is not that most conclusive as showing that Reid must have known that defective work was going on. If he had been a man of a different description he would have instantly said "Dawson has told me that this bad work has been done; and it ought to be put right." Upon page 154 of the printed evidence it will be found that Reid, on being further examined, said :—

5768. How long would it take a bricklayer to build a succession of drums 14 feet in length? I could not say. I never timed them.

5769. Would it take half a day? No.

5770. How long would it take them? A good man could do eight drums a day.

5771. It would take some hours? Yes.

5772. What would Connors be doing during the time Dawson would be leaving the space open? He would be pointing his work up and cleaning it down.

I may mention that each drum would be 2 ft. 6 in. From Mr. Davis's own evidence it will be seen that Dawson left spaces amounting to 14 feet and 9 feet. Now he could not have left those spaces unpacked without the bricklayer's knowing of it, and without someone else knowing also, because it would have taken half a day to build the drums, and at least half a day to pack them. Looking at this evidence therefore, Dawson could not possibly have left these drums unpacked unless they were done one or two at a time, without its coming to the knowledge of others. I come now to page 155 of Reid's evidence in relation to this same point :—

5776. If a bricklayer is going along with the work, the man who is doing the packing would be in close association with him, would he not? Yes; but you can't be laying bricks while another man is packing.

5777. But the bricklayer must observe the man who is packing, must he not;—he must do so from the narrow space in the tunnel? Yes.

5778. He could not possibly make a mistake, could he, without being observed—the man who was packing? No; if any spaces were left open, of course the other man could see them.

5779. Then Connors could not make a mistake in saying that Dawson had done bad work? There can be no doubt about it at all. There are cases, of course, where a bricklayer would build more than two drums at a time in the case of big work.

5780. *His Honor.*] How many drums back could a man pack? Three drums, comfortably.

5781. What length is a drum? Two feet 6 inches.

It will be seen from that evidence that it would be impossible for this man Dawson to have left from 9 to 14 feet unpacked on three separate occasions—on one occasion 9 feet, one of the cavities which has been discovered; on another occasion, 14 feet; on the third occasion—as discovered by Mr. McCredie upon his second visit to the sewer—about 8 feet; to say nothing of the other smaller holes. This defective work could not have been done without other men upon the works knowing of it. As I have pointed out before, and as Mr. Davis admits in one portion of his evidence, this sort of work is very common upon these contracts. A letter was read to your Honor showing that Mr. Davis had to remonstrate about a space of 9 feet which was left in the Waverley contract. I will now refer your Honor to Dawson's evidence upon page 590, where he says, in reference to Contract 79A :—

589. Were any of the contractors ever there? No; the contractors never came near us.

590. The manager treated it as a joke that you should use so little metal for the concrete? Yes; he often chaffed us about it, saying how well we were getting along with it. Then the quantity of cement was always given to the Government inspector according to the quantity of sand we used. The quantity of cement given to the inspector was always larger than we actually used.

I come now to Contract 79. He says :—

40. Was the defective work in this contract similar to that in Contract 79A? It was not similar. It was scamping in the cement. The cavities were filled in in the case of Contract 79. It was only the cement which was scamped.

41. *His Honor.*] Do you mean the cement in the brickwork or in the concrete? I mean the cement supposed to be used in the concrete.

42. *Mr. Parkes.*] Will you describe to His Honor how you workmen deceived the inspectors in order to get this scamped cement in? We had to get them out of the way. Some reason was given to get them away. There are several ways of reducing the quantity of cement. You can knock the gauge into the sand, and put the cement in.

What does the witness Darcus say?

2146. You noticed the quality of the concrete which was used upon that contract, did you not? Yes, many times.

2147. Will you say how it was mixed? At times it was mixed very carelessly. The correct quantities were not put in. The correct quantities would be 16 of blue metal, 8 of sand, and 4 of cement, but those quantities were not mixed. The mixing was done very carelessly.

2148. Did you at one time apply that better material must be put in? Yes; I had some very difficult work to do. I had to construct some arches which had to carry a very great weight, and I was afraid they might give way.

2149. Was the material bad? I did not consider that it was good enough, and I applied for better.

2150. Did they send it to you? They laughed at me.

What does Chiene say? As to that witness I should like to comment upon what has been said in regard to him. Naturally the defence—if I may call it so—has brought forward evidence with the object of destroying the character of these witnesses who have been brought forward on the charge of defective work. Among other evidence of that kind we have had evidence with the object of destroying Chiene's character. A witness named Eaton came before this Commission. At times very humorous things have occurred, even in connection with the proceedings of this Commission, and this particular incident seems to me to be the most humorous of all; for I may say indirectly I received from this very gentleman the information of the £8 per cwt. being put in the schedule of the Long Cove contract, and I also received, indirectly, from him the advice to call Chiene as a witness. Let me refer your Honor to Chiene's evidence—

4802. *His Honor.*] What was the practice as to the cement; was it gauged as a regular thing;—would a certain number of casks of cement be used as representing a certain bulk? The cask is generally put in holus-bolus.

4803. But is it the practice to gauge the cement in the gauge-box, or to treat so many casks of cement as representing (say) a cubic yard? In concrete a cask of cement is used as representing 4 cubic feet.

4804. So that the practice would not be to put the cement out of the cask into the gauge-box? Not in the case of concrete, but that is done for rendering.

4805. Is there not a method of gauging the sand, metal, and cement, in the mass for sewer packing? A gauge-box is made for the blue or white metal and a gauge-box for the sand, and the cask of cement would represent 4 cubic feet.

4806. I understood you to say just now that the blue or white metal would be heaped up, and that the sand also would be heaped up in the gauge-box, and that then the cask of cement would be put in? Yes.

4807. I want to know what you mean by that? The box is supposed to contain 16 feet of blue metal. The metal is measured in it in the way I describe, and is put on to the board. The sand is then measured and put on, and finally the cask of cement is added.

4808. You mean that one cask of cement would be the proper amount if the other materials were not heaped up in the gauge-box? Yes.

4809. What you complain of is the heaping up of the metal in the gauge-box? Yes.

Take also the evidence of Melville:—

8840. What used he to do? Well, I ordered up some stuff which he had once sent down at Thomas-street.

8841. *His Honor.*] Why? Because there were not the proper quantities in the stuff.

8842. In what way? The quantities should be 2 to 1 for the compo. used for the brickwork.

8843. What did he make it? I found it 3 and 4 to 1.

Further on Melville said:—

8855. But were you threatened with removal by anyone belonging to Carter, Gummow, & Co.? No.

8856. You said you were inspecting on a work which Mr. Gummow did? Yes.

8857. How did his men behave? A report went into the office that concrete was put in one morning mixed with pure sludge from the bottom of a shaft. That was reported to Mr. Wade. Mr. Davis was conversant with the facts.

8858. Did you take any of this stuff from the position in which it had been fixed? I found it at the top of the shaft when I went there early one morning. I had charge of the concrete and another man had charge of the brickwork.

8859. Besides Jack Reid, there was a man working on that contract named Bandeen? Yes; he was a man who was not to be trusted. I was always coming into conflict with these men, and Mr. Davis heard of my doing so on various occasions. It was over concrete and various other things.

And

And again he says:—

8912. *Mr. Gummow.*] Is it not a fact that you are a natural grumbler? I am much obliged to you for the compliment. There is one thing I should like to mention. Through the kind influence of yourself, I presume, I have been shifted out of Government employ. I was a nuisance to you because I would not allow your men to do bad work.

8913. *His Honor.*] Then you say that you are not a natural grumbler? No man who has charge of these contracts can always control his temper. I was thirteen years in the employ of the department. And under Mr. Bennett I lost one of my hands. Finally I got dismissed as I have told you. Mr. Gummow knows very well that at the time of the job in Hyde Park he would not speak to me for three weeks because I would not allow him to do what he liked. It was a question of his tearing the ground to pieces. I would not sanction the measurements without their going to Mr. Wade. I was sent from Abercrombie-street to stop Mr. Gummow from tearing the ground to pieces.

8914. When you say that Mr. Gummow persisted in keeping Shellback on the work, what did you mean? I was referring to what occurred under him. The inspecting work was divided between Gledhill and myself. I was supposed to look after the concrete; but I could not see all the stuff that went in, because the inspector is not supposed to go on to the works until 9 o'clock in the morning, and the men start at 7 o'clock.

8915. There is plenty of time for them to do bad work before the inspector is there? If they choose.

8916. Did Gledhill report Shellback, do you know? I reported him to Mr. Wade. I know nothing of what took place between Mr. Wade and Gledhill; I know that I went there one morning at twenty minutes to 8 o'clock and saw this bad stuff going down the shaft. I did not think it ought to be allowed in justice to the work itself, and I reported it to Mr. Wade, who had some of the stuff taken into the office.

8917. Then did Gledhill try to get Shellback taken off the work? I cannot say. The matter was taken clean out of my hands.

8918. All you know is that Shellback remained? Yes.

8919. You do not know how that came about? No.

I come now to Caughey's evidence:—

14019. Was that good or bad? Part of it. Some gauges went down properly, and some did not.

14020. What would you call a bad gauge? Say about a dozen shovels overfull.

14021. Was all the work done by shovelling? Where it was badly mixed.

14022. Did you see any of the sandstone and the sand for the concrete sifted? No.

14023. Was it screened? I never saw any of it screened.

14024. Was there a screen on the job? Not where I was.

Further on he says:—

14055. Was Reid a man who insisted upon your doing good work or asked you to do bad work? No. After the mixing of the concrete, we had a man who was supposed to be over us, and we had to go by his instructions.

14056. Who was that man? He is not alive now. It was George Humphreys. He was the man I worked under principally then.

14057. Would he instruct the men to do good work or bad? He would start doing inferior work, and we would have to do the same.

14058. How many sumps did you work on? Only No. 11 and No. 12.

14059. At which one were the stones put down? No. 11.

It will be clearly seen that Caughey was not a willing witness. While he could not deny that very bad work was being done on the Glebe job, at least, he did not wish to make it appear as bad as it really and truly was. What did the witness Green say? He gave evidence to the effect that he was out at Shea's Creek, and that he casually saw the men mixing up concrete for Contract 72. He says:—

13817. In the case of Contract No. 72—the Shea's Creek job, do you know how they mixed the concrete? I was not working there; but not being at work at the time I was often over there, and I saw a lot of dirt and stuff being shovelled up with the stone which went in with the concrete.

13818. Have you a good knowledge as to how concrete ought to be mixed? Yes. I take it that my experience of twenty or thirty years ought to tell me how concrete should be mixed.

13819. How was the concrete mixed, in your opinion, on the Shea's Creek job? I have no fault to find with the mixing. What I find fault with is the kind of stuff which was put into the

the concrete. You know that when sandstone is broken a lot of it goes very small, almost like sand. The stuff was shovelled up from the ground where it had been broken, and with it was a lot of sand and dirt.

13820. What effect would that have upon the cement? Well, there would be more sand in the work than there ought to be to begin with, to say nothing of the dirt and the sand, I should say, would take the strength out of the cement in any case.

There is no doubt that that is the way in which the cement, which is a very valuable component, as far as money is concerned, became eliminated from the work. If your Honor will look at Inspector Fowle's evidence, you will see that he freely admits that he had to keep a constantly watchful eye upon the man Reid and other men who were employed by Carter, Gummow, & Co., in order to ensure the proper carrying out of the work as far as concrete and work of that description, in which cement would be used, was concerned. There is only one way, I submit, in which concrete can be properly tested. There is only one way in which you can find out whether the concrete is composed of the specified quantity; and that would be to have these works thoroughly searched, and to have specimens taken from them for analysis, by disinterested and qualified experts. That analysis would prove conclusively whether there has been a saving effected in the cement or not. Failing that, however, the evidence, I submit, which has been placed before your Honor is of such a conclusive nature that it is impossible to see how anyone can say that there has not been, as I alleged in my charges against the department, imperfect supervision and very great loss to the State from the payment by the department for concrete of the most superior kind, when, as a matter of fact, concrete of a very inferior order has been supplied. There has not been sufficient supervision over the whole of these works—in fact, there does not seem to have been that supervision which would be necessary to insure that the proper quantity of cement would be put in. It may not be considered proper to charge Carter, Gummow, & Co. with doing this work knowingly. That I cannot tell. It may be that their workmen did it to please them, or for other reasons best known to themselves; but, as a matter of fact, there the saving is, and certainly there ought to have been a better check kept by the department, because the whole of the blame must rest upon them if a great saving of cement is shown to have been effected by the contractors, thus putting money into their pockets at the expense of the State. The papers I have enumerated, and which are printed in the Appendices, will show, as I pointed out, the time when cement was delivered upon Contract 79 by Parbury, Henty, & Co. The papers will also show the time when the first certificates were given upon the delivered cement—that is, as to its being tested. The papers will also show the time at which the first advance was made upon that cement. Then the inspectors' returns show, date by date, from the commencement of the use of the cement until the completion of the contract, how it was used. Your Honor has before you absolute evidence as to the quantity of cement which was delivered on Contract 79, and as to the quantity of cement used in the work. Then we have entirely independent evidence showing that it would not be possible to bring from Contract 72 to Contract 79, under the circumstances, any cement. The facts to which I have directed attention entirely destroy the supposition on the part of the department, and the contention, on the part of Carter, Gummow, & Co., that a large quantity of cement was transferred from Contract 79 to Contract 72. I would point out that Mr. Boys was employed upon Contract 72—in fact, he came from Contract 72 to Contract 79, and Inspector Fowle acted as chief inspector. But Mr. Boys, having come from Contract 72, would naturally have entered in his journal the receipt of the 2,000 casks if it had been actually transferred from 72 to 79. But nothing of that sort appears in his book. He wrote a minute in reference to 130 casks out of the 999 delivered as having been sent to Contract 90; and in respect of Contract 79, Inspector Fowle's evidence shows that no cement work was started upon the job until May, 1893. There was an interval between the stoppage of Contract 72, which would be in October, 1891, until the first cement was used upon Contract 79, in May, 1893, of about eighteen months, during which the cement would have had to be stored upon the contract had it been taken over at all. Moreover, the transfer would have had to be mentioned in official documents. I come now to a little phase of this inquiry which has received considerable attention, and that is the connection of certain officers of the department with this firm of contractors. I would first of all draw your Honor's attention to Mr. Davis' memorandum which appears upon page 633 of the printed evidence. That is one of many indications which I have adduced before the Commission of the totally unreliable nature of the information supplied to your Honor by the department. Mr. Davis says that Mr. Resident Engineer Weedon, from whom Carter, Gummow, & Co.—I use the name of the firm, because the firm paid the interest—borrowed £2,000, was put in charge of Contract 79A only from March, 1895, to April, 1895. I would ask your Honor to refer to the Parliamentary Return—to look throughout the papers, and to take cognisance of the oft-repeated evidence which appears in them from letters written to Mr. Weedon, from minutes written by him, and also from letters written by and to him, the documents passing backwards and forwards—when you will see that from the start of Contract 79A until a change was made in the branch, and its work was handed over to the Water and Sewerage Board in April, 1895—during the most important part  
of

of the carrying on of that contract—Mr. Weedon was there in charge. If you will refer to page 361 of the Parliamentary Return you will see that on 9th September, 1894, there was a letter from Mr. Davis to Mr. Weedon, and that on the 16th October, 1894, there was a letter of Mr. Weedon's to Mr. Davis. On 27th November, 1894, there was also a letter from Mr. Weedon. On 28th November, 1894, there is a minute concerning Mr. Weedon. On the 16th January, 1895, there is further evidence of correspondence in which Mr. Weedon was concerned. This occurs again on the 7th January, 1895, on the 9th January, 1895, until finally on the 8th March, 1895, Mr. Weedon settled the prices for an addition to Contract 79A—that is, for the High-street branch. Your Honor will have observed the high values which were put upon that contract, and, in this connection, I would ask your Honor to peruse Mr. Weedon's memo. to Supervising-Engineer Davis on the 8th March, 1895:—

|   |       | 8 March, 1895.                                       |      |    |       |    |             |

Tracing herewith.

STEPHEN H. WEEDON,  
Resident Engineer.

It will be seen that the bluestone concrete is put down at 60s. and the sandstone concrete at 30s. That branch was not let with Contract 79A. It is a branch for the drainage of houses, and there is no doubt that these are most excessive prices, having regard to the circumstance that the work was of a much cheaper nature than was that in the original contract. It will be observed that Mr. Weedon had complete control of all the earlier portion of this contract. In addition to that, it can be seen from a glance at the Parliamentary papers that there is a greater connection of Mr. Weedon with Contracts 69 and 79 than is set forth by Mr. Davis' memorandum on page 633 of the printed evidence. I do not know how it is that Mr. Davis came to state that Mr. Weedon was on Contract 79A only from March to April, a period of one month, when he was there for a period of more like twelve months. This shakes my faith in the evidence which Mr. Davis has put before the Commission in this tabulated form. I do not wish to argue from this circumstance that there should be any terrible punishment inflicted upon Mr. Weedon for having had this connection with the firm of contractors, for having put money into the contractors' business and works. What I say is simply this—that such practices are not of the very best nature—that is using the mildest expression—and that they ought not to be allowed in connection with Government contracts which these officers have to supervise. It will be remembered that in the case of the Bare Island contract two officers were so severely dealt with as to be dismissed peremptorily, for borrowing money of the contractors. To my mind they were too severely dealt with under all the circumstances. My object, however, is merely to put a stop to any future relations of this description, or any such defective working of the department as your Honor may discover during the course of your inquiry. I do not think this connection of Mr. Weedon's with the contractors should be tolerated, or that it should be accepted as a precedent for other officers of the department to follow. At the same time, I should be very sorry to see him put into a position of trouble or even lose any of his salary in consequence of this transaction. No matter what explanation may be forthcoming, we cannot afford to look upon these matters from a sentimental standpoint. Mr. Weedon's position is one in which he derived a direct benefit from the firm of Carter, Gummow, & Co. It does not matter whether he lent the money privately to Mr. Carter, or whether it was lent by him to the firm. Mr. Christie points out that, from the bank pass-books of the firm of Carter, Gummow, & Co., the quarterly interest was paid by the firm upon this advance of £2,000. It is no explanation to say that Mr. Carter borrowed the money privately from Mr. Weedon, and lent it to his firm. That will not avail, because the benefit derived by Mr. Weedon was direct from the firm. I submit that there was no intention that it should be regarded as a private transaction between Mr. Weedon and Mr. Carter. Mr. Christie, in his evidence, sets forth the state of the firm's business at the time of the transaction. I will refer your Honor to page 232 of the printed evidence, Question 8325. From the facts there disclosed, it is apparent that there was a necessity for the firm, who had an overdraft at that time, to receive a certain amount of money and to pay it into their banking account. In support of that contention, let me direct your Honor's attention to the evidence of Mr. Parfit, the Manager of the Bank of New Zealand. He explained to us that the limit put by the bank on the credit of Carter, Gummow, & Co. was about £3,000. He said that if their overdraft went above that amount he should require an explanation.

explanation. It is clear, therefore, that the money which was borrowed from Mr. Weedon was useful to Carter, Gummow, & Co. at that particular time, as, in addition to their overdraft, they had several other heavy items of expenditure to meet, and Mr. Weedon must have looked to some advantage in having his money with Carter, Gummow, & Co.'s business. Your Honor had before you Mr. Greig of the firm of Richardson & Wrench, a valuer under the Real Property Act. Mr. Greig is a well-known valuer in this country, and his valuations are accepted both here and abroad as above those of any other valuer in the colony. This gentleman valued the various properties of the firm. It was shown that the property upon which Mr. Weedon had advanced this sum of money, and which he held as security, was worth only £1,600 at the present day. It was also shown in Mr. Christie's evidence that although this property was held as security for the £2,000, there was only a certain proportion of it which was really in the name of Mr. Carter, Messrs. Carter, Gummow, & Co., being set down as owners to the extent of £887 10s. Really the property belonged to the firm of Carter, Gummow, & Co., so there can be no doubt about it that Mr. Weedon's interest was wrapped up in the profit, progress, and general prosperity of that firm. Otherwise the security was useless, and his income from it would be anything but assured. It must also be remembered that Mr. Weedon was the supervising engineer upon Contract 72 before coming to Contract 79, so that he had considerable experience with these contractors. I come now to Mr. Rudolph's matter. He is in much the same position, the difference in the two cases being that he borrowed without interest from Carter, Gummow, & Co. Mr. Rudolph was the engineer who supervised the Glebe contract, concerning which there have been so many doubtful rumours, and concerning which, also, some very definite evidence has been brought before this Commission as to its being a contract upon which a certain amount of defective work was done. Mr. Rudolph, no doubt, borrowed this money with the best of intentions, but nevertheless his action in borrowing the money—and I admit willingly that it may be that Mr. Carter lent it with the kindest of intentions—is not one of the very best, is not one which it is advisable to allow in connection with Government work, where so much depends upon these officers, and particularly when you consider the class of men who have to be dealt with. Your Honor must know, after hearing evidence from the heads of the department down to the workmen upon the contracts, that it is looked upon as a fair thing to cheat the Government in any way possible in sewerage construction. Even Mr. Davis and Inspector Fowle have said that these sewerage contractors required constantly watching. According to these gentlemen, the best of these contractors, Carter, Gummow, or any of them, require very careful watching. Then we have the comment of Mr. Carter himself—and Mr. Gummow made a remark to the same effect—that it is only human nature, and a perfectly legitimate thing from their point of view, for contractors to take advantage of an inspector whenever he gives them the chance. In answer to a question asked by your Honor, Mr. Carter admitted that it was but human nature, and he said that contractors—Mr. Forrest, Mr. Snodgrass, his partners, or others—would certainly take advantage of an ignorant inspector; an inspector who was not alive to his duties. This conclusively shows, to my mind, how very necessary it is that there should be no connection whatever between any of the inspectors of the department and the contractors in any monetary transactions, no matter how innocent they may be. I turn now to Mr. O'Hanlon's matter. He had a transaction with Mr. Carter of a similar nature to that of Mr. Rudolph. I would impress upon your Honor that these transactions have been found just at haphazard from a perusal from the bank passbooks of Carter, Gummow, & Co. They would not have been found had a careful search not been instituted through those books. They are transactions which were casually hit upon, and it is possible—seeing that no books were provided by Messrs. Carter, Gummow, & Co. which would in any way show their business transactions, notwithstanding that they had these enormously complex dealings—such, for instance, as Mr. Carter borrowing money from Mr. Weedon and lending it to the firm, and taking money out of the firm and lending it to inspectors, or taking money from the firm for charitable purposes, and giving it here, there, and everywhere—it is quite possible, I say, that, if transactions such as these have been discovered in this particular way, there may be others. Moreover, if transactions of the kind which I have just instanced can be made with the firm's account, how could there, in the absence of books, be any satisfactory adjustment of the partnership? These transactions, as your Honor is aware, have been casually hit upon without any assistance so far as any books from the firm are concerned. They never would have been discovered, perhaps, but for a very close research, and, even as matters stand, we cannot tell what may have taken place in the past in the way of transactions between officers of the department and contractors as regards the lending and borrowing of money or the interchange of money by way of friendly transactions. In addition to these matters, there are smaller matters which, I think, are admitted by Carter, Gummow, & Co. I refer to the giving of amounts at different times by way of subscription to sick lists, submitted to the firm by inspectors, and in which the inspectors and others were concerned, the inspectors being invariably treated with the greatest possible consideration. The one exception appears to be Inspector Reid, with whose relations to these contractors I will deal separately later on. While addressing myself to this question of defective work, I would point out how conclusive has been the evidence throughout that

that, while the department knew of very inferior work going on upon these various contracts, they still allowed to be retained upon the jobs men who had been discovered doing that very defective work. Mr. Davis, when giving his evidence, read letters showing the reasons for the dismissal of certain inspectors, and then proceeded to show that they were immediately reinstated and were sent on to other contracts and kept going in that way. Take the case of Hamilton. He was an inspector, who allowed some very defective work to be done, evidently from carelessness. The department would not have treated him in so harsh a manner, as far as writing is concerned, as disclosed by the letters put in as evidence, had it not been for his allowing such gross carelessness on the part of the contractors, whereby there was such a large saving to their pockets, to the loss of the State. This man was simply changed from the position of inspector on the Waverley contract to the position of inspector on the Glebe contract, at a reduced salary it is true, but still he was engaged on the work of Carter, Gummow, & Co. He has remained in the department ever since, being simply transferred from one of Carter, Gummow, & Co.'s works to another work of the firm. There is evidence that other inspectors have been summarily dealt with for offences of considerably less magnitude than any committed by Hamilton. Again, take the case of Gledhill. Inspector Melville in his evidence clearly pointed out that Gledhill was responsible for the bad concrete which went down behind the Hyde Park sewer—Gledhill as well as the man Shellback. These men were both kept on the work, and they are at the present moment on them, Gledhill being still an inspector. As regards the Waverley contract, it will be remembered that Mr. Davis wrote very strong condemnatory letters concerning an inspector named Vincent. This man has been kept upon Carter, Gummow, & Co.'s works, and has been taken from one district to another, where their works were going on. The evidence is that he has been kept continuously going by the department. He was actually supervising Contract 79A, where the very defective work described by Dawson had taken place. Then the bricklayer, Reidelberg, has also been continuously employed by Carter, Gummow, & Co. upon all their works. This man was condemned by Mr. Davis as having carried out very defective packing upon the Waverley contract. Then there is Hansen, who was also caught at North Shore doing defective packing, and who was simply transferred from Contract 79 to Contract 69, from one work of Carter, Gummow, & Co. to another work of the same firm. Then we have Manager Reid, who has been constantly reported upon every work which Carter & Co. and Carter, Gummow, & Co. have had for some years. He has been constantly reported as a man who would do the greatest possible amount of defective work upon every occasion, endeavouring especially to save cement for his employers. Take Inspector Melville's evidence concerning him. He tells that he caught him close upon a dozen times trying to cheat by saving cement in concrete. The man appears to have been a constant nuisance to the inspectors. Mr. Davis himself says he was not a man of whom he could at all approve. We also have Inspectors Wagg and Reid complaining of the same man. Witness after witness proved, I think, to your Honor's satisfaction, that Reid was a man who laid himself out, in the interests of the contractors, to save cement wherever he could. He was a man also who is said to have quarrelled with both inspectors and men, and we are told that he tried in every possible way to effect a saving to the contractors to the detriment of good work. Yet he was kept constantly upon the jobs of this firm. He left only two or three months before this Commission commenced, and he left the firm then only because they had not work with which to keep him going. There are other men who have been conclusively proved to have been not at all suitable men to be kept upon these contracts. Yet these men had been retained. The treatment of Inspector Reid by these men, when he was starting to keep them in check, is quite consistent with their general conduct. I say that sufficient care has not been exercised, that sufficient supervision has not been maintained in the carrying out of these works, and the conduct and action of the department itself has, whether intentionally or otherwise, been directed to the interests of Carter, Gummow, & Co., instead of to the interests of the State, in the carrying out of the various contracts upon which I have touched, whether casually or in exhaustive detail. I come now to the remark made by Mr. Carter—and it has not yet been challenged, it has not been contradicted—to Inspector Reid. What does Reid say in his evidence?

233. Did you ever receive any intimidation at all from any of the contractors? I saw Mr. Carter in the cable tram at the North Shore after one of these reports, and he told me I was making a fool of myself. He said, "As to these reports of yours you know you cannot hurt us. We are too strong."

That has not been contradicted, and it shows that Mr. Carter was regarded with such kindly feelings, to say the least of it, by the departmental officers that he could afford to defy the inspectors if they were in any way obstructive to him, in the carrying out of his works in such a way that they would not be as perfect as his contract with the Crown would require them to be made. I will also refer your Honor to question 358 in the evidence of Mr. Hickson:—

358. Did Mr. Carter request the removal of your own officer? I am not sure that he actually put it in that way. I think he said that as long as Reid was there there would be friction. He expressed a desire for the withdrawal of Reid—at least, I so understood him.

I should think that if anything would make the mind of an engineer supervising works of this sort suspicious as to the nature of the work that was going on it would be a request from the contractors themselves to have a certain inspector removed from their works. But Mr. Hickson acted upon Mr. Carter's request and removed Inspector Reid. I say emphatically that that must convince everyone that Contract 79A is a contract which has been carried out with an excessive amount of defective work in addition to that which has been pointed out by the witness Dawson—that it has been carried out in a manner in which it could not be carried out had there been an inspector such as Reid upon the job. An inspector will at times complain of little things as well as of great things, and if he allows defective work in small details he will be tolerant of defective work upon a larger scale on the important parts of the work. Everyone who has had to do with the supervision of the construction of works knows how constantly you have to watch the men who are engaged upon the work—how carefully you have to check them in every respect. It is a well-known fact that those engaged in supervision of that kind find it necessary to make constant application to the men to do that which is proper; and that Reid was justified—was fully justified—in keeping the strict control of the work which he did keep—the strict and thorough supervision which he did keep—is fully borne out by the evidence which we have had upon the subject of defective work. Before leaving that question I will direct your Honor's attention to Inspector Melville's evidence concerning Shellback. Some of the statements he made will be found given in reply to question 8897. Inspector Melville pointed out that, in spite of his complaint, Shellback was still continued on the work. I will now deal more particularly with Inspector Reid's case. Your Honor had him before the Commission as a witness, and I have no doubt you came to the conclusion that he was a man of sterling honesty. He is undoubtedly a man who would do his duty even though it entailed disaster to himself. He came to be somewhat fearful of the treatment he received on these works. He was invited by Mr. Snodgrass on one occasion to have a drink and to be sociable; but, knowing the clear line of demarcation which must be drawn between the adequate discharge of his duty in his position of inspector and his fraternal relations with the workmen and contractors, I think he took the proper course in declining to enter into the suggested association with them. The position of an Inspector while engaged in the carrying out of Government works is clearly defined. He must do his duty quietly and persistently, and without having any association with the men by means of which an advantage might be gained over the Department by the contractors. This line of conduct seems to have been the one followed by Reid very carefully throughout, and what has he received for it? He was removed from the job, and ultimately his relations with the Department were altogether severed. Evidence of contractors over whom Reid has acted as an Inspector has been brought before the Commission—for instance, we had Gilliver, Rhodes, and other persons, who have given him the character of being a man who took particular care that not the slightest defective work should go into any job he was supervising—that he was most particular in the carrying out his duties, and that he was not the meddling man that some persons have endeavoured to make him out to be. He exacted the carrying out of the specification to the fullest extent possible, and who can deny that that was the duty he had to perform? He had occasion to make reports constantly with reference to the work of Carter, Gummow, & Co. He told us that he sent in at least three or four reports, and that no attention was paid to them, until he at last came into conflict with the men who persisted in doing bad work. After that he wrote through his superiors to the Engineer-in-Chief, and it is admitted that that report, as well as the other reports which he had forwarded, was received from him. Nothing, however, was done to back up this man in his efforts to get the work properly carried out. He was ultimately removed from the work and was sent on to other contracts. Now I submit that if his services had been continued where he was it would have been to the interest of the State, and it would have prevented work from going on in the manner in which it did on Contract 79A. We cannot at the present time tell the extent of scamped work which may have gone on in connection with these sewers. We have had irrefutable evidence that it is absolutely impossible to tell from the tapping of the brickwork whether drums have been properly packed or not. Inspector Fowle was very emphatic upon that point. He said you could not tell from tapping whether the work was good or not, and Manager Reid, on being questioned by Mr. Davis, gave evidence to the same effect. He is a man of experience, and would be likely to know. There can be no doubt, in my mind, that Mr. M'Creddie in going through these sewers passed many cavities. Mr. Davis said, in answer to your Honor, that in one case where Dawson hammered he thought the ground in that drum was absolutely solid. I will give you the words which Mr. Davis used. You will find them in reply to question 14638:—

14638. In relation to the necessity for watertight packing, I understood Mr. Bagge to say that one principal reason why it was necessary to have watertight packing was because of the great uncertainty of having the joints of the brickwork regularly filled;—as to that reason, can you say whether he is right or whether he is mistaken? I think the joints on the whole would be filled. I have examined a good deal of the work after it has been finished, and I find that in the majority of cases the joints have been fairly filled. I take that which we examined six weeks ago  
at

at North Shore. Although the bricks were very much radiated—I suppose there was as much as three-fourths of an inch on the wedge of the brick—it was probably three minutes before the man, using a 5-lb. hammer, could drive out one of those bricks. There was nothing behind the brick—indeed, I said to Dawson, “That is solid;” but it was hollow all the same. It was simply that the brick had been properly bedded, and the adhesion of the brick to the mortar prevented it from coming back.

It will be clearly seen that an inspection of these works, made by simply tapping, would be by no means conclusive as to the extent of defective work of that nature which may have been carried on.

*His Honor* : On reflection, I have come to the conclusion that the evidence in this inquiry will hardly be complete without the evidence of Mr. Snodgrass, if his attendance could be secured. I wished to avoid the expense of bringing him here from New Zealand; but I think that, if possible, he really ought to come.

*Mr. Carter* : I know nothing of Mr. Snodgrass’s movements, your Honor, except that he is at the Thames, in New Zealand.

*His Honor* : I understand that he is in no way connected with your firm now?

*Mr. Carter* : No.

*His Honor* : Does he correspond with you?

*Mr. Carter* : Not regularly; I heard about a month ago that he was at the Thames. I understood that he was then about to engage in the manufacture of explosives.

*His Honor* : I suppose he could be found easily enough at the Thames?

*Mr. Carter* : I think so, your Honor. It will be merely a question of travelling expenses.

*His Honor* : I suppose that as far as you know Mr. Snodgrass could leave the factory for a time if it has been actually started without any great risk?

*Mr. Carter* : I should think so, your Honor.

*His Honor* : Then I will have a cablegram despatched to him in the course of the day requesting his attendance.

His Honor at 1:10 p.m. adjourned the inquiry until 10 a.m. on Wednesday, October 7th.

C. E. R. MURRAY,

Commissioner.

WEDNESDAY, 7 OCTOBER, 1896.

His Honor sat at the Board Room, Chief Secretary’s Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising), Mr. Ernest Smith (appearing for Mr. Hickson), Mr. Carter, and Mr. Gummow of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, also attended.

*Mr. Davis* : Before Mr. Parkes resumes his address I should like to explain a little matter which occurred yesterday with reference to some evidence which has been given. Mr. Parkes referred to a list of officers employed upon Contract 79A, which was given by me and which appears on page 633 of the printed evidence. A mistake has been made. The list which appears in the evidence is from a rough slip handed to my clerk from which to make it out. I had made a note of interrogation opposite the date of March, 1895, in the case of Mr. Weedon. The clerk copied it without making any inquiry; and a mistake has been made.

*His Honor* : Have you discovered what the date ought to be.

*Mr. Davis* : I find there is a difficulty in getting the precise date from the records. Mr. Boys had a note in his pocket-book; and he wired to me last night that the date would be June 18th, 1894. That would be the date of Mr. Weedon’s taking charge of Contract 79A.

*His Honor* : I will now call upon you, Mr. Parkes, to resume your address.

*Mr. Parkes* : When your Honor adjourned the inquiry yesterday I was dealing with the evidence which had been tendered upon the question of defective work, and I will now read a quotation from that evidence, which will show to some extent how it comes about that some of the defective work has been done. For instance, we have had evidence as to the racing in the work which is encouraged by Carter & Co. in the carrying out of their contract. I will refer your Honor to Question 5389:—

5389. Do you remember making a wager of half-a-sov., at North Shore, five or six years ago, in connection with some pipes which were being laid? Yes; I remember it, not from the making of it, but from the occasion.

5390. You paid the man;—he beat you, did he not? Yes; I paid him.

5391. Were the pipes decently laid? I believe so.

If your Honor will now refer to Question 6695 in Owen's evidence you will see that £50 appears to have been given to the men who could put down a shaft in the quickest time. Then there is further evidence upon this point given by Inspector Fowle. He says:—

16460. And you sometimes caught the men doing bad work? Yes.

16461. How did they excuse themselves;—did they say that the work was being done by order, or did you find that it was being done by order? No; it was due to carelessness, as a rule, on the part of the men. On some occasions, in the bricklaying, the men would race one another to see who could get through the quickest, in order to curry favour with the contractors. Of course the man who got through first with his length would be thought more of by the contractors. He might be thought to be a better man from their point of view than the others.

16462. *Mr. Parkes.*] Were there any prizes attached to this racing? I have never known of any in that work.

16463. *His Honor.*] That sort of thing would be approved by Reid, as far as you could see? Yes.

I point this out to show that there really was an inducement offered to the men to do bad work—I mean the class of bad work which would result from quick work. As a matter of fact, the men themselves could not be said to gain greatly by it, if they gained at all. The clear gainers in a case of that kind are the contractors themselves, because by hurrying the work the workmen diminish the time of their employment. It is absolutely necessary, therefore, that, both on the part of the department, and also on the part of the contractors, the most scrupulous care should be taken in the carrying out of the work. No inducement should be held out to the men to do their work in such a hurried manner that it would be likely to contain more or less bad or defective work. I will also refer to the general testimony given as to the character of Inspector Reid. Mr. Hickson and Mr. Davis have both given him letters of testimonial. These letters have been put in evidence. All the contractors with whom Reid has worked have given him the highest character possible. There can be no doubt, therefore, that he is a man of very good character. I will now deal with the contracts in order—taking, first of all, Contract 77. That contract is a peculiar one, inasmuch as it involves the introduction of what is known as the Monier patent. I would impress upon your Honor that the department consists of a head engineer and of other engineers who are under that head, and that their duties are to prepare the most clever and suitable designs for any given work, and also to prepare specifications, having regard to the most economic considerations, in the interests of the State. Of course economy in construction would naturally be with them a great feature in the efficient discharge of their duties. These are the duties for which they are paid. In the carrying out of this particular contract this understanding would appear to have been departed from. In the first place the heads of the department allowed the contractors to send in on their own behalf their own plan and estimate, and to practically carry out the work at their own price without any check whatever as to whether that price was a fair one or not as regards the State. It is for your Honor to judge whether this course was taken with the idea of favouritism or not. I hold that it was, and I hold also that sufficient evidence has been brought before the Commission to show clearly that that was the case. I would, first of all, touch upon the manner in which this work was introduced. It is not as if the Monier principle were unknown in the department; it was unknown by it until some two years before this contract came up; and it has been clearly proved by the admissions of various witnesses that it was the intention of the heads of the department to take advantage of a favourable opportunity to give the patent a proper test. Their duty, in making this test, would have been to select some special place for the purpose and to have given it a trial with the object of seeing whether the system was economical as well as serviceable. Instead of doing that they undertook to pay the contractors 15 per. cent. for the use of the patent before satisfying themselves whether or not it was a good one to adopt. They called for tenders for an aqueduct, upon the most elaborate design which could possibly have been got out, both from a structural and from an architectural point of view. Tenders were called for; and the alternative design, made by an officer of the department, was submitted by Messrs. Carter, Gummow, & Co., with their tender upon the departmental design. I submit that, upon the evidence, it was known by Mr. Hickson that the design was made by that officer. It is quite clear, from witnesses who have been examined here, that no secret was made by Mr. Baltzer, the draftsman, of his intention in making the plan. It is undeniable, I contend, upon the evidence that the State would be a sufferer by the introduction of the Monier system upon this particular contract, as far as money is concerned. The second portion of the case, as regards this contract, with which I will now deal, is the method by which the sureties were obtained in order to secure this work, should there be any risk. Of course, it was admitted that there would be a certain amount of risk. The patent was a new thing in the country. It was altogether a new departure in construction, and it was seen that a certain amount of risk would accrue from the experiment in such a large and important work as the Johnstone's and White's Creek aqueducts.

In the third place, I want to point out to your Honor what I consider to be unanswerable evidence that a loss was sustained by the State through the substitution of the alternative for the original design. Mr. Hickson ought to have had sufficient experience from what happened in Adelaide, when Wells Brothers sent in their own plan and specification for the Rivoli Bay and Kingston jetties, as has been disclosed to this Commission, because in that case difficulties and complications arose which should have convinced him that it was not a wise practice to allow contractors to put in unchecked designs and estimates for their own work in competition with the departmental plans. Mr. Hickson, in spite of that experience, used every effort possible to induce the Minister to accept the contract sent in in this manner by Carter, Gummow, & Co. He also knew as conclusively as any man could know that an officer of his department was deeply interested in this patent; and he also knew—and both of these facts have been proved, I contend—that this officer had access to all the papers and particulars of the work which was prepared by the departmental officers. There is no doubt whatever about that. In spite of this knowledge, Mr. Hickson never, from his own admission, took the slightest trouble to find out from Mr. Baltzer, Mr. Carter, or from anyone else, what was the actual detailed cost or what material was to be put into the work; whether, taken as a whole, the work bore a fair comparison as regards cost with that under the departmental plan or not. Nothing of this kind was done; but when the tenders came in Mr. Hickson sent on the tender and alternative plan, or rather took them himself to the Board of Reference. That is the first step which was taken when this substituted plan was sent in, and I would point out to your Honor the evidence given by Mr. Hickson and Mr. Darley in connection with the introduction of this Monier principle. Mr. Hickson's evidence upon the point is as follows:—

1288. What did you say to the Board? When this tender came in on 14th March it was arranged that the work should be taken out of my hands and handed over to Mr. Darley. I brought the tender and the plans down to Mr. Darley, and we talked over the matter for a considerable time. The result of the conversation was that we both thought it desirable that an opportunity should be given of testing the Monier arch principle, which was acknowledged by all engineers on the Continent to be a very valuable engineering structure, and that the matter should be considered by the Board of Reference. The papers were then sent down to the Board of Reference without any direct recommendation from myself or Mr. Darley.

Your Honor will see that directly he got this alternative tender and plan he proceeded to discuss the matter with Mr. Darley. What is Mr. Darley's evidence upon this point? He says:—

2030. Had you not had a consultation with Mr. Hickson about the matter before? No; I never saw this aqueduct before the tenders were called for. Before the tenders came before the Board of Reference I did not know whether it was to be a pipe or an aqueduct.

2031. Do you know anything about the Monier arches now? Yes. My attention has been directed to the matter since.

2032. Do not you think that as there is only a difference of something over £200 between the two contracts it would have been better to have a good substantial structure, instead of taking the risk of the Monier system? I do not think there is any risk, and you are getting a much nicer-looking structure.

2033. If there be no risk, why did you, as one of the Board of Reference, suggest that on account of the risk good surety bonds should be given? It was a new thing at the time, but I do not now think that there is any risk in adopting it.

Later on in his evidence the same witness said:—

2076. Are you sure that you never discussed the Monier principle with Mr. Hickson before it came before the Tender Board? I think he had called my attention to it, but not in connection with any particular contract. I remember his showing me some French work about the Monier system. I think he was the first to call my attention to it. I think he said he would like to introduce it into some of our country bridges; but his observations had no connection with any particular contract.

You will see that Mr. Darley absolutely contradicts Mr. Hickson's evidence as to his having interviewed him before this matter came before the Board of Reference. Mr. Barling in his evidence said:—

Mr. Hickson thereupon explained that he and Mr. Darley had carefully gone into the plans and specifications, and also the cost, and that they were prepared to recommend that this particular system should be tried. Upon that explanation the Board unanimously came to the conclusion that it would be perfectly safe to try the work.

Your

Your Honor will see that Mr. Hickson assured the Board of Reference also that Mr. Darley had gone into the question of cost. Now Mr. Darley has sworn that he did not do anything of the sort. What did Mr. Barling say later on in his evidence?

7427. If this Monier plan, made by an officer of the department, were submitted by the contractors as a substitute for the office design, do you not think that it would be a proper thing for the officer in charge to have taken out the quantities, in order to ascertain what the real value of the lump-sum undertaking on the part of the contractors was? I was perfectly unacquainted with the fact that an officer of the department did prepare a plan for the contractors. I was very much astonished to see that evidence had been given that any officer of the department had made this plan. I did not know it, and I certainly do not think that any member of the Board of Reference knew it. As to the main question of whether the relative values should not have been tested, I imagine that that was gone into.

As a matter of fact at least one member of the Board of Reference must have known that an officer of the department was connected with the patent—that has been admitted—and that member of the Board of Reference was Mr. Hickson. The Board then recommended that this Monier system should be adopted if good sureties were found—not sureties in the ordinary way, but sureties to be taken for a special purpose—not sureties for the ordinary method of carrying out a contract, but sureties for the application of an entirely new system of construction which might turn out badly, necessitating the pulling down of the work to its very foundation, and the replacing of it with another structure. Of what description were these sureties to be? They were to be independent sureties. As it turned out, the sureties were two partners, and certainly not the most financially strong partners, but the least financially strong, in the firm of Carter, Gummow, & Co. Their names were sent in to the department, and the department accepted them, almost admitting, as they do now, that they knew them to be connected in some degree with the firm as contractors. It has been proved conclusively, I think, that they were beneficiaries in the contract from first to last—that they participated in any gain which might be obtained from the work. They were members of the firm purely and simply, and I put it to your Honor whether, if anything had happened such as the contractors' becoming insolvent or wishing to shirk their obligations, there was any further security to the Government from these sureties, being taken. Is there any security to them whatever in having two members of the firm as sureties? If anything of the kind I have indicated had happened, every member of the firm, including Mr. Forrest and Mr. Gillan, would have come in, and there would have been no further remedy given to the State as regards sureties. That certainly was not the intention of the Board of Reference when they told Mr. Hickson that they would agree to the acceptance of the alternative design if independent sureties were found. The matter afterwards went on to Mr. Young, the Secretary for Public Works, and he, reading all the papers which had been put before him, and considering the explanations which were made to him, said, "Yes, I will consent to this if the Board of Reference advises its being carried out, and if I am assured that it is not very much cheaper than the office design which has been prepared." I will read to your Honor Mr. Young's minute of the 27th March, 1893:—

Before approving of this proposal I should like an estimate of the actual value of the work to be carried out by the contractors under the substituted scheme.

Mr. Young's explanation of that is contained in his evidence in reply to Question 7506:—

7506. What was your object? My object was this—that, however satisfactory the Monier arch system might be represented to me to be, I would not have accepted the tender without putting up the specification under the system for public competition, unless it had been reported to me that the actual work to be carried out under the system approached very closely to the departmental estimate for the contract.

Now, any Minister conserving the public interest would write a minute such as Mr. Young wrote, with the objection set forth in his evidence. He continues:—

7508. If you look at page 6 of the Parliamentary Papers ordered to be printed on 9th October, 1895, you will see the following minute by Mr. Hickson:—

To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm, estimates were made for the work on the Monier system, as well as on the department's designs. The result was that the estimate of both works was practically the same. Applying that comparison to this case, it would mean that the departmental estimate for the work under consideration would be £22,000.

Supposing the work in the outfall sewer construction were to a great extent cheaper than the original design for the contract, would you then have accepted the Monier system as a substitute at the same price? I cannot say that I should. I can only make my position clear. The reason why I did it was that it was reported to me that the cost under the Monier arch system would be practically the same as under the departmental plan.

That

That is conclusive as to the way in which Mr. Young, the Minister, looked at this matter, and as to the way in which he took the replies of Mr. Hickson which were given to him. I will read to your Honor those replies. Mr. Hickson, for instance, wrote the following minute :—

To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm, estimates were made for the work on the Monier system as well as on the department's designs. The result was that the estimate of both works was practically the same. Applying that comparison to this case, it would mean that the departmental estimate for the work under consideration would be £22,000.

There can be no mistake about that. The report which Mr. Hickson referred to was Mr. Bagge's report of the 21st September, 1894. Mr. Bagge, in that report, drew out an estimate, or rather instructed the officers of his department, who took out an estimate. It was undoubtedly the work of the office, checked and rechecked. Upon one of these schemes the cost was £9 11s. 5d. per lineal foot, the cost of the second scheme per lineal foot being £6 16s. 11d. These two schemes were, according to Mr. Hickson, compared with the Monier scheme, the cost of which came out at £6 6s. 8d. per lineal foot. But your Honor can see that none of these three schemes had ever been adopted by the department. They were all based upon European patents of a certain description, and the comparison which Mr. Bagge really made was between them and Ahearn's Contract No. 101, upon which these estimates were made out by way of comparison. Now, that particular contract was essentially a work which was going on in the office. It contained small-span brick arches between piers of certain bulky foundations, and it was to cost £10 16s. 1d. The comparison, without a doubt, which was made by Mr. Bagge, bore out to a great degree, if it did not altogether do so, the former information which Mr. Hickson had sent to Mr. Young,—showing, as has been made clear to this Commission, that the adoption of the Monier system would reduce the cost of Government work on which it could be used by about 50 per cent. Your Honor put Mr. Hickson through a very close cross-examination in order to obtain an explanation of this difference; and, by reading Mr. Hickson's evidence, I would point out the way in which he makes the explanation. After your Honor had asked for a lengthy explanation on the matter, it was condensed into various set questions. I will quote the questions and the answers given :—

1553. I understand you to say, in point of fact, that Ahearn's plans were wasteful plans;—you mean as to cost, I suppose—the use of a large quantity of unnecessary material? I would not go so far as to say that. No doubt as we went on with our sewerage works we saw where we could save a good deal of material, and we did so.

1554. As between Contract 112 and Contract 77, what you say is that you have effected a substantial saving? Yes; reducing considerably the cost of the work.

1555. Was that done by reducing the co-efficient of strength, or by keeping up the co-efficient of strength and reducing unnecessary material? Yes; we found that keeping up a sufficient co-efficient of strength we had a large margin to go upon.

1556. Do you still say that you really did not understand the note appended to Mr. Bagge's report? I did not take it into account at all, because I was comparing two open aqueducts. Why the question of a triplicate closed sewer should be brought in was, to my mind, quite unintelligible.

1557. I understand that No. 2 scheme of Mr. Bagge's report had been worked upon then? No; it was worked upon as the result of the calculations then made.

1558. It had been worked upon before you wrote this minute? Yes.

1559. There was only an interval of six months? Immediately after Mr. Bagge's report had been presented the contract for No. 112 was got into hand on the basis of No. 2 scheme.

1560. And it was in the working out of the quantities that you came to certain results? Yes; the results are shown on plans No. 2 and No. 3, which I have put in.

1561. After arriving at these results the office drew the plans of No. 77? Yes.

1562. In drawing the plans of No. 77, were the plans under scheme No. 2 in Mr. Bagge's report borne in mind in any way? We bore in mind the result of our researches as to the cost of work upon No. 2 scheme.

1563. You had it in mind then that, as between No. 2 scheme in Mr. Bagge's report and No. 77, there was not much difference;—is that so? There was not very much. I have had the estimates all run out accurately since, and I can show you how they come out.

1564. How was it that in No. 77 the office did not go in for another experiment upon the basis of No. 2 scheme, but preferred to adopt the old system? We did not exactly adopt the old system, because in No. 77 we reduced the cost of our work.

1565. I mean so far as the brick arches and the closed carriers are concerned? The brick arches and concrete represent practically no difference in cost.

1566. Was it that you had concluded that brick arches, if not connected with unnecessarily expensive work, were practically no more expensive than concrete? There was very little difference in cost.

1567. So it was in your mind that only schemes Nos. 2 and 3 were to be compared. Although, in fact, No. 3, a different system from No. 2, was under comparison, what was really in issue as between the department and Carter, Gummow, & Co. was a comparison between No. 77 plans and the Monier system in No. 3? Yes.

1568. But you say that in your mind the comparison between the aqueduct work involved in No. 77 and the Monier system was the same as a comparison between scheme No. 2 and the Monier system? Yes.

1569. Because with the increased saving in your designs for aqueducts you had brought down the cost to something practically equivalent to the cost of No. 2? Yes.

1570. Whereas in Ahearn's Contract No. 101 the cost had been much greater than the cost of scheme No. 2? Yes.

1571. That is your explanation? Yes.

1572. Do you understand, then, that Carter, Gummow, & Co. were working on the basis practically of Mr. Bagge's No. 3 estimate in carrying out the work they were to do? On very much the same basis.

1573. That basis brought the cost down to a little less than the cost of No. 2? Yes.

1574. And you looked in the future to being able to reduce the cost still lower by reducing the quantity of material used? Yes.

1575. Very much below the quantity which appears in scheme No. 3? Considerably less. This is not mere theory. I can show you what was actually done.

Now, the explanation of Mr. Hickson, as contained in the answers to those questions, is this—that the departmental design for Contract 77 was not more costly than was the design for Contract 112. His explanation is that the design for Contract 77 was much cheaper than was that for Contract 101, and that, in comparison with other works also, it was very much cheaper. Your Honor has very carefully examined the plan, and you have had before you Mr. M'Credie and Mr. Thompson as to the comparative values of the different designs. The department has not put forward the slightest contradiction to their values. I wish to point out that it is undeniably the case that the design for Contract 77 is more costly than was that for Contract 101 by £1,250. This is illustrated by the evidence of both Mr. M'Credie and Mr. Thompson. They say that it involves an equal expenditure as regards the material, and, taking one design with the other, as Contract 64, which was Carson's contract, and which was a most expensive design. If you will take the plans and sections referred to by Mr. Cutler and other witnesses you will see, as they pointed out, that the side walls between the inner lining of the sewer and the exterior of the work is the same in Contract 77 as it is in Carson's Contract 64 and in Ahearn's Contract 101. There is no saving in material, and the thickness of the work and the quantities of material are the same. It will be seen on comparing the design of Carson's contract with it that it is exactly the same. Its stone cornices, its plynth moulds, its arches, its patent double-pressed brick facing—everything in its construction makes it identical with the other design. The only difference is that it has greater spans in the arches—that is to say, the arches are extended from 42 feet to 52 feet. As a counteracting element, the piers are greater and the arches more costly. It will be seen, therefore, that there has been no reduction from the date of the letting of Carson's Contract 64 until the drawing of the departmental plan for Contract 77. As to Ahearn's Contract 101, taking the material, and looking at the quantities of the material and the nature of it, there is not the slightest doubt but that Contract 77 is greatly superior and is more costly. Now, how comes it that Mr. Hickson can say that McSweeney's contract, which is an entirely different contract altogether—an open sewer, an open aqueduct, and drawn at the same time as was No. 77—was the one with which he was comparing a design with a closed-in carrier and such elaborate work as is shown upon the departmental design of Contract 77? That is the only explanation which can be given to justify this minute of Mr. Hickson's. It goes to indicate to the Minister that if the department had taken out an estimate it would have been found that the Monier patent would have cost the country £22,000. Your Honor must see that Mr. Hickson could not possibly make that error. He admits that he had Mr. Carter before him as to the sureties, and would it not be in accordance with common sense that he should then say to him, "Show me how you made up this estimate for the lump-sum tender. You must prove to me that you are not getting the best of the Government." Mr. Hickson must have known all along that this work would be done with a great amount of profit to the contractors who sent in the substituted plan. I come now to deal with the real cost of Contract 77. The first evidence I will take to prove that there was a great saving made upon the substituted plan, and, therefore, a great profit given to the contractors, is that

of

of Mr. Gummow himself. The object of competition on the part of the Government is to bring in the brains of men, so as to obtain by the use of those brains in competition the execution of work at the cheapest possible cost. That is the object; otherwise we need not have competition at all. If the department deliver themselves over to a system under which the contractors can get the most expensive prices for their work, then the business of the department cannot be conducted in a proper manner. Both Mr. Gummow and Mr. Carter have admitted in their evidence that they put in their estimates for the departmental plan at cost price. It must not be forgotten, however, that Mr. McSweeney would have done the work for £16,300. Mr. Gummow submitted, when giving evidence, at page 649, the detailed quantities of the tender which the firm sent in at the time, when submitting the substituted scheme. He has also pointed out to your Honor that he and Mr. Snodgrass went through this estimate very carefully, in order to make up the price which they submitted in their tender, the full amount being £14,777. That would be for the whole of the contract, including £488 for plant, £750 for management, £200 for smith, and £300 for sundries—a sum of £1,738 over and above the cost of material put in. I submit that the prices of material given carry a very fair profit, as I will point out in detail further on. If your Honor separates the quantities in this tender of Mr. Gummow, you will find that the sum of £7,403 represents work which is common to both designs—the departmental design and the Monier design—and which is altogether outside of the aqueduct. If you deduct the £7,403, representing material not affecting the aqueduct, from the amount of the tender sent in, £15,500—the Monier work substituted, by the way, was nearly £800 in excess of the schedule they made out—you will find that they allowed for the construction of the Monier work £8,097. Now, Mr. Gummow's evidence will be found upon page 639. He said he very carefully kept a tally to see what the actual cost of the work would be to the contractors as it proceeded. He made this tally during the time the contract was going on, and he says:

19440. *His Honor.*] You assumed that the cost of the four would give you a fair average? Yes. I ought also to explain that the men were working eight a half hours a day and saving their Saturday. The arches at White's Creek are a little bit smaller in width, there being a smaller-sized sewer there, than are the arches at Johnstone's Creek. The quantity of 1,325 yards is not the whole total of the concrete and compo., but the estimate which I made as to the four arches at White's Creek. That would make a small difference. There may be 25 or 30 yards of concrete more than I have considered in my calculation. As to the blacksmith's work, it is almost impossible to get that item exactly, because the blacksmith is engaged in sharpening tools, drills, picks, and that sort of thing, as well as doing other work. He also has two men to assist him.

Now, when I asked Mr. Thompson and Mr. McCredie to make out their estimates of quantities in conjunction with Mr. Davis, I said to them "Deal with the matter in the fairest way you possibly can. Take Mr. Davis' estimates if they are not altogether too extravagant." There is no doubt that they did this, having regard to the designs themselves and the rather large amount which they gave. If your Honor will take the trouble to check the quantities in the Monier aqueduct work which were actually used, you will see that these gentlemen made a most liberal allowance for this material. Mr. Gummow, however, set that point at rest by stating that 1,350 yards of material were actually put into the work, from a check made by him as the work actually proceeded. He makes out that this will cost at per cubic yard £3 14s. 6d., or we will call it £3 15s. Multiply 1,350 yards by £3 15s., and you have the sum of £5,060, including supervision and everything. So that the difference between the original tender made out by Mr. Gummow of £8,097 for this Monier work—because I am not taking the aqueduct with the piers, but simply the Monier work rising from the springing of the arches—the difference, as I say, is this—that Mr. Gummow allowed £8,097 in his estimate, the actual cost being £5,062. So that there is no doubt about it that there was a saving of £3,035, which bears out every witness who has been before this Commission, including the Government officers, in their contention that there is a great difference in price between the two designs. The departmental scheme was tendered for by Messrs. Carter, Gummow, & Co. at the admitted cost price of £15,757. If you deduct from that Mr. Gummow's figures, £7,403, you are left with an item of £8,354 to be used in constructing the departmental design with the departmental material above the springing of the arches. That shows that they received for this Monier work, which is so much cheaper in construction, £3,285 of benefit, there being included in both the actual and estimated cost put forward by Mr. Gummow £488 for plant, £750 for management, £200 for smith, and £300 for sundries, the tenders upon the departmental plan being at neat cost. Let me proceed, your Honor, to point out what evidence we have produced before you as to the value of this work. Mr. McCredie and Mr. Thompson went very carefully and minutely into the quantities. Their evidence is to be found upon page 344. Now there is no doubt that these gentlemen acted honestly and in every way properly in arriving at that value. They had nothing to bias them. They had no desire to injure the department. They received but a very small remuneration, and they simply did their duty as independent witnesses before this Commission. They have proved, by taking the market rate for material and labour, that if  
the

the original design had been carried out in compo. instead of concrete, there would have been a saving of £4,000 odd. Even if it were carried out in concrete, there would have been a saving of £3,633. Mr. John Young, who certainly is not a man without experience—he is a man, on the other hand, who has had a lifelong knowledge of concrete work—having made it a specialty in his own buildings, and having at all times taken an interest in that particular class of work, having even built houses completely of concrete—has given your Honor an estimate that there would be a saving in favour of the contractors by the substitution of this design over and above every expense which could be legitimately put upon it and the ruling percentage of profit at that time, which was not large, of £3,361. Mr. Alexander Dean has also carefully examined the figures given by Mr. McCredie. He gives upon page 365 of the printed evidence a description of how he and his son went through the estimate, and came to the conclusion that Mr. McCredie and Mr. Thompson had certainly not placed exorbitant values upon the work. I come now to the estimate of Professor Warren. He produced before this Commission a very carelessly drawn-up statement. I do not like to say hard things, but, seeing that Professor Warren was coming before a responsible Commission which had to go so deeply and seriously into so grave a subject, he should not have come here with an ill-prepared document, which certainly does not reflect very much credit upon a man holding such a high position. In this document, as your Honor is aware, there were sundry mistakes found, and all these mistakes—mistakes in simple arithmetic—had to be worked out to make a certain result. When the mistakes in addition and multiplication were pointed out, it was found that they made a considerable difference in Professor Warren's evidence, and, even as it stands now, the addition in some cases is not quite correct. I believe the addition in the case of the material not included in the Monier work is not quite accurate, although, of course, it may have been corrected since I last saw it in type. In any case Professor Warren had to admit that there was a difference between these two works, although he loaded up his estimate with wheelbarrows, sheds, waste material, profit, 15 per cent. commission, and goodness knows what—a difference of £2,397 between the values of these two works. The department itself has submitted an estimate, which appears in the Parliamentary return of the 22nd October, 1895, page 208. An estimate will there be found of the value of the work to be performed on the Johnstone's and White's Creeks aqueducts, and the value is set down at £12,501. Now, with all their efforts at building up the material to the very utmost, the department can only make the figures come to £9,400—that is, they have to admit that there is a difference of £3,000 between the two designs—their own design and that submitted by Carter, Gummow, & Co. Can there be any doubt whatever as to the difference between the value of the two works? It is evident that an artificially-made cement structure must be cheaper than an elaborate chiseled stonework, pointed, and faced with double-pressed bricks, containing also the best class of concrete and other correspondingly expensive material. Let me refer your Honor to Mr. Hickson's statement upon this very question:—

1574. And you looked in the future to being able to reduce the cost still lower by reducing the quantity of material used? Yes.

1575. Very much below the quantity which appears in scheme No. 3? Considerably less. This is not mere theory. I can show you what was actually done. You will see in the book I hand you an illustration of a bridge which has actually been built. The span is 121 ft. 4 in., and the thickness of the crown is only 6½ in., whereas our Monier arch at Johnstone's Creek has a 75-ft. span and is 12 in. thick.

1576. What weight is the bridge to which you are referring calculated to bear? The bridge I have shown you was tested on 14th November, 1890, in the presence of the President of the Zurich Association of Engineers, firstly, by submitting it to an evenly distributed load over one half of the arch, equal to 61 lb. to the square foot, and no measurable deflections could be recorded. It was secondly tested by a moving load of 5 tons being drawn across the bridge, when no vibrations were recorded by the gauges on the loaded or unloaded portions of the bridge, which results were considered satisfactory.

1577–8. This was, as a matter of fact, an experiment;—you thought it would involve no serious risk, and that there would be no extra cost, and that although there would be a small saving only at present, it would probably lead in the future to a great saving, because you contemplated reducing the quantities of the material used? Yes. But with regard to what you say as to the risk, there was absolutely no risk at all, because we put the whole responsibility upon the contractors. Most modern engineers believe in this system, and I wanted it introduced without any risk to the department. Although the saving in this particular structure is practically nothing—that is, only about £200—I am quite satisfied from information which I now have from what has actually been done and from calculations which have been run out, that we shall be able to adopt this style of bridge at a very considerable reduction in the cost of the works.

We are dealing here with an aqueduct the walls of which are only 4½ inches thick, the lower portion of the invert being only about 6 inches thick. The arches have a span of 82 feet. There could be

no reduction in the cost of either the piers or the aqueduct; the only possible reduction which could be made in the cost would be in the arches alone; and, taking the material in these seventeen arches at £3 16s., the value put on the material by the Government officers, the thickness being reduced from 12 inches to 6 inches, the saving would be only about £500. That would be the only amount which, upon a most liberal estimate, could be saved in a value of £9,400, which is nothing like 50 per cent. of saving—in fact, it is hardly worth speaking about. There is no explanation in the evidence of Mr. Hickson upon this point; and I contend that there can be no explanation as to why he did not tell the Minister the true cost, other than this—that he wished to give a friendly consideration to these contractors, in allowing them to receive a sum of £3,000 from the State, which they could not have got if the work had been put up to legitimate and proper competition, which, by the way, would not have taken more than a month to do. Let us examine other portions of Mr. Hickson's minute in reply to the request of the Minister. He says—

To comply with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm, estimates were made for the work on the Monier system as well as on the Department's designs. The result was that the estimate of both works was practically the same. Applying that comparison in this case it would mean that the departmental estimate for the work under consideration would be £22,000.

Supposing that it had taken a week to do it, is that not a fair hindrance? Can it be said that there was any inclination on the part of an officer who wrote such a minute as that to in any way assist to get this work carried out at the cheapest possible cost? As a matter of fact, Mr. McCredie and Mr. Thompson gave evidence that in three days they took out the quantities and made their estimates. Evidence has been forthcoming which shows that a period of nearly two months elapsed between the time of the signing of the contract and the time when the minute to which I have referred was written. There was therefore plenty of time, had Mr. Hickson wished to do so, in which to call for tenders. As to the question of any contractor's being at liberty to put in plans and a tender of his own upon those plans, what possible chance had other contractors who were asked to tender upon the departmental design of putting in an alternative design? Had they an officer in the department who was in a position to get them information, for instance, as to the length and capacity of the aqueducts, or to furnish them with other particulars which are in every sense office property? They had no officer and partner in the department like Mr. Baltzer to do that sort of thing for them; and, if such a thing is to be permitted, we might as well make the practice general—dispense with our officers, and keep only the head of the department, calling upon all contractors to send in their own schemes as well as their own prices for any work which is required. Look at the matter in any way you like, no reasonable explanation of the conduct of Mr. Hickson in writing that minute offers itself. I will now deal with the question of sureties. This was a very risky work, as far as the department knew. At all events, if it is not so considered now, it certainly was then, and the Board of Reference and the Minister thought it advisable that substantial sureties should be taken to safeguard the interests of the State. They made that recommendation in the performance of their duty. Mr. Hickson was required to get sureties, and he admits that Mr. Carter himself came to him and submitted his sureties verbally, whereupon they formed the subject of a conversation. Would you not think that Mr. Hickson, who, in the case of Ahearn's contract, was so very careful to ask if Mr. McArdle had property in this country, which might be held if anything went wrong, would have asked Mr. Carter at that interview whether Mr. Forrest and Mr. Gillan, whom he admits he knew to have been connected with the firm for years in various contracts, were not really contracting with the other members of the firm for Contract 77. In order to introduce this branch of the subject, I will first of all read the letter which Mr. Hickson wrote on 5th April, 1895:—

The accompanying letter of 4th April, 1895, from Messrs. Carter, Gummow, & Co., is a protest against the stringent supplementary specification prepared by Mr. Norrie, at my suggestion, with regard to the alteration in the design of Contract No. 77.

Messrs. Carter and Gummow ask that their own "personal sureties for the amount named," *i.e.*, £12,000 (an amount which they do not dispute), "should be taken for its completion and maintenance, and as a sufficient guarantee for the proper carrying out of the work."

They go on to say that they are "a firm of sound financial standing, well and favourably known to the department as contractors." This is quite true. They are a firm in which I have every confidence. They have done a great deal of work under me, and I can testify that their aim always has been to turn out the very best class of work possible. At the same time, misfortunes happen the very soundest firms of contractors, and the department must look a little way into the future.

Docs

Does not a paragraph of that nature really indicate that Mr. Hickson knew, as any intelligent man must have known, what was his duty to the State under such circumstances. No man without a thorough knowledge of his duty could have penned such a passage. He continues:—

Their own bond for £12,000 would be really of no use if they were unfortunate enough in the meantime to become bankrupt.

Plainer English words could not be used, showing that Mr. Hickson knew what was his duty as regards finding out exactly who these sureties were. He continues:—

I think, therefore, it is right that the sureties should be insisted upon. They give the names of two men—Mr. George Forrest and Mr. James Gillan. From inquiries made, I believe these men to be financially sound, and I think, if their names were accepted as sureties in the penal sum of £6,000 each, the department would be secured as far as it is reasonably possible to be.

Now the enormous sum required in the form of these sureties is in itself, as Mr. John Young pointed out to your Honor, enough to create suspicion in any intelligent mind as to the *bona-fides* of the sureties. Mr. Hickson says:—

From inquiries I have made, I believe these men to be financially sound.

What inquiries did he make? Might it not have been expected that he would make inquiries from Mr. Carter as to whether these men had an interest in their business—whether their property was not contained in the business of Carter, Gummow, & Co. Your Honor will see from the evidence what really did take place. Mr. Hickson, upon page 177, says:—

6541. How did Mr. Carter submit the bondsmen to you;—was it done in writing? I could not tell you that from memory.

6542. What I want to know is, how you came to get the bondsmen submitted to you? It was done either in writing or verbally. The papers will probably show it. I presume it was done in writing. It is nearly always done in writing.

A few days ago Mr. Hickson said that the only interview he had with Mr. Carter was the one in reference to this matter, in which he submitted the two bondsmen. He goes on to give this evidence:—

6545. Do you remember where your conversation took place with Mr. Kane? I know Mr. Kane pretty well, and I have had various conversations with him. The conversation I specially refer to took place, I think, on the Adelaide railway station.

6546. Do you know how it came about? We were talking about the firm generally, and, as an official of the bank, he spoke in the highest terms of the firm; in fact, the expression he used, as far as I can remember, was that he would trust any one of the firm to any extent, and that they were all well-to-do persons.

6547. He was then speaking of the firm in Adelaide, was he not? He was speaking of the firm generally. Mr. Gillan was in Adelaide at the time.

6548. Who were the members of the firm whom you knew to be there? Mr. Gillan and Mr. Gummow were the two who were in Adelaide then.

6549. Mr. Forrest, I understand you to say, was spoken of too? Yes. He was not in Adelaide.

6550. But he was a member of the firm then? Yes, upon some of the contracts.

There is therefore clear evidence of Mr. Hickson's knowledge of the connection of these men with the firm of Carter, Gummow, & Co., and it is hard under those circumstances to account for his minute which I have read. Further on he gives this evidence:—

6551. What gave rise to the conversation you had with Mr. Kane as to the firm;—what led to their names being mentioned? I think it arose in this way: He knew my son was then in Adelaide, and he said it was a very good firm for a young fellow to be with. In the course of our conversation he spoke about the members of the firm generally.

6552. You had known Mr. Kane before then? Yes, a long time.

6553. Did you meet him by accident on the railway station at Adelaide? I think he knew I was coming, and came down to meet me.

6554. That was on your arrival? Yes; I saw him three or four times in Adelaide, I think.

That is the only explanation Mr. Hickson has ever given as to his representation to the Minister—

From inquiries made I believe these men to be financially sound.

That was a long time—a very considerable time—before this contract ever came up—indeed, before it was ever thought of. Further on Mr. Hickson, in reply to Mr. Smith, gave this evidence:—

6555. *Mr. Smith.*] Has the opinion you have expressed in your minute as to these two men being financially sound been confirmed lately? Yes, abundantly confirmed.

6556. Could you specially refer to any way? First of all the bond was taken, and that confirmed my minute.

Do people in a responsible position like this, dealing with such responsible business, rely altogether upon a simple bond being signed? He continues—

But quite lately I had a communication from the manager of the bank here, and he said that, if there were any question at all in connection with the matter, if I would refer to him he would furnish particulars.

6557. You are referring to the manager of the Bank of New Zealand? Yes, or to the sub-manager; I forget which. He said he would give any information necessary as to the stability of the firm. I think Mr. Gillan's name was specially mentioned.

Here is the point. He says—

But quite lately I had a communication from the manager of the bank here, and he said that, if there were any questions at all in connection with the matter, if I would refer to him he would furnish particulars.

What was the evidence of the bank officials? Take the evidence of Mr. Wilson, the former manager of the Bank of New Zealand, which appears on page 198:—

7280. Had you lately any conversation with Mr. Hickson concerning Mr. Forrest or Mr. Gillan? I had a conversation with Mr. Hickson about the firm, I think, and the names of Mr. Forrest and Mr. Gillan may possibly have been mentioned.

7281. As members of the firm? Yes.

7282. On what date was that? I suppose it would be about six weeks or two months ago. The matter was mentioned incidentally in conversation.

7283. What did you then report? I reported that Mr. Gillan was a man of some means.

7284. What property had he in New South Wales? That I do not know; but I know that he has means.

7285. How do you arrive at that conclusion;—had Mr. Gillan a very extensive business with your bank? Not very extensive; but it showed that he was a member of a firm who were carrying on large contracts, and, moreover, that he could afford to have money idle.

7286. In what concerns was he interested? He was a member of the firm of Carter, Gummow, & Co.

7287. Was he a full-share partner? I do not know anything about that. I never had any business with him connected with the firm. Mr. Carter always transacted the business of the firm with me.

7288. Do you know the state of Mr. Gillan's account in the months of May or June, 1895? I could not say now what it was; but I know that he was a man of means.

Mr. Wilson points out clearly that if Mr. Hickson said that he had seen the manager of the bank the statement could not refer to him, because he had left the bank some twelve months before. He says that his knowledge of Mr. Gillan was that he was a member of the firm of Carter, Gummow, & Co., and that he came to a judgment of his means simply because he was interested in that particular firm, which was carrying on large contracts. What was Mr. Parfitt's evidence? Your Honor will find it on page 288. This, I presume, is the gentleman with whom Mr. Hickson must have had communication. He gave this evidence:—

9921. *Mr. Parkes.*] On July 6th of this year, Mr. Rigg, your assistant manager, was a witness before the Commission, and he said that he did not know your business or connection with certain questions, otherwise you would not have been asked to attend to-day;—two days before Mr. Rigg came here, was not Mr. Hickson in your office? I could not answer that question.

9922. Did he not see you? No; I never saw him in my life to my knowledge.

9923. Mr. Hickson has said before this Commission, in answer to questions, that he had a communication from the manager or sub-manager of your bank, in which he said that if any question arose in connection with the sureties of Mr. Forest and Mr. Gillan, if the matter were referred to him he would furnish all particulars;—did you send that? It is quite possible that such a communication may have been sent from the office. Personally, I had nothing to do with it.

9924. And you say you have never seen Mr. Hickson in your life? I have not to my knowledge.

9925. Mr. Hickson in his evidence said that the manager or sub-manager of your bank had said that he would give any information as to the stability of the firm, and he thought that Mr. Gillan's name was specially mentioned; Mr. Rigg, in his evidence, said that no inquiries had been made of him;—did you have any conversation with Mr. Rigg about this matter at all? No. The names you are using now are hardly familiar to me.

9926. You never had any conversation at all with your sub-manager as to the sureties of Mr. Forrest and Mr. Gillan which were given to the Works Department? No.

9927. On no occasion? No.

9928. You never heard from any of your officers whether Mr. Hickson was on July 4th at the bank? No.

Your Honor will see that Mr. Parfitt is not the gentleman who supplied Mr. Hickson with the information. Then take the evidence of Mr. Rigg, the sub-manager, which appears upon page 197.

7228. *Mr. Parkes.*] What is your present position? I am assistant manager of the Bank of New Zealand.

7229. What were you in the Bank of New Zealand in the year 1895? Assistant manager.

7230. In April and May of that year? Yes.

7231. Prior to the month of July in that year, were any inquiries made of you as to the position of Mr. Gillan and Mr. Forrest as sureties in connection with any Government contract? Not that I know of.

7232. No inquiries were made of you? None.

7233. Not through the Bank of New South Wales? Not to my recollection.

7234. Do you remember any being made by any officer of a Government department? As far as I can recollect, none were made by anyone.

Further on he says—

7246. Have you lately informed Mr. Hickson that he can rely upon these men as sureties? No I never informed him about them at all.

7247. Has he spoken to you about them lately? He asked me the other day if any inquiries had been made of me, and I said that there had not been.

7248. On what date was this? Two or three days ago.

7249. Did he then ask you about the position of these gentlemen? Not directly. He asked me if I had reported to the department concerning them, and I said I had not. I do not remember at this moment whether he asked me about them directly; but I think I told him I considered them men who were worth about £5,000 each.

He also gave this evidence—

7261. What in 1895 was the state of the general financial credit of Mr. Gillan? We looked upon him as a man worth £4,000 or £5,000, being in the position in which we supposed him to be as a member of the firm of Carter, Gummow, & Co.

The inference is that otherwise he would not be worth the amount. I come now to Mr. Darley's evidence with reference to this matter. Your Honor will find it upon page 178—

6583. This was a peculiar case—this security given for the permanence of the Monier work. I suppose that, under the circumstances, you would look into the question of sureties more particularly than in any other case? I was dealing with cases of sureties almost daily, and I cannot exactly remember the report. I remember that the substance of the report was that I thought the sureties might be accepted. I must have received a favourable answer as to the substantiality of the men before making the report.

6584. This is the first time you ever had to take sureties for the work in that way? I cannot call to mind a previous case of the kind, or rather a case exactly parallel. I do not think we had a parallel case. We take security for permanence of the work in the case of a reservoir. In that case the contractor has to be responsible when the water is turned on. When we have not been ready to turn the water on, we have taken securities from the contractors in order that they might be paid off, to secure any defective work being afterwards made good; but I do not remember a parallel case to that of Contract 77.

6585. Therefore, I suppose you would be very far from looking on these sureties as a mere matter of form? I certainly made inquiry in the usual way, and I must have received a favourable reply.

Mr. Darley said in his evidence that he directed a Mr. Conley to make inquiries. That gentleman came before the Commission and stated that he had not made any inquiries, and that no officer of his department, as far as he was aware, had made any. It is probable, therefore, that Mr. Darley may have meant to make these inquiries, and in consequence of the confusion in his office which prevailed at that particular time may have omitted to do so. Mr. Hickson, however, was the officer who had to do this work, because he had not then handed over his duties to Mr. Darley; or, had he done so, it was curious that he should have continued to transact the business of the branch until Carter & Co.'s contract was completed and fixed

fixed up, and that he should then have handed it over. There was no reason why he should have left this particular matter of the sureties to Mr. Darley. He seems to have gone out of his way to deal with this transaction, because the branch had been transferred to Mr. Darley before that date. I want to impress upon your Honor that there could not have been, judging from the evidence, any inquiry at all as to the financial state of these men—as to whether they had an interest in the firm's business or not; and this particular paragraph of Mr. Hickson's letter, taken in conjunction with his statement to the effect that their own bond for £12,000 would be really of no use, has very much the appearance, I submit, of deceiving the Minister. Let us examine for a moment the nature of these sureties. Who were they? Mr. Forrest and Mr. Gillan were known to have been connected with the firm of Carter, Gummow, & Co., in and out, for a great length of time upon different contracts. This being so, ought not the department to have made themselves absolutely satisfied upon the point, whether they were connected with the firm in this particular contract before they signed the bond? Although the greatest effort has been made before this Commission to cloak up the whole matter, and to prove that Mr. Forest and Mr. Gillan were not interested in the firm as regards this contract—that they were not partners—I think your Honor will see, from their own admission, which I shall read, that, although they did not, as persons often do in difficulties, fix their property upon their wives, or adopt other methods of putting themselves beyond financial responsibilities should they get into difficulties, the firm so fixed their contracts as to use part of the members as tenderers, and part of the members as sureties; dodging about in that way, instead of endeavouring to escape their proper financial liabilities by other means. Can that be called good and proper business with the department. Is it a kind of business which anyone, viewing it judicially, could condone? The only explanation which has been put before the Commission consists in elaborate evidence as to the reasons why Mr. Forest and Mr. Gillan were not members of the firm of Carter, Gummow, & Co. It is alleged, for instance, that they were not members because their names did not appear in the tender—because they had fixed up between certain members of the firm a deed with certain incongruous statements, but which, at the same time, binds them together as partners in contracts as conclusively as possible—in the particular contract in dispute as well as in other contracts; especially would that be found to be the case if there were any dispute in law as to a settlement between the various parties upon one of the contracts. I think your Honor will dismiss that subterfuge in regard to this particular contract. I will ask you to take Mr. Forrest's and Mr. Gillan's own admission, which ought at once to put an end to argument as to their true position. It is conclusive, from their own statements, that they were members of the firm and that the whole of the money they had was in the firm's business. Mr. Forrest gave this evidence:—

6917. What is the salary you receive from Messrs. Carter, Gummow, & Co.? £10 a week.  
 6918. What would it be for? For management and work.  
 6919. Do you receive it as a partner? Yes, as a partner; we all draw alike.  
 6920. Do you receive it whether you are managing or not? Yes; if there is any work to do we always draw the same salary.  
 6921. Suppose there is no work to do? We have to do with half salary then.  
 6922. I understand that there are a good many of the firm's contracts in which you have been concerned, and a good many in which you have not been concerned? I have an interest in them all, although my name does not appear in them all.  
 6923. You have actually an interest in them? Yes.  
 6924. Then you have been a partner in the firm all along? Yes; from the first.  
 6925. From how long ago would that be? Over eight years.  
 6926. In cases where your name has not appeared in the contracts, have you been still a partner? Yes; still a shareholder.  
 6927. How have you shared in the profits of contracts in connection with which your name has not appeared? Just the same as in the others.  
 6928. Just the same as in those in connection with which your name has appeared? Just the same.

Mr. Gillan also clearly admitted in his evidence that he had been a partner all through, and that he drew an equal salary with the other partners. I need not read his evidence on this point. His partnership in the firm and the fact of his drawing a salary are placed beyond the possibility of doubt when that evidence is perused. What is the use of endeavouring to prove that he did not join the firm, then, until this contract was completed? These two gentlemen themselves admitted that they drew money from the firm in virtue of their interest in it. Mr. Forrest says he drew money for a period of eight years, and that, whatever their profits may have been, he drew his proportionate share; that if there was any loss he had, like the rest of the members, to share it. The same conditions appear to have obtained as to Contract 77. At all events, they admit that they drew their share of the payments in respect of the contract That  
 Mr.

Mr. Hickson knew of their being members of the firm there is, in my mind, not the shadow of a doubt. I wish now to show your Honor what looseness and laxity in the discharge of duty has been shown by the junior officers of the Public Works Department. Mr. Norrie, for instance, had these sureties sent to him, and he drew up a bond which he placed before these contractors for signature. Mr. Forrest signed a declaration in these terms:—

STATUTORY DECLARATION.

I, George Forrest, of Marrickville, in the Colony of New South Wales, householder, do hereby solemnly declare and affirm that I am possessed of property to the value of £6,000 sterling and more, and that such property consists of—Freehold property, £5,700; cash in bank, £300 sterling. And I make this solemn declaration as to the matters aforesaid, according to the law in this behalf made and subject to the punishment by law provided for any wilfully false statement in any such declaration.

Taken and declared at Marrickville, this 1st day }  
of June, 1895, before me,—

GEO. FORREST.

ROBERT ANDERSON, J.P.

Mr. Gillan signed a similar declaration adding an affirmation to the effect that he had landed property in the colony. In addition to his statutory declaration which has been put before this Commission we have had Mr. Gillan's own evidence to the effect that he had no land in the Colony, and that the only real substantial item towards the £6,000 of value mentioned in his declaration was the £3,000 odd of interest which he had in the firm of Carter, Gummow, & Co. Mr. Forest came before this Commission, first of all, and made a statement to the effect that he was the owner of the Lodge property at North Sydney, which statement he corrected at a subsequent sitting of the Commission. It is very likely that his first statement was the result of pure inadvertence. It appeared from his subsequent examination, however, that he had only a share in the Lodge property. Mr. Carter's and Mr. Forrest's evidence is to the effect that, although he had a share in that property, the deeds are really in the name of Mr. Carter.

*Mr. Andrews* : The certificate of title is in the names of Messrs. Carter, Forrest, and Snodgrass.

*His Honor* : Yes ; that mistake was corrected afterwards by Mr. Carter himself. It was proved that Mr. Forrest had only a share in the property.

*Mr. Parkes* : We will assume that Mr. Forrest has a third interest in the property ; and, even if that be so, we had Mr. Greig, of the firm of Richardson and Wrench, before the Commission, and he clearly set forth the value of the properties held by members of this firm at the time these bonds were signed. It can be seen from the evidence that Mr. Forrest, independently of his interest in the firm of Carter, Gummow, & Co., was not worth the amount set forth in his bond. We can spare them, however, so far as that is concerned, because, after all, the question lies absolutely in the negligence of the office in taking this kind of surety, and in taking partners of the firm as substantial securities in the case of an accident happening. It might be that from very sudden changes from high to low temperatures, as has been suggested before this Commission, this particular work at White's and Johnstone's Creek may crack in such a way as to render it necessary that the whole of the structure should be taken down, and in that case, the piers being 82 feet apart, they would not be available for the departmental design for the work in the event of reconstruction being necessary. The entire structure would have to be re-built, and in that case how could the department obtain any remedy from Carter, Gummow, & Co., if, between the present time and the period of the possible reconstruction of the work, the firm were to become bankrupt. Business is business ; sentiment of any sort is not a thing which belongs to business. There is no such thing as sentimentality in business matters, especially in business dealings with the State, where there must necessarily be a hard and fast line for the regulation of the rights of institutions and individuals, and where proper business methods must, for the same reason, be adopted. We must not look at this question from the point of view of Messrs. Carter, Gummow, & Co. being particularly generous and thoughtful persons who would strain every nerve to do what was right as alleged by the Department. The question must be looked at from the point of view of any ordinary contract into which the State might enter. It is necessary that the State should secure itself beyond all possibility of loss. Having that in view, this description of bond ought not to have been drawn up in connection with this contract. There can be no answer, I submit, to that. There is not the slightest doubt but that Mr. Hickson knew—he must have known—of the position of these sureties, and why could he not have said in his minute to Mr. Young, "Messrs. Forest and Gillan have formerly carried out contracts with Carter, Gummow, & Co. They have appeared in connection with former contracts as members of the firm." He did not, however, do so. Had he taken that course, the Minister, being a reasonable man, would have said, "You must find out whether Mr. Forest and Mr. Gillan are concerned with the firm in this particular contract." But nothing of the sort happened, because Mr. Hickson sent in their names in the most definite language, as if wishing the Minister to believe that Mr. Forrest and Mr. Gillan were persons who had nothing whatever to do with the firm of Carter, Gummow, & Co.,  
but

but were absolutely independent persons. The Minister, of course, accepted Mr. Hickson's recommendation. Mr. Darley added his acceptance; but I suspect that Mr. Darley really looked upon Mr. Hickson as being the person who made inquiries, and that he trusted implicitly in him. He wrote the minute which is attached to the papers. Mr. Young naturally approved of the acceptance of the sureties, as, of course, any Minister would do with such a definite minute. In his evidence, however, he put the full responsibility upon the shoulders of his officers, and how those officers are to explain the affair away I cannot say, for it is impossible to say that this is the proper way in which to conduct Government business, there being such a plain and simple and well-recognised way of transacting that particular business—a way which, one would think, would appeal to every man with a grain of common sense. I come now to the evidence as to how this substituted plan came to be submitted to the department at all. I will refer your Honor first to the evidence of Mr. Young and Mr. Barling. The latter gentleman, being at that time the Under Secretary of the department, said, in reply to Question 7422, that he was assured as to the cost of the alternative design. He subsequently gave this evidence:—

7426. Supposing when the quantities were taken out and the price reduced by 28½ per cent. it showed a difference as between the two designs of £4,125, what would you have said? I should have said that it would be perfectly outrageous to accept the tender. If it were shown that the adoption of this Monier principle would mean a saving to the contractors of £4,128, I should say that it would be perfectly outrageous for anyone to recommend it. I do not believe for a moment that Mr. Hickson or Mr. Darley in their wildest dreams could have imagined such a thing.

That was Mr. Barling's opinion of the business of allowing the contractors to make this difference between the two plans submitted. Mr. Young also expressed the opinion that he would not have accepted Mr. Forrest and Mr. Gillan as sureties if he had had the slightest knowledge that they were connected in any way with the firm's contracts. At Question 7518 he says:—

I should not think there would be any objection to them if they were not partners as regards this particular contract.

That shows the manner in which the heads of the department would view this kind of transaction, and that is the way in which every sensible man would view it. I come to the connection of Mr. Baltzer with this plan. No doubt every invention which goes to cheapen the construction of public works is beneficial. No doubt inventions are sometimes desirable things to introduce. But there is a proper way and an improper way of introducing them, and an office such as the Public Works Department ought to be free from any suspicion whatever in such a matter. If a patent is known of, the State should not be delivered up, with its hands tied, to the holder of that patent. It was known that Mr. Baltzer had this patent, and that he was an officer of the department. A description of the patent has been given very clearly by Mr. Selve, and by an officer of the Patents Office; and I think your Honor will be convinced that it lies only in a little wire connection at the intersection of the bars and rods, and that if a connection of any other description were used there can be no doubt but that these contractors could not maintain the patent. The use of iron and concrete in various forms was illustrated by Mr. John Young and by other witnesses. Iron has been used in concrete construction in this country and in other countries for many years, and the State must be allowed to have the free use of common materials such as these without being tied hand and foot to pay a certain patent-holder upon an arrangement worked out in that patent-holder's interest, the patent-holder being, moreover, an officer of the department who is supposed to be looking entirely after the State's interests.

*His Honor*: I do not profess to have any special knowledge of the law of patents. If you can refer me to any good work on the subject, Mr. Parkes, I shall be much obliged to you. I cannot, however, at the present time, exercising my common sense, accept Mr. Selve's view as to the tying as being at all a material part. It strikes me as being a purely accidental part, the real principle of the system being involved in the placing of the bars in relation to one another. The questions of size and of approximation seem to me to be important elements, but the tying of the bars appear to be almost an immaterial element. Mr. Selve may be perfectly right, but, until I am satisfied that he is, by reference to some good work on patents, I cannot accept his opinion.

*Mr. Parkes*: Of course I am not able to dispute a question of law with your Honor.

*His Honor*: I am looking at the question now from the point of view of common sense, and not as a matter of law.

*Mr. Parkes*: Looking at the matter from the point of view of common sense, I say that the country will have to pay 15 per cent. over the entire cost of construction of Contract 112.

*His Honor*: That is another matter concerning which I will not express an opinion. There is, I think, a great departure there from the principle of the Monier system. It is a matter of degree. That, however,

however, is another question. What I wished to convey to your mind was that I could not accept, without some authority beyond Mr. Selfe's own opinion, that idea of his that the most important element in the system was in the mode of tying the bars.

*Mr. Parkes* : I presume that some day the question will be tested in a court of law, and it will then, in all probability, be settled. I could not produce authorities to your Honor in support of Mr. Selfe's view, but, dropping that aspect of the question altogether, I would take it upon another ground. I will admit for the time being that the patent is one which can be maintained. I still contend, however, that the State ought to have the right of use above private individuals, and upon the most economical terms, because it furnishes all the machinery and protection for patent-holders. Now, there was an officer in the department—an officer, according to the evidence, of very high standing—I mean Mr. Baltzer—who took out this particular patent from information which he received from abroad. He intended, without the slightest doubt—and that can be seen from his subsequent action—to so utilise it as to obtain the greatest possible benefit from it at the hands of the State, his employers. In order to do that he looked round to find some men whom he could utilise as outside agents or partners in the working of the thing, it being impossible for him to do everything himself. With this object in view, he allied himself with Messrs. Carter, Gummow, & Co., who then began to approach the office. Mr. Carter himself has told us that at that period a patent, which was called the "Patent Grip," was being foisted upon the State at a considerable figure, and he thought that he might as well endeavour to get the Monier patent accepted also, since the State paid in such a liberal manner for these things. He set to work accordingly, and Mr. Baltzer produced a book containing information of every description upon the patent, which was left with Mr. Hickson. Mr. Hickson became impressed with the importance of the thing, and the matter generally was worked up to a point of great interest. Mr. Hickson seems to have allowed himself to be a very malleable material in the hands of these gentlemen. He not only took this book and perused it, but agreed to pay 15 per cent. for the use of the patent, in a very dubious fashion, as I consider. Quite apart from that, the department made tests and took all manner of interest in promoting the patent. They also went to elaborate expense in constructing and pulling down a culvert in order to promote the interests of this particular officer, Mr. Baltzer, and of these particular contractors. Now the proper course to have taken in this matter, I submit, was to have said to these patent-holders, and, first of all, to Mr. Baltzer: "As you are an officer of the department you will not receive any interest in this matter until it has been approved of by the Government, and then you must not remain here working in the interests of the patent. You must take your interest in it as a proper partner of these contractors." The department should have said to the contractors: "We will test this patent for you if you will take the responsibility of the test, and if you can prove at your own expense, and not at the expense of the State, that it is a good thing, we will accept the patent and pay you so much royalty. You will derive a future benefit from its having been proved to be a good thing. If it does not turn out to be a success we will not pay you anything for the test." The Government is not supposed to supply contractors or others with means of perfecting and proving by test various patents, even in the interest of future saving to the department. The cost should be borne by those who are seeking to have the monopoly granted to them by the State. This Monier patent was introduced by Mr. Baltzer, and was accepted by the office in the manner I have described. Mr. Baltzer has given evidence before the Commission that he drew the plan—and a carefully drawn plan it was—not with the intention of submitting it, but simply from a love of making designs. It is a strange thing, however, that in its details—in the calculations in everything—he made it exactly fit in with the piece of work in connection with which it was subsequently used. Is it contended for a moment that, seeing that the office went so elaborately into the design for this contract, calculating the carrying capacity, and making all the other necessary calculations, Mr. Baltzer did not calculate the small comparative cost of this particular design side by side with the office design? The evidence behind the scenes proves conclusively that there cannot be a doubt about it—that Mr. Baltzer, Mr. Carter, and Mr. Gummow, put their heads together and saw that there was a really good sum of money to be made by getting this patent introduced in this particular position. Of course there is the question whether Mr. Hickson knew that this officer was preparing this plan for this special purpose or not. Mr. Hickson has said in his evidence that he did not know anything about this plan until it appeared in the tender-box. He has said that lately, but at an earlier stage of this inquiry he gave this evidence, in reply to my questions:—

1579. *Mr. Parkes*.] Why, when the department was calling for tenders for Contract No. 77, did you not call for tenders upon two schemes—one upon the office plan and the other on the Monier patent? I considered the question, and I came to the conclusion that it would be better not to do so, because calling for tenders upon the Monier principle would be leaving it in the hands of only one firm of contractors to tender.

That

That seems to me to point clearly to the fact—because Mr. Hickson admits that he went into the question of submitting these two designs—that he had a knowledge that this plan was being made for Carter, Gummow, & Co. But let us take also the evidence of Mr. Littlejohn and of Mr. Hungerford. Mr. Littlejohn said :—

6876. *His Honor.*] As to the preparation of the Monier plan which was put in or sent in after the tenders for No. 77 were sent in—the plan which explains the lump-sum tender of £15,500—what did you hear about that in the office? I understand that you refer to the plans which were sent in with Carter, Gummow, & Co.'s tender. Mr. Baltzer told me that he was going to prepare some plans for them to send in with their tender. He used to take home his instruments every day for that purpose, and bring them back again in the morning. On one occasion, I remember that he forgot his instruments. Some time after that, I remember his bringing the plans in, and as he unrolled them I remember his saying, "I have these plans to-day, so you can look at them." He then showed me the plans.

6877. How many sheets were there? Three sheets. When I was shown the Monier plan this morning I did not altogether remember it, because I recollected seeing three sheets. I do not know whether they were all to be submitted, probably not, because the details would not be required. I know a man who was living with him at the time, and who saw him at night working upon these plans.

6878. Who is that? Mr. Hungerford.

6879. Is he the gentleman who is now in the office? Yes; he is in one of the clerical branches.

6880. Is that Mr. E. Hungerford? Yes. He was living in the same house, and he used to see Mr. Baltzer working upon these plans at night.

Mr. Hungerford's evidence was as follows :—

7533. You knew Mr. Baltzer well? Very well.

7534. Are you intimately acquainted with him? Yes, very intimately.

7535. You lodged in the same house? Yes, for some years.

7536. Before he left the department? Yes.

7537. I want to know what you knew from Mr. Baltzer as to his preparation of plans, or of a plan for use by Messrs. Carter, Gummow, & Co. in connection with their lump-sum tender for Contract 77? Mr. Baltzer was engaged for some time on those plans. I used to see him at work upon them constantly.

7538. Where was he engaged upon them? At home.

7539. Partly at home and partly in the office, or entirely at home? Entirely at home, so far as I know. I never saw him in the office, so that I cannot speak of what he did there; but we always came over from North Shore in the same boat, and I should certainly have seen him carrying plans. I presume he would not have had one plan at home and another in the office.

Then, later on, he says :—

7542. Do you know from Mr. Baltzer how he came to prepare this Monier plan? Yes; in connection with the patenting of the Monier system.

7543. Were the plans to be used with the lump-sum tender for Contract 77? He told me he was preparing them for that contract.

7544. At whose request? He never told me that.

7545. He simply said that he was preparing plans? Yes.

7546. You knew from him that these plans were going to be used in some way in relation to Contract 77? Certainly.

7547. Did you know what was going to be done in reference to them? He told me that an alternative tender was going to be put in.

7548. Did he tell you that as a secret or openly? Quite openly.

7549. Did he ask you to keep it to yourself, or what did he say? He did not ask me to do so.

7550. Was the matter generally known to any other person besides yourself? I could not say.

7551. He made no secret of it? Not to me.

Mr. Littlejohn also told the Commission that the matter was not made a secret of, and that it was known in the office; and can it be possible that, known as it was in the office, Mr. Hickson would not himself have known that such a plan was to be submitted. The suspicious circumstance upon the top of that, however, is that Mr. Hickson should not have gone into the estimate of the cost—that he should not have gone into the question whether the sureties were proper sureties or not. On the part of a man of such keen intelligence as Mr. Hickson such an omission of duty is not natural. I submit that the evidence is of such a nature as to show that there was something beyond neglect upon the part of

Mr. Hickson, and that he must have had the fullest intention, if only from the point of view of kindness to these contractors, of doing the best he could for them in this matter. If he had not had such an intention they would certainly not have had the contract under such improper conditions. I submit that the State got the worst of the contract to the extent of something like £3,200, or, at all events, a sum ranging between that amount and £4,000. Now, I hesitate about touching upon the financial stability of Messrs. Carter, Gummow, & Co., but in all contracting businesses there are ups and downs, so that you never know where a man is, unless he is a man who has a substantial backing as security in the case of accident. Now, the whole of the evidence before the Commission upon this point goes to show that Carter, Gummow, & Co. held, outside of their business, £9,000 worth of property, and that they had upon that a mortgage of more than one-half its value. Inside of their business one can see, from a glance at the bank books, that they were working on an overdraft. Mr. Parfitt, the bank manager, has said that the limit of the account of the firm was £3,000, and that if the amount went over that they must make an explanation. All this goes to show that you cannot always tell the position of contractors at a given moment. At the present moment Messrs. Carter, Gummow, & Co. may be low down. Perhaps with two or three successful contracts they may in the course of two or three years be worth £20,000 or £30,000. There is always a great hazard in contractors' businesses, and they certainly ought not to be taken as their own sureties. It must be conclusive to the mind of any business-man, that, in taking sureties in a case like this, men must be taken who have some landed property in the country upon which the State, without any bother, can put its hand, if there be any necessity to do so. Sureties are taken not so much with the object of obtaining recompense as to make contractors think very deeply before they will go insolvent, and throw the risk of loss upon their sureties. If substantial security is given by sureties they will at all times keep an eye on the contractors to see that they are not doing wrong, and in that way they may be relied upon to safeguard the interests of the country. If, on the other hand, the sureties are useless sureties, you might as well at once deliver up the whole business of competition and let the country sail along as best it can without it. Leaving Contract 77 for the time being, I will come to Contract 79. The history of Contract 79 is this: When tenders were called there was, according to Mr. Hickson's own statement, a sum of money of £170,000 upon the Estimates for the carrying out of sewerage at North Sydney. Of this amount a certain portion had been expended. There was available only a certain amount of money. A perusal of the Loan Act confirms that fact. If your Honor would like to see the Act I can put it in as evidence.

*His Honor*: A Loan Act is one of those public things which a Commissioner, like any other Court, can take cognisance of. It is a matter of such public knowledge that it is hardly necessary to make evidence of it.

*Mr. Parkes*: This sum of money being available, there was a little delay in the acceptance of the tender—a little temporary delay on the part of the Minister, Mr. Bruce Smith, until he saw how matters would turn out in the year 1892. That can be shown clearly from his own minute, holding up this contract after tenders came in for a short space of time. But there was money available, and there was no reason why this contract should not have been proceeded with in a reasonable time. Yet we have the evidence of Mr. Hudson, who, in conjunction with Mr. Bond, was the successful contractor, that the officers of the department were telling him that the work would not go on for two years. He was constantly applying to know when the work would be proceeded with. The Tender Board had the tenders for Contract 79 placed before them, and they decided to accept the lowest—that of Messrs. Bond and Hudson. But no notification was sent to the firm to that effect, nor was it made to Mr. Hudson when he repeatedly called to ask whether it was probable that the contract would shortly be proceeded with. He was never told that he might go on with his tender if he waited. There is no evidence to show that any inducement was offered to Messrs. Bond and Hudson to get them to abide by their tender, and there is full evidence that the withdrawal of their tender was only too readily accepted, without any remonstrance at all, or without any approach being made to them to see whether they would not continue, seeing that the contract was likely to be proceeded with in a few weeks time. Tenders having been called, it was found, as I said, that Bond and Hudson were the lowest tenderers. They were found to be within a shade of £30,000 below the tender of Carter & Co. Carter & Co., Gummow and Gillan, and Maddison and Ewing, were evidently at that time joined together. If they did not absolutely join together in a deed of partnership, they were joined together for the purposes of this contract. That has been proved by the books and evidence which has been adduced before this Commission, because the moneys of Carter & Co., upon this contract, were paid into the firm of Carter, Gummow, & Co., and the distribution of what profits there might be to distribute, such as to those to Mr. Maddison and to Mr. Ewing, was from the account of Carter, Gummow, & Co., although they might not actually have signed the deed until six months after the job was started. There can be no doubt that they were joint beneficiaries in the contract. They joined together in the first place to prevent Messrs. Bond and Hudson from obtaining the contract, and they wrote the joint letter of protest  
which

which appears upon page 270 of the Parliamentary return, the letter being dated the 10th June, 1891. They requested that Mr. Hickson would cancel the contract of Messrs. Bond and Hudson, because they had been the lowest tenderers upon another contract and had not taken up the job. If Mr. Hickson had done that it would have been a very peculiar thing. No one could have acceded to a request such as that; and Mr. Hickson did what it was very proper that he should do—that is, he declined to entertain the request, and recommended that Bond and Hudson's tender should be accepted. Why he did not notify Messrs. Bond and Hudson that in the near future they might expect to get the contract, I cannot tell. At all events, the delay seems to be very suspicious and in every way curious, particularly having regard to the receipt of the letter from Bond and Hudson of the 28th September, 1891, in which they say:—

*In re Contract No. 79, Sydney Sewerage Works.*

Dear Sir,

88, Sussex-street, Sydney, 28 September, 1891.

On 10th June of this year we had the pleasure of submitting a tender for the above works, and, we believe, were successful in being the lowest tenderers.

We have been anticipating the acceptance of our tender for some months, but, not hearing from your department, we have, in the meantime, entered upon other obligations, and must consequently respectfully ask you to permit us to withdraw our tender, and to return us the deposit attached thereto now lying in your hands, viz., £369.

We are, &c.,

C. B. BOND

(Bond and Hudson).

Mr. Hudson, in the course of his evidence, said—

8592. You know where the Tender Board Room is? Yes.

8593. Did you ever speak to the clerk in the Board-room? You mean Mr. Mitchell—yes. I went often down to him to get back the amount which we had put in with our tender.

8594. Did you speak to him about the contract? I could not say now.

8595. Therefore, the only intimation you had as to the acceptance or rejection of your tender was through the newspapers? Yes; I saw from the newspapers that Carter & Co. had the job.

8596. In the meantime you were under the impression that you would get the work, although it might be hung up for two years? Yes; they told me two years might elapse before it was proceeded with.

It will be seen that Mr. Hudson, up till the day he saw that Carter & Co.'s tender was accepted, was expecting to get this contract, and he gave evidence to the effect that Mr. Bond had put the sum of £2,000 into the bank as bond money for the proper carrying out of the work, showing that he was willing to carry it out. Not only that, but Mr. Hudson stated in his evidence that he anticipated making out of the contract something like £5,000. Mr. Kenwood also gave evidence upon this point:—

9024. When Mr. Carter saw you with reference to this tender of Bond and Hudson's, did he not point out to you that you were rather low in your tendering? No; the first I heard of that was through Mr. Hudson. He said that he had seen Mr. Snodgrass, and that Mr. Snodgrass had asked him what we were going to do.

9025. But you had heard that your tender was low, taking the schedule basis? No; I thought we had a fair price.

Mr. Kenwood is himself an engineer and contractor. He knows very well what prices are; he was not likely to make a mistake in coming to the conclusion that Bond and Hudson had a good price. Mr. Hudson, as I have said, thought the firm would make something like £5,000 out of the contract. Now, while this delay was taking place, Mr. Carter approached Mr. Bond, through Mr. Kenwood, and persuaded that gentleman to accept the sum of £1,500, and Mr. Kenwood, who was a son-in-law of Mr. Bond's, a sum of £200; the object being that Carter, Gummow, & Co. should, for that consideration, obtain a sum of £3,000 from the State. That, no doubt, is a fair way in which to state the position, because, looking at the way in which tenders were going, and accepting the evidence of Mr. Hudson and Mr. Kenwood, Bond and Hudson had put in a good paying tender, and Mr. Carter, in giving the £1,700 to these gentlemen to withdraw their tender, stepped in and deprived the Government of the opportunity to obtain the services of the firm for a sum of £3,000 below the price which he afterwards induced the Government to give his own firm upon their contract. Let me here draw attention to the difference between these two tenders, taking the items which were really paid for in the vouchers. In the first place I will take the item of excavation in hard rock—the item adopted for the tunnel-work done by Carter, Gummow, & Co. Messrs. Carter & Co. received 60s. upon that item, and Bond and Hudson asked for 65s. On that item only, therefore, there would have been an increase, but when we come to shaft excavation and excavation in road-surfaces it will be seen how cheap were the prices of Messrs. Bond and Hudson. In Carter & Co.'s tender the excavations in hard rock where charges of powder 4 inches in length are used—I mean item No. 7—were charged at 78s., whereas Bond and Hudson's figure would have been 35s.; for excavation in road-surfaces, Bond and Hudson put in

a price of 30s.; whereas the price put in by Carter, Gummow, & Co. was 78s. The 75 yards of road excavation given in the probable quantities was also increased, according to final voucher, to 544 cubic yards. Some of the items which Bond and Hudson sent in were highly priced, and if those prices had been adopted and the contract had been carried out upon them it would have panned out above the corresponding prices which Carter & Co. sent in. The excessive items which Bond and Hudson sent in were those which they thought would not be adopted. If they worked upon the same basis as did Carter, Gummow, & Co.—and the Department say that all contractors do work in a similar way—which I deny—they would have rigged their schedule so as to obtain an enormous sum out of the public funds. Messrs. Bond and Hudson put in the item of guttering and gadding at 80s. Of course manual labour is much more costly than is blasting out with powder, and they would not have risked putting in less than 80s., seeing that they did not know definitely that guttering and gadding would not be done. Supposing that Bond and Hudson had chosen to put in 60s. for that item, and correspondingly low prices for other items which they had known would not be carried out, their tender would then have been very low indeed. Take the other contractors. If they had known that guttering and gadding would not have been done upon this contract, they would not have put in the very high sums they did opposite that item. Some of them put in £7 for guttering and gadding work, and none of them came down to the price of Carter, Gummow, & Co., which was 63s. Your Honor will see what this kind of thing leads to—that is, allowing the contractor to obtain benefits, after his tender is accepted, by the manipulation of the schedule. Under such circumstances, a contract may start at £40,000, and may pan out at the close at £40,000, although there have been certain items eliminated and a certain number of other items increased. Notwithstanding that the initial and the closing sum may be both £40,000, the contractor will have received considerable benefit upon the extra items put in and upon the items eliminated. There can be no doubt that if Bond and Hudson's tender had been accepted it would have been greatly to the advantage of the State, and that Carter, Gummow, & Co., in interfering with the right of the State to receive the benefit of the services of those tenderers, put the Government to a loss of something like £6,000, made up by the difference between Carter, Gummow, & Co.'s tender and Bond and Hudson's tender—the difference between the items which would have been finally adopted, as shown by the final certificate. What is to be thought of action of that kind I do not know, if it is not to be strongly condemned. If in private practice or employment there had been such laxity, to put it mildly, in the carrying on of business, interfering with the interests of the constituents of a firm, and causing such a loss as that which I have indicated in this instance—causing an interference, for instance, with the right of the firm to obtain competitive valuations—I do not know what would have taken place. I am not acquainted with the law on the subject, and I do not know how this matter stands legally. I would not submit to your Honor that this interference with the right of the State to obtain the services of Bond and Hudson is actually punishable by law; all I want to make clear is that it was a highly improper thing to occur in connection with a Government contract—that it is a thing which ought not to be permitted. I intend presently to bring further proof to show that there is grave reason for doubting whether these circumstances were not thoroughly known to the Engineer-in-Chief; I intend to show that the very acts of the Engineer-in-Chief assisted this kind of business. It is naturally very difficult to obtain strong proof of the firm's having been assisted by him; I should be just as pleased if no strong proof could be brought, but at the same time I should like to see an end put to any transactions like this—to prevent the recurrence of any such thing. It could be easily stopped by having some definite method of tendering. For instance, if a contractor who, in open competition, is £3,000 over the lowest tenderer, is not allowed to have the next place if the lowest tenderer withdraws, that would at once put an end to all collusion in connection with these matters. I would like to draw attention to Mr. Barling's opinion of this transaction. He gave this evidence:—

13908. *Mr. Parkes.*] Would it not have been a fair thing to re-tender this contract when there was a difference of nearly £3,000 between Bond and Hudson and the next tenderer? I submitted it for fresh tenders to be called, and approved of that's being done; and it was only when these other considerations, with which I had nothing to do, came in that another course was taken.

That referred to Mr. Hickson's interference with the course of tendering on the very last day before tenders were to be re-advertised, and when he induced Mr. Lyne to give this contract to Messrs. Carter & Co. Mr. Barling gave this further evidence—

13898. But I presume you would not have agreed to Messrs. Carter & Co.'s having this contract without tender had you known that Bond and Hudson were willing to take it up? Certainly not. Most certainly not—it would have been a wrong thing to do.

13899. If you had known at that time that Bond and Hudson had been bought off by Messrs. Carter, Gummow, & Co., would you have accepted Messrs. Carter, Gummow, & Co.'s tender? I should say most certainly not.

I come now to the manner in which Carter & Co., after this transaction, managed to get this contract given to them instead of having it re-tendered. I will point out this suspicious circumstance about it. Would it be natural for Messrs. Gummow, Gillan, & Co., if they were not associated in this contract, seeing how close their tender was to that of Carter & Co., to join with them in making the first protest. What would they have gained by protesting against Messrs. Bond and Hudson's receiving the contract if it were not to be re-tendered? How did Carter & Co. go about the obtaining of this contract? They approached Mr. Hickson seven days before he wrote the minute which I will read to Your Honor, and which appears on page 271 of the Parliamentary return. After Messrs. Bond and Hudson had, on the 28th September, withdrawn their tender—as Mr. Hudson has explained, not with his knowledge—Mr. Barling instructed Mr. Hickson to have fresh tenders called. Mr. Hickson noted that in a minute, and then Carter & Co., about seven days before Mr. Hickson took the second action, came to him with a certain claim, a claim for the stoppage of a former contract. Mr. Hickson then wrote this minute on the very day the tenders were to be received,—

Since writing my minute of 6/10/91, complications have arisen with Carter & Co., *re* their contract No. 72 having been stopped. They have made large claims on this account, some of which, no doubt, could not be entertained, but on some items they have made a good case. They are prepared, if they obtained this work, to waive all claims on No. 72. As their tender is a reasonable one, and some £3,600 below the estimate, I think it might fairly be accepted. If this course were adopted, work would be given at once to a large number of men.—R.H., 23/2/92. Under Secretary. Important. I would draw your Honor's attention to the last passage which occurs in that minute. We find the same thing occurring in connection with 79A, where the Minister let the contract without competition, because, as it seemed, it would give employment to a large number of men. There are not a great number of men employed upon these sewerage contracts, and it is simply absurd to make the number of men who would be employed an excuse for giving the contract. The claim submitted by Messrs. Carter & Co. appears in Mr. Christie's evidence upon page 256, and is as follows:—

Carter & Co.'s claim in *re* Contract No. 72.—Losses by Withdrawal of Contract Work.

|  |                   | Rate. | £     | s. | d. |   |
|--|-------------------|-------|-------|----|----|---|
| Rent of Knight's paddock .....                           | 40 weeks ...      | 5/-   | 10    | 0  | 0  | Required for storage purposes, Macdonald-street.                          |
| Sandstone for concrete broken and stacked.....           | 1,000 c. yds. ... | 8/-   | 400   | 0  | 0  | Material purchased before withdrawal of work.                             |
| Portland cement.....                                     | 1,300 casks ...   | 14/9  | 958   | 15 | 0  | do do   |
| Do loss on sale .....                                    | 2,000 „ ...       | 2/6   | 250   | 0  | 0  | do do   |

| Interest on expenditure, £3,211 5s. ...                  | 3 months... ..    | 8 %   | 64    | 4  | 6  | do do   |
| Valuation of plant on ground for completion of contract. | .....             | ..... | 500   | 0  | 0  | Cost of cement sold is included in £3,211 5s.                             |
| Loss of profit on work withdrawn ...                     | £7,000 .....      | 25 %  | 1,750 | 0  | 0  | The greatest profit would have accrued from this portion of the contract. |
|  |                   |       | 4,050 | 9  | 6  |   |

It has been very clearly proved in evidence, and also from the papers which have been placed before the Commission, that, after the notice by Mr. Hickson that the works would not be continued beyond a certain point—I refer to the notice of October, 1891—work upon this contract was still going on and was being paid for, according to vouchers which have been placed before your Honor. The Portland cement referred to in the claim was being used extensively in the carrying out of the work, and, as a matter of fact, there was neither cessation nor was there any hindrance in the onward conduct of the contract. Although the notice to which I have referred was given in October, the works were not stopped, and in April when the new Loan Bill of that year was passed, containing the required sum of money—it being known by the Department and the contractors that it would be so passed—the work was at once continued. What is there, in that claim, which any reasonable man knowing the circumstances as Mr. Hickson knew them, could consider fairly chargeable against the department. Let me take the items “Sandstone for concrete broken and stacked,”—that was used. The cement was also used; the manhole covers were used. The interest on the expenditure was not as represented. The valuation of plant for the completion of the contract ought not to have been in the claim because the plant was not only used there, but was taken to other contracts. As to the loss of profit on work withdrawn, there was no work withdrawn; the contract was continued. There was never any intention, I submit, to withdraw the work, as both Mr. Hickson and the contractors well knew. I cannot see any item in that claim in regard to which any man wishing to conserve the interests of the public can allow that the slightest legal or equitable right exists. At all events, that was the claim made. Mr. Christie in his evidence, upon page 256, in connection with this matter, says:—

(l) Messrs. Carter & Co.'s claim is dated 15 February, 1892, and was marked by Mr. Hickson to Mr. Bagge for report on 18th February, 1892. Mr. Bagge sent it to Mr. Davis for report on 22nd February, 1892, Mr. Davis returned the papers on 26th February, 1892, with the following minute:—

“This matter has now been settled. I understand the contractors have signed the office measurements, accepting them.” It

It would thus appear that on 22nd February, 1892 (when Mr. Hickson advised the Minister that he thought Messrs. Carter & Co. could make good a claim for something like £2,000 as compensation on Contract 72), the documents were not with Mr. Hickson, and the claim had not been looked into or reported on, nor has it at any subsequent date so been dealt with.

- (m) It has been stated in evidence before the Commission that Mr. Bond, without Mr. Hudson's knowledge, withdrew the tender of Bond and Hudson; that Mr. Bond received £750 for so doing, and that Mr. Kenwood (Mr. Bond's son-in-law) was paid £200 for negotiating the matter.

There is no doubt that Mr. Christie, looking through the dates and other particulars and comparing one fact with another, has there pointed out to your Honor conclusive evidence that Mr. Hickson had not perused this document setting forth the claim of the contractors, or that he had even waited for it to be reported upon, before he interviewed the Minister. It was upon the very last day for re-tendering upon which Mr. Hickson approached the Minister, and he then hurriedly wrote minutes granting this concession of another contract to the contractors, Messrs. Carter, Gummow, & Co., who were notified accordingly. Of course, as your Honor will see, within a very short period—almost on the same day, I think—a congratulatory letter which appears in the Parliamentary papers was written from the Mayor of North Sydney referring to the letting of this contract. The date of accepting this contract, not of signing it, must have been conveyed to the Mayor, Mr. Punch, very quickly, seeing that on the 23rd this undertaking was accepted, and that on the 24th he wrote the following:—

Dear Mr. Lyne,

24 February, 1892.

Permit me to thank you for the prompt manner you have settled the North Sydney sewerage contract. I am sure the people in the district will join with me in praise of you for the consideration you have given them on all occasions when your assistance has been asked for the carrying out of public works. Long may you continue in your present place, for I feel sure the country will progress with such men as you at the head of affairs.

Again thanking you, I am, dear Mr. Lyne,—

Yours, &c.,  
F. PUNCH.

It was very close upon that date that Mr. Punch received the news. All these things seem to have been done in a wonderful hurry, and that of itself gives rise to suspicion.

*Mr. Smith*: Might I point out that tenders were not called for until the 9th March.

*His Honor*: Tenders were called for a future time. It is the closing of the tendering I understand to which Mr. Parkes alludes.

*Mr. Parkes*: Mr. Hickson, on the 23rd February, wrote his minute, and Mr. Punch wrote his letter on the following day.

*Mr. Smith*: Tenders had been called for that date, but the notice was afterwards withdrawn.

*Mr. Parkes*: Although Mr. Barling said that tenders were to be called for they were not called for. The matter was hung up until the date when Mr. Hickson interfered by seeing the Minister and putting this claim before him.

*His Honor*: The notice appears to have been sent to the *Gazette*, and to have been withdrawn before the advertisement appeared.

*Mr. Parkes*: Allow me to direct your Honor's attention to Mr. Barling's evidence upon this point. He said that, knowing that Messrs. Bond and Hudson had withdrawn their tender, he gave instructions that fresh tenders should be called, but that fresh tenders were not called, and the whole thing was hung up until Mr. Lyne came into office, the matter being only submitted to and approved by him on the 22nd February, the matter having been delayed from the time Mr. Barling instructed that fresh tenders should be called—that is, after the 28th September, 1891, until the 22nd February, 1892. No action was taken in this interval, and then Mr. Lyne suddenly approved of the calling for tenders. No sooner had he done so than, on 23rd February, Mr. Hickson interfered and stopped it. At this stage I would ask your Honor to direct the production to the Commission of the journal Contract 72. It is a most important journal, and it is absolutely essential that we should have it.

*His Honor*: Mr. Hungerford, I understood, has instituted an unsuccessful search for that and other papers, but I will ask Mr. Davis to instruct Mr. Hungerford to make a particular search for this journal. It is as important in one sense as is the original plan of the same contract.

*Mr. Parkes*: The claim which it has been stated in evidence was put in by and made up by Mr. B. C. Simpson is undoubtedly in Mr. Carter's own handwriting.

*His Honor*: What is the date?

*Mr. Parkes*: The date is the 15th February.

*His Honor*: Is it admitted to be in Mr. Carter's handwriting?

*Mr. Carter*: Yes, your Honor.

*Mr.*

*Mr. Davis* : I think your Honor will find that the subject matter of Mr. Carter's letter was before the department long before that date.

*His Honor* : I think it must be so. It appears from the terms of the paper itself that there must have been something before that date. I suppose these are the whole of the papers which the department have been able to discover dealing with the question.

*Mr. Davis* : I think Mr. B. C. Simpson's letters have been put in in evidence. They bear directly upon this very question. As a matter of fact Mr. Carter's letter does not do so.

*Mr. Christie* : It is the first record of any specific claim.

*His Honor* : That is, of any claim put in in a tabulated form.

*Mr. Christie* : Yes.

*Mr. Davis* : I think Mr. Simpson mentions the amount in one of his letters, but I am not sure about it.

*His Honor* : There is a letter of Mr. B. C. Simpson's, dated 10th December, referring to something which transpired earlier. Correspondence had apparently been going on sometime before.

*Mr. Parkes* : I would suggest that, in cases where I produce documentary evidence, I ought to be answered by documentary evidence. I have consistently produced throughout the proceedings of the Commission documentary evidence of this nature, and I think it ought to be answered by documentary evidence. I think the department ought to produce documents showing that the claim was submitted before the statement of claim which I have put in.

*His Honor* : Some of the original papers have been already put in.

*Mr. Parkes* : But none containing the details.

*His Honor* : What Mr. Smith, I understand, is objecting to is the statement that the letter of Mr. Carter, to which you were referring, was the first appearance of a claim.

*Mr. Parkes* : It is the first appearance of the items of the claim.

*His Honor* : Apparently it is. At all events it is the first that has been found. Mr. Christie's statement is accurate in that respect. What Mr. Christie states is, that it appeared at that time in a definite form, not that it then appeared for the first time.

His Honor at 1.5 p.m. adjourned the inquiry until 10 a.m. on Thursday, 8th October, 1896.

C. E. R. MURRAY,  
Commissioner.

---

THURSDAY, 8 OCTOBER, 1896.

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. R. R. P. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising); attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, Bond Clerk, attended.

Edward Hungerford was recalled and further examined.

James Watson Fraser and Michael McMahon were sworn and examined.

*His Honor* : I will now call upon Mr. Parkes to resume his address.

*Mr. Parkes* : When the Commission adjourned yesterday I was referring to the claim made by Carter & Co. with reference to Contract 72, and upon which Mr. Hickson obtained the consent of Mr. Lyne to the granting to the firm of Contract 79, the firm's tender price for the contract being £3,000 above the tender price of the lowest tenderers, Messrs. Bond and Hudson. Now, the peculiarity of the circumstances is this, that before this Commission sat the whole of this matter was talked of, not as a claim for suspension, but as a claim for the withdrawal of a portion of the contract. I wish to impress upon your Honor that the question of suspension has come forward only since this and other matters have been referred to this Commission for inquiry. Mr. Carter, in the statement of claim which is attached to his letter of the 15th February, 1892, says, "Loss by withdrawal of contract work." You will see he does not say "suspension"; he says "withdrawal." Now, Mr. Hickson, as will be seen upon page 271 of the Parliamentary return, in referring the matter to Mr. Lyne, says:—

Since writing my minute of 6/10/91 complications have arisen with Carter & Co. *re* their Contract 72 having been stopped.

As a matter of fact he does not use the word "suspended"; but if you refer to Mr. Hickson's letters, written months before, to Mr. Lyne, to the contractors, and, through Mr. Barling, to certain municipal authorities,

authorities, you will find that he refers to the work as being only suspended. I still maintain, therefore, that Mr. Christie's evidence, which I laid before your Honor yesterday, is absolutely correct—that is, that Mr. Hickson, when he recommended to Mr. Lyne the acceptance of Carter & Co.'s tender for Contract 79, had never seen this claim. Mr. Simpson, as is evidenced by his letter, which is among the appendices, was going on the basis absolutely that there was a withdrawal of a portion of the contract, until we come to a period when he seems to have had an interview with Mr. Hickson. He appears to have been told that the work was to be gone on with, because in his final letter of 10th December, 1891, he asks that the suspension should be quickly settled and the continuation of the contract entered upon. In his first letter he says:—

Messrs. Carter & Co. have again seen me respecting their claims for compensation on account of the withdrawal of the most profitable portion of their Sewerage Contract No. 72, concerning which claim I wrote to you on the 19th October. Mr. Piper, of your department, called on me on the 3rd ultimo, and stated that you agreed with him as to the contractors' right to complete their contract; but, pending their completion, Messrs. Carter & Co. allege that they are being put to continued expense, and desire that a settlement of the question should be arrived at.

That is the settlement of the question—that they are to go on with their contract.

They appear to want only what is fair, which, I am quite sure, you will be willing to give them; and I shall be pleased if I can assist in a satisfactory settlement. I shall be glad to call upon you at any time that will be convenient to you.

Mr. Hickson made a minute upon this paper, asking for an interview, and that interview must have taken place. This claim could not by anyone who understands ordinary business be entertained if there was a continuation of the contract in contemplation, and it is very clear that there was. It is clear that this intention was conveyed to Carter & Co., and also to Mr. Simpson. We will take the items of the claim *seriatim*:—"Rent of Knight's paddock, 40 weeks, £10." That might be allowed. Then there is "Sandstone for concrete, broken and stacked, £400." That certainly would be used, and was actually being used, because, as I have pointed out from the evidence—and it cannot be denied—this work was actually going on, and certificates were being paid in respect of it up to February. Then there was also the request for a return of the retention money which set forth the amount of the work then done, the end of the section being reached. As regards the next item, "Portland cement, 1,300 casks at 14s. 9d.—£958 15s.," that must have been used even before this claim was entered upon. Then there is, "Portland cement, loss on sale, 2,000 casks at 2s. 6d.—£250." That is a loss which certainly did not occur unless the cement was resold afterwards, of which we have not had any evidence. Undoubtedly it is not an item which can be taken into consideration in connection with the question of suspension, when there was a large portion of the contract—something like £8,000 worth—to be continued at a later date. The next item is, "Gratings, 75 at 70s.—£87 10s." There is a letter among the documents which have been put before your Honor showing that they were bought by the department. The next item is, "Manhole covers, 4 at 150s.—£30." Those were all used. The next items are, "Interest on expenditure, £3,211 5s.—three months at 8 per cent., £64 4s. 6d.; valuation of plant on ground for completion of contract, £500." The plant was used in the completion of the contract. Then the last item is, "Loss of profit on the work withdrawn, £7,000 at 25 per cent.—£1,750." We know that the work was afterwards continued, and whatever profit there may have been upon it was obtained by the contractors, not lost by them. I desire to point out to your Honor the remarkable nature of this Contract 72, because it is evident that it was started, first of all, upon a certain plan. That plan was to continue it from a certain junction at Macdonaldtown Park to Shea's Creek. There was a clause in the contract put in for a very proper and obvious reason. That clause is quoted in Mr. Davis's evidence, upon page 519:—

It is to be understood that the lower 13 or 27 chains of the channel shall not be constructed until the engineer gives a written order to that effect; and the engineer shall have the power to suspend the execution of these portions of the work, or any other part of the contract, or to reduce the length of the contract by the extent of the said 13 or 27 chains, or any other part of the sewer shown on the drawings, that he may consider necessary, and the contract shall not thereby be invalidated, nor shall the contractor be entitled to any compensation on account of such temporary suspension of any part or parts of the contract or permanent reduction of same.

That clause is a definite clause put into the specification;—and for what reason? The reason adduced is, that the Government had a certain sum of money from which alone this work could be constructed. If the whole of the work were constructed the Loan Vote would be exceeded. It was reduced in this way for the purpose of keeping it within the Loan Vote, and also for another purpose—to prevent the work from going on to the Public Works Committee, which, in the first place, was a very wrong thing for the department to have done, because it was a deliberate interference with an Act of Parliament enacted for

for the control of this very department in its expenditure. If your Honor will turn to the specification of Contract 72 you will see the proper description of the work which Carter, Gummow, & Co. had to carry out under their schedule. You will see the extent of the contract to be performed at that time.

The works comprised in this contract consist in the necessary excavation, shoring, timbering, piling, unwatering, concrete, brickwork, stonework, rendering, re-filling, pipe-laying, carpenter's work, ironwork, pitching, paving, ballasting, metalling, leading surplus materials to spoil, &c., required in the construction of the following, viz. :—

|                      |                  |   |                                 |
|----------------------|------------------|---|---------------------------------|
| From Shea's Creek to | 20 chains        | open channel  | 11 ft. 6 in. x 7 ft. 6 in.      |
| „                    | 20 chains to 28  | „ oval sewer  | 10 ft. 6 in. x 6 ft. 6 in.      |
| „                    | 28 „ to 39·12    | „ „   | 10 ft. 6 in. x 6 ft.            |
| „                    | 39·12 „ to 39·77 | „ junction of two creeks, with flat concrete decking between wrought-iron rolled girders. |                                 |
| „                    | 39·70 „ to 48·17 | „ oval sewer  | 7 ft. 2 in. x 6 ft.             |
| „                    | 48·17 „ to 58    | „ circular sewer of   | 6 ft. internal diameter.        |
| „                    | 58 „ to 62·50    | „ „ of  | 5 ft. 10 in. internal diameter. |
| „                    | 62·50 „ to 66    | „ „ of  | 5 ft. 2 in. internal diameter.  |
| „                    | 66 „ to 72       | „ „ of  | 3 ft. internal diameter.        |
| „                    | 72 „ to 76·58    | „ „ of  | 2 ft. 6 in. internal diameter.  |

in open cutting in mud, sand, loam, clay, shale, and ironstone, as shown on longitudinal section, and as shall be directed, with all branches, junctions, curves, manholes, flushing chambers, subducts, road-making, and all other works in connection with those herein enumerated, and the maintenance of the whole of the works for a period of three months after they have been formally taken over by the engineer.

That defines the extent of the contract absolutely. There can be no doubt that to say that any other work which was afterwards put in was not extra work is only a quibble. I will proceed to show, from Mr. Davis' evidence, how this contention is borne out. Let me, first of all, quote a minute by Mr. Hickson, which appears upon page 514 of the printed evidence, which is dated the 5th February, 1892. Mr. Hickson says :—

This tender was accepted on the understanding that the cost of the work be reduced so as to bring the cost within the amount allowed without reference to the Public Works Committee.

That, I submit, was a very wrong action for Mr. Hickson to take. The Public Works Act, establishing the Committee, did not contemplate any infringement of that sort.

*His Honor* : I quite agree with you, Mr. Parkes, but it has been often done in other cases. It does not come very much within the question before the Commission, of course.

*Mr. Parkes* : Still, it shows a reason for the reduction of this work. Mr. Hickson's minute continues :—

At the commencement of the contract the sum of £15,500 was available, and this was proposed to be expended on the work between the Mitchell Road and Munni-street (C to E on sketch), a clause allowing a reduction of the work, A to C, being inserted in the specification.

On starting the work, however, it was found that there was no outlet to the sewer at Mitchell Road at C, and a channel had to be cut along the proposed course of Shea's Creek Canal (A to B), at a cost of £4,000, to provide an outlet, and the sewer continued from Mitchell Road (C) to the commencement of the outlet channel (B), at a cost of £8,000.

This unavoidable construction of the sewer in the first instance, from A to D, exhausted the funds, and that portion of the work from the Macdonaldtown Park junction at D to the point of commencement at Munni-street (E), which formed part of the original contract, has had to be omitted for the present.

That, as I say, was written on 5th February, 1892, yet Mr. Hickson on 23rd February, 1892, writes to the Minister as follows :—

Since writing my minute of 6/10/91 complications have arisen with Carter & Co. *re* their contract No. 72 having been stopped.

Going a stage further in the matter, we find Mr. Davis' own minute of 3rd October, 1891 :—

The amount of tender for Contract No. 72 was £20,650, but it was accepted conditionally upon the contract's being reduced by £3,000.

It is advisable that Contract No. 72 should be continued so as to give an outlet to Contract No. 75.

|  |              |
|--|--------------|
| The cost of doing this will be .....           | £18,764 4 10 |
| Deduct amount paid to date .....               | 9,680 13 9   |
| Amount required to finish to Contract 75 ..... | 9,087 11 1   |
| Amount available from vote .....               | 5,754 0 0    |
| Balance to be provided .....                   | £3,333 11 1  |

I beg to suggest that this amount be paid from the following votes, viz. :—

|   |            |
|---|------------|
| (1.) There will probably be a balance of £2,000 from the Macdonaldtown Storm-water Channel Vote, after that channel has been paid for, which might be used for Contract No. 72, which is part and parcel of the same work ..... | £2,000 0 0 |
| (2.) The following amounts, being balances left from votes from the undermentioned storm-water channels, might also be used for this purpose :—   |            |
| University, storm-water channel .....   | 131 0 0    |
| Phillip-street, Alexandria, storm-water channel.....  | 815 0 0    |
| Pymont Bridge Road, storm-water channel .....   | 265 0 0    |
| Alexandria Park, storm-water channel.....   | 57 0 0     |
|   | £3,268 0 0 |

Mr. Bagge.

J. DAVIS.

That shows what an easy conscience Mr. Davis has in shifting about these votes. He would have returned this money as having been expended upon the University storm-water channel, the storm-water channel at Phillip-street, Alexandria, the storm-water channel at Pymont Bridge Road, and the storm-water channel at Alexandria Park, it having been expended upon Contract No. 72. All this goes to clearly prove that this contract had a certain limit and that a certain amount of extra work, an extension of the work, was afterwards decided upon—that as a matter of fact the claim which Carter, Gummow, & Co. put in was for an amount of work which was a contemplated reduction when they signed their contract. That circumstance the contractors themselves, as well as the department, must have known. This amount of extra work which was added to the contract to carry out the canal should, at least, have been taken into consideration. Upon page 516 of the evidence you will also see a minute by Mr. Barling, under date of 28th October, 1891, in which he says :—

On the Loan Estimates for 1890 the following votes were taken :—

Macdonaldtown Park Storm-water Sewer, from Swanson-street to Ashmore-street; thence from Ashmore-street to Macdonald-street—£8,500.

Storm-water Channel from Munni-street, Newtown, through Macdonaldtown Park to Shea's Creek—£15,500.

The work comprised in the first item is shown on the accompanying plan marked "A" to "B." It is being carried out by Messrs. Parry and Farley, and is nearly completed. The cost will be about £6,500, leaving a balance on the vote of about £2,000.

The work comprised in the second item is now being carried out by Carter & Co. Its position is shown on plan starting from point "C," and it is intended to terminate at "E," supposing sufficient funds are at disposal for the purpose, the contract being a schedule one. It was found during the progress of this work that an earthen drain was required from point "C" to "F" on plan, running along the course of Shea's Creek Canal. This work was one which it was first understood would be carried out by the Harbours and Rivers Branch in connection with the canal works, but it was subsequently decided to include the work in the Roads Branch Contract. This earthen drain will absorb £4,000 of the money, leaving a deficiency on the vote of something like £9,000. The contract of Messrs. Parry and Farley has been shown as terminating at point "B" on plan, and a small gap has been left between "B" and "D," which it is estimated will cost £1,264 to complete. This can be paid for out of the balance available on the £8,500 vote. It will be seen, therefore, that a further sum of £9,000 will be required to complete the whole of the work from "E" to "F." Of this sum, £4,000 is required on account of the earthen drain referred to, and which was not contemplated when the work was undertaken, and the balance, £5,000, is required to complete the work up to "E." In other words, the £9,000 represents "extras," not contemplated when the contract was let.

It is represented that the matter is so urgent that the Minister is asked whether special arrangements cannot be made to permit of this work being proceeded with, in anticipation of further funds being voted. None of the additional sum will be required until next year. This further amount will bring the cost of the Munni-street sewer to about £25,000.

J.B.

Can there be any doubt whatever, in the face of that minute, and the plan indicating so clearly the contract, that the work originally contemplated was from "C" to "E," and that after the work had started the piece of canal which runs across the site of the proposed ship-canal, under the Harbours and Rivers Department, that is, from "C" to "F," was an extra given to the contractors. If the question is to be looked at from the point of view of equity, let me point out at what cost this work was given to the contractors. Your Honor saw the site, and must have noticed the nature of the material which had to be excavated. Although the canal itself, which runs from "D" to "C," was only 12 feet across, this further canal,—this extension of the earthwork, as shown upon the tracing which has been placed before the Commission,—is about 21 feet at the bottom and about 50 feet at the top.

*Mr. Davis:* Those are not the correct dimensions. The evidence goes to show that the size required to discharge the quantity of water which would come down a concrete canal was provided in the earth canal.

*His Honor:* As far as I can see, Mr. Parkes is rather overstating than understating the size of the channel. I could quite understand your objection, Mr. Davis, had the opposite been the case. I do not know whether Mr. Parkes intends to contend that the size of the channel was unnecessarily large.

*Mr. Parkes:* Yes, your Honor.

*Mr. Davis:* As I have already said, the size was that required to discharge the quantity of water which came down the concrete channel.

*His*

*His Honor* : It goes without saying that the earth channel would have to be larger than would a concrete channel, but it is a question of engineering whether it was or was not unduly large.

*Mr. Parkes* : The original storm-water channel, as far as can be judged from the plans, is about 9 feet deep, but the extra earth canal is only about 5 feet 6 inches deep, but the channel is spread out to a very great extent. The quantity which it contained was about 22,000 cubic yards, and that was paid for at the rate of 2s. 6d. for excavation, and 1s. for the placing of the spoil 25 feet away from the margin of the channel, as will be seen by the two letters which I will now read to your Honor. On the 13th March, 1891, Mr. Tillett, of the Harbours and Rivers branch, wrote the following minute:—

It has just come to my knowledge that in carrying out the works of the Munni-street to Shea's Creek Sewer, a part of which is along the centre line of the proposed Shea's Creek Canal, and is itself an open channel, the material from the open channel is being disposed in such a position as in the event of the Shea's Creek Canal being extended to Buckland the whole of their material will have again to be moved: it may be possible that this material can be so disposed as to make one moving sufficient. I would suggest that the Engineer-in-Chief for Roads and Bridges' attention be drawn to the matter.

On the following page your Honor will find a minute by Mr. Davis containing the following:—

The ground is of such soft nature that I do not think it practicable to move our excavated material clear of the 750 feet proposed canal resumption, except at great expense, and as it does not appear that the cross section of the excavation for the canal is definitely settled, I recommend that our contractors be allowed to go on depositing the earth parallel with the canal, leaving 25 feet from the edge of the canal for the future bank.

It will be seen that afterwards, when the Harbours and Rivers Department came to deal with the matter, they had to shift this material. Now the payment of this price of 3s. 6d. for the excavation of this canal, and the deposit of the spoil 25 feet from the margin—

*Mr. Davis* : The evidence is not that 3s. 6d. was paid.

*His Honor* : 2s. 6d. appears to have been paid for the excavation, and 1s. for depositing the spoil?

*Mr. Davis* : Yes, your Honor, and the evidence is that the 1s. was not paid.

*Mr. Parkes* : If your Honor will take out the area of the canal you will find that it comes to 22,000 yards. Those 22,000 yards, if paid for at the rate of 2s. 6d. per yard for excavation, will not make £4,000, the sum of money which was put down as being the amount of money required for this work. It is very easy to be seen that the extra shilling was required to make up the £4,000, the sum of money which was paid for the canal. It is simply a quibble to interrupt my address with matters of this sort. I think that unless I am stating that which is not a fact I ought not to be interrupted.

*His Honor* : The question to which Mr. Davis is alluding is, I take it, 15790 and the following questions in his own evidence:—

15790. Did the contractors receive 1s. a yard for filling—for putting the spoil 25 yards from the bank? No.

15791. What became of the spoil of the canal? It was put as the minute I have just read—the minute of the 16th March—indicates.

15792. Where was it put? As that minute indicates.

15793. What does the minute say? I think 25 ft. from the edge of the proposed canal.

15794. And did the Harbours and Rivers Branch remove it again? I do not know what happened afterwards.

15795. The Harbours and Rivers Branch excavated the ground where it was deposited? I do not think so. I believe after we had drained the swamp a period elapsed before the ships' canal was brought up to that point. I suppose a couple of years elapsed. The swamp being drained, Chinamen started to cultivate upon the soil we had put there; in fact, they had some nice gardens there, and it was not until the ship canal was put into operation that the gardens were abandoned.

15796. Do you call that the losing end of a contract where the contractors were receiving 2s. 6d. for excavating soft material, and where they deposited it at 1s. a yard? It was a very nasty end of the contract.

There is no contradiction to your assumption, Mr. Parkes, that 1s. a yard was paid for depositing. The final voucher would show that.

*Mr. Parkes* : If your Honor will look at page 139 of the Parliamentary Return your Honor will see the original contract. The probable quantity of excavation is set down at 26,200 yards, at 2s. 6d.

*His Honor* : The final certificate shows the general excavation at 53,410 yards, at 2s. 6d., and the filling in at 27,961 yards, at 1s., corresponding with the amount originally contemplated. *Mr.*

*Mr. Parkes* : Your Honor will see that the quantity of filling given in the schedule on page 139 of the Parliamentary Return is only 12,000 yards. In the minute of Mr. Barling, to which I have already referred, you will find these words :—

It will be seen, therefore, that a further sum of £9,000 will be required to complete the whole of the work from "E" to "F." Of this sum £4,000 is required on account of the earthen drain referred to.

If you take the 22,000 yards at 3s. 6d., you will find that it will make up the £4,000. I say that if the Engineer-in-Chief recommended that in respect of this simple notice of an intention to suspend the work at a certain point—the work was really not suspended but went on continuously—a claim existed upon grounds of an equitable nature, surely the interests of the country ought to have been taken into consideration, when the contractors were given a piece of canaling at a cost of 3s. 6d. per cubic yard. It is not so long ago when the Contractor's Association waited upon the present Secretary for Public Works, Mr. Young, and undertook to take out as much of this class of excavation as was required, and to deposit it wherever the Minister wished, at 7d. per yard. That is an excellent price for such a class of excavation, as any professional man will tell your Honor.

*His Honor* : When did that occur ?

*Mr. Parkes* : About two months ago.

*Mr. Davis* : It was a totally different case. The material was different.

*Mr. Carter* : I think Mr Parkes is referring to sand.

*Mr. Davis* : There is absolutely no parallel between the two cases.

*His Honor* : The circumstance to which Mr. Parkes refers is not in evidence ; and I do not, in fact, know of my own knowledge whether anything of the kind occurred. If anything of the kind occurred which could be made material to this inquiry, I should take evidence in reference to it if it were produced. That which occurred very lately it would be hardly fair, however, to compare with what occurred in 1891.

*Mr. Parkes* : Will your Honor allow me to put in the evidence ?

*His Honor* : Yes.

*Mr. Parkes* : Then I will do so at a later stage.

*His Honor* : Of course I shall also allow evidence to be tendered in reply.

*Mr. Parkes* : But putting that question aside for the time being, the cost of this excavation is equal, as a matter of fact, to the cost put in many contracts, which have been laid before your Honor, for the blasting out of solid rock, viz., 4s. Take, for instance, Carter & Co.'s own schedule for Contract 69. They have put in items there which they certainly were not asked to carry out.

*His Honor* : No one says that those are the proper values. The contractors themselves do not contend that they are proper values.

*Mr. Parkes* : But the department has, in some of these cases, put in blasting at a very small price, viz., 6s. a yard. If this extra work were required, it must have been known before the contract was started that the contractors would have to do it ; and that, without the slightest doubt, was the object of the clause in the contract which was referred to in Mr. Hickson's letter giving power to the Engineer-in-Chief to suspend or to alter or cut off a portion of the contract wherever it might happen to be at the time. This clause gave the department absolute power and left the contractors without the slightest right to compensation.

*His Honor* : I see that in the schedule for Contract 118 excavation in hard rock with 4-inch charges is put down at 6s. 6d., whereas excavation in surfacé soil, mud, sand, clay, ballast, and soft rock, is put down at 2s.

*Mr. Parkes* : The schedules in various contracts show very small prices for rock excavation, but there can be no doubt that 3s. 6d. per yard was an enormous price for the excavation in the case of Contract 72. Mr. Hickson's communication to the contractors in respect to the suspension of the contract was in these terms :—

With reference to your contract, No. 72, Sydney Sewerage Works, Munni-street, Shea's Creek, south-west channel, I have the honor to inform you that, in accordance with clause No. 3 of the specification, which gives me power to make such permanent alterations as may be considered necessary, I have decided to terminate the contract after the construction of the junction chamber and connection with the Macdonaldtown Park storm-water channel at 41.30 chains, thereby omitting that portion of the contract from such junction upwards to the point of termination of the sewer, as shown on drawings at Union-street, and hereby give you notice that the Munni-street storm-water channel is not to be carried on beyond the before-mentioned junction.

The

The explanation of that letter in the evidence is this—that it was sent by Mr. Hickson to the contractors merely as a bluff. I do not think your Honor can possibly accept that explanation as seriously given. Here we have the business letter of a man who has made provision in his specification guarding against his getting into difficulties by running beyond the money available or allotted for the contract. He knew that under this clause he could alter the contract as he liked. As a matter of fact the contract was started and carried out in such an unbusinesslike fashion, and in such a confused way, that Mr. Hickson, no doubt, saw that he would get into difficulties unless he took this step—unless he availed himself of the clause which he had specially provided in the specification. No valid claim for compensation therefor could have arisen from the exercise of power under that clause. What does Mr. Hickson himself say in his own letter of 5th February, 1892:—

At the commencement of the contract the sum of £15,500 was available, and this was proposed to be expended on the work between the Mitchell Road and Munni-street, C to E on sketch, a clause allowing a reduction of the work, A to C, being inserted in the specification.

Mr. Hickson must have known that the stoppage was only of a temporary nature. He could not, as a matter of fact, have known the items which were put into the contractors' claim. Coming to those items, is it a reasonable thing to suppose that a shrewd man like Mr. B. C. Simpson, the engineer, could ever have conceived the idea of submitting items such as those in a claim in respect of the suspension of a contract? If Mr. Simpson did submit this claim, as Messrs Carter & Co. allege—although it is in Mr. Carter's handwriting—there can be no doubt that it was submitted on the assumption that there would be an absolute stoppage of the contract. Each item in the claim shows that. When Mr. Carter saw that there was a question of the Minister's calling for tenders for Contract 79, he at once saw Mr. Hickson, and that gentleman, I presume, said to him, "Well, it will be difficult to overcome the Minister." It was then, we may presume, that Mr. Carter produced his claim in respect of Contract 72—and that Mr. Hickson, without seeing what it actually contained, and knowing nothing, except that it was conveyed to him by Mr. Carter, went to the Minister and advised him to accept Carter & Co.'s tender for Contract 79 upon the understanding that their claim in respect of Contract 72 would be withdrawn. Now the suspicious business about the whole of this transaction lies in these constant interviews between Mr. Carter and Mr. Hickson. Here is another suspicious circumstance. Is it at all likely that a man so shrewd in business as is Mr. Carter, shaping his everyday business to a course of gain, would have paid Messrs. Bond and Hudson a sum of £750 three months before he got this particular contract, unless he really was sure that his firm would obtain it? Let me refer your Honor to Mr. Hudson's evidence upon page 254:—

9072. Did you go to the clerk in the tender room—to the officer in charge of tenders? I cannot say, speaking from memory.

9073. He never informed you that Mr. Bond had withdrawn his tender altogether? No.

9074. What did he tell you? He said we could get back our money by applying for it.

9075. And that you could take your tender up at any time? He said that we could withdraw our money without prejudice.

9076. Without prejudice to your tender? Yes.

9077. Was there any probability to your mind of the job's being gone on with? Long before that I asked when the department were likely to go on with the job. I was continually coming down to know if the department were going on with it, and they said they were not likely to be going on with it for two years.

9078. Could you not recognise the officer you saw if he were brought here? No, I cannot say that I could.

It will be clearly seen that Mr. Hudson, in spite of the fact that ample money was voted for Contract 79, and that there was not the slightest doubt but that the work would be sanctioned at an early date by the Minister, was humbugged in this way by the office. I will direct your Honor's attention to Mr. Carter's evidence upon page 253. He said, in answer to my questions:—

9026. *Mr. Parkes.*] When you made the arrangement with Mr. Bond, which has been referred to this morning, did you then give him a promissory-note? No; I gave him a cheque.

9027. For what amount? £750.

9028. That was another £750, then? Yes.

9029. In all, then, you paid Mr. Bond £1,500? Yes.

9030. First you gave him a cheque for £750 and then a promissory-note for £750? Yes.

9031. Did the cheque go through the account of Carter, Gummow, & Co.? Yes. I have some faint recollection of the agreement which has been referred to. To the best of my recollection it was torn up in Mr. Bond's presence.

9032. Was it after the promissory-note had been paid that the document was torn up? Yes.

9033.

9033. *His Honor.*] I do not understand how it comes about that the promissory note bears this date;—was that the date of the transaction? No; the transaction occurred towards the close of 1891. Your question refreshes my memory to some extent with reference to the agreement. There were only a few words in it. It was to the effect that we were to pay Mr. Bond £750 down, contract or no contract—I risked that £750—and that if the tender were accepted a promissory note was to be given to him for the balance of £750. I presume the tender would be accepted about that date—that is, the 23rd March—and that I then gave him the promissory note.

9034. *Mr. Parkes.*] The contract was signed on March 13th, was it not? Yes; you will see that that would allow me ten days for the transaction of this business with Mr. Bond. The cheque to Kenwood and Kerle was a payment for services rendered.

9035. Why did you not pay that in September instead of March? They were not entitled to it until the transaction was completed.

9036. It was not completed until the payment of the promissory note in June, 1892? I think that when I once gave the promissory note the transaction was settled.

9037. *His Honor.*] Then it cost you £1,700 to get the contract? Yes.

Then let me refer your Honor to Mr. Kenwood's evidence upon page 251. He there gives a very clear illustration of the manner in which Mr. Carter went about obtaining this contract by buying out Bond and Hudson. Now, the fact of Mr. Carter's paying so large a sum as £750—an amount which his firm were really not in a position to pay at that time, as is evidenced by their giving a P.N. later on, and by a perusal of their banking account, Weedon's money at that time being paid into it —

*Mr. Carter:* That is entirely a misstatement.

*His Honor:* Mr. Weedon's money was paid into the account long after that.

*Mr. Parkes:* A perusal of Mr. Christie's evidence and the bank-books of Carter & Co. will establish the fact that Mr. Carter had at that time an overdraft at the bank; and the fact of his giving £750 in this way, at a time when the firm were in need of work and money—because Mr. Carter said in his own evidence that there they were at the end of their work—is conclusive evidence that he must have had some assurance—that he must have relied implicitly upon what he could do with the Department, founded, possibly, upon a knowledge of what he had done with the Department before. There must have been something of this kind operating upon his mind to justify him in giving away this large sum of £750. I do not think I can be called abnormally suspicious because I look at the transaction in that way. Keen business people do not hazard money in that way; for it must be remembered that in this case it had been mentioned that tenders were to be called for. That being so, Mr. Carter must have had some assurance that his own firm would receive the contract. Mr. Barling, no doubt, gave instructions in perfect good faith that tenders were to be called, and he believed, no doubt, that they would be called; but, as against that, we have Mr. Hickson, on the last day of tendering, or within eight days of the receipt of this statement of claim from Carter, Gummow, & Co., appearing at the last moment to check Mr. Lyne's hands with regard to the tendering. These are facts which have a very suspicious appearance. I am coming now to the nature of this contract, and as to the way in which it was altered after it had been let. We have in Mr. Davis' evidence a statement in which he says:—

Since the inauguration of the Sewerage Branch in November, 1879, up to the present date, 117 contracts have been let and completed, with the following result:—Amount of tenders, worked out at schedule rates, £1,440,225; total amount of final vouchers, £1,433,186. Showing that the amount of the tenders worked out at schedule rates has exceeded the amounts of final vouchers by the sum of £7,039, or a saving of that amount in about one and a half million pounds worth of work. It will therefore be seen that, although speculative tendering has been in vogue for sixteen years, while in some cases the quantities at schedule rates worked out to more than the amount of the tender, the opposite occurred quite as frequently.

This is merely a statement. There is no documentary evidence in proof of it. The agreement between the returns might be simply the result of accident, because the rearrangement of the schedules might bring that about, and yet give to the contractors working under them a vast advantage in obtaining a greater amount of money at the conclusion of the contract than they anticipated when they started. Take the schedule of Contract 79. The tender amount was £39,000, and Mr. Davis claims that it worked out at £40,000. But notice the items which are eliminated. The items upon which the contractor carried out the work were not the items which he put into his tender. For instance, there was no timber left in the shafts, and other items such as subducts, handpacked filling, brickwork, permanent puddling, surplus material, and a lot of other items were decreased, a number of other items being increased; so that really the schedule upon which the contract was completed was not at all like the schedule upon which the

the firm tendered. As a matter of fact, Carter & Co., as shown by Mr. Thompson's evidence—and it has not been answered by the Department—benefited by the readjustment of the schedule to the extent of about £3,000. The matter is referred to in Mr. Thompson's evidence upon page 306. It will be seen, upon reference to the joint report of Mr. McCredie and Mr. Thompson, which appears on that page, that they do not proceed on the basis taken by the Department, for it must be admitted that there was only a certain proportion of work specified in the Government schedule to be gadded out, and a certain proportion, as specified, to be blasted out. Mr. Davis's memo. deals with this matter, in reply to Mr. Thompson, as if the Department had the power to substitute throughout the work gadding for blasting out. Mr. Thompson proceeds upon the proper assumption that the Department only substituted the blasting for the gadding in the proportion of 800 cubic yards which they put into the specification. He takes as a basis—and it ought to be a fair basis—not the rigged schedule of Carter, Gummow, & Co., but an office valuation originally thought to be Contract 79, but which turned out to be Contract 79A, on account of the departments being unable to produce their original schedule of Contract 79. In respect of Contract 79A, a continuation of Contract 79, it may be fairly argued that the proportion of the items represents the proportion of the items in the neighbouring contract, and in that the department, according to the schedule which appears upon page 339 of the Parliamentary return, put down excavation in hard rock where gadding only is permitted, 72s., and excavation in hard rock where charges of powder four inches in length are permitted, 55s., the difference being 17s. If you look at any departmental schedule you will see that they put the guttering and gadding down at an increased price over the blasting. Of course, manual labour is a great deal the more costly way of carrying out this work than blowing it out with powder. Mr. Thompson has taken a very fair basis, I submit, in doing that. It was a larger and more expensive work, and he would have been inclined to increase it. Your Honor asked him a very pertinent question as to whether, the contract being a larger and more expensive contract, the items would not have been increased. That would be so, and the basis, I submit, is a fair one, to show that the substitution gave the contractors a great benefit. I will show that Mr. Davis's memorandum is on an entirely wrong basis, because the contractors were paid to within half an inch of the full limit of the concrete which would have been paid for if the contract had been carried out according to the letter of the specification. I will now read the report of Mr. McCredie and Mr. Thompson :—

Varney Parkes, Esq., M.L.A., Public Works Inquiry Commission.

Dear Sir,

250, Pitt-street, Sydney, 23 July, 1896.

We have carefully gone through the schedule and final voucher in connection with Contract No. 79, and have the honor to report as follows :—

*Item No. 1.*—In this item the schedule quantities give 800 cubic yards of "excavation in tunnel, guttering, and gadding," and the final voucher has 21·22 cubic yards, showing a deduction of 778·78 cubic yards, which latter quantity was allowed to be carried out as excavation with 4-inch powder, at a merely nominal reduction in cost of 3s. per cubic yard, as per schedule, whereas the proper difference in value would have been 17s. per cubic yard, thus the alteration benefited the contractors by 14s. per cubic yard, amounting to £545 2s. 11d.

Had the above-mentioned 778·78 cubic yards been carried out by guttering and gadding, we would point out that the contractor would have had a loss of 9s. per cubic yard, which would have amounted to £350 9s., based on the Department's estimate of 72s. per cubic yard.

*Item No. 5.*—The schedule quantities give 361 cubic yards of guttering and gadding in shafts, while the final return shows that excavation with 4-inch powder was substituted, which would give the contractor an increased profit of 5s. per cubic yard, amounting to £90 5s.

*Item No. 17.*—In this item there is an increase of 852·17 cubic yards of sandstone concrete in the final return over the quantity shown in the schedule, which would result in the contractor gaining a profit of 7s. 6d. per cubic yard, amounting to £319 11s. 3d., the Government estimate being 30s. per cubic yard.

*Items Nos. 10 to 15 (inclusive).*—For these items the contractor only allows £3 4s. 2d., while a fair cost would amount to £238 15s.; and as they were not carried out, the contractor was saved a loss of £235 10s. 10d.

*Item No. 20.*—This item, 180 cubic yards of brickwork, the contract rate for which was 20s. per cubic yard, or £180, was omitted; whereas the Department's estimated value is 60s. per cubic yard, and which, if it had been carried out, would have resulted in a loss to the contractor of £360.

We may point out that in Item No. 4 the schedule quantities give 75 cubic yards excavation in road surfaces, whereas the quantity paid for was 541·77 cubic yards; and as the contractor's price was 78s. per cubic yard, against the Department's estimated value of 6s. per cubic yard, this increase gave the contractor an additional profit of £1,680 7s. 5d.

We are, &c.,

GEORGE MCCREDIE,  
W. THOMPSON.

It will be clearly seen that the department was conferring benefit by the rearrangement of the schedule, although it came out at £40,000 with the addition of £1,200 for a branch sewer, and the addition of other small works Carter & Co. received by the readjustment of the items, a great benefit over and above the contract which they signed. Let me come now to Mr. Davis' explanation of this matter in his memorandum.

*His Honor:* I would point out that the only readjustment was the substitution of 4-inch powder blasting for guttering and gadding. All the other items adjust themselves, leaving out, of course, subducts.

Mr.

*Mr. Davis* : I have not wished to interrupt Mr. Parkes, although I might have done so repeatedly for the purpose of correcting misstatements. In this case he seems to have forgotten the fact that the statement of Mr. McCredie and Mr. Thompson was practically withdrawn, and that we had no opportunity to cross-examine them in reference to it.

*His Honor* : If the proportions were the same and the quantities greater, then the difference would be proportionately greater, and it is upon the difference that the argument has been founded. At the same time the only readjustment lies in the substitution of blasting for guttering and gadding.

*Mr. Parkes* : With reference to the statement which Mr. Davis has just made in regard to Mr. McCredie and Mr. Thompson, I should like to point out that they were both brought back for the purposes of cross-examination, but that the department declined to cross-examine them. Mr. Davis' statement that the contract would come out at a certain amount is a fallacious statement. With an indefinite schedule it is impossible to make a calculation of that kind. I will deal now with Mr. Davis' statement as to the subducts. He has made an estimate showing the amount of saving in this respect. It will be found in his memorandum No. 6, upon page 508 of the printed evidence :—

When the shafts were sunk to the level of the tunnels, and the contractors were about to start driving, comparative estimates were made for the different modes of excavating the tunnel provided for in the schedule. Although the price for guttering and gadding was somewhat above that for blasting—taking into consideration the fact that if the tunnels were driven by the latter means they could not be taken out to the precise size required, and therefore more concrete would be used in the lining than if the excavation were done by guttering and gadding—it was found the department would effect a saving of about £1,250 on the whole length of the tunnels, if they were taken out without the use of explosives. The contractors saw the Engineer-in-Chief in my presence respecting the matter, and offered, if they were allowed to do the excavation by the use of 4 inches of compressed powder, to allow an equivalent to the above sum in the quantity of concrete paid for. On these conditions the Engineer-in-Chief approved of the excavations being done by blasting, and the work was carried out accordingly; and in the final voucher the concrete which was included was reduced equal to £1,302 9s. 8d.

Mr. Davis shows in his statement that the total amount of sandstone packing in the tunnels paid for, less the Ernest-street branch, was 421 cubic yards; and that in the bluestone sewer 1,219 cubic yards, less the Ernest-street branch, were paid for. The summary shows the amount saved on the sandstone concrete as £705, and on the bluestone concrete £596; that is upon the assumption that there were only 2 inches of lining paid for. But, as a matter of fact, if your Honor will turn to page 318 of the Parliamentary papers, it will be seen that the amount of lining which was allowed was  $3\frac{1}{4}$  inches over and above what was required to make the periphery of the sewer. Coming to the actual facts of the case, it is provided in the specification, as has been stated by Mr. Davis, that when blasting is carried out on these contracts there shall be a limit of 4 inches margin in the concrete to be paid for. I will take Mr. Davis' figures. He says there were 421 yards of sandstone concrete, omitting the Ernest-street branch—a very small amount, some 90 yards. I will ask you to turn to the voucher upon page 333 of the Parliamentary return. How is it possible that such a saving can be made when we see that, according to the final voucher, sandstone concrete assumed the dimensions of 1,872 cubic yards, and bluestone concrete the dimensions of 1,562 cubic yards? Those were the quantities that were actually paid for, the quantities in the tender schedule being 1,023 and 1,390 yards respectively. As a matter of fact, the so-called saving in this matter was no saving at all, but was a great benefit to the contractors. I have pointed out in respect of Contract 79 those which I consider to be the main concessions which were granted to these contractors. All that I have to say, in concluding my remarks as regards that contract, is that where the contractors are dealing with the public those who have charge of the public interests should not always think of the position of the contractors, and try invariably to do that which will meet their convenience or produce profit for them. It has been shown that, in this case, everything was done by the department for the contractors; every action taken by the department tended to give them the best advantage which they could have obtained upon the contract. From the very first, when an opportunity was given to them to buy off Bond and Hudson, up till the time when the final voucher was paid, everything upon the contract was worked to the advantage of the contractors. The State has some say in the matter, and it certainly ought to have some definite method of carrying on its work. When the Public Works Department calls for competitive undertakings it ought at least to have a fair basis upon which the competition can take place, so that it will get the full benefit of it. I come now to Contract 72 itself. I have dealt pretty extensively with that contract during the time I have been dealing with Contract 79, but I should like to point out clearly to your Honor what was the position of that contract, beginning with its earlier stages. In the first place, the department submitted an estimate to Parliament that £15,500 was required to build a sewer from Munni-street to Shea's Creek.

Parliament

Parliament voted that money upon a very definite scale. The lowest tender, according to the Parliamentary papers, which came in for Contract 72, for the amount of work competed for—that is, from Shea's Creek to a certain chainage—was £20,650. Then this question came up—that if that tender were accepted the work would have to go before the Public Works Committee; and, in order to avoid that course, the estimate was reduced, as Mr. Davis has admitted in his minute, by £3,000, making the contract sum about £17,700. In order that the work might come within £15,500 which was voted—if that question should arise—a clause was put in the specification, which appears upon page 141 of the Parliamentary return. I refer to clause 3, which has been so often read before the Commission. That clause provides that at a certain time, if a further sum of money had not been voted in a succeeding Loan Bill, the portion set forth in the clause, or any other portion, might be cut off from the contract. As the work proceeded the department seemed suddenly to find out that they had not a proper outlet, and, as regards that point, it seems very dubious whether they were right in coming to that conclusion. However, they did, for whatever reasons, come to that conclusion. Below the level of this sewer there was running Shea's Creek; and it would have taken, without any channel whatever being cut, the output. It was simply a question of cutting some 50 feet between the end of the sewer and Shea's Creek. That would have taken the water without any necessity for cutting the channel at a different level through which to run down the water.

*His Honor* : I understand that there was a flat without any definite channel at all.

*Mr. Parkes* : At all times there was a channel of sufficient depth to carry away any water that might come from the sewer. If you examine residents in the locality your Honor can soon settle the point, if there is any doubt in your mind.

*Mr. Davis* : That question was fully gone into in M'Namara's case.

*Mr. Parkes* : I should like to know how it was possible to connect the channel, which was only 5 feet 6 inches, with the sewer, which was about 12 feet.

*Mr. Davis* : The greatest depth would be 7 feet 6 inches.

*Mr. Parkes* : The channel was much less in depth, as shown by the drawing, than was the sewer. The level of the land must have been below the top of the sewer, and the channel without a doubt was cut without any necessity. Even supposing we allow that there was a necessity, it was an extra in every sense of the word, and was no part and parcel of the contract in the first instance. However, this channel was cut, and the claim in Carter & Co's. case is that they had the most expensive portion of the work to do in the first instance. Now I want to know how it is that, if the wrong end of the contract was commenced, Carter & Co. did not object to that. The truth is that they commenced at the end of the contract in respect of which they received the greatest amount of remuneration for the work they were doing. They commenced at the end where they had nothing but soft sand cutting at the extravagant price of 2s. 6d. for excavation and 1s. for refilling. That is the reason why the contractors commenced at that end. This clause would apply to any portion of the work, whether it was commenced at one end or the other. The clause allows of a certain amount of money being expended, and there is then power to terminate, permanently or temporarily, any portion of the contract. It was found ultimately necessary, after notice had been given by Mr. Hickson to the contractors in October, 1891, to obtain an extra amount of money, to be hurriedly voted by Parliament, for the continuation of the work. The department immediately set about doing this. They set to work to make out their reasons for the vote, and they then persuaded the Minister to put an amount on the Estimates. The amount was so put on and passed. Now it is well known that Loan Bills are generally introduced, not at the early part of a Session, but towards the close of it. If you search the records of this particular case you will find that the Bill, at every stage, had this £9,000 in it. Carter & Co. must have known that the work would be continued. The department certainly knew, Mr. Hickson's letter being written to meet the contingency of the works not being continued, or the happening of any accident. During the whole of this time Carter & Co. were working upon this contract—that is beyond dispute—and within a few weeks of the time of the notification of the second contract. Now on the very day on which the Loan Bill was passed through Parliament, Mr. Hickson notified Carter & Co. that their contract would be continued. Where, then, is there any equitable claim in respect of the contract? Where is there any justification for the statement to the Minister that Carter & Co. had an equitable claim for that very short suspension, when, as a matter of fact, the firm received an extension of the contract at very excellent prices? Instead of an injury being done to the contractors in respect of this contract, a vast benefit was conferred upon them by giving them this extra work and associating them with the contract right through. If the Public Works Department manages the whole of its contracts in the way in which Contract 72 was managed, then I certainly do not think Mr. Smith's remark that Mr. Hickson has shown to the country throughout this inquiry that he has ever looked to the safeguarding of

the interests of the public is very well established. I will now take up the question of the rigging of schedules, and especially with respect to Contracts 69 and 79. In the first place I should like to point out to your Honor that in any work of this description the first care of an engineer should be to get the most definite proposal possible put down in the plan and specification. After this definite proposal has been so put down, the contractors can compete fairly for the work. In order that they may be enabled to do this, proper borings should be made right to the depth of the contemplated sewer. This has not been done in the case of departmental work, and the particulars, form, and manner, of the schedules, even up to the present day, is not at all satisfactory. The different classes of material are so confusingly put together that they must inevitably lead contractors at all times to speculate in their prices. The first reason and prime basis of speculation by contractors in tendering is to be found in the indefinite manner in which information is given to them by the department. As a matter of fact, that information is given in such a manner as to invite speculative tendering, and to result in benefit to the contractors rather than to the public. As regards this question, let me refer your Honor to the evidence of Mr. Young, upon page 358, and to the evidence of Mr. Dean, upon page 349. Speaking generally as to that evidence, it shows conclusively that these men, who are the two oldest of the contractors in and about the city of Sydney, if not in New South Wales, are not familiar with the methods of schedule rigging which were adopted by Carter, Gummow, & Co. in their tenders for Contracts 69 and 79. It is contended by the department that this is an existing evil; but the fact remains that the tenders of Carter & Co. for Contracts 69 and 79 contained prices of a most extravagant nature. I will turn, for a moment, to Mr. Bagge's evidence, on page 404. Mr. Bagge was an officer of the department for a great number of years. He is evidently an honorable old man who understands his business, and he seems to have been wonderfully struck by the nature of the tenders which were sent in at that period. He says, in his evidence, it reminded him of what had taken place in Victoria.

I remember that when this rigging occurred in Victoria an officer of the Public Works Department reported the matter to Mr. Wardell, Inspector-General of Public Works, and complained about the practice. The matter was sent to the Crown Solicitor, and that officer wrote a minute to this effect:—He said “that the engineer was responsible to his employers for the work being carried out within the sum tendered, and that if, therefore, a contractor gave speculative prices upon certain items, he should not be paid those speculative prices, but must be allowed only so much, permitting of the remainder of the work being constructed within the amount of the contract if an emergency should arise.” We acted accordingly in Victoria.

Mr. Bagge had not seen the schedules from the time he left the office, perhaps for a much longer period than that, and if he could recollect them you will see that, from the very nature of the schedules, his memory must be pretty good. At all events he was very exact upon this point. The schedules showed that where other contractors were allowed 30s. and 50s. for shaft excavation—the first work done upon these contracts—Carter & Co. were allowed the enormous sum of 78s. Now Owen, a man who excavated for Carter & Co. by sub-contract, stated clearly in his evidence that this work cost 15s. a yard let out to sub-contractors. That being so, the contractors must have made an enormous profit. Owen's evidence will be found upon page 179.

6679. Do you know what was paid to the men working in the shafts? Fifteen shillings when they started and more when they got deep. When they got down to a good depth 17s. 6d. was paid, and it rose afterwards.

6680. Did they ever get over £1 in the shafts? I do not know what they got, but I do not think so.

It will be seen from this evidence that the profits of the contractors upon shaft excavation were remarkably good, and that it agreed with what Mr. Bagge pointed out. It is very likely that it would be so, seeing that in his estimate for Contract 79A he has put in figures corresponding to a reasonable proportion. He says upon page 404, question 13106:—

Of course Carter, Gummow, & Co. are an old firm, who have done a quarter of million pounds worth of work for us, and I can well understand that they would have no intention of dropping the work. Still there may be trouble in the money market in the getting of money, and my opinion is that they are simply endeavouring to raise money out of this part of the contract with which to complete the remainder of the job.

It is a significant fact that at the commencement of this job the second payment to Messrs. Bond and Hudson, who were bought off, was made on a promissory note.

I told Mr. Hickson further that I thought the tender ought to be sent back to Carter, Gummow, & Co., with a request that they would re-arrange their prices in proper proportion, not exceeding the sum total of the contract.

The

The object of Mr. Bagge in sending back that tender was to so fix the schedule that in paying the contractors the department would not put the country to the risk of making over-payment, in case trouble came. It was the action of a dutiful and faithful officer of the Crown. He continues—

Mr. Hickson, however, said that would not do, and that we must stand by the prices. I told him that in Victoria a contract such as that would be returned to the contractor with the request that he would remodel his prices.

I have already quoted the evidence which immediately follows, but, further on, Mr. Bagge says:—

I remember saying to Mr. Davis at the time, "It is all very well for Mr. Hickson to say that, but we do not know what may occur. We cannot tell what trouble there may be in store for us. Don't you pay the full quantities, whatever you do; be sure to keep sufficient money in hand to cover the contract." That, I honestly believe, Mr. Davis did. I remember his saying "You need not feel afraid; I do not return the full quantities. I always keep sufficient money in hand to render us perfectly safe."

He said later on that, in addition to calling Mr. Hickson's attention to Contract 79, he had also called his attention to the schedule of Contract 69, and especially to the item of £50 for bluestone pitchers. Now he was cross-examined very severely by Mr. Davis—and Mr. Davis did not spare Mr. Bagge when he cross-examined him—with regard to Contract 69. I will ask your Honor to turn to Mr. Bagge's evidence at question 13190—

13190. With regard to Contract 69—was it before or after the receipt of tenders that you saw Mr. Hickson with regard to the price of £50 per square yard for bluestone pitchers? If I saw Mr. Hickson it would always occur when the tenders were sent up to me. The tenders would come up to me from the Board. I then looked through them and recommended the acceptance of a certain tender. If I saw any incongruity in connection with a tender, I would direct Mr. Hickson's attention to it.

13191. Are you sure that you went to Mr. Hickson and pointed out to him this price of £50 for bluestone pitchers? Yes.

13192. You are sure of that? Yes.

13193. Why did you not put it in your recommendation? For the simple reason that Mr. Hickson told me that it was of no use objecting, and that we should have to pay the price given. He insisted upon the price in the schedule being paid. I suggested that the tenders should be sent back to Carter, Gummow, & Co., and that they should be asked to revise their prices, but he said that that could not be done.

Leaving that evidence for the moment, I wish to comment upon the item in the schedule of Contract 69 relating to the bluestone pitchers. That, I think, is beyond what may be called fair speculation—fair, honest, dealing. If anyone took advantage of a mistake of that kind in any other business—if he insisted upon the payment of money at a rate like that—if he endeavoured to obtain money in that way, he would be liable to get into trouble. In this case, if it is to be admitted—as Mr. Carter, Mr. Gummow, Mr. Davis, and others have admitted—that an advantage was taken of this £50 being an absolute mistake on the part of the department, and of the putting in of 12 yards instead of 37, then I say that, if ever there was justification on the part of the head of a department for determining that the contractor should not be allowed to take the advantage, that he should not be paid at such an exorbitant rate, it would exist in this case. There cannot be the slightest doubt about that, surely. Where 500 per cent. was being paid upon a particular item, surely the head of a department should have used every effort possible to prevent an imposition upon the State. In regard to this particular item, the sum of £1,850 instead of about £37 was paid. Mr. Davis, in his examination, admits that Mr. Hickson did not express any wonderful indignation in seeing this sum of £50. He says that Mr. Hickson looked at it in a casual way as forming part of a rigged schedule, and determined that the price must be paid. The strange part of the evidence of Mr. Davis as to this schedule will be found in his memorandum upon page 497, where he says:—

From my own knowledge, it has been the habit for a number of years for tenderers to take advantage of the uncertainty referred to. No doubt, in the case of Contract No. 69, the speculation assumed serious proportions. When Mr. Hickson saw the pitch it had reached, as indicated by that contract, he decided to adopt an entirely new system, which has since been introduced, where applicable, in the other branches of the Department of Public Works, and also by the Board of Water Supply and Sewerage, and, I understand, by his advice, by the Melbourne Board of Water Supply and Sewerage, where the same difficulty was being experienced. The tender for Contract No. 69 was received on the 27th December, 1893, and the first tender under the new system was received in March, 1894; no time, therefore, was lost after the receipt of the tender for Contract No. 69 in adopting the new system.

I will ask your Honor to turn now to another portion of Mr. Davis's evidence, where you will find him saying:—

I should like to add, with regard to the bluestone pitchers, that it is usual, when a contract is let, to forward to the supervising officer a schedule of prices, which is really a copy of the contractor's tender. At the time Contract 69 was let that was done. I received a schedule, and in that schedule a clerical error was made. As it happened, it proved to be rather a serious one. The clerk, instead of putting down £50 opposite the item of bluestone pitchers, had put down 50s. per square yard. It was not until the beginning of May that I discovered that there had been a mistake. So that from December until May I was carrying out the contract upon the assumption that the bluestone pitchers were to cost the department 50s. a square yard, and not, as it turned out, £50 per square yard.

Mr. Hickson has also given evidence confirmatory of that given by Mr. Davis on his behalf—that the department never observed this price of the pitchers until the date of the May certificate. Then how is it possible, I asked, that they could have let the first contract in March, or have called for tenders early in the year 1894. They would have had to compile the specification and schedule about the time tenders were coming in for Contract 69; so that if they altered the old system, and first adopted the new system in the case of Cook and Webb's tender, it would have been long before the month of May when they first found this price for bluestone pitchers in the schedule. I will not go to the length of saying that it was absolutely so, but to my mind the real truth of the matter was this—the first contract under the new system was McSweeney's contract, No. 112, in 1895. I asked Mr. Hickson very particularly as to the change in the schedule, and he said in his evidence upon page 578:—

17407. Cook and Webb's contract was for an annual supply of ironwork, was it not;—it has been referred to as the first contract let under the new system? I forget which was the first contract.

17408. Are you not aware that the Treasury has for years past called for all its supplies upon a schedule upon which tenderers have been asked to tender at a percentage above or below given prices, or at par? Yes. The same thing applies to the Works Department.

17409. Then the change of system was not an innovation? Entirely, as far as public works themselves are concerned.

17410. But in other departments it has been adopted for perhaps twenty years in connection with annual supplies? It has been done in the Works Department for years so far as annual supplies are concerned.

17411. This contract of Cook and Webb's was a contract for annual supplies, was it not? That I could not say, speaking from memory.

17412. It was for the supply of ironwork for sewerage contracts, was it not? I should have to see the specification before I could say whether it was for an annual supply or not. It does not appear to be very clear from the specification whether it was for an annual supply or not. It appears to be for a definite quantity of material for sewerage contracts.

17413. But, ordinarily, all these contracts for the supply of material are called for annually? Ordinarily, that would be so, so far as the supply of material is concerned; but this is a different contract. It is not one of the ordinary contracts for a supply of material.

17414. It is for the supply of ironwork for all contracts, is it not? Yes.

As a matter of fact this system of tendering is not a new thing. It has been adopted in connection with the Treasury supplies—that is, all annual supplies for the public departments are called for on this system of tendering at par, and a percentage above or below schedule rates. Mr. Davis has taken this contract of Cook and Webb's, which was really one of these contracts for ordinary supply, as if it were the first contract let under the new system of tendering.

*Mr. Davis:* There is no evidence to that effect. The evidence is to the contrary.

*His Honor:* The system seems to have been adopted in the case of annual supplies, but not upon ordinary contracts.

*Mr. Davis:* The evidence is that Cook and Webb's contract is just the same kind of contract as had been let for ironwork previously. The same system was adopted as was adopted in the case of Contract 69.

*His Honor:* What I understand you to mean is, that in former similar contracts to that of Cook and Webb the schedule system was adopted, although in many ordinary annual contracts the other system was adopted.

*Mr. Davis:* Yes; there is no doubt that in many cases the other system was adopted.

*Mr.*

*Mr. Parkes*: If Cook and Webb's contract was the first contract upon which the new system was adopted, of what value is the evidence that the £50 for bluestone pitchers was first seen when the May voucher for Contract 69 was presented for payment. In order to allow for the tenders coming in in March, the schedule would have had to be prepared for the contract at about the time the tenders for Contract 69 came in. That is December, 1893. If that be so it strongly supports Mr. Bagge's evidence, when he says that he showed this item of £50 in the schedule to Mr. Hickson, and that it was known both to that gentleman and to Mr. Davis. If it had not been known to these gentlemen they would not have so prepared the schedule for Cook and Webb's contract, the tenders for which came in but a few months afterwards, actuated as they say they were by Contract 69. Mr. Hickson, upon page 578, says:—

17415. Sometimes you called for the supply of leather and other materials for use on contracts? For use in the department.

17416. Those tenders are called always on a system under which tenderers can tender at a percentage above or below prices or at par? Yes. That has been in force for years. I do not claim any originality in respect of the system itself. The originality lay in the application of the system to public works. That had never been done before. I got the Water and Sewerage Board to take the same course.

17417. They had been doing so before, had they not? Not on sewerage contracts.

17418. But on water contracts? I do not know about those.

We had Mr. Smail's evidence that the system had been adopted for years previously in connection with water-pipe contracts.

*His Honor*: The general idea was not new; there is no doubt about that.

*Mr. Parkes*: Mr. Hickson also replied to some questions by your Honor with reference to the same matter. The evidence will be found upon page 50:—

1796. You concluded, therefore, that the fairest plan would be to take off an estimate of each item, and to let the contractors tender at, above, or below, it at a fixed ratio? Yes. I think that is the proper way to do the work, though, of course, none of the contractors liked the change.

1797. It was a new idea so far as your experience goes;—it had not been adopted in the other Colonies? I do not know of any place where it had been adopted before. As a matter of fact, I know that it is not adopted in the Railway Department in this Colony.

I merely point this out to show that unless documentary evidence is produced, showing clearly when the change did take place, the assurance ought not to be accepted merely upon evidence of that description. We ought not to have merely word-of-mouth evidence in a matter of this kind. Another thing I wish to point out is that, as a matter of fact, if Cook and Webb's tender was not the first tender which was accepted under the changed system, then the first tender which was accepted would be a genuine contract for sewerage work—work of a definite nature. I refer to Mr. McSweeney's Contract 112. The tender for that work was not accepted until the commencement of 1895. In point of fact, the reason why the change in the system was made was that public comment, as well as comment in the office, was very severe in regard to the nature of the tenders sent in for Contracts 69 and 79. No doubt an item like that of £50 per square yard for bluestone pitchers is calculated to cause considerable comment among the officers of the department. Naturally, it would be shown to Mr. Bagge, and he would show the item to his superior officer. We have it in evidence from various witnesses that considerable comment was made upon this particular item, and there must also have been considerable comment on the part of the public outside, and particularly among the contracting body. I come now to the statement that it is impossible to alter these contracts when they have been signed—for the Engineer-in-Chief to avail himself of a clause in the specification giving him power to make alterations. Mr. Darley, in his evidence, admits that he interviewed Messrs. Carter & Co., in order to induce them to agree to an alteration in a schedule which had been put in in connection with the Long Cove contract. In that case there was a mistake made in the department by putting down "cwts." for "tons," at a cost of £8. Mr. Darley saw the error and pointed it out to the contractors, who agreed that a mistake had been made, and that the amount ought not to be paid. I should like to know why Mr. Hickson should not have followed a similar course in regard to Contract 69. Surely if the practice held good in one case it would hold good in the other. Had we not Mr. Gilliver's evidence as to the manner in which he was treated in connection with the Rookwood contract. A bridge was to have been built in conjunction with the sewer there. He had a very fair figure for the work, but the bridge was cut out of the contract under clauses 16 and 17 of the specification, which had so often been referred to during the evidence. Mr. Hickson said that there was no parallel between the two cases. He says:—

17154. You heard the evidence of Mr. Gilliver about the cutting out of a bridge on one of his contracts? I read it.

17155.

17155. I think the effect of his evidence was that you ought to have dealt with this item of bluestone pitchers in connection with Contract 69 in just the same way that you dealt with his bridge? That apparently is what he thought.

17156. Will you explain in what way the cases are not parallel? They are totally different cases. First of all, I should tell you that the bridge ought not to have been put in. It was a mistake, and it was left out, not because it was a bad-paying or a good-paying item. I do not know whether the contractors would have lost or made anything upon it, but it was left out because, in my opinion, it was a work which ought not to have been charged to the ratepayers of Sydney. It was not required for the pipe line. All that we required was what we put in at the time—a trestle bridge. As regards a traffic bridge, I maintain that it would have been unfair to charge the ratepayers of the whole suburban area with the cost of such a bridge, which was required only for local purposes. As to the pitching, it was specified for, and the work had to be carried out. I certainly should not have been justified in taking it out because it happened to be a big paying item, unless at the same time I had been prepared to increase some of the low-paying items, which would have been a most dangerous thing to do.

When the bridge was taken out of Mr. Gilliver's contract, there was nothing said about increasing any of the lower priced items in order to admit of that being done; but it seemed that, in the opinion of Mr. Hickson, the building of the bridge was not justifiable, although it was included in the contract, and, entertaining that opinion, he availed himself of the power which he conceived he had under the contract, to cut the thing out. The same argument holds good with regard to the bluestone pitchers. It was equally patent that the ratepayers of Sydney should not be called upon to pay the enormous cost of £50 per square yard for bluestone pitchers. It is an absolutely parallel case. There can be no quibble as to that. There might have been, as Mr. Davis has suggested, and quite properly so, a substitution of special bluestone concrete. Mr. Gilliver, in his evidence, gave an instance where, on the Parramatta Road, bluestone concrete had been used for this purpose. It was used, moreover, in a place where there was pretty heavy vehicular traffic. Why, then, could bluestone concrete not be used in the case of a road like the Illawarra Road. If Mr. Hickson could take the course he did in connection with Mr. Gilliver's contract, there is no reason why he could not have taken a similar course in regard to Contract 69. I cannot see that, in his explanation, he has satisfied the Commission that there is any difference between the two cases. If the argument holds good that a contract, when it has been once signed, cannot be varied, whatever reason there may be for the variation, then Mr. Gilliver was absolutely right in insisting that the bridge in the case of this contract should be built. If Mr. Carter was absolutely right in insisting that he should receive £50 a yard for bluestone pitchers, then Mr. Gilliver was absolutely right in insisting on the building of the bridge. With regard to this question of variation of contracts, I would like to call your Honor's attention to Mr. Smail's evidence, which appears upon pages 400 and 415. The evidence at those two points reads very strangely. Upon page 400 Mr. Smail gave this evidence :—

13000. Have the correspondence or minutes between yourself and the Board been kept? There was just one report, which I forwarded to the Board.

13001. Did you originate that report? Certainly.

13002. It came from you alone? Yes. Of course the district officers may have drawn my attention to the matter.

13003. But it emanated in your office? Yes.

13004. Would you have the papers in the matter? Yes; I daresay they could be produced.

13005. And your report? I presume so.

13006. Then as a matter of fact you did not get instructions from the Public Works Department that you were to carry out this new system? No.

13007. You are the sole originator of it? I was not the sole originator. I was simply copying the practice which we had had in the Water Branch in the laying of mains by contract. The items there were comparatively few, but it was considered that we might apply the same system to larger contracts.

13008. How long had you been using the system? It had been in use in the Water Branch for three or four years before I introduced it into the Sewerage Branch. It was not a new thing, and I do not claim any originality for it.

13009. Who was in charge of the Water Branch? Mr. Trevor Jones. I succeeded him. He was at that time engineer for water, while I was engineer for sewerage.

13010. Had he used it for some time as engineer for water? I think so. The prices were fixed for rock and soil, or whatever the item might be, and the contractors had to tender at par or above or below those prices.

That

That was very emphatic evidence ; but Mr. Smail, in giving evidence further on, said :—

There is one matter I should like to mention. Mr. Davis asked me a question as to a certain contract, and I was misled as to the date. In that respect I should like to amend my evidence. Mr. Davis alluded to Cook and Webb's contract. The copy which misled me showed that the date of letting was 28th March, 1895, whereas, as a matter of fact, it should have been 1894 ; so that the Government Construction Branch certainly got the first contract out under the new system. Our first contract under that system was not let until some time afterwards. I should like, also, to mention that Mr. Hickson, being a member of the Board and also Engineer-in-Chief for Construction, this matter was discussed by him and by me for some time. He had noticed in his department, as I had in mine, that this manipulating of schedules was going on, and as I mentioned in my evidence the other day, we tried to check it. I claim no originality for the new system.

13339. It had been in vogue for some time in your Water Branch, had it not? As a matter of fact, the Water Branch had carried out the system since 1888 in small contracts.

The inference is that Mr. Smail must have been interviewed between the first occasion upon which he gave evidence and the second occasion. It appears to me to be very curious evidence, in conjunction with Mr. Hickson's subsequent statement to your Honor, and Mr. Davis's memorandum as to the time the contract was started and the time at which he found the item of £50 included in the schedule. It is almost certain, I submit, that that contract of Cook and Webb's could not have been the contract which was first taken up under the new system. I believe, from evidence produced, it will be seen that the first contract taken up under the new system was McSweeney's Contract No. 112. I have already pointed out that Mr. McCredie and Mr. Thompson went into the question of the arrangement of the schedule of Contract 79, and their report has been placed before your Honor. Mr. Thompson, who is an able quantity surveyor, carefully analysed the quantities in connection with all the tenders which were submitted in Contract 69. A very curious thing occurred in connection with the sheet of contracts, which appears in the Parliamentary return commencing at page 67, and that is, that Mr. Hickson must have perused, at an early date, these tenders. If you take the schedule of Carter & Co., on page 78, you will see that, in respect of items 74 to 77, Mr. Hickson—he has admitted in his evidence that it was his handwriting—wrote a correction to the effect that the rates quoted were “shillings” per “cwt.,” not “pounds,” the correction being initialed by Messrs. Carter, Gummow, & Co. That shows pretty clearly that he must himself have perused the items in the schedule. He must have done so in order to make that alteration. I was about to point out that Mr. Thompson has gone into an analysis of the cost of this contract, supposing it to have been worked out ultimately upon the schedule given to Carter & Co., and taking the prices put in by the various tenderers. Mr. Thompson proves by his analysis that Mr. Ahearn's tender would have been considerably the best one for the department to accept. Your Honor will find Mr. Thompson's evidence upon page 374. He handed in with his evidence a very carefully prepared statement, showing that Ahearn's tender would have worked out at £6,317 less than the amount disclosed by the final payment made to Carter, Gummow, & Co., and also that MacKenzie's would have worked out at a less price than that of Carter, Gummow, & Co. It was shown that the items selected for Carter & Co., if tendered upon by these various contractors, would have greatly reduced their tenders. It was shown that, although Carter & Co.'s tender looked to be the cheapest at the commencement, they were allowed to so fix their schedules that they received thousands of pounds more upon the work than they were entitled to receive. It is necessary to look into the schedule to see of what a curious nature it is. The Government schedule will be found upon page 62 of the Parliamentary Returns. Take Item No. 2, “Excavation in Hard Shale, Rock, 1,165 yards.” Three different items of excavation are given at the same probable quantity. Items Nos. 6, 7, and 8, also deal with excavation, and contain the same probable quantity, viz., 1,140 cubic yards. Then, Items 9, 10, and 11, are in exactly the same position, the probable quantity being in each case 1,850 yards. It is quite evident from the regular recurrence of these figures that no effort was made to arrive at any data for the excavation. The result of framing schedules with quantities like these is that 9,780 yards is put in for tunnel excavation when, as a matter of fact, the department could have seen from the bores, imperfectly taken though they were, that they would have to use timber and to increase the excavation, and that it would come out more like the amount at which it ultimately did come out, viz., 14,500 cubic yards, when the work was completed. It is evident that a schedule prepared in that way is an invitation to contractors to rig their schedules with the object of getting the best of the Government. Plans were made and bores were taken to a certain depth. Why could not these have been taken to the proper depths? Why could not the department have prepared a complete plan, showing the nature of the borings taken, or, at all events, sufficient of them to show the description of the ground, at the same time preparing a schedule upon the estimate thus formed? But there was no proper estimate. There was a certain guide given, it is true, but a few hundred yards more or less does not seem to have mattered very much so far as the department was concerned.

*His*

*His Honor* : I will call your attention to one thing, as it is a point which might be utilised if there were a right of reply to your address, Mr. Parkes, and that is, that these schedules were, in point of fact, actually prepared by Mr. Bagge.

*Mr. Davis* : There is another thing I should like to mention. Mr. Parkes said that in regard to several of the items the same quantities were used, the materials being different. As a matter of fact, the material in the cases to which he referred is the same. That is only a different mode of taking out the same material. Mr. Parkes made that observation apply to Items 2, 3, and 4, but the same thing applies to what he said in regard to Items 9, 10, and 11.

*His Honor* : That appears to be so on the face of the schedule.

*Mr. Parkes* : Mr. Bagge, as a matter of fact, did not make out the schedules. He merely perused them. They were made out by officers of his department. Various witnesses have described to your Honor the manner in which the schedules were made out.

*His Honor* : Mr. Bagge said, I think, that he went into the matter, and that he consulted Mr. Davis as to the prices. Of course, he would not take out the quantities himself.

*Mr. Parkes*.] Let me refer your Honor to Mr. Bagge's evidence :—

13098. *Mr. Parkes* : Were you in the habit of making up all the schedules for sewerage contracts before you left the department? I made up all the schedules from No. 3 Contract.

13099. Did you prepare the schedules yourself, or were they prepared by the officers of your department? I generally prepared the schedules myself; but the quantities were taken out by a regular staff. I used to inspect the quantities.

13100. Who put in the prices? They were put in virtually by all of us. For instance, I looked to Mr. Davis to inform me carefully of what changes had taken place in connection with outside work, because I had nothing to do with that. Then we had a consultation about the prices in vogue at the time, and the schedule was drawn up accordingly.

13101. In connection with which contract was that? That applies to all contracts. As each contract came out we had a consultation, because the prices were constantly altered.

You will see that Mr. Bagge says that he simply revised the quantities; that he did not absolutely take them out himself. I contend that there is no justification for the submitting of quantities in this fashion. It is offering an invitation to contractors to fix their schedules, as it will be seen Carter & Co. fixed theirs, without apparently going into any quantities—that is to say, they arrived at an average, and met the department in that way. Mr. Davis has laid before the Commission a memorandum dealing with this matter, which appears upon page 499 of the printed evidence. He has gone to considerable trouble to show that subducts, although put into Carter & Co.'s tender at 1d. per yard, were really costing 12s. 2d. I do not think your Honor will look upon the explanation contained in Mr. Davis' memorandum as being in any way satisfactory. It requires a great stretch of imagination to believe that Carter & Co., if they carried out these subducts, would be paid for them at the rate of 12s. 2d. According to the specification the subducts are supposed to contain certain work—that is, the piping, the casing, and the packing. There can be no mistake about that part of the specification. The rock excavation would have to be done at the cost of the contractors, because there is a clause in the specification which says that if powder is used there shall be a margin given upon excavation of any kind in the contract, and that that shall be 4 inches. They could not possibly have taken the value to be more than one-half included in the item of excavation. It is simply absurd. If your Honor will look at the quantities you will see that the department gives estimates for subducts in hard rock at 6 inches internal diameter, 4s.; 9 inches internal diameter, 6s.; 6 inches internal diameter, 7s.; 9 inches internal diameter, 8s. Now, if it were intended that there should be included in that item piping only, why should the department itself put in these extravagant prices when piping is worth at the very most only, when laid, 2s. a foot. Then you must take the excavation. But what would it take to imbed a 6-inch or 9-inch drain-pipe per lineal yard? 3 cubic feet would go to every yard, and there would therefore be 27 feet run to make up that measurement. The contention of Mr. Davis, therefore, is absolutely absurd. The truth is that this item was intended to include the whole of the subducts, and the argument as to the 12s. 2d. is fallacious, the supposition being simply put forward in order to make this catch business of Carter & Co. appear less glaring. If subducts were not to be used in the contract, why put them in? It has been proved in the evidence that subducts were really used, and if there was any contract in the neighbourhood of the city of Sydney requiring subducts it would have been Contract 69, because it traversed a low bed adjoining Botany Bay, very little above sea level, and it might be anticipated that water would come in pretty freely. Carter & Co. are the only persons out of the whole eleven contractors for these works who could venture to put in such a sum of money for subducts. They must have known, absolutely, that they would receive consideration from the department before they would dare to risk that item. As I say, the amount is not included

included in their excavation, and that argument was simply put forward to make the item appear less glaring than it really is. Supposing there was a certain amount of excavation to be added, it would only be about 3 feet, which would be a small proportion, and instead of representing anything like 12s. 2d., it would represent only about 3s. 1d.

His Honor, at 1.5 p.m., adjourned the inquiry until 10 a.m. on Friday, October 9th.

C. E. R. MURRAY,  
Commissioner.

FRIDAY, 9 OCTOBER, 1896.

His Honor, the Commissioner, sat at the Board-room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. Ernest Smith (appearing for Mr. Hickson); Mr. Carter, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising), attended.

Mr. J. Davis, Engineer for Sewerage, and Mr. Norrie, bond clerk, also attended.

*His Honor* : As there has been no cross-examination of any officer of the department upon the question of the cost of subducts, and as I have not yet found time to look up the matter myself, I intend to ask for some explanation as to how the different items have been arrived at by Mr. Davis. I think it would be fairer to you, Mr. Parkes, to ask Mr. Davis to make the explanation now before you resume your address, than to ask him to make it at a later stage when your address has been concluded, unless, of course, you prefer that the explanation should stand over.

*Mr. Parkes* : I do not see that there is much upon which Mr. Davis can be asked any questions.

*His Honor* : You, yourself, Mr. Parkes, did not cross-examine him as to how he arrived at his items for subducts.

*Mr. Parkes* : It has been very clearly explained, I think.

*His Honor* : Mr. Davis gave the amount, I think, but he did not explain how the items were made up.

*Mr. Parkes* : Mr. Hickson gave a description of the matter in his evidence.

*His Honor* : I am aware of that, but Mr. Davis gave certain amounts and you did not cross-examine him upon them.

*Mr. Parkes* : I thought the matter was so definitely stated that Mr. Davis would be only likely to repeat what is already in evidence.

*His Honor* : No particulars were given by Mr. Davis as to how he made up the amounts. I intend to ask him to explain that matter, and I thought of doing so now in fairness to you, Mr. Parkes.

Joseph Davis was recalled and further examined.

*His Honor* : I will now call upon you, Mr. Parkes, to resume your address.

*Mr. Parkes* : The explanation which Mr. Davis has given this morning in regard to the item of subducts does not very much affect what I said to your Honor yesterday, because, after all, what was contained in the specification no doubt was the foundation of the estimate in the departmental schedule, the prices given being from 5s. to 8s. Carter & Co. put down 1d. and the other contractors did not do anything of the sort. If the department add 12s. 1d. for excavation it, of course, makes up the amount, but it does seem to be a monstrous sum for the excavation required—that is, half a yard for the running yard of subduct. If the amount were to be made up the excavation would have to be very large and would be perfectly unnecessary for the purpose. When the inquiry was adjourned yesterday I was dealing with the schedules of Contracts 69 and 79. Mr. Barling, it will be remembered, gave some evidence with regard to the item of £50 a yard for bluestone pitchers in Carter & Co.'s tender in Contract 69. He gave the following evidence in reference to that item:—

13944. You depend for everything of that kind upon the heads of the branches of the department? Undoubtedly.

13945. *His Honor*.] The question is whether, if your attention had been called by one of the heads of the department to this particular item, you would have agreed to the acceptance of the tender? If my attention had been directed to it as a member of the Board of Reference, then, of course, exception would have been taken to the tender.

13946. And the Tender Board would then have gone into the question? Undoubtedly.

Now, my contention has been that Mr. Hickson was shown this particular item by Mr. Bagge. It is pretty clear, from Mr. Bagge's own evidence, and from the surrounding circumstances, that that must have been so—that is, if Mr. Davis and Mr. Hickson are correct in saying that Cook and Webb's contract was the first contract under the new system, and after they had seen the stage to which the rigging of schedules had arrived in the case of Contract 69. There is another circumstance which somewhat upholds Mr. Bagge's testimony as being correct, and that is, that in the Parliamentary papers, on page 305, there will be found a minute written by Mr. Bagge in the early stages of Carter & Co.'s contract at North

Shore, in which he said that Carter & Co. had undoubtedly fixed their prices speculatively to increase their profits on the contract as much as possible to the loss of the department. It has been proved from the evidence that what Mr. Bagge alleges really did take place—that, as he points out, Carter & Co.'s tender for No. 79 was so arranged that the most extravagant prices were put into the first part of the contract. I would point out that even the new specification, or, indeed, any specification, would be of very little effect if there be not perfect data, or data as nearly perfect as possible, put down in the Government schedule and in the Government plan upon which tenders are invited for these works. The old system, supposing definite information were given, would be equally good. It is a system which has been used all over the world, and no doubt it has been used with such effect as we have seen exhibited in the schedules of Contracts 79 and 69, where proper information has not been afforded to contractors. If proper information had been afforded to them in the case of Contract 69—and it could easily have been obtained—no doubt there would have been no opportunity for the rigging of the schedule in the manner in which Carter & Co. rigged it. But, after it was discovered that the schedule had been rigged in this manner, can it be said that it was not the duty of the Government officers to save the country against the ultimate effects of the carrying out of the contracts under such a schedule. I should like to point out that unless proper information and proper prices be given by the department, even under the new schedules, the country will probably have to pay through the nose. Look at the varying nature of the schedules which were submitted in the cases of Contracts 77, 117, and 112—the whole of them being schedules under the new system. Mr. Thompson, in his evidence upon page 117, clearly points out the varying nature of these schedules. He gave this evidence:—

4339. Before we go any further into these figures, I want you to look at the tender forms of Contracts 112, 101, and 77;—what, for instance, is the price set down for bluestone concrete, in the ordinary form, in the case of No. 77? £2 10s. a yard is set down for bluestone concrete in any situation.

4340. What is it in the case of 101? 34s.

4341. In the case of 112, what is the price? £2 5s.

4342. So that the price in the case of 77 exceeds the other two, does it not? Yes.

4343. What is the price set down for special bluestone concrete in the case of No. 77;—I mean the schedule to the original plan? £3.

4344. What is the price of special bluestone concrete per yard in the case of 112? £2 15s., including the placing in position, the mastic plates and bars, &c.

4345. What is the price in the case of 77;—it is £3 without any iron, is it not? Yes.

4346. The material is of the same nature, as far as you can see? I think it is rather better in the case of 112, because it is 1, 1½, and 3.

4347. You mean better than in the case of 77? Yes.

4348. And yet it is set down at £2 15s.? Yes.

4349. Including all the ironwork? Yes.

It will be seen that in one case special bluestone concrete—7, 3, and 2—was put down at £3, and in the case of Contract 112 an extra special quality of bluestone concrete, including ironwork, 3½, 1½, and 1, was put down at £2 15s. Item No. 10 in the schedule of Contract 112 is for special bluestone concrete, as specified in clauses 2, 7, and 8, the price being £2 15s. In the case of Contract 77 the specification provides for special bluestone concrete for the inner lining of the sewer at £3. With reference to No. 112, Mr. Thomson gave this evidence:—

4350. *His Honor.*] What is the composition of the special bluestone concrete in the case of No. 112? One of cement, one and a half of sand, and three of ¾-inch blue metal.

4351. *Mr. Parkes.*] Yet, including the ironwork, it is put down at 55s., as against 60s. in the case of Contract 77? Yes.

Let me now refer your Honor to the specification of Contract 117. It was referred to in Mr. Gilliver's evidence upon page 136. He was there asked some questions with reference to Contracts 77 and 117:—

5053. Coming to Contract No. 77, I believe you are carrying out the adjoining contract? Yes.

5054. In Contract No. 117 you are paid at the rate of 28s. per cubic yard for excavations in rock where charges of powder not exceeding 4 inches in length are allowed? Yes,—less 9 per cent.

5055. That is your actual payment? Yes.

5056. Will that price pay you? I hope so.

5057. Do you think it will? Yes.

5058. You are satisfied with it? Yes. I expect to make 12 per cent. out of it.

5059. Is there any difference as regards the solid rock to be excavated where 4-inch charges of powder are allowed as between Carter, Gummow, & Co.'s job and yours? No; it is all about one class of ground. If anything, they have a bit the best of it, because they have a bigger tunnel than we have, and the bigger the tunnel the lower the price at which it can be taken out.

5060. Have you any excavation in your contract where guttering and gadding only are permitted? Yes.

5061. What is the rate at which you are being paid? £1 15s. per cubic yard, less 9 per cent. The price in Contract 77 is £3 15s.
5062. *His Honor.*] Your contract is No. 117? Yes.
5063. And it follows on from No. 77? Yes; we junction with Carter, Gummow, & Co.'s job midway in the hill.
5064. On the north-west side of White's Creek? Yes.
5065. *Mr. Parkes.*] Let us now take bluestone concrete in any situation—what are you being paid for that? I think the Government price is £2 per cubic yard.
5066. What is the price in Contract 77 for bluestone concrete in any situation? £2 10s.
5067. Do you think £2 will pay you? Yes.
5068. Will it pay you well? I expect to make from 10 to 15 per cent. upon the whole contract.
5069. Taking the whole of the prices, as far as you can recollect them, in the case of Contract 77, they represent a great increase upon the prices in Contract 117, do they not? Yes; in some cases they are 100 per cent. higher.
5070. And the nature of the work is not different? No; it is the same. Their drive, however, is a little larger than ours, and they have a slight pull upon us in that respect.

It will be seen that the schedules vary in prices, although the same class of material, and practically for the same class of work. Unless some definite data be given it will be impossible to prevent contractors from speculating upon one price more than upon another. It will, in fact, be impossible to regulate the matter at all under any form of schedule unless proper and definite information is given to the contractors. Take the case of Contract 69. If proper care had been exercised, and if proper information had been given, the work would have turned out all right both to the office and to Messrs. Carter & Co., and not exclusively to the benefit of Carter Gummow, & Co. I come now to Contract 79A. That is another contract which is let without tender. As your Honor is aware, it was let through Mr. Carter's approaching Mr. Lyne in company with Mr. E. M. Clark, the Member for St. Leonards. Mr. Hickson wrote a minute in which he pointed out to Mr. Lyne that the contract could be carried out at a much less cost than that set down in the Government schedule, if the work were put up to tender. The contract, however, was let to Messrs. Carter, Gummow, & Co., without tender, and upon departmental schedule prices. We have no papers showing the nature of the transaction in connection with this contract. Whether such papers existed or not it is hard to tell, but such papers as have been asked for by the Commission it has been often impossible to obtain. There must have been some papers in connection with the matter, because Mr. Barling in his evidence distinctly told your Honor that he was not consulted in connection with the contract at all, and that the minutes came to him as the first indication of what had been done in connection with it. Whether it was another case of "While you remain in charge of the office the affairs of the country will go on well," or something of that description, it is hard to say. But there the matter stands. The fact remains that the contract was let to this firm, and there is no documentary evidence to show how it was let. At any rate it was let greatly to the advantage of Carter & Co., without any effort at public tendering, to ascertain what was the true cost of the work. A parallel case has been drawn by the department in the extension given to Mr. Gilliver, and two or three other cases in which contracts have been let without tendering. Let me point out the difference in these cases. In the case of Gilliver's contract the extension was let on his own prices, arrived at by an exacting competition upon the original contract. Moreover, it was a similar class of work. In the case of Contract 79A the contract was let, not after competition upon a similar class of work, but after a competition upon a very much more expensive work. It was also let upon the schedule of the department taken out for this reduced class of work upon an entirely different description of contract. There is no parallel between the two cases, and there can be no doubt that whoever may have been at fault the contract ought, in the interests of the public, to have been tendered for. No special effort seems to have been exerted by the Engineer-in-Chief, Mr. Hickson, to impress upon Mr. Lyne that great benefit would have been derived by the public if the contract were put up to open competition. According to Mr. Barling, Mr. Hickson had interviews with Mr. Lyne without Mr. Barling's being in any way informed of the nature of them, the matter being finally settled between Mr. Lyne, Mr. Hickson, Mr. Carter, and Mr. E. M. Clark. There is no evidence to show in what way the matter was finally settled, and I suppose it will have to remain without any further evidence being tendered. As to the advances which have been made upon material, I included that matter in my charges because I consider that special facilities were given to Messrs. Carter, Gummow, & Co., which were not given to other contractors. No case of similar treatment has been placed before the Commission by the department. In the first place, the State is not supposed to be a lender of money. The State is not supposed to be an institution for the financing of contractors. When a public department like the Works Department calls for public tenders it sets out a specification showing certain responsibilities which will be put upon the contractors' shoulders. Upon that specification and the conditions it contains, the contractors tender and enter into an agreement with the Crown. The conditions are inserted for one purpose only, that being to safeguard the public interests. They are clearly set forth in the specification. If your Honor will turn to

to Mr. Christie's evidence upon page 295, you will see that it is clearly defined what is required to be held in hand by the officers of the Department in order to secure the Government against accident in connection with the contract. In the first place, the material is placed upon the site, and there is a clause put into the specification to prevent the removal of the material, because that material becomes part and parcel of the security for the contract; and, although that clause has been referred to in evidence as a clause inserted with the object of allowing advances to be made upon material, I contend, your Honor, that the purport of it is absolutely to afford security for the proper carrying out of the contract, in order that, in case of accident, there may be no delay or loss of money to the State through the coming in of another contractor to carry out the work in the event of the first contractor's becoming insolvent. I will direct your Honor's attention to clause 14 of the specification, which appears upon page 294 of the printed evidence. The first section of the clause is in these terms:—

All approved materials, plant, and prepared work, brought upon the ground for use in or on the works shall be considered, and shall be, the property of Her Majesty the Queen until completion of contract; and contractor shall not take away, remove, or dispose of, any such material or plant or prepared work without the written authority of the Superintending Officer.

I contend that that clause is simply inserted as one of the safeguards of the contract. It is not inserted with any intention that material shall be advanced upon. The plant only temporarily becomes the property of the Crown, for the simple reason that, during the carrying out of the contract, it might be very awkward if the contractors had the right to remove it from the site in the event of any accidents occurring. This brings me to the question of the cash bond. What would be the object of taking a cash deposit for the due completion of the work, otherwise than with the object of holding it throughout the term of maintenance, for the purpose of remedying any defects arising from scamped work which might be discovered after the contract had been completed? The object of taking the bond is to keep the contractors to their work—to make them do proper work. If the bond is returned before the date upon which the contract is finally taken over, then instantly the security is gone, and there would be no reason whatever for providing for it in the specification. The contract might just as well have gone ahead without any bond at all for its due and proper performance, unless the bond money be kept, as the specification distinctly provides, until the term of maintenance has expired, and the work is proved to be thoroughly satisfactory. I intend, later on, to refer to a memorandum of Mr. Davis's with reference to the return of the money in connection with Contract 79. I come now to the retention money. There is no doubt that, as the works proceed, it would be fair to allow for the return of a certain amount of the retention money; but it would not be fair, in the interests of the State, to allow retention money to be returned when payments were being made, or when advances on material were being made, which exceeded the real value of the work and of the material on the job at that particular time, as will be seen to have been the case in that portion of Mr. Christie's evidence in which he draws certain conclusions as to the state of Carter & Co.'s contracts at certain periods. If, upon a given contract, these three concessions are extended to contractors in connection with the cash deposit, retention money, and advances on material, what possible security has the State over the contractors for the due and proper fulfilment of that contract? Let me point out the difference between Carter, Gummow, & Co.'s Contract 79, and the cases quoted by Mr. Davis upon page 502. Mr. Davis there says:—

Fixed deposits were frequently returned to contractors prior to the expiration of the maintenance period—so often, in fact, that the clerk in charge of bonds and contracts had a form struck off to meet such cases; but every case was considered on its own merits. I attach a list hereto, showing some instances in which this practice has been followed.

Mr. Davis has been careful to put the matter in this way: "Fixed deposits were frequently returned to contractors prior to the expiration of the maintenance period." In the case of Carter, Gummow, & Co., however, the facts are these. If your Honor refers to page 333 of the Parliamentary return, you will find the following letter from Mr. Boys:—

*Subject:—State of Contract 79.*  
Department of Public Works, Roads and Bridges and Sewerage Branch,  
North Sydney, 29 November, 1894.

I BEG to report that this contract is complete, with the exception of two sets of bluestone pitchers—one set for shaft No. 4, Ernest-street; one set for shaft No. 4A, Ernest-street. These two sets were ordered, but were delivered on the Marrickville contract in error.

Two off-let valves were on, but, as the valves are made of timber, they swelled, and I had them taken off to be eased and the worm gear cleaned.

The contractors are replacing these to-day, and I will inspect this work when finished.

I think it would have been better for the Department to have put this gear back when the sewer is in use, as I am certain that it will get very rusted if left unused for long.

A little rock excavation has to be done at the outlet at Long Bay. The contractors are doing this.

The work in this contract, generally, has been faithfully carried out, and is, I think, a credit to everyone concerned.

Attached is the certificate of the satisfactory condition of the streets, from the Borough Council, North Sydney.

The maintenance time for this work expires 10th October, 1894.

J. W. T. BOYS.  
That

That is under date of 29th November. It is a report notifying the completion of the contract; but the date on which the cash deposit was returned to Carter, Gummow, & Co., was the 19th June previous. It will be seen from page 328 of the Parliamentary return, that on 19th June Mr. Barling wrote the following letter:—

Gentlemen,

Department of Public Works, Sydney, 19 June, 1894.

I am directed to inform you that the Secretary for Public Works has approved of the return to you of the Bank fixed deposit receipt for £2,000, held as security for the due performance of your contract for the construction of the main outfall sewer, North Sydney, on condition that you lodge security to the extent of £650, in respect of the works in extension of the contract referred to.

I have, &c.,

J. BARLING,

(*Per* D.C.M'L.),

Under Secretary.

Now, £650 had been already lodged upon an entirely different contract. It had been lodged upon Contract 79A just about that time; so that, practically, by the return of that cash deposit, which was recommended by Mr. Hickson on the 13th June, 1894, six days before the date of the Under Secretary's letter, supposing any portion of Contract 79 had collapsed, or anything had gone wrong with it, there would have been nothing upon which the Government could come with which to remedy the state of the works. What is object of taking a bond at all, if the money is to be returned in that manner? As to the retention money, it will be seen from Mr. Christie's evidence that it was returned in such a manner as to leave very little upon the contract—I think it was a matter of some £220 over and above the money which was paid upon the voucher. At all events there was very little money left with which to complete the contract in case anything had occurred to jeopardise the interests of the State. I would point out that the specification says most distinctly that advances "may" be made. I do not pretend to have any legal knowledge or experience, but I submit that the bond which appears upon page 71 is really useless. It gives the Minister the right to make advances at a certain percentage to these contractors upon their material. Now this is not a bill of sale. It is only an undertaking to give a bill of sale upon this material supposing the material is not on the premises—that is, away upon some private property, as was shown to be the case upon one of these contracts. Then it might at any time be seized by the creditors of the contractor and removed. I do not think the State would have any control over that material upon a mere agreement of that sort executed with the contractors. The advances were made, not at the rate of 75 per cent.—for, if your Honor refers to Mr. Christie's evidence upon page 296, you will see that advances were made upon cement at the rate of 16s. per cask, purchase value. Cement at that time, as the Department must have known—being acquainted with the market,—was only at the value of from 11s. to 12s. There was therefore, no justification for the making of advances upon it at the rate of 16s. They took the schedule, and Carter, Gummow, & Co. were asked to put down a price for some odd casks,—some casual casks, which they would have to deliver close to the time when the works were completed, or after they were practically completed. They put down these special casks at the rate of 16s., and upon that the Government considered that they were bound to advance at the rate of 16s. That is totally absurd. They had no right under that agreement to advance more than 75 per cent. upon the actual market value of the material. I do not think the Department can show that in any other case they gave such a concession to other contractors as they have given to Carter, Gummow, & Co. The concessions practically amount to this—that they financed the firm right through their contracts. The Government are not called upon, as I pointed out in the first instance, to finance contractors. They are supposed to have contractors of sufficient credit and financial standing carrying out their works to obviate the necessity for any measures of that kind. Otherwise, the Department might just as well dispense with contractors and carry out their works themselves, finding their own labour, and financing matters right through. While dealing with this point, I should like to refer to the evidence of Mr. Gummow. He was called to show that a similar course had been adopted by the South Australian Government; but your Honor, on looking at his evidence, will see that he admitted that the South Australian Government did not return the cash deposit. He said that the firm received back a portion of the retention money there, but that the deposit of £5,000 had been retained to this day. It will be retained until the expiry of the term of maintenance—that is, until the Crown considers that sufficient time has elapsed to permit of their taking over the contract with safety. Prior to the advances being made in this Colony there can be no doubt there was no Ministerial sanction obtained. Mr. Davis has directed your Honor's attention to a minute by Mr. Bruce Smith. I may point out that in Mr. Christie's evidence, upon page 382, it is shown that an item of £1,000 was advanced out of the retention money upon the 23rd October, 1894, upon certificate No. 8—that is, in respect of Contract 69. There was at that period £23,159 worth of work to be completed upon the contract, showing that the Department were only too ready to return this retention money at a period when there was really no justification whatever for that step. There might be some justification for it towards the close of the contract, but there was certainly no justification when one half of the contract had to be completed. It might be pointed out that this was under a new system where the retention

retention money was not accumulating, but where it only arrived at the extent of the deposit. It was at that time limited, and there would therefore have been £1,000 less. In reference to this same contract, No. 69, it may be remembered by your Honor that two sureties were taken, Mr. Henty, of Parbury, Henty, & Co., and Mr. Scrutton, of Scrutton & Co. Mr. Davis wrote a minute, under date of 21st September, 1894, upon the following letter by Messrs. Carter & Co. to the Engineer-in-chief for Sewerage:—

Contract No. 69, Western Suburbs Sewerage.

Sir,

North Sydney, 20 September, 1894.

Having now completed a considerable portion of the above contract, for the performance of which your department hold security to the extent of about £6,800, being £4,500 as guaranteed by our sureties and £2,300 retention money for work already done, we have the honor to ask you to allow the payment to us of £1,000 from the latter amount, leaving £5,800 still remaining as security for the due fulfilment of the remaining portion of the work.

We would remind you that our sureties are two of the most reliable firms in the city, viz., Parbury, Henty, & Co., Pitt-street, and R. L. Scrutton & Co., Clarence-street; and also that the amount of security required had the contract been accepted in the ordinary way would not have exceeded £4,500.

We have, &c.,

CARTER, GUMMOW, & CO.

As a matter of fact, the securities were not the firms, but the individual members of the firms. In any case, the money was returned, and, although it is not admitted by the department, I have always been led to consider, in private practice, that if any infringement be made upon a contract, the bondsmen, if they have not been notified of the intention to make a payment or give concessions not provided for in the contract, are legally free of the bond into which they have entered. The question is not whether Mr. Henty and Mr. Scrutton would take a point like that. The point still exists, and I contend that in the case of a public contract such risks as are disclosed to have existed in this matter ought not to have existed. Unless these contractors were financially strong, they ought not to have had these concessions, and the very fact of their asking at such an early period for a return of the retention money ought to have satisfied the department that they ought to have looked more carefully into the way in which they were paying away money to them, so that the State might be in a perfectly safe position upon the final completion of the work. There is one matter with which I should like to deal at this stage, and that is the connection of Mr. Hickson, jun., with the firm of Carter, Gummow, & Co. Originally, from information which I received, I felt convinced that young Mr. Hickson was a member of the firm. Of course the evidence which has come before the Committee has shown distinctly that he was not a member of the firm. At the same time the evidence tendered reads very curiously, and I intend to place before your Honor, grouped together, the testimony of various witnesses upon this point. Let us take, first of all, the evidence of Mr. Ewing:—

3280. Sometime in June, 1895, I believe you had a conversation with Mr. Carter near the Bank of New Zealand? Yes.

3281. What did Mr. Carter tell you? Mr. Maddison asked Mr. Carter if it were true that Mr. Hickson, jun., had been engaged by the firm, and Mr. Carter said "Yes." Mr. Hickson, he said, wanted to join the firm, but he had told him that he had better wait two or three years.

3282. Join in what capacity, or how? Mr. Carter simply said that Mr. Hickson wanted to join the firm, but that he could not do so for some years, although he would be taken on as an employee.

Mr. Maddison, when he came before your Honor, gave this evidence:—

3406. Will you tell His Honor what it was? It amounted to this—that Mr. Hickson, jun., had been retrenched out of the department, and that Mr. Hickson, sen., wished to find him employment of some sort, and had asked Mr. Carter if he could find anything for him to do, or whether they would take him in as a member of the firm. The reply which I understood Mr. Carter made to that request was that Mr. Hickson, jun., could not be taken into the firm within five or six years.

Then later on he said:—

3415. Later on Mr. Gillan, one of the members of the partnership, came up to Sydney from Adelaide, did he not? Yes; some considerable time afterwards.

3416. And you, in company with Mr. Ewing, had a conversation with him? Yes; we were talking about things in general.

3417. What did he say? He said he had seen a wire which had come from Sydney to this effect—that Mr. Hickson, sen., wanted his son taken into the firm.

3418. Did that part of the conversation go any further? No.

I come now to Mr. Carter's evidence.

3914. As to the matter of Mr. Hickson, junr., becoming a partner, did you ever suggest that he was to become a partner? No.

3915.

3915. Did you ever hold out any encouragement to him to believe that he might one day become a partner? Not the slightest.

3916. Did you not, on the other hand, damp him, as it were,—instead of encouraging him, did you not rather discourage him? Certainly I did. As far as I can remember the matter only cropped up once between us conversationally, and then I sat upon him, as it were.

3917. *His Honor.*] When and where was that? During his trip here. When he was on his holidays I believe. He was always anxious to better himself, I presume. We had seven partners in the business, and I thought that quite enough.

Take now Mr. Gummow's evidence:—

4213. Between yourself and Mr. Hickson was there ever any conversation as to his becoming a member of the firm? Yes.

4214. Will you tell His Honor what it was and where it took place? I can tell you the first one we had on the subject. He was often staying at my house in Adelaide, sometimes for a few days, sometimes for a night, and sometimes for an hour or two. We often talked about business and about all sorts of subjects. I can tell you the last conversation we had upon the matter to which you refer; that took place at Forest Lodge. With regard to the other conversations, I always told him that I did not consider that there was any chance for a young fellow going into contracting either with our firm or with any other firm, and that if he could keep his position as an employee he would be far better off.

He also gave this evidence:—

4201. Was there ever any intention on the part of the firm of making him a member? Never; not on my part, anyway.

Then look at his reply to Question 4228:—

4228. But where did this particular conversation you are about to refer to take place? I cannot remember. The conversation upon each occasion was upon the same points,—that is, as to how his son was getting on, how he did his work, whether he looked well, and general questions of that sort which a father would naturally ask about his son. I remember that on one of these occasions I said to his father that I did not see much prospect of his son getting on in the outside world as a contractor.

What did Mr. Hickson, junr., himself say?

3576. You never had a conversation of any kind with them as to your becoming a partner in the firm? Not seriously; but such a lot of things are said which one cannot remember.

3577. You did not converse with any member of the firm about your being a member of it? No, never.

3578. You are positive of that? I am, on my oath.

Later on he said:—

3713. Did you receive any bonus from the firm? No.

3714. Did you get your expenses from the firm when you went to Adelaide? Going down and coming back I got my expenses.

3715. What did they amount to? About £15.

3716. Besides that £15, or thereabouts, did you ever get anything from the firm in addition to your salary? Not a penny that I can think of.

3717. Is it not a fact that when you went in to Adelaide on the firm's business you paid your own expenses, and never charged them to the firm? Frequently.

3718. How far were the works from Adelaide? Eighteen miles.

3719. Do you consider that the firm paid you a huge price for your expenses? I received none at all for going in to the city from the works.

3720. Were you a loser or a gainer from the visits you made to the city on behalf of the firm? I was decidedly a loser.

3721. *Mr. Smith.*] I think you told Mr. Parkes that you stayed with your father for several weeks when you came from Adelaide in July, 1895? Yes.

3722. Where did you go after that? To Forest Lodge.

3723. To lodgings? Yes.

3724. You were staying with your father then only while you were looking for lodgings? Yes.

3725. I think you said that when you were in the department you did not get anything above your pay? I received an allowance.

3726. What did it amount to? 2s. a day.

3727. *His Honor.*] What was that supposed to cover? It was a travelling allowance to cover train and tram fares.

3728. *Mr. Smith.*] I think you said your salary was £200 when you were in the department? Yes.

3729. *His Honor.*] When was your salary from the firm raised to £250? I cannot quite remember; but I think at Christmas, 1893.

3730. You say you never had any conversation with any member of the firm as to a partnership? No.

3731. Was any hint ever dropped, or any suggestion ever made, that you should enter into a partnership? Well, I suppose such a thing may have been mentioned, but there was never any agreement or any definite arrangement of any kind made.

3732. What sorts of hints or suggestions were made? I often expressed a wish, I believe, to become a member of the firm.

3733. And what would be said by the persons to whom you expressed such a wish? They never gave me any hope at all.

3734. The question was mooted only in a general way? Only in a general way.

3735. At what time would that be? I could not give you any idea.

3736. Was it soon after you went to Adelaide, or was it before you entered the service of the firm? I could not say. It was never really discussed at all.

3737. What I understand you to say is that a hint was dropped by you that it would be a good thing for you if you were to become a partner; is that it? I do not know how to put it. I never asked them to take me into the firm, and they never asked me to join it.

3738. Then in what sort of way was the matter mooted? I cannot exactly say. Nothing was mentioned concerning it with any degree of finality. No hope was held out to me that I should become a partner.

3739. But did you say to any member of the firm that you would like to become a partner? No; I think I never said that.

3740. Did you suggest that, as you were an expert, it might be to the advantage of the partnership that you should become a partner? No.

3741. But some hint of the kind was dropped, I understand? I thought I should be bettering myself if I could become a partner, but nothing of a definite character in any shape or form was ever said.

3742. What I want to arrive at is, what it was that was indefinitely said? I cannot remember.

3743. But whatever did occur occurred in South Australia? Yes. I saw Mr. Gummow privately just as often as I saw him officially, and we talked about various things—about other firms and matters of interest.

3744. And in the course of these conversations did you drop hints to him that you would like to be a partner of the firm? Yes; but in a purely private way.

I will now take some more passages in the evidence of Mr. Carter.

2919. *Mr. Parkes.*] Did you ever have any communication in any way, verbally or written, with Mr. Hickson, senr., concerning the appointment of his son? No.

3920. Had you not any at the time of his appointment? No.

Let me now refer your Honor to the evidence of Mr. Hickson, senr., upon page 562:—

I then went down to Mr. Lyne, the Minister; and he said the report had not come to him, but that if I had the least hesitation in my mind in regard to my son he would not allow it to go any further. I said I had made up my mind what I would do, and that I would adhere to my determination. The next morning my son came to me and said he had accepted an offer to go to Adelaide with Carter, Gummow, & Co. Mr. Carter happened to be in the office that morning, and I sent for him. I said "Is it true that you have a position for my son in Adelaide?" He said "Yes." I said "There is no mistake about it; you want someone?" He said his partner in Adelaide wanted an assistant, and that if he did not get this young man he would get someone else. He went on to state what he proposed to pay him. I stopped him at once, and I said "He is now your employee. You are offering to give him what he is worth, in your opinion, and it is nothing to me one way or the other."

It would appear, therefore, that a conversation really did take place, and the whole thing, as far as this matter is concerned, is wrapped in a considerable amount of mystery. Now I received certain information concerning young Mr. Hickson and his connection with the firm, and it would have been absolutely impossible for me to get at the truth or otherwise of that information without the most exacting inquiry.

I knew that well, and I asked Mr. Maddison and Mr. Ewing, the two gentlemen who gave me the first information upon which I spoke in the Legislative Assembly, to give me the best method of fixing, without any chance of challenge, the statements they made to me. Mr. Maddison said that he was very friendly with Mr. Gillan, and that he could get a copy of the telegram from him. He said that, if he could not get him to make a copy of the telegram, a copy could be got from the Telegraph Department. That I think I pointed out in my evidence. As far as this particular aspect of the case is concerned, it may be that future developments will throw more light upon it. But, looking at the matter in the light of the evidence which has come before the Commission, or all the evidence that I have been able to produce, I certainly have failed to show that young Mr. Hickson was a partner in the firm. But, even supposing he was a partner in the firm, perhaps it would not be fair to say that Mr. Hickson granted all the concessions which I contend he has granted to Messrs. Carter, Gummow, & Co., over and above the treatment which he has meted out to other contractors, simply from that cause. It has of course been established beyond doubt that young Mr. Hickson was taken into the firm of Carter, Gummow, & Co., as an employee at a time when they had really very little work except the Adelaide contract, where they had two partners who were properly qualified to look thoroughly after the firm's business. We have evidence also that young Mr. Hickson left the firm's employ—and on leaving it he was given three months' advance of salary—at a time when they were expecting to get further Government contracts and just prior to this inquiry. If the firm had not a great number of the Government contracts actually in hand, they had been tendering, no doubt. Tenders were constantly being called for for sewerage work, and there was plenty of money available for carrying it out. The firm, under these circumstances, might naturally have expected to get as much business as they had before. I intend, however, to strike out of my charges, if I can do so at this time, that portion of the clause in which I charged Mr. Hickson with making concessions to Carter, Gummow, & Co. on account of his son—that is, I will amend the clause by striking out the words “his son, George Hickson, being an interested party in the firm of Carter, Gummow, & Co.” I contend that great concessions have been given to this particular firm, but whether it was for that reason or not it would be almost impossible to produce evidence to show. It would not be fair, I think, having regard to the evidence which has been brought forward, for me to allow the portion of the clause to which I have referred to remain. I admit that the evidence in that connection is not strong enough, although I have read to your Honor certain portions which tend to throw a certain amount of mystery over the matter. I would ask your Honor to permit me to amend the clause in the way I have indicated.

*His Honor* : These charges, as you yourself contend, Mr. Parkes, do not bind you in any way to the proof of them ; nor do they limit the inquiry which the Commission has a right to make, because if it should appear that there was evidence to support anything which is not absolutely contained in these charges the Commission would still have to receive it and to inquire into the matter referred to. Therefore, although it is quite right that it should appear in the course of your address that you express the opinion you have expressed, it would only complicate matters unnecessarily, I think, to actually strike the words out of the charge now, because they would have to appear as part of the history of the case—as having at one time been formulated. It is not so much that charges have been made, I take it, as that your opinions have been formulated.

*Mr. Parkes* : I listened, your Honor, very attentively to that portion of Mr. Smith's address in which he charged me with acting with very slight and poor consideration in laying these charges. It is almost impossible to lay a charge without putting it in words which will mean that which you think the evidence will prove. I thought there was really something in Mr. Smith's remarks to the effect that there was an intention on my part to cause harm to Mr. Hickson by laying charges in the way I did. It is only a matter of sentiment, and I wished to eliminate the words to which I have referred purely on that ground.

*His Honor* : If you wish it, Mr. Parkes, a footnote could be added to the minutes showing that, at a certain date, you wished to withdraw the words to which you have referred.

*Mr. Parkes* : With reference to this matter I have said that future developments may bring forth the truth one way or the other, but it must be apparent to anyone, from the evidence which has been given, that there was an effort on the part of young Mr. Hickson to become a partner of the firm, and that there was certainly some conversation among the parties concerned as to whether it was proper that he should become a member, whether it was to their interest or his interest that he should become a member of the firm or not. It would be almost impossible, without adopting a course which I have been very careful not to adopt during this inquiry ; without going to the extreme of playing the part of a detective, with agents here and there, seeking for information—that I scrupulously avoided during this inquiry—to set this matter at rest. The reason I asked for the Bank-books was simply in order that a complete search might be made through them—a search as complete as it was possible to make with the data we had—so that your Honor might judge whether the rumours which were circulated about town, and which were put into a definite form by the two retiring partners, had or had not any foundation  
of

of truth. I have so far omitted to make reference to a little matter in regard to the introduction of the Monier patent. I have left it as a little subject incidental to the inquiry to be dealt with by itself. I refer to the construction of the Monier culvert at Strathfield. Now, most remarkable evidence has been brought before your Honor in connection with that culvert; and I think you ought to take cognisance of it in so far as it relates to the method in which Parliamentary votes are expended in connection with these works, and also as to the method in which the accounts of the department are kept and returns are made to the Auditor-General.

*His Honor*: You must remember, Mr. Parkes, that they are matters which are outside of my cognisance, unless they, in some way, come in as material evidence to prove the charges, or are material to the questions with which the Commission has to deal. Of themselves, they are altogether outside the scope of the inquiry.

*Mr. Parkes*: I might point out that the Monier culvert which was built at Strathfield must come under your Honor's cognisance in so far as it is connected with one of the charges which I have placed before you bearing upon the first introduction of this patent into the department. Other matters have also come under your Honor's cognisance in the same way—in that they had to do with the cost of the work and the manner in which it was carried out; that being the basis upon which a certain report was made to the Minister.

*His Honor*: The matter, I can see, is involved in this way—that the more the work cost the more justification would there be for putting a high price upon Contract 77, and the less it cost the more justification would there be for introducing the system.

*Mr. Parkes*: I contend that the culvert afforded no guide at all as to the cost of the work. Mr. Barling, for instance, was questioned as to whether the cost of a culvert of this nature was sufficient to justify Mr. Hickson in making the report he did to the Minister, and he gave this evidence:—

7437. According to Mr. W. A. Smith, only one-half of the culvert was completed when Mr. Hickson wrote this letter to the Secretary for Public Works:—"The Monier system of concrete arching has been patented in the Colony by Messrs. Carter & Co. Where applicable, it reduces the cost of spanning an opening by about 50 per cent. The patentees are willing to allow the department to use the patent on payment of a royalty of 15 per cent. on the cost of the arch. I recommend this for the Minister's approval. I might state, I have just completed, with the permission of the patentees, a culvert on the Parramatta Road built on this principle, with most satisfactory results financially and otherwise;"—do you think that the building of that culvert was sufficient justification for the Minister's entering into an undertaking like this? I do not think it was sufficient standing alone, but Mr. Hickson explained, when recommending the patent, that it had been tried in Europe and elsewhere. I remember his showing either to the Tender Board or to myself—I think it was to the Board—a number of photographs of bridges of considerable size in the construction of which the principle had been used with great success. As to one of your preceding questions, I can quite understand how it was Mr. Hickson was not prepared to recommend the purchase of the patent for £1,500 then, but subsequent information may have convinced him that it was a desirable thing to try.

What I want to point out is this—that, according to Mr. Barling's statement, there was not sufficient justification for Mr. Hickson's recommendation. The Monier arch at Strathfield was built in connection with a culvert, and a lot of work would have to be done to create a culvert in the first instance. Mr. Symonds, the officer in charge of the road, sent in to the department, as his evidence clearly shows, a report to the effect that the only culvert required at this point to take away the limited quantity of water would be a few earthenware pipes, costing, approximately £110. In Mr. Symond's opinion a brick barrel drain of 2 feet diameter would have sufficed, but the department set to work and created a Monier culvert, spanning a distance of about 5 feet. It will be easily seen that the culvert was one which would have to be built while traffic was going on, and the work would therefore be of a small, finicky nature, and there would be an extravagant expenditure for labour, as is proved by the documents which have been handed in—that is, vouchers in connection with the work—and by the payments of Mr. Symonds, who was in charge of the work, and who made a record of all the disbursements. These records show that the expenditure upon the work was of an extravagant nature, and that it afforded no precedent upon which the department could go in suggesting that the system would render works in connection with which it could be used 50 per cent. cheaper. That might be the case in a large work where the contractors would have the means of carrying it out in a proper fashion. It might be in such a case a cheaper system; it undoubtedly is, as figures which have been submitted to your Honor have conclusively shown. But it has been shown, in connection with the construction of this culvert, that there was no intention of trying to economise

economise or to find out whether the system was economical or not. The only object seems to have been to obtain the introduction of this patent into the Public Service. It is a significant thing that Mr. Baltzer—as he admitted in his evidence—was watching the operations, that Carter & Co., according to the vouchers, were supplying the cement, and that the greatest interest was being taken in the culvert—certainly not, however, from the point of view of making the system appear economical. There was, therefore, nothing to justify Mr. Hickson in writing his minute, apart from the statements which had been laid before him in Mr. Bagge's report, or by Mr. Bagge or Mr. Baltzer or any other officer of the department in conversation, and from his reading of pamphlets and things of that sort. However, he points to this expensive culvert in his minute as an illustration. The original papers show, in the first place, that the offer of the patent was written on the 2nd July, 1894, by Mr. Carter, in the Public Works Department, when the construction was only about half way through. It was impossible to tell upon the 18th July, when Mr. Hickson wrote his minute, what the real cost of the work would be. Yet he said in his minute :

The Monier system of concrete arching has been patented in the Colony by Messrs. Carter & Co  
Where applicable, it reduces the cost of spanning an opening by about 50 per cent.

The patentees are willing to allow the Department to use the patent on payment of a royalty of 15 per cent. on the cost of the arch. I recommend this for the Minister's approval.

I might state I have just completed (with the permission of the patentees) a culvert on the Parramatta Road, built on this principle, with most satisfactory results, financially and otherwise.

Now, how was he to judge whether, taking that culvert as an illustration, the system was satisfactory financially and otherwise. Mr. W. H. Smith, in his evidence upon page 169, said :—

6307. Was the portion of the arch which the heavily laden dray went over completed on 2nd July? I could not say.

6308. When did you start the work? Somewhere about the end of June. I do not remember the exact date. The only way in which I have been able to arrive at all has been by turning up my diary, from which I see that I visited the place every second or third day from the 25th June to the 24th July.

The work was not completed on the 24th July, and yet, on the 18th July, Mr. Hickson wrote the minute which I have quoted. I contend that you cannot make a comparison of the system founded upon works in two different positions, and for totally different purposes. The only way in which you can make it is by having regard to the exact materials, taking the true cost of the materials and of the labour expended upon them, and letting each work stand upon its own basis. There was not sufficient experience gained in the construction of this small culvert to justify the department in forming an opinion that the work would be cheaper. Mr. Hickson could well have understood that, and, if he wanted to genuinely recommend the use of this patent in the department, he ought to have selected some bridge in the Colony for its trial, and have made the contractors, at cost price or with only a little profit, convince him, by the application of the system to a work of that importance, that it really was cheaper than the ordinary method of construction adopted by the department, also that it was more substantial than the ordinary method of construction. There cannot be the slightest doubt but that the system is cheaper, and, although Mr. Symonds' evidence has gone to show that the culvert was in this case more costly than the ordinary method of construction—that is absolutely proved by producing the vouchers signed by Mr. Smith—still that would not be the rule. It was also shown that Mr. Smith's evidence was entirely wrong so far as his estimate of the cost of the work went, and there can be no doubt that if the work had been carried out with less messing about and less waste of time and material it would have disclosed a much better result from an economic standpoint. I admit that it would have been cheaper, but, taking the data which Mr. Hickson had before him at that time, my contention is that Mr. Hickson was not justified, unless he wished to make a concession to these contractors, in writing that minute to Mr. Young, upon which he agreed that Carter & Co. were to obtain a royalty of 15 per cent. for the use of the Monier patent wherever the department desired to use it.

*Mr. Davis* : May I be permitted to point out the evidence which Mr. Smith gave upon page 170, Mr. Parkes directed your Honor's attention only to the statements of Mr. Smith upon page 169.

*His Honor* : I shall of course have to go through the whole of the evidence myself, although of all the confused pieces of contradiction which I have come across, the Smith, Bryant, and Symonds, tangle is one of the worst. It would be very hard to arrive at the cost of the culvert from the evidence which has been tendered to the Commission.

*Mr. Parkes* : I submit that it would be simply impossible to do so, your Honor. I come now to Mr. McSweeney's evidence, upon page 51. When Mr. Hickson was giving his evidence I handed to him a letter or minute in regard to Contract 112, and at the tail end of the minute, as your Honor may recollect,

recollect, there was a paragraph stating that the whole of the responsibility for the payment of the 15 per cent. upon the Monier system was thrown upon the shoulders of the contractors. Mr. Hickson, upon page 90, gave this evidence :—

3213. When you submitted the tenders to the Tender Board you knew that the patentees would make a claim? Yes.

3214. Before the contract was let? Yes.

3215. Then why did you not before letting the contract take the Monier plates out—why did you wait until Mr. M'Sweeney made his protest before you took them out? The few plates were not worth speaking of. They were a very small portion of the job.

3216. *His Honor.*] I understood one of your answers just now to have reference to the iron bars in the carriers? Yes; that is another matter.

3217. *Mr. Parkes.*] They do not belong to the Monier system, you say? No.

When Mr. Carter was being examined I asked him if he intended to make a claim upon Mr. M'Sweeney for the application of the Monier system to the carrier in Contract 112, and he said he would see about it when the work was completed. There can be no doubt about this—that there has been a great effort on the part of Mr. Hickson himself—who has shown great friendliness towards Carter & Co. in obtaining a good position for their patent—to introduce the patent into public works generally. Mr. Hickson, upon page 34, said :—

1272. And you recommended that 15 per cent. should be paid upon the cost of it? Yes.

1273. Carter & Co., on 2nd February, 1894, wrote a letter upon your own office paper undertaking to accept that? Yes.

1274. And it was accepted? Yes.

1275. And the contract is now entered into? There is really nothing at all in what you are speaking of which applies to this particular contract. This was a general approval which I obtained wherever I thought it advisable to apply the system to the road bridges of the Colony. As a matter of fact, it has not yet been so applied, except in the case of one small bridge on the Parramatta Road.

1276. As a matter of fact, have not Carter & Co. a legal right to get this percentage upon all work of the kind done by the department? On any work we did of the kind most unquestionably.

I would ask your Honor to turn also to Mr. Hickson's evidence upon page 563 :—

17076. They say, in their letter, "Referring to our conversation"? I suppose that refers to the statement of the fact that they had taken out the patent. I do not know that they mentioned what percentage they would ask until the letter was written.

17077. It would appear from the letter that it was sent on to Mr. W. A. Smith, the engineer? Yes.

17078. So that the conversation therein referred to would probably be a conversation with Mr. Smith, but not with you? The conversation referred to would no doubt be with Mr. Smith. The only conversation they had with me related, as I say, to the statement of the fact that they had patented the thing.

17079. And upon that you wrote your minute of 18th July? Yes.

17080. In that minute you state that the patentees are willing to allow the department to use the patent upon payment of a royalty of 15 per cent. on the cost of the arch? Yes.

17081. And you recommend that for the Minister's approval? Yes.

17082. At that time you had had a report from Mr. Smith as to the Parramatta Road culvert? Yes.

17083. At all events the work was far enough advanced to enable you to form a good opinion as to the nature and cost of it? Yes; and there was also my reading as to the Monier arch system generally.

17084. But you never induced the Minister to enter into an agreement to adopt this patent;—you never wrote any minute inducing the Minister to enter into an agreement with the firm? The minute you have quoted is the only minute I wrote, and there is nothing in that, because it was never acted upon.

17085. That was only obtaining the authority of the Minister to use the patent, whenever it might be thought advisable to do so, at a certain rate? Yes; in cases where it might be thought expedient.

17086. But there was no binding agreement between the department and the contractors as to the adoption of the patent? No.

17087. The matter was still left entirely at large as to whether you would use the patent on any particular work or not? Yes.

There

There is no doubt that there was a binding obligation to pay the 15 per cent., and my contention is that on a better trial, and with competition with other patents which exist, a much greater advantage could have been obtained for the State. For instance, in the report which Mr. Bagge made during the time Contract 112 was being planned, several other similar patents were gone into. If the Monier work was to be at the cost put down for Contract 77, then it was proved that the system used in Contract 112, an equally substantial work, and built in a very careful manner by Mr. M'Sweeney, would cost infinitely less. As to the stability of this system, time alone can prove that. We have had evidence as to the contraction and expansion of cement. No doubt a great part of that evidence is true. There is no stability in cement even after it has set; there are movements from expansion and contraction and from other causes. It is a risky thing at all times to use artificial constructions which are dependent upon the blending of cement, sand, and metal. Only time can tell whether this work will stand. But, supposing it to be the very best construction in the world, flaws will probably be found in it which would not be found in stone or in brick structures. Some flaw may develop at any time which would prove ruinous to the whole structure. Time alone can prove whether the structure is a good one or not, and the risk involved depends altogether upon the sureties. The position in which the State will find itself hereafter will depend entirely upon them, and virtually they are the contractors alone. What I want to impress upon your Honor is that in the limited test of the system upon the culvert at Strathfield, and in the photographs and notes which were put before Mr. Hickson, there was not sufficient to justify him, unless he had had a most friendly feeling towards these contractors, in obtaining for them the great concession he obtained by getting into his own hands power to obtain the general adoption of the system in public works throughout the Colony. Before I bring my remarks to a close, I wish to refer to the charge I made to the effect that papers were not fully and properly produced for Parliament. Mr. Davis has attempted to explain that matter away by saying that in producing the papers he took cognisance of what the printing would cost. Now, when Parliament passes a resolution ordering the production of certain papers, it does not absolutely order them to be printed, and Mr. Davis was not justified in exercising this discretion after Parliament had passed a resolution for the production of these papers. The papers for which I moved were, "All papers and correspondence in connection with certain contracts," and the papers most material to the question of the letting of Contract 79 were those which bore upon the claim which existed in connection with Contract 72. Now, so much did Mr. Davis recognise that those documents ought to be produced that, in making up the papers for Parliament, he said he put in certain documents concerning the claim. Why at that time did he not put in the whole of the documents concerning Contract 72? I contend that the order of Parliament was so clear as to leave Mr. Davis without any discretion in the elimination of papers. The order was to the effect that all papers referring to the contract enumerated should be laid upon the Table of the House. The object of laying them upon the Table was not that they might be printed, but that they might be perused by Honorable Members. If the Minister chooses afterwards to submit a motion that the papers be printed, that is another matter. The House need not agree to the motion. The papers are merely put upon the Table for the perusal of Honorable Members. That is the only circumstance which Mr. Davis would have taken into consideration. There can be no question but that every paper in connection with these contracts should have been put upon the Table in compliance with the terms of the Assembly's order. No matter how remotely papers were connected with these contracts they ought to have been put upon the Table. To say that the papers concerning Contract 77, as to the schedule drawn up by Mr. Griffiths, setting forth the payments upon the work, and the papers concerning the first introduction of the Monier system upon the Strathfield culvert—documents which were registered—were not to be produced, because they were in another department, is only begging the question. A most complete record is kept. There is a register showing what papers exist and where they are, giving every particular concerning them—whether they are out or whether they have been returned. That these papers could be found from the register there is not the slightest doubt. The first thing an officer of the department would do, in producing papers, would be to look through the register and see exactly what papers were connected with each case. He would then collect the papers with a view to their being laid upon the Table of the House. The papers in connection with Contract 72 were very important. They were absolutely essential, and my complaint is that they were not laid upon the Table with the other papers.

*His Honor* : I do not wish to be under a misapprehension, but the practice I understand is that, although the order for the printing of papers is generally made after the papers have been laid upon the Table, as a matter of fact in some cases the papers are all printed when they are laid upon the Table. I understand that in some cases that practice is followed. I do not know if it has been followed in this instance. In many cases the documents which are perused by Hon. Members are really the printed papers, not the original documents.

*Mr. Parkes* : The documents are not supposed to be printed except upon a subsequent order of the House.

*His Honor* : Does it not sometimes happen that the papers are first printed and that the order of the House for the printing afterwards follows.

*Mr. Parkes* : No, the course taken is this : the House calls for certain papers, and when those papers are produced by the Minister he submits a motion for the printing of them. That motion may be defeated, and in that case the papers would simply remain upon the Table for the perusal of Hon. Members. The only object in printing the papers is to secure their perusal by Hon. Members. As a matter of fact the mere printing of them often defeats the object of the Member who wishes them produced, and it sometimes happens that he himself opposes the motion to print them. Printing, I think, is never done before a motion for printing is submitted by the Minister. I doubt whether it can be done until that motion has been made.

*His Honor* : What I have assumed to have been done in this case was this : that the papers were sent from the office to the Government Printing Office, and that a printed copy of them was laid upon the Table of the Legislative Assembly.

*Mr. Parkes* : That is not so, your Honor. It will be seen from the evidence of Mr. Barling himself that the original papers were hurriedly sent up to the Legislative Assembly. It is clear from what he said that the original papers were laid upon the Table. As a matter of fact, I remember that they formed a very bulky parcel and that Mr. Young moved that they be printed. That order, I believe, was made on 22nd October, 1895. The papers then went away to the Government Printer, and they were not returned in printed form to the House until 2nd February, 1896,—that is to say, the printed document was not in the hands of Hon. Members until that date. My motion was for “copies” of the papers, but the Department laid the originals upon the Table. In some cases the order is made for original papers, but in this case I asked only for “copies.” All the papers in connection with Contract 77, for instance, were asked for ; but many papers, which have since appeared in the portfolio of that contract, were not included. Take also the papers in connection with Contract 118. That is another contract to which my motion referred ; but the papers produced were limited, as your Honor will see, to the specification, the schedules, and payments. The whole of the correspondence was not put before Parliament. I contend that the department had no discretion at all in this matter. Then, again, one half of the papers in connection with Contracts 79 and 79A which have appeared in the portfolios were not submitted to Parliament, many of them being necessary to connect the information which was contained in the return. Here, again, I submit that all the papers should have been included. In all probability the House would not have voted for the printing of the papers had the Minister explained the bulky nature of the contract papers and correspondence. The Minister submitted the resolution for the printing of the papers in a hurried fashion, however, and the House made the order. The question of printing should not have entered at all into the minds of the officers who prepared these papers for Parliament. The simple order given was that “copies” of the papers be produced, and I submit that every paper should have been so produced. I wish now to deal with Mr. Davis’s memoranda and the manner in which they were submitted to your Honor. In the first place I would draw your Honor’s attention to the memorandum which appears upon page 496, dealing with Contract 69, under the heading of “speculative tenders.” Your Honor will see that in submitting these varying prices placed on certain material by various contractors, Mr. Davis does not in any way touch upon the question of Carter & Co.’s schedule. These are varying prices genuinely taken out by these contractors. The question which alone is involved in Mr. Carter’s tender is that a deliberate attempt was made to obtain concessions which should not have been granted. Mr. Thompson’s memorandum to your Honor will show the items eliminated and the total of them in each tender, as well as the items which were used in the carrying out of the contract. Your Honor will see from Mr. Thompson’s figures that Messrs. Carter, Gummow, & Co. were far below the cost of these other contractors ; and the fairest way of dealing with the matter is to take these items together, and to properly proportion them ; to see what advantage would be got by the picking out of various items here and there. Mr. Davis’s memorandum is no answer to the charge that Messrs. Carter & Co.’s tender for Contract 69 should not have been accepted. As I have pointed out to your Honor there is an inconsistency in the allegations as to the time at which the new schedule came into operation. However, the greatest exception which I take to these memoranda is the incomplete manner in which they have been submitted, and the want of documentary evidence to sustain them. I have been careful to place at the back of the oral evidence which I have placed before your Honor documentary evidence ; and I think that in memoranda such as these Mr. Davis should have taken the same course. I will take one memorandum—that which deals with the cement. The reply of Mr. Davis to that charge of mine that a deficient quantity of cement was allowed to be used is contained upon page 631. Mr. Davis makes up his calculations as to the quantity of cement supplied upon Contracts 69, 79, and 79A, by stating that he accepts the quantity of 13,432 barrels purchased, and he adds to that the stock delivered from Contract 72. Now, Mr. Davis, taking the journal of Contract 72, must have known, because he initialled the information in it —

*Mr.*

*Mr. Davis* : I may say that I had not seen that journal until it was found yesterday. I proposed to ask Mr. Boys about it. Moreover, that journal, I submit, your Honor, is not in evidence.

*His Honor* : It is in evidence now ; but it did not, in point of fact, turn up until yesterday morning.

*Mr. Parkes* : There is the fact in black and white. Mr. Davis initialled these entries as correct—for instance, he initialled as correct the entry made on December 5th, 1891, to the effect that the inspector found that there were only 1,689 barrels of cement stored in the sheds, viz., 300 Alsen, 958 Camel, and 431 Germania. That was in December, 1891. I should like Mr. Davis to point out the item to which he refers.

*Mr. Davis* : If you look through the journal you will see that there are 2,000 casks independently of that quantity altogether.

*Mr. Parkes* : I see that Mr. Boys says it was reported that there were 2,200.

*Mr. Davis* : My contention is that the journal shows clearly that, in addition to the 1,689 barrels to which you have referred, there were a further 2,000 barrels, making a total of 3,689 barrels.

*Mr. Parkes* : Where is the report as to the 2,000 barrels ?

*Mr. Davis* : It is in the journal.

*Mr. Parkes* : There is an entry under the date of 16th November :—"The contractors have stored on the works 2,000 barrels of cement, samples of which they desire tested. The cement is not required." Then, on 5th December, Mr. Boys says it was reported that there were 2,200 barrels, but that the inspector found that there were only 1,689 barrels in the three sheds.

*Mr. Davis* : That refers to approved cement. There was a fourth shed, and it is evident that in that fourth shed the 2,000 casks were stored. The journal supports *in toto* the position which I have taken up.

*Mr. Parkes* : The work was running at that time, and up till February cement was being used. What I contend is, that Mr. Davis, with these journals before him, and with the journal of Contract 79, upon which contract Mr. Boys was also the engineer, before him, must have seen all the particulars of cement delivered, including the first delivery of cement upon Contract 79. This being so, he ought never to have placed before your Honor the statement that 2,200 barrels were transferred from Contract 72 to Contract 79.

*His Honor* : The evidence is that Mr. Davis had not these journals before him.

*Mr. Davis* : Statements, which have been purely assumptions, have run through the whole of Mr. Parkes's address.

*Mr. Parkes* : I will withdraw this particular statement or assumption. The matter will be cleared up later on, no doubt. What I meant to say was, that Mr. Davis must have had these journals within his knowledge.

*His Honor* : But as to his remembering what he initialled at the time these reports were made, I suppose you would hardly contend, Mr. Parkes, that Mr. Davis could do that.

*Mr. Parkes* : What I contend is, that these memoranda, based upon the evidence—upon evidence such as that of Burcombe—ought not to have been placed before the Commission unless there were good documentary evidence to back them up. I should like your Honor to carefully peruse these various memoranda, which are based only upon mere statements. I will ask your Honor to look into the particulars of each of these statements to see that there has not been an error—an unintentional error—creeping into their compilation. Of course, your Honor will see that with statements such as these, without the production of the documents referred to, it would be almost impossible, without another inquiry, to challenge them. When Mr. Davis refers, for instance, to certain returns of deposits to contractors in the railway and other branches of the Public Works service, the documents relating to them certainly ought to be produced for your Honor's perusal before the statements founded upon them are accepted as absolute evidence.

*Mr. Davis* : They have been produced. They are in the room at the present time. They were produced some time ago for Mr. Parkes's information.

*Mr. Parkes* : Not only in this instance, but in many other instances, reference has been made by the department to documents which are outside of this room. Quite a number of references have been made which ought to have been authenticated by the production of the original documents. I come now, your Honor, to my charges as tabled. As regards Contract 69, my first charge was—

With allowing Messrs. Carter, Gummow, & Co. to manipulate the Department's schedule for Sewerage Contract 69 so as to give the contractors an advantage over the Crown in their contract to build a sewer in Marrickville, by which the contractors were paid upon the extravagant items of charge, and were conceded those items upon which they had a losing price. That

That has been fully proved, I submit, by evidence which has been produced on the subsequent conduct of officers of the Department, after the receipt of the tender of Carter, Gummow, & Co. My second charge in relation to Contract 69 was—

With allowing the contract to be taken up by Carter, Gummow, & Co. with an insufficient bond, and with ultimately breaking that bond by remitting the retention money, and writing a minute by which the Minister was deceived and induced to consent.

I consider, also, that the evidence has been conclusive in respect of that charge. The taking of personal sureties without making inquiry is beyond question. It is admitted, in fact, that no inquiry was made in the case of Mr. Scrutton and Mr. Henty, and, without making inquiry, their names ought not to have been substituted for the principle of a cash deposit, even although the contractors had undertaken to accept payment in Funded Stock. My third charge in relation to this Contract was—

With paying to the contractors large sums of money which they (the Departmental officers) were not compelled to pay under Carter, Gummow, & Co.'s contract with the Crown.

That is also proved, I contend, in that the department continued to pay to Messrs. Carter & Co. an enormous sum of money for bluestone pitchers when they certainly might, with great equity, even to the contractors themselves, have so altered the schedule as to save the Treasury. My fourth charge as to this contract was—

With advancing to the contractors sums of money improperly and in violation of the terms of the contract, and without sufficient security.

Here, again, I contend that, taking the specification, the acts of the department, and the documents which were drawn up, there was not sufficient security for the advances made to the contractors. I contend, further, that it was never contemplated by Parliament, or even by the Minister, that the State should render financial assistance to those who are engaged in the carrying out of public contracts. My fifth charge in relation to Contract 69 was—

With incompetency in carrying out and administering the contract.

That charge is allied with the other charges. Charge No. 6 was—

With failing to comply with the orders of Parliament, and placing documents on the Table of the House in a manner calculated to mislead Honorable Members of the Assembly.

I contend your Honor that, unless the complete documents were forthcoming in connection with these contracts—and the complete documents in connection with Contract 69 were not by a long way laid upon the table—it would be impossible for any Hon. Member to understand the exact nature of the undertakings. The papers are put before Parliament for the perusal of the Hon. Member asking for them, and, of course, for the perusal of other Hon. Members; and an officer of the department has no discretion whatever in picking out those papers which should be included and those papers which should not be included. Charge No. 7 in relation to Contract 69 was—

With allowing defective work to be put in the works, by which a loss is sustained by the Crown.

That charge, I contend, is covered by my general charge with reference to the shortage of cement in these various works. I come now to Contract 72. My first charge under the heading of that contract was as follows :—

With paying away large sums of money to the contractors, Carter, Gummow, & Co., which they (the departmental officers) were not obliged to do under the contract conditions; and with settling a claim without a proper test as to the liability of the Crown for a sum of £4,050 9s. 6d., by obtaining the Minister's consent granting the contractors Contract 79 without re-tendering for that contract, when, in the interest of the Crown, it was the clear duty of the department to do so.

That, I contend, has been clearly proved. Charge 2 in relation to Contract 72 was—

With proceeding with works not contained in the contract, and paying for same out of contract vote; and with using unauthorised, in connection with contract, money voted for other contracts.

That, I contend, has also been done. My third charge in relation to this contract was—

With withholding from the papers laid upon the Table of the House such documents as would allow Honorable Members of Parliament to understand the nature of the contract, and the manner in which it was carried out.

Here again I contend that the evidence shows that this has been done. As to my charge, in connection with Contract 77, relating to the calling of public tenders, the minute issued by Mr. Hickson with regard to the cost of the work, and the minute issued by him with regard to the sureties, I contend that, looking

at

at the evidence which has been produced, there cannot be the slightest doubt but that those minutes deceived the Minister, and that, had they not been written, the Minister would not have acted as he did act. I contend, also, that there was no justification whatever for Mr. Hickson, unless it was to befriend the contractors, writing these minutes. That is clearly shown by the evidence which has been placed before your Honor. My fourth charge in relation to Contract 77 was—

With withholding the proper information concerning the above transaction from Parliament, by not laying plans and other papers upon the Table of the House when ordered to do so by Parliament.

My complaint is that, when the papers were submitted to Parliament, no papers such as have been since produced were forthcoming to show the nature of the Monier arch work—the quantity of work involved in the system, or anything of the sort. As to Contract 79, my first charge was—

With improperly granting to Messrs. Carter, Gummow, & Co., without re-tendering, Contract 79, by which a loss was sustained by the Crown.

I have proved that, I think. As to the second charge—

With allowing Messrs. Carter, Gummow, & Co. to manipulate the items in the schedule prepared by the department, so as to increase the profits of the contractors to the loss of the Crown.

I contend that the evidence sustains that also. Charge No. 3 was—

With returning the cash security and the retention fund to the contractors, in violation of the contract agreement and to the advantage of the contractors, and hazarding the interests of the Crown.

I contend that there was not the slightest justification, as has been shown by the evidence, for this action. Charge No. 4 was—

With the discharging of Inspector Reid from the above contract for simply doing his duty in the interest of the Crown by insisting upon good work and material.

The evidence which has been tendered to the Commission shows conclusively that this man should never have been removed from the contract. From the evidence which has been given, showing the manner in which this contract was carried out, it must be clear to your Honor that a man of Reid's description was necessary to protect the best interests of the country. Charge No. 5 was—

With improperly paying an account of £350 6s. 8d. to the contractors for removing material, which work they never performed.

That charge I desire to withdraw. Charge No. 6 was—

With placing improperly to the account for payments on Contract 79 various items of payments for work done at Bondi.

That is a similar charge ; but I will allow it to stand, because I do not think that any moneys, however small, used upon a certain work, should be returned as having been used upon a work miles away. Charge No. 7 was—

With advancing, without sufficient security, the sums of money upon contract materials not in the possession of the Crown.

That, I contend, was an improper thing to do—a thing which was never contemplated by any Minister. No Minister, I am satisfied, would give such authority ; and it is quite evident that authority was not obtained in this instance. I am satisfied that no Minister, had he known the nature of the transaction, would have given his authority for it. This brings me to Contract 79A. My first charge was—

With inducing the Minister, on the plea of urgency, to let the above Contract 79A to Carter, Gummow, & Co. without tender, and upon departmental estimate, by which a loss is liable to be sustained by the Crown.

That is a weakly supported charge, I admit. There does not appear to be evidence enough to show that Mr. Hickson, in any wrong way, gave the concession to Carter and Co. ; but that they obtained a concession by getting that contract there can be no doubt. Whether the concession was given by the Minister alone, or whether by the Minister assisted by Mr. Hickson, I do not know. It appears to me, however, that Mr. Hickson ought to have pressed more than he did his minute to the effect that this contract should be tendered for. There can be no doubt that had it been put up to tender there would have been a saving upon it. There were smaller contracts in connection with No. 79 and 79A, which were given to Carter, Gummow and Co. ; and if your Honor will look at the prices, seeing that the contracts were not very big contracts, but were simply branches of the sewer—if, I say, your Honor will look at

the prices paid for these works you will see that had they been put up to public tender, they would have been carried out at a greatly decreased cost. My second charge in connection with Contract 79A is—

With advancing the sums of money of the moneys of the Crown to the contractors upon insufficient movable security, and in violation of the contract between the contractors and the Crown.

I contend that the specification should be read literally in the interests of the State, and that the action taken by the department was not a proper action in this case. Charge No. 3 was—

With failing to place upon the Table of the House the papers ordered by Parliament, by which Honorable Members might be misled as to the nature of the transactions.

I repeat that all the papers having any reference to these contracts should have been laid upon the Table of the Legislative Assembly. My fourth charge was—

With permitting defective work to be executed by the contractors, by which a loss is sustained by the Crown.

I submit that that has been clearly proved by the evidence of Dawson, and by the examinations made by Mr. McCredie and Professor Warren. Coming to my charges in reference to Contract 118, there can be no doubt that those charges have not been proved. Evidence has not been forthcoming to prove them, with the exception of the charge relating to the omission of necessary papers from those laid before Parliament. There is one charge with reference to the Glebe contract, and it is as follows:—

With allowing defective work to be done, by which a large loss of money was sustained by the Crown, and with not making any effort to recover such loss from the contractors, Messrs. Carter, Gummow, & Co.

Now, with reference to that contract I really think that, although the evidence before the Commission has been small, from rumours which have been mentioned here—I admit that the evidence is only hearsay—the contract ought to have been examined by some one independent of the department or contractors, in order to see that it has been carried out in a proper manner. Conclusive evidence has been laid before your Honor in support of the charge I made, that defective work had been carried out upon four or five contracts which have been dealt with. There has been a constant saving of cement, and the putting in, in its place, of inexpensive material. In regard to this very Glebe contract we have had clear definite evidence of a similar scamping in cement work, and if it be worth while to scamp the work in a small degree your Honor may be sure that the same men will scamp it in a greater degree, whenever the opportunity presents itself. As to the question whether Messrs. Carter, Gummow, & Co. knew anything about it, I should be very sorry if evidence showed that they did. The only object I had in this inquiry was to show that these irregularities did go on, and having done that, then, so long as a stop is put to these practices, I am satisfied. I do not wish to see persons get into trouble. There can be no doubt the men working for Carter, Gummow, & Co. have constantly done bad work, but whether they have done bad work, authorised or unauthorised, I do not know if the evidence is conclusive enough to show. With reference to the charge as to Mr. Hickson's giving concessions to the contractors, I consider that the charge has been fully proved, because the advantages which they have derived from these contracts are undeniable. From whatever reason—whether from motives of friendship, or from other motives, there was not evidence to show—but many concessions have been made. It is beyond all doubt now that great concessions have been made to Messrs. Carter, Gummow, & Co. by Mr. Hickson. In conclusion, I desire to say just a few words in regard to the manner in which I have conducted this inquiry. As I said in the first place, I did not want to come before this Commission otherwise than as a witness, because it seemed to me that, if I departed from that course, I at once laid myself open to the charge of being a persecutor. I came before the Commission because, having made the charges as I did, I wished to take the onus of them, and to do all that I could to show that they were as true as I myself believed them to be, and to assist your Honor in eliciting the truth, even although it might be against me. That I have done. I have done everything in my power to bring before this Commission—in an honorable fashion—evidence to sustain my charges. I have been very careful, your Honor, not to bring here men whom I thought to be of doubtful character. I might have obtained innumerable witnesses had I been less particular in that regard. Your Honor would probably be surprised did you know the number of witnesses who have proffered their testimony, but whom I have rejected. If your Honor were acquainted with the full particulars, you would see how very careful I have been not to put the Commission on the footing of an improper prosecution. When the Commission was first granted, therefore, I went immediately to men of known repute—men of good repute as to truthfulness—and concerning whose character I myself had such a knowledge as to convince me that they would be honorable and trustworthy witnesses. Among the witnesses I have brought before your Honor have been Mr. McCredie, of whom your Honor must have formed a very high opinion, Mr. Thompson, a very accurate

accurate and careful quantity surveyor, Mr. Young, Mr. Dean, and Mr. Christie. I have brought other reliable witnesses, who, I thought, would not be influenced by me in any way to give evidence which was not of an absolutely truthful nature. These witnesses have been most careful and accurate in all that they have done, and had I made the slightest effort to mislead them, or to draw them to my side with a view to my winning the case, as it may be called—if I had endeavoured in any way to make tools of them, they would have resisted such advances and endeavours. That I knew from the first. I obtained the services of these men, because I thought it the proper and honorable course to endeavour to get at the absolute truth in these matters. Mr. Smith has, in his address, stated that the evidence which I myself gave, coupled with notices of motion which I have given in Parliament, indicated that I had a commission, as it were, from certain old constituents of mine, or, if I were to take his words at their literal meaning, I was under a pledge to carry out certain obligations to my constituents at the time of my representation of the electoral district of East Sydney. I think that insinuation may be thrown to the winds at once. Again, Mr. Smith contended in his address that I had an object in bringing these matters before a Commission—that I was actuated by a feeling of animus against Mr. Hickson in consequence of my relations with the Public Works Committee. Now I think your Honor will free me of any such accusation. You will not, I am sure, be of opinion that I entertained any feeling of this sort, because, after all, these charges are not directed specifically against Mr. Hickson, but they are directed against the administration of the department. For that reason I have used the word "Government" generally in charges which I could not associate with any individual, but which contained matter, the responsibility of which, I thought, should be sheeted home to some person or persons; feeling, as I did, that these persons could be found only by a most searching inquiry by a Commission such as your Honor has held. As to my having any ill-feeling against Mr. Hickson or against any officer of the department, I can freely urge that Mr. Smith's contention, even upon the evidence he has suggested, cannot be entertained. As a matter of fact, it is very poor satisfaction, your Honor, to a public man to prosecute any inquiry concerning a matter where he thinks there is need for reform, simply upon the basis of prejudice or a feeling of vindictiveness against any individual who may be concerned. It is not worth the while of any public man to take action from such motives; but there is a much higher object which a public man may have, and that is to agitate for reform where he knows that there is an absolute necessity for it. It is only when a public man is actuated by such a motive that he can derive any satisfaction whatever from the discharge of such a duty as I have taken up in this case. I shall not be at the pains of defending myself against the insinuation that I have been actuated by the motive of obtaining any benefit for myself or for other persons, or that I have acted from spleen against any individual. My motives were simply these. I know—and the evidence which has come before your Honor has clearly proved it to be so—that there is a waste going on in the public funds of this country, and particularly in the Public Works Department, and the object I have in view is that this waste shall be remedied by some proper method of control, either by the Treasury or by some other department—control exercised in such a way as to make it impossible for such things to take place as have been demonstrated by the evidence submitted to your Honor to have occurred in this department. That is the sole object I have in view. Having certain information, I thought that the best way to discover the truth or untruth of it was to have a Commission of Inquiry. I asked for a Select Committee or Commission. If your Honor, in your profound wisdom, should consider that the effect of this inquiry has not been to support the truth of the charges which I made, then, of course, there will be no need for any change in the Public Works Department; but if, as I contend, a certain number of the charges which I have made are well-founded, then certain action must be taken, and I shall have attained the object I had in view—that object being that there should be some control over this great spending department of the State with a view to save an annual waste in the public funds of this country. I apologise for having occupied so much time by my address, but I could not possibly have reviewed the quantity of evidence which has been tendered without going very fully into it. I now, with every confidence, leave the true judgment of the matter to your Honor's profound intelligence and sense of justice.

*His Honor:* The time occupied by your address, Mr. Parkes, has been rather long, but I can clearly see that from the enormous amount of material you have had to review you could not have discharged your task within a shorter period. As to the manner of the address, I certainly have no complaint to make with regard to that.

His Honor, at 1.15 p.m., adjourned the inquiry until 10 a.m. on Tuesday, 13th October.

C. E. R. MURRAY,  
Commissioner.

TUESDAY,

## TUESDAY, 13 OCTOBER, 1896.

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 10 a.m.  
Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. R. R. P. Hickson, Under Secretary for Public Works (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising); attended.

Mr. J. Davis, engineer for sewerage, and Mr. Norrie, bond clerk, also attended.

Edward Mann Clark and John William Townsend Boys were sworn and examined.

Joseph Davis was recalled and further examined.

His Honor, at 12:40 p.m., adjourned the inquiry until 10 a.m. on Friday, 16th October.

C. E. R. MURRAY,  
Commissioner.

## FRIDAY, 16 OCTOBER, 1896.

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. Ernest Smith, solicitor (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising); attended.

Mr. J. Davis, engineer for sewerage, and Mr. Norrie, bond clerk, also attended.

George Christie, Frank Moorhouse Gummow, John Carter, and Joseph Davis, were recalled and further examined.

His Honor, at 12:35 p.m., adjourned the inquiry until 10 a.m. on Monday, 19th October.

C. E. R. MURRAY,  
Commissioner.

## MONDAY, 19 OCTOBER, 1896.

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. Ernest Smith, solicitor (appearing for Mr. Hickson); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising); attended.

Mr. J. Davis, engineer for sewerage, and Mr. Norrie, bond clerk, also attended.

David Graham Snodgrass was sworn and examined.

Joseph Davis was recalled and further examined.

Mr. Davis said that the department was being put to very serious inconvenience through the retention by the Commission of various papers and plans, and he would be glad if His Honor would make an order for their release at the earliest possible moment.

His Honor said that the whole of the papers which were not required to be printed as Appendices could be released at once, but in releasing them he would ask that the department would not have them conveyed away from the building, and that they might be placed in a room where they would be available for inspection by the Commission if necessary.

Mr. Gummow desired to know whether His Honor would at the same time release the bank pass-books of the firms of Carter & Co., Carter, Gummow, & Co., and Gummow and Gillan; also the bank pass-books of the private accounts of the different members of those firms.

His Honor said he did not think there was any necessity to retain the books any longer. The results of their examination, he assumed, were crystallised in Mr. Christie's memoranda. He would direct the immediate return of the books to Mr. Carter.

*His Honor*: There being no further evidence to be tendered, there will be no necessity for me to adjourn the hearing to a further date. At the same time, if anyone should wish to make application for the hearing of evidence I will entertain that application at any time. This room will be considered the office of the Commission until my report is finally sent in to His Excellency—in fact, until the 21st of November. I, therefore, adjourn the inquiry *sine die*.

C. E. R. MURRAY,  
Commissioner.

## TUESDAY, 3 NOVEMBER, 1896.

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 10 a.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. R. R. P. Hickson (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow (Mr. Andrews, solicitor, advising); attended.

Mr. J. Davis, engineer for sewerage, and Mr. Norrie, bond clerk, also attended.

Robert Rowan Purdon Hickson, Joseph Davis, George Scott Chiene, and Andrew Eaton, were recalled and further examined.

His Honor, at 12:15 p.m., adjourned the inquiry until 2 p.m. on Wednesday, 4th November, 1896.

C. E. R. MURRAY,  
Commissioner.

## WEDNESDAY, 4 NOVEMBER, 1896.

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 2 p.m.

Mr. Varney Parkes, M.P. (Mr. White, solicitor, advising); Mr. R. R. P. Hickson (Mr. Ernest Smith, solicitor, advising); Mr. Carter and Mr. Gummow (Mr. Andrews, solicitor, advising); attended.

Mr. J. Davis, engineer for sewerage, and Mr. Norrie, bond clerk, also attended.

Joseph Barling, Robert Rowan Purdon Hickson, Christian Herman Ohlfsen-Bagge, and John Carter, were recalled and further examined.

His

His Honor said that several witnesses who had been examined had not made any claim to expenses. He thought that some of those witnesses were not really at any loss through giving evidence before the Commission, and it was very much to their credit, under those circumstances, that they had abstained from making any claim. He hoped they would continue to abstain from asking for any compensation, because, after all, what was given to a witness as compensation was not in any sense by way of reward for the evidence he had given, but was to save him from being at a loss from the time occupied in his attendance. If the witnesses who had given evidence and had not made any claim were abstaining from making it as the result of their not knowing that they were entitled to make a claim, they might come in and make a claim at some future time. If they intended to do so, he hoped they would make the claim as soon as possible, because, if it were not soon made, it was very likely that there would be no possibility of answering it when it was made. At the same time he would repeat that it was to be assumed that witnesses would not make any claim when they knew that they had not suffered loss of time representing loss of money, and that they had not been put to any expense in coming to the Board Room to give evidence. He did not wish to curtail the right of witnesses to compensation if they asked for that compensation, supposing they had a fair right to it. He did not wish to suggest to witnesses who did not see why they should be compensated on the ground that they had suffered no loss, that they should make what would, under those circumstances, be a fictitious claim; he merely asked those witnesses who had a good claim to make it as soon as they could conveniently do so.

His Honor, at 3:45 p.m., adjourned the inquiry *sine die*.

C. E. R. MURRAY,  
Commissioner.

---

TUESDAY, 10 NOVEMBER, 1896.

His Honor the Commissioner sat at the Board Room, Chief Secretary's Office, at 2 p.m.  
Mr. Varney Parkes, M.P. (Mr. H. White, solicitor, advising); Mr. Carter and Mr. Gummow, of the firm of Carter, Gummow, & Co. (Mr. Andrews, solicitor, advising); attended.  
Mr. J. Davis, engineer for sewerage, and Mr. Norrie, bond clerk, also attended.  
Joseph Davis and John Carter were recalled and further examined.  
His Honor, at 2:50 p.m., adjourned the inquiry *sine die*.

C. E. R. MURRAY,  
Commissioner.

## INDEX TO WITNESSES.

PUBLIC WORKS INQUIRY COMMISSION.

MINUTES OF EVIDENCE.

TAKEN before His Honor Judge Murray in the course of his inquiry touching all questions raised in the Legislative Assembly, whether specifically or in course of debate, as to any improper conduct in connection with the Contracts, past and present, of Messrs. Carter, Gummow, & Company with the Department of Public Works.

WEDNESDAY, 27 MAY, 1896.

George Dawson, sworn and examined:—

G. Dawson.  
27 May, 1896.

1. *Mr. Parkes.*] What is your occupation? I am a general labourer.
2. You were for some time working on the contracts of Carter, Gummow, & Co.? Yes.
3. For what length of time? I have been with the firm for about eight years.
4. In almost constant employment? I have been a few weeks here and there without work, that is all.
5. What was the nature of your work? My principal work in the sewers was that of a bricklayer's labourer.
6. In that capacity you would have to pack the top of the sewer? Yes.
7. Will you describe the manner in which the packing was done? If there were any space left between the brickwork of the tunnel and the rock it would have to be packed with concrete and rammed with a rammer to the satisfaction of the Inspector.
8. When you first paid a visit to me you were still in the employment of Carter, Gummow, & Co.? Yes.
9. Lately you have left them? Yes.
10. But you were not discharged? No; I was not discharged, but I was refused work on the next job.
11. You left at the time you did simply because the work ceased? Yes; where I was then working.
12. You did not leave on account of any dissatisfaction with you on the part of the contractors? There was not any dissatisfaction at all.
13. What were your reasons for coming to me? I saw that you had taken the matter up, and I thought it would be a good thing for working men to have it all ventilated. I felt uneasy in my mind. There were several things which I knew which were not right, and I knew that it was of no use my going personally to make a complaint because no notice would be taken of me. When I saw that the matter had been taken up in the House I thought it my duty to come and say what I knew.
14. When you came to me I was reluctant to take any statement from you? You did not wish to hear me at all.
15. When did you first come to me? I could not say now.
16. How many months ago would it be? About ten or eleven weeks ago. I was working on the Annandale job at the time.
17. Will you tell His Honor what description of work was done upon Contract 79 A, by yourself and others? There was some very defective work on that contract. There were great cavities left, and in one case we ran four drums without packing.
18. What would be the size of a drum? It would be from 2 ft. 9 in. to 3 ft. long. It is what the brickwork is built on. You are supposed to pack every one as you build, but we left these cavities, and we thought nothing of it. There are spaces between the brickwork and the rocks with nothing in them. These spaces vary from 2 ft. 6 in. to 2 ft. 9 in. in height. In some cases they are a little higher.
19. What would be the length in lineal feet in any case? It might be about 12 feet. I should say I was within the bounds in saying that.
20. What is the total length of the cavities, do you suppose, which have not been filled up? I was speaking then of one particular case, but none of the work has been thoroughly packed with the exception of an odd drum or two.
21. *His Honor.*] When you say that none of the work has been thoroughly packed what length of sewer are you speaking of? I was speaking of particular parts where I was working.
22. How many drums would it be in length? The big cavity to which I have referred is about five drums in length.
- 22½. *Mr. Parkes.*] Is it near shaft No. 13? It is between No. 12 and No. 13.
23. For what distance at that point does the defective work extend? I could not state the exact distance. I do not know the length of the drive.
24. Would it be between 200 and 300 feet? More than that.
25. Would it be 400 feet? Yes.

- G. Dawson. 26. Would it be 500 feet? Taking one drive with another, I should say 500 feet. There would be that quantity of defective work.
- 27 May, 1896. 27. In your opinion that defective work imperils the safety of the sewer? Undoubtedly.
28. What is the thickness of the brick-lining? Four and a half inches.
29. How far from No. 13 shaft, going down stream, is the point at which this defective work commences to your knowledge? 275 feet I should say from the centre of No. 13 shaft going down stream. There may be a drum or two with a certain amount of packing in them. There would be about 310 or 320 feet from the shaft to where the cavity of which I have spoken exists.
30. *His Honor.*] How far would you have to go from that point before you got out of the defective work? From 12 to 14 feet.
31. That is the greatest extent of defective work down that drive upon which you have worked? Yes.
32. You have worked lower down in the drive? Yes.
33. But you know that below the point you have named it is properly packed? Yes.
34. *Mr. Parkes.*] Did you work upon Contract 79? Yes.
35. Do you know whether the work in that contract was all correct? I know that there has been some scamping, but I could not locate any bad work.
36. But you know it is there? Yes; I did it myself.
37. But you say you could not locate the work now? No.
38. It could be located by taking out a few bricks here and there? By an expert, I daresay it could.
39. You have had conversations with various men working on this job? Yes.
40. Was the defective work in this contract similar to that in Contract 79A? It was not similar. It was scamping in the cement. The cavities were filled in in the case of Contract 79. It was only the cement which was scamped.
41. *His Honor.*] Do you mean the cement in the brickwork or in the concrete? I mean the cement supposed to be used in the concrete.
42. *Mr. Parkes.*] Will you describe to His Honor how you workmen deceived the inspectors in order to get this scamped cement in? We had to get them out of the way. Some reason was given to get them away. There are several ways of reducing the quantity of cement. You can knock the gauge into the sand, and put the cement in.
43. *His Honor.*] What is the size of the gauge? They are of different sizes.
44. *Mr. Parkes.*] You did not put in this defective work of your own inclination? No.
45. Why did you do it? To keep our places.
46. Who gave you instructions to do it? The manager of the job told us that the inspector was taken away, then it was our own lookout what we did.
47. As a matter of fact, your employment depended upon your doing that kind of thing? Yes. If we did not do it we should not be kept there.
48. You know Inspector Reid? Yes.
49. I believe he is a very severe man? He is very strict.
50. He was particularly severe upon you men? He did his duty. He would not allow us to do anything wrong.
51. Were you afraid to do anything wrong when you were under him? It would not do to let him catch us in any shape or form.
52. Inspector Reid was removed from Contract 79? Yes.
53. When he was removed you had a freer hand? Yes. There was no one to watch us as closely as Inspector Reid had done.
54. You know the reason of his removal? Yes. I believe it was because he caught myself and the foreman bricklayer in the act of doing what we ought not to have been doing.
55. You were in the act of doing bad work when he caught you? Yes.
56. What was the bad work? We were shovelling dry metal down without any cement or sand mixed with it.
57. *His Honor.*] Shovelling it where? We were packing the side of the shaft. Inspector Reid came upon us, and saw us shovelling down this dry metal. We said, "We are going to put in the compo. that was left."
58. *Mr. Parkes.*] And Inspector Reid insisted upon your doing correct and proper work? Yes.
59. Of course an Inspector of Works cannot be very delicate in the use of his words. He sometimes has to use some very strong language;—he must be naturally a rough man? Certainly, because he has rough men to deal with.
60. If Inspector Reid did at times use abusive language it was on account of the class of men with whom he had to deal? I cannot say that he ever used abusive language in my hearing.
61. When he tried to stop you from proceeding with the defective work did he use very strong language? Not in my hearing.
62. After he had discovered you doing that work, do you know what became of him? He was removed from the job. I cannot say where he went.
63. Do you know why he was removed from the job? I cannot say why, unless it was for the particular thing I have just named. I do not suppose he would be told why.
64. At what space of time after the incident to which you have referred was he removed? Two or three days, to the best of my knowledge.
65. Another inspector took his place? There were so many that I could not say whether any particular person took his place.
66. Then you do not know who succeeded him? I believe Mr. Eyre came after him, but I would not swear to it.
67. Was he as hard upon you as Inspector Reid was? He was never so much near us as Mr. Reid was.
68. I believe you also worked on Contract 69? Yes.
69. Part of that sewer was packed with cement? Yes.
70. I believe there was a length of it which you packed with something else—with shale? We packed some with shale. There was metal on the board, but I could not say whether it had to be packed with cement or not. I am referring now to the part in Emily-street, adjoining O'Neil and Rogers' contract.

71. *His Honor.*] You mean the end of Carter, Gummow, & Co.'s contract in that direction? Yes.
72. *Mr. Parkes.*] You say there was metal and concrete on the board? Yes. We packed the first drum with concrete, and afterwards we used shale.
73. To what length? I should say from 600 to 700 feet. I cannot swear that that is the exact distance.
74. You were instructed to do that by your superior? Yes.
75. Was there an inspector overlooking it? Yes.
76. Who was the inspector? Mr. Tudgay, I think, was in charge.
77. You were instructed, I suppose, by the contractor in charge? By our foreman.
78. Is it not a very precarious thing for a man like you to give such evidence as this? Yes; it will spoil me from getting any work in the future.
79. *Mr. Hickson.*] Do I understand that you acknowledge before this Commission that you deliberately did defective work? Yes.
80. I hope I make myself quite clear;—you did certain work knowing it to be defective? Yes.
81. When did you make up your mind to confess to having done this defective work? As soon as I saw from the newspapers that it had been brought up in the House.
82. Did you ever tell any of the officers of the Department, the resident engineer, or the inspector, what was being done there? Never.
83. I understand you to say that you got instructions from time to time to do this defective work? Yes.
84. Take the two North Shore contracts, who gave you instructions in that case? The manager used to tell us that the inspector was taken out of the road, and it was then our chance to do it.
85. In the case of the Marrickville contract also you say you were instructed to do this defective work? Yes; we got instructions from Foreman Connors.
86. He was the man who gave you instructions to do this defective work? It was only packing with shale in that case, and I do not know whether that would be supposed to be defective or not. Connors gave us instructions to pack the shale.
87. You say that Inspector Reid was sent away from the North Shore contract on account of his being too accurate in looking after the work? I did not say that. I said I did not know why he was removed. He caught us in the act, as I told you, and several days after that he was removed.
88. By whom was he succeeded? I cannot be positive whether Mr. Eyre was his successor or not.
89. Inspector Reid was strict, and Inspector Eyre you say was not? He was never standing over us as Inspector Reid was. I do not say that he was lenient, but he was never standing over us in the same way as Inspector Reid was.
90. Where was he if he was not overlooking the work? It was not my place to know where he was.
91. Do you mean us to understand that he was off the work altogether? He might have been.
92. You mentioned the contractor's manager, Mr. Reid, and Connors on the North Shore contract? Yes. Connors was the foreman of bricklayers.
93. Did he give you instructions about this bad work? No; he sometimes worked with us in doing it. It was the manager who gave us the instructions in that case.
94. *Mr. Carter.*] Did you ever inform me, or any member of the firm of Carter, Gummow, & Co., that this defective work was going on? No.
95. Did I, or any individual member of the firm, ever give you any instructions as to this defective work? No.
96. Were you ever restricted in material—was there not always plenty of it? There was always plenty.
97. No question was ever asked as to where it was going, and you were not grumbled at for using too much? No.
98. There was always plenty of material had you chosen to use it? Yes, there was always plenty of material.
99. There was sometimes too much, and it had to be carted away? Yes. It had to be carted away on Contract 79 A.
100. Does not that apply to almost every job? There has always been plenty of material on any job I have been on.
101. You were not dismissed, but you were paid off in the ordinary way with a number more men? Yes.
102. You were afterwards re-employed on another contract at Johnston's Creek? Yes.
103. You saw Mr. Gummow there? Yes.
104. Would you mind telling His Honor what you told Mr. Gummow as to these charges? I asked Mr. Gummow if he would give me a start on the work over at Annandale. I said I had come to him personally because it had been said that I was going to put the company away, and that they would not give me work. I said I would not ask any other member of the firm but himself, as he knew me personally better than any of the rest of them. He said there had never been anything said about me that he knew of, and that if there was he would tell me straight. I asked him whether he would give me a reference, as I could not afford to be walking about idle. He said, "You will not want a reference; we shall have a job for you before the end of the week. If you come to me at the latter end of this week I will let you know definitely what I intend to do." I went back on the Friday. As I was passing another section of the work I saw Mr. Gummow in conversation with the foreman. I walked down to the Johnston Creek job and waited for Mr. Gummow. When he came he said, "You had better see Bandeen." He said he had spoken to him for me, and that there was work for me. When I went over to see Bandeen he told me I could come up on the following Monday.
105. *His Honor.*] It was after that that you got on to the Annandale job? Yes.
106. You interviewed Mr. Parkes after that? Yes.
107. *Mr. Carter.*] You have seen Mr. Gummow since? Yes.
108. You have endeavoured to get work from us within the last fortnight? Yes; I asked a foreman of yours.
109. In spite of all that you say had happened? Yes.
110. Referring to this matter of packing, what would you be doing when you were supposed to be packing, and were in reality not doing it—were you sitting down? I was getting in bricks, to do more work.
111. You never had so much to do that you could not have packed had you chosen? We might have packed, but we could not do the quantity. The bricklayers were always complaining that we were not doing enough.

G. Dawson.  
27 May, 1896.

- G. Dawson. 112. *Mr. Hickson.*] You said, in reply to Mr. Carter, that there was always plenty of material on the ground? Yes.
- 27 May, 1896. 113. What became of it if you did not put it into the work? It was left lying about. I believe there is some lying about there yet.
114. *Mr. Parkes.*] Was it your place to inquire what was done with the material? Not at all.
115. Did you ever see any member of the firm on your work? They passed along, but they never came down.
116. Was there any chance of your approaching them? I could have done so at the pay office had I wished to communicate with them.
117. As a matter of fact, you could not approach them for instructions? No; the instructions were given to us by the manager, Mr. Reid.
118. He was the representative of the firm, and you thought that in taking instructions from him you were taking them from the firm? Yes.
119. *Mr. Hickson.*] There was no reason why you should not make your complaint at any time to the Government Inspector, who was always on the ground? I could have done so, but if I had I should have had to leave.
120. *His Honor.*] Do I understand that you had had some communication with someone before you had the conversation with Mr. Gummow to which you have referred? Yes; we often talked among ourselves. The men would talk about the scamping which was being done. I often said that it was only right that it should be reported.
121. You expressed that opinion? I did, freely.
122. Alluding to the scamping? Yes; I said anyone was at liberty to carry what I said to the firm, and in my opinion it was carried to the firm or to their representative.
123. That was quite apart from anything which had been said publicly? Nothing had been said publicly then. It was simply among the men on the work by themselves, and it was carried to the manager, Mr. Reid.
124. The packing, I understand, in the case of the North Shore job was in a rock tunnel where blasting had been carried out? Yes.
125. Was that tunnel blasted out in many places beyond the required dimensions? Here and there there are places blasted out considerably above the usual size. It is so in all sewerage works. You cannot do it to a nicety.
126. So that the packing would be irregular, running from an inch or two to say 2 ft. 9 in.? Yes; there were places where you could not get in a half inch. It was supposed to be trowel-packed there with cement.
127. The other job in which you say shale was packed in was of a similar nature as regards the blasting? Yes.
128. The excavation had not been made by hand. It had been blasted? Yes.
129. And the shale was put in under similar conditions? Yes.
130. There were various depths and thicknesses? Yes.
131. You do not know whether the shale was put in by authority or not? No.
132. Was the cutting through shale? Yes.
133. And some of the shale which had been taken out was put in again, I suppose? Yes.
134. Was it hard blue shale or clay? Ordinary shale.
135. Supposing it had been a perfectly legitimate thing to use the shale for packing, would you say that the work was done in a proper way? Yes; no one could find fault with it.
136. The shale was packed in between the shale wall and the crown of the sewer? Yes.
137. *Mr. Parkes.*] The packing is put in to keep the sewer from weeping? Yes; and when the sewer is charged with gas it would lift I should think if it were not packed.
138. *His Honor.*] Supposing the cutting is hand-work and not blasting, and supposing it to be absolutely true, is there then any packing at all, or have the bricks to be put tight against the wall of the drive? There are certain places where the bricks would fit very closely. Sometimes you would have to scabel to make them fit; in other cases there would be half an inch and upwards to spare.
139. The barrel itself is supposed to be watertight? Yes.
140. The bricks being bedded in cement? Yes.
141. *Mr. Parkes.*] The barrel will not in itself keep the water out? If it is properly bedded in cement.
142. If it is a good job? Yes; if the joints are all filled.
143. Did the tunnel in Contract 69 weep? I have not been through it since to see. It was a plasterer who complained to me of the weeping. I did not see any weeping in the brickwork. The barrel was half brickwork and half concrete.
144. The packing applies to the crown? Yes.
145. The weeping would occur from drainage outside the sewer? Yes. Had there been subducts it would all have been carried away.
146. The subducts are intended to carry that water off? Yes.
147. And they would have carried it off in this particular instance? Yes.
148. It would be a defect in a sewer to have the weeping continue? Yes; but the plasterers' work is to stop it.
149. *Mr. Hickson.*] Did you ever see subducts in a rock cutting? No.
150. *Mr. Parkes.*] Is there no weeping in a rock cutting? Yes; and if the subducts were there they would carry all the water away.

George Benson sworn and examined:—

- G. Benson. 151. *Mr. Parkes.*] What is your occupation? I am a water and gas-pipe layer.
- 27 May, 1896. 152. You were employed by Carter, Gummow, & Co.? Yes.
153. Were you long in their employ? Seven or eight weeks.
154. *His Honor.*] Can you fix the date? I think it would be about last July.
155. *Mr. Parkes.*] You were employed upon Contract 69—the Marrickville contract? Yes.
156. You were employed to connect what is called a flushing-pipe with the sewer at a point on the Illawarra Road between Marrickville Road and Sydenham Road? Yes.
- 157.

- G. Benson.  
27 May, 1896.
157. Will you describe to His Honor the nature of the work there? I was connecting a 20-inch water main. I had to join the two ends, and to caulk them with lead. It was a water-supply pipe intended to flush out the sewer. The distance apart of the two ends upon which I had to fix the collar was too great. A sufficient length of pipe had not been allowed to permit of the two pipes coming properly into the collar. The collar barely covered them three-quarters of an inch on each side, whereas there should be 6 inches on each side if the caulking is to be properly done. You have to caulk with spun-yarn first, and then run in your lead. There was also a flange-joint at the same place underneath a concrete culvert, in which the bolts were not long enough.
158. How far beyond the collar would that be? About 8 or 9 feet. Some of the bolts had only two threads for the nut, some three threads, some only half a thread, and in some cases the bolts would not go through at all. The bolts are supposed to go right through the joint, and the nut is screwed on the outside. You could hardly get a grip at all with some of the nuts.
159. How many bolts would there be? There would be fifteen or sixteen bolts round a 20-inch flange.
160. This pipe would have to stand a great pressure of water? I believe it would.
161. Therefore it would need to be well caulked and bolted, and well shouldered up? Yes.
162. And that work was not done? Not properly.
163. The work that was done is grossly defective? Yes.
164. *His Honor.*] What you mean to say is that you did the work as well as you could, but that as a matter of fact there was not sufficient length of pipe? There was not.
165. Was the work in the case of the flange joint your own work, or was it merely defective work which you noticed? It was my own work, and I was paid for doing it. I got 1s. 3d. a joint. It was piece-work.
166. *Mr. Parkes.*] You knew you were doing wrong? I knew the job was not being done properly.
167. Did you say so to those who employed you? They knew I was doing wrong.
168. Did you protest? They told me to make the best job I could of it, and I did so.
169. Why did you do the work under such conditions? Because I was paid for it. I knew that if I did not do it someone else would, and that is why I did it.
170. Do you know of any other defective work on that job? No; I was not long enough there. I was only there seven or eight weeks.
171. You were in the pay of Carter, Gummow, & Co.? Yes; Mr. Forrest was then managing.
172. Did he see the work to which you have referred? I believe so. He was there at the time.
173. Did he make any comment? I do not know if he looked at it. I spoke about the bolts being too short for the flange joint. I measured the flanges, and found the bolts the same length as the flanges. They were not sufficiently long for the nuts to screw on outside. Mr. Forrest was there on the ground while all this work was being done.
174. Mr. Forrest is a member of the firm of Carter, Gummow, & Co.? Yes.
175. *Mr. Hickson.*] You say you received so much a joint for this work? Yes; 1s. 3d. for the small ones, and 3s. for the big ones.
176. You did them badly—that is what it amounts to? I did the best I could. Banteen told me to make the best I could of the job.
177. You said just now, in answer to Mr. Parkes, that this water-pipe would have to carry a heavy pressure? I understood from the inspector that it did.
178. Was it a Water and Sewerage Board pipe, or was it a pipe in connection with this contract? It was a water-main to keep the sewer flushed.
179. Did it connect further on? Yes. I did not connect it with the sewer.
180. You do not appear to be quite certain whether it was a Water and Sewerage Board main or not? It was not a water-main to supply the public with water for drinking. It was simply a main to flush the sewer.
181. It was a main belonging to the Water and Sewerage Board, was it not? Well, it was connected with the sewerage work.
182. Of course if it were a water-main Carter, Gummow, & Co. could not touch it? I do not know about that. They said the water was intended to flush the sewer.
183. It could not carry a heavy pressure unless it were a main of the Water and Sewerage Board, and if it were a main of the Water and Sewerage Board, then Carter, Gummow, & Co. had no right to touch it? All that I know is that I got the job to do at so much a joint. I was told to manage the defective joints as best I could, and I did so knowing that if I did not do it someone else would.
184. Supposing the pipe had to do nothing but carry an overflow, and that there was no pressure, would it not have been sufficiently strong? It was not at all sufficient. It would leak if there were no pressure at all. If the pipe were full of dead water it would leak.
185. Did you report this to anyone as a defective joint? They knew all about it. I told them it was bad work.
186. Whom did you tell? Banteen was one and Husband was another.
187. You told them about the defective work? Certainly; I told both of them it was a bad job.
188. *Mr. Carter.*] Did you tell Mr. Forrest? No; I did not speak to Mr. Forrest about it.
189. *Mr. Parkes.*] There is no doubt about your being employed by Carter, Gummow, & Co.? I was under them.
190. You were doing their work? Yes, so I understood.
191. This defective work, for all you knew, was part of Carter, Gummow, & Co.'s contract? Yes; I had so many joints to do and I did them, and I had other men working with me.
192. *Mr. Hickson.*] What were their names? James Brennan was one and the name of the other one is Boyd.
193. What would be the difference in the cost between making the job you are speaking of a good one and a bad one—that is, the bad one that was made of it;—would it be a big item? It would not cost very much if the job were well done. It would only amount to a few pounds of lead more in each joint—I dare say 30 lb. or 40 lb. of lead more in each joint.
194. You thought it worth while to make a bad job in order to save that? I could not do the job in any other way; the pipes were cut short before they came down.
195. Who cut the pipes? I cut them under directions.
196. What made you cut them short? They were measured and marked.

- G. Benson. 197. Who did that work? Husband.  
 198. He marked the pipes and marked them short? Yes, he and Bandeen; I asked them if they were right and they said yes, and I then cut them.  
 199. *His Honor.*] I understand that you cut the particular pipes to which you have referred? Yes.  
 200. But the mistake was made by those who did the measuring and marking? Yes.  
 201. When you came to put the pipes into the collar you found that they were too short? Yes.  
 202. And you were then told to go on and finish the job with the pipes as they were? Yes.  
 203. *Mr. Parkes.*] You are quite sure that you drew attention to the pipes being cut short? Yes; I am quite sure they knew about it.  
 204. *Mr. Hickson.*] I understand that Husband was the man who made the pipes short? Yes; he was the man who measured them with the tape.  
 205. Did you at any other time point out to him that the pipes would be too short? I told them I did not know how the job was going to be done.  
 206. And still they persisted in having it done? Yes.  
 207. You said this to Husband? Yes, and to the foreman. They told me to make the best I could of the job.  
 208. Notwithstanding that you told Husband that the pipes were too short, he told you to do the job? Yes.

Robert George Reid sworn and examined:—

- R. G. Reid. 209. *Mr. Parkes.*] What is your occupation? I am unemployed at the present time, but I was an inspector in the Sewerage Department.  
 27 May, 1896. 210. When did you leave the Government service? About three months ago. I do not know that I can be said to have left it. I am only waiting until some more work comes out.  
 211. Were you dismissed? No.  
 212. Why did you leave? Simply because there was no more work for me at that time.  
 213. You were told that? Yes.  
 214. Were there other inspectors kept on? Yes.  
 215. Was there any diminution in the contract work? Yes; that must be so. There are always a number of contracts let, and a certain number of them are always being finished.  
 216. There are as many sewerage contracts going on now as there were when you were employed? I cannot say.  
 217. When you left the service you were under Mr. Hickson's department? About three months ago I was actually under Mr. Darley, I think, but before that I had always been employed under Mr. Hickson.  
 218. What contract were you inspecting when you left the service? The contract I was inspecting was at Parramatta, and the inspector there applied for a holiday and I relieved him for a fortnight.  
 219. Before that you were on Contract 79 at North Shore? Yes.  
 220. How long were you on that contract? About four months.  
 221. Had you any need to complain of the work there? Yes, I had.  
 221½. Did you often complain? I think I sent to the inspector in charge two or three reports.  
 222. They were written reports? Yes.  
 223. Were they all reports upon defective work? Some of the reports were made only verbally to the inspector in charge; others were written. I have no note concerning those which were given verbally, but as to those which were written I have a note in my pocket-book.  
 224. Can you tell us from your notes the contents of these reports? According to the first report, which was made on the 31st January, 1894, I saw Connors, the foreman bricklayer, and Dawson, a labourer, putting down dry stone at No. 6 shaft. They put down about two and a half barrow loads. There was a batch of concrete on the board, and there were about two or three loads of broken stone close alongside. Of course, when they saw me they stopped and mixed a little bit of dry compo. with it. I told them that that would not do, and that I should have to report them. I reported them to Inspector Fowle, and he made his report on mine and sent it on to Mr. Davis.  
 225. What was the result? Mr. Davis came over one morning about 9 o'clock and held an inquiry in the company's office in Alfred-street, North Sydney.  
 226. But what was the result of the inquiry? All that I heard Mr. Davis say when the inquiry was over was "Well, Snodgrass, what do you say to that? You can only contradict it." That is all I heard of it with this exception—that Mr. Davis when he came out from the inquiry called me aside and said "Reid, do you believe they were both equally guilty?" I said they were both equally guilty of putting down the stone, but that I did not think the labourer ought to be charged with what he was told to do by the foreman. That was all that came out of the report as far as I heard of it.  
 227. What is the date of your next report? I do not know the date of it. It would be about a week after the former report.  
 228. What was the effect of it? I went to No. 6 shaft—the same shaft as before—a little after 1 o'clock on a Saturday. I saw Henderson, a bricklayer, and a labourer whose name I do not remember—I think it was Hutchins—who were about finishing the packing in No. 6. They required about half a gauge or say about 10 feet to finish the packing of the shaft. They started to gauge it. The stone was very dirty, and I asked Henderson to fork the stone instead of using the shovel.  
 229. The forking was necessary to fix the gauge? On account of the stone being dirty. It is provided for in the specification. Henderson said it did not require forking. I said it did, and that it was very dirty. While we were talking Connors, the foreman bricklayer, came up and said, "Take no notice of him. He is only a damned buck navy." Of course I made a note of it, and told Inspector Fowle, and he reported it. I may state that before this I reported Reid, the contractors' representative. He came to me at No. 5 shaft and told me to tell the inspector in charge that he did not intend to pack any of the shafts until they were finished. I said I did not think it was possible to build a shaft 200 or 300 feet without packing. He said, "Never mind. You tell him; this will show you fellows that you are not going to have it all your own way." I asked him to put it in writing, and we should then understand each other better. He said he had not a piece of paper, and I produced half a sheet of note. He wrote out a report, but he said he would not send it, but that I was to tell Inspector Fowle, and that as for me he would see that I was shifted off the job within two or three days. 230.

R. G. Reid.  
27 May, 1896.

30. What date is that approximately? It would be about Christmas time, 1893. It was either a little before or a little after Christmas; I do not remember the date exactly. I made another verbal report of Henderson, the same bricklayer, about packing the drive at No. 7 shaft. He was packing with the chippings that came from the drive. The drive had evidently been too small, and when they came to run the brickwork along if they had to scabel to allow the brickwork to be put in. The chipping was lying at the bottom of the invert of the sewer. They started to pack the drive with this, and I told them I could not allow them to pack it in that way, because concrete was specified. He said it was as good as concrete. I told him that if the Department thought it as good as concrete I had no doubt they would have put it in the specification. However, he said he would pack with it. I said, "If you do I shall have to report you." He told the labourer then to run the truck over me. The labourer ran the truck towards me. Whether he intended to run it over me I could not say, but instead of the truck coming over the top of me I got into the truck and was sent along the drive. I ought to have stated that the first night I went on duty there, before I made any report, I went down No. 7 shaft with two bricklayers and two labourers. One bricklayer was packing in very tight ground, and the other was in loose ground. I stayed at the end of the drive where the tight packing was. I was reported to Mr. Boys, the resident Engineer, for being too long at one end. Mr. Boys told Inspector Fowle to tell me to come to him. I called on Mr. Boys, and he asked me to explain why it was, or if it was true, that I was at one end of the drive most of the time. I told him it was true, and I explained the reason, with which he was satisfied. I may state that the night on which I complained of Henderson packing with chippings he and his labourer and another bricklayer went up the shaft before me. I got in the bucket to go up, and gave the usual knock. I do not know whether it was the engine-driver or not who brought me up. I had my candle in my right hand, and I had hold of the rope with the left hand, and the bucket was just off the ground when he took me up the shaft full speed ahead. The force with which I went up blew the candle out before I had hardly started from the bottom, so that I had to go up the shaft a little over or under 200 ft. in the dark. I told the driver he had brought me up very quickly. He said, "I did bring you up quickly." The bricklayer and the labourer who were inside the engine-house laughed.

231. Had you any conversation with any member of the firm of Carter, Gummow, & Co.? With Mr. Snodgrass.

232. And he told you really as a threat that he would have you shifted out of the service? No; none of the contractors told me that.

233. Did you ever receive any intimidation at all from any of the contractors? I saw Mr. Carter in the cable tram at North Shore after one of these reports, and he told me I was making a fool of myself. He said, "As to these reports of yours you know you cannot hurt us. We are too strong."

234. What did he mean by "too strong"? I do not know. I told him I did not wish to hurt anyone.

235. As a matter of fact a man of your position having your duties to discharge must be a very severe, resolute, and courageous man. He must at times be harsh in his conduct and in his way of having his orders carried out? If he wishes to do right for the Department he will have to be so.

236. He cannot very well carry out his duties without at times being harsh in his language? I do not know whether he has to use harsh language. If the men will not do their duty he has his remedy, and can report them.

237. You cannot be very soft or gentle with men who are scamping work? You cannot; but there is a difference between a man being severe and using bad language.

238. You consider that you merely did your duty on this job? Yes.

239. And you consider that scamping was going on throughout it? The only scamping I know of is that which I have mentioned to the Commission.

240. You would have stopped it if you had been left on the job? I was left on the job for about three months, but that did not seem to stop it; it was only getting worse.

241. No attention was paid to your reports;—you received no reply? I never got any reply. After the report about the abusive language of Connors, the foreman bricklayer, I got a letter from the resident engineer, Mr. Weedon, who was relieving Mr. Boys, informing me that I was to at once remove from Contract 79 and to go into Contract 89, and that another inspector would relieve me.

242. What was the name of the inspector who relieved you? Inspector Eyre.

243. You really experienced intimidation while you were on this work, did you not? In some cases.

244. Did you experience intimidation upon any of the other contracts? Never.

245. Where you ordered work to be corrected it was corrected? Yes.

246. How long after your last report was it before you were taken from the job? I reported it on the Saturday, and I got notice on the Tuesday or Wednesday to remove.

247. Do the inspectors get proper support from the chiefs of the Department in doing their duty to the public? I believe they do.

248. Did you in this case? Perhaps they took a different view of the matter from myself.

249. Do you think your removal from this job by your superior heads was right in the public interest? I do not think it was; and I told Mr. Davis so in the interview I had with him.

250. You are naturally unwilling to give evidence against the department? I have no desire to do so. I do not wish to say anything against any of the departmental officers. We have always been the best of friends, although I told Mr. Davis at one time that I thought it rather hard if I had done my duty at North Shore that I should be removed to a job at Lewisham. It was very inconvenient for me, and very expensive too.

251. *His Honor.*] Where were you living at that time? North Shore.

252. *Mr. Parkes.*] You naturally looked to the heads of the Department for support in getting this bad work stopped? Yes.

253. Have you any further evidence to give to His Honor in connection with the hampering you have received in the discharge of your duties? I have seen from the papers that I reported that the concrete was prepared at from 2 to 2:30, whereas it was not required to be used until between 5 and 6. I made that report as to the concrete which was being mixed at Nos. 5 and 6 shafts. I informed Inspector Fowle, and he reported to the resident engineer. That would refer to Contract No. 79.

254. *His Honor.*] What is a proper limit of time for the mixing of concrete before use? The specifications provide that no concrete shall be mixed until immediately before it is required to be used. I believe there is a clause in most specifications to that effect, and I believe it was in the specification of Contract 79, or I would not have called the attention of Inspector Fowle to the matter. 255.

- R. G. Reid. 255. What was the contractors' object do you suppose in having the concrete mixed so long before it was put into position? There were two reasons—first of all it would increase the time of the inspector on the job; the other was that it would give the bricklayers' labourer something to do in the meantime in getting ready to pack the shaft. If it was left until 5 o'clock that would be an hour before the supposed time of the bricklayers coming up. It would then take an extra labourer to do the work that they might have done during the day.
256. It was to save the contractors time and expense? That is the only reason I can give.
257. *His Honor.*] What is the effect of mixing the concrete so long before the time it is required to be used? That is a question I should prefer to leave to an expert.
258. *Mr. Davis.*] Commencing with the concrete you just mentioned, was it wet-up at the time you say—at 2:30 in the day? It was never wet to go down the shaft; it was dry-mixed.
259. So that water was not added until the concrete was required to be put into position? The sand was damp, and so was the stone, and there was enough moisture in the sand and stone to damp the cement.
260. The concrete was not wet until it was required to be used? No more than I have explained.
261. With regard to your position—you are a third-class inspector, are you not? You and Mr. Hickson say in your returns that I am a second-class inspector.
262. During the time you were employed upon Contract 79 you occupied a subordinate position? I was second to Inspector Fowle. He would be there in the daytime, and he would leave me in charge at night.
263. You carried out his directions? As far as I could.
264. You were there to do as you were told? Yes.
265. How long have you been employed by the Department? I started in the Sewerage Department in March, 1891.
266. How long have you been off the work? About three months.
267. You have been pretty continuously employed in the Department from February, 1894, until within about three months ago? As nearly as I can remember, it is about two years and three months since I was moved from Contract 79 to Contract 89. When I finished Contract 89 there was not a vacancy.
268. With brief intervals you have been employed in the Sewerage Department until quite recently during the period you have named? Yes.
269. You say that you experienced trouble on Contract 79 in getting the work carried out in accordance with the specifications? Yes.
270. I presume that as an inspector you always, speaking generally, experience more or less trouble? Yes.
271. In fact you are there for the express purpose of insisting on the work being carried out according to contract—is that so? Yes.
272. Coming now to the defective work. The first that you mentioned was a little before or a little after Christmas, 1893? Yes.
273. You state you objected to the filling of the shafts being left until the shafts were built? That is what the contractors' representative told me. I did not object to it. He merely told me to tell Inspector Fowle, who was in charge of the job.
274. The conversation to which you refer had reference not to packing, but to filling—that is, filling the space between the sides of the excavation with earth? It was with reference to the packing of concrete between the brickwork and the walls of the shaft.
275. Do you mean to say that Mr. Reid told you he would leave the whole of the packing from the top to the bottom until the whole shaft was built? He asked me to inform Inspector Fowle that that was his intention.
276. Did Foreman Reid do as he said he would, or did you get your way? I did not place any confidence in what he said, or I should have reported it on paper.
277. As a matter of fact, the work was carried out according to specification in that instance? Yes.
278. I will come now to the defective work at the end of January, 1894, when you say you saw 2½ barrow-loads of dry metal put down a shaft? I was about 20 or 30 feet away from the men. I had Nos. 5 and 6 shafts to look after. I saw them pack at No. 5, and I walked along to see the remainder of the packing at No. 6. The engine-house was right between No. 5 and No. 6 shafts, so that I had to walk along the reserve fence. When I got to within 20 or 30 feet of Connors and Dawson, I saw they were shovelling down the dry stone from a stack which had been carted there to be mixed into concrete.
279. Will you swear that 2½ barrow-loads were put down the shaft? About that.
280. Did you stand there and allow it to be done? I stood there to satisfy myself.
281. You allowed them to put down 2½ barrow-loads before you objected? From the time I first saw them until I was convinced that they were shovelling in dry stone I should say that they put in 2½ loads.
282. After you had seen the 2½ barrow-loads of dry stone put down the shaft, did you go down to see what had been done with it? No; there was no engine-driver there, and if I had gone down I could not have been more convinced than I was that dry stone was being put down the shaft.
283. Were you not stationed there for the purpose, and would it not be a part of your duty to go down the shaft to see what was being done with the dry stone;—you were there to see that concrete was put in? I could not go down a shaft of 200 feet if there was nothing to go down in.
284. How did the men get up and down? There was no driver until about 7 o'clock.
285. At what time did you see the stone put down? At about half-past 6.
286. Did you go down at 7? No.
287. Why not? I did not think it necessary to go down the shaft. I had already seen the stone sent down, and they had thrown down a certain amount of dry compo.
288. Do you say that after putting down the dry stone they put down in addition a certain amount of dry compo.? They did, and they asked me if that would not satisfy me. I said, "No; it must be concrete."
289. Do you mean to say that after you had spoken to the men you did not go down the shaft at all to see what was being done below? I did not.
290. Then for aught you know the work down there was being done all right? It could not be right.
291. You say you saw dry stone put down, and you tell us that you also saw them put down dry compo.;—what reason had you for supposing that the dry stone and the compo. was not put into the work in the form of concrete;—can you say whether that was or was not done? I do not know how much stone had gone down before I saw them, but I made a note in my pocketbook of about 2½ barrow-loads, so that I might make quite sure. There may have been two cart-loads.

R. G. Reid.  
27 May, 1896.

292. But you do not know what was done below;—you say that the driver was there half an hour after you had seen the men putting down dry stone;—why did you not avail yourself of the opportunity to go down then? Well, the shaft being naturally wet, the compe. which had been put down would be mixed among the stone.
293. Practically then you had every reason to think that the work was all right, and that is the reason you did not go down? I had every reason to think that the work was all wrong, or I would not have reported it.
294. Coming to the other occurrence which you reported to Inspector Fowle on or about the 10th February, you told the Commission you objected to dirty metal, and that you asked the contractors' employees to use the fork;—can you tell me whether that metal had been forked previously? I could not say if it had been forked, but if so, it had been very badly forked; it was very dirty.
295. Supposing the metal requiring to be forked had been forked when you came to the last of it, would the forking take out the dirt—would it make the metal clean? It would take away all the quarry refuse and dirty sand.
296. That was the dirt you objected to? Yes, and there were bits of root in it, and it had been trampled over; it was the last of the heap.
297. What was the result of your action when the dirty stone was put down the shaft;—was it used? It was put down the shaft.
298. Should you not know whether it was used or not;—were you not there for the purpose of seeing? Certainly it was used; it was mixed with cement.
299. To what extent? About half a gauge; about 10 cubic feet.
300. Before the reports to which you have referred this morning as reports No. 1 and No. 2 was there any friction between yourself and the employees of the contractors? There was not any friction so far as I was concerned. I had never seen some of them before.
301. Would you not regard what you told us this morning about one of the bricklayers threatening to run the trolley over you, and about your being pulled up the shaft much faster than suited your sensibilities;—would you not regard that as evidence of friction? That was by a different man altogether.
302. But I am speaking of the contractors' employees generally? I looked at my being pulled up the shaft as a joke between the men. I did not consider that the contractors had anything at all to do with that matter.
303. The inference from what you said about your being pulled up the shaft was that obstruction, so to speak, was being put in your way by the contractors and their employees? You may look upon it in that way if you like.
304. As a matter of fact, was there not difficulty from almost the first moment you went to the contract until you were removed in February between yourself and the contractors' employees? There was no difficulty so far as I was concerned. I would not allow the men to pack the brickwork in the way they wanted to.
305. Beyond the dirty metal which you reported in February, and the dry metal which was put down the shaft on the 31st January, concerning which you have some suspicion, do you know of any defective work upon Contract 79? I only know of one other matter—a brick was broken, and I mentioned it to Inspector Fowle. He took the engineer down and he said "Let it be the worst." A brick in the arch was chipped.
306. *His Honor.*] Do you mean on the outer or inner side of the arch? A piece was taken off half-way along the brick. The bricklayer did it when he was driving the key-brick up. It was an accident.
307. You know as a matter of fact that at the time you were removed from Contract 79 to Contract 89 the foreman bricklayer was removed too? That I could not say.
308. Do you know Inspector Eyre? Yes; I have met him on different works.
309. I suppose you regard him as a fairly good man? I have not a chance to know. I have never been with him.
310. *Mr. Carter.*] You said this morning that you received intimidation on one of these contracts? I did not say that, but you can draw your own conclusion.
311. Did that come from any member of the firm, or did it come from some of the workmen with whom you were quarrelling? I do not know that I ever quarrelled with any man on your jobs.
312. *Mr. Parkes.*] Your quarrelling with the men, in so far as you did so, was only from your insisting on the work being done in a proper manner? That is all.
313. Did you ever have a conversation with Mr. Davis in connection with your removal to Contract 89? Yes.
314. What did he say to you? He came out there after my removal, as he usually does, making the round of the different jobs. He came up to me, and said, "Well, Reid, how are you getting on here?" I said, "Very well; I have nothing to complain of on this job; but there is a little matter I would like to understand. If I have been too severe on Contract 79 it would be just as well for me to be informed of it, because I do not wish to be severe." He said, "Nothing of the kind, Reid; you have done quite right." I said, "If I have done quite right I do not think it is fair for me to be removed over here." I explained that I lived close to Contract 79, on North Shore, and I did not see why I should pay the boat, tram, and train fares out to Lewisham. Mr. Davis said, "Well, I cannot help it; the Department will not pay your expenses." I thought it very hard that he, the engineer, should endorse my action upon the contract, and yet that he should shift me from it to another contract, where I had to pay boat, tram, and train fare.
315. This morning you stated that you were for a certain time at the end of one of the drives;—what were you doing there? I was superintending the building and packing of the brickwork.
316. With regard to the putting down of bad material, you had no means of stopping the men who were engaged in doing so except by reporting the circumstance to your superior officer? That is all.
317. You did that? Yes.
318. Did they take the matter up and deal with it? Mr. Davis held an inquiry in the company's office, at North Shore. Inspector Fowle, Mr. Boys, Mr. Carter, and Mr. Snodgrass were present.
319. You took due care in every case to report bad work? Yes, either verbally or in writing.
320. And they did not act on your report? They held inquiry.
321. Was incompetence, or any other reason, assigned for your removal from the contract? Never.
322. With reference to the inspectors going down the shaft, is it not imperative that the contractors should provide means for their going down? I am not sure about that.

- R. G. Reid. 323. *His Honor.*] Cannot you be a little more explicit about the occasion on which you noticed dry metal being sent down;—it was for the filling at the back of the shaft. was it not? The shaft was in sandstone rock, and the space between the brickwork and the rock had to be filled with sandstone concrete.
- 27 May, 1896. 324. What stage of the building up of the shaft had been reached at that time;—how is the shaft built up from below after it has been completely excavated? It is brought up over the crown of the drive, so that it goes right down into the sewer. It is brought up with a wall 9 inches thick.
325. At the time to which you refer, how far up had the shaft been built? At that time I should say they were from 100 to 150 feet from the top—in other words, they were up about 50 feet. The rock at the sides would project at various points, touching the brickwork. If the brickwork is built up above one of these points, it stands to reason that the cavity left below cannot be filled. If the inspector sees that the bricklayer is coming up to this projecting part of the rock, and that he is blocking the chance of filling the cavity below, it is his duty to call attention to it, because when the brickwork is carried above the projection the packing below cannot be done.
326. The packing is sent down ready mixed, I suppose? Yes. The concrete is mixed on a large board alongside of the shaft, with a shoot going down from the end of the board, so that the men have only to shovel the concrete along the board and it drops down the shaft. The men then go down, and put the concrete in for the packing.
327. The concrete ought to be sent down wet—that is, ready mixed? Yes. There is so much weeping in some cases from the sides of the shaft that if the concrete only lies on the board a few minutes it is wet.
328. You say you saw two and a half barrow-loads of broken sandstone going down dry? Yes.
329. The other components would be sand and cement? Yes.
330. How did you know that these components had not been sent down first, and that the men were not going down to mix on the board below;—did you see any other material sent down after the dry stone? I saw a few shovelfuls of compo., left after the bricklayers had finished using it, sent down.
331. Did you see anything else go down? They had half a batch of concrete ready mixed on the board, and they sent that down.
332. After sending that concrete down, did they send a man down? Yes; afterwards.
333. What did you assume was being done down below;—did you assume that the concrete was being made up, and that there was too much metal? I assumed that the proportion of cement specified was not in the work.
334. And that the sandstone was present in an unduly large proportion? Yes; if they wanted packing, why did they not use the half batch of concrete which was on the board before sending down the dry stone?
335. The concrete on the board was in proper proportions? Yes. From where I stood I was in a position to see clearly that the men were not shovelling down concrete. They were shovelling down material from a heap of dry stone.
336. When you went over to them did you at once speak about it? I said I should have to report it.
337. Did you not ask for an explanation from the men? I asked for a explanation, and they said they required only half a batch. I said, "Why not use the half batch which you have on the board?" That was afterwards used.
338. After the concrete had been sent down a man would have to be lowered to put it in position? Yes.
339. And you say you saw the man go down? Yes.
340. You did not go down yourself? No.
341. You could have got one of the men to lower you down? I could; but I did not think under the circumstances that it was safe for me to go down, as neither of the men were engine-drivers, and if I had gone down I could not have been more convinced than I already was that dry stone had been sent down.
342. *Mr. Davis.*] I should like you to say definitely what you saw which you thought radically wrong;—you say you did not follow up what you saw by going down the shaft and seeing what was being done below? No; I could not be more convinced than I was that dry stone had been sent down.
343. Did you think that simply telling the foreman bricklayer that you would report him sufficient action for you to take? I could not have done more if I had gone down.
344. You said just now that a labourer went down to put the concrete in position after the material had been put down the shaft;—why did you not go down with him? I did not consider that I had any right to risk my life with a man whom I had caught in an act of roguery. I did not think I ought to risk my life with men like that.
345. As a matter of fact, was there not a good deal of friction between yourself and the workmen of the contractors? There was no friction at all in the ordinary sense. Of course, if a man has been proved to be in the wrong—if he has been caught red-handed in wrong-doing—there is bound to be a certain amount of friction.
346. Can you say conscientiously that there was not a good deal of personal feeling between yourself and the contractors' workmen? There was no personal feeling between myself and the workmen. Some of them I had never before seen in my life. Some of them I had seen on different other works, and I was friendly with them.
347. Did it not occur to you that the Department was extending you a considerable amount of consideration in removing you from a contract upon which you had so much personal animosity to contend with? It certainly never occurred to me to suppose that the Department was taking me into consideration. If I was in the right I thought the Department ought to have left me on contract 79, and if I was wrong I thought I ought to be dismissed.

FRIDAY, 29 MAY, 1896.

• Robert Rowan Purdon Hickson sworn and examined:—

- R. R. P. 348. *Mr. Parkes.*] What is your position in the Department of Public Works? I am Under Secretary for Public Works and Commissioner for Roads.
- Hickson. 349. What was your position on the 22nd February, 1894? I was Commissioner for Roads and Engineer-in-Chief for Sewerage.
- 29 May, 1896. 350. It was you who decided, I believe, that Inspector Reid should leave Carter, Gunmow, & Co's. work? To leave that contract—yes.

351. Why did you so decide? Because I had come to the conclusion that it was in the interests of the work, as well as in the interests of the man himself, that he should be removed.

352. Before you decided that, you sent for Mr. Carter? Yes.

353. You and he had an interview? Yes.

354. What took place? I asked Mr. Carter to come in on account of the complaints which had been made to me with regard to the friction which had taken place upon the contract. The complaints were made to Mr. Davis, the supervising engineer, and he made an investigation, the result of which was very unsatisfactory. We could not put the blame of the friction upon any special person, and, after consultation with Mr. Davis, I came to the conclusion that the best thing would be to move the inspector and also two of the contractors' men who I thought were equally responsible for the friction. I sent for Mr. Carter and told him what I thought of doing. He did not like the idea of his men being removed. However, I told him very clearly that that was what I intended to do. I also moved Inspector Reid from the contract, sending in his place an equally good, if not a better man.

355. According to the minutes, you saw Mr. Carter before you arrived at that decision? Not before I came to a decision in my own mind.

356. Why should you send for Carter? I wanted to see him, and to hear what he had to say about the matter. I had practically decided to remove two of his men, and I wished to give him a chance to make a statement.

357. Mr. Carter has said that he never was upon the job; why, therefore, should you send for him? Because he was at the head of the firm; he was the only member I knew of.

358. Did Mr. Carter request the removal of your own officer? I am not sure that he actually put it in that way. I think he said that as long as Reid was there there would be friction. He expressed a desire for the withdrawal of Reid—at least, I so understood him.

359. Would it not lead you to think that Inspector Reid was preventing the men from doing bad work? Certainly not.

360. Not when Inspector Reid was constantly reporting to you that bad work was going on? He never was reporting anything of the sort.

361. Did Inspector Fowle not send you the reports of Reid? Yes; I saw some of his reports.

362. Have you not a regulation in your Department rendering it imperative that men who do foul work should be removed from all Government jobs, and should not be allowed upon them again? There is no standing rule.

363. It is a regulation, is it not? It is not. But we do so; we have removed men.

364. Is it not, in the interests of the State, wise to remove men for doing foul work? Yes.

365. When you had these reports before you why did you not remove them then? I did send away two of the contractors' men. But I am not aware of Reid reporting bad work. He said himself the other day that he knew of no bad work that was done. What he mentioned was that some broken stone not mixed with cement was thrown down one of the shafts. He spoke to the men very strongly about it, I believe; and I think he was very wrong in not following it up. That was one of the reasons which led me to think that it would be better for the Department to have a better class of inspector at the work.

366. Did you act upon his former reports? The reports would all come through the supervising engineer. We consulted from time to time as to the best thing to do.

367. Did you assist your inspectors? In every way.

368. Did you remove the men who were doing bad work? What men?

369. The men who had been reported? It was on the strength of some of the reports that I removed two of the men.

370. After many appeals on the part of your inspectors? After the matter had been thoroughly investigated by Mr. Davis on the spot.

371. You admit that you ignored former reports? I do not. I should like to see the reports to which you refer, so that I might know those upon which no action was taken.

372. As a matter of fact, did you not permit the contractors' men who were removed from the job to go on to other works of the Government under Carter and Gummow? My decision was that they were to be removed.

373. But you allowed them to be removed to another work of Carter, Gummow, & Co.? As a matter of fact, I did not know that they had been shifted to another job.

374. Did you not similarly remove an inspector named Harris from one of Carter, Gummow, & Co.'s jobs? I do not remember the case.

375. Did not you similarly remove an inspector, named Wagg? Which contract are you alluding to?

376. I cannot say. A question was asked in Parliament about the removal of inspectors—do you not remember that? I cannot call the cases to mind at present.

377. Cannot you recollect the removal under similar circumstances of Inspector Harris? I cannot. We are continually removing inspectors backwards and forwards from one work to another. It is a very common thing to do. I cannot tell you what was the reason for the removal of the inspector you mention from some unknown contract.

378. You are sure you did not remove Inspector Harris from any one of the works? I believe Harris has been removed backwards and forwards.

379. But, I mean for similar reasons—that is, on a complaint by Carter, Gummow, & Co. of him? I have no recollection of it now. If you could let me know the number of the contract I could tell at once.

380. Do you recollect furnishing an answer to a question which I asked in Parliament on 9th October, 1895? Not by the date.

381. I suppose Mr. Young would refer all questions to you for answer? It is very likely.

382. The reply you furnished on the occasion to which I refer was that only one inspector had been removed from Carter, Gummow, & Co.'s works, viz., Inspector Reid? I do not remember the question. So many questions are asked in Parliament that it is impossible to carry the whole of them in one's head.

383. You represented to Parliament that Inspector Reid was removed because of friction with Carter, Gummow, & Co.'s manager and foreman;—that is the only reason you offer? Yes.

384. As a matter of fact, what remedy have your inspectors got other than appealing to you to have their orders carried out? The first remedy is to see that the thing is done on the spot. If that is absolutely refused, then of course they would go to their superior officers.

R. R. P.  
Hickson.  
29 May, 1896.

R. R. P.  
Hickson.  
29 May, 1896.

385. Supposing that they endeavour to see that the thing is done, and that it is absolutely refused, what are they to do then? Then they could appeal to me.
386. Did you never receive a report from Inspector Fowle that it was almost impossible to get Carter, Gummow, & Co.'s men to do any work on account of their obstinacy? I have no recollection of any report to that effect.
387. Do you not consider that in the interests of the public you should have very firm inspectors on these works? Most decidedly.
388. Do you not think that when it comes to the question of paying away public funds to contractors, and your inspectors complain that the work is being scamped, that it is your duty to see that the men who are scamping are removed, and that the bad work is also removed, and proper work substituted for it;—do you not think you ought to uphold your inspectors? Most undoubtedly.
389. Is it your duty to remove them simply because they have friction with the men in the discharge of their duty? I certainly would remove them if there were friction.
390. If you remove them because there is friction between them and the men, is that not an act of grace to the contractors;—is it not assisting the contractors? I do not see in what way it is an act of grace to the contractors to dismiss some of their men.
391. You asked not for their dismissal but merely for their removal from one contract to another? I was not aware at the time that they left the work to go to another.
392. You have nothing against the character of Inspector Reid? No; Reid is a very fair inspector; I think he is an honest conscientious man; he is injudicious; that is the only thing I can say about him.
393. In what way? Well, in regard to the friction that was going on. There was a good deal of what one might call skylarking and larrikinism going on there. For that reason I thought it well that he should be removed, both for the sake of the work and for his own sake.
394. What do you mean by skylarking? Well, I mean such incidents as the men playing tricks with him when he was going up the shaft.
395. Do you call it skylarking that men in Reid's position should have their lives endangered by the action of men in regard to whom he had simply done his duty? It is remarkable that he is the only man in the whole place who made such complaints.
396. Did you never receive complaints from any other of your officers as to the way in which they were treated by the men? I do not recollect receiving any.
397. Did you ever go upon Contract 79A? Very little of it was carried out under me; I may have been on it once, but I do not think I was.
398. Do you generally examine your own works? As well as I can; of course there is very little examination that the head of a Department can make personally; he depends upon his officers.
399. Would you not consider it a case requiring your own special examination when complaint had been made by an inspector that every step he took was met with an attempt to get in defective work? I do not acknowledge the truth of the statement that attempts were made to get in defective work, and in the second place I had the principal assistant engineer whose duty it was to supervise the whole of the contracts, besides the resident engineer; these are the men who go into all these details; I could not afford the time to go into these matters and examine all the disputes that arise.
400. Of what do your duties consist? Of managing the branch of which I am the head.
401. In what way? In the office, looking after all the details of the office.
402. Do you mean clerical work? I think an engineer in this Colony is almost a clerk; there is so much clerical work to be done in the office; 95 per cent. of his time is occupied in that way; it is for that reason that we got the principal assistant engineer to do the outside work.
403. You have plenty of officers, I understand, to do the clerical work necessary? Not the clerical work I had to do.
404. Do you write many minutes yourself? A great number.
405. Do you examine your own plans? Yes.
406. But you have any number of officers;—you are not limited in that regard; therefore I should think you would have time to go out and look at the works? I had no time for that. My officers do the outdoor work. I find that I have quite enough to do in supervising all the work in the office, writing reports, answering questions, and being at the same time in constant communication with the Minister on various points.
407. You do not think it part of your duty to go and see periodically works upon which large sums of public money are being expended? It is my duty to do so as often as I can consistently with the discharge of my special duty of managing the Department and the office. I have all the accounts to look after. I have to sign all the cheques for payment, and that in itself is a very big business.
408. First of all, do you satisfy yourself as to what the cheques are for;—do you look through the quantities and the voucher before you sign the cheques? No.
409. You rely implicitly upon your officers? I must do so at times, especially when there are contracts passing through my hands at the rate of twelve a day.
410. Therefore you have not any responsible work? Yes, I have.
411. But if you never look into your contracts and the payments you make you cannot be doing responsible work? I do look at the plans, and I do look at the contracts whenever I can spare the time.
412. Do you look into the items you have to pay away? I go upon the signature of the responsible officer, the accountant, as to the correctness of the additions, and upon that of the supervising engineer in regard to the correctness of the quantities.
413. And you never compare the contracts with the payments you make? Only in the lump sum. No head of a Department would have time to do more than that.
414. It would not take so very long to make a cursory comparison—merely looking down your quantities? It would be physically impossible for me to do it, taking that work alone as the work of my office.
415. *His Honor.*] Having given this evidence, so far as it has gone, is there anything more you can think of which you wish to mention in relation to the same subject matter as that upon which you have been cross-examined? I do not think so.
416. Did you in fact voluntarily and knowingly allow any defective work to be done;—or knowing that defective work was going on, did you permit that work to go on on any occasion? No, certainly not.
417. Knowing defective work to have been done on any occasion, or suspecting that defective work had been

been done on any occasion, did you allow that work to remain in a defective condition without having it set right? Certainly not. Perhaps I might be permitted to say that there is no allegation of defective work in regard to Contract 79.

R. R. P.  
Hickson.

29 May, 1896.

418. Is the work between shafts Nos. 12 and 13, in Alfred-street, North Shore, part of Contract 79 or 79 A? 79 A.

419. Do you wish to make any explanation with reference to Contract 69? It was carried out strictly according to specification. It was not concrete packing.

420. Do I understand that in the specifications it was provided that concrete or other material of which the Engineer-in-Chief might approve should be put into the cavities, or some words similar to that? I should like to see the specification. I am not quite sure whether it was written before the old system was abolished or not. Having looked at the papers, I see that it is one of the contracts under the altered specifications. I should like to refer you to page 85 of the Parliamentary paper ordered to be printed on 22nd October, 1895. You will see there a schedule to specifications. That schedule of specifications is put with every contract that is let on the sewerage works. It does not follow that the whole of it applies to each contract, but in the specification written before that the clauses intended to apply are referred to.

421. In regard to Contract 69, the tunnel, I understand, was through shale, and Dawson said that the filling over the crown was done with shale instead of with concrete;—the question is with what material the filling was to be done? I take it that the filling is to be done in conformity with clause 87 of the specification to which I have first referred.

422. Does that clause apply to open cuttings as well as to tunnels? Yes; because there is the packing in between and the open cutting as well.

423. What is the meaning of these words "the spaces between the excavation (poling boards where there are such) and the brick or concrete work of sewer in tunnels unless otherwise directed to be filled in with concrete;"—do those words not apply to the whole of the inter-spaces over the crown as well as the sides between the sewer when constructed and the excavation? They would apply to the whole thing unless otherwise directed.

424. Then the words "unless otherwise directed" are very material? Yes.

425. Do you know, in point of fact, of your own knowledge, in regard to the particular sewer spoken of by Dawson in Contract 69, what directions were given by the engineer in charge as to the material which should be used in the filling over the sewer? It was to be filled in with shale.

426. Do you know that of your own knowledge? Only from what the engineer told me.

427. From reports formally made to you? Yes, by the principal Assistant Engineer.

428. Of course, you are an engineer by profession? Yes, I am a member of the Institute of Civil Engineers.

429. Speaking as an expert, what would you say as to the propriety of using shale, for instance, under these circumstances—would shale of this quality be a proper material for filling as a substitute for concrete? It is a proper material for filling. You can hardly call it a substitute for concrete, because it is so totally different.

430. I mean, what do you think of its use instead of concrete? Certainly it can be so used.

431. *Mr. Parkes.*] Where you have rock you do put concrete, do you not? It used to be the custom; it is not so now.

432. In this contract is it so? Yes.

433. Where you have shale you have put shale filling? Yes.

434. Is not shale considered a material of a more or less soft nature, as compared with rock? Yes.

435. Would it not naturally follow that if you put concrete where you had rock it would be more necessary to put concrete where you had shale? It does not matter what opinion you may form. We have the specifications to go by, and, as I have said, we are giving up putting concrete in at all round the top of our sewers even when we are going through rock. The last few contracts which have been let, not immediately under me, provide, I believe, for filling with sand.

436. Why did you provide for the concrete then? It was the old custom, and by degrees in the course of the various works we have come to see where improvements can be made in the way of cheapness.

437. Have you ever seen 10 feet of the city streets blown up with the pressure of storm-water? I never saw it here, although I believe the Tank Stream was once blown up.

438. Have not the sewers of the city often burst up the streets? I never saw it myself.

439. Is this sewer not supposed to sustain a very heavy pressure from within? No.

440. Not when it is charged with water? No, it is calculated to a two-thirds flow.

441. Are not the street drains turned into it? But there is an overflow to meet that.

442. Supposing there were extraordinary rains and the sewer were tested to the uttermost, would it not be necessary to have it in firm packing? We do not consider so now.

443. *His Honor.*] How is the packing put in when it is done with any material other than concrete? A brick sewer is carried on in advance of the work to a certain length, say about a 4-ft. length, and the packing is pushed in from the front with a wooden spade. The material is packed in with this spade as tightly as it is possible for a man to press it in.

444. *Mr. Parkes.*] What effect would the natural weep in the case of this sewer have upon the shale? It could not have very much, because the material cannot get out.

445. If the shale became sodden with water, what effect would it have? The same effect as on the shale all round it. The strength of the sewer is not dependent in any way upon the concrete or shale at the top. The sewer is calculated to carry its own pressure, and to be watertight in itself.

446. *His Honor.*] It is all one piece on account of the quality of the cement—that is to say, the bond is supposed to be perfect—to make it one piece? Yes.

447. *Mr. Parkes.*] Your specifications say the contractors shall not deviate from their work except upon writing? Yes.

448. Did you write an order for the alteration of this material? We are not very strict on any of our contracts as regards a written order. As a rule, these things are fixed up on the ground when the engineer is going over the work with the contractor.

449. An inspector, then, could alter the concrete to shale at any time? Not an inspector.

450. But you could do so? Yes, and my supervising engineer also.

451. Therefore, although it is said in the specifications that it is imperative that the alteration should be in writing, it does not matter? That clause is honored more in the breach than in the observance.

R. R. P.  
Hickson.  
29 May, 1896.

452. *His Honor.*] Is it or is it not possible to pack with broken sandstone rock?—is there any distinction between the possibility of satisfactory packing with shale and satisfactory packing with sandstone rock? I understand you to say that you never pack with sandstone rock where there is shale—is that so? Not in shale.

453. Do you in the sandstone itself? No; I have never done so.

454. Is there a reason why shale can be satisfactorily used for packing and why broken stone cannot? Broken stone will not lie so close. You could not fill in the interstices with broken stone, but you can pack shale very close.

455. Shale when broken up in the ordinary way in an excavation can be used for packing as well as clay or sand? Yes.

456. *Mr. Parkes.*] If shale were used would you pay for it as concrete? Certainly not.

457. *His Honor.*] Will you give us a definition of the word "lining" as you understand it in the specification? I take it to be part and parcel of the sewer proper.

458. The perimeter of the cylinder so to speak would be the lining? The word sewer would explain what is meant.

459. Your definition of "lining" then would be the material of which the barrel itself is formed? Yes. If you look at the end of my minute on page 305 you will see the word "packing" used in its proper sense.

460. The material question now is, what was actually done by the department in relation to the contractors in respect to the packing over the lining—was the shale which was used as described by Dawson properly or improperly put in. Was it done with or without the consent of the department? It was done according to specification; and, as far as I know, it was properly put in. I cannot say whether it was properly done, because I was not on the spot.

461-2. If the packing was put in with shale would the contractors be paid for anything along that part of the sewer except the shale packing—that is, except at the rate for shale packing—for packing with material other than concrete? It would be paid for at the rates set down opposite that item.

463. I understand this contract was one of those in the old form, which I was informed the other day had since been modified by another department, under which the contractors tendered for each separate kind of work at a separate rate, and estimated their total of the quantities which the department had formerly taken out and informed them of? That was the form, your Honor; but so far as the alteration being made by another department is concerned I might be allowed to state that I made it myself.

464. Contracts 79, 79 A, and 69 are all under the old regime? Yes.

465. *Mr. Parkes.*] I observe from the papers that in regard to Contract 69 there is an excess paid on concrete to the extent of about £2,000; can you produce the written instructions which of course would be recorded to substitute shale for concrete packing? This voucher did not come under me at all, so that I cannot give you any particulars; it was out of my hands before the date named there.

466. Mr. Darley's only work in connection with this contract seems to have been to issue the final certificate—a merely perfunctory work. You yourself had charge of the work;—when did you actually hand it over to Mr. Darley? I think I gave him charge on 1st April, 1895.

467. The final vouchers were given in July, were they not? The date of the one you have handed me is the 25th October.

468. That voucher would not be issued until many months after the job was completed? The measurement is made up on a certain day and the voucher is made up as soon afterwards as possible.

469. As a matter of fact was not the work complete before Mr. Darley took it over? No.

470. The date of signing the contract was 22nd January, 1894? Yes.

471. It had to be completed in what time? In eighteen months.

472. As a matter of fact was it not completed in July, 1895? I could not say; I was not then in charge. I gave up charge on the 1st April, 1895.

473. How long had Mr. Darley to administer this contract? From 1st April, 1895, until it was completed, apparently in October.

474. But practically the work was done under you? Most of it.

475. I would like to ask you whether you ever built a sewer in the city of Sydney without a brick-ring lining? Yes; I think we have built some with concrete all round.

476. Where? I should not like to say definitely without refreshing my memory, but I think we did build some.

477. In the case of this particular job is it specified to be in brick ring throughout? I think so.

478. Then the excess of concrete that is put over the brick ring is, I suppose, in order to provide against bad ground? There is not any excess of concrete. Other material was substituted, and in this case it was shale.

479. Why do you say that where the material is more or less soft the packing shall be increased? We have to provide for all sorts of contingencies. I may say that in starting these sewerage works we cannot tell the nature of the ground we shall meet. Therefore we have to specify for all sorts of contingencies—hard ground, soft ground, a good deal of packing, little packing, several rings or one ring, as the case may be, and as the work goes on it is determined by the officer in charge what class of work shall go in at particular places. We have items in our schedule of prices to meet the various circumstances that arise.

480. Is not shale a more or less soft material? We get all sorts of shale; some has to be picked, and some will come out quite easily.

481. You use the words "more or less hard material," I see—what do they mean? There is hard clay and soft clay, hard shale and soft shale; soft shale would be more or less hard material.

482. You say hard and soft shale? Some shale would go over soft rock, because you have to blast it?

483. In the specifications it is provided that there shall be an excess of packing in more or less soft material? Yes, there would have to be a larger packing.

484. *His Honor.*] Would you extend the tunnel then in soft material beyond the necessary size, so as to allow for a greater thickness of packing? No. If the material is very soft you have to make it larger than is absolutely necessary, because of the timber which has to go in it; if it is hard material you can cut it out to the exact size.

485. It is not because you want to get a ring of tightly-rammed and solid material round the barrel that you put in more packing, but because you cannot help yourselves—that is to say, you have to take out more stuff than you would need to take out if the material were harder, and would stand better;—it is

not

not with the object of protecting the barrel that you put in the greater thickness of packing? No; you have to make up the space you have taken out.

486. I want to understand this perfectly;—where you use concrete to a point half way up and then put in a brick crown, how do you do the packing of the lower part, supposing you cannot cut the tunnel perfectly true? It is all done in one operation. The sewer is cut out roughly, and of course, the space must be filled in.

487. What I want to know is, how the contractor is paid for the concrete he puts in in that way;—is he only paid for the quantity which would require to go in if the excavation were cut true? You have to fix a limit. We know that the tunnel cannot be cut to the exact size, and we give a limit which was settled a great many years ago, I think, at  $4\frac{1}{2}$  inches. If the contractor goes beyond that, he has to fill it up at his own cost.

488. But he must bring the concrete right up to the excavation? Yes.

489. Where the tunnel is built entirely of brick right round, what is the practice adopted;—how is the lower part of the brickwork laid? It is packed with concrete as we come up with each brick. The concrete is brought up with each course of brick.

490. In all cases there is a wooden drum or frame fixed somehow in position where the centre of the core would come, round which the bricks are laid? Yes; and as each course of bricks comes up, the concrete is put in.

491. From the spring, the bricks, of course, are laid on the drum, and when they are set the filling is put in? Yes.

492. Cement being used, the setting is practically instantaneous? Yes; almost immediately the brick-layer has done his length, the ramming can go on.

493. The stability of the whole concern rests upon the quality of the bricks and the quality of the cement? Yes.

494. The stability does not depend upon its surroundings—at any rate upon its upper surface? I would not go so far as to say that it does not, because the packing prevents any possibility of the thing rising up.

495. But what you may call the detailed stability is enough to make it unnecessary to put in particularly hard material so as to keep each particular brick in position;—the general firm pressure is sufficient? Yes; and the practice now is to fill up the space with sand.

496. There being a general firm pressure all round? Yes.

497. I understand that this sewer will take the storm water down the gully shafts? A certain proportion.

498. A limited proportion? Yes.

499. The limit being calculated on the grade and section of the sewer? Yes; along the main line of sewer there are overflows into storm-water channels.

500. Discharging at convenient points so as to run out in comparatively short distances? Yes; they are all brought to some river or creek.

501. I suppose they would be two-thirds of the way up the sewer? Some are two-thirds, and some are three-quarters.

502. That would prevent any chance of the sewer bursting from hydrostatic pressure? Yes.

503. Is there anything further you wish to state? We started upon the question of defective workmanship. The defective workmanship complained of upon contract 79A was done at a place that was not under my care at all. I had not charge of the sewer at the time.

504. Will you explain that place, and the date at which the work would have been done? My last voucher upon contract 79A is dated 20th March, 1895. I am not in a position to say the exact date at which the part of the sewer which was examined yesterday was done, but the engineer-in-charge would be able to say. I am informed that it was a long time after the date I have just named.

John Henry Harris sworn and examined:—

505. *Mr. Parkes.*] What is your occupation? I am a bricklayer. I am an inspector at present under J. H. Harris, the Sewerage Construction Department.

506. Were you an inspector under Mr. Hickson? Yes.

507. Were you ever an inspector upon any of Carter, Gummow, & Co.'s contracts? Yes; on one of the first sections at North Shore?

508. Would that be Contract No. 79? Yes.

509. Had you any reason to complain of defective work? No; I do not think so. There were once some hollow joints in a manhole, to which I called attention. The bricklayer had done the work on a night shift. The joints were afterwards attended to.

510. Did you ever make any complaint of Carter, Gummow, & Co.'s work? Not in reference to the work done.

511. Was the work generally good? Yes.

512. Were you removed from the job? Yes.

513. What was the cause of your removal? Other work came in at the time.

514. It was not because you had any quarrel with any of Carter, Gummow, & Co.'s men? No.

George Wagg sworn and examined:—

515. *Mr. Parkes.*] What is your occupation? I am an inspector under the Sewerage Construction Branch.

516. Were you ever an inspector under Mr. Hickson when he had charge of that Department? Yes.

517. Were you employed upon Carter, Gummow and Co.'s contracts? Yes.

518. Had you any reason to complain of their work? In what way do you mean?

519. Had you to complain of defective work? No.

520. Had you ever a quarrel with Carter, Gummow & Co.'s men? That happens on pretty nearly every job; there are bound to be differences of opinion. It is impossible to get through the work without them.

521. Were you ever removed from Carter, Gummow and Co.'s contracts? No.

522. You were never shifted to another job? No.

523. *Mr. Hickson.*] As a matter of fact, are you not an inspector upon one of their contracts now? Yes.

Robert

R. R. P.  
Hickson.

29 May, 1896.

29 May, 1896.

G. Wagg.

29 May, 1896.

Robert Rowan Purdon Hickson recalled and further examined:—

- R. R. P. Hickson.  
29 May, 1896.
524. *Mr. Parkes.*] Did you not start Contract 79A? Yes.  
525. Where would the contract start from? From the junction with Contract 79.  
526. Does not Contract 79A commence at Mount-street? Yes.  
527. *His Honor.*] Shaft No. 12 would be at the junction of Contract 79 and Contract 79A? Yes.  
528. *Mr. Parkes.*] How far was that work carried on when you handed over the job to Mr. Darley? could not tell you that.  
529. Was it half-way through? Probably about half-way through.  
530. As a matter of fact, you were in charge when the work was done at shafts Nos. 12, 13, 14? I could not say from memory how this work was carried on, but I was told this morning that the work examined yesterday was not done under my supervision.  
531. *His Honor.*] Was Contract 79 completed before 79A was begun or not? Yes; I think I completed 79.  
532. *Mr. Parkes.*] Then when you swore this morning that that contract was not under your charge the statement was not correct? I did not swear anything of the sort.  
533. *His Honor.*] I understand you to say that you understood that that particular portion of the work was not done under your supervision? Yes; but Mr. Parkes mentioned the contract.  
534. The question is when the work in Contract 79A was begun? I cannot tell when the lining of the tunnel at the point examined yesterday morning, and alleged to be defective, was made. I think Dawson said it was about July, but I gave up charge of the work on the 1st April.  
535. *Mr. Parkes.*] Did you not swear that the lining went on with the excavation and packing simultaneously? I said the packing went on with the lining.  
536. Does not the lining come on as you drive the face? No.  
537. Is it not the case that as you drive each length the packing and lining have to follow? No. How can you carry on blasting in a tunnel and follow on with the packing and lining at the same time?  
538. Does not the specification provide for the work to go on in that way? It provides for the work to go on as I direct it to be done.  
539. For how many months was this work under your hands? From the date at which it commenced—that is, from June, 1894, until the 1st April, 1895.  
540. Therefore it was nine months in your charge? Yes.  
541. Then why should you try to put the responsibility on to another officer? I am not trying to do that. I was asked whether I knew anything about the defective work upon Contracts 79 and 79A, and I said that in regard to 79A I was given to understand, subject to correction, that the alleged defective work was not done when I was in charge.  
542. Having regard to the time you had the contract in hand, and the position of this defective work, are you still prepared to swear that it was done when the work was out of your hands? I have not sworn at all yet in regard to the date which the work was done, but I am given to understand that it was done after 1st April, 1895.  
543. As a matter of fact, must not the work have been done while the contract was under your charge? Certainly not.  
544. *His Honor.*] At what stage of the carrying out of the contract is the lining put in;—is the excavation generally finished to a large extent before the lining is begun? To a large extent.  
545. When was the lining begun in the case of this particular contract? I cannot say.

George Dawson recalled and further examined:—

- G. Dawson.  
29 May, 1896.
546. *Mr. Parkes.*] In constructing these sewers, do they not follow up the excavation with the lining? After a time; not close up.  
547. How far behind would the lining be? It depends upon the contract.  
548. In the case of Contract 79A, how long afterwards would it be? Some considerable time.  
549. How far was the excavation on before the lining was commenced? All the drives were through before we went on.  
550. Was it followed up with the lining at once? Some time afterwards; I could not say how long.  
551. At what date was the lining commenced, speaking roughly? I could not state the date at all.  
552. Was Mr. Davis the supervising engineer at the time? No, Mr. Griffiths.  
553. Whom would he be under? I do not know.  
554. *His Honor.*] Don't you remember when you left that job? Yes; some time at the latter end of January or the beginning of February in this year.  
555. How long before that was it that you were working in the place which was examined yesterday? It was in December, 1895, that that was done.  
556. What was the last work of all you did upon Contract 79A? It was in No. 14 shaft.  
557. Were you working there upstream in the brickwork? We were building the shaft there—the manholes.  
558. The lining of the section between shaft No. 12 and shaft No. 13 had been finished then? Yes.  
559. Was the work finished between 13 and 14? Yes; all the brickwork was finished, but the plastering was not finished.  
560. You were doing work near the surface? Yes.  
561. How was it that you remembered the distance from the shaft No. 13 to the bad work which was examined yesterday? The distance is marked every 35 feet on the concrete.  
562. Where is it marked? On the spring. There is a peg every 35 feet. The inspector marks it with red carbon on the concrete.  
563. Which way were you working with the brickwork? We were working up stream towards shaft No. 13.  
564. Which way were you measuring? The measurement started from shaft No. 13 down stream.  
565. Then you were measuring backwards as you went up? Yes.  
566. Did you make any note of the distance from the shaft to the bad work which you spoke of the other day;—I want to know how it was that you bore it in mind? Because it was such a big cavity. When you are running along with a truck in low places you take notice of them on account of knocking your back,

back, and when you come to the big places where you are able to straighten yourself you notice those also. In this particular case you could scarcely forget the big cavity, because you would be watching for it as you went along. We had at times to come a long distance underground where the rock was close, and I was very glad sometimes to get a chance of standing up.

G. Dawson.  
29 May, 1896.

567. What impressed this particular cavity upon your mind was the circumstance that it was a very high place? Yes, and at 275 feet there was a piece of timber. The ground was not too good there, and they put a piece of timber in. That would be 275 feet from No. 13 shaft.

568. Was the measurement done before the lining was put in? Yes; it is marked on the concrete for the pegs to go in just where the brickwork starts—that is, on the spring of the concrete.

569. And that is how you remembered the position of this very place? Yes.

570. There were other high places which were filled? There were none nearly so high as that.

571. Was this the only very high place? It was the only very high place. They got out of their levels somehow; they got too high.

572. And you had occasion to notice it from its extreme height? Yes.

573. And noticing its extreme height, you remembered exactly where it was? Yes; and, as I have said, I always stopped there to straighten my back.

574. Was this the only cavity which was left quite empty? There were other places left, but I could not locate them to a brick or two. Whenever we had the inspectors out of the way we could leave a drum or two.

575. You workmen did that of yourselves? Yes.

576. Where was your "boss" then? I reckoned that the bricklayer was my "boss."

577. How many men would be there at that time? The bricklayer and myself.

578. Did no one else actually see these hollow spaces? No one except the inspector. He would see them as he went through, but not of course as we were passing them by.

579. The inspector would not be there when you passed them? No; because if he had been there we could not have done it.

580. If the inspector had been there these places would not have been left? No.

581. No inspector on behalf of the Government and no inspector on behalf of the contractors was there, you say, to see that the work was properly done? No one but the bricklayer and myself.

582. Who is immediately over yourself and the bricklayer? The manager, Mr. Reid.

583. Did he ever go down? Very rarely.

584. He seldom went underground? I have not seen him underground more than twice.

585. When he did go down would he be able to see any bad work? He could do so if he wished.

586. How could he see the bad work if it had been covered up by your getting ahead of it? He would know by the pace at which we had got through. Besides he would know that we were not using the stuff. He had taken the sections for the metal, and he often used to laugh about it, and would say that we should have to give the stuff away to the Council, and that we were using none at all. He would chaff us for not using it, and give us a drink on the strength of it.

587. Where did he take you for the drinks? Sometimes to the Queen's and sometimes to Cabel's.

588. What length did this manager look after? He looked after the whole of 79A.

589. Were any of the contractors ever there? No, the contractors never came near us.

590. The manager treated it as a joke that you should use so little metal for the concrete? Yes; he often chaffed us about it, saying how well we were getting along with it. Then the quantity of cement was always given to the Government inspector according to the quantity of sand we used. The quantity of cement given to the inspector was always larger than we actually used.

591. And you used more sand than should have been used? Yes.

592. Did you use sand alone? No; we used a little cement.

593. And I understand that you left some places quite empty? Yes.

594. And other places filled with bad concrete? I should not like to say it was bad. I did not make it.

595. But the concrete contained more sand than anything else you think? It was supposed to.

596. At any rate the proportion of cement to sand was not used? The only time I used the cement was when we were building the shafts. That was the only time I had to do with the gauging of it.

597. Who gauged it for the concrete supposed to be used in the drives? The men engaged on the top.

598. They sent it down mixed? Yes.

599. Dry mixed or wet mixed? It was always damp a little.

600. You had to damp it further below? No; it was just ready for us.

601. *Mr. Parkes.*] Did you ever work under Inspector Wagg? Occasionally; never very much.

602. Did he ever complain of bad work being done? Not to me. The only time he ever spoke to me was about a gauge-box.

603. How long did you work under Inspector Wagg? I do not suppose more than a week altogether.

604. Did you ever work under Inspector Harris? Not directly. He was over the plasterers.

605. Did he ever complain about the work? He had one piece altered. He reckoned that it was not up to the mark. It was done over again, but I never saw the work.

606. Were you upon Carter, Gummow, & Co.'s contract when Inspector Harris was removed? Yes; I think he went to take charge of a job.

607. Was he removed for quarrelling with the men, or for any reason of that sort? Not that I know of.

608. *Mr. Hickson.*] What is the name of the bricklayer who worked with you? Crawshaw.

609. Did he know of you leaving these cavities unfilled;—was it with his connivance that it was done? Yes.

610. The two of you together connived to do the defective work? Yes.

William Henry sworn and examined:—

611. *Mr. Parkes.*] What is your occupation? I am a carter.

612. Employed by whom? W. Burcombe.

613. Does he draw sand for the firm of Carter, Gummow, & Co.? He drew a few loads some months ago, but he has not done any recently.

614. You have drawn sandstone for Carter, Gummow, & Co.'s contract;—I mean the Johnstone's Creek aqueduct? Yes.

W. Henry.  
29 May, 1896.

- W. Henry. 615. Will you tell His Honor the quality of the sandstone you drew? We drew a good deal of the ballast from Ryan's quarry at Pymont, and we also drew some from Meredith's quarry at Annandale.
- 29 May, 1896. 616. You drew some from another quarry, did you not? No; only from those two quarries. I know of another man who drew from two other quarries.
617. Ryan's stone is what is called lower block—the best hard sandstone, is it not? A great quantity is.
618. How much of Ryan's stone did you draw? I could not say.
619. You commenced by drawing Ryan's stone? Yes; I think we drew it for a couple of months, but I could not swear to the time.
620. Ryan's stone was approved by the inspector? As far as I know.
621. It was good stone? Yes.
622. How much did you draw? I am not prepared to say.
623. Did you draw nearly as much from Ryan's quarry as from Meredith's? I believe we did, speaking roughly.
624. About half and half? Yes.
625. What was Meredith's stone like? Fairly good stone. As far as the testing of stone is concerned, I do not know whether it was passed stone or not.
626. Comparing it with Ryan's stone, was it not defective? I am not prepared to say whether it was defective or not. Ryan's stone was the better of the two.
627. Would Meredith's stone stand a test of 6,500 lb. to the square inch? I could not say.
628. *His Honor.*] Do you know anything whatever about the testing of stone? No; that is a thing I cannot speak of.
629. *Mr. Parkes.*] Was the stone top block stone? It was mixed stone—some was top block and some was bottom block. It was a very different face of stone to Ryan's.
630. Is it half as good in quality as Ryan's stone? Some of it may be as good, as far as that goes, and some of it would be inferior.
631. How much inferior stone did you draw? It was mixed.
632. But you did draw a quantity of top surface stone? Yes.
633. Do you know anything about the making of concrete? Very little, further than seeing it mixed. I never worked on a concrete board.
634. Do you think some of Meredith's top surface stone would make good concrete? Some of it would be very bad stuff for concrete, I should say.
635. Did you draw a thousand loads of this soft stuff? Nothing like a thousand loads.
636. Where is Meredith's quarry situated? On the other side of Johnstone-street, in Annandale—quite close to the sewer.
637. You drew some sand did you not? A few loads only.
638. Where did you draw the sand from? From Balmain.
639. Had it loam mixed with it? No; all that I drew from there was good sand.
640. Was this soft sandstone which you drew crushed for sand? Some loads went out from the same quarry when the job first started.
641. *His Honor.*] For crushing? Yes; at the start of the job I drew three or four double loads out of the quarry for crushing.
642. *Mr. Parkes.*] Where was the stone crushed? At the crusher at Annandale.
643. Did you think the sand as good as the clean washed sand? Yes; it stood the Government test.
644. *His Honor.*] Are you speaking of the sand which you drew as sand? No; of the stone.
645. *Mr. Parkes.*] Do you know a man named Flood? Yes.
646. Did he draw for Carter, Gummow, and Co.? Yes.
647. Where did he draw from? From Ferris's quarry in Booth-street.
648. Was that top surface stone? I cannot say. I never drew any stone from that quarry.
649. Is the stone as good as Ryan's stone? No.
650. Is it one-half as good? It may be.
651. Why did you draw in the first place from Ryan's quarry? I do not know anything further about it except that the instructions we got were to draw from the quarry.
652. From whom? Mr. M'Millan employed my employer.
653. Who is he? He had the contract to draw the stone for Carter and Gummow's job. It was the first place we started to draw from.
654. You know Ryan? Yes.
655. Did you ever have any conversation with him? Nothing beyond speaking to him when we went to that quarry to get the stone.
656. The stone you drew in the first place from Ryan's you believed to be proved stone? Yes; as far as I know it was proved stone.
657. Who told you so? It was passed by the inspector upon the job.
658. Was the stone from Meredith's quarry passed by the inspector? The stone was used; I cannot say anything further than that.
659. You cannot say whether it was specially tested? I cannot say; that is outside of our work.
660. You have considerable knowledge of the nature of stone? A fair knowledge.
661. How long have you been working among stone? About five or six years, off and on.
662. If you were having concrete made, would you sanction the use of such stuff as you brought on to this job? Some of it was not fit for concrete work; it was more fit for making sand than concrete.
663. Still, you know it went into concrete? The balance that was left after the stone was crushed was used for concrete.
664. *His Honor.*] The crushing makes some ballast and some sand? Yes; as it leaves the crusher it is sifted by a screen.
665. *Mr. Parkes.*] What is the gauge of the screen? I could not say; it is a revolving screen.
666. What are the openings? There are only sufficient openings for the sand to go through.
667. Is it a fine mesh? Yes.
668. Would it be a  $\frac{1}{4}$ -inch? Less than that.
669. Cannot you tell us roughly how many loads of inferior stone you drew for the whole job? I could not tell you that now.
670. It would not be a thousand loads? No.
671. Did any other carters draw beside yourself? M'Millan drew quantities of ballast. 672.

W. Henry.  
29 May, 1896.

672. Did he draw inferior stone also? Yes, as far as I know.  
 673. To any extent? I am not prepared to say what quantity.  
 674. For how many weeks was he drawing? I could not say.  
 675. Is he still drawing? Not that I know of.  
 676. Where is the stone coming from that is now going into the work? I could not say. We do not go on to the work at all now.  
 677. How many other men beside yourself were drawing for the job? M'Millan, Flood, and M'Gill were drawing.  
 678. *Mr. Hickson.*] You were simply a carter carting stone on to the work? Yes.  
 679. You really did not know what became of stone or how it was used? It was crushed.  
 680. You know that it was crushed? Yes.  
 681. You told Mr. Parkes that some of the stone was good and that some of it was not so good? Yes.  
 682. And the softer stuff if crushed would be good sand? Yes.  
 683. *Mr. Parkes.*] All the stone that you drew was not crushed. You drew stone to make concrete? Yes; but it was crushed to make concrete.  
 684. *Mr. Hickson.*] You did not see it made into concrete? I did not see it mixed.  
 685. *Mr. Parkes.*] But I suppose that if drawn to the job it would be for concrete? Well, it was loaded in trucks under the crusher and run away to the concrete board; that is all I know.  
 686. You saw the trucks loaded with it to go to the concrete board? Yes.  
 687. Had those trucks the soft stone in them? It was all mixed as it went through the crusher.  
 688. *Mr. Hickson.*] The soft stone was used in the shape of sand, you say, and it would be good sand for the work? Yes; what went into sand in the crusher was used for sand on the works.  
 689. *His Honor.*] What came through in the form of ballast was broken to what gauge? Two and a half inch.  
 690. And that went round in trucks to the concrete board? Yes.  
 691. You carried the stone in the form of spalls? Yes.  
 692. *Mr. Gummow.*] How do you know for what purpose the sandstone was used after it was taken away in the trucks? I suppose it was used on the work.  
 693. Upon what work? In the open sewer at Lillybridge.  
 694. What is the sewer for? It is a stormwater sewer.  
 695. You do not know the number of the contract? No; I am speaking of the Lillybridge job.  
 696. *His Honor.*] Is that the storm-water channel at the bed of the creek—the substitute for the creek? Yes.  
 697. *Mr. Parkes.*] Did you draw to the contract which has the aqueduct in it? Yes.  
 698. Do you know the price of Ryan's stone? About 3s. a yard.  
 699. Do you know the price of the stone which you brought from Meredith's quarry? 2s. 6d.  
 700. Was that for the best class of stone? It was for the stone as a whole; no distinction was made in the price; I have given you the contractors' prices.  
 701. When you drew from Ryan's quarry you did not draw any top surface stone? I do not say that it was all bottom block.  
 702. *Mr. Gummow.*] How do you come to know the price of stone at Ryan's quarry? I used to make out the accounts for it.

Robert Rowan Purdon Hickson, recalled and further examined:—

703. *Mr. Parkes.*] If you look at the specification you will see the following clause:—

15. All sandstone used in the construction of these works, to be hard, sound, and solid, of the best description, free from all defects, and as per sample to be seen in the Engineer's office, and to stand a crushing strain of 6,500 lb. per square inch. A tensile test will also be required; for this six stones must be prepared 4 in. by 4 in. by 12 in.; these when laid on their natural beds upon supports 10 inches apart, must give an average breaking of not less than 4,333 lb., the strain being applied across the centre of the stone.

R. R. P.  
Hickson.  
29 May, 1896.

Was that test applied to stone from these quarries? I could not say; I had nothing to do with this contract at all; none of it was carried out under me. (*Vide Appendix No. 1.*)

704. Did you not start this contract? No.  
 705. Did you not sign the agreement? No.  
 706. Did you not transact the business until the signing of the agreement? No, I gave up charge on 1st April, and the agreement was signed, I think, on 16th May.  
 707. When sandstone of the very best description, to stand a certain strain, is specified, would it be proper to substitute inferior stone for it? Certainly not.  
 708. In all the contracts with which you have had to do, nothing but the very best lower-block Pymont stone has been used? We have used stone from various places.  
 709. Sandstone which would stand 6,500 lb. to the square inch would necessarily be the highest class of stone? Yes. Pymont stand higher than that.  
 710. *His Honor.*] The crushing strain would be all that would be applied to stone used for concrete,—the tensile strain would be immaterial? Yes.  
 711. *Mr. Parkes.*] When sandstone is specified for the making of concrete, would it be proper to use brick-spalls instead of sandstone? I think brick-spalls are as good as sandstone.  
 712. Is not the porosity of brick greater than that of stone? Yes; but the porosity of concrete is not good in any case.  
 713. But for the packing of sewers would it be proper to use brick-spalls instead of sandstone, if sandstone were specified? I think they would be quite as good. I think hard-burnt bricks would stand a better crushing than sandstone.  
 714. Supposing they were bricks from an old building that had been pulled down? If they were bad bricks of course they would not do.

MONDAY,

MONDAY, 1 JUNE, 1896.

Cecil West Darley, sworn and examined:—

- C. W. Darley. 715. *Mr. Parkes.*] You are Engineer-in-Chief for Public Works? Yes.  
 1 June, 1896. 716. During the past five years you have made many changes in your official position, have you not? Two changes.  
 717. Will you tell us what they were? I was Engineer-in-Chief for Harbours and Rivers.  
 718. On what date was that? Up to the end of June, 1895. I went away for a holiday in April. I was away for two months, and when I came back I took the position of President of the Metropolitan Water and Sewerage Board and Engineer-in-Chief for Metropolitan Sewerage Construction. That would be at the end of June, 1895.  
 719. When changes are made from one office to another in that manner it is very difficult to obtain a proper comprehension of the works which come under you, is it not? It takes a little time to grasp all the works of course.  
 720. If you did not grasp the works you would consult Mr. Hickson? I always did. I made a practice of doing so in connection with any work which he had been carrying on so as to avoid change as much as possible.  
 721. When you took over the Sewerage Department you had often occasion to see Mr. Hickson? Mr. Hickson or Mr. Davis, who had been previously the supervising engineer.  
 722. Did you ever find, in connection with any of those contracts, plans or schedules coming to you with any irregularities? I cannot say I did. What do you mean by irregularities?  
 723. Were there any items, for instance, in the schedule concerning which you had to obtain an explanation from Mr. Hickson or Mr. Davis? I cannot call to mind anything that I had to get explained.  
 724. Did you not find in one of the schedules iron marked at £8 a cwt. instead of £8 a ton? Not I think in one of Mr. Hickson's contracts. I found quite lately a misprint of that kind in connection with one of our own contracts, but that had nothing to do with Mr. Hickson.  
 725. Did it not come to you in a schedule which had been prepared by Mr. Hickson's officer? It is possible that the paper to which you now refer was prepared not by Mr. Hickson as Engineer for Sewerage, but by Mr. Hickson as Engineer for Public Works. I think the matter was in the printer's hands at about the time the change was made. I think it was printed just about the time Mr. Hickson gave up charge, and took over the duties of Under Secretary. I am referring to an error which was found in a contract quite recently, which came to me as Engineer-in-Chief for Public Works.  
 726. But the papers came from Mr. Hickson, did they not? The mistake was made just about the time of the transfer. I do not suppose Mr. Hickson ever saw the contract.  
 727. What contract was it? The contract for a little sewer at Annandale, from Park Road, I think, to Long Cove Creek. (*Vide Appendix No. 2.*)  
 728. Who were the contractors? The firm whose tender was accepted was Carter, Gummow, & Co.  
 729. They were the parties who were paid at the rate named? No payments were made at that rate. The tender was only just accepted when the mistake was found out.  
 730. But the Government were liable to pay at that until you made a compromise? The Government would have been liable if the error had not been detected.  
 731. How did you remedy it? It was brought under my notice when the specification was sent to my field officer. He was going through the plans when he detected it, and brought it under my notice. I sent for the contractors, and they agreed to alter the word, as being a palpable misprint.  
 732. You took steps at once to save the country? Yes.  
 733. You had to make a compromise? There was no compromise. The contractors came forward like men, and acknowledged that there had been a palpable mistake.  
 734. And now they will be paid at the rate of £8 per ton? Yes.  
 735. Did they get no concession for the alteration? None whatever.  
 736. When did you take over contract 79A? That was one of the contracts which came over to me when I took up the duties at the end of June, 1895?  
 737. How far on was the contract? I could not say, speaking from memory.  
 738. Was any of the lining done? I think they were doing some of the lining, but I could not say at this moment.  
 739. Could your supervising engineer say? Yes; he would be able to speak as to that.  
 740. Who would he be? Mr. T. Griffiths.  
 741. You do not know at what stage the work was so far as the lining of the tunnel was concerned? I know that a great deal of the lining was done during my time, but I do not know whether it had then been actually started or not.  
 742. It is unsatisfactory to you to have to take over a work which is only partially completed? It is not unsatisfactory exactly, but it is more difficult for anyone to take up a work in that way than to start one.  
 743. It would have been infinitely better if this work once started had been completed under Mr. Hickson, would it not? No doubt it would.  
 744. It disorganises matters to make a change? Any change must bring about a certain amount of disorganisation.  
 745. If you have works in hand which you have commenced it is much better for purposes of control that you should complete them? Quite so. There are certain things which an engineer may have it in his mind to do and when the proper time comes it is sometimes very difficult to convey those things to another person. You may quite unintentionally and accidentally forget to convey your intention to your successor.  
 746. How far was Contract 69 completed when you took it over? It was finished.\*  
 747. Absolutely finished? I think so.  
 748. No work was done afterwards, you can swear to that? I think I may safely say so. There may have been some little detail, but I think I can safely say that the work was finished when I took over the contract. That is certainly my impression.  
 749. I see that a voucher was made out on the 4th July, 1895? If a voucher was made out on that date all the work contained in it must have been done some time before; all the measurements must have been checked and worked out.

750.

\* NOTE (*on revision*):—I understood Question 746 and several succeeding questions to refer to contract 79.—C. W. D.

750. At all events, after the 4th July you think no excavation or concrete work was done? I think not. I am under the impression that no work was done on Contract No. 69 after I took charge. It was looked upon as finished. C. W. Darley.  
1 June, 1896.

751. Did you examine the work yourself? I did not.

752. In all underground work it is necessary to have the weep caused by soakage from rain and the natural weep carried away by weep-drains or sub-ducts? It depends upon the nature of the ground. If it is clay or bad ground they are desirable.

753. It is the usual thing in sewer construction to put weeping-drains? In bad ground.

754. Would you not put them in rock? No.

755. Why? The object of the drain is to take away water from underneath the sewer.

756. Then why do you specify for them in rock? Sub-ducts are put in wherever they are required, that is, where the ground is bad.

757. The object is to take off the weeping, is it not? To take off the soakage to keep the ground dry during construction. I always consider it desirable to omit them if it can be safely done.

758. I see the excavation was increased from 9,300 cubic yards in the tunnel to 17,000 cubic yards. That is a great increase;—was it not on account of the nature of the ground? I did not see the ground; I cannot say. I was not in possession of the details of this particular contract.

759. From your knowledge of engineering you can say whether in ground of that nature sub-ducts should be used? I would not put a sub-duct in unless the ground were very wet.

760. But if you specified them as necessary in wet ground should they not be put in? I would not put them in if I thought I could do without them.

761. Would not the absence of sub-ducts be very detrimental to the packing round of the sewer if it were not of concrete? That depends upon the amount of weeping. Of course if the weep were very bad a sub-duct should be put in.

762. You yourself have never had reports sent in to you of defective work upon Contract 79? I never knew of any bad work there.

763. Supposing you had the opportunity of doing the work by blasting or by guttering and gadding, the two things being at about the same price, would it not be to the interest of the entire work to have it done by manual labour? If the prices were the same.

764. Instead of shattering the surroundings of the tunnel with powder? Yes; if the prices were about the same I should prefer the manual labour, but it would be more tedious and much slower work.

765. Not slower work in the long run, I suppose, because you could at once follow it up with your sewer lining and packing as you went along with your excavation, whereas if you use powder you would have to wait for a considerable time before you followed up with the lining? You cannot have an excavation and lining going on at the same place.

766. But could not the lining follow very shortly? It would depend upon the shafts.

767. You do not work from one shaft only? We work with two headings from one shaft until the excavations meet.

768. How far are your shafts apart? The distances vary.

769. What would they average? From 300 up to 800 feet.

770. You could follow up at least 300 feet behind, could you not? The two shafts must be connected.

771. If you were blasting you could not follow up so closely with the lining, I take it, because the concussion of the explosion would prevent your doing so? Whether you are blasting or doing the work by hand the two shafts must be connected before you proceed with your lining.

772. *His Honor.*] You have to take out the spoil through the opening? Yes.

773. And when you meet another shaft the excavation is finished? Yes; we drive from one shaft to another, and when the two shafts are connected, of course the other work can be proceeded with.

774. You drive in two faces? Yes.

775. Until you get one tunnel through between two shafts? Yes.

776. You can then begin the lining in one, while the driving in the other direction is going on? Yes.

777. There would be two drives going on in opposite directions? Yes.

778. *Mr. Parkes.*] What you have just described would not be practicable with blasting? Yes; because the blasting would be so far away.

779. You do not know whether in Contract 79A the lining followed immediately? I could not say. I was not down on that contract. The resident engineer would be able to give you the information.

780. How far was Contract 77 advanced when you took it over in June? Very little was done when I first visited it. Some of the foundations to some of the piers only were being put in. The work was really taken over by Mr. Smail, acting on my behalf. It was taken over at the time of the change in April. There was an officer acting for me while I was away on my holiday. I went away at the end of April, and Mr. Smail acted as Engineer-in-Chief for Sewerage Construction. I should prefer to say that the whole of this work was done during my time of office, although for the first two months it was supervised by an officer acting for me. The contract was let about the time Mr. Hickson was giving up charge.

781. You really did not enter upon your duties until September? Yes; on the 1st July.

782. And it would take you a considerable time to gather up a knowledge of the work? Some time.

783. During the time you were away on your holidays the supervision of this work was actually under the Engineer-in-Chief, Mr. Hickson? No; it was, more properly speaking, under Mr. Smail.

784. He would be under the Engineer-in-Chief? No; he was really acting for me. He was duly gazetted as Acting Engineer-in-Chief for Sewerage Construction, and he would have the same powers which I have.

785. Take the case of a sewer 3 ft. 3 in. x 2 ft. 2 in., with a fall of 1 in 2,000, and 2 miles long, what would be the pressure per inch of the head at the distance of 2 miles from the entrance, supposing the sewer to be charged to the utmost with storm-water? Of course, if you were to actually block the sewer, it would not be running.

786. But supposing it were charged by very heavy flood-water, and that it had become compact with water, what would be the pressure? It would be under 2½ lb., but I cannot imagine such a thing happening, because all these sewers have by-washes.

787. I was speaking of Contract 79? There were several by-washes in that contract, so that what you say cannot apply to that.

- C. W. Darley. 788. But a tremendous surcharge might take place from heavy rain? Not in that sewer, because there would be overflow drains.
- 1 June, 1896. 789. Would they be sufficient to save it? Yes; they would let off all the water that could get into it.
790. Have you not a calculation of the pressure—a certain pressure which the sewer would have to stand? Yes; they are calculated to stand a certain pressure.
791. What head? A 3 ft. 3 in. sewer would flow when full 2 ft. 9 in. deep.
792. Taking 2½ lb. to an inch, that would be on a brick 27 in. in area 60 lb.? On one brick, yes.
793. Therefore they would need stout backing to support that pressure? Not when the bricks are set in cement.
794. But you construct your sewers with the bottom portion of concrete, and with a 4½ brick ring arch over it, and the reason that you pack it firmly I suppose is to keep it from fracture, or being entirely lifted from the pressure of water or gas? No water or gas pressure would lift it if the bricks were set in cement. You must take the strength of the whole periphery of brick, and you can calculate that at 200 lb. to the inch.
795. What is the object of packing over these sewers with concrete? The object is to keep any fall from coming down. If there are any cavities it is usual to fill them up. In many cases the filling might be omitted, but it is desirable to fill them up in order to prevent settlement from taking place, or a creep or crush from starting. The water would rarely if ever touch the roof of any tunnel, so that, practically, the work might be omitted.
796. Supposing the packing is not completed—that it is not made perfect, that vacancies are left, and that a creep of which you have just spoken occurred, the consequences would be very disastrous in the sandstone rock in which many of these sewers are built, would it not? Many of our large railway tunnels are built through sandstone rock without any lining, and there are, I think, 6 miles of tunnelling in the case of the Sydney Water Supply Works through sandstone rock without any lining. We look upon sandstone rock as being quite good enough, especially in the case of small tunnels such as you are speaking of.
797. Are not the tunnels in the case of the Sydney Water Supply Works lined? Not in the sandstone rock.
798. Not in the fine compressed sandstone perhaps? In none of the sandstone tunnels.
799. Are they not lined at Judge's Hills? Yes; they are lined there because they are in shale. The shale disintegrates when the air gets to it; therefore you want to avoid the air getting in.
800. *His Honor.*] You mean by oxidization? Yes.
801. The shale generally turns into a white clay, and then into a red clay, does it not? Some of it would go into clay—in fact, it is ground up, and bricks are made of it. In some cases where the shale has been lying fully exposed to oxidization it obtains the consistency of fine gravel, and it has been used, as in the Camden district, for putting on to roads.
802. The main point is that you consider that the packing of the lining of our tunnels more important for the purpose of saving any settlement than for the purpose of strengthening the lining itself to enable it to withstand pressure from within? Quite so.
803. You do not consider the packing necessary to enable it to resist the pressure from within? No engineer would calculate upon the roof lining of an arch to strengthen his arch against any pressure of that kind. So far as the strength of the sewer is concerned, the packing of the lining might be altogether omitted.
804. *Mr. Parkes.*] If you were packing over a sewer in shale, would you not pack with concrete? No; with the shale itself.
805. *Mr. Hickson.*] In order to clear up the question of who took charge of the work from 1st April, when I gave up charge, until you came back from your holiday, will you look at the *Gazette* notice I now hand you;—the *Gazette* is under date 23rd April, and the number is 273;—you will see that Mr. Smail is there gazetted Acting Engineer-in-Chief for Metropolitan Sewerage Construction during the absence of yourself? Yes; that is so.
806. As a matter of fact, I had nothing to say to the sewerage works in any way after the 2nd April, 1895? That would be so.
807. In regard to these sub-ducts;—for what purpose are they put into the tunnels? To take away any water during construction.
808. And you say that you would, wherever possible, avoid putting in sub-ducts? Certainly I would, if the tunnel could be constructed without them.
809. If anything they are a source of weakness to the foundation of a tunnel? I look upon any pipes laid under the invert of a tunnel as objectionable if they can be avoided. I would rather have solid ground there.
810. Would you ever think of putting them in if you were driving a tunnel through rock? Certainly not.
811. Not under any circumstances whatever? No.
812. *His Honor.*] Supposing you were driving through rock in which, from the existence of faults or bands, there was really a large quantity of weep, would you leave out the sub-ducts, or use them? If I thought the contractor could carry out the work and lead off the water without them, I would certainly omit them.
813. I understand, then, that the principal use of sub-ducts would be during the course of the construction of a work, and not after the sewer had been constructed? They are more wanted during the course of construction in bad ground, where you cannot get your lining in properly, unless you have means of taking off the water underneath.
814. Supposing there is weeping, and supposing you packed with some other material than concrete—supposing, for instance, that in shale you packed with the shale which comes out of the drive, is that packing any more likely to be affected by the continuation of the natural weep after the sewer is constructed than is the surrounding rock itself? No.
815. You do not want sub-ducts, then, to prevent the drives from being weakened or opened out above the crown of the sewer by the tendency of the weep to flow along the course of the excavation? No; the disintegration would be due not so much to water as to air.
816. Once you can get the packing in, whether it be shale or otherwise, the water oozing from the sides of the original unexcavated ground is not an element you need trouble yourself about? That is so.

817. *Mr. Gummow.*] As far as you have had experience, do you consider the works carried out by Carter, Gummow, & Co. have been satisfactory? I have never found their work otherwise. My experience of the firm is that they are always most willing to carry out the engineers' instructions. C.W. Darley.

818. *His Honor.*] With reference to the question of subducts, supposing they are laid under a sewer, they fall slightly each way, I understand, from the centre of the interval between the shafts towards each shaft? Yes. 1 June, 1896.

819. They have a pitch of their own, from the centre of the interval between the two shafts, distinct from the fall of the sewer itself? That is usual. It will depend upon circumstances. The distance apart between the shafts is, of course, an element in the case.

820. Sometimes you would have to make them fall all through with the grade of the sewer? Yes; but where it is practicable to give a fall both ways it is well to do so.

821. Supposing that subducts are constructed, and that they are left in, and that the whole work is completed, what becomes of the water which trickles down the subducts to the shafts;—is there any excavation to catch that water and hold it under the shaft;—is there a continuation downward of the shaft, or what provision is made? In the absence of pumping provision, it would be necessary to carry it out to the mouth of the tunnel, otherwise it would be sealed in. Where the tunnel is in bad ground it would have to be taken right through to the outlet.

822. If you grade the subducts down from the centre of the interval between the two shafts, then, in the absence of some such outlet when the work is completed, they must be worse than useless? Yes.

823. You do not of course put in any cross-excavations to act as an outlet from each shaft? No. My idea is that subducts should not be put in where they can possibly be avoided.

824. The subducts being graded down to each shaft from the centre of the interval there will be a certain accumulation of water there? Yes. The water would be sealed in. There would be no escape for it.

825. *Mr. Hickson.*] A workman was examined here the other day, who told us that he deliberately left out a piece of packing over the lining of the sewer in Contract 79A. I think he said he did it in December. That will, I think, be some time after the work was in your charge;—had you any knowledge of it;—was it reported to you in any way? No.

826. You have heard of it now for the first time? Yes.

827. You had a resident engineer and inspector on the spot, I presume? A supervising engineer, a resident engineer, and an inspector.

828. If a workman deliberately lays himself out to do a bad piece of work it will be utterly impossible for any resident engineer or inspector to detect it? Quite impossible. If any number of men make up their mind to do bad work they can do it. The inspector cannot be standing over every man. He has to watch several places which are working.

829. The only way in which you could meet such a case would be to put an inspector over every man? Yes.

830. Would you consider yourself personally responsible if a piece of bad work were found under such circumstances? I should not.

831. *Mr. Parkes.*] Are these subducts not permanently connected with the sewer;—do they not discharge into the sewer itself? I do not know what has been the practice of the Department in regard to any subducts which had been constructed in the past.

832. Cannot they be permanently connected with the sewer itself? They can be, but it is a very objectionable practice. You want to keep the sewer free from outside drainage.

833. If you were building temporary subducts, would you go to the trouble of putting in good earthenware pipes, well packed with spalls of rock? I would put them in in the best way possible. If anything happens to them it means injury to your sewer. If you put them in at all you must put them in in the very best manner.

834. Why would you put subducts in at the side of a sewer if not to take away drainage? In dealing with engineering matters you meet with very many difficulties. It is not wise to put subducts there.

835. Is it not necessary for the preservation of the sewer to keep the outward water connected with the inward flow in order to keep the surroundings of the sewer dry? No.

836. Supposing there is a great accumulation of water on the outside of the sewer;—what becomes of it? It must find its own exit.

837. What becomes of the lining? It will not hurt that.

838. Water is constantly accumulating under such circumstances, is it not? That may be; but it will not hurt cement and bricks.

839. But will it not hurt shale packing or any other soft lining? Not to any serious extent.

840. *Mr. Hickson.*] Should such a thing as the connection of outside with inside water for one moment be permitted? No.

841. The object of the sewer is to take away all the sewerage from the upper district, and that must be prevented from mixing with the outside water? Certainly you must exclude the outside water as far as possible.

842. *His Honor.*] It would be practically impossible unless you adopted a very complicated mechanism to let the outside water into the sewer without letting the inside water out? Exactly; the sewerage would escape. With regard to the water injuring the shale, for instance, outside the sewer, it must be remembered that the water is always present there. Water cannot be said to injure the ground in which it is found lying. It is lying there at all times, and it will be no worse than before. Water may lie in the shale down below without, so far as we know, injuring it at all; but everything possible must be done to keep the outside water from the sewer. If you let in the outside water you let out the sewerage.

843. *Mr. Parkes.*] If, as you say it is necessary for everything possible to be done to keep the outside water from getting inside the sewer, does not that make it necessary to put round the sewer a good packing of concrete? Not if you get a good tight lining and rendering.

844. *His Honor.*] With reference to the action of cement on the bricks, I understand a portion of your evidence to mean this—that cement properly used in brickwork of this kind is as strong as the bricks themselves? Yes.

845. And that practically a sewer built in this way is a barrel of material as strong as is the material of which the baked bricks are made? Yes.

846. That is to say, it is as good as if it had all been baked in one piece? Yes. If a properly-constructed sewer were broken up you would be more likely to break through the bricks than through the joints.

- C. W. Darley. 847. *Mr. Parkes.*] There is always more or less porosity in bricks? Bricks are specially selected, with the minimum amount of porosity. Hard burnt bricks which are specially used in sewerage works have a very small amount of porosity.  
 1 June, 1896. 848. *His Honor.*] In sewerage construction you engineers have given up the use of concrete filling, is not that so? Over the lining, yes.  
 849. It used to be always adopted? Yes.  
 850. In every kind of construction? Yes; although I was always under the impression that it was a wasteful use of concrete.  
 851. I understand that now in the interests of economy the practice has been given up? Yes.

George M'Creddie, sworn and examined:—

- G. M'Creddie. 852. *Mr. Parkes.*] What is your occupation? I am an architect and consulting engineer.  
 1 June, 1896. 853. You have had considerable experience in your profession? I have had sixteen years' practice in Sydney in all classes of work.  
 854. Have you ever done any sewerage work? Yes; we have carried out a good deal of work of that kind.  
 855. In what particular places? Well, we have undertaken a large job in Brisbane.  
 856. In all your works of that kind you have been very careful in your calculations before constructing? Yes.  
 857. Can you tell His Honor the nature of the work you have carried out in Brisbane? It is some time ago since we completed the work, but as far as I can recollect some 3 or 4 miles of sewerage in one section were completed, and some 7 or 8 miles in another section. The sewer was intended to carry away sewerage and storm-water.  
 858. What class of work was it? This particular sewer was built of 9-inch brickwork and cement.  
 859. Why 9-inch? We estimated that that was required to give the necessary strength to the sewer.  
 860. Would not 4½ inches have suited your purpose? No.  
 861. How did you come to that conclusion? From calculations we took out as to the strength of the sewer we were to put down.  
 862. After you had put in the lining with what did you pack the top of the sewer? With hand-packed ballast.  
 863. What sort of ballast? Small ballast.  
 864. What was the reason of your packing with this ballast? On account of the pressure inside.  
 865. *His Honor.*] You mean to resist the thrust outwards? Yes.  
 866. *Mr. Parkes.*] To prevent the sewer from lifting? Yes.  
 867. And to resist the pressure from the storm-water? Yes.  
 868. Did you put any weeping drains to that sewer? I could not say, speaking from memory, whether we did so or not. The sections are in the Brisbane office.  
 869. Weeping drains are necessary, are they not? We generally put them in.  
 870. How do you get away the water from these weeping drains? We always consider that it is to our benefit to have a drain while we are carrying on the work to take away the water.  
 871. But do you make an outlet for the pipes anywhere? We carry them underneath the bed of the sewer, and drain them to any place where we can get the water away.  
 872. Would the drains do any harm if they were connected with the sewer itself, so long as they were built on the sides? No; they would make no difference.  
 873. There is always more or less weep in an excavation of this sort? Yes.  
 874. Does that weep injure the sewer if it is not provided for? It does not do it any good.  
 875. Does it injure the packing round the sewer if it is unprovided for? I should say it would.  
 876. Could you give us the pressure there would be in an ordinary sewer, about 2 miles in length, supposing it were charged in time of heavy flood;—we will suppose that provision were made to take off a certain quantity of water to ease the sewer, suppose the sewer were 3 ft. x 2 ft., and that it was 1 in 2,000 fall? There would be about a 6-foot head, and that would be about 3 lb. to the square inch.  
 877. Not more than that? No; not more.  
 878. What is the pressure which will destroy a boiler, per square inch—a riveted boiler? That depends.  
 879. It would be a good boiler that would stand a pressure of 40 or 50 lb. to the inch? Yes; that would be a boiler made to stand a good pressure.  
 880. Do you think a 4¼-inch brick-lining in the sewer would be sufficient to stand a pressure of 3 lb. to the inch? I do not think so.  
 881. You think that would lift it? Yes.  
 882. In spite of the adhesive nature of the cement? Yes.  
 883. It would fracture it perhaps? Yes.  
 884. Therefore, you think it necessary that these sewers should be well packed on the top? Yes.  
 885. Is it not necessary that they should be packed with concrete or with stone-spalls? In the case of a 4½-inch lining I should certainly pack with concrete. The sewers are built according to the sewerage you have to take away. In the case of our 9-inch brickwork in Brisbane we found the hand-packing at the top of the lining sufficient. Had we been building 4½-inch work we should certainly have used concrete.  
 886. You went over to North Sydney last Thursday to examine the sewer there in which defective work was alleged? Yes.  
 887. You subjected it to a thorough examination? Yes; as far as I was able.  
 888. You found defective work? Yes.  
 889. Will you describe what you saw? I went down shaft No. 12, 95 feet deep. The sewer at the bottom was 3 ft. 3 in. x 2 ft. 2 in. It is an egg-shaped sewer. I had a hole knocked in the side of the crown 143 feet—2 chains 11 feet from the mouth. I found there on examination afterwards at the back of the brickwork solid concrete. I had another hole knocked in about 15 feet further on. This I examined and found at the back a space 7 ft. 6 in. long 3 feet wide and 1 foot deep.  
 890. You had a man accompanying you? Yes, two men.  
 891. Did they ask you to go further along the drive? They did. They wanted us to go further along, but I thought I had gone far enough.

892. You found the sewer a little too small? Well, the air down below was so bad that when I first got there I did not expect we should be able to get through at all, but we afterwards managed it. G. M'Credie.
893. But for that you would have gone further on? Yes. 1 June, 1896.
894. Do you think from what you saw that there is ground for the suspicion that the sewer was badly built throughout? From seeing the space which we found I should think there was need of thorough inspection.
895. Supposing that you as an engineer had discovered that error in packing, would you inspect the work throughout? Yes.
896. You think the work in Contract 79 and 79A ought to be thoroughly inspected? Yes.
897. An inspection could easily be made by a man going along in a trolley and tapping the bricks as he went along? Yes; the sound would tell him. Directly I heard the first sound the other day I knew there was solid work behind the bricks, but when I heard the second sound I knew that there was a hollow. You very soon get accustomed to it.
898. *His Honor.*] You could tell you think by the sound? Yes. Anyone who was accustomed to it could do so.
899. The reverberation in the tunnel itself would not prevent you from judging from the sound in the brickwork whether it was solid or not? No.
900. *Mr. Parkes.*] As you went down the tunnel the other day, did you notice any deposit or muck of any description hanging from the top of the sewer? On the edge of the shelf at the bottom there was a lot of stuff hanging. It looked as though it were soapy water.
901. Did you see any ooze in the sewer itself? The bottom was very wet.
902. Did you see any ooze coming through the brickwork? No.
903. Was there debris of any description oozing through from above? No. There was what appeared to me to be soapy water.
904. There was a deposit in it? Yes.
905. Had there been a weeping drain through the sewer, could that deposit have taken place? No; there would have been no deposit, nor would there have been any water running in the sewer.
906. Do you know if the contract is completed? I do not know.
907. In packing a sewer with shale, where it is damp, would it not be inadvisable to use a packing of Waianamatta shale? Yes; I should think the packing in that case ought to be of good solid material.
908. The shale is apt to be destroyed by the water? Well, decomposed.
909. If you, yourself, were running a sewer through shady ground you would pack it with concrete? I should prefer putting in concrete to any other material.
910. For what reason? The concrete forms an arch in itself at the back of the crown of the sewer.
911. You say distinctly that you are satisfied that an inspection should be made of the whole of the sewer? I certainly think so.
912. Supposing you had means of access, would you undertake to make the inspection? I should require to have the means of access. A small trolley is generally used in the case of small sewers of this kind.
913. Supposing you had the option of getting guttering and gadding work done at the same price as blasting, which would you adopt? Guttering and gadding.
914. Why? Because you could make the sewer exactly the size required, and you could build your work right up to it. It would make a better job altogether.
915. When you blast, you shatter all the surroundings more or less? You are likely to do it, and in many cases you do do it.
916. It is always a more defective job when you have to pack than when you have simply to build in a hand-cut opening? Yes.
917. Is it more expeditious to blast than to gutter and gad? In my experience there is very little difference. I myself prefer guttering and gadding, if it is possible to get it done at anything like a reasonable price. It is generally much dearer than the other process.
918. What is the reason you are able to follow up with the brickwork more quickly after the guttering and gadding than after the blasting? You can get on with the work more quickly from the fact that the whole has been cut to the exact size you want. You can build right up to it at once, whereas in the other case you have to pack.
919. You consider that in sewerage work, owing to the pressure from storm-water and the pressure from gas, guttering and gadding is preferable? The very best class of work must be done.
920. A second class of work will not answer the purpose? No.
921. It is not like work on the surface, where you can always keep a look-out for defects? No.
922. Once the work is done you have to take the defects with it—you cannot afterwards repair it? No.
923. Therefore you need to have the utmost supervision and the best class of work put in? Yes.
924. *Mr. Hickson.*] Was the Brisbane work you carried out a storm-water drain? For sewerage and storm-water combined.
925. You are aware that we do not in our Sydney system combine storm-water with sewerage? No; there are separate systems.
926. You know that our sewers are not for carrying storm-water, but are simply for carrying sewerage? Yes.
927. Therefore, if this North Shore sewer were full to its greatest capacity—that is, if it were flowing only two-thirds full—there would be no fear of the pressure lifting the roof off? Not if it was only two-thirds full.
928. Of course, if it were a storm-water sewer as well, you would have to make your roof very strong on account of the contingency of heavy floods? Yes.
929. *Mr. Gummow.*] Did you supervise the Brisbane job yourself to which you have referred? Only in passing through Brisbane. I have a partner there. All the plans were submitted to us for approval.
930. Do you know personally whether that job was thoroughly well done? Yes; I know that to be so.
931. You saw it all done? I did not see it all done.
932. Would you say there were no defects in the work? I could not say that.
933. Has the sewer any overflows? All the details are in the Brisbane office. Unless I looked them up I could not tell you.

- G. McCredie. 934. Are you in charge of the tunnelling which is being constructed in Pitt-street? Yes.
935. Have you any sub-ducts in that case? Yes.
- 1 June, 1896. 936. Near the railway station? Yes; some are near the railway station, and some are further down.
937. Where do you lead them to? We lead them, when we can, into the sewer. All of them go into the sewer.
938. Take a case where they are under the tunnel? We have only one case where the drain is under the line of tunnel. In that case there is a pit, and the water is pumped out.
939. When the job is finished? Yes.
940. When the job is finished you will keep that pit open? Yes. It will be so kept that the water can be pumped out of it at any time.
941. I understood you to say that if you had the choice between shooting and gadding out a drive you would prefer to gad it out? I said if the cost were the same I would gad it out.
942. What about the time;—how much do you consider you could gad out in a week in a tunnel for a sewer 3 ft. 3 in. by 2 ft. 2 in., as compared with blasting work—excavating to the extent of 4 feet by 3 feet? It depends upon the quality of the material, whether it be hard or soft.
943. Taking the ordinary hard sandstone 150 feet underground what would be the comparison between the two classes of work? The guttering and gadding would take longer.
944. How much, could you say? I could not.
945. How much could a man do in a week at gadding? I should have to think of that. It depends upon the material.
946. Supposing the material to be of equal quality in the two cases, and that it could be shot out or gadded out, what would be the comparison between the two classes of work in your estimation? I should think that finally the guttering and gadding would be found to take about as long a time as the blasting.
947. Did I not understand you to say that guttering and gadding would be quicker in the long run because you could do your brickwork more quickly in the gadded ground? Yes; I said I thought the brickwork could be done more quickly.
948. Would you go on with the brickwork while you were doing the gadding? I would follow on after. When a certain section was done I should start with the brickwork.
949. Would you wait until the tunnel had been driven between the two shafts, or would you let the gadding go on at the face and follow on at once with the brickwork? I should connect the two shafts and then follow on with the brickwork.
950. You would excavate from one shaft to the other first? Yes.
951. Before you made any start on the brickwork? Yes.
952. The excavations would have to meet before you did any finishing work? Yes.
953. What would be the difference in the time, say, in doing the brickwork in the cut-out ground as compared with the brickwork in the blasted ground? Well, if you gutter and gad you do not need to fill in at the top with concrete packing.
954. What loss of time is there in the filling? It takes some time.
955. While the man is filling, what is the bricklayer doing? He works along a certain section, and the packing can be proceeded with as soon as a certain quantity of brickwork is done.
956. Where is the delay in doing the brickwork then in blasted ground as compared with gadded ground;—where does the quicker work come in in gadded ground? There is no delay at all with gadded ground. The bricklayer will get along much quicker. He is not delayed by the labourer putting in packing.
957. Has not the bricklayer something else to do besides laying bricks? No.
958. Who does the pointing? That is done after all the brickwork is completed.
959. What is the general class of bricks you have in this telephone work;—are they as good as the sewerage bricks? I have not looked at the sewer bricks—that is, I did not carefully examine them. The bricks we are using in our tunnel are first class for the work we have in hand.
960. *His Honor.*] What are they? Wire-cut machine-made bricks.
961. Some bricks are single-pressed and others double-pressed? Yes; the double-pressed bricks are more expensive.
962. Are you using double or single pressed bricks? Single-pressed.
963. *Mr. Parkes.*] Are they using double-pressed bricks in the sewerage works? I did not examine them.
964. *Mr. Gummow.*] If you were buying a boiler for a client, would you consider that if the boiler stood a 40 lb. or 50 lb. pressure you would be buying a fairly good article? It would depend on the work the boiler had to do. I should consider it a fairly good article if it stood a 40 lb. or 50 lb. pressure.
965. If you were told that a boiler had been seen working at an 80 lb. pressure, would you consider it an extremely good boiler? It would depend upon the work.
966. If a boiler were working with over an 80 lb. pressure, would you consider it a good boiler? Yes; a good one.
967. An extremely good one? I should have to look at the class of workmanship in it.
968. Do you not know that you can buy an ordinary upright boiler which is guaranteed to stand 150 lb. pressure to the square inch—an ordinary trade boiler? Yes.
969. Do you consider that brickwork bedded in cement will stand 200 lb. to the square inch pressure? What thickness?
970. Four and a half inch? No; I do not think so.
971. *His Honor.*] What was the size of the storm-water sewer you were building in Brisbane? I could not say; I have not the particulars.
972. Would it be a much bigger piece of work than the 3 ft. by 2 ft. tunnels we have been speaking of? It would be about the same size as is the tunnel at North Shore.
973. No bigger? Not much, I think.
974. How many years ago is it since you did this work? Four or five.
975. The Queensland Government had more money then than they have now? Yes. The balance of the section was to be proceeded with as soon as they could obtain money.
976. Upon the same principle as regards strength? Yes.
977. In Brisbane there is an occasional rainfall of 12 inches to the hour? Yes.
- 978-9. *Mr. Parkes.*] You did not tell us to what price per foot your sewer in Brisbane would run? No; I could not tell you now. 980.

980. Could you get the information for us? Yes.

981. *His Honor.*] A subduct as a subduct is always below the invert of the sewer? Yes.

982. You cannot lead a subduct into a sewer then unless you run it an indefinite distance? No.

983. If the fall of the sewer were 1 in 2,000 you would have to run a long way? Yes; we do that in Pitt-street.

984. You say that it is not necessary to put in a weeping drain to intercept the water at a higher point than the invert of the sewer and to lead it down? It is done sometimes.

985. That is of no use to the contractor? No; but the bottom drain is of great use to him.

986. Only the true sub-duct will be of use to him; the other will be an extra piece of work for the benefit of the sewer itself? Yes.

987. The tunnel you are making is to be used for the telephone wires? Yes.

988. And it would not have to stand pressure from inside, although, as a matter of fact, it would do so? Exactly.

989. The great object is to keep it as dry as possible? We try to do so, although, so far as that is concerned, the wires are all insulated and the water will not damage them. There is no fear of damage to the wires because the same sort of wire is put under water and receives no harm from it.

990. There is a specification that you shall put in the weeping drain you speak of? Yes.

991. That is never specified with the sewer, is it? It depends.

992. Except in a swampy or wet piece of ground? Or where there is soakage through rock, when, of course, the drains will carry it away.

993. *Mr. Gummow.*] Who went down the tunnel with you last Thursday? The only two I know were Professor Warren and Mr. Davis. There were two workmen.

994. Was there anyone there representing the contractors? I do not know.

995. With regard to subducts, would it be possible to put a lining in a tunnel 7 ft. 6 in. in diameter with 30,000 gallons of water an hour running down it;—could that be made a good work? You might make an ordinary gutter and fill it up after the work was done, but I should think the best thing would be to have a proper drain.

996. Supposing a contractor were paid cost price for a subduct, and that he had the option of putting it in, would he, under such circumstances, do without the subduct? If I were the contractor I should certainly put in a subduct.

997. Do you think he could do the work to the satisfaction of those in charge without a subduct? I do not know that it is necessary for a contractor to put in a subduct as long as he can take the water off in some other way.

998. But he could do it? Yes.

Ernest Augustus Smith sworn and examined:—

999. *Mr. Parkes.*] You were, on July 29th, 1895, Crown Solicitor? I was Crown Solicitor from October, 1891, to April, 1894. E. A. Smith.

1000. You were Crown Solicitor then on 26th October, 1892? Yes. 1 June, 1896.

1001. During the time you were Crown Solicitor, were you asked to advise upon the damage being done to properties by blasting—that is as to the liability of the Crown? I have a vague notion that I did advise upon a question of that kind, but I should not like to speak definitely. (*Vide Appendix No. 3.*)

1002. Do you think you were asked to advise in regard to 100 claims? I could not say. I have a vague impression in my mind that among other things which came before me I had to advise upon this matter. No doubt if I could refer to any papers the whole thing would come back to me.

1003. Do you remember advising upon the claim of the two Schills against Carter, Gummow, & Co.? I may have done so.

1004. Will you look at the papers and tell me what advice you gave? I see that there were two questions submitted? The first was whether the contractor who carried out the work as specified as regards the size of the charges was liable. The question really was, who was liable for blasting operations, which caused damage—whether the contractors who carried out the work were liable, or whether an action would lie against the Department. The opinion was given to the Department of Public Works.

1005. *His Honor.*] What was the effect of the opinion? The opinion was that the contractors were clearly liable for any damage that would be done to any individual who was injured; but that the Government would be liable to any third person who was injured if it could be shown that the contractors were acting under the direction of a Government officer in doing the particular thing which caused the damage, but that, as between the Government and the contractors, there was a clause in the contract which would throw the whole of this damage on to the contractors, and that they would have to make good to the Government what the Government had to pay to a third person.

1006. *Mr. Parkes.*] Therefore, you are of opinion that if authority was given by the Department in writing for this blasting, the State would have to pay? Yes; if the particular act were done under the direction of an officer of the Government.

1007. Was that not through negligence in the drawing of the specification? No; because, as far as the contract had gone, as I pointed out, we had done all we could by fixing the contractors, as between the contractors and the Government, with a liability to make good all damage done to outsiders. The only thing was to take care that the engineer was careful in not giving a written order to do work if there were the slightest risk of doing injury to a third person.

1008. If guttering and gadding work had been done, these claims could not have come up? No; that is obvious.

1009. Do you think there ought not to be in the contract a condition, saving the Crown? I have no doubt there is; clause 19, I think, does that.

1010. You advised, then, that if authority were given in writing to do the blasting, the Crown was liable for the damage and loss? If the damage ensued on the particular act authorised.

1011. Do you know that hundreds of claims were made in respect of this damage? I was not aware of it.

1012. Supposing a building were injured to the extent of (say) £10,000, would the Crown still be liable? I take it that the extent of the damage would have nothing to do with the legal liability.

1013. There might be no limit to that? There might not be. It would depend upon whether the engineer authorised in writing the particular act which caused the damage. Under clause 14 of the conditions the whole thing was, I think, under the control of an officer of the Government.

Joseph

Joseph Davis sworn and examined :—

- J. Davis. 1014. *Mr. Parkes.*] What is your occupation? I am a member of the Institute of Civil Engineers.  
 1015. What is your position in the Government service? I am Principal Assistant Engineer for Metropolitan Sewerage Construction.  
 1 June, 1896. 1016. You have heard Mr. Smith's written opinion concerning the damage from blasting? I have heard Mr. Smith's evidence.  
 1017. Of course you read the original opinion? I did.  
 1018. In that original opinion you advise that a claim of £196 17s. 4d. should be refunded to the contractors for the Schills' damage? Looking at the papers, I should not regard that as a recommendation.  
 1019. Listen to this expression: "Under these circumstances I am inclined to think that the Department would be only acting in accordance with its usual custom in refunding £146 17s. 4d.; at the same time I desire to point out that so far as I am aware this is the only case in which a matter of this description has been dealt with through the contractors." Did not that mean a refund to Carter, Gummow, & Co.? It did not. My suggestion was not acted upon. The money was not refunded. (*Vide Appendix No. 4.*)  
 1020. Why did you advise that it be refunded? I have given my reasons pretty fully in the minute you have read. I might be permitted to explain that the late Crown Solicitor advised in a similar matter in connection with Contract 62—McSweeney's contract—and, as it seemed to me that Contract 62 was on all fours with McSweeney's, I acted on Mr. Smith's advice. I thought it applied to the point at issue, and inasmuch as the Department in the past had refunded or had compromised in the few cases—there had been very few—where damage had been done by blasting, and as this was the only case where the contractors were left to fight the matter out by themselves, it seemed to me only fair that they should be dealt with in the way I suggested.  
 1021. How many cases have you pending as regards Contracts 79 and 79A? None whatever, as far as I know.  
 1022. Are no claims being made? Not to my knowledge.  
 1023. As a matter of fact, do not the papers disclose a number of claims in respect of Contracts 79 and 79A? Of course persons make claims right and left without rhyme or reason.  
 1024. But are they settled yet? There is nothing to settle. As a matter of fact the Department had no liability.  
 1025. Have you not settled some minor claims of £10 or £12 or thereabouts in respect of Contract 79 or 79A? I do not remember any at this moment.  
 1026. Who prevented the claim of the two Schills being settled upon your recommendation? I do not admit that I made a recommendation. I do not know what became of the papers after they left me.  
 1027. What was the subsequent action? Reference to the papers will show that.  
 1028. There are no papers—the papers are apparently missing;—I suppose you cannot tell me where they are? I cannot.  
 1029. On 13th August, 1895, did you not recommend the payment of Arnold's claim for £10? I do not think it is at all likely. I was not in charge of the work at that time. (*Vide Appendix No. 5.*)  
 1030. Was not Arnold's claim paid at that time? I cannot call it to mind.  
 1031. Have none of the claims contained in these papers been settled? I have explained very fully the position of the Department, I think.  
 1032. How many claims have you settled? I should like you to be more specific.  
 1033. *His Honor.*] Do you remember any claims which have been settled? I do not.  
 1034. *Mr. Hickson.*] Claims are continually coming from all parts of the city in connection with sewerage works? Yes.  
 1035. I see from the papers a claim from Mr. Sam Smith, in connection with Contract 79, which was reported upon on 22nd June, 1893. I will ask you to tell His Honor what was done in that case? An inspection was made of the house in question, which was said to have been shaken by the concussion from the blasting. The conclusion arrived at was that the building had sustained no damage whatever. Claimant's solicitor was informed accordingly, and nothing more was heard of the matter.  
 1036. *His Honor.*] The Department has paid no claims? Not to my knowledge. Something may have been done after I gave up charge; but to April 1st or 2nd, 1895, I do not think any money was paid in respect of either Contract 79 or 79A.  
 1037. *Mr. Parkes.*] Would you swear that no payments were made? That is my impression.  
 1038. *Mr. Hickson.*] To the best of your belief, no payments were made up to the time you took charge? No.  
 1039. Has not the policy of the Department been to absolutely refuse any responsibility in regard to these claims? Most decidedly.  
 1040. And in all cases which came before me the reply I gave was that if any claims were made they must be made against the contractors? Yes; it was understood that we must endeavour to get the parties to claim from the contractors, but that if they persisted in claiming against us we must settle the claims, and settle the matter with the contractors afterwards.  
 1041. Has the Government ever had to pay any of these claims so far as you know;—had it done so up to the time you relinquished charge of the work? I do not remember any instance where the Government paid any money away for alleged damage by blasting.  
 1042. Do you know whether any of the contractors have had to pay any money? Yes; I know that Carter, Gummow, & Co. had to pay.  
 1043. Were the amounts refunded them? No.  
 1044. *Mr. Gummow.*] Has any action been brought against the Government in connection with our works? I do not think so.  
 1045. Have any been brought against Carter, Gummow, & Co.? Yes.

Christian Hansen sworn and examined :—

- C. Hansen. 1046. *Mr. Parkes.*] You worked under Carter, Gummow, & Co.? Yes.  
 1 June, 1896. 1047. On what contract? I do not know the number of it.  
 1048. Was it one of the North Shore contracts? Yes.  
 1049. How long did you work there? Off and on, about twelve months.  
 1050. While you were working there, did you see any defective work going on? I did not. 1051.

C. Hansen.  
1 June, 1896.

1051. All the work was good? So far as I know.  
 1052. Were you working along with Dawson? No—with Thomas Phillips.  
 1053. What work were you doing? Packing.  
 1054. What lengths were you working in? In Contract 79A, I think.  
 1055. *His Honor.*] Between which shafts? Between No. 13 and No. 12.  
 1056. That would be under Alfred-street? Yes.  
 1057. *Mr. Parkes.*] The work there was all well done? Yes; as well as I knew how to do it.  
 1058. Do you know anything of Dawson's work? No.  
 1059. Was Phillips your boss? Well, not the boss; he was the bricklayer.  
 1060. For what distance altogether in that tunnel did you work? I do not know. It might be 300 or 400 feet.  
 1061. Did you work in other lengths? Yes.  
 1062. How far off would they be? In other streets.  
 1063. All these lengths were well packed, were they? Yes.  
 1064. You took good care of that? Yes; to the best of my knowledge.  
 1065. You packed them with your own hand, and therefore you can be sure of it? Yes.  
 1066. Have you lately had any conversation with any member of the firm of Carter, Gummow, & Co.? No; I have never been near them.  
 1067. You did not work in any part of Contract No. 79? No.  
 1068. Have you worked upon any other contracts of Carter, Gummow, & Co.? Yes.  
 1069. The work there was all well done, was it? Yes.  
 1070. They generally did their work well? Yes.  
 1071. *His Honor.*] Did you work right along the piece between the two shafts you have named? Yes.  
 1072. You were not doing the whole of the packing? No; there were different men on the job.  
 1073. Was the work done by day, or night and day, in shifts? In shifts.  
 1074. You were not in the same shift with Dawson? Dawson would be at one end, and I should be at the other end. Two men go in at one end, and two at the other.  
 1075. Was the brickwork commenced in the middle of the space between the two shafts? Yes.  
 1076. You worked away towards one shaft, and he worked away towards the other? Yes.  
 1077. Were you going towards No. 13 or No. 12 shaft? Towards 13.  
 1078. Beginning in the middle of the drive? Yes. I think, however, that I made a mistake just now in the numbers of the shafts. I should have said that I worked between shafts 13 and 14.  
 1079. *Mr. Parkes.*] Where did Dawson work? From 13 to 14.  
 1080. And you were working from 14 to 13? Yes.

WEDNESDAY, 3 JUNE, 1896.

George Dawson recalled and further examined:—

1081. *Mr. Parkes.*] I want to impress upon you what an awful thing it is to give evidence which is false, and which may bring trouble to other people, and I want, also, to impress upon you that it is your duty to tell the truth when the truth is necessary. Never mind with what subtlety questions may be framed to draw certain answers from you, your replies must be truthful in so far as you understand the questions. Never mind what you have said to me in conversation, I want you to be clear and decided upon the truth of what you now swear to. In the first place, I want to ask you whether you know a man named Christian Hansen? I knew him by the name of "Chris." [*Hansen was called in, and identified by witness*]  
 1082. That man worked with you on Contract 79A, did he not? Yes.  
 1083. Did he, in a similar way to yourself, do any scamping? According to his own words he did.  
 1084. What did he say? He said he often ran two drums in the morning before the Inspector came.  
 1085. Meaning that he had not filled them properly, I suppose? Yes.  
 1086. Did he say that he did so himself? Yes.  
 1087. This man Hansen was dismissed from Contract 79A by Inspector Andrew, was he not? I believe Inspector Andrew told Manager Reid to shift him.  
 1088. Do you know of your own knowledge how Hansen came to be dismissed? We were all there together. Inspector Andrew said at the time that he had cautioned Hansen one or two days previously. At the time I am speaking of he came back and caught him again, and he told him then that he would have to go.  
 1089. Do you mean for scamping work? Yes.  
 1090. Did you hear any conversation coming down in the boat at night? Yes; as we were coming back at night Inspector Andrew said, "I told him before that he would have to go," and Manager Reid then gave him a note to go to Mr. Snodgrass, on the other job.  
 1091. That you know of your own knowledge? Yes.  
 1092. There is no doubt as to that being the truth? No.  
 1093. Were the other men present? Yes; the bricklayers were there. The labourers generally go together by themselves, and the bricklayers by themselves, but I think they would all have heard what was said.  
 1094. There is no doubt but that Hansen was dismissed through the action of Inspector Andrew? Yes; Inspector Andrew told Manager Reid he would have to remove him.  
 1095. And Manager Reid did remove him? Yes.  
 1096. For scamping work, as you yourself were doing? Perhaps it was not quite so glaring as the work in the piece I was on.

George Andrew sworn and examined:—

1097. *Mr. Parkes.*] You are an inspector under the Water and Sewerage Construction Branch, are you not? Yes.  
 1098. Were you an inspector upon Contract 79A? I was.  
 1099. Are you aware that defective work was done there? I am not.  
 1100. Have you heard rumours to that effect? I have.

G. Andrew.  
3 June, 1896.

1101.

- G. Andrew. 1101. You took every precaution to prevent defective work from being done, did you not? I did.  
 1102. You had occasion to caution a man named Dawson, had you not? No.  
 3 June, 1896. 1103. Did you not caution a man named Dawson about doing defective work? No.  
 1104. Did you not dismiss a man named Hansen for doing defective work? Yes.  
 1105. What was he doing? Inferior packing.  
 1106. And for that you dismissed him? Yes.  
 1107. Did you catch him at it twice or three times? Twice.  
 1108. And on the second occasion you dismissed him? Yes.  
 1109. In what way was the work defective? It was not rammed enough for my liking.  
 1110. Did you know of any drums which had not been filled by Hansen? No.  
 1111. Did not Hansen leave two drums unfilled near shaft 17? Not to my knowledge.  
 1112. There is no doubt, however, but that the man was doing defective work? I do not think he was.  
 1113. Why did you dismiss him? I caught him doing defective work on one occasion, and shortly afterwards I caught him again.  
 1114. *His Honor.*] Under whom was the work done? I could hardly tell you; Mr. Cook was the resident engineer.  
 1115. Under whom was he working? Under Mr. Griffiths.  
 1116. And under whom would Mr. Griffiths be working? Under Mr. Darley or Mr. Smailes, I presume.  
 1117. What would be the date of the dismissal of Hansen? I could hardly give you the date.  
 1118. Could you say approximately? It would be in the latter end of October, 1895.  
 1119. *Mr. Hickson.*] If I understood your evidence aright, you said you did not detect Hansen doing any bad work? When I go to inspect I always try the work. I do so in all cases. In this instance I found that the work was not properly rammed, and that was quite enough for me. The work was packed, but it was not sufficiently tight. I told him on the first occasion I caught him that if I caught him again I would have him shifted.  
 1120. No gaps or voids were left? Not that I know of.  
 1121. *His Honor.*] It was concrete packing, I suppose, over the crown? Yes.  
 1122. *Mr. Hickson.*] You were only on Contract 79A;—you were not upon 79? Only on 79A.  
 1123. Did you find any of the voids or holes in the packing which have been spoken of in any of the lengths upon 79A? No.  
 1124. And the work in Contract 79 you know nothing about? No.  
 1125. You know of no work which you would call defective on 79A? No.  
 1126. In this particular instance to which you have referred the packing was not tight enough, that is all? That is all.  
 1127. *Mr. Gummow.*] All the work upon the contract, as far as you know, is well done? Perfectly.  
 1128. When you caught Hansen doing the loose packing you have spoken of, did you dismiss him at once? I reported him to the manager, who told him he would have to go, and he was then dismissed.  
 1129. But before that, did you make Hansen do the work properly? Yes.  
 1130. You did not allow him to leave it in a bad state? No; I stopped there until he had done it.  
 1131. And the manager, you say, removed him? He did.  
 1132. Did he raise any objection, or did he at once remove him when you told him what the man had done? He removed him at once without raising any objection at all.  
 1133. *His Honor.*] How did you discover that the man was not ramming the concrete sufficiently tight? By going down and trying it.  
 1134. Before or after it was set? I asked Hansen if he had finished the drum, and he said "yes." I then took up the rammer and rammed it, and found I could disturb it.  
 1135. You found you could press it further in? I could not press it much to speak of, but it was not as solid as it ought to have been.  
 1136. What did you do then;—did you make him put some more in? Yes.  
 1137. And ram it tightly? Yes.  
 1138. Did you test any part of the work in any way after it was finished by going through the sewer;—did you adopt any plan to test whether the packing over the crown of the sewer was perfect? No.  
 1139. Can it be tested after the work is finished—after the whole of it is set;—is it not then practicable to test to a certain extent the solidity of the packing over the crown or to discover whether there is packing left out altogether by tapping? I do not think it could be done without cutting out.  
 1140. You do not think it could be done by tapping? I do not think so.  
 1141. Have you ever tried? I have tried all sorts of ways.  
 1142. And you have found it impossible to discover whether the work on the crown was solid or hollow? I believe it would be impossible to distinguish by merely tapping.  
 1143. *Mr. Hickson.*] You know Inspector Reid? Yes.  
 1144. He was not on Contract 79A at all? Not while I was there.  
 1145. Were you there from the commencement of 79A? No; from about the seventh month of last year.

Christian Hansen recalled and further examined:—

- C. Hansen. 1146. *Mr. Parkes.*] There is no doubt, I suppose, but that you have nothing to gain by telling a lie in this matter? I have not.  
 3 June, 1896. 1147. It is imperative in the interests of justice that all men who come here should swear the truth; all that you have to do is to say what is thoroughly true, and nothing else; you told me the other day that no defective work was done upon Contract 79A;—did you not then make a mistake? Well, I might have made a mistake.  
 1148. That answer will not do;—did you or did you not make a mistake? I did.  
 1149. Then you did do defective work? Yes; I did a length one day.  
 1150. You did a whole length wrong? Yes; in High-street.  
 1151. Did you leave a drum unpacked? I did not finish a drum.  
 1152. Did you not tell Dawson, a fellow labourer, that you left two drums unpacked near shaft 17? No; I never did.  
 1153. Did you not tell him that you left two drums unpacked somewhere? I never did. 1154.

1154. Were you not dismissed for bad packing? I was not. I never got the sack for that.
1155. Did not Inspector Andrew have you removed for doing bad work? I was going to tell you that Inspector Andrew came down to me when I had not quite finished a length and put a rammer into it. The ramming was not to his satisfaction, although there was plenty of packing in the length.
1156. Was not that the second time he caught you? Yes; he found fault with the ramming before.
1157. What was the nature of the bad work when he caught you the first time? The ramming was not to his satisfaction.
1158. Do you think it is likely that a man would be discharged from a job simply because the ramming was not sufficiently tight? I did not get the sack for that.
1159. You were removed;—what do you call that but the sack? I was not sacked. The manager simply sent me over to Annandale.
1160. He removed you from this job to another job of the firm's? Yes.
1161. Did Inspector Andrew know that you were going to another job of Carter, Gummow, & Co.'s? I could not say. The manager told me to go to the other job.
1162. As a matter of fact can you swear that the work you did upon the job was not scamped;—mind there are means by which it can be thoroughly tested? It was done to the best of my knowledge and the inspector's satisfaction.
1163. That will not do;—did you scamp any work;—did you leave any drums hollow? Not hollow.
1164. You are sure of that? Yes.
1165. Near what shafts did you work? I could not tell you the number of the shafts.
1166. Could you not tell the number of the shafts from where you got out of them? I could not.
1167. You had a conversation the other day with Inspector Board in one of the ante-rooms of this building? Yes; I had a talk with him.
1168. What did he say to you? He said nothing.
1169. Then what was the nature of your conversation? He said nothing to me.
1170. *His Honor.*] If he talked to you he must have said something;—what did he say? He asked me about Inspector Andrew's coming down, and whether I was asked any questions about that length? I said that I had been asked questions.
1171. *Mr. Parkes.*] In other words, he asked whether you had told the Commission about that incident? Yes.
1172. What other conversation had you? That is all he said.
1173. How long was he speaking to you? About four or five minutes.
1174. Was he not there a quarter of an hour? He might have been.
1175. Was he not with you a quarter of an hour in the ante-room? He might have been. I was not speaking to him all the time.
1176. Were you not the only two persons there? No; there were more there.
1177. How many more? A good few persons.
1178. You had told the Commission that you worked between shafts 13 and 12, had you not? Yes; and I was told that I had made a mistake in the numbers of the shafts, and that I was working between shafts 14 and 13.
1179. Who gave you that information? Well, Inspector Board asked me what I had said.
1180. And it was he who gave you the information? Yes.
1181. After you had given your evidence the other day? Yes; he said I had made a mistake in the numbers of the shafts.
1182. And he sent you back in the room to correct the mistake? Yes.
1183. Is Inspector Board an inspector of the Metropolitan Water and Sewerage Construction Branch? Yes.
1184. Was he an inspector over you at any time? Yes.
1185. He knew you very well then? He knew I had been working on the job.
1186. Did he not persuade you to come in and give the evidence you gave on Monday? He did not.
1187. Did he not speak to you about the evidence you were to give on Monday before you came into the room? He did not.
1188. You have already said that he talked to you about the nature of the work you did between certain shafts? He asked me if I was asked that question inside.
1189. *Mr. Gummow.*] What was the nature of the work to which Inspector Andrew applied the rammer? It was not what you might call bad work, only the ramming was not to his satisfaction.
1190. And did he make you do the work properly? Yes.
1191. You had to make it good before you came away? Yes.
1192. Then you were removed off the contract after that day? Yes; manager Reid came and told me I had better go over to the Annandale job. I did not get the sack.
1193. Were you put on to a different class of work there? Yes; he said I could have a job on top. The job at the other place was nearly finished.
1194. What work did you do at Annandale? Concrete.
1195. On the surface? Yes.
1196. *Mr. Parkes.*] If you were made to repair the defective work you did why were you removed? I could not tell you that. The job was nearly done.
1197. *Mr. Gummow.*] If you were found doing loose work would not the man in charge of the work lose confidence in you? I should not think so.
1198. Would he expect you to do good work on the following day? No, I do not think so.
1199. Would you not take it as a sign that a man had lost confidence in you when he requested that you should be removed? Well he told me that I should have a job on top.
1200. Would not that show that he was dissatisfied with the work you had done below? Yes.
1201. Is it not natural that he should lose confidence in you if you did loose work below? Yes, he might do so.
1202. For the sake of the work, is it not natural that the inspector looking after it should see that good work was done, and would he not prefer having a man he could trust to a man he could not trust? I should think so.

Robert George Reid recalled and further examined :—

- R. G. Reid  
3 June, 1896.
1203. *His Honor.*] I believe you wish to make some explanations and additions to the evidence you gave the other day. You said in your evidence, "I called on Mr. Boys, and he asked me to explain why it was, or if it was true that I was at one end of the drive most of the time. I told him it was true, and I explained the reason, with which he was satisfied." You wish to give the explanation you offered to Mr. Boys, I understand? Yes. When I went down below I went into both ends of the drive and examined the points where the bricklayers were laying the bricks. I could see that at one end the bricklayer would have to cut a piece off the top of the drive or split the bricks, as he laid them. The other man had plenty of room, and even if he had built his length I could examine the work better than I could in the other case if the man had built only two courses. That was my reason for remaining at the one end.
1204. That was your reason for keeping so close to the man whose work was near the top of the drive? Yes. The bricklayer would have to split his bricks or scabel the top of the drive to get room between his centre and the crown, and I disallowed it.
1205. Is that the reason you gave to Mr. Boys? Yes.
1206. At another point of your evidence you were asked if you had had any conversation with a member of the firm of Carter, Gummow, & Co., and you said, "With Mr. Snodgrass";—have you any explanation to offer in regard to that? A week or a fortnight before Christmas—I am not very sure about the time—Mr. Snodgrass came down No. 5 shaft, accompanied by Inspector Vincent. He came into the end where I was, and he asked me about a brick which was chipped, and which I had reported to Inspector Fowle. (*Vide Appendix 6*). He asked me why it was I could not get on better with the men. I said I should get on very well with the men if they would do what was right, but that I could not allow a brick of that kind to go unnoticed. He said, "Very well, will you come up on top?" I said, "No, thank you; I am not paid for being on top." He said, "I will promise you that nothing will go wrong while you are up on top." I said, "I must decline the offer, Mr. Snodgrass. I will stay below, and then I will be sure there is nothing wrong."
1207. Is that all you wish to say regarding the conversation? Yes. He went away then, and I believe he gave the two bricklayers some money, because the bricklayers and the labourers went to the mouth of the tunnel, where they had some conversation, and then went up on top.
1208. And did what? When they went up on top I rang for the bucket to come down. I wanted to go up for my lunch. There was no one there but the man who pulled me up with the engine. The others had evidently gone away somewhere. They came back in about half an hour to the engine-house. I was having my lunch there. They had two or three, or perhaps more, bottles of drink of some description. I believe it was ale.
1209. Who had? The bricklayers and their labourers. They came into the engine-house a few moments afterwards. Mr. Snodgrass also came. He had some drink, and he offered it to me. He said I would be a better man if I took it.
1210. What did you say to that? I said that was a matter of opinion.
1211. Did you take any? I did not. Then they had a few songs and recitations. They asked me to sing. I said I had no objection to being sociable both with Mr. Snodgrass and the men, but I must decline anything else, as it would be very pretty to see a paper coming into the office stating that Inspector Reid had been found drinking and singing with the men in No. 5 engine-house. Mr. Snodgrass said, "I can promise you that it will never go to the office." I said, "I can promise you that I do not intend to do it."
1212. That was at knock-off time, I suppose? It was the meal between the shifts. They go on at 7 and come off sometimes at 11 and sometimes before. On this particular night they came off before, I believe, because they thought the public-house would be shut up at 11. On that account they knocked off a little earlier, I think.
1213. *Mr. Parkes.*] Referring to your answer to question 347, and your expression that you thought the Department ought to see the thing out, evidently what you meant was that they ought to have retained you, and to have had the bad work upon which you had reported put right? I did mean that.
1214. In addition to that, you also meant that they ought to have kept you upon Contract 79? Yes; if it was their opinion that I had done right.
1215. Do you know an inspector named Board? I know a gentleman of that name. He was a clerk in the Sewerage Department for two or three years, and I believe he is now on some work.
1216. Do you know by sight a labourer named Hansen? Yes; I saw him here the other day when he was giving evidence.
1217. Did you see Board take him into one of the ante-rooms of this building the other day? No; but I saw them talking in an ante-room. They were talking when I went in.
1218. How long were they talking? I do not know. I came away when I saw that they were talking. I did not want to hear what they were talking about, and I came round to the other passage.
1219. How long were they in that room together? I could not say how long they were there. It was after 11 o'clock when I came here, and I did not go away until after 12 o'clock, and they were here when I went away.
1220. *His Honor.*] By ante-room you mean a room adjacent to this room? I mean the room in which witnesses wait until they are required to be examined.
1221. *Mr. Hickson.*] You were not an inspector upon Contract 79A at all? No.
1222. You said the other day, I understand, that actually no bad work was done upon Contract 79. What you complained of was in one case a broken brick, and in the other case of two and a half barrow-loads of dry stone being thrown down a shaft;—you said you did not know of any actual bad work? That is a matter of opinion. The only thing an inspector can do if he sees anything wrong is to report it to the officer in charge. If he chooses to take notice of it, and if he thinks the work defective, well and good—he can please himself. In this particular case anyone could have examined the work. It would have been no trouble while the joints were green to go and pull out a brick to see whether I was right, or whether the contractors' men were right. I reported the second matter to which you refer as soon as Inspector Fowle came on to the job on the Monday morning, and Mr. Davis afterwards held an inquiry. It would have been easy for Mr. Davis then, if he thought that more than two barrow-loads of dry stone had been sent down, to examine the work.
1223. You did not follow up the two barrow-loads to which you referred to see whether they went into the work in a dry state? I did not. I have already given my reasons. 1224.

1224. You were not the inspector in charge—you were only one of the inspectors? I was the second inspector. When Inspector Fowle went away at 5 o'clock he would leave me in charge. I had not only his instruction, I had the specification. R. G. Reid,  
3 June, 1896,
1225. *Mr. Gummow.*] With regard to this matter of Mr. Snodgrass and the men having a bottle or two of beer to drink, was it not about Christmas time? I believe it was about a week before Christmas.
1226. And I suppose it was some little Christmas cheer he was giving them? I do not know whether it could be said to be Christmas cheer. I do not think Christmas had started then.
1227. Did Mr. Snodgrass himself have a few drinks? I believe he did.
1228. As a matter of fact, it is his misfortune at times to be a little too liberal with his cash? I am sorry to say it is.
1229. Since a good deal has been said about talking to witnesses before they give their evidence I should like to ask you a question upon the same point;—did you talk to any witnesses either before or after you had given your evidence; did you meet any witnesses and have a talk to them? Knowing all the men as I do I daresay I have talked to some of them.
1230. Is it the usual thing for the men to yarn away with one another on all sorts of subjects? I do not know whether it is or not.
1231. But it is so—as a matter of fact, is it not? They do talk.
1232. Do not you do so yourself? Yes; I talk sometimes.
1233. Do you know of any defective work upon the contract you have been speaking of except that which you yourself reported on as defective? No; if I knew of any I should consider that I failed in my duty if I did not report it to the Department—not to this Commission, because my reports were made, two years ago, not to the Commission, but to the Department.
1234. But do you know of any defective work besides that which you reported upon? No.
1235. And all that you know of in the way of defective work is this—that you saw two and a half barrow loads of dry stone going down one of the shafts? About that.
1236. It was not two and a half cart-loads? No; if I had seen that quantity I certainly should have said so.
1237. You were shifted off Contract 79 on to another contract? Yes—Contract 89.
1238. Who had that contract? Phillips and Rhodes.
1239. *Mr. Parkes.*] When you were with Phillips and Rhodes you had no difficulty in getting proper work carried out? No.
1240. How long were you upon the contract? For six or seven months.
1241. You had no difficulty there on account of any friction with the men? No.
1242. You got proper work done without any difficulty whatever? Yes.
1243. *Mr. Gummow.*] With the exception of what you reported did you get proper work done on Contract 79? With the exception of what I reported, but I had a great deal of trouble.
1244. *His Honor.*] I understood you to say that by knocking some bricks out of the side of the shaft where the packing was doubtful it could have been discovered at once whether dry metal had been put in as packing or not? Yes; it could have been very simply done while the cement and bricks were green. It would have been easy for the inspector in charge to say, "This bricklayer has done so many feet upon this shift; we will tap the work here; that is about the place where the dry metal would have been put in." I had a place ready to point out to anyone who might have thought it necessary to examine the work, but the work was never examined.
1245. Of what thickness was the wall in the shaft? About 9 inches.

Robert Rowan Purdon Hickson recalled and further examined:—

1246. *Mr. Parkes.*] On 3rd April, 1893, an agent for Messrs. Carter, Gummow, & Co., named Armstrong, wrote to you asking that the patent for what is known as the Monier arch might be purchased by the State for £1,500, did he not? Yes. [*Vide Appendix No. 7.*]
1247. Was not Mr. Ohlfsen-Bagge an officer in your Department? Yes.
1248. At what time did he leave? I think he left in the July retrenchments of last year.
1249. He was an officer of your Department when this patent was offered to the Government for the sum of £1,500? I could not tell you the exact date of his leaving.
1250. You did not at that date know anything about this Monier patent? Oh, yes, a good deal.
1251. Then why did you write to Mr. Bagge on the subject? We had considered the question for some time. [*Vide Appendix No. 9.*]
1252. Did you not use words to this effect, "Does Mr. Bagge know anything about this patent"? I used those words because I knew that he had gone into the question. As a matter of fact, I had at that time put up a small culvert on the Parramatta Road on the Monier system.
1253. When you sent word to Mr. Bagge, had you done that? Yes.
1254. Then why did you write this minute on the 12th April, 1893: "I find Messrs. Carter & Co. have patented in Australia 'Monier's Patent Concrete Arch'; this arch has been under my consideration for some time, long before it was patented here, and as soon as funds are available I have arranged for the erection of a small culvert on this principle without a patent fee. In any case I could not recommend compliance with this request";—why did you write that minute if you had already given the patent a trial on the Parramatta Road? I had not then given it a trial, but I had arranged for it to be put up.
1255. The next stage of this patent coming into the office was when you tested it on the Parramatta Road, was it not? The next stage was, I think, when the designs for the aqueduct in one of these contracts were sent in.
1256. When was that? They came in with the tender.
1257. On what date? On the same date as all the tenders for Contract No. 77.
1258. That was on 14th March, 1895, was it not? That is not the actual date of the receipt of the tender. It is the date on which it was dealt with.
1259. They were dealt with on 29th March, 1895? Yes.
1260. Did you not, on the 18th July, 1894, write this minute to the Minister: "The Monier system of concrete arching has been patented in the Colony by Messrs. Carter & Co. Where applicable, it reduces the cost of spanning an opening by about 50 per cent. The patentees are willing to allow the Department

R. R. P.  
Hickson.  
3 June, 1896.

R. R. P.  
Hickson.  
3 June, 1896.

to use the patent on payment of a royalty of 15 per cent. on the cost of the arch. I recommend this for the Minister's approval. I might state I have just completed (with the permission of the patentees) a culvert on the Parramatta Road, built on this principle, with most satisfactory results, financially and otherwise";—that is your minute, I suppose? Yes. [*Vide Appendix No. 10.*]

1261. You admit that this work can be done in the arch at a cost 50 per cent. cheaper? On road bridges where there is a good width, but not in the case of a narrow bridge such as that of an aqueduct.

1262. If it be applicable to an arch in one case, must it not be applicable in another? No. You evidently have not gone into the question.

1263. For what reason would it not be applicable? There are two strains in an arch. It is subject to a lateral strain and a downward strain. A road bridge with a wide roadway is a different construction in every way from a narrow aqueduct.

1264. What do you mean by different? On account of the side strain.

1265. *His Honor.*] What you mean is that in the case of a road bridge there is no allowance to be made for a lateral strain? You have a great width of road in which you can arrange for the lateral strain. In the case of a narrow bridge, as in an aqueduct, it is most difficult to do that, because you have such a narrow structure to go upon. I have strong evidence in papers, which I will bring forward presently, showing that my estimate is an under-estimate, and that there would be really a saving of 60 per cent. in the case of road bridges. In the case of an aqueduct or narrow bridge there would be nothing like that saving.

1266. And, as a matter of fact, it would have to carry a dead weight? Yes.

1267. *Mr. Parkes.*] Have you not a framework of quarter-inch iron rods running right through the structure? Yes.

1268. And are they not a tie against all wind pressure? Yes.

1269. In the case of a road bridge, where heavy vehicles carrying tons are passing over it, would the work not necessarily be more costly than in the case of an aqueduct? As a matter of fact it is not.

1270. Seeing that these iron rods are put through this aqueduct, in what particular do they require to be stouter to resist the wind pressure than they would require to be to resist the vibration caused by heavily-loaded carts? They have not to be stouter with regard to the downward pressure, but they have to be much stouter with regard to the side pressure, because you have not the width of bridge to arrange for your cross-ties.

1271. Not specifying the difference between roads or aqueducts, you recommended that the patent should be used generally throughout the Government service because the cost of the works would be 50 per cent. cheaper? Yes.

1272. And you recommended that 15 per cent. should be paid upon the cost of it? Yes.

1273. Carter & Co., on 2nd February, 1894, wrote a letter upon your own office paper undertaking to accept that? Yes. [*Vide Appendix No. 11.*]

1274. And it was accepted? Yes.

1275. And the contract is now entered into? There is really nothing at all in what you are speaking of which applies to this particular contract. This was a general approval which I obtained wherever I thought it advisable to apply the system to the road bridges of the Colony. As a matter of fact it has not yet been so applied, except in the case of one small bridge on the Parramatta Road.

1276. As a matter of fact, have not Carter & Co. a legal right to get this percentage upon all work of the kind done by the Department? On any work we did of the kind most unquestionably.

1277. What would be the next stage of the introduction of this patent into your Department? The next stage would be the receipt of tenders for Contract 77.

1278. Accompanying those was a lump-sum tender from Carter, Gummow, & Co. on the Monier arch principle? Yes; that came in at the same time.

1279. This tender was sent in on 14th March, 1895? Yes.

1280. Did not Carter, Gummow, & Co. undertake to carry out your original plan and specification at 28½ per cent. below schedule rates? Yes.

1281. Is not the document I hand you the original schedule which you issued for your own work for stone, brick, and concrete? Yes.

1282. That was the schedule issued to the contractors? Yes.

1283. It is the schedule upon which Carter, Gummow, & Co., McSweeney, Carson, Gilliver and Curtis, Holloway Bros., and other contractors submitted their tenders? Yes.

1284. The next step taken was to send tenders to a Board of Reference? Yes; after they had been examined by the Department.

1285. Of whom did the Board of Reference consist? At that time it consisted of Mr. Barling, the Under Secretary for Public Works, Mr. Darley, then Engineer-in-Chief for Harbours and Rivers, Mr. Deane, the Engineer-in-Chief for Railway Construction, Mr. Vernon, the Government Architect, and myself, as Commissioner for Roads.

1286. You reported to that Board upon this particular contract of Messrs. Carter, Gummow, & Co., did you not? Yes.

1287. Will you please tell His Honor what you reported to the Board in reference to the Monier arch? The report of the Board of Reference, which you will find at the foot of page 206 of the Parliamentary paper, ordered to be printed 22nd October, 1895, is the result of the conversation which took place.

1288. What did you say to the Board? When this tender came in on 14th March it was arranged that the sewerage works should be taken out of my hands and handed over to Mr. Darley. I brought the tender and the plans down to Mr. Darley, and we talked over the matter for a considerable time. The result of the conversation was that we both thought it desirable that an opportunity should be given of testing the Monier arch principle, which was acknowledged by all engineers on the Continent to be a very valuable engineering structure, and that the matter should be considered by the Board of Reference. The papers were then sent down to the Board of Reference without any direct recommendation from myself or Mr. Darley. We talked the matter over at the Board of Reference, and the paper to which I have referred you upon page 206 is the result of the conversation.

1289. Did you not report to the Board that the use of this patent would result in considerable economy? No, not in this case. I believe it eventually will; but it will not on this particular plan, because it is an expensive plan of the Monier arch.

1290. Will you tell me why the Board of Reference reported to the Minister, "In view of the fact that  
Messrs.

Messrs. Darley and Hickson are satisfied that the principle is a sound one, and that the adoption of the plan will result in considerable economy, we are prepared to endorse the recommendation of these gentlemen, and now submit the matter for the Minister's consideration";—how did the Board of Reference come to make that report to the Minister? I suppose it was in accordance with their firm belief.

R. R. P.  
Hickson.

3 June, 1896.

1291. But why did they report that Messrs. Darley and Hickson were satisfied that the adoption of the plan would result in considerable economy? I believe that the introduction of the system into our public works will result in ultimate economy, but there will not be much economy in the case of this particular structure, because it is very much too strong for the Monier arch principle.

1292. Besides informing the Minister on 18th July, 1894, that it would be 50 per cent. cheaper, did you not also inform the Board of Reference that it would be so? I did not.

1293. Are you sure you did not? Quite certain.

1294. Did you tell the Board that it would be reduced by  $28\frac{1}{2}$  per cent. upon the quantities? I do not know what you mean.

1295. Carter, Gummow, & Co. tendered on the original plan for  $28\frac{1}{2}$  per cent. below schedule rates? Yes; making the amount come to £15,500.

1296. Did you report to the Board that Carter, Gummow, & Co.'s tender for the Monier arch was on reduced schedule quantities? There was no occasion to report anything. They had their tender of £15,500 before them.

1297. But did you report to the Board that that amount was made up on Carter, Gummow, & Co.'s tender or on the office amounts? I did not report anything; the tender was there for the £15,500.

1298. In what manner did you impress the Board with the fact that there would be considerable economy from the adoption of the principle? I brought before the Board evidence in connection with the Monier arch principle, which I am prepared to bring forward now.

1299. Carter, Gummow, & Co.'s tender was  $28\frac{1}{2}$  per cent. upon the plans that accompanied the tender? Yes.

1300. Were these tenders called upon the Monier arch principle at all? No.

1301. Public tenders were called for an arch? Yes.

1302. And Carter, Gummow, & Co.'s tender was  $28\frac{1}{2}$  per cent. below your figures and quantities? Yes.

1303. Did you inform the Board of Reference that Carter, Gummow, & Co.'s price for the Monier arch was on the reduced quantities or not? Certainly not. It had nothing to do with the matter.

1304. Why not? Because they sent in a design of their own. They did not give any quantities. They said they would do the work for £15,500, and it was for the Board to say whether they would accept the tender or not.

1305. How did you arrive at the sum of £15,500? I did not arrive at it at all; it was the contractor's tender.

1306. If you recommended the acceptance of the tender as being a considerable economy, surely you went into the quantities? I did not.

1307. *His Honor.*] You did not then go through the quantities to see whether the tender was or was not a fair one upon the Monier basis? Not at that time. It was done afterwards, and of course I can give the figures.

1308. *Mr. Parkes.*] But you induced the Board of Reference to advise Mr. Young to adopt the Monier arch because it involved considerable economy, did you not? I did not say that it would lead to economy in this case. As a matter of fact there will be very little economy upon this special design.

1309. Was there no schedule made up to arrive at the exact amount of £15,500? I do not think there was. I think that sum was given in.

1310. Did the contractors make up a schedule? I should like to refresh my memory, but I think not.

1311. Did they go through the amount with any of your officers? Not to my knowledge.

1312. Upon 9th September, 1895, did you get a letter from Mr. Griffiths, Supervising Engineer, Metropolitan Sewerage Construction, to this effect: "Will the Engineer-in-Chief kindly approve the accompanying schedule of prices for use in preparing progress vouchers in this contract, the price for which is 'lump sum.' It will be observed that quantities are slightly altered from original. This has been done in order to provide for Monier work, which has been substituted for brickwork";—you received that letter, did you not? No; Mr. Griffiths was not an officer of mine.

1313. Did not a Mr. S. Adams tender on a copy of it? I do not remember. In any case, Mr. Griffiths was not an officer of mine, and he could not have reported to me.

1314. Were you not Engineer-in-Chief on 9th September, 1895? No. Mr. Darley was Engineer-in-Chief for Sewerage Construction. I was Engineer-in-Chief for Public Works.

1315. You were Engineer-in-Chief for Public Works? Yes. I had nothing to say to this contract.

1316. Is not the letter written to you as Engineer-in-Chief for Public Works? No; it is written to Mr. Darley, and you will see Mr. Darley's approval upon it.

1317. Did not Mr. Barling note this and have it sent to you on 11th September, 1895? I do not think so. It is a letter from Mr. Griffiths, who was Mr. Darley's supervising engineer, written on 9th September, 1895. I had given up charge of these works in the previous April. This is a recommendation to Mr. Darley. He approved of it, and it was noted by Mr. Beveridge and Mr. Adams, and a copy was sent to the Engineer-in-Chief. That is the whole matter. I must take exception to your incorrect reading of the title of the officer to whom the letter was addressed. It was addressed to the Engineer-in-Chief Metropolitan Sewerage Construction. [*Vide Appendix No. 12.*]

1318. Will you look at this schedule;—are not the printed figures the same as in the document I have already shown you in connection with Contract 77? I have not gone through them, but I suppose they are.

1319. Is not this schedule with the prices attached the schedule and prices upon which the contractors have been paid for this Monier arch? I do not know. I never passed a voucher for it. It is the first time I have seen this document.

1320. Did you not on 27th March, 1895, receive from Mr. Young, the Minister, after this tender was submitted, a minute to this effect: "Before approving of this proposal I should like an estimate of the actual value of the work to be carried out by the contractors under the substituted scheme"? Yes.

1321. For what reason did you not make that schedule;—you had a number of officers to take out the quantities? The reason is given in the next minute.

1322.

R. R. P.  
Hickson.  
3 June, 1896.

1322. What was there to prevent your getting one of your officers to take the quantities out? Nothing but the time. I think I said it would take a week.
1323. The minute was signed on the 28th March, 1895, and the contract was not signed until 16th May, 1895? I do not know when the contract was signed. It was not in my charge.
1324. Do you not see from the papers that the contract was not signed until 16th May? That is apparently the date.
1325. Then there was not time in the two months to have the quantities taken out? Yes, if necessary; but I had the information I wanted.
1326. As a matter of fact, could they not have been taken out in two days? No, indeed they could not.
1327. Could the quantities be taken out in a week? Yes; I suppose there would be about a week's work. I think I said so.
1328. On 28th March, 1895, you wrote to the Minister as follows: "To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm estimates were made for the work on the Monier system as well as on the Department's design. The result was that the estimate of both works was practically the same. Applying that comparison to this case, it would mean that the Departmental estimate for the work under consideration would be £22,000"? Yes.
1329. Are you aware that, taken on the Department's own figures, without the 28½ per cent. of Carter, Gummow, & Co.'s tender in reduction of the quantities, they run out to make only £15,500? I was speaking of the Departmental estimate for the work.
1330. That has nothing to do with it? That is everything to do with it. It is what I am alluding to.
1331. You say that if the quantities were taken out the result would be that the price would amount to £22,000? Upon the same basis.
1332. Are you aware that the contractors are now being paid upon the original office amounts to each number of the schedule? I do not know how they are being paid.
1333. According to you the quantities of both works would be practically the same? Yes.
1334. Then are you aware that there is an item on the original plans prepared by you of brickwork, 2,020 yards, at 50s. a yard? Yes.
1335. That was reduced from 2,020 yards to 150 yards? Where?
1336. Upon the Monier arch? I do not know.
1337. Are you aware that there is an item for sandstone concrete in your original plan, 2,350 square yards, which in the case of the Monier arch is reduced to 1,800 yards. I mean item No. 19, at 28s.;—are you aware of the reduction in that case? I am not, indeed. I do not know it to be a fact, because it was not done in my office at all.
1338. These quantities were made out by one section of the Works Department? I do not know where they were done.
1339. Are they not the quantities upon which the contractors are being paid? I do not know.
1340. Do you know that the item contained in your original plan of Pymont bottom block sandstone ashlar, 13,250 cubic feet, is entirely taken out in the case of the Monier arch? I do not know that it is.
1341. Is that in the schedule upon which the contractors are being paid? I do not know about that schedule.
1342. Are you aware that there is an item also for special cement facing, 1 to 1—not 2 to 1—2,750 yards, at 2s. 6d., and that that is entirely omitted in the case of the Monier arch? I could not say.
1343. You heard Mr. Darley's evidence on Monday? Yes.
1344. You heard him say that when he took over Contract 77 the foundations of the piers were in? I believe he did say so, but I think he corrected the statement afterwards. As a matter of fact there was not anything done.
1345. You will notice upon page 208 of the Parliamentary papers, from which I have been quoting, that after the contract was drawn up, or just at that time, it was advised by Mr. Norrie that Mr. Darley's name be substituted for yours? Yes.
1346. So that really the contract was signed upon your recommendation, and was accepted upon your recommendation—that is to say, you were the engineer for this work when the contract was accepted? I was one of the officers who recommended its acceptance. The tender was accepted on 11th April, and I was not in charge after 2nd April.
1347. Mr. Darley did not take over the work until July? He personally took it over then, but he had been away, and an officer of his had taken it over from 2nd April.
1348. And this contract was let, you say, on 11th April? Yes; ten days afterwards.
1349. It was practically let by you, then, and handed over to Mr. Darley? No. I gave up complete charge of these works on 2nd April. I was gazetted out then, and the acceptance of the tender was dated 11th April, ten days afterwards.
1350. Upon whose recommendation did the Minister approve of this contract? The recommendation made by Mr. Darley and myself and the Board of Directors.
1351. Did you not write the minute to Mr. Young upon which the contract was accepted? I wrote the minute you have read.
1352. The whole of the letting of the contract was done upon your advice? Upon my advice and that of the Board of Reference.
1353. Did you not write the final minute upon which Mr. Young undertook the tender? Yes.
1354. Where can we find in these papers the calculations showing that the quantities and prices of the Monier arch would make it equivalent to the Government plans? In the papers laid upon the Table of the House on 9th October, 1895. You will see it on page 5.
1355. What is contained in that summary? It gives an estimate of three separate schemes for carrying the sewer overground.
1356. Is this work not being carried out under No. 2 scheme? Is not that the scheme going on at Johnstone's Creek, Annandale? No; that is being carried out somewhat similar to No. 3 scheme.
1357. That is at the rate of £6 6s. 8½d. per lineal foot? Yes.
1358. As a matter of fact, was not Mr. Bagge's estimate for Ahearn's work based upon a single sewer, instead of upon a triplicate sewer? It is a triplicate scheme.
1359. But the basis is a two-sewer system? No—triplicate.

1360. Then Ahearn's proportion per foot will be over £15 per lineal foot, as against £6 6s. 8d.? I do not know how you make that calculation out.

R. R. P.  
Hickson.

1361. You say these estimates are carried out upon a triplicate-sewer plan? Yes; all these three schemes. 3 June, 1896.

1362. And is Ahearn's based upon a triplicate system, too? Yes.

1363. But Mr. Bagge makes Ahearn's cost per lineal foot £10 16s. 1d. and No. 3 scheme £6 6s. 8d.? If you look at the summary you will see that No. 2 is estimated to cost £6 16s. 11d. per lineal foot. The same scheme upon the Monier arch principle would cost £6 6s. 8d., so that the two are practically the same.

1364. *His Honor.*] Perhaps you had better make a statement as to the actual facts? The actual facts are these: When we were arranging for the sewer in connection with the sewage farm three schemes were got out, in order that we might see which would be the most economical. No. 2 scheme—the one which is being carried out—was estimated to cost £6 16s. 11d. per lineal foot. The third scheme, upon the Monier arch principle, was estimated to cost £6 6s. 8d. per lineal foot, or, as I said to the Minister in my minute of 28th March, 1895, practically the same.

1365. Are not these three schemes summarised in the papers all variations of the Monier system? No.

1366. Are the schemes all concrete? Well, No. 2 has brickwork in it, I think; but it is practically concrete.

1367. Through all these three schemes does not the iron rod run which makes the Monier patent? No.

1368. Then why have they here  $\frac{3}{4}$ -inch wrought-iron bond rods in No. 2? They have, but it is not the Monier system.

1369. Are they not different kinds of the Monier system? Certainly not.

1370. *Mr. Parkes.*] Mr. Bagge says:—

These designs are herewith submitted for the consideration of the Engineer-in-Chief, each design with an open aqueduct carried upon arches and piers. The aqueduct, or main carrier, is capable of discharging 11,000 cubic feet of sewage per minute, which is equal to two 6-foot diameter outfall sewers, running three-quarters full, with a gradient of 1 in 2 000.

The sewerage aqueducts have hitherto been constructed here in such a manner, method, and of such materials, that any competent tradesman, in his special line, obtainable in the Colony, could do the work.

Now, however, as it is a matter of the greatest importance to reduce the cost of the works, there seems to be no other way of accomplishing this object but to adopt for this Colony a more or less experimental system of construction for these aqueducts—of increasing the spans of arches, introducing arches with joints, of constructing the whole in concrete, and of constructing the whole of the work of concrete and mortar and iron.

In the old Home countries these novel systems of construction have caused in the commencement failures, owing to the works being carried out by more or less inexperienced and untrained engineers and artisans; hence the various State Governments would not entertain and construct works on these novel methods until special companies established themselves, who made it their special business to carry out such works with artisans who had had time to gain the necessary experience, and who had been practically and specially trained in the construction of such work.

It was only to such companies that works, which are termed purely and simply specialities, were entrusted, after they had given adequate security for the faithful, careful, and competent execution of same.

Now let me refer you to what you say in your minute of 28th March, 1895:—

To comply fully with the Minister's minute would mean the taking out of quantities in the plans submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewerage farm estimates were made for the work on the Monier system, as well as on the Department's designs.

You will see that there is not the slightest doubt about the three plans being upon the Monier system, and about their being made to compare with the office work;—do you not see now that they are all upon the Monier principle? No.

1371. Then why did you report to the Minister that they were? I did not.

1372. Did you not say when plans were being prepared for the extension of the sewer to the sewage farm estimates were made for the work upon the Monier system, as well as upon the Departmental design? So they were. You will see from the papers that No. 2 scheme, which is being carried out, was estimated to cost £6 16s. 11<sup>3</sup>/<sub>4</sub>d. per lineal foot, and that the Monier arch scheme was estimated to cost £6 6s. 8<sup>3</sup>/<sub>4</sub>d. per lineal foot.

1373. Did Ahearn's plan include twelve 18-inch diameter 30-foot long piles, rubble-stone packing at top of piles, 3 feet deep, &c.? I think so. You can find out exactly from the specification.

1374. Will you swear that that is so? No; but my impression is that that was his scheme.

1375. Will you swear it definitely? Not without seeing the plans.

1376. At this point I should like to ask you when your son left this Colony? About five weeks ago.

1377. On what date? Some little time before the opening of Parliament, I think.

1378. You do not recollect the date? I could not say from memory.

1379. Was it on a Friday or a Wednesday? It was on a Wednesday he left. I should say it would be this day five or six weeks ago.

1380. On the 1st May was he not entertained by the North Shore Cricket Club at a dinner? I should not like to give a definite date.

1381. He left four days after that, did he not? The entertainment to which you refer was on a Saturday evening, and my son left on the following Wednesday.

1382. Are you sure it was not on a Saturday he left? No; he was to have gone on the Saturday, but the boat did not go.

1383. Parliament met on the following Tuesday? I think so.

1384. Did you tell Mr. Young that he left some months before the meeting of Parliament? No. [*Vide Appendix No. 13.*]

1385. Then how came Mr. Young to tell the House so? He made a mistake in saying months; he should have said weeks.

1386. As a matter of fact it was not even weeks—it was only days? I do not know how Mr. Young came to make the mistake. It was a slip, and I told him of it afterwards.

1387. I understood you to say just now that you had not before seen the documents I handed to you containing the schedule of prices and Mr. Griffiths's letter? No, I had not.

1388. Did you not take them from this room on Wednesday last, in order that a copy might be made of them? No.

1389. You did not then peruse them? No.

1390. It is a most singular thing that when I saw them last week they had no marks of checking upon them. Since their return I notice these marks upon them. They must have been made by you or your officers? Why should they be made by me? 1391.

R. R. P.  
Hickson.  
3 June, 1896.

1391. You had not seen the document before you saw it to-day? No; as a matter of fact I had not. Upon inquiry, I may say that I found that my son received notice from the contractors that his services would not be required upon 1st April, and that he left here on 6th May.
1392. If you look at the contract plans of No. 101 contract, signed by John Ahearn, you will see that there are no iron tierods? That is not the second scheme. [*Vide Appendix A.*]
1393. The second scheme is not John Ahearn's contract? No.
1394. Did you not say just now that it was? I said it was one of these contracts. As a matter of fact the plan to which you refer is not Ahearn's;—it is McSweeney's.
1395. And it is not on the Monier principle? No.
1396. Did not Mr. Bagge take out these No. 1, 2, and 3 Monier arch tests on no particular job? They were taken out in connection with the extension of a contract which was afterwards let to McSweeney. The plan before you is the plan from which they were taken. [*Vide Appendix No. 8.*]
1397. This is not a signed plan at all? The original is not here yet, but it will be sent down.
1398. There is a foot-note to this effect in Mr. Bagge's report:—"Mr. Ahearn's present outfall sewer, Contract No. 101, if calculated for two sewers of 6 foot diameter would cost £10 16s. 1d. per lineal foot"? That note refers to the last paragraph of the report, I suppose.
1399. *His Honor.*] Was that calculation made upon a triplicate sewer? This report refers to the three different schemes which actually were not in existence. This foot-note of Mr. Bagge's applies his calculation to another contract that actually was in existence. [*Vide Appendix B.*]
1400. But what is the meaning of the words, "If calculated for two sewers of 6 feet diameter"? Your Honor had better ask Mr. Bagge, I think; I confess that I do not understand it, and I never did.
1401. *Mr. Parkes.*] The plan was drawn in your office, under Mr. Bagge? Yes. You are referring, I suppose, to No. 2 scheme, with a price of £6 16s. 11d. per lineal foot. That is not on the Monier principle. There is not an iron tie-rod in the arch in that case.
1402. In your minute of 28th March, 1895, you say, "When plans were being prepared for the extension of the sewers on to the sewage farm estimates were made for the work on the Monier system, as well as on the departmental design. The result was that the estimate for both works was practically the same. Applying that comparison to this case it would mean that the departmental estimate for the work under consideration would be £22,000." That is a concrete work, is it not? Yes.
- 1403-4. In the original scheme which you prepared for Johnson's Creek and White's Creek the aqueducts were concrete and brick? Yes.
1405. There is a vast difference between Contract No. 77 and Contract 112, as submitted? Not a great deal of difference.
1406. You were supposed to be advising Mr. Young upon the difference between cement composite work and brick, stone, and concrete, as contained in your original plan? Yes.
1407. Then naturally the comparison would have to be made upon similar Government work as applied to the Western sewerage contract? Perhaps I could set this vexed question at rest by giving at once the actual estimates in both cases.
1408. You told Mr. Young that the work would come out at £22,000 in both schemes? Yes.
1409. Presumably the western suburbs sewerage scheme would be a similar work, brick, stone, and concrete, would it not? Not necessarily.
1410. Why not? The difference between brickwork and cement is not very great. There is not so very much difference in cost.
1411. Here is a schedule upon which the contractors are being paid, showing thousands of pounds of difference? I do not know where you get those figures from, but I see from the document that bluestone concrete was put down at £2 10s., and brickwork also at £2 10s. a yard.
1412. In the schedule for the Monier arch in connection with Contract 77 the items are reduced so much that applying the figures of the department in their original scheme for stone, brick, and concrete, there is a reduction from £22,000 to £15,000. There can be no doubt that the comparison you pointed out to Mr. Young would not have brought the cost of the scheme under the Monier principle up to £22,000? What I said to Mr. Young is absolutely correct. In making the designs for the extension of this sewer to the sewage farm I compared the Monier system with the concrete arches, and they came out as I show here to all intents and purposes the same. I applied the same test to the Johnstone's Creek design, and I maintain that I was perfectly right in doing so, although in one case there was brickwork and in the other concrete because the value of brickwork and concrete under these circumstances is practically the same.
1413. Is there any comparison between No. 2 scheme including twelve 18-inch diameter 30 feet long piles, rubble stone packing at top of piles 2 feet deep, &c., and your original scheme for the aqueduct in connection with No. 77 contract? This only applies to the arches. The foundation is common to both. The arch in the one case is to be of concrete, and in the other case of brickwork. As I have already told you the prices for concrete and brickwork were actually the same, that is, £2 10s. a yard for each. I say therefore that the comparison was a perfectly fair and justifiable one.
1414. Are you aware that you had bluestone concrete in the No. 2 scheme for the western sewerage set down at £2 2s., whereas an alteration was made to £2 10s. Would not 8s. a yard over the whole work come to a great sum of money? No. The arches are a very small part of the concrete.
1415. Does the bluestone concrete go through the foundations too? No; that is another class of concrete.
1416. Will you explain your report to Mr. Young since you base it upon No. 2 scheme? I cannot do more than I have done. I have explained exactly how the comparison was made, and I think it was a fair one.
1417. *His Honor.*] I understand that all these three schemes are schemes of construction involving the use of concrete instead of brickwork in the arches—is that so? Yes.
1418. And that the third of them only is the one which is properly describable as the Monier system? Yes.
1419. And that the Monier system as well as the others involves the use of iron ties? All three systems involve the use of iron ties? Not in the arches of No. 1 and No. 2. There it is only in the superstructure.
1420. It is only in the Monier system that iron is used in the arches themselves? Yes.
1421. Is that a peculiarity of the Monier system? Yes.
1422. *Mr. Parkes.*] Is that the only peculiarity? Yes; it is a combination of iron and concrete.
1423. *His Honor.*] It is a system of concrete construction as applied to arches? Yes.

1424. *Mr. Parkes.*] Ahearn's contract for the western sewerage was carried out upon these plans, was it not? Yes.

R. R. P.  
Hickson.

1425. And per lineal foot, it ran at about £10 16s. 1d., did it not? No. If calculated for two sewers of 6 feet diameter, Mr. Bagge says it would cost £10 16s. 1d.

3 June, 1896.

1426. If calculated for three, it would amount to more, would it not? I presume so. As I have said I never could understand this foot-note of Mr. Bagge's. Mr. Davis himself cannot understand it.

1427. If you could not understand it, why did you make use of it in your report to Mr. Young? I never did use it. I used the comparison of the three schemes which have nothing whatsoever to do with that paragraph having reference to John Ahearn's No. 101 contract. I prepared three alternative schemes for the extension to the sewage farm. Nos. 1 and 2 as given in these papers were for concrete arches, not on the Monier system. No. 2 scheme as shown here is estimated to cost £6 16s. 11'3d. per lineal foot. Calculations were made for a scheme giving exactly the same carrying capacity of sewer upon the Monier system which is scheme No. 3 in these papers. That is estimated to cost £6 6s. 8'3d. per lineal foot. You have said that I am comparing two concrete structures, whereas in the case of the Johnstone-street sewer I am comparing a concrete structure with a brick structure, and I say that there is no difference between brick arching and concrete in that case, as they are of the same price. Those are the simple facts.

1428. While brick arching and concrete are put at the same price, the sandstone concrete in the substituted scheme at 2,350 yards is reduced to 1,800 yards, and the bluestone concrete is reduced from 590 yards to 300 yards. The entire brickwork to the extent of 2,020 yards is reduced, all except 150 yards being taken out. Now where is the comparison? First of all I do not know the quantities of which you have spoken are taken from there. I do not know anything about it, or by whom it was done. Mr. Darley will, perhaps, be able to explain it.

1429. I want to know upon what estimate you arrive at the value of the quantities specified in connection with the Monier scheme? On these estimates.

1430. On which? On the No. 2 and No. 3 schemes.

1431. You have not McSweeney's signed contract plans, have you? No.

1432. If Carter, Gummow, & Co., or McSweeney would undertake to reduce the cost of your original scheme by 28½ per cent. upon Contract No. 77, would not that reduction have to be made in respect of the Monier system if the quantities and material were less? Not all through; certainly not.

1433. Why not? Because there is no concrete in that specification. That would apply to the Monier arch concrete, and that is a special composition. Although it is called concrete it is not concrete proper. It is 3 to 1 I think.

1434. *His Honor.*] In the composition is the stone left out? Yes; it is much richer and more expensive.

1435. Is it lighter? The specific gravity would be lighter.

1436. Would it be as tough? Tougher; the more cement you put in the better the concrete. You can have cement 1 to 8. In the Monier arch it is 1 to 3.

1437. The other material being sand? Yes.

1438. You say that the concrete used in the Monier system is a 3 to 1 composition? Yes.

1439. *Mr. Parkes.*] A special bluestone concrete was proposed to be used in your original scheme;—3 of broken metal, 2 of sand, and 1 of cement? That is so.

1440. In your reports to Parliament on 19th December, 1895, you said that this composition would cost from 80s. to 90s.? Yes; £4.

1441. As a matter of fact it is being paid for now at the rate of 70s.? I do not know; the estimate was actually made out on 80s. I did not know that it was being paid on 70s.; if so, it is close to my estimate.

1442. Except the reduction of the other material I have named, and the taking away of the brickwork, the only other change in the Monier arching is in regard to special bluestone concrete, which is altered from 1,000 to 1,050 yards of this composition? All the arch work.

1443. But I mean the only change in solid material other than the arch work? I do not know. I do not know what the quantities are.

1444. *His Honor.*] Do you wish to make any further statement upon the evidence you have given? No, not unless there is anything your Honor does not understand in regard to the comparative estimates.

1445. *Mr. Gummow.*] As to the estimates of 80s. or 90s. for mortar, what does that include? It includes all the net work of iron which comprises the Monier patent.

1446. Do you know, whether as a matter of fact, the 70s. referred to by Mr. Parkes includes the arch? I do not know. I never saw the figures before.

FRIDAY, 5 JUNE, 1896.

Robert Rowan Purdon Hickson, recalled and further examined:—

1447. *His Honor.*] I think you must have been in error, on Wednesday, in some of your answers—I notice that in a minute of the 28th March, 1895, you say, "When plans were being prepared for the extension of the sewers on to the sewerage farm, estimates were made for the work on the Monier system as well as on the Department's design";—beyond Mr. Bagge's report of the 21st September, 1894, which is a sort of comparative estimate of three systems, one of them being the Monier system was any other estimate made showing the relative cost of the Monier or any other system to the original scheme of the Department? Yes.

R. R. P.  
Hickson.

5 June, 1896.

1448. What estimate was that? It is shown here in the first and second schemes.

1449. Here we have Mr. Bagge's estimate of the comparative cost of the three schemes which I understand are radically different from any scheme which has hitherto been adopted by the Department? Yes.

1450. I mean, of course, any scheme of sewer aqueduct? Yes.

1451. Beyond that estimate, was any other estimate made by the Department comparing the Monier system in cost with the designs of the Department? Yes; there was the estimate in connection with the Department's design.

1452. What I want to know is whether the estimate made by Mr. Bagge, on 21st September, 1894, was the only one made. I suppose plans accompanied it which compared this system of constructing arches in either concrete or compo. with the Department's former system of constructing arches of brickwork? Yes.

1453.

- R. R. P. Hickson.  
5 June, 1896.
1453. But these are the only estimates? Yes.
1454. Upon that comparison you will see that the standard used was Ahearn's outfall sewer Contract 101? No. That is where the mistake comes in.
1455. Is there any difficulty in understanding what Mr. Bagge meant when he says at the commencement of his report, "Three designs are herewith submitted for the consideration of the Engineer-in-Chief, each design with an open aqueduct, carried upon arches and piers. The aqueduct or main carrier is capable of discharging 11,000 cubic feet of sewage per minute, which is equal to two 6-foot diameter outfall sewers running three-quarters full with a gradient of 1 in 2,000." Then, at the end of the report, he says, "Mr. Ahearn's present outfall sewer Contract No. 101, if calculated for two sewers of 6 feet diameter, would cost £10 16s. 1d. per lineal foot." Ahearn's outfall sewer was a contract, I understand, in which there were three pipes of 6 feet diameter each? Yes.
1456. Then, when he says here that Mr. Ahearn's present outfall sewer Contract No. 101, if calculated for two sewers of 6 feet diameter, would cost £10 16s. 1d., it means that he made a reduction below the estimate of the Department for the cost of Ahearn's sewer, assuming that Ahearn's sewer was reduced from three to two carriers. On that basis, although Ahearn's cost would be something more than £10 16s. 1d. per lineal foot, a two-carrier sewer would come to approximately that? Yes; apparently so.
1457. Did you not, when you read Mr. Bagge's report in the first place, understand what he meant as the basis—as the sewer representative of the Department's work already designed—that he meant to take that as the basis of comparison to see how much would be saved if a sewer to carry the equivalent of two 6-foot diameter carriers were substituted for the sewer designed to carry the same quantity of sewage on the principle already in use by the Department? No; it has no application whatever to that. Ahearn's contract was a pipe sewer; the other was an open aqueduct.
1458. But was not the open aqueduct system one which had not hitherto been adopted for sewerage by the Department? No; it was on the sewage farm long before I took charge of the Department.
1459. Before Ahearn's contract was let? Yes; six or seven years ago, before any of the plans of the western suburbs sewerage were in hand.
1460. Do I understand that the principle of open aqueducts carried on a concrete arch had been in use before Mr. Bagge wrote his report? Yes.
1461. On concrete arches? Yes.
1462. Then this system which Mr. Bagge was alluding to in his report was not a new system, except in so far as the Monier arch was concerned? That is so.
1463. What then was the comparison which I understand you wished Mr. Bagge to make when you asked him to write this report? It was as to what would be the cheapest way of extending the sewer into the sewage farm as an open aqueduct; and to arrive at a conclusion he made the three plans which you have here, and gave three estimates in connection with them.
1464. The plans you produce were attached to the estimates, I suppose? Yes. No. 1 scheme is for a concrete arch; not on the Monier principle in any way whatever.
1465. It is constructed, I believe, upon the system of Road-Engineer Koch, is it not? Yes. No. 2 scheme is very much the same. It is a concrete arch also, but with a little difference in the expansion joints, which is a matter of detail. No. 3 scheme is the Monier system pure and simple, but No. 2 scheme is that which we actually carried out in this extension. It is M'Sweeney's contract, No. 112.
1466. Did not M'Sweeney's contract No. 112 involve the use of brick arches? Concrete arches.
1467. Only concrete arches? Yes.
1468. Passing away from that for the present, it is not disputed, I suppose, that the comparison made by Mr. Bagge is correct—that is the comparison with Ahearn's contract No. 101? I hardly understand what he meant, because it was not applicable in any sense. I do not really know why it was brought in. Perhaps he will be able to tell you himself.
1469. When Mr. Bagge made out this report, what particular sewers or extensions had you in contemplation at the time? The extension into the sewage farm, No. 112 contract.
1470. Not anything which was afterwards evolved in Contract No 77? No; as I say, they are two different kinds of work.
1471. At any rate, the comparison which Mr. Bagge makes is, on the face of it, with Ahearn's outfall sewer Contract No. 101 if calculated for two sewers of 6 feet diameter? His comparison between No. 2 and No. 3 schemes is the only comparison which applies to the case.
1472. At all events, Ahearn's scheme was one which did not substantially differ, except in regard to its carrying capacity;—it did not substantially differ I mean from the plans of the Department for Contract No. 77, upon which tenders were called for? That is a different style of thing altogether. Ahearn's contract is for a three-pipe sewer.
1473. But it is carried on brick arches with the concrete which is generally used? Yes.
1474. The pipes I understand are in concrete—they are formed in concrete? Yes.
1475. There is no iron cylinder? No.
1476. It is simply a concrete carrier resting on a brick arch? I ought to explain that what we had under consideration was simply an open carrier.
1477. Is there any substantial difference in cost between Ahearn's contract plans and the plans drawn by the Department for Contract No. 77, so far as Contract No. 77 applies to the building of a closed aqueduct? Ahearn's would be much more costly.
1478. In No. 77 the plans involve not an open aqueduct but an oval carrier? No; I think it is open.
1479. I mean the original plans? Yes; I see it is closed in that case. I thought it was open.
1480. They provide for an oval section instead of a circular section, but that I suppose would make no appreciable difference in cost? Not much difference.
1481. Am I not correct in suggesting this—that the Department's plans for Contract No. 77 and the Department's plans upon which Ahearn worked, although for aqueducts carrying different quantities of sewage, were practically in cost the same, although differing in detail? I should have to go into the matter in detail if I were to reply to that question.
1482. You see they both involve brick arches, which is one radical distinction between them and the other systems? Yes; but the cost of the two would be pretty much the same.
1483. Is there any radical distinction between Contract No. 101 and Contract No. 77, as far as the Department's plans are concerned, in the cost of the aqueduct work? No; I do not suppose there would be very much difference.
- 1484.

1484. Do you not observe that Mr. Bagge has made an estimate which shows that comparing the Monier system with Ahearn's for a similar carrying capacity the Monier system is as 1 to Ahearn's 1·7 in cost—a very substantial difference? I suppose it would be. R. R. P.  
Hickson.
1485. In your letter of 5th April, 1895, you say that the part of Carter, Gummow, & Co.'s tender which applies to the aqueduct work comes out at £9,000, that being the proportionate part? Yes. 5 June, 1896.
1486. That applies to the tender of £15,757? Yes.
1487. Out of the £15,757, £9,000 would be for the aqueduct work on this estimate? Yes.
1488. Reduced 28½ per cent. below your estimate? Yes.
1489. Now, the work they were to do for the £9,000, according to their estimate, was work, I understand, which would cost approximately the same as would work which was involved in Contract No. 101. Your plans for No. 77, on which they tendered, and your plans for No. 101, upon which Ahearn tendered, were practically plans involving the same cost? Yes; very much the same.
1490. They tendered for work which was the same as that which Mr. Bagge has taken into consideration here, which he utilised as a sort of standard upon which to compare the Monier system and the other somewhat similar systems—that is so, is it not? Yes.
1491. Then what I want to know is this—as between the country or the Department and Carter, Gummow, & Co., ought not that sum of £9,000 really to have been divided by 1·7 in order to arrive at the proper reduction which ought to accompany the substitution of the Monier aqueduct for the Department's aqueduct as part of Contract No. 77? Perhaps the best way to answer all this would be to give you the actual estimates of both designs.
1492. What I want to ascertain from you is this: If you reduce the amount of £9,000 in proportion to that reduction of cost which Mr. Bagge mentions in his report you will bring it down to £5,294;—dividing it by 1·7: you will then have a difference of £3,706;—now, is not that a fair calculation in endeavouring to arrive at what ought to have been the difference between Carter, Gummow, & Co.'s tender for the work done upon your plans and their tender for the work to be done upon the Monier system? That is going upon the assumption that £9,000 is really the value of it. As a matter of fact the £9,000 was put high for a special reason, and the calculations we have since had made would show the exact cost of both schemes as applied to No. 77.
1493. At the time you wrote this letter, however, you took the sum of £9,000 as being correct? Yes, as approximately correct.
1494. At the time you advised the Board of Reference you also took the £9,000 as being correct? Yes.
1495. You mention, in fact, the sum of £12,000 as the sum which it would cost the Department to renew that portion of the sewer which was built upon the Monier system? That estimate includes all the taking down which might be involved.
1496. Did it not strike you, having read Mr. Bagge's report which had been made only some six months before, and which you alluded to when you wrote your minute of 28th March, 1895,—did it not strike you to make a calculation to see whether the amount of £15,500 was really a fair tender, being only £257 below the tender made upon the basis of your much more expensive plan? No, it did not, because, as I say, I was comparing No. 2 and No. 3 schemes. As a matter of fact, what has taken place since will show that I was correct.
1497. How does No. 2 scheme come into the issue at all? No. 2 scheme has no relation to the plan of No. 77 contract, inasmuch as No. 2 scheme is founded upon a totally different principle—the principle of an open aqueduct carried upon concrete arches, while No. 77 is a closed sewer carried upon brick arches? The cost of closing a single sewer like that is very light, because you can make your walls so much thinner, and, besides that, there are all the iron braces which go on to the top of the open sewer. These will make it come to nearly the same price as a closed sewer. There is really not very much difference in the cost.
1498. Is there not really a substantial difference between the cost of an elaborate and remarkably strong and good brick arch, such as you see in the Department's design, and the cost either of concrete arches or of composite arches containing iron lattice work? Not very much, because the concrete and the brickwork are at practically the same price.
1499. Then how did Mr. Bagge arrive at the conclusion that the Monier system was very much cheaper than No. 101—that it would actually cost so very much less than your plans as they appear in Contract No. 101? I cannot tell you how he made that out. All I know is that the estimates which we prepared show very little difference in the cost of the two.
1500. At the time the No. 77 plans were prepared I think you said you had had some of this concrete-work done? Yes.
1501. Were you then in your own mind comparing the concrete-work which you had had done with the cost of No. 77, as prepared by you? No; because the concrete-work to which I referred was not done by me at all.
1502. Under whom was it done? Under Mr. Bennett, the late Engineer-in-Chief for Sewerage.
1503. The concrete-work you are speaking of is on an aqueduct leading out to the sewage farm? Yes; from the Botany side.
1504. Then we come back to this, that what you really had as a basis for your calculations and the basis for your report was Mr. Bagge's report? No; what I had in my mind was the comparative estimates made upon the two schemes submitted to me.
1505. The two schemes submitted to you being No. 77 and the Monier scheme? No. The alternative schemes for extending the carriers into the sewage farm according to the plans which I have here.
1506. Those are the plans, I presume, attached to Mr. Bagge's report? Yes.
1507. But they were plans upon which your Department had never worked. You had had no experience of them? Not at that time.
1508. They were new? Well, Contract No. 112 was upon one of these plans.
1509. When was Contract No. 112 carried out? Immediately after this report was made.
1510. Then in working upon Contract No. 112 the quantities were all taken out and estimates were made? Yes.
1511. Then if plan No. 112 did not prove to be very much cheaper than the work you had formerly been doing it could not have tallied with Mr. Bagge's estimate, because, according to his estimate, No. 2 scheme ought to have cost very much less than the brick arch or closed sewer work which had formerly been done by the Department? It would cost considerably less.

R. R. P.  
Hickson.  
5 June, 1896.

1512. How much less? Well, some of the outfall sewer work was very heavy indeed. I could not say how much it came to per foot, but it would come to considerably over this amount.
1513. But do I understand that when you said the cost of the two schemes would be about the same you were then comparing the Monier with No. 2 scheme in Mr. Bagge's report? Yes; No. 77 was not thought of at that time.
1514. But the No. 77 plans had been prepared? Not when this report of Mr. Bagge's was made.
1515. But when you said that the estimate of both works was practically the same you meant that the estimate for the work done under what we will call scheme No. 2 of Mr. Bagge's report and the Monier scheme were practically the same? Yes.
- 1516-1517. But the plans of No. 77 as designed by the Department were absolutely different—radically different—from No. 2 scheme of Mr. Bagge's report? They were not radically different. There was brickwork in the arches instead of concrete, but you can hardly call that a radical difference, because the cost is practically the same. The sewer in the one case was an open one but it was tied strongly across with iron bars, and, as a matter of fact, we have found from working that the cost of that is almost equal to the cost of filling up with concrete. The difference would be very little indeed.
1518. Then we come back to this—that the cost of scheme No. 2 has been really proved to be the same as the cost of No. 77, as proposed by the Department, and as No. 77 and No. 101 are practically equally expensive then Mr. Bagge must have been utterly wrong when he said that No. 2 would be so very much cheaper than No. 101? When I say that they would cost the same, I mean the same cost per cubic yard. Ahearn's No. 101 Contract is a great deal more substantial, and there is a great deal more material in it than in Contract No. 77, so that per foot run there would be a great difference in cost.
1519. Ahearn's is a more expensive contract because it is a bigger one? I do not mean because it has three carriers, but the work is much more massive in Ahearn's case.
1520. Much more massive than in Contract 77? Yes.
1521. Unnecessarily massive? Yes; unnecessarily massive. By that time we were reducing the massiveness of our sewers. Some of them we found were too heavy. There was a waste of material.
1522. Where would the waste come in in No. 101 in comparison with No. 77? There are enormously heavy foundations and very heavy piers. The arch is a very heavy one, and the body of concrete is much more substantial than in No. 77.
1523. In proportion to the weight to be carried? Yes.
1524. When was the experiment made in the case of the road culvert to which you have referred? I could not tell you the date now, but I could obtain it.
1525. Was it before or after you wrote the minute I have quoted? Before that.
1526. Was it a true Monier arch that was put in in that case with open work? Yes; but not with open work above: that forms no essential part of the Monier system.
1527. It is the introduction of iron lattice work which makes the radical distinction between the Monier and other descriptions of concrete and compo. work? Yes.
1528. *Mr. Parkes.*] I should like to ask whether you let the contract to McSweeney upon the Monier system, or upon the No. 2 scheme reported upon by Mr. Bagge? On the No. 2 scheme.
1529. After McSweeney had tendered for the No. 2 scheme, did you not write to him stating that he must adopt the Monier system and pay 15 per cent. upon the cost? No.
1530. Will you swear that you did not? Yes.
1531. You swear that you did not write to him telling him that he must adopt the Monier system? I did not.
1532. Did you write to him at all concerning the Monier system? He asked me if he would have to pay the patent fees, and I said "Certainly not."
1533. You did not instruct him that although your plan was drawn in accordance with No. 2 scheme reported upon by Mr. Bagge, he must, nevertheless, adopt the Monier system? No.
1534. You did not write to him words to that effect? Certainly not.
1535. You have sworn that the dimensions of No. 101 are greater than the dimensions of No. 77. Will you kindly measure off the dimensions in the plan—take first the piers? In the first place I said that the foundations were heavier and were more costly than were the foundations in No. 77. That, of course, is apparent from the drawing. In the second place you will see that there are very heavy footings in the piers.
1536. What is the width of the piers, as marked upon your plan 101? The footing is here of 11 ft. 6 in. across.
1537. What is the average? You cannot average in a case of this kind; some are 8 ft. and some are 11 ft. 6 in. In the plan of No. 77 there is one footing which is 10 ft. and others are 4 ft.
1538. What are the abutments in No. 77? There are some 14 ft.
1539. And your intermediate piers there are 10 ft., are they not? Yes.
1540. What is the width? Seven ft. 10 in. Allowing the same width on the inside of the pipe as on the outside, the pier would be 9 ft. 6 in. in the case of 101.
1541. What is the average depth of the piers from the spring of the arch to the heel of the foundation? Four ft. down to 15 ft.
1542. What is the average depth in the case of plan 77? They run from 4 ft. to 25 ft.; you cannot take an average.
1543. Is it not a fact that the thickness of the piers, as shown by plan 77, is 5 ft. 6 in.? I do not think they would go as much as that.
1544. Are not the piers upon plan 77 greater in carrying capacity than the piers upon plan 101? Not taking the whole of the piers together.
1545. Take the three designs reported upon by Mr. Bagge, of which plans were prepared, was any one of them built? Yes.
1546. Built absolutely from the plan? Almost exactly. The contractors' plans are taken from the plan before you.
1547. Have you had any conversation with Mr. Bagge this morning? No.
1548. Can you produce the plans of the sewer you have mentioned which was built under Mr. Bennett? I should think they would be with the Water and Sewerage Board. I have never seen them.
1549. *His Honor.*] You did not take them into consideration? No; I never saw the work carried out. I only know there are arches in it. 1550.

R. R. P.  
Hickson.

5 June, 1896.

1550. *Mr. Parkes.*] Did you not swear that No. 2 scheme reported upon by Mr. Bagge was based upon Mr. Bennett's scheme? No, I did not.
- 1551-2. *His Honor.*] Do you wish to make any explanation upon the questions which have been asked you? I do not know that any explanation is requisite. Of course, I put in the three plans upon which the three schemes mentioned in Mr. Bagge's report were prepared, and upon which three estimates were made out.
1553. I understand you to say in point of fact that Ahearn's plans were wasteful plans;—you mean as to cost, I suppose—the use of a large quantity of unnecessary material? I would not go so far as to say that. No doubt as we went on with our sewerage works we saw where we could save a good deal of material, and we did so.
1554. As between Contract 112, 101, and Contract 77, what you say is that you have effected a substantial saving? Yes, reducing considerably the cost of the work.
1555. Was that done by reducing the co-efficient of strength or by keeping up the co-efficient of strength and reducing unnecessary material? Yes; we found that keeping up a sufficient co-efficient of strength we had a large margin to go upon.
1556. Do you still say that you really did not understand the note appended to Mr. Bagge's report? I did not take it into account at all, because I was comparing two open aqueducts. Why the question of a triplicate closed sewer should be brought in was, to my mind, quite unintelligible.
1557. I understand that No. 2 scheme of Mr. Bagge's report had been worked upon then? No, it was worked upon as the result of the calculations then made.
1558. It had been worked upon before you wrote this minute? Yes.
1559. There was only an interval of six months? Immediately after Mr. Bagge's report had been presented the contract for No. 112 was got into hand on the basis of No. 2 scheme.
1560. And it was in the working out of the quantities that you came to certain results? Yes; the results are shown on plans No. 2 and No. 3, which I have put in.
1561. After arriving at these results the office drew the plans of No. 77? Yes.
1562. In drawing the plans of No. 77 were the plans under scheme No. 2 in Mr. Bagge's report borne in mind in any way? We bore in mind the result of our researches as to the cost of work upon No. 2 scheme.
1563. You had it in mind then that, as between No. 2 scheme in Mr. Bagge's report and No. 77 there was not much difference;—is that so? There was not very much. I have had the estimates all run out accurately since, and I can show you how they come out.
1564. How was it that in No. 77 the office did not go in for another experiment upon the basis of No. 2 scheme, but preferred to adopt the old system? We did not exactly adopt the old system, because in No. 77 we reduced the cost of our work.
1565. I mean so far as the brick arches and the closed carriers are concerned? The brick arches and concrete represent practically no difference in cost.
1566. Was it that you had concluded that brick arches if not connected with unnecessarily expensive work were practically no more expensive than concrete? There was very little difference in cost.
1567. So it was in your mind that only schemes Nos. 2 and 3 were to be compared;—although in fact No. 3, a different system from No. 2, was under comparison, what was really in issue as between the Department and Carter, Gummow, & Co. was a comparison between No. 77 plans and the Monier system in No. 3? Yes.
1568. But you say that in your mind the comparison between the aqueduct work involved in No. 77 and the Monier system were the same as a comparison between scheme No. 2 and the Monier system? Yes.
1569. Because with the increased saving in your designs for aqueducts you had brought down the cost to something practically equivalent to the cost of No. 2? Yes.
1570. Whereas in Ahearn's Contract No. 101 the cost had been much greater than the cost of scheme No. 2? Yes.
1571. That is your explanation? Yes.
1572. Do you understand, then, that Carter, Gummow, & Co. were working on the basis practically of Mr. Bagge's No. 3 estimate in carrying out the work they were to do? On very much the same basis.
1573. That basis brought the cost down to a little less than the cost of No. 2? Yes.
1574. And you looked in the future to being able to reduce the cost still lower by reducing the quantity of material used? Yes.
1575. Very much below the quantity which appears in scheme No. 3? Considerably less. This is not mere theory. I can show you what was actually done. You will see in the book I hand you an illustration of a bridge which has actually been built. The span is 121 ft. 4 in., and the thickness of the crown is only 6½ in., whereas our Monier arch at Johnstone's Creek has a 75-ft. span and is 12 in. thick.
1576. What weight is the bridge to which you are referring calculated to bear? The bridge I have shown you was tested on 14th November, 1890, in the presence of the President of the Zurich Association of Engineers, firstly, by submitting it to an evenly distributed load over one half of the arch, equal to 61 lb. to the square foot, and no measurable deflections could be recorded. It was secondly tested by a moving load of 5 tons being drawn across the bridge, when no vibrations were recorded by the gauges on the loaded or unloaded portions of the bridge, which results were considered satisfactory.
- 1577-8. This was, as a matter of fact, an experiment;—you thought it would involve no serious risk, and that there would be no extra cost, and that although there would be a small saving only at present, it would probably lead in the future to a great saving, because you contemplated reducing the quantities of the material used? Yes. But with regard to what you say as to the risk, there was absolutely no risk at all, because we put the whole responsibility upon the contractors. Most modern engineers believe in this system, and I wanted it introduced without any risk to the Department. Although the saving in this particular structure is practically nothing—that is, only about £200—I am quite satisfied from information which I now have from what has actually been done and from calculations which have been run out, that we shall be able to adopt this style of bridge at a very considerable reduction in the cost of the works.
1579. *Mr. Parkes.*] Why, when the Department was calling for tenders for Contract No. 77, did you not call for tenders upon two schemes—one upon the office plan and the other on the Monier patent? I considered the question, and I came to the conclusion that it would be better not to do so, because calling for tenders upon the Monier principle would be leaving it in the hands of only one firm of contractors to tender.

- R. R. P. Hickson.  
5 June, 1896.
1580. This contract is being paid for on the identical items in your original plan so far as brick archwork is concerned? As I have told you before, I do not know anything about that.
1581. Was not the schedule I now hand you prepared by you? Certainly not.
1582. Were these corrections? Certainly not.
1583. But as regards the printed form? Yes.
1584. In making a comparison between the two schedules—that is, the corrected and the uncorrected one, you see that the printed form is the same? Yes.
1585. Take No. 1;—that is paid for at 2s. per cubic yard? Yes.
1586. The next item is paid for at 7s. per cubic yard? Yes.
1587. And the next at 6s. per cubic yard? Yes.
1588. And the next at 57s. 6d. per cubic yard? Yes.
- 1588½. Take No. 9;—that is paid for at the rate of 20s. per cubic yard? Yes.
1589. Item No. 11 is paid for at the rate of a shilling per cubic yard? Yes.
1590. And item No. 13 at 4s.? Yes.
1591. 14 at 12s.? Yes.
1592. No. 18 at 4s.? Yes.
1593. You see that the two documents compare as to the amounts to be paid for quantities? I see that one item has been changed from £3 to £3 10s.
1594. But the items I have just quoted are not connected with the Monier arch? No.
1595. Therefore they are common to both the Monier scheme and the plan prepared by the office? I do not know. I did not prepare the two schedules.
1596. Are not these the identical items in the original tender form for Contract 77? It speaks for itself; the figures are the same.
1597. Seeing that you received a tender reducing each of these items 28½ per cent., why should they now be paid for at the original office rates? You had better ask the engineer who arranged that.
1598. Did you not prepare this contract? I did not fix these prices.
1599. Did you not advise Mr. Young that he might accept the contract because it would be at the same cost? Yes.
1600. Why did you not report to Mr. Young that 28½ per cent. should be taken off those items which had not to do with the Monier arch? Because I did not think it should be taken off.
1601. But is it not a fair thing, in the interests of the country, when you invited tenders at a certain rate below the office values that it should receive the benefit of those reduced rates? It was a lump sum contract. These figures are used only for progress payments.
1602. The office, in order to pay for this contract, divided it into schedule form? Yes. I did not do that.
1603. You wish to throw all the blame upon Mr. Darley? I do not wish to throw blame upon anyone, but I will not take any blame which does not belong to me.
1604. Had you no correspondence or communications with Mr. Darley as to the fixing of these schedules prior to your advising the Minister? Certainly not.
1605. Have you since that date had any communication or talk with him as to these schedule rates? No; I had not seen this document before the last day I was here.
1606. You cannot tell how that exact sum of £15,500 which tallies so well with this amended quantity list was made up? Certainly not. It is a lump sum without any schedules or rates attached to it at all.
1607. Did you ever wait upon an architect named John Kirkpatrick in order to advocate the use of this Monier system in a building in Moore-street? No.
1608. Did you interview him and ask him to substitute the Monier system for his arches in the building of the Mutual Life Assurance Company of New York? No; I have no recollection of speaking to him on that subject. We have spoken about many professional matters, but I have no recollection of asking him to introduce this Monier patent.

Christian Herman Ohlfsen-Bagge sworn and examined:—

- C. H. Ohlfsen-Bagge.  
5 June, 1896.
1609. *Mr. Parkes.*] You were an engineer in the Public Works Department? Yes; but before I give any evidence, I should like to explain that when I was coming to Sydney last night upon His Honor's subpoena, I was told that I was the instigator of this inquiry. With His Honor's permission, I should like to give that a point blank denial. I am not at all interested in either party, or in either side of the case.
1610. How many years were you in the Department? Fifteen years. I am an engineer of standing in the Colony. I am well known in the profession, and I have carried out various large works.
1611. When you were in the Department you were directly under Mr. Hickson? I was first under Mr. Bennett, and latterly under Mr. Hickson.
1612. Did Mr. Hickson ever request you to make a report on what is called the Monier patent? Yes.
1613. Did he give you verbal instructions, or did you have an interview with him concerning it? Not specially, as far as I can recollect on this subject. Of course we spoke about the matter.
1614. When you made your report you submitted three plans? Yes; three plans were sent in, but they were not all drawn under my direction—that is to say, the plan for the Monier scheme was not.
1615. Who did that? A gentleman in the office named Baltzer.
1616. Was he not one of the holders of the patent? Yes; I recollect now that Mr. Hickson instructed me at the time to be modern in my designs, and we then prepared several designs on the latest principles. One of these was a concrete arch which had been recently constructed in Germany and which was considered a novelty.
1617. That was No. 2 scheme, mentioned in your report? Yes.
1618. Did you base your design in that scheme upon any work in the Colony? No.
1619. Did you tell Mr. Hickson that you based it upon Road-Inspector Koch's design? Yes, I think so. He was the man who built the works at home.
1620. You based your design upon his work? Not exactly; because his bridge was simply a road bridge, while our bridge carries an aqueduct. I ought to explain that on the continent when professional men bring forward anything which is apparently new the Government will not entertain any patent. They do not exactly put their foot down upon it, but they say, "you must form a strong company and

C. H.  
Ohlfsen-  
Bagge.

5 June, 1896.

and give us sufficient security." I may tell you that the Government in Germany forced the cement manufacturers to form a union, and it was only from this union that these arches would be allowed to be constructed.

1621. Did you compare your quantities for these three different schemes with John Ahearn's work only? No—yes, I think we did.

1622. You did not make any comparison with a sewer running through Botany? No; I think we compared only with Ahearn's contract.

1623. Did you have any conversation with Mr. Hickson concerning any Botany sewer? I do not think so. I cannot remember it.

1624. What is your opinion of the saving which would be effected as between the original office plans and the proposed plans on the Monier system? I can scarcely recollect what the saving is. I think the report states it.

1625. The report embodied your opinion upon that point? Yes.

1626. And the intention of the report was to convey that opinion distinctly to Mr. Hickson? Yes.

1627. Did he understand it? I think so.

1628. You were in the office when M'Sweeney's Contract No. 112 was started? Yes.

1629. Were any of these schemes adopted for M'Sweeney's job? I do not exactly recollect the transaction, because when the plan leaves me and the tender is accepted the matter does not go through my hands.

1630. *His Honor.*] What is your recollection of what took place? I think one of the designs was adopted, but unless I saw the plans I could not say.

1631. *Mr. Parkes.*] If you saw the plans of M'Sweeney's contract you could tell? Yes. There was such a lot of work going through my hands that, of course, I am liable to get mixed up concerning the different plans.

1632. On 14th March, 1894, the tenders for Contract 77, at Annandale, would be in your hands? I suppose so.

1633. The original document before you is your report is it not? Yes.

1634. At the end of your report you say, "I think it would not be advisable to construct at the outset a work of such importance on the Monier principle"? Exactly.

1635. It was your opinion that it would not be safe to construct the work upon a risky patent? Exactly.

1636. Do you know how the lump sum of £15,500 was made up;—was any schedule produced? I never saw it to my knowledge. I was only informed unofficially that the design had been accepted.

1637. Was any schedule made up in the office do you know? We made no schedule up, I am sure of that.

1638. If any contractor tendered 28½ per cent. below the original office schedule prices, do you not think it would have been proper to take that 28½ per cent. off the schedule in the case of the Monier scheme? As far as I can recollect, the Monier scheme was a special offer from the contractors to the Government. They tendered for our work, and handed in at the same time a design of the Monier principle.

1638½. Will you look down the altered quantities in the document I hand you? Yes.

1639. If you had known that the quantities of the Monier would be so much reduced upon the original design quantities you would have recommended that it be not adopted, except at the reduced prices? I could not honestly have done so. I would have recommended the department not to try the Monier system.

1640. Did you ever observe closely the substituted plans for Contract 77 on the Monier system? I think I have seen them.

1641. Who prepared the plans? Mr. Baltzer.

1642. Was he in the office then? Yes.

1643. Did you pay any very close attention to the plans? I did not. I informed Baltzer that Mr. Hickson wanted a Monier design. I said, "Now, Baltzer, here is your chance. Mr. Hickson wants a Monier design. You, as an expert, can draw it." He replied: "Yes, Mr. Hickson has told me so."

1644. In the light of your engineering knowledge, do you not think that there would be considerable saving in the Monier as compared with the office design? That is a very questionable thing. You must not forget that the Monier system has to be carried out entirely by experts, and it has to be proved whether the experts we have in the Colony will be successful in carrying it out. I sincerely hope they may be. I hope for the sake of all concerned it may turn out to be a success. I could not say at present whether there would be a saving on the design or not. Perhaps I ought to tell you that the Monier system was first started in France.

1645. On what date? I think the office has known the Monier system since 1888. It was started in France; then a German engineering firm went to France and made arrangements with the Monier Company to sell them the patent, and to give them all the necessary information so that they might start works upon the principle in Germany. Another firm took out the patent in Austria. There were thus the three patents in existence. The German Government, when they were approached with reference to the building of works upon the principle, said, "We cannot introduce any work in the nature of a patent. If we did so, it would create a monopoly, and we cannot do that. We will not exactly put our foot down upon it, but we must have very substantial sureties concerning it. A strong company must be formed, and they must take all the responsibility. We, as a Government, cannot do any more in the matter." The Governments of France, Germany, and Austria would not adopt the patent. They thought it impracticable to carry it out by the ordinary builders and contractors, and that being so, I did not think I was justified in leading the Government of this Colony into what, according to the best knowledge I could obtain from home upon the subject, might have been endless trouble. I do not think we were justified in assuming that we had specialists here who would be prepared to carry out works on the principle.

1646. What is your opinion of the arch, supposing the iron grill were not in it? If the iron were not in it the Monier arch would tumble down.

1647. You notice that according to the plan in this case it would be exposed to the weather? Yes.

1648. There is great porosity in concrete? Yes.

1649. And in rainy weather it would become soaked with water, would it not? From what I have been able to read of the latest news from home concerning this system, it has been very highly spoken of by the institutes of civil engineers in Germany, Austria, and France. It has been discovered that the cohesion between the concrete and the iron is so great as to create a force enabling the patentees to use the system very generally.

1650.

C. H.  
Ohlfsen-  
Bagge.  
5 June, 1896.

1650. Is it not much cheaper? That is another question. It would be lighter, and it might in some instances be cheaper; but if that result is to be obtained all the cement used must be of equal strength, and we cannot guarantee that in respect of the cement we have to use here. Speaking of my fifteen years experience in the Sewerage Department, I am in a position to say that the home manufacturers try to "do us" continually in the matter of cement. We had to make constant endeavours to counteract the effects of using bad cement. You can understand a great risk under such circumstances attending the adoption of the Monier principle.

1651. Of what thickness would the iron be in these arches? It would be only  $\frac{1}{4}$  inch iron.

1652. If the iron were wet for any period would not the rust affect the rods? No; I think not. It has been estimated that the concrete adheres to the iron with a force equivalent to from 400 to 500 lb. to the square inch.

1653. Iron inserted in stone or in concrete has been known by rusting to break the stone or concrete to pieces, has it not? It may have done so in stone where it has not been surrounded by concrete; but when clean iron is put into cement, when all the rust is first taken off, then the cohesion of which I have spoken sets in, and that constitutes the immense strength to be found in the Monier system.

1654. *His Honor.*] Supposing any damp got through the concrete,—would the presence of the cement in immediate contact with the iron stop oxidation? If you use the best quality of cement it would set instantaneously on to clean iron, and you have then produced an immensely strong structure in which you will not have to contend with oxidisation.

1655. Supposing the bond to be perfect, but supposing also that moisture does slowly percolate through the cement, has experience shown that in such a case the iron oxidises at any rate, or does the opposite result ensue—does the iron remain unoxidised? If the iron oxidised it would prove, in my opinion, that the cement was not good.

1656. You think then that the moisture would not get through good cement? I think not. I believe the Monier people are constructing water-pipes of the same material.

1657. *Mr. Parkes.*] Will not a 3 to 1 compo. absorb water? I should think so. The plans which I have seen from Europe do not carry an aqueduct. In this instance it is intended that an aqueduct should be carried. Not only is there that difference between the two cases, but you have here a very severe climate. You have immense heat on one side and comparative coolness on the other side of the structure, and what effect those conditions will have upon such a structure as the Monier arch it is difficult to fortell.

1658. Will you look at the section and tell me what size are the bolts which tie the side plates of the sewer channel? They are three-eighths bolts.

1659. A very small bolt? Yes.

1660. How far is it from the bottom of the invert of the sewer to the bolts you are looking at? Only about an inch or two.

1661. Is the lining of the sewer cement? It is cemented when the work is finished.

1662. Would not the damp, from the constant running of the sewer, rust away the iron bolts? Not if the cement is good.

1663. It all depends upon the adhesion of the cement to the iron? Yes.

1664. Have you never seen iron bolts or hooks taken out of cement because they have rusted away? If so, I should say they were put in dirty.

1665. You think everything depends upon the iron rods being put into the cement thoroughly clean? Yes; and on the cement being thoroughly good.

1666. Do you not think the Monier system is a most risky structure in comparison with a plain brick arch, with stone abutments, and with concrete? I have said already that I do not conscientiously think we have specialists here who could undertake work of this kind. I know how the thing originated in the office. Mr. Baltzer claimed to be a specialist. In speaking to him about the matter, I said "You are not a specialist. You have merely received an advertising pamphlet from your brother, who is a schoolmaster in Europe. Upon this pamphlet you have taken a patent. If you were asked to calculate the strength you would not know how to do so. You are a clever young fellow and you have not long left the University. You are a clever man in many respects, but you have not had that practical experience in these matters which would entitle you to call yourself a specialist."

1667. What is the width of the arches as shown on the plan from centre to centre? 82 feet 10 inches.

1668. Now, will you look at the original plan and tell us the distance between the centres of the arches? 52 ft. 3 in.

1669. *His Honor.*] Do you mean from centre to centre, or are you taking the span? The span.

1670. *Mr. Parkes.*] Will you tell us how many extra piers are needed for the construction of the office design as compared with the Monier scheme? There are twenty piers in the office plan and fifteen in the Monier scheme.

1671. Does not that make a considerable saving on the Monier patent? It may; it depends upon the result.

1672. I am referring to the saving in the cost of construction as between the two plans? It is very difficult to say what the saving would be.

1673. There is less material, is there not? Yes; but there is a great difference in the quality of the material.

1674. Does not the patent consist only in the change in the arch? It consists of many things. Its success will certainly depend upon getting special cement. In constructing an arch upon the Monier system it is necessary to start at both ends and not to leave off until the arch is finished. The work must be carried on night and day until it is completed. No dry joints must be left.

1675. Have you had a look at the work at Annandale since it was started? Only from below.

1676. Did you notice whether the arches were being built in the manner you have described? I did not go there for the purpose of inspecting them.

1677. Are they building them in the manner you have described? I could not tell.

1678. Are they not building them arch by arch? I think they are.

1679-80. *Mr. Gummow.*] I understand you to say that the arches must be built altogether;—what do you mean by that? What I mean to say is that you have to start a number of arches at the same time. You also have to start the cement work from both ends of each arch simultaneously. The work must continue until it is closed in the centre. It must go on night and day. It will not do to have any dry joints. There must be no joint in any part of the structure.

C. H.  
Ohlfsen;  
Bagge;

5 June, 1896.

1681. What is the effect of building one arch *in toto* to-day and building another arch *in toto* to-morrow? Supposing you build one arch to-day the pier is not built to resist the thrust of the adjoining arch; it is simply built in conjunction with all the other piers to hold the top structure. If you are going to construct arch by arch you must run the risk of toppling a pier over, or causing a crack in the structure. 1682-3. *His Honor.*] But is there any appreciable thrust before the centerings are taken out? The moment the centerings are taken away the thrust is there.

1684. But I understand that the centerings are left in the Monier system for some months after the entire work is finished? Yes; so they should.

1685. And when the centerings are in there is no thrust? You cannot tell; it is difficult to say. The secret of the Monier system, speaking from what I have read—and I can only speak from what I have read—is this, that you must have a number of arches commenced at the same time from each abutment, the whole structure going gradually forward and preventing the leaving of any dry joint.

1686. If you built one arch and completed it, and afterwards started another arch and completed that, a dry joint would be left between the two arches, that is to say, one part of the material would be dry before the other material was applied to the adjoining arch? Yes.

1687. There is a joint in this system at the centre of each pier, I understand, and that is filled in with another different material? That is another German system.

1688. The Monier system does not involve these joints? No. It is one continuous structure. It is upon much the same principle as the Americans build their big "sky-rakers." They are built of steel lattice-work, and this is enclosed in concrete. There is a great difficulty in getting work of this kind done from one end to the other honestly and conscientiously.

1689. *Mr. Gummow.*] If one arch is built and completed to-day, and another arch is completed say to-morrow, you say that that would be dangerous to the stability of the structure? It might be.

1690. If the centerings are left in? I am not prepared to say. It might be.

1691. In calculating the amount of thrust upon the piers, is not the whole calculation taken out with the weight of the carriers—with the weight of the sewage in them—and not upon the arch alone? That is quite right; but if you build arch by arch you get dry joints, and one of the difficulties of the Monier system is to avoid those joints.

1692. In the case of the arches, which are being built in Contract 77, is no joint provided for in the whole length of them? The work should be continuous.

1693. *His Honor.*] I understand that No. 3 scheme is held by you to be an improvement upon the Monier system? Yes.

1694. *Mr. Gummow.*] Will you look at the plan of Contract No. 77;—is there no expansion and contraction joint shown upon it? None are shown as far as I can see.

1695. Supposing the arch to be built, and the centering to be removed, is it possible to calculate whether the pier would be sufficiently strong as an abutment to resist the thrust? It is difficult to calculate; I think it was specified that not less than five or six centerings should be used at a time.

1696. Why? So that when one set of arches was completed the centering might be taken out and put in others.

1697. Do the centerings act in such a way as to take away the danger of thrust in the case of any particular arch? Decidedly, if the centerings were put in carefully they would do so.

1698. You have been down to the contract at Annandale? I have been there once or twice; I was there on other business.

1699. As a matter of fact, did you not go over and have a look at it with young Mr. Hickson? I was there with young Mr. Hickson; I looked at the work from down below.

1700. Did you notice at the time whether the arches had centerings in them? I did not take much notice.

1701. *His Honor.*] Are you certain whether any of the arches which you saw was standing without its centering in it? I could not say; I did not go there for the purpose of inspecting the work.

1702. *Mr. Gummow.*] Did you not, in the course of your evidence to-day, say that the arches would tumble down if they had not the ironwork in them? I should think so; the Monier arches would tumble down.

1703. Then what is the meaning of this paragraph in your report: "In order to meet this difficulty, the radius of the 75-ft. span arch of scheme No. 3 had to be so selected that the centre line of forces should always keep within the middle third of the arch ring";—would that arch tumble down if that were done? Yes, it might.

1704. If the centre line of forces were kept within the middle third of the arch ring? The centre line of resistance in the Monier arch did not, in this case, keep within the thickness of the arch, so we had to draw it thicker.

1705. Do you know whether the centre line of resistance will keep within the middle third of the arch ring? We tried to make a calculation, but the key was not given us, and we could not arrive at any conclusion which would warrant us in saying that it was absolutely correct.

1706. Then what do you mean by the paragraph of your report which I have just read? Well, I was just saying that we tried to make a calculation and could not do so.

1707. *His Honor.*] The paragraph which Mr. Gummow has read has reference to your own scheme, I take it, which is said to be an improvement upon the Monier system? Yes.

1708. *Mr. Gummow.*] Were you able, in making these improvements, to calculate that the centre line of resistance would keep within the middle third of the arch ring;—you could not calculate that in reference to an arch of this kind designed by someone else, could you? We tried to do so, but we found that the key of the calculation was not given. Mr. Baltzer said he could easily calculate it. We got at a result in a roundabout way, but we could not guarantee it.

1709. *His Honor.*] Is the plan of the third scheme before you the drawing which you sent into Mr. Hickson with your report? This is apparently a tracing of the plan drawn by Mr. Baltzer; I could not accept any responsibility in connection with it.

1710. The tracing before us would be made from Mr. Baltzer's design? I presume so.

1711. The original plan would contain the same writing on the top of it? I should think so.

1712. This plan is not the original which you sent to Mr. Hickson with your report concerning the three different schemes? I cannot say.

1713. *Mr. Gummow.*] In face of your statement to-day that if the iron were not in the arch it would tumble down, you will see from the plan that the arch is made thicker, and you so calculated your radius that the centre line of force was to be kept within the middle third of the arch ring. Under those conditions

C. H.  
Ohlfsen-  
Bagge.  
5 June, 1896.

conditions is it likely that the arch would break down? That is the question. Of course the arch has been made thicker as you say, but we cannot guarantee the calculation.

1714. *His Honor.*] In making these calculations did you take into consideration the effect of the iron generally, or did you take that out of the calculation? We had to leave that out of the calculation. We had not the formula to connect the two things together.

1715. When you had your co-efficient of stability, you calculated it upon the assumption that the arch was built of compo only? Yes.

1716. The iron came in as an extra? Yes.

1717. *Mr. Gummow.*] In your third design, then, you calculated that the arch would stand if built without iron? We had orders to save money as much as possible. The thing was done according to instructions. As I have told you we were not sure of our calculations being right. We had to get at the result in a roundabout way as nearly as we could.

1718. You say you calculated this particular curve and thickness so that the centre line of forces would always keep within the middle third of the arch ring;—what I want to know is would the arch stand if the line of forces were kept within the middle third? Yes, it would stand provided it is thick enough.

1719. You calculated your third scheme in accordance with that? Yes.

1720. If this particular work were designed in the same way would it stand? I should think so if it were carried out as required.

1721. It would stand without the iron? It would stand, according to our calculations.

1722. I thought you said that without the iron the thing would fall down? What I have been endeavouring to point out is that there is a great risk attaching to this style of structure unless carried out by specialists.

1723. *His Honor.*] Does it not come to this—that if it were not for Monier accidentally discovering that the introduction of iron network or bars into a concrete or cement structure made it enormously stronger you would not have thought of building a structure of this kind at all. Although your calculations show a factor of safety of 5.618, still you would not have trusted to that. Does it not come to this—that you, as an engineer, do not yet know enough of the system to be able to calculate how much the structure is strengthened by the introduction of the iron grill? That is just what it comes to.

1724. *Mr. Gummow.*] Is it not possible for a calculation to be made in such a way as to afford a guarantee that the arch will not fall down? We did make a calculation as far as we could, and you have the result.

1725. Is compo. weaker than concrete? It depends altogether upon what mixture you take.

1726. *His Honor.*] From the point of view of toughness, not upon the crushing resistance only, but taking the breaking strain? The concrete is more solid.

1727. You say that concrete is a more solid mass than compo.? Yes.

1728. *Mr. Gummow.*] Are your calculations in respect of scheme No. 3 taken out in compo. or concrete? They must have been taken out from these plans. The Monier arch is of compo.

1729. Then you are satisfied now that the arch would not fall down if there were no iron in it? According to our calculations it would not; but I am not certain that it would stand.

1730. What is the size and number of the piers in this scheme as compared with the original scheme No. 77? They are in the proportion of fifteen to twenty, I think.

1731. What is the size of the piers? In the substituted Monier scheme they are 7 ft. 10 in. by 13, as compared with 4 ft. 3 in. by 6 feet in the original plan.

1732. You say that you require to use good cement? Yes.

1733. Did you have tests made of the cement when you were in the Department? Yes.

1734. You tested every shipment or parcel which came in? Yes.

1735. Would not that test show you whether the cement was good or not? That is very questionable, because we have found in one shipment different cements. Then, again, one shipment would not be the same as another. There is great difficulty in getting good cement.

1736. How do they manage to get an equal cement on the continent if you cannot get it here;—why cannot you test your cement here in such a way as to insure an equal quality? They do not send the best cement here. On the continent the whole of the cement manufactured has to go through the State's testing machine. You specify there for State cement. The cement would be sent from Berlin, for instance, in sealed waggons and casks, and one cask is just the same as another.

1737. Do they test every cask? The whole of the cement is tested.

1738. Does not the Sewerage Department test the cement, taking a test out of every fifty casks;—do they not go into elaborate tests to prove the consistency of the results of the tests—for instance, if you take out a test here and there out of every fifty casks in a shed, and if the tests go to show that the cement in itself is good and that it is consistent, what more do you require; is not that satisfactory? I do not think so. In the case of some works we have tested the cement and in some shipments we have found two different kinds of cement with exactly the same label. I am not now speaking of your firm. I am speaking generally of the trouble which we have had in connection with cement. By some extraordinary manipulation two different kinds of cement have been mixed together under one brand. That illustrates the great risk that you run in adopting these modern structures which depend upon an equal quality in the cement. Upon the continent you have a different condition of affairs because the State guarantees the cement, but here you have to deal with cement which you obtain from the market, and the dealers will do you if they can.

1739. But if the cement is put into bond and the Government tests it as they do here, and we get it out of bond, is not the cement practically as much guaranteed by the State as it is on the continent? Certainly not. I would not trust the tests here for more than the casks actually tested.

1740. But is it not practically a State test which is made here? I would not guarantee one cask apart from another.

1741. Do you know how an iron and cement structure would expand or contract? The materials counteract each other; the combination has been very highly spoken of on the continent.

1742. In this particular instance the iron network has simply been adopted as an additional security? I told you that we had not the key in making our calculations, and that is why we made the arch so thick, that it would hold itself without the iron. Theoretically it is so, but I am not sure of the result.

1743. You calculated the arch without the iron? Yes.

1744. You say in your report the wrought-iron network was mainly to be laid in as additional security? Yes.

1745.

C. H.  
Ohlfsen-  
Bagge.

5 June, 1896.

1745. You have nothing against our firm? No.
1746. Have you not often said that you would not like to see the Monier system used by any contractors, but that if it were to be tried by any firm you would be quite satisfied we should give it a trial? I believe honestly that if any firm here would give it a fair trial it would be your firm. I would entrust your firm with this experiment before any other.
1747. So satisfied are you with our work? Yes.
1748. You said that Mr. Hickson told you to be more modern in your ideas? Yes.
1749. But he gave you no clue whatever as to the formula to be adopted in this case? No; all that we had to go by was the description in pamphlets.
1750. Are there such things as formulas in connection with the Monier system? Yes.
1751. Do you know of any persons in the Colony who have them? No.
1752. When you were asked to be more modern in your ideas, you were not, as a matter of fact, in touch with modern formulas? We used to get the latest information from Home every year.
1753. Is it likely that the patentees would let you know all their formulas, and give them to you? Certainly not.
1754. Do you think they would give or sell them to anyone? I doubt it.
1755. Are you satisfied that no oxidation sets in when iron is bedded in cement? The iron may oxidise, but, as I have pointed out to you, the secret of the system consists in the cohesion existing between the cement and the iron.
1756. *His Honor.*] As to the question of oxidation, you cannot possibly say whether, in course of time, by very slow action, the whole of the bars of iron might not get oxidised right through? From what I have read of the criticisms of the German Institution of Civil Engineers that would not be likely to take place. The secret of the system lies in the extraordinary cohesion between the iron and the cement. The German Government do not adopt this system. They simply say to the patentees, "If you are going to carry out this patent in such and such a work you must put down 75 per cent. of the value in cash securities. After the work has stood one year 50 per cent. of the contract money will be paid you. After it has stood for the second year another 25 per cent. will be paid you. After it has stood for the third year you will get the balance with your security." You will see from that that the State thinks there is some risk in the system.
1757. Once the iron is oxidised through of course its effect upon the structure is lost? Yes.
1758. With regard to expansion and contraction experience I believe shows that the expansion of the iron with an increase of temperature does not crack the cement? It does not. The chief danger I saw in this instance was this—that I had seen the system applied only to bridges, not to an aqueduct above it.
1759. Is not the presence of running water in relation to the changes of temperature one of the best elements there could possibly be;—is it not likely really to keep the temperature from changing very much;—would not the changes be likely to be less than if the running water were not there? True; but you must not forget that the sewers do not always run full. They will be running during the daytime at different heights of flow. At certain times you will see a small rivulet at the bottom. At other times you will see a foot or two, and at other times they will be brim full. Between these times the structure is exposed to the varying temperature of our climate, and the constant changes in the depth of the water are a severe test to the channel.
1760. But that is not so bad as in Central Europe so far as maximum and minimum changes are concerned? At all events the Governments of Central Europe will not accept it as a system for general structure, and I am afraid that if it is adopted here generally we shall one day have to pay the piper.
1761. *Mr. Gummow.*] What do you mean by its adoption in general structure? I mean that the Governments do not generally adopt the system in constructing public works.
1762. Do they not use it generally in bridge work? No; the Continental States will not do so.
1763. But do not the States there allow it to be used? No; except under the conditions I have named.
1764. Do they not allow it to be used for road bridges, railway bridges, and overhead bridges? Only under the conditions I have stated.
1765. But it has been allowed to be used? In certain places, but not generally.
1766. *Mr. Parkes.*] When you came into this room this morning you said you had been accused of putting away the Department? I do not wish to mention any names, but I heard so. I was highly astonished.
1767. Did you ever speak to me before to-day? I think some fifteen years ago.

MONDAY, 8 JUNE, 1896.

Robert Rowan Purden Hickson recalled and further examined:—

1768. *His Honor.*] I want you to explain exactly under what circumstances, when, and for what reason the change was made in the system of calling for tenders—you understand the change I mean? Yes. The contractors had been in the habit of what is called rigging their tenders—that is to say, they made an estimate of what they thought there would be an increase upon, and *vice versa*, and arranged their prices accordingly. That is the system which formerly was adopted, and which is still adopted in this Colony, with the exception of works in the Harbours and Rivers Branch and the Sewerage Construction Branch. I saw that this would lead to difficulties in ascertaining the actual cost of the work, and I altered the system to one under which the Department fixes the prices, and allows the contractors to tender at the rates named, or at a percentage above or below them.
1769. Do you remember the date of that change? I could not say, speaking from memory, the date of the first contract let under the altered system.
1770. Was this change made by the Minister upon your suggestion, or what was done;—how was the new departure evidenced? I made the change myself.
1771. Was there anything in the form of a new rule which appears in writing anywhere in the Department? There was nothing in writing. I made the change myself upon the first contract after I had decided that a change would be advisable. I could not tell you the exact date, speaking from memory.
1772. Did you make the change after consultation with the Minister, or was it your own idea entirely? I made the change after consultation with the supervising engineer, not the Minister.
1773. It was not necessary you thought to consult the Minister? No.

R. R. P.  
Hickson.

8 June, 1896.

1774.

- R. R. P. Hickson.  
8 June, 1896.
1774. Had you in your mind at the time you made the change any special instances of obviously absurd prices which had appeared in tenders which had been sent in? Yes; I had a good many prices in my mind at the time.
1775. Were there any more absurd on the face of them than a penny per yard in the case of the subducts, or £50 for a square yard of bluestone pitching—I mean the prices given in respect of Contract 69? A penny per yard was not an absurd price for the subducts.
1776. Certain subducts were to be built according to the specification of the office, and they were tendered for at 1d. per yard; would not that be an absurd price? That is not the whole price of the subducts. There is a charge under other items, irrespective of the 1d. per yard.
1777. Will you explain them? The subducts would also have to be paid for under the heading of excavations at 27s. 6d. per yard.
1778. What other items would come in in connection with the payment of these subducts? There would be hand-packing, but that is a small item. Practically, excavations would be the only other item.
1779. Then what does the price tendered for subducts actually cover? The pipes.
1780. And the packing round the pipes? No; the packing round the pipes would be charged for under the heading of hand-packing.
1781. Then the 1d. per yard would be for the pipes only? Yes.
1782. But the pipes would be worth a great deal more than 1d. per yard, would they not? Yes; but the whole price of the subducts would come to about 12s. 2d., instead of 1d. per lineal yard for a 6-inch pipe, and that is a fair price.
1783. That would be for the whole thing? Yes.
1784. Including the excavations? Yes.
1785. The contractor, if he tenders at 1d. per yard, is paid for the excavation, is he? Yes.
1786. In addition to whatever price he may tender at for the subducts? Yes.
1787. What would be a fair price to allow for the value of the pipes? I suppose 6d. per foot would be about the value of them.
1788. I notice that in this case the other contractors tendered at a very great advance—I forget now what it amounts to? Yes; but their price for excavations is low, so that the ultimate price for the subducts does not vary so very much.
1789. With regard to the other price I mentioned, £50 a square yard for bluestone pitching, that is ridiculous? It is absurd.
1790. Was that one of the items you had in your mind when you altered the system of tendering? Yes.
1791. It was not so much the subducts then which struck you as being an absurd item as the other item I have mentioned? Yes, so far as this particular contract is concerned. But, of course, there were other contracts where the same thing would come in to a greater or less degree. There was the adjoining contract of Carson. Timber piles were put down at 5s. The value of them would be about 3s. It turned out that a great quantity of them were required, so there was a big profit on that item. Then there were other items which were absurdly low. For instance, in the contract we are now dealing with the timbering was also put down at 1d. per cubic foot. I presume the contractor thought that probably there would be very little of it.
1792. What would be a fair thing per cubic foot? About 2s. 6d.
1793. I understand that the system proved to be very unsatisfactory going right through the various contracts? Yes.
1794. And for that reason—that it left an opportunity for pointing—you considered it advisable to change it? Yes. I may mention that in the case to which I alluded just now the contractors made a very bad hit. In the case of the timbering put down at 1d., the estimated quantity was 9 cubic feet, and I see by the final voucher that the contractors were paid for 9,918 feet.
1795. So that they made a considerable loss upon that item? Yes. I suppose they lost about £900.
1796. You concluded, therefore, that the fairest plan would be to take off an estimate of each item, and to let the contractors tender at, above, or below it at a fixed ratio? Yes. I think that is the proper way to do the work, though of course none of the contractors liked the change.
1797. It was a new idea so far as your experience goes;—it had not been adopted in the other Colonies? I do not know of any place where it had been adopted before. As a matter of fact, I know that it is not adopted in the Railway Department in this Colony.

Justin McSweeney sworn and examined:—

- J. McSweeney.  
8 June, 1896.
1798. What is your occupation? I am a contractor.
1799. You have carried out various contracts for the Department of Public Works? Yes.
1800. You carried out a contract at what is called the sewage farm—I mean Contract No. 112—did you not? I am doing it now.
1801. What is the contract price for that work? It is at schedule prices. I think it runs somewhere between £17,000 and £20,000.
1802. When tenders were called for that work, did Messrs. Carter, Gummow, & Co. tender? It is very likely they did, but I am not sure. I think Carson was the next tenderer to myself.
1803. Did Messrs. Carter, Gummow, & Co. not put in a tender on the Monier system? They may have done so. I do not know any of the particulars of that system.
1804. After you had signed your contract, was any approach made to you by the officers of the Department with the idea of your substituting the Monier system for the original plans? No communication was made to me by the Department, but previous to the acceptance of the contract I received a letter in relation to the Monier system. It was not, however, from the Department.
1805. From whom was it? Messrs. Carter, Gummow, & Co.
1806. *His Honor.*] Have you that letter;—what have you done with it? I probably gave it to one of my clerks.
1807. *Mr. Parkes.*] Will you have it sent to His Honor if you still have it? Yes; Mr. Strong, who is in my office, will have it if anyone has it, and he could produce it at once.
1808. On about what date did you receive the letter? I cannot say; but I received it before signing the contract.

1809. What was the purport of the letter? They said they would expect me to pay them a royalty of 15 per cent. for the use of some of the Monier plates which were specified in the contract. There were some Monier plates specified as part of the contract just at the discharge. There were some small arches there, and that is where the Monier plates were to be used. J. McSweeney. 8 June, 1896.

1810. Did you communicate with the office? The first thing I did was to answer Messrs. Carter, Gummow, & Co.'s letter. I said I had taken the contract from the Government plans, and that I intended to carry out those plans. I also said I did not look upon their claim as tenable, and that if they wanted to enforce it they would have to go to the Supreme Court, or something to that effect. I am not quite sure of the words I used.

1811. Did you appeal to the officers of the Department? I saw Mr. Hickson, and told him I had received this letter, and that I would not pay the amount. I said I should resist it, and he said, "If there is going to be any trouble about it I will strike the bars out." There were to be only a few Monier arches. They would be of no benefit to the work, and I could not see why I should be called upon to pay a royalty of 15 per cent.

1812. What would have been the total amount you would have had to pay? If the 15 per cent. applied to the whole contract I should have had to pay that percentage on about £17,000.

1813. Did they make their demand in respect of the whole contract? The impression upon my mind is that their claim applied to the whole contract, but I am not sure upon that point.

1814. Did Mr. Hickson make any effort to persuade you to use the Monier system? No.

1815. Then you did not use the Monier plates? Shortly afterwards the work passed into the hands of Mr. Darley, and he revised the whole of the plans. He made general alterations in them which benefited the work. I also called his attention to the matter of the Monier plates, and I told him that if there was going to be any claim against me it would have to end in a lawsuit. He subsequently struck them all out, and substituted ordinary brick arches.

1816. You were certainly under the impression that the Monier plates were put in with the object of Carter, Gummow, & Co., obtaining a 15 per cent. royalty from you? When I tendered for the contract I took very little notice of the plates. It was only when I received their letter that my attention was directed specifically to the matter.

1817. Was their letter received by you before you signed the contract? Yes.

1818. Were the Monier plates taken out by Mr. Hickson before you signed it? As I have already explained to you when I received Carter, Gummow, & Co.'s letter I said I would carry out the plans of the Department, and that I would take all the consequences. I told them that if they claimed anything they would have to go to court for it.

1819. But it was not until the work came under Mr. Darley that the Monier plates were struck out? That is so.

1820. You complained to Mr. Darley before they were struck out? Yes. I said that if Messrs. Carter, Gummow, & Co. enforced their claim it would end in a law suit.

1821. If you had had an opportunity to carry out the Monier system in connection with the Annandale contract, No. 77, would you not have done so? I never saw plans of the Monier system. I do not know what it is.

1822. Supposing the quantities under the Monier system were reduced considerably below the quantities in the original plan, would you have wanted any more as your payment for the job than the prices under your 25½ per cent. reduction—I mean the prices at which you originally undertook to construct the work? Provided the concrete were mixed in the same proportions, the price would be the same.

1823. As a practical man, would you not sooner construct a work of three to 1 composition than of special bluestone concrete? I should have to go into that matter carefully before I gave you an answer.

1824. Supposing crushed sandstone is used, is it not then pulverised so that the grain is lost? Crushed sandstone is a good sand. If you get hard sandstone and crush it it makes very good sand for concrete.

1825. But may not certain kinds of sandstone give too great a quantity of loam in the mixture? Not if you get good hard sandstone.

1826. What about top block sandstone? Of course, some of it would go to powder.

1827. Cement put in loamy sand will make bulk, will it not? Loamy sand, of course, would not be nearly so good as coarse gritty sand.

1828. But in the case of sand which has a good sharp grit the cement loses itself in the interstices between the grain, does it not? They bind better if there is a good coarse grain.

1829. And if there is loam the cement does make bulk? I would not say that; but if it were loamy sand it would, of course, be inferior. It would not be so good as gritty sand.

1830. The only portions of Contract No. 77 which could come under the Monier system would be the arches of the aqueduct and the aqueduct superstructure; would they not? I have never seen plans of the Monier system.

1831. *His Honor.*] Do you know the principle of the Monier system at all? I have heard incidentally that it is the binding of iron with cement, but I have never seen plans or specifications.

1832. *Mr. Parkes.*] Supposing the work under the Monier system comprised one-third of the whole job, and that you had received a contract at a special price, would you expect to be paid 25½ per cent. in addition to what you had undertaken on your contract? You mean that a reduction in value ought to apply also to the portion containing the Monier system. Roughly speaking, I should say so, but I should not like to express a definite opinion without seeing the plans.

1833. You feel satisfied in your own mind that you could have carried out the contract from the original plans on No. 77 at 25½ per cent. below the prices estimated by the Department? Yes; I am quite satisfied on that point.

1834. *Mr. Hickson.*] As to the crushed sandstone, you know, as a practical man, that that is the best sand that is used? Yes; I consider that it is equal to any sand.

1835. As to the contract you are carrying out now, No. 112, do you remember having a conversation with me, in the course of which you told me that Messrs. Carter, Gummow, & Co. had made a claim upon you? Yes.

1836. Do you remember what I told you? You said that if there were any bother you would strike the bars out.

1837. Did they found their claim upon the whole contract price? I could not say at this moment, but that is certainly the impression in my mind.

- J  
McSweeney.  
8 June, 1896.
1838. Did I not tell you that they could make no claim whatever in respect of any part of the contract except that in which the Monier plates were used? You might have said that.
1839. You do not remember my telling you that in the porch of the new building when we had come down in the lift together? When I said I would resist the claim I remember your saying that you did not think the claim was tenable.
1840. Were you to supply the Monier plates? No; they were to be supplied by the Department.
1841. So that if anyone had had to pay anything upon them it would not have been you, but the Department? The letter I received distinctly asked me to pay the royalty, and I should not have taken any notice of the matter except for that.
1842. So far as the Department is concerned your contract was not to make the Monier plates? No.
1843. Did I not tell you at the time of the conversation to which you have referred that if there were any trouble over the patent I would take the plates out of the contract? Yes.
1844. You distinctly remember my saying that? Yes.
1845. I understood you to say that Mr. Darley made the change? Yes.
1846. Because, I presume, the works had been handed over to him; he would naturally be the officer who would make the change? Yes.
1847. With regard to the material which is to be used in connection with the Monier patent, you know that it is not concrete but compo.? I have never seen the plans at all. I know nothing about them.
1848. As a matter of fact it consists of 3 to 1 compo., with iron bars 4 inches apart—a network of bars; had you any price in your schedule which would cover work of that description? None whatever.
1849. *Mr. Gummou.*] If you tendered at a lump sum for contracts, would you afterwards expect that the Department would supply you with a schedule with 25½ per cent. off—in other words, does it make any difference what schedule you get in the meantime for the making of progress payments? If I tendered a lump sum for a contract I should take it that that would cover the whole thing.
1850. But would you not require some schedule on which to make your monthly payments? Yes; a schedule would be required as the basis of payment.
1851. With regard to sand, I think you said that sand made from hard sandstone would be very good;—what sort of sand would soft stone make? It would be very likely to make bad sand.
1852. In what way? It would be very likely to crush too fine. You would not have the same grain to bind with the cement which you would have in the case of a coarse, gritty sand.
1853. Have you never seen soft sandstone which would make splendid sand? I am merely giving you a general opinion. I should certainly say that soft sandstone would not make as good sand as would hard stone. I have used a good deal of sand from crushed sandstone myself, but I have never seen any inferior stone ground up.
1854. Is it not a fact that sand from soft stone may be just as coarse as is sand from hard stone? No; I think not.
1855. Why could it not be? The sand in the soft stone would be more likely to go to powder. You would not get as good a grit in it as you would in the case of sand from hard stone.
1856. Take a hill of soft sandstone not going through the crusher, do you mean to say that you could not get good coarse sand out of such stone? As I said before, I am merely expressing a general opinion.
1857. But supposing that sand passes the Government test? Then it would be all right.
1858. *His Honor.*] You never have experimented upon soft and hard sandstone for the purpose of testing the relative sharpness of the sand which comes from them? No.
1859. Hard sandstone would require to be put under a heavier crusher than would soft sandstone in order to break it up? Any sandstone will crush very readily in a machine.
1860. Can you adjust the machine to the hardness of the stone you are putting through? You want to go more slowly when crushing soft stone than with hard stone. For instance, I have put blue metal into the machine, and you can go as hard with it as you can get the engine to go.
1861. What you intend to do is to separate the original grains if you can? Yes; we want to leave the sand as coarse as we can—gritty, lumpy sand.
1862. As to the compo. and concrete—the relative cost of the two for a given block;—what do you say as to that? I could not express an opinion without going into the matter very carefully; I could not possibly express an off-hand opinion.
1863. You have not gone into it, as you are not in the habit of using compo.? I have never used compo. at all, except for rendering—that is, for finishing concrete work, when we sometimes put a five-eighths skin of cement on.
1864. That would be a very hard and fine compo.? Yes; it would make the inside of the sewer smooth, and would permit of the water running freely.
1865. You charge for that by the superficial yard? Yes.
1866. So that you have not gone into the question of how much a cubic yard would be worth? No.

Cecil West Darley recalled and further examined:—

- C. W. Darley.  
8 June, 1893.
1867. *Mr. Parkes.*] In connection with Contract 69 I would like to ask you a few questions? Upon reading my evidence I find that I misunderstood you the other day. I assumed that your question 746, and a few of the succeeding questions, had reference to Contract 79, and I answered them accordingly. I see from the evidence that your question referred to Contract 69.
1868. Upon what date was the Sewerage Construction transferred from Mr. Hickson? It was transferred from Mr. Hickson in March, I think.
1869. You took it over in March? Personally, I did not. Mr. Smail took it over upon my behalf. I was absent for some time; and on my return to the Colony I commenced my duties in this connection. That would be about the end of May.
1870. Was Mr. Davis not in charge as Supervising Engineer at that time? He was in charge previous to the transference from Mr. Hickson to myself.
1871. Is he not Supervising Engineer under you now? No; he is now with Mr. Smail.
1872. And is not Mr. Smail under you? No.
1873. In June, 1895, was not Mr. Davis under you? No; Mr. Davis was never under me.
1874. He was under Mr. Smail was he not? No; when the sewerage passed from Mr. Hickson it passed

passed from Mr. Davis too. Mr. Smail took up the work, and his own engineer acted as supervising C. W. Darley. engineer. That would be Mr. Griffiths.

1875. But Mr. Davis continued to have charge of the sewerage after the transfer, did he not? He helped <sup>8 June, 1896.</sup> Mr. Smail with his advice.

1876. But he was still acting as supervising engineer, was he not? He is now, but he was not at the time you are speaking of. I never had Mr. Davis under me in connection with sewerage.

1877. Do you mean to tell me that Mr. Davis is not actually supervising the sewerage works? He has gone back to it. Perhaps the better way to put it would be that he is again supervising engineer for sewerage. For nearly a year he was not doing so.

1878. *His Honor.*] There were a number of retrenchment changes made, and then followed the big retrenchment, under which everything was altered again? Yes.

1879. *Mr. Parkes.*] As a matter of fact, when you took over Contract 69 were not all the excavations and the packing and lining of the drives completed? I do not know. I do not think it was all completed. I did not examine it for some time after I took it over.

1880. Were not the final vouchers paid on the 23rd October, 1895? I cannot recollect. I am not certain whether the final vouchers have been adjusted even yet.

1881. Are not the words "final voucher" contained upon the document I now hand you? I think that is a mistake. It should read "Final progress voucher," not "final voucher." (*Vide Appendix No. 14.*)

1882. Can you tell me what work was being done upon the contract when you took it over? The Marrickville road trenches were all open. On my first visit they were working underground.

1883. As a matter of fact, do you not allow three months for maintenance before you pay the final voucher? Yes.

1884. The document gives the sum of £54,320 7s. 7d., which is an increase on the original contract of £10,000;—is not that the final voucher? I cannot say without refreshing my memory.

1885. Why should it be marked "final voucher"? I noticed the mistake in the printed return. I knew that it was only lately that I made up the contract. It was one of the last things I did before I gave up. I remember asking one of my officers whether a mistake had not been made, and he said that the voucher should have been a final progress voucher, but not the final voucher of the contract. That voucher, I think, has not been adjusted yet, or if it has been it can only have been done very recently.

1886. Coming to Contract 77, you were a member of the Board of Reference when Mr. Hickson produced before the Board the original office plans of the contract and proposed to substitute a plan upon the Monier system? Yes. (*Vide Appendix C.*)

1887. When that contract was produced before the Board of Reference, did you go into the question of the comparative cost of the substituted and the original office plans? I did not.

1888. You took Mr. Hickson's recommendation as sufficient to guide you? Yes; I had no time to go into the matter then.

1889. Afterwards, when you came to look into the quantities, you found that they were greatly reduced as compared with the original contract? Some of the quantities were reduced.

1890. Is it not a fact that the principal thing comprised in the Monier patent is the iron work—the lattice work? Iron is introduced.

1891. What proportion of the contract do the items bear, speaking roughly,—I mean the items which are properly chargeable to the system. For instance, take the item No. 21—special bluestone concrete—that belongs to the Monier system? Yes. (*Vide Appendix No. 11.*)

1892. Then there is No. 24—special cement facing, 1 to 1—that also belongs to the system? Yes.

1893. Then there is No. 22—brickwork in cement in facings, arches, circular-panels, pilasters, corbels, piers, spandrels, parapets—that has been reduced from 2,020 to 150 cubic yards;—that item would come within the Monier system, would it not? Yes.

1894. Then there would be item No. 23—cement facing, 1 to 2, in any situation where ordered—that has been altered from 2,960 square yards to 12,000, that is also in the Monier system? Yes.

1895. Then there is the item, "cast-iron plates, 12 tons, at £11 3s., or a total of £133 16s., that also comes in in the Monier system? Yes.

1896. Then there are tie-bars, channel-iron, 22 tons, at £15, or a total of £330—that is also part of the system? Yes.

1897. Then there are  $\frac{3}{4}$  and  $\frac{1}{2}$  in. iron rods, bedded in cement mortar, 44 tons, at £10, or a total of £440—that also comes into the Monier system? Yes.

1898. And these items comprise the whole of the contents of the Monier arches? Yes.

1899. There is a very great reduction upon the original plans so far as quantities are concerned, is there not? It is a completely new design.

1900. But is there not a very great reduction comparing the quantities with the original office quantities? There is a reduction.

1901. A very great reduction? It is a different class of work.

1902. For instance, the item of 2,020 cubic yards for brickwork, of a special kind, has been reduced to 150 cubic yards—that in itself is a big reduction, is it not? Yes.

1903. Then the item of special cement facings, which has been altogether omitted, constitutes another important difference, does it not? I think there is a mistake there. I am under the impression that my supervising engineer when he ran out these quantities thought that all the cement work was to be 2 to 1, whereas a portion of it should have been 1 to 1.

1904. As a matter of fact you are paying the contractors upon this schedule, are you not? Yes, so far as I am aware, but none of that work is done yet. Moreover, the schedule can be altered at the engineer's discretion.

1905. The schedule makes up the exact sum of the contract, does it not? It is a lump sum contract, and in order that there might be some guide for the payments, I instructed the supervising engineer to prepare a list of prices which would cover the lump sum.

1906. Do not all the items in the schedule from No. 1 to 20 belong to the original plan, having nothing to do with the Monier system? Practically, that is so.

1907. And the items from 32 to 42 also have nothing to do with the Monier system? That is so.

1908. If you will take my addition as correct you will find that by adding these items you get a sum of £9,200 of work not affected by the Monier system? I think it might come to about that.

1909.

- C. W. Darley. 1909. Did not Messrs. Carter, Gummow, and Co. undertake to do the work at  $28\frac{1}{2}$  per cent. below your office valuations? On the original plan, yes.
- 8 June, 1896. 1910. Why should the officers of the Department not adhere to that undertaking on the part of the contractors? Because the tender at  $28\frac{1}{2}$  per cent was not finally accepted.
1911. You had twelve contractors, all tendering at percentages below the office value—is not that so? Yes.
1912. Carter, Gummow, and Co.'s tender at  $28\frac{1}{2}$  per cent. was the furthest below? Yes.
1913. Do you not think it is pretty rough upon the taxpayers of this country that they should be asked to pay  $28\frac{1}{2}$  per cent. over and above the amount which the contractors required to do this work? That is not the case. A contract for a lump sum was accepted in lieu of the contract at  $28\frac{1}{2}$  per cent., and the difference between the two contracts represented a saving of something like £250—in favor of the contract at the lump sum.
1914. When you called for tenders certain sums were put down as the office valuations of the work? Yes.
1915. Are you not paying the contractors upon those office values? There are certain portions of the work on the Monier system concerning which there were no office estimates.
1916. But I mean leaving the Monier system out altogether? It is a lump sum contract; you cannot do that.
1917. But there is a certain amount of underground work in the contracts which has nothing to do with the Monier system? Yes.
1918. There is a certain amount of open cutting and other work which has nothing to do with the Monier system? Yes.
1919. And the contractors undertook to do that work at  $28\frac{1}{2}$  per cent. below office values? Yes; the contract price was £15,757.
1920. Therefore, £9,200 worth of work is being paid for at  $28\frac{1}{2}$  per cent. above what the contractors undertook to do it for? That is not a fair way of putting it. You must make allowance for the Monier arches.
1921. Leaving those out of the matter altogether, treating them as a separate thing, and as having nothing to do with this work, are the contractors not being paid upon the original office values;—here is your schedule for payment, and you will find that the figures tally? I might mention that these figures are no part of the contract; they do not appear in the contract. They are merely put into this schedule as guide for progress payments—to prevent any over-payments. They are quite arbitrary figures, and I can vary them as I like.
1922. These, however, are the rates at which the contractors are being paid? Yes.
- 1922½. *His Honor.*] Paying the contractors these rates while the contract is in progress, will you ever end by paying the contractors more than £15,500? No; we stop at £15,500. So far as the Monier arch portion is concerned, the contractors have to take the whole responsibility of putting them up; and, as a matter of fact, I ordered them to put in extra strength, which I thought was required. They will have to complete the work in a satisfactory manner.
1923. *Mr. Parkes.*] The point I wish to emphasise is this: Is not the country a loser on the prices you are paying to the extent of  $28\frac{1}{2}$  per cent.? Not by a penny.
1924. How is that? Because the contract is based on a lump sum, arrived at by taking  $28\frac{1}{2}$  per cent. off these prices.
1925. If that is so, why do you not pay for the whole of this work at a reduction of  $28\frac{1}{2}$  per cent. upon the original estimate of the Department? Because the introduction of the Monier system so completely altered the design. There would be nothing to pay for the centerings under the arches, which is a very heavy item.
1926. What would be the total cost of the centerings? I cannot say at this moment, but the erection and taking down of the centerings would be a large item.
1927. Do not your specifications make it necessary to put centerings in these arches? But the prices of the material will not pay for them. They have to be distributed over the whole contract.
1928. Are not centerings provided for under the contract? They have to be paid for, and in order to do that it is necessary to distribute them through the prices.
1929. Have not the contractors to provide centerings in order to carry out the work at all? That is so; but they must get paid for them in the prices of material.
1930. Would they not be one of their plant risks? They must be paid for from the prices of material.
1931. I suppose arches were contained in the original contract? As I have said, it is necessary to put in a price that will pay for the centerings. You cannot make the contractors pay for them out of their own pocket.
1932. *His Honor.*] Are the centerings used in connection with the Monier arches more numerous and more expensive than would be the case in the arches originally proposed by the Department? That is so. In the case of the Monier arches, the centerings can be used only about four times.
1933. *Mr. Parkes.*] As a matter of fact, are there not six more arches in your original plan than in the case of the Monier plan? But there are smaller centerings, and these could be moved on and used a number of times. The price is contained in a large quantity of brickwork which is omitted.
1934. Has not compo. been substituted for the brickwork? Yes; but in a much smaller quantity. Of course, if we were getting out fresh prices for the whole thing, the price of the centerings could be put in.
1935. If this contract had been completed upon the quantities shown upon your own estimate, and upon which, according to the vouchers, you are paying the contractors, would not the country have been entitled to receive a reduction of  $28\frac{1}{2}$  per cent. from Carter, Gummow, and Co., on these items? No.
1936. Why not? Because it is already taken off.
1937. Where is it taken off? In the £15,757.
1938. You have certain quantities which make up the exact sum of £15,500, have you not? Yes.
1939. These quantities are being paid at the original office rates? In this case they are merely arbitrary or tentative rates.
1940. Although after the tenders were in you had an opportunity of getting this work done at a price  $28\frac{1}{2}$  per cent. cheaper than the rate at which you are paying for it, you decided that the country should pay a sum of something like £5,700 in order that this special patent arch might be given to the country? That

That is not the case at all. The original contract at these prices would have come to a certain amount, 28½ per cent being struck off, it was brought down to £15,757. The contractors offered to carry out the whole work at £15,500, so that the country benefits to the extent of £257.

C. W. Darley,  
8 June, 1896.

1941. Does this patent affect any other portion than the arches and the aqueduct above it? No; those are the portions affected.

1942. Therefore, in order to test this patent, the country has to pay at the rate of 28½ per cent. on all the other work which is not comprised within the patent? I have already said that that is not a fair way of putting it.

1943. *His Honor.*] Take any contract tendered for under the new system, the contractor tenders at schedule rates, that is, at a percentage running right through the prices. When you are making progress payments do you make them in practice on the original schedule prices, or do you make them on the new schedule prices arrived at by reducing the original schedule prices by the percentage of reduction on the whole contract? We pay on the original prices, and deduct 28½ per cent.

1944. In making progress payments upon this lump sum contract for £15,500, on what basis have you gone when you have been paying on items for which schedule rates have been originally set down;—have you paid right through upon all the items at the original estimated rates, or what have you done? We have paid at the original estimated rates. The schedules allow for only nominal rates on the Monier portion. If we had made a fresh estimate we might have put these prices in; but instead of altering the whole thing it has been simpler to do as we have done.

1945. When you get on to the Monier items, how do you pay for the composite and for the iron, for instance? We put down a value which would about balance the lump sum. Seeing, for instance, that centerings bear such a large proportion to the cost of the arch we ought to put a large price on to the composite to pay for the centerings, whereas a comparatively small price has been put on to the composite, having regard to the costly nature of the work.

1946. The composite and the accompanying iron grid are not items in the original specification at all? No.

1947. Then, the question is, how in making progress payments you arrive at the cost of them? My officers put down a price which is really a very low one for the work, in order to balance out the lump sum.

1948. *Mr. Parkes.*] They have put down an item of £3 10s. for cement and composite? Yes.

1949. *His Honor.*] Where the items appear in the original schedule, the practice is to pay at 28½ per cent. below the original schedule rates in this particular contract? We do not pay below the original rates. We left the rates as they were, and then fixed prices for the Monier so as to balance.

1950. Then you ignore the 28½ per cent.? Yes; because it is no part of the contract. It is the lump sum with which we are concerned.

1951. Paying in that way, will it not follow that the progress payments will finally come up to the total payment due before the total work is completed? No; the original quantities have been altered very closely to meet the work, as it is likely to come out in the end.

1952. That alteration has been made only on the aqueduct? The prices are all modified upon the aqueduct.

1953. But on the underground part of the work they remain the same? Yes.

1954. You are now paying on that part of the work as well as on the other at the original schedule rates, not at the rates reduced by 28½ per cent.? No; that is no part of the contract.

1955. You count that out altogether? Yes.

1956. *Mr. Parkes.*] Take your original brick, stone, and concrete structure, you had 2,020 cubic yards of brickwork. In the substituted Monier system that is reduced to 150 yards. In your original estimate you had 2,350 cubic yards of sandstone concrete; under the Monier system, that is reduced to 1,800 cubic yards. In your original design you had 590 cubic yards of bluestone concrete; that is reduced to 300 cubic yards. In your original design you had special cement facings to the extent of 2,750 square yards. That has been taken out? I have already told you that that will not be taken out; it has to go back.

1957. But are you not paying for that work on the vouchers as the work is going on? None has been done yet.

1958. You are paying for cement facing in the proportion of 1 to 2? But a portion will have to be 1 to 1.

1959. Then there is an item of Pymont bottom block sandstone ashlar, 13,250 cubic feet, which has been struck out, and there is also an item of brickwork in cement in facings, arches, &c., 2,020 yards, which has been reduced to 150 yards. The only item upon which there is an increase is upon the special bluestone concrete, which has been increased from 1,000 cubic yards to 1,050 cubic yards. You will see, therefore, from these various items which I have read, that the quantities on the Monier arches are enormously below the quantities as estimated in your original design? The quantities are below the original quantities, but the entire design has been altered.

1960. But the quantities of material under the Monier plan are greatly below the quantities in the original design? The nature of the material has been altered.

1961. You are paying for that material at office rates, are you not? We have no office rate at all for the compo.

1962. You have fixed rates which must have been satisfactory to the contractors, because, instead of special bluestone concrete at £2 10s., you have compo. site at £3 10s.? That price has been put in for progress payments.

1963. Then there are 153 cubic yards of brickwork in cement in facings, &c., at £2 10s. per yard—that is, as it stood originally? Yes.

1964. Then there are 12,000 cubic yards of cement facing, 1 to 2, in substitution for 2,960 yards, and you are paying for that at 2s. 3d. per yard, the original office value? Yes.

1965. Do you not think, then, that, when you give these contractors the original office value, the taxpayers of this country are made to suffer by reason of the adoption of the substituted scheme? The taxpayers are not made to suffer at all.

1966. Not when the substituted scheme is being paid for at the rate above that tendered by any other contractors tendering? The nature of the contract is so completely altered, that we are getting material quite foreign to that specified.

1967. What does it matter how much the contract is altered—there is only one way to arrive at these values, and that is by the quantities and the prices you pay for them? If you divided up the contract you would find that you would have to pay a large price to get the arches put in.

1968.

- C. W. Darley. 1968. As a matter of fact, have you not done that;—have you not taken out the quantities and divided the contract? So far as the Monier arch is concerned, we should have to pay the patent rights or royalty, and the extra cost which is not covered by these prices; they would not pay for the compo.
- 8 June, 1896. 1969. The compo. is not altogether the cost of the substituted plan;—there is 150 yards of brickwork;—there is no reason why that should be increased in price because you adopt the Monier system? I cannot remember at this moment where that work would come in.
1970. Is there any reason why you should increase the cost of the concrete because you adopt the Monier system? It depends upon the circumstances. We are altering entirely the nature of the work.
1971. Some concrete goes into both jobs;—is there, then, any reason why its cost should be increased? I am afraid I cannot explain the matter to you further. These prices were simply put down in the schedule to balance the lump sum arrived at. We have tried to put on a fair price. We have allowed for the royalty for the patent and for other matters.
1972. Is no dependence to be placed upon your original quantities? I do not say that at all. The quantities are adjusted to arrive at the figures contained in the lump-sum contract. They do not include the royalty and a number of things of that kind.
1973. Must the royalty be paid? No doubt it is included in the contract sum.
1974. Will the royalty be paid upon the entire aqueduct or only on the arches? I take it that when we pay £15,500 we pay whatever royalty may be chargeable. I presume it would be chargeable upon the arches.
1975. That would be 15 per cent.? The contractors asked 15 per cent. originally, I think.
1976. *His Honor.*] I understand you to say that the contractors in tendering took the royalty into consideration—I do not understand that you say that the royalty is to be paid in addition to the contract price? No; if we took the original departmental prices of the tunnel portion of the work and reduced them by 28½ per cent., and paid on the prices put down in the schedule, that would leave the contractors nothing for the royalty, for instance, and nothing for their centerings. We might have recast all these prices, as I have said, but it seemed unnecessary to do so in the case of a lump contract. It seems to me to be immaterial how you fix the prices so long as you do not eventually exceed the lump sum.
1977. *Mr. Parkes.*] Who took out these quantities? The supervising engineer, Mr. Griffiths, who checked them with the quantity surveyor.
1978. Who is the quantity surveyor? I forget his name now, but he would be one of the draftsmen in the office.
1979. Are they thoroughly reliable men? Yes.
1980. You have no reason to think that the quantities in this schedule are wrong? No; they are sufficiently near, I think.
1981. You approved of them? Yes.
1982. You knew that the quantities were correct? I have no reason to doubt the correctness of the quantities at all. I looked through them, and I saw that they about balanced with the lump sum. It was immaterial to me what the prices were.
1983. Seeing that these quantities are correct, and that the quantities are being paid for at the original office rates, and that you have a contractor who would do this work at 28½ per cent. under the office rates, would it not be a fair thing to the taxpayers if this sum of £15,500 were reduced by 28½ per cent.? Certainly not. That has been arrived at by reducing the lump sum by 28½ per cent.
1984. But it has not? It undoubtedly has. The sum of £15,757 was 28½ per cent. off the original contract.
1985. But this new Monier plan is taken out from the same description of quantities as the original office plan; therefore I want to know whether the sum of £15,500 ought not to be reduced by 28½ per cent.? Certainly not. In that case you would be getting the arches done for nothing.
1986. Would it not have been to the interests of the taxpayers to have had the more costly structure carried out at the 28½ per cent. reduction? I have already pointed out to you that the taxpayers are gainers to the extent of £257.
1987. By paying for the work without the reduction of 28½ per cent.? Certainly not.
1988. *His Honor.*] Have you formed any estimate, rough or otherwise, of how much the whole scheme could be constructed for upon the Monier system, worked out irrespective of any reduction by the tenderer on the basis of the office prices;—have you made any calculation to try to discover whether the change from the office proposal to the Monier system on that part of the work would have reduced the whole estimate much below £22,000? I believe that has been done, but I have not done it personally. If we were to take off 28½ per cent. we should have largely to increase these prices in order to make allowance for the expensive nature of the work.
1989. *Mr. Parkes.*] Is compo. at £3 10s. a yard 28½ per cent. below its value? It is more than 28½ per cent. below its value from the way in which it has to be put on. If you put up the prices under the original contract schedule, and then re-let the work, we should have to pay more like £6 a yard for the Monier patent portion of it.
1990. *His Honor.*] That is for the compo. and lattice work? Yes. The centerings are very expensive and the arches are very tedious to put in. The compo. has to be put in by hand, and work has to be done bit by bit—shovelful by shovelful.
1991. *Mr. Parkes.*] If you were a private employer, and were employing an engineer to do work for you, and you had an opportunity of getting the work done under tender 28½ per cent. below your engineer's valuation, would you allow a contract to be worked out at 28½ per cent. above what the contractor absolutely undertook to do it at? If it were an ordinary job, and the price given would complete the work, I should certainly take advantage of the 28½ per cent.
1992. As a matter of fact is not the Monier system, as applied to the arches, the only thing which does not make the contract an ordinary contract? The arches and the superstructure.
1993. The rest of the work is an ordinary work? Yes.
1994. Would you not gravely grumble if your engineer asked you to pay 28½ per cent. above what the contractor contracted to do the work for—that is, if it were a private work of your own? As I have said, you cannot divide up this work in that way, because you will have to leave a large portion of the work unfinished. You would be at the mercy of the contractor, who would be able to ask you any price he liked for his own patent.

C. W. Darley.  
8 June, 1896.

1995. Seeing that you had schedules taken out, and that these divided up the work, would it not have been fair that the 28½ per cent. should have been taken off those portions of the work not affected by the Monier arch? It comes to the same thing.
1996. If items 1 to 20 in the schedule I have handed you were not affected by the Monier arch, what was to prevent your saving the country 28½ per cent. upon those items? There was nothing to prevent it, but you would have had to put the amount on to the other portion—on to the patent portion.
1997. You have put down £11 3s. for 12 tons of cast-iron plates, &c.—is not that a good price for the iron-work;—is not 28½ per cent. off that a fair value? In the construction of the arches you have to remember that with a 75-foot span the centerings would be a very heavy item.
1998. But leaving the centerings out of the question? I cannot do that: They are included in both schemes.
1999. The price fixed for channel iron is £15 per ton—is that 28½ per cent. below the market value for that material? No.
2000. Then take the ¾-inch and ½-inch iron rods—is £10 a ton 28½ per cent. below their value? That would be a fair value.
2001. These constitute the items of the Monier arch;—therefore, as a matter of fact, it is not being paid for under a fair value, is it? At the prices which are being paid it would be considerably under value. We must put in a price which will provide for the centerings.
2002. Do not these centerings afterwards become the property of the contractor? They would be useful for very little beyond firewood when the work is finished.
2003. What would be their value? It would amount to a considerable sum on a 75-foot span.
2004. In other cases centerings can be used again and again;—you can distribute the price if the centerings can be used in that way? If you can use a centering six times you would only put one-sixth of the value on to each arch. If you could use it only four times you must put one-fourth of the value on to each arch.
2005. Would not £300 cover the price of the centerings? Putting them up and taking them down—certainly not.
2006. What figure would cover the cost? I should require to go into figures before answering that. I could not say off-hand.
2007. It would come to hundreds of pounds? Yes.
2008. Then when we are dealing with the sum of £5,000, what effect can that amount have? It has a very great effect upon the price of material.
2009. But that does not materially affect the issue? It does, undoubtedly.
2010. On your substituted quantities the total upon the Monier arches would come to £6,300, and upon the office design the amount would be £11,341—that is a difference of £5,000 in the total;—you will see, therefore, that the reduction comes in not in the lessening of the amount but in the lessening of the quantities which are not in the Monier arch? The quantities are largely recast.
2011. By so much that there is a reduction of £5,000? I do not know with what you are instituting a comparison. So much brickwork has been left out, but then other material has been put in.
2012. Taking the figures of your original quantities, and the figures of the substituted Monier scheme, I find that they work out in the ratio of £11,341 to £6,300;—that reduction is made in the quantities is it not? I cannot follow you there.
2013. Take a number of these different items, 2,350 yards of sandstone concrete have been reduced to 1,800 yards;—then the brickwork has been reduced from 2,020 to 150 yards;—the Pymont bottom-block sandstone has been omitted altogether—is not that a reduction in quantities? Some of the items have been left out altogether, but other items have been put in.
2014. 13,000 cubic feet of Pymont bottom-block stone have been entirely omitted, making a sum of £2,318 worked out upon your own quantities? Yes.
2015. And the only substitute you have for these enormously decreased and omitted quantities is about 50 yards of special bluestone-concrete? Well, then there are the patent rights to be considered.
2016. That is about the only thing you can at present put against these reductions? Yes.
2017. Do you not think that the Government in substituting this work for £15,500, when they could have got the original design carried out for £15,757, have been put to great disadvantage and loss? The country has gained £257 by the change. We have an equally good structure for £257 less.
2018. Is that £257 compensation for the £5,000 lost as between the two different kinds of arches? It is not lost. You have an equally good structure for a less sum of money. The original contract sum was £15,757, and you are having the work carried for £15,500. Those are the facts.
2019. Generalities are not worth anything. Here are your own figures, which show a difference of £5,000 between the two aqueducts. The only thing you give to the State for that difference of £5,000 is this sum of £257;—is that fair dealing? That is not a fair way of putting it. I consider that the country has gained upon the transaction to the extent of £257.
2020. Would you deal in that way if your own money were at stake? Certainly; if I could get as good an article for less money I would accept it.
2021. *His Honor.*] If the Monier system had been known here earlier, and if tenders had been called for the whole contract, or for the aqueduct part of it separately from the rest, do you not think a greater reduction than £257 would finally have resulted from the tenders being very much less than the original £15,757? I do not think it would. You cannot get competition upon a patent. All that you can do is to get a price from the owners of the patent. If you did the ordinary work not included in the patent you would have to put prices upon the material to cover the centerings and the royalties. In this particular case they are exceedingly costly in proportion to the amount of work to be done. The centerings can only be repeated twice in this case; in other cases they might be used five times.
2022. *Mr. Parkes.*] Do you make out that the centerings and a royalty make up the difference of £5,000 between the two designs? I do not quite know how the £5,000 is arrived at.
2023. The centerings and the royalty for the patent would not affect the other portions of the contract? If you constructed other portions of the work at a lump sum and then asked the contractors what they could get the arch put in for, you would find that a much larger sum would be asked than we are paying.
2024. Did you give other contractors an opportunity to tender to see if they could reduce the cost of these quantities? I did not; I had nothing to do with that.

- C. W. Darley. 2025. Why did not the Board of Reference recommend that course? Because the other contractors would have had to come back to this particular firm to ask them what they would do the arches for.
- 8 June, 1896. 2026. But the royalty is included in the £15,500? The firm who own the patent are doing the work.
2027. Could not the others have paid a 15 per cent. royalty? I do not know whether they could have done the work on those terms. I do not know what the patentees would have asked. They might have asked 30 per cent.
2028. Would it not have been a fair thing to call for tenders upon this Monier principle as well as upon the Departmental design? The thing only cropped up when the tenders came in.
2029. Would it not have been a wise and proper thing to take that course? You would have had to stop the work in order to call for tenders. The Monier system had not suggested itself, I presume, to the officers of the Department.
2030. Had you not had a consultation with Mr. Hickson about the matter before? No. I never saw this aqueduct before the tenders were called for. Before the tenders came before the Board of Reference I did not know whether it was to be a pipe or an aqueduct.
2031. Do you know anything about the Monier arches now? Yes. My attention has been directed to the matter since.
2032. Do not you think that as there is only a difference of something over £200 between the two contracts it would have been better to have a good substantial structure instead of taking the risk of the Monier system? I do not think there is any risk, and you are getting a much nicer-looking structure.
2033. If there be no risk, why did you, as one of the Board of Reference, suggest that on account of the risk good surety bonds should be given? It was a new thing at the time, but I do not now think that there is any risk in adopting it.
2034. *His Honor.*] Can you give me the discharging capacity per minute of the Monier aqueduct? I cannot. I had nothing to do with the getting out of the design.
2035. *Mr. Smith.*] You were a member of the Board of Reference in March, 1895? Yes.
2036. I want you to look at the report of the Board under date March 20th, 1895, which appears upon pages 206 and 207 of the Parliamentary Papers ordered to be printed on the 22nd October last; is that a correct report of what took place at the meeting of the Board of Reference? It is.
2037. From that it would appear that you and Mr. Hickson had discussed this question of the introduction of the Monier system before it came before the Board? Yes.
2038. Mr. Hickson had come to a certain conclusion, upon which a certain recommendation was made? That is so.
2039. You endorsed the view of Mr. Hickson in the matter? I did.
2040. You thought the Monier a sound system as far as you could judge, and that it would be a good thing to apply it to this particular contract? Yes.
2041. A good deal of work has since been carried out under the system, and you are still of opinion that your advice was sound? I am still of the same opinion—in fact, the experiments which have been carried out since that date have confirmed me in the view I then took. I did not then know as much about the matter as I do now.
2042. In the case of this particular plan the work in the arches is of a heavier and more substantial nature than would be the case under the ordinary Monier system. The Monier system is adopted, as a rule, with a view to making the work much lighter? There have been arches constructed under the system much lighter than these.
2043. But this being the first time that the system had been imported into any work done in this Colony, it was made a good deal heavier than usual? Yes. Quite strong enough, I think, to do without the iron altogether.
2044. This schedule we have heard so much about was prepared by Mr. Griffiths? Yes.
2045. As I understand the matter, it was a schedule made out simply for departmental purposes? That is so.
2046. It is no part of the contract at all? No.
2047. The contractors had no say in the matter at all? No.
2048. The schedule was made out merely to enable your Department to arrive at a conclusion as to what the amount of each progress payment ought to be? As a means of valuing the work monthly.
2049. I understand that in making out this schedule you have taken those items which do not involve the Monier system upon the schedule rates originally prepared by the Department? Yes.
2050. But with regard to those items which did involve the Monier system you have made no special estimate, but have averaged them among the remaining items, so as to bring the total within the lump sum constituting the contract price? That is so.
2051. So that you did not go into the question as to the real value of those items which made up the Monier system? I did not.
2052. It is perfectly misleading to state that those items which do not involve the Monier system are being paid for at the rate of 28½ per cent. more than the contractors were prepared to give for them? Quite misleading.
2053. I suppose that in making the progress payments you kept back the usual amount of retention money? I do not think any retention money came into the contract. It is a lump-sum contract. There would be merely the original contract security.
2054. I suppose that in all these lump-sum contracts you must have some sort of schedule, such as that upon which you have been examined, to permit of your making progress payments? Yes. Take a case in which Mort & Company build a dredge for the sum of £38,000 or £40,000. They give us a lump sum; then our officers have to value the work. The Department goes through it and puts in certain prices upon which we determine to make progress payments. When the contract is entered into we divide the work into certain sections, and fix prices covering those sections upon which progress payments are made; but we are very careful towards the end of the work in seeing that there is no risk of over-payments. We have sometimes to alter the quantities to prevent over-payments. Prices are fixed simply to arrange the progress instalments. Architects who let large contracts for buildings often give a certificate to a builder for the value of the work performed up to a certain date; but the owner, in paying that amount, does not know what prices he is paying.

2055. Let me draw your attention once more to Mr. Hickson's minute, which appears upon page 207 of the Parliamentary papers, to which I have just referred:—

C. W. Darley.  
8 June, 1896.

To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm, estimates were made for the work on the Monier system, as well as on the Department's. The result was that the estimate of both works was practically the same. Applying that comparison to this case, it would mean that the Departmental estimate for the work under consideration would be £22,000.

Did you see the comparative estimate made by Mr. Bagge? I saw a copy of it the other day. I did not see the original.

2056. You did not consider it at the time I am speaking of? No.

2057. What you say now, after your experience of this particular system in connection with this plan, is that the Government are getting, if not a better, at all events as good a work for the sum of £257 below the lowest tender for the original design? That is my opinion.

2058. *Mr. Gummow.*] In the case of this particular contract, I think you said there was no retention money, but that there was a bond and sureties, and, I suppose, also a deposit? A deposit was made.

2059. Will you look through these papers and see whether there is any reference to retention money;—I think you made an error in speaking of that? I see that there was retention money—£775.

2060. Could any tender be let for work upon the Monier system without rights being given to the contractors by the patentees? I think not.

2061. With regard to the payments under the schedule rate system, do you pay the contractors upon what is shown on your printed schedule, or upon what is actually taken out? We pay them upon what is actually taken out.

2062. If, in a contract under the usual schedule system, the contractor takes out double the quantity of excavation or double the quantity upon any other item, do you not pay him for what he takes out if it is ordered? Yes; the quantity may be doubled. In that case the amount paid would be doubled.

2063. And under a lump sum contract the contractors have to take the risk? Yes; the contractor takes the risk in the case of this particular contract.

2064. If a contractor has to take out more excavation than is allowed for in his tunnel, does he get paid extra for it? No.

2065. That is the contractor's risk? Yes.

2066. With regard to the brickwork quantities, for which 2,020 cubic yards is shown in the original items and 150 yards in the amended items, do you know where it is put in? I cannot call to mind at this moment where it would come in.

2067. Would it be likely to be in the tunnels? Very likely.

2068. Do you consider that brickwork—that is, single-ring work—can be done on the arching of a tunnel at the same price as that at which similar work could be done in the open air? No.

2069. Therefore, the price of 50s. as applied to one class of work does not apply to the other—the difference in the work completely alters the prices? Yes; the same price would not apply.

2070. With regard to the sum of £5,000 mentioned by Mr. Parkes—I do not know whether his figures are correct, but assuming that they are—should not that amount have 28½ per cent. deducted upon the line of argument which he advanced? I do not know how the £5,000 is arrived at.

2071. Presuming that it is arrived at from the printed figures shown in the schedule, should it not have 28½ per cent. taken off? If it relates to the original tender; but the 28½ per cent. does not come in in the case of the contract. Of course, for the purposes of comparison with the original tender, the 28½ per cent. would have to come off.

2072. As to the quantities: do quantities necessarily make the better job; if you put in 10 tons of iron-work where a ton of iron would do, does it make the job any better;—what I mean is, do you necessarily get any benefit from the increase of quantities? Not necessarily. You can put too much material into a job.

2073. The quantity is not necessarily a guide as to the value of the work when finished? Not necessarily at all.

2074. *Mr. Parkes.*] I understood you to say that so far as the Monier arch principle was concerned no other contractors could tender? It is a question of law. I do not know how the matter stands in the light of the latest decisions; but I am under the impression that if you own a patent no other tenderer can use your patent without permission.

2075. What was the good of your going to the trouble and cost of having designs like those for Contract No. 77 prepared if you were going to give Carter, Gummow, & Co. the tender upon the Monier principle, and if no other firm of contractors could tender upon that principle? When Mr. Hickson had those plans prepared, I presume he did not intend to introduce the Monier system. It was sprung upon him as it were. It was a suggestion emanating from certain contractors after the contract designs were prepared. They submitted an alternative design with their tender.

2076. Are you sure that you never discussed the Monier principle with Mr. Hickson before it came before the Tender Board? I think he had called my attention to it, but not in connection with any particular contract. I remember his showing me some French work about the Monier system. I think he was the first to call my attention to it. I think he said he would like to introduce it into some of our country bridges, but his observations had no connection with any particular contract.

2077. Did you understand the Monier system when it was brought before the Board of Reference on the occasion referred to? Yes.

2078. You knew all about it? I knew a good deal, but I know more about it now. As a matter of fact, Mr. Hickson gave me some later information on the subject which was looked up before the matter came before the Board.

2079. *His Honor.*] What was Mr. Hickson's manner at those conferences with you;—was he anxious to have the Monier system adopted, or did he leave it quite an open question? His manner was just as usual. In bringing the matter under the notice of the Board he said there were tenders for a certain work, but that one firm had put in a design of their own which was cheaper than the Departmental design, and which was upon the Monier system. He said he thought it worth considering, and I think the Board then decided that I should look into the matter with Mr. Hickson and explain the system to the Board at the next meeting.

- C. W. Darley. 2080. Are you sure you did not see Mr. Bagge's estimate making a comparison between the Monier system and a somewhat similar system in use in Ahearn's contract? I do not recollect seeing it at that time.  
 8 June, 1896. 2081. I mean so as to arrive at some idea as to what the cost of the Monier system to the contractors would probably be? No, I do not remember seeing Mr. Bagge's report at that time.  
 2082. Do you remember the question of the construction of a certain section of McSweeney's contract in connection with the outfall sewer almost entirely in concrete without the use of brick to any large extent—do you remember that being gone into? I remember that a contract was about being let for a length of concrete sewer which was not upon the Monier system.  
 2083. A triplicate sewer? Yes.  
 2084. That was touched upon in conversation between yourself and Mr. Hickson, I mean as regards the relative cost? I do not remember any comparison being made with that work at all.

Henry Deane sworn and examined:—

- H. Deane. 2085. What is your position in the Public Service? I am Engineer-in-Chief for railway construction.  
 8 June, 1896. 2086. You are one of the Board of Reference to whom tenders are submitted before contracts are signed? Yes.  
 2087. Were you one of the Board of Reference to whom were submitted by Mr. Hickson the tenders for contract 77—I mean the Annandale contract? I do not know the number of the contract, but I remember the matter being submitted to the Board.  
 2088. I believe a substituted design was put in on the Monier system by Messrs Carter, Gummow, & Co.? Yes.  
 2089. Did you look into the matter yourself? I have looked into the matter. I know the Monier system.  
 2090. Did you look into the matter then? Yes; the matter was explained at a meeting of the Board.  
 2091. Who explained it? Mr. Darley and Mr. Hickson.  
 2092. Will you tell His Honor the nature of the explanation? I do not know that I can give you very much detail, although the explanation, I think, was this—that the contractors had made an offer to construct the work, by adopting this particular principle, at a lower cost than that of the original tender.  
 2093. The contractors tendered for the original scheme at 28½ per cent. below the office values, did they not? Yes.  
 2094. When this sum of £15,500 was substituted did you understand that that tender also was to be 28½ per cent. under the office values of the work? I do not remember that there was to be a reduction upon the previous tender.  
 2095. But did you understand that that substituted contract was to be paid for at the rate of 28½ per cent. below office values? Did you, in short, make any effort to find out at what rate the contract was to be paid for—that is, at what rate of percentage as compared with the original office values? I think a calculation was made at the time, but I do not remember what it was.  
 2096. Was that made upon the schedule? I mean as to the proportionate decrease upon the whole amount.  
 2097. It was made on the schedule as submitted to you, was it not—how could you make a comparison unless you had a schedule of quantities? We could tell what the total cost of the work would be. The total amount was to be so much less than the total amount tendered for.  
 2098. Was any explanation made to you to show upon what basis the payments would be made for the substituted contract? No; I do not think that was entered into at the time.  
 2099. Did Mr. Hickson make any reference to a test that had been made under Mr. Bagge, comparing three plans of sewers with the outfall sewer which was being constructed at the sewerage farm? Do you mean tests as to the Monier principle?  
 2100. I mean tests as to the price of the work as compared with the office work? No; I do not remember that being brought forward.  
 2101. I suppose there was a little discussion by the Board? The matter took up a good deal of time, seeing that it was quite a new proposal in this Colony.  
 2102. If you had known that there was to be a great reduction in the quantities as compared with those of the original design, and that the contract was to be paid for at the original office values instead of at a 28½ per cent. reduction, would you have sanctioned the proposal? I understood that there was to be a reduction on the total cost, and that being so I recommended the scheme.  
 2103. But supposing that at the time you had known that the contract throughout the work affected by the Monier principle and the work not affected by it was equally to be paid for at the office values instead of at the rate of 28½ per cent. below those values, would you have sanctioned it? I think I am scarcely in a position to say without going into what is involved in your question.  
 2104. Let me put the matter plainly;—Messrs. Carter, Gummow & Co. tendered to do the work originally at 28½ per cent. below office values; they then substituted a plan; if you had had the quantities of that substituted plan before you, and you had known that those quantities were to be paid for at office values instead of at the rate of 28½ per cent. below those values, would you have agreed to the proposal under those circumstances? I do not know whether I should have done so or not. It depends upon how the prices were to be made out; upon how they would work in. For instance, the material of the concrete would be different, and that item would be of a different value.  
 2105. Supposing that the material of the substituted arches was not of a much greater value? I suppose they would be, because I understand that a larger proportion of cement is used in connection with the Monier system than is the case in ordinary concrete.  
 2106. Presuming that there had been placed before you an estimate of quantities and valuations showing a great reduction, would you not have thought that there ought to be a corresponding reduction in the contractor's tender. If you had a contract before you upon which a contractor had undertaken to do work at 28½ per cent. below your computed values, and if there were a substituted scheme, portion of which contained something else, would you, as regards the substituted portion, pay the contractor the values you had put upon the whole of the original work? In making a substitution I should arrange probably that the prices only in that part which was substituted should be affected.  
 2107. That would be a proper thing for an engineer to do? That would usually be done.  
 2108. You would not consider that, as regards those parts not affected by the substitution, you would be justified in paying 28½ per cent. above what the contractor wanted? Unless there were some very good reason for doing so, I certainly should not.

2109. If you had known that that had been the case as regards the prices for the Monier arches you would not have agreed to the proposal? I understood that there would be a saving upon the total cost.

2110. Mr. Hickson did not take you into any quantities; he did not produce Mr. Bagge's report? No.

2111. Do you not think it would have been as well to have the quantities of the Monier arch taken out before submitting the proposal to the Board of Reference? I scarcely think it was necessary.

2112. On what basis, then, would you proceed? I should go upon general experience in the matter. Speaking for myself, my feeling was this—I was glad of an opportunity to see the principle tested. The reduction in price did not seem a very large one; still in testing a new principle you cannot expect to get in the first instance so large a reduction as you would probably get afterwards. If the principle were once tested, and if it proved satisfactory, no doubt a large saving could be effected in the future. I understand that this patent was in the hands of these particular contractors. It was therefore a question of dealing with them. The work could not have been done by open tendering, so that the conditions were quite different from those which you would have in connection with an ordinary contract.

2113. Is it a wise thing for the Government to adopt a patent the value of which is untested in connection with so large a work as this? I do not refer to this contract as being a testing of the value of the principle, because there was no doubt in my mind that the principle was a good one. It had been adopted with very great success upon the continent, and I believe it is now being received with some favour in America. I meant the testing of the principle as to its commercial value—the possibility of carrying it out commercially with a certain profit.

2114. If you were testing the principle commercially you would want to ascertain the cheapest article, combined with the greatest durability? Yes.

2115. Then, upon that standard, what test could there be when, upon so large a work, the cost was only £250 less? There would be the test as to whether it could be carried out effectively.

2116. Why should you enter into so great an experiment as that;—why could you not take a smaller case in order to test the principle, if that were the reason? That would involve a certain amount of delay.

2117. A contract was being carried out under Mr. M'Sweeney, on a plan somewhat similar, for an equal amount of money;—would it not have been wise to wait a little while, in order to test whether or not the other scheme was equally cheap? I was perfectly satisfied to accept the proposal.

2118. You had no really strong ground for accepting it? Well, I saw that there might be a great saving in the future. There was a small saving in this particular case. If it had been higher, I should have objected to the experiment.

2119. If you wanted to make a test, why not effect a saving? You could not tell exactly what the system would cost in the Colony, because you could not under the circumstances call for tenders for the particular class of work.

2120. *Mr. Smith.*] I think you were asked whether you had or had not any strong grounds for recommending the acceptance of the tender? Perhaps my answer to the question scarcely conveyed what I meant. I did not, perhaps, properly catch the question. I think the saving which there might be in the future would be a strong ground for accepting the tender.

2121. You also thought that there was a good opportunity for the introduction of a system which you had satisfied yourself was a sound one? Yes.

2122. The report of the 20th March, 1895, of the Board of Reference, correctly states what took place at the meeting of the Board, does it not? Yes; I have not altered my opinion about the matter at all. In fact, it has been rather strengthened than otherwise as regards the advisableness of adopting the principle. The report is a correct account of what took place.

2123. And you say you have not altered your mind since? No.

2124. You are perfectly satisfied with the advice given by the Board of Reference? Yes.

2125. I suppose the whole matter was very fully and carefully considered at the meeting of the Board? It took some little time; we all understood Mr. Hickson's views upon the question, and we coincided with them, as you will see by the minute.

2126. The Board were unanimous in their recommendation? Yes.

2127. When you accept a lump sum contract, I suppose you have afterwards to make out a schedule or something of the kind in order to ascertain what your progress payments are to be? Yes.

2128. That would be a matter to arrange after the contract had been signed? Well, in the case of my work, I have a schedule attached to the contract; it is chiefly for additions and reductions. I believe it is the practice in the sewerage branch to have a schedule attached to the contract. The contractor puts in his schedule of rates, and the contract is accepted according to the lump sum, but if the quantities worked out at those rates come to a larger amount than the lump sum, the contractor is expected to reduce the rates accordingly.

2129. So that he will receive payment at the lower rates? Yes.

2130. *Mr. Gummow.*] You were asked whether, if you had a contractor doing a certain work, and you wished to substitute other work, you would pay him for the whole contract under the substituted rates, or whether you would alter only the rates for the substituted part? Yes.

2131. Do you consider a tenderer putting in a lump sum price for a certain way of doing a work, and putting in a schedule rate price less a certain percentage—do you consider those parallel cases? It is not exactly a parallel case.

2132. *Mr. Smith.*] In regard to this Monier system, it involves special kind of work? Yes.

2133. Therefore, it does not follow that because the quantities of the portion of the contract upon which the Monier system is used might be less than the value of the work might not be greater than under the original plan;—what I mean is, the quantity is not the true test of value? No, because the items may be higher in price.

2134. When work is done under the Monier system it might involve a higher price than would the same quantities under the ordinary system? That is the case, especially with regard to concrete, which in one case contains much more cement than in the other. Under the Monier system it is not concrete in the proper sense of the word. Concrete contains sand and broken stone or gravel. In the case of the Monier system it is more of the nature of mortar.

2135. *Mr. Parkes.*] If special bluestone concrete is worth £3 per yard, a fair value relative to that for compo. would be £3 10s., would it not? It would depend upon the proportion of bluestone in the concrete.

H. Deane.  
8 June, 1896.

WEDNESDAY, 10 JUNE, 1896.

Frank Moorhouse Gummow sworn and examined:—

- F. M. Gummow.  
10 June, 1896.
2136. *Mr. Parkes.*] I notice that on 3rd April, 1893, you, under the name of Carter, Snodgrass, and Baltzer, as patentees of the Monier system, offered the patent to the Government? No. (*Vide Appendix No. 7.*)
2137. But your agent, Mr. Armstrong, did so? No.
2138. It was not offered to the Government by you? No.
2139. Was not Mr. Baltzer an officer of the Department at that time? He was.
2140. At the time he was a co-patentee with you? I did not enter into this patent until last year. Prior to that I had nothing whatever to do with it. I am not sure when Mr. Baltzer left the Department, but I became a shareholder in the patent about March or April of last year.
2141. No doubt he is identical with the gentleman who was in the Department? Yes.

William Darcus sworn and examined:—

- W. Darcus.  
10 June, 1896.
2142. *Mr. Parkes.*] What is your occupation? I am a carpenter.
2143. You were in the year 1894 in the employ of Carter, Gummow, & Co.? Yes.
2144. As a sort of foreman upon Contract 69? Yes.
2145. While you were foreman upon that contract you had, as well as making the moulds and doing other carpentering work, to do some cementing work at various times, had you not? I never had to do any cementing work, but I had to set off nearly all the excavation work upon that job.
2146. You noticed the quality of the concrete which was used upon that contract, did you not? Yes, many times.
2147. Will you say how it was mixed? At times it was mixed very carelessly. The correct quantities were not put in. The correct quantities would be 16 of blue metal, 8 of sand, and 4 of cement, but those quantities were not mixed. The mixing was done very carelessly.
2148. Did you at one time apply that better material must be put in. Yes; I had some very difficult work to do. I had to construct some arches which had to carry a very great weight, and I was afraid they might give way.
2149. Was the material bad? I did not consider that it was good enough, and I applied for better.
2150. Did they send it to you? They laughed at me.
2151. In a job of such an extent as that, where something like £15,600 is paid for concrete, I suppose the mixing of the concrete in the way you describe would make an enormous saving? If all the concrete were mixed in that way. But I could not say that that was the case—in fact, I am certain that it was not.
2152. Did you see any considerable quantity mixed in that way? No; what I saw mixed in that way was at the Premier-street shaft.
2153. Did you see any of the other shafts in construction? I supervised the construction of them all on this particular job.
2154. And the concrete you have just described was the worst you saw? Yes.
2155. You had, in the discharge of your duty, to measure and set off the work upon this contract, had you not? Yes.
2156. You have before you the contract plans of Contract 69; I suppose you understand them thoroughly? Yes.
2157. Will you look at drawings Nos. 3 and 4, including the plan of the chamber in Premier-street? Yes. (*Vide Appendix D.*)
2158. The original contract plans provided for a very elaborate spiral staircase? Yes.
2159. And a very large chamber and shaft? Yes.
2160. This work was excavated to a great extent? It was all excavated with the exception of the spiral staircase. All the rest was excavated, but it was known that the spiral staircase would not be made.
2161. When the plan was altered the small chamber represented in the drawing No. 4A was substituted? Yes.
2162. When that drawing was substituted the spiral stairways of stone were taken out and iron ladders were substituted in a comparatively small shaft? After the excavation for the larger chamber, not including the stairway, had been made it was found that a great deal of space had been shot out which had to be filled in with concrete. The ground had been shot out, and when the altered plan came in of course it had to be filled in.
2163. What then took place? The excavation was filled in with concrete, and the contractors I suppose were paid for the excavation and for the extra filling.
2164. To any great extent—would it go into hundreds of yards? I could not say until I went into figures. I should have to take measurements from the plans.
2165. Would it go to hundreds of yards? I dare say it would. Quantities could easily be taken from the drawings.
2166. At all events, there would be an enormous increase? Yes.
2167. And all to the advantage of the contractors? Yes.
2168. Do you know if any reduction was made for this substitution? I do not think any reduction would be made. The contractors I am sure would not permit it.
2169. Had you to do with the making out of the final quantities? I had not, but I made out quantities for members of the firm who have since left it, for their own private information.
2170. You cannot give us information upon your own knowledge as to whether the shaft of which you speak was paid for at the original prices with the addition of the concrete? I could not say. I had no knowledge of that.
2171. Turning from that to a siphon which was to be built in the sewer—you remember that? Yes.
2172. *His Honor.*] On what plan would that be shown? On drawing 14. An alteration was also made there.
2173. For 10 chains from Premier-street to the Illawarra Road there had, according to the original contract, to be duplicate sewers? Yes. (*Vide Appendix D.*)
2174. And it was found that considerable saving could be made by increasing the size of one sewer and doing away with the other? By substituting one sewer for two—yes.
2175. The whole of the necessary excavation had been done beforehand? Yes.

W. Darcus.  
10 June, 1896.

2176. And when the alteration was made that excavation had to be filled in? Yes; the filling is shown here on the plan.
2177. That would also entail a great deal of extra cost? Yes.
2178. And that filling was paid for at the rate of 5s. per yard? So far as cost is concerned. Of course I cannot be sure whether the building of the one channel was more expensive than the building of the two. I should have to take out the quantities.
2179. But the alteration did take place? Yes.
2180. And you consider that it was to the advantage of the contractors? Yes.
2181. You say the siphon to which you have referred is shown upon drawing No. 14? Yes. (*Vide Appendix D.*)
2182. There was some defective work there, was there not? Yes.
2183. Will you explain what it was? It was on the Illawarra Road. The pipes were put in much below the penstock chamber. My duty was to build this chamber, and when I came to put in the chamber I found that the pipes were out of the line of the main sewer. I had then to build the thing up as best I could. We had to bend the main sewer round so that it would come in.
2184. Do you consider that a defective job? Yes; anything, I take it, which would impede the flow of the water would be defective.
2185. Would this defect you are speaking of impede the flow of the water? It is bound to do so.
2186. Was the work reported to the inspectors as defective? Yes; two of them were there with the engineer looking on, and they approved of the way in which I did the job.
2187. What engineer would that be? I think Mr. Gibbs. The same thing took place at the inlet of the siphon.
2188. Instead of taking up the pipes, this botched work was done? Yes.
2189. *His Honor.*] What amount of deflection would there be? I suppose there would be about a foot.
2190. Do I understand that the iron pipes are put into concrete? Yes.
2191. You said just now that you had to bend the sewer;—how did you get the curve in the iron pipes? We did not get any curve in the iron pipes, but an alteration was made in the concrete barrel.
2192. Then you must have cut away the concrete? Yes.
2193. The concrete was set at the time? When I was setting the pipe I discovered that it was out of line, and what I did was to make it fit as well as I could, with the approval of the engineer and inspector. You will see from the plan that there is a sliding-door to the penstock chamber, and you will see from that that the work had to be very exact to permit of the mechanism of the sliding-door working properly.
2194. *Mr. Parkes.*] What do I understand you to say was done at the siphon? The concrete approaching the iron pipe was cut away.
2195. That would have the effect of pinching the neck, would it not? Well, the water would not flow straight, of course.
2196. On one occasion you had a conversation with Mr. Snodgrass? Yes.
2197. In connection with some centerings? Yes.
2198. Could you fix the date? No; I keep no diary.
2199. *His Honor.*] Can you not fix the spot, and give us the date as nearly as possible? The conversation took place in the carpenter's shop on the Marrickville Road, near the entrance of the "Empress of India Hotel."
2200. Do you remember in what month it was? I could not say.
2201. *Mr. Parkes.*] What was the conversation? It was with reference to the centerings cancelled on account of the alterations which had been made. Mr. Snodgrass told me to give him a valuation of the centerings, and to be sure to put in a good price. I gave him the correct valuation. It was something like £5 or £6.
2202. What did Mr. Snodgrass tell you to do? He expected me to put on about twenty times the amount. I said, "That is the correct thing; you can do the rest."
2203. He wanted you to put on about £100? He did not mention a sum, but he wanted me to put on far more than the correct value.
2204. But you gave him the correct amount? Yes.
2205. These centerings are charged for in the general account? They must be.
2206. You noticed in the construction of these sewers the sinking of sumps under each shaft to take the drainage from the subducts? Yes.
2207. The filling in that case was to be with concrete? Yes—sandstone concrete.
2208. Did you notice how these sumps were filled in? Yes.
2209. How were they filled in? They used everything they could get their hands on to fill them in with.
2210. Did they use cement-casks, for instance? Well, I saw lumps of wood used.
2211. Rubbish of every sort? Yes.
2212. And they charged for that as concrete? I do not know whether that is so or not.
2213. They were supposed to be filled with concrete? Yes. There was always some concrete put in them.
2214. Did it ever occur to you to report these matters? No, never; it was not my business.
2215. Where was the inspector while this work was going on? He would be looking after some other part of the work, I suppose. The inspectors have a good deal to do.
2216. The inspectors attended to their duty, you think? They did.
2217. Did you ever have a conversation with the man who drove the engine at the shafts? Yes.
2218. What did he tell you? He told me a lot of things I could not believe. I did not think there would be so much villainy connected even with this firm.
2219. What is the name of that man? Thomas Odgers.
2220. Where is he now? In Coolgardie.
2221. Do you know anything about the brick lining of this sewer? Yes. I made all the centerings for it.
2222. Is the greater portion of it two-ring or a single-ring? The greater portion is single-ring. Of course it depends upon the nature of the ground. Wherever the nature of the ground necessitated it double-ring work would be put in.
2223. You made centerings for the sewer all through? Yes.
2224. And you naturally would pay attention to the size of the excavation, would you not? Yes.
2225. The sewer is large at one end, and is small at the other? Yes.

- W. Darcus.  
10 June, 1896.
2226. What would be the average size of the excavated passage? There are so many different sizes of sewer that it would be difficult to strike an average.
2227. The sewer ran in size from 6 ft. 8 in. x 7 ft. 8 in. down to 3 ft. 3 in. x 2 ft. 2 in.? Yes.
2228. What was generally the room which would be left for packing? The ground was got out as nearly as they could get it to the size of the sewer.
2229. In some cases the ground was bad? Yes.
2230. Was it very wet ground? It was wet. The underlay was of a soppy nature, and there was a good deal of shale.
2231. From the inner line of the periphery would there be an average of more than 2 feet taken out? Not so much as that, I think. It might average (say) 1 foot. You will see from the rough drawing I have made the approximate size of the excavation.
2232. Measuring from the inner periphery? Yes.
2233. That would be right through the sewer? Yes.
2234. Then the packing would run at that average? I suppose it would.
2235. What was the date of the completion of the drive and shafts? I cannot give you that date.
2236. When did you leave the job? I think in about August of last year.
2237. Would the drives and shafts be completed in July of last year? Yes; I think they were completed in July, but there would be a good deal of rendering to be done. The brickwork and concrete were all in.
2238. Had you been a clerk of work of the Government what would have been your opinion of this work? I would have condemned two-thirds of it.
2239. *His Honor.*] What parts of it would you have condemned? I would have condemned, for instance, the concrete in the Premier-street penstock chamber.
2240. *Mr. Parkes.*] What was the nature of the work? Well, if I had been Government inspector I would not have permitted it to go on.
2241. In what respect was the work defective;—was the material bad? The material was good, but the proportions were all wrong.
2242. What would be the proper proportion? Sixteen of blue metal, 8 of sand, and 4 of cement.
2243. What proportions were put in? I could hardly say the exact quantity. It was shovelled in anyhow.
2244. Was there any gauging? Well, the gauge-box would be left and the man would continue to shovel on until the box took the shape of a pyramid.
2245. *His Honor.*] You mean in the gauging of the metal, of course? Yes—the metal and the sand.
2246. Putting in an excess of metal and sand over the proper proportion to the cement? Yes.
2247. To what extent was that done? As I only saw them doing it now and again I could not say to what extent. I did not pay much attention to it. I was an employee of the contractors; they paid me, and it was to their benefit that I should pay no attention to what was being done. At the same time I knew what was going on.
2248. *Mr. Hickson.*] Could you fix the date of the bad work in connection with the siphon? I can fix no date.
2249. Who were the inspectors on the job? Messrs. Tudgay, Husband, and Eyre.
2250. Who were the engineers in charge? Mr. Millner and Mr. Gibbs.
2251. Who was the supervising engineer? Mr. Davis, I think, part of the time. I forget the name of the gentleman who came after him.
2252. When this bad work was done who was in charge? The gentleman who came after Mr. Davis.
2253. You appear to have been over the work from one end to the other;—you appear to have been at the mortar-board when the mixing was going on, and you appear to have been down below, and I want to know how you came to be in all these places at the same time? I did not say so. I was at one of these places at one time, and at another place at another. I did not live down the shaft; I had to come up sometimes.
2254. In regard to the mixing of the concrete, you say that you only estimated that the proper proportions were not put in; you did not know, as a matter of fact, whether the proper proportions were put in or not? No; but I stood by, and I saw the extra stuff thrown on to the board.
2255. When? I have no dates. I did not expect to be examined in regard to the matter, but I know that the thing was done on several occasions.
2256. What were the names of the men who were doing this? Messrs. Carter, Gummow, & Co. could easily give you the names.
2257. But I want the information from you;—you say you were a sort of foreman on the work, and of course you would know the names of the men? Martin Byrnes was one of them.
2258. He was one of the men who were mixing the concrete in the manner you have described? Yes. The other man I only knew by his Christian name—Tim. The contractors know his surname well enough.
2259. You mentioned some defective work at the dome where the three sewers branch off at Premier-street? I had occasion to speak to the men who were mixing concrete, and to ask them to send down better stuff.
2260. Who was the inspector then? Mr. Tudgay was the chief inspector.
2261. Who was the engineer? Mr. Millner.
2262. Who was the supervising engineer? Mr. Griffiths.
2263. You mentioned, I think, that a good deal of money was put into the contractors' pockets by the substitution of one sewer for two? I said there was an alteration.
2264. Do you know, as a matter of fact, that there was a considerable saving on the adoption of that plan? I do not know what you would call a considerable saving.
2265. Suppose there were a saving of £10,000? I do not think there was.
2266. Are you sure there was not? I am.
2267. You are quite sure there was not a saving of £10,000 effected by the alterations in the sewer at Premier-street? A saving to whom?
2268. To the Government; I understood you to say that money was thrown into the hands of the contractors on account of these alterations; presumably, therefore, the Government had to pay something extra; in other words, you say there was no saving to the Government by the alteration? There was no saving to the Government, in my opinion.

2269. As a matter of fact, there was a considerable saving to the Government which you apparently know nothing about? I know nothing about any saving. The plans show where the alterations were made, and the excavation was done before the altered plans were handed in to the contractors. These excavations had to be filled in again with concrete. W. Darcus.  
10 June, 1896.
2270. You would be surprised to hear that a saving of about £10,000 was effected to the Government by the alteration? I should be surprised.
2271. *His Honor.*] You do not know anything about the arrangements made between the Department and the contractors when these alterations were made? No.
2272. There may have been any arrangement for aught you know? Yes.
2273. *Mr. Hickson.*] Why do you think the contractors made a considerable profit at the expense of the Department? From what I could see I thought that that was the case.
2274. It is a mere guess on your part? There is no guessing about it. The ground was shot away, and it had to be filled in with concrete.
2275. It is something like your guessing at the quantities in the concrete—this is simply another guess? I have just said that it is not guessing at all, because the excavation was made, and it had to be filled in.
2276. Did you mention this bad work to the inspectors? No.
2277. Did you mention it to the contractors? To one of the firm I mentioned it several times.
2278. Who was that? Mr. Forrest.
2279. What did he say? Nothing.
2280. You did not mention it to the Departmental inspectors? It was not my business to do so.
2281. I presume this work was done when the inspector's back was turned? Yes.
2282. Mr. Parkes referred you just now to drawing No. 3 among these plans;—do you know, as a matter of fact, whether that is part of the contract? I presume so, or the drawing would not have been handed to the contractors.
2283. What is the meaning of the word "cancelled" across the drawing? I never saw that before.
2284. It would appear that you have been speaking with reference to a drawing that does not form part of the contract? It was understood all along that the spiral stairway was cancelled.
2285. Supposing that was not the contract plan, would it not upset your evidence? No; the stairway was never made.
2286. You say that an alteration was made in the spiral stairway, and this had the effect of putting a lot of money into the contractors' pockets? I said no such thing. No excavation was made for the spiral stairway. The excavation to which I refer was quite independent of that.
2287. You see that the plan before you was cancelled? Only part of it was cancelled.
2288. Are you quite certain? Yes.
2289. Why? Because I had to do with the whole of the work. I had to make all the centerings and to set out the work so that the men might shoot away the ground and excavate.
2290. You are certain that the whole of this plan was not cancelled? Quite certain. Decidedly it was not.
2291. Are you still in the employ of the contractors? No; I have not been for some time.
2292. *Mr. Gummow.*] I think you said you were a sort of foreman;—were you a foreman for the contractors? I had charge of the work.
2293. Where were the contractors? They were there also.
2294. Did they not manage their own work? Mr. Ewing and Mr. Maddison both handed me drawings to see that certain work was done.
2295. They handed you drawings to make centerings from—drawings from which you could set up the ribs? And to set the ground out for excavation also.
2296. Had you any men under you to do that? Yes; I had any men I required.
2297. Who told you to set out the work? Mr. Ewing.
2298. Did not Mr. Maddison? Mr. Maddison was gone at the time the Premier-street dome was set out.
2299. Do you know young Mr. Forrest? Yes.
2300. Did you tell him last week that you had a set against the Government engineers and inspectors, and that you would make it hot for them? I did not.
2301. With regard to the fixing up of some of the work at the dome at Premier-street, you say you gave instructions to the men about sending down good material, and that they took no notice of you? I simply asked for better stuff.
2302. They did not take any notice of what you said? No notice whatever.
2303. Had you any right to tell these men what they were to do? I think I had.
2304. But had you, as a matter of fact? I am sure I had.
2305. Was there no one there in charge besides yourself? Mr. Forrester was there now and again, but he left the whole matter to me.
2306. Why did you not sack the men when they did not carry out your instructions? I had no power to sack any men or to put any men on.
2307. Had you power to order them to do anything? No.
2308. Do you not know that the whole of your contractors' foremen, if they have power to order men to do anything, have also power to sack them? I did not order the men in this case. I simply asked them for better material.
2309. Did you not say a minute ago that you had the right to order them? No. What I said was, I thought I had the right to ask them for better stuff.
2310. Did you ask the men at any other place to put in better material? No.
2311. How many of the heaped-up boxes of metal do you think you saw used in the concrete? I saw the heaped-up box used six or ten times.
2312. Can you swear that you saw it used ten times? I will not swear that I saw it used ten times, but I will swear that I saw it used five times.
2313. Where was that? At Premier-street.
2314. When? I can give you no date. It was during the course of the work.
2315. Can you not give us the date within a month? I can give you no date.
2316. Can you give us the date within two or three months? I can give you no date. It was during the course of the work.

- W. Darcus. 2317. What do you mean by the course of the work—extending over what period? During the time the work was being constructed.
- 10 June, 1896. 2318. What time was that? From March, 1894, till August, 1894, I think, but I will not swear to the dates.
2319. You cannot tell within a month or two? I cannot give you the dates, but it can easily be discovered when that work was going on.
2320. I understood you to say, at the commencement of your evidence, that you took measurements in connection with this contract;—who asked you to do so? Mr. Maddison.
2321. At what place? No. 7 shaft, Illawarra Road.
2322. Did he ask you to do so at Premier-street? He had nothing to do with the work at Premier-street.
2323. As to your conversation with Mr. Snodgrass, what value do you say you gave him for the centering? £5 or £6.
2324. Did that include the whole of the centering? It included the cancelled centering we were talking of at the time.
2325. You do not know, as regards the payment, what we received for centering? No.
2326. Do you know the exact size of the tunnel which was taken out? I know it pretty well.
2327. Do you think any part of the tunnel would be taken out larger than you indicated just now by your rough pencil sketch on the plan? It might be slightly larger.
2328. You are not sure whether it was not taken out square and timbered? Parts of it, where the ground is bad, would be taken out square and timbered. The drawing I made just now on the plan was intended to illustrate the taking out of the tunnel in rock.
2329. I thought you said that was a section of the tunnel approximately from beginning to end? That would be in rock. In soft ground, of course, the tunnelling has to be timbered.
2330. Do you know what it is packed with? It ought to have been packed with shale or with sandstone concrete where the engineer required it.
2331. Then the sketch you have made does not apply to the timbered ground? No.
2332. Can you give us an estimate of the quantity of excavation? No.
2333. Do you know how much of it would be timbered? I could not give you the quantity exactly.
2334. Could you give it approximately? No; I took no interest in the length.
2335. Then why did you say that it was on the average about 1 foot from the inside of the periphery? I meant that to apply to cases where the cutting was in rock.
2336. Then why do you not say so, instead of endeavouring to mislead persons? I am doing my best to give correct evidence.
2337. You assumed that the contractors were being paid for measurements which were not put in;—how did you arrive at that conclusion? To answer that question I should have to incriminate myself.
2338. *His Honor.*] You have already said that you were doing bad work without saying anything about it to the inspectors. I do not know that there is anything more in what you now wish to say? I did not consider it my duty to say anything to the inspectors, because I was employed by the firm of Carter, Gummow, & Co.
2339. I do not understand that your evidence would render you liable to any prosecution;—do you understand that it would? I do not know. Messrs. Carter, Gummow, & Co. are very vindictive people.
2340. I do not see how, as far as your evidence has gone, it would render you liable to prosecution. The mere fact of your having done bad work under instructions would not, as far as I could see, render you liable to be prosecuted? I did as I was directed by the contractors.
2341. *Mr. Gummow.*] You said that you did not remember anything about the times at which these things happened because you did not know that you were going to be examined about them? No.
2342. Did you know that you were to be examined upon any other points? No; I was summoned to come here when I had everything packed to go to Western Australia.
2343. Did you speak to any other men concerning this matter? To several men, I think.
2344. As to Messrs. Carter & Co. being so vindictive, in what way have they shown their vindictiveness;—do you remember the time when Messrs. Maddison and Ewing left the contract? Yes.
2345. Had you not your tools packed up ready to go the next morning when Mr. Forrest arrived? Yes.
2346. What did he say to you? That I was to go on with my work.
2347. Do you call that being vindictive? It was greatly to his interest to tell me to go on.
2348. In what way? I do not think he could have got another man at that time to carry on the work I was doing.
2349. Did the other sewerage contracts stop because you were not engaged upon them? No; but I had a thorough command of this particular work.
2350. Did Messrs. Carter, Gummow, & Co. not have other carpenters who were carrying on work of a difficult nature? Not so difficult, I think, as the work upon which I was engaged.
2351. Is this the most difficult sewerage work which has been carried out? The outlet at Bondi would be the only exception.
2352. You were not there, but I suppose the work was carried out all right? Certainly.
2353. If it was carried out all right, I presume men could be found to do the work? A carpenter was there, but there was an engineer to direct him.
2354. On this particular contract were Messrs. Carter and Gummow dependent upon you;—could they not have found an engineer? They could if they had liked, I suppose.
2355. Was there no engineer in the firm? I never saw one upon that job.
2356. You had the whole of the work upon your own shoulders? Yes.
2357. You say you worked under Mr. Snodgrass upon this job? Yes.
2358. Is he an engineer? I do not think so.
2359. Would he be capable of setting out this work? I have my doubts.
2360. Have you worked under him upon other contracts? Yes.
2361. Do you not know that he is a capable man, and could he not do all the measurements or anything that would be necessary on the part of an engineer? Not on the Marrickville job. He is supposed to be a capable engineer, but I know that he is not.
2362. Are you a judge of a capable engineer? I believe I am.

W. Darcus.  
10 June, 1896.

2363. How did you come to assume that we were to be paid for work we had not done? I do not think I assumed that. It is a well-known fact that you would not do work for nothing.
2364. How did you come to assume that it was a gain to us to have this stairway of which you have spoken knocked out? I did not assume that. I do not know how it came to be knocked out.
2365. Did you not say that the knocking of it out would be a benefit to the contractors? No. My answer referred not to the knocking out of the stairway, but to an alteration in the shaft.
2366. How did you arrive at the fact that that would be of benefit to the contractors? Because they were paid by the cubic yard for excavation and for concrete.
2367. Are they paid for what they do not put in? I do not know. They may be.
2368. You do not know? I know nothing whatever about their payments.
2369. The measurements you made up were for whom or for what purpose? For the information of two members of the firm, who could get no satisfaction from the clever members.
2370. Who were they? Messrs. Maddison and Ewing. They came to me and asked me to make out quantities so that they might know how many cubic yards of concrete were going in. They appealed to Mr. Snodgrass, and he would not tell them at all. Then they asked me to do the work, and I did it.
2371. You were to assist them, because they were so ignorant? That is putting it rather roughly.
2372. Could they not have done it for themselves? No.
2373. Then it comes to this: you were to assist them because they were ignorant, whereas the clever members of the firm could have done the work without your assistance? I suppose so.
2374. Why could not the men to whom you refer have got the information from other members of the firm? They asked for it, and were refused it.
2375. You acted as their engineer—as a sort of spy? I was no spy at all, and I defy you to prove it. I acted just as I was instructed by Mr. Maddison.
2376. *Mr. Parkes.*] Will you look at Drawing No. 4? Yes.
2377. Is it not a signed contract drawing; is it not a drawing you have often seen? It is a copy of the drawing.
2378. But is it not the same drawing? I do not think it is.
2379. Another drawing to which you referred is marked No. 4A? Yes.
2380. Is not the Drawing 4A the one containing the alterations upon Drawing No. 3? Yes. [*Vide Appendices D and No. 8.*]
2381. Would not the work shown there have been just as complete and sound if it had been filled in with any other material such as filling at 6d. per yard instead of with expensive concrete? Provided a good wall of concrete was made over the arches and up the shaft. The other space might have been filled in with filling at 6d. per yard, and the work would have been just as good.
2382. *His Honor.*] What did you mean by saying just now that you might have to incriminate yourself if you answered a question which was asked you by Mr. Gummow;—you did not appear to complete your answer to the question? I was going to say that I was one of the men who took the measurements at Premier-street. The measurements were taken with a rod 7 feet long marked 5 feet and 2 feet. The measurements were taken from the ribs to the dome. I would hold up the rod, calling out 9 feet, 8 feet, 7 feet, without measuring the distance between the end of the rod and the dome correctly. The measurement was carried on under great difficulties. It was a dark, wet place, and it was very difficult to stand. To obtain the measurements accurately, we should have had to build a scaffolding. As it was, I got up on to the ribs and held up the rod to the rock, and a man in the dry tunnel would write down the measurements as they were called out.
2383. That would be the Government engineer? Yes.
2384. Would he not check them? There was an inspector half-way up the ribs assisting us to take the measurement. He had a candle, and sometimes through water falling it would go out, and it would be impossible then to see whether the measurements were correct or not.
2385. You took the measurements, whether in the light or in the dark? Yes. I had a 3-foot rule and sometimes put it to the end of the rod, and would call out whatever I thought were the measurements.
2386. Do I understand you to mean that you took the measurements careless as to whether they were correctly taken, or that you took them wrong intentionally? I took them carelessly.
2387. On the whole, do you think you arrived at a fair general average, or do you think you exceeded it? I think I slightly exceeded it, but not much.
2388. Having regard to the conditions under which the measurements were taken, are they as good an approach to correctness as could be arrived at or not? We should have had to build scaffolding to get at them correctly; but we did not wish to take them correctly.
2389. The measurements were taken in the way you indicate to avoid trouble and loss of time? Yes.
2390. *Mr. Hickson.*] Who were the men engaged with you in taking the measurements? The labourers who were there; also Mr. Tudgay, the inspector, and Mr. Gibbs, the engineer.
2391. You are referring to the measurements at the Premier-street dome, I understand? Yes.
2392. *Mr. Gummow.*] Was the approximate way of taking the measurements your own way of taking them, or were you told to take them in that way? Mr. Snodgrass informed me that I was to make the best of it.
2393. In measuring holes in roof excavations you can easily measure 6 inches more or less if it is a very large excavation? Yes.
2394. For instance, could you say whether 2 or 3 inches this way or that, as the case might be, would be the more correct measurement to give;—speaking generally, is not the whole thing an approximation;—when all is said and done, could it be otherwise than approximate in very rough ground? I could have taken the measurements more accurately if I had been inclined.
2395. Could you get as absolutely correct measurements as you could get between timbers? No. In some cases the holes would be 6 feet.
2396. Did you take the measurements all over the dome? I measured when I got an opportunity in the deepest holes.
2397. Were there any deep holes you did not measure into? I measured all the deep holes I could get the rod into.
2398. Did you measure anyhow—that is, all over the place, or did you have a fixed idea? There were certain points given to us to measure from.
2399. *His Honor.*] By whom were these points given you? By Mr. Snodgrass. He mentioned that the measurements

W. Darcus.  
10 June, 1896.

- measurements were to be taken at certain angles round, and the circular ribs were set up as a guide. They could easily make the calculation inside the circular ribs, but they wanted it made outside.
2400. *Mr. Gummow.*] Mr. Snodgrass was your boss, was he not? No.
- 2401-2. He was one of the contractors, was he not? I am not sure. He is very seldom there.
2403. Did he not, as a matter of fact, settle the distances at which you were to measure the excavation to which you have referred;—supposing this room to be the excavation, was it not divided up into sections of 5 or 6 feet, and did you not measure from those sections up to particular points? It was not done in that way.
2404. Did you not, in going round the circle, take the measurements from certain points right round? I took the measurements as nearly as possible in radial lines.
2405. Having measured at one point, you would go a distance of 5 or 6 feet and take another measurement? Yes.
2406. There was a certain fixed method laid down upon which you made the measurements? Yes.
2407. It was not for you to go where you liked all over the dome and pick out the holes? No.
2408. You made the measurement from ribs fixed at certain distances apart, and your measurements from those ribs had to be taken by the Government and the contractors? That was the method adopted if it had been correctly carried out.
2409. You were not to pick out all the big holes and put your rod into them? I did, though, all the same. While I was employed by the firm I did my very best to further their interests, and I thought I was furthering their interests by giving them as much measurement as possible. If I got the opportunity to put the measuring rod into a deep place at a given point I did so.
2410. *His Honor.*] Was that done at their instigation, or was it your idea of your duty to your employers? The firm never instruct their men to cheat.
2411. What you did was your idea of doing your duty to your employers—the idea, for instance, which sometimes leads seamen to swear that lights were burning brightly? That is the case.
2412. *Mr. Gummow.*] Should you not think the firm must be losing very heavily now by not employing you? No; and I think that is an insolent question.
2413. *His Honor.*] How did you come to leave the firm? I had finished the work upon which I was engaged.
2414. You were not dismissed? No.
2415. There was no dispute between you and your employers? None whatever.
2416. Is the contract upon which you were doing the work you have described finished or not? I think it is finished.
2417. *Mr. Parkes.*] Do you mean to say that you made the extra measurements you had described of your own free will? I would rather not answer that question.
2418. *His Honor.*] It is a most important question, and you must answer it—the question is whether you made these measurements of your own free will without the knowledge or consent of the contractors? I have already said that Mr. Snodgrass told me to do my best for the contractors.
2419. Then you were under the impression that you were empowered and expected to do this work, were you? My impression was that I was to do my best for the contractors, and that was my method of doing it.
2420. *Mr. Parkes.*] Did you think you might not be kept upon the work if you did not do these things? I do not know about that.
2421. *Mr. Hickson.*] Was Mr. Snodgrass present when the measurements to which you have referred were taken? He was below on the floor of the dome.
2422. Did he direct you to put your rod into the holes? No.
2423. You did it of your own free will? Yes.
2424. *His Honor.*] In making the measurements the rod was supposed to be perpendicular to the particular part of the ribs from which the measurement was being taken? Yes.
2425. And the ribs were marked off at regular intervals to show you where the measurements were to be taken from? Yes.
2426. The rod was supposed to be long enough always to reach from the ribs to the roof? Yes.
2427. But occasionally you would find that the roof had been blown away too much, and in those cases you would have to guess the measurement? Yes.
2428. You used a 3-foot rule on the foot of the rod at places? Yes.
2429. And I understand that sometimes you simply guessed the measurement, and at other times you put the rule on? Yes.
2430. The light, you say, was bad? Yes, and I had a dangerous place to stand upon.
2431. What were you standing on? On the lagging.
2432. You were in rather a shaky position? Yes.

Thomas Wright sworn and examined:—

T. Wright.  
10 June, 1896.

2433. *Mr. Parkes.*] What is your calling? I am a carpenter.
2434. Were you employed at any time by Messrs. Carter, Gummow, & Co.? Yes.
2435. For any length of time? For some months; I did not take much notice of the time.
2436. Upon what jobs of theirs were you employed? At North Shore, Woolloomooloo, and Alexandria.
2437. The Alexandria job would be where the sewer runs through Alexandria Park? Yes.
2438. Your duty as a carpenter was to make the moulds on which the concrete sewer was built, is that so? Yes.
2439. *His Honor.*] Is that a branch sewer from one of the main contracts? It is a storm-water sewer.
2440. You are familiar with the section of sewer shown upon drawing No. 1, Contract No. 61, before you? Yes. [*Vide Appendix E.*]
2441. What you might call the invert of that sewer would be 9 inches of concrete as shown upon the plan? Yes.
2442. When you made those moulds what did you discover in connection with the concrete? I found that we could not get at places more than 3 inches or 3½ inches.
2443. Would that be throughout the sewer? It is now five or six years ago, and it is difficult to speak exactly

exactly as to the quantity, but there might be 30 or 40 feet to which that would apply. I know that I wrote to Mr. Davis the engineer about the time the thing occurred, but he never answered my letter.

T. Wright.  
10 June, 1896.

2444. Did you do all the centering upon this job? Yes.

2445. Beyond the 30 or 40 feet you have spoken of, was the work good? I daresay it would be near enough in places, but the material was bad.

2446. In what way bad? Condemned cement was used. I have known cement to be put into the work which would set in fifteen minutes. Mr. Davis and Mr. Snodgrass both tried the cement, and were satisfied that it was bad.

2447. Was it condemned by Mr. Davis? I think it was. I cannot be quite sure, but I think he condemned it. They had other casks of good cement upon the ground, and some of this cement which they knew would stand the test was sent in. Word came back that the cement was good, and I know for a fact that the cement which had been formerly condemned was used.

2448. Did you write to Mr. Davis and point that out? Yes; after a dispute, which subsequently took place at North Shore, with the contractor.

2449. You wrote to Mr. Davis about this job then? Not this job more than any other upon which I had known of defective work.

2450. Was cement being put into this No. 61 job at the requisite gauge? Some of the gauges would go as far as 30 feet. Now, a gauge of concrete, if the metal is good, will go about 20 feet. The proportions are 16 of metal, 8 of sand, 4 of cement. When these proportions are properly mixed up a gauge will go about 20 cubic feet, but, in this particular case, I have known it to go over 30 feet, because the material was bad.

2451. What you mean by that is they put in too much metal? The metal was not the right sort of metal. It was too fine. It was more like sand. I think I can safely say that sometimes the bankers would measure over 30 feet, and a cask of cement is supposed to go to every banker.

2452. That means that the quantity of cement used was short? Yes.

2453. *His Honor.*] In other words, the metal lay too close; and when you were measuring, if you had taken the weight of a cubic foot of metal you would have found it greater than it ought to have been, because there were fewer interstices? Yes. The metal we had from Kiama would run 20 feet to a cask of cement, and the metal which was crushed at Newtown would go about 21 feet, if the work had been done honestly, merely because the stone was flatter.

2454. If it had gone 21 feet it would not have been a bad job? No.

2455. How do you account for its going 30 feet? The metal was bad.

2456. Where was the metal obtained from? Newtown.

2457. Crushed how? I do not know.

2458. Had they a crusher, or was it crushed by hand? It was crushed by machinery, I think.

2459. Could you put your hand upon where the defective work is in the invert of the sewer? No, not very well. It has all been covered up. Commencing at the end where we finished in the Chinamen's gardens, near Alexandria Park, I should say you would find the bad work within about a foot of the end.

[*Vide Appendix E.*]

2460. *Mr. Parkes.*] You do not know what street that would be near? No; but I believe you would find the work starting there at about a foot from the end. You would find that the concrete there is only 2 or 3 inches thick.

2461. *His Honor.*] That is in the invert? Yes.

2462. Is there rock underneath? No—sand.

2463. *Mr. Parkes.*] If the invert of the sewer is 9 inches, and if the sewer is 7 ft. 6½ in. by 7 feet, there would be a large saving, would there not? Yes; I thought many times that there was £100 saved in that little place to which I have referred. When the work was open I could have shown it to you easily enough, but it would be hard to find it now.

2464. You knew of this bad work by testing it yourself? Yes.

2465. As you went down the sewer, did you have to drive the peg down at any place? I should say that at least thirty or forty pegs had to be shifted? I cannot say the exact number, because the thing happened five or six years ago.

2466. What you mean is that the pegs were put up in the first place to show a gauge of 9 inches? Yes.

2467. And to get in your moulds to construct the sewer you had to drive these pegs down to 3 inches? Yes; we had to go down to get the grade. The concrete is supposed to be put in at the bottom in two layers—one of 4½ inches, and the second 4⅜ inches, ⅝ inch being allowed for rendering. When I came to set my moulds I had not room for half the thickness, and I had to pick it away.

2468. Even for the first 4½ inches? Yes.

2469. *His Honor.*] You say you had to drive the pegs down to 3 inches in some cases? Yes; I do not suppose there would have been even that much in some places. There was no room for the second layer at all.

2470. A mistake was made originally in the calculation? I could not say where the mistake was made.

2471. You could not get your grade? No; we should have had to go up hill.

2472. You found a gradual sweep upwards? Yes.

2473. To get the proper thickness in the bottom the pegs swept upwards a little? Yes.

2474. The bottom layer was there before you went in? Yes.

2475. *Mr. Parkes.*] You also worked on one of the North Shore contracts? Yes.

2476. And you found defective work going on there also? Yes.

2477. Did you see it yourself? Yes. One-half of the cement put into that job was condemned cement.

2478. How did they manage to get it in? In this way—one dray would take six casks and another five. In the case of the six casks there were three of condemned and three of good cement. In the case of the five casks the good and bad cement would be in the proportion of three to two in alternate loads.

2479. Was the concrete in this case mixed in bad proportions, as you have described in the case of the former job? Yes; the metal was good enough though.

2480. *His Honor.*] What was there wrong in the mixing? The proportions were wrong.

2481. What contract are you now speaking of? No. 60.

2482. *Mr. Parkes.*] Upon the whole, was there very much defective work so far as the concrete was concerned? They were using bad cement all the time I was there.

2483. How long were you there? About two months. It might be more, or it might be less.

2484. Did you write to the Department complaining of this defective work? Not till after I had been dismissed from the works.

2485.

T. Wright. 2485. Why were you dismissed? Perhaps I had better explain. I was working there at about 4 or 5 o'clock one Saturday evening when the inspector came round with Mr. Forrest. Both of them were pretty well drunk.

10 June, 1896.

2486. *His Honor.*] What is the name of the inspector? Inwood. They had been boozing all day. That happened not one day, but almost every day. There was another inspector standing watching us all the time. Inwood raised his foot and drove it through the metal, and said, "This b— stuff will not do" and "That b— stuff will not do"; and went on for some time in that way. Presently I got angry and began calling him names. I afterwards put on my coat and went away home. The following Monday was a holiday. When I came back on the Tuesday Mr. Forrest came to me and said, referring to what had taken place on the Saturday, "This is going to be a bad job. We are going to put you away. You will have to go away. Perhaps, however, an apology will do." I said I would not make any apology. On the following morning Mr. Carter and Mr. Forrest came down to me, and Mr. Forrest said, "I am sorry we have to put you away, but we must do so. We are putting you off without a fault." I at once gathered up my tools and got my time and money and went. Before that, however, I saw Mr. Davis and he asked me what I was put off for. He said, "You are not put off; they cannot do that." I said, "But they have done it." He then wanted to know what I had been put off for. I told him that we had had some words. I went round two or three days afterwards to a room in the Works Department. Mr. Bagge, Mr. Davis, and Mr. Piper and several more were there. I wanted to say something more in reference to the matter, but they would not allow me to say a word. I did not open my mouth. When it was all over Mr. Davis turned round to me and said, "You had no business to interfere with the contractor when he said what he did." I was a little bit surprised at the time, and I said something about letting the cat out of the bag, and I added, "I will see you in the morning." He said, "I do not want to see you." On the following day I wrote him a letter, and I have received no answer to it from that day to this. Afterwards I told the Honorable John Davies all about it, and he said, "Give me a letter similar to that which they have put into the waste-paper basket." I gave him a copy of the letter I had sent to Mr. Davis, and when I saw the Hon. John Davies again he said, "You make application for a place, and you will get it." Before I could make any application Mr. Bruce Smith, who was Minister at the time, went away, and when he came back I tried time after time to see him, but could not do so. I also wrote on different occasions, but I could not get an answer. I do not know whether Mr. Davis is responsible for it or not, but ever since I have been deprived of the opportunity to get any work on contracts under the Department.

2487. *Mr. Parkes.*] You are confident there was bad concrete used upon job No. 60, and that the cement was bad? Yes; I am sure of that.

2488. You can swear absolutely that that is so? I can swear that the cement was bad. I remember Mr. Davis going over one day and getting it all carted away. He knows that what I am saying is true.

2489. Was this bad concrete being used during the time you were on the job? Yes; for weeks. The first day I was on the job I saw what was going on. The cement which was condemned was in a different sort of cask to the good cement. It was in a tongued-and-grooved cask, and anyone could tell the difference, therefore, between the good and the bad cement which was being used.

2490. You know, of your own knowledge, that this defective work was going on? Yes.

2491. Were you doing it of your own intention, or were you instructed to do it by anyone? Well, we had the cement there, and we had to use it. Mr. Forrest would come over, and would help to unload the cement himself.

2492. He assisted you, then, to a certain extent in putting in the bad work? Yes.

2493. You say that in some of the concrete there was not sufficient cement? That is so.

2494. Do you think the contractors knew that the concrete was being mixed without the proper proportion of cement? I do not know whether they knew it or not.

2495. Were you acting without instructions in what you did? Well, you go there; you see what you have to do, and you do it.

2496. Who gauges the material for the concrete? There is one man there purposely to do that. He was on the board, and did all the gauging.

2497. How would he gauge? Sometimes, if there was nobody watching, he would put in as much as he can get in. He would make the gauge of stone as big as he could make it.

2498. Would there be a contractor's manager at work on the contract? Sometimes there would be a foreman.

2499. You were explaining how the bad concrete was mixed? Well, there is a box which is supposed to hold 16 feet. If there is no one watching, the man would put in 2 or 3 feet more. He has to keep an account in his own mind of how he is going on with the box. Perhaps when night comes round he will know that he has used thirty casks of cement. He will be asked how much he has used during the day. He will then say that he has used forty casks, having used only the thirty, knowing that forty casks would correspond with the work which had been done. If he did not watch very carefully he would be bowled out, because anyone knows that one cask of cement if used in the proper proportion will only do so much work.

2500. *His Honor.*] Would there be no account kept of the number of casks in the shed (say) one morning, and the number there on the following morning? Well, there might be 200 or 300 casks in the shed.

2501. But no account is kept by the inspectors showing the number of casks which have been taken out? No. They take down whatever number they are told.

2502. Do I understand that the man who manages the mixing of the concrete is a sort of foreman, who would return what would appear to be the proper number of casks which had been used in proportion to the quantity of work done? Yes.

2503. How many times did you write to Mr. Davis about these matters? Two or three times.

2504. And you say he never replied to your letters? No.

2505. Have you since seen him in reference to the matter? I have seen him, but I have not spoken to him since he told me that I had no business to interfere.

2506. *Mr. Davis.*] Since 1891 I suppose you had mentioned these matters to someone else? I daresay I have.

2507. Have you spoken to Mr. Parkes about them? Yes, I saw him yesterday and told him.

2508. When do you say you told Mr. Parkes? Yesterday or the day before.

2509. Referring to contract No. 61, and to what you allege as to the bottom of the sewer at Alexandria— was it an accident or was it done purposely? I could not say.
2510. Did the inspector know that too little concrete was put in there? Yes.
2511. Did the resident engineer know? I cannot say.
2512. Which end of the sewer did you begin to construct? We began about the middle.
2513. With respect to the condemned cement upon contract No. 61, do you know of your own knowledge that condemned cement went into the work—are you positive on the point? I can swear it.
2514. What are your reasons for swearing that condemned cement went into the work; how do you know that the cement which you saw going into the work was condemned? When the cement was condemned word was sent out to the man in charge that it had been condemned. Every man upon the job would know of the condemnation. Of course I did not actually see the cement condemned.
2515. *His Honor.*] How do you happen to know what particular lot of cement was condemned? The cement is branded. We might get in on any one day 200 or 300 casks. A cask of it would be taken away to be tested and if it is condemned we would know that the whole of that brand was condemned.
2516. *Mr. Davis.*] Can you remember the brand of cement which was condemned in this instance? The "Lion" brand.
2517. Will you swear that the parcel of "Lion" brand which was brought on to the work was condemned, and that in spite of that it was put into the work? Yes.
2518. To what extent was it used? I could not say how much was used.
2519. Could you give us an idea of how many casks there would be likely to be in the parcel? I could not say. Sometimes I was at North Shore, and sometimes I was on the other job.
2520. There might have been only five? There might have been more.
2521. How many more? I could not say how many more, but there would be far more than five. If you had come out when I sent you the letter, you would have seen all that was being put into the work.
2522. Coming to contract No. 60, you and the inspector had rather a serious quarrel there, and the upshot of it was that an inquiry at which you were present was held? Yes.
2523. Unfortunately for you, you were sent away from the work? Yes.
2524. You were not satisfied with that? No.
2525. After that you wrote to the Hon. John Davies? No; I did not.
2526. When was the inquiry held? It was held the week after I was put off the job.
2527. Did you not write to the Hon. John Davies before that? I wrote to you two or three times, receiving no answer, before I saw the Hon. John Davies.
2528. Was it before or after the inquiry that you wrote to the Hon. John Davies? I did not write to him.
2529. What was the purport of your communication with him? I gave him a copy of the letter I had sent to you.
2530. What was the nature of the letter? I found fault with the material, and I also mentioned the way in which the men were drinking.
2531. Was not your letter to the effect that a certain inspector had been imbibing too freely? I told the Hon. John Davies of the matter in the street. I gave him a letter which he took to Mr. Bruce Smith. I did not write to him at all.
2532. After all this, did you apply for an inspector's position? No.
2533. Coming to this condemned cement which you say was used upon contract No. 60, can you give us any more definite information about that than you have given us about the condemned cement which you say was used upon contract No. 61? I know that it was condemned cement. I saw you standing beside me and allowing me to use it.
2534. How do you know that it was condemned cement which you used? Word was sent out that it was condemned. Mr. Forrest and Mr. Carter and everyone knew that the cement had been condemned, but they were all half drunk right through the place.
2535. You were the only righteous man there? I took it as well as the rest.
2536. *Mr. Gummow.*] Do you say that Mr. Carter was the worse for liquor? I never saw him the worse for it.
2537. Did you ever see him take any liquor? I did not.

Patrick Harford Kenna sworn and examined. :—

2538. *Mr. Parkes.*] Do you know a man named Christian Hansen? Yes.
2539. Will you tell His Honor the statement he made to you the day before he came here to give his evidence? On the occasion to which I refer, I was in King-street, Newtown, with him. We were talking over matters in connection with this Commission. I happened to remark that it was time some change was made, and I said, "You are aware that the work is being slummed," as we term it. He said, "I know that very well, but if a man said anything about it he would be looked upon as an informer." I saw him the next day, and he told me that he had to give evidence. He said, "I had four or five months' work, but I suppose I shall lose it through having to give evidence." When I read his evidence in one of the newspapers, I was very much surprised at the way in which he had turned round upon what he had said to me, and I thought that in the interests of justice I ought to make known what I knew concerning the matter.
2540. *His Honor.*] Did you go to Mr. Parkes and tell him? I had not seen him until to-day.
2541. *Mr. Hickson.*] Were you employed upon any of these works? Never.

P. H. Kenna.  
10 June, 1896.

William Henry Warren sworn and examined. :—

2542. *Mr. Parkes.*] You are Professor of Engineering at the Sydney University? Yes.
2543. In the week before last I think you paid a visit of inspection to what is called contract No. 79A at North Sydney? I do not know it as 79A; but I went to the intersection of two streets there and I went down a manhole and inspected the sewer.
2544. What did you see? We crawled in for a distance of about 143 feet, where bricks had been knocked out in accordance with our instructions, and we found a cavity behind the bricks about 7ft. 6in. long, 18in. in width, and 11 or 12 inches deep.

W. H. Warren.  
10 June, 1896.

2545.

W. H.  
Warren.  
10 June, 1896.

2545. Did you test any other portions of the sewer? No; we did not go beyond that. We found it extremely difficult to get even to that point.

2546. Did the man who accompanied you ask you to go any further? Yes.

2547. You think he was prepared to show you further defective work? Well, he asked us to go further, but we could not do so. We had extreme difficulty in getting to the point I have named. Mr. M'Creddie, I think, could not have gone further even had I done so, because he was more exhausted than I was.

2548. Do you think from the nature of the cavity you saw that it would be at all likely that other parts of the work would be defective—that is to say, that other cavities would have been left? It is impossible to say that. There is no doubt as to the existence of this one cavity; but one would require to see the other cavities, if they exist, before saying anything about them.

2549. But from the cavity which you saw, would you entertain a suspicion that there would be further defective work? I should think it quite possible that having found one defect you might find others.

2550. Did you test the brickwork at all? I looked at it.

2551. What class of brickwork do you think it was? First-class.

2552. Did you test the cement in the packing at all? I saw some cement mortar which appeared to be pretty good.

2553. Do you mean concrete? It was cement mortar that I saw. I do not quite know what the proportions of the composition would be.

2554. *Mr. Hickson.*] Were the holes made for you before you went into the sewer to look at them? We saw them made. We did not go into the sewer as we had originally intended to find out any defective places for ourselves on account of the extreme difficulty attending the inspection, but we sent Mr. Davis in with the men, and we could see all that they did. We saw them knock out bricks, and afterwards when we knew there was a cavity we went in to see it.

2555. Who decided upon the places at which the bricks should be taken out? The man with us seemed to know precisely where to go. He found the place at once.

2556. I understand you examined two places? Two places were examined. In the first place the work behind the bricks was solid, and there was, therefore, no use in examining it. They went on a little further and knocked out other bricks, behind which the cavity I have described was found.

2557. Was the class of workmanship, as far as you saw, generally good? Yes.

2558. Do you think that by tapping the roof of the sewer you could detect hollow places? I would not undertake to do that. I do not think you could accurately do it in a sewer, because the noise made would be too great. By tapping a wall outside you might ascertain whether there were any hollows behind it, but it would be very difficult to make such a discovery by tapping in a sewer, especially in a sewer of this size.

2559-60. Have you gone into the question of the strength of the roof of this sewer? Of course there is no doubt that at the particular place to which you have referred there was no packing. But would there be any danger of anything happening to damage the sewer? In what way?

2561. For instance, the sewer is 3 ft. 3 in. x 2 ft. 2 in., and the cavity is on the top? No, the cavity is on one side.

2562. Is it possible for the roof to be lifted from any pressure that could be brought to bear upon it in the sewer? From any internal pressure, certainly not.

2563. That would be impossible, you think? Yes.

2564. What head of water would be required to lift the roof? The best way to test it is to take a foot of sewer and to imagine that the sewer is bursting. The sewer could only burst in one of two ways. The cement itself would either fail by tension, or it would be pulled away from the bricks to which it had adhered. We will suppose that the adhesion between the bricks and the cement is overcome: I went into that matter some seven years ago. I think I made some 300 tests, which are recorded in most of the books. The result amounted to this, that a pressure of 75 lb. to the square inch would be required, and that would mean a head of 170 feet.

2565. You mean that you would require 170 feet of head in order to damage that piece of sewer? Yes. That is assuming that there is a cavity all round it, and that the mortar is 3 to 1; it would undoubtedly take that head to burst it.

2566. Do you know the depth of the shaft? I was told it was 80 feet.

2567. Therefore you would require to have a column of water 100 feet over the shaft before the sewer would burst? Yes, supposing the mortar were of good quality.

2568. If evidence has been given to the effect that 4½-inch brickwork is not sufficiently strong, that would be absolutely incorrect? Yes; 4½ inches would give abundant strength.

FRIDAY, 12 JUNE, 1896.

Robert Rowan Purdon Hickson recalled and further examined:—

R. R. P.  
Hickson.  
12 June, 1896.

2569. *Mr. Parkes.*] You identify the document I hand you as the schedule tender form for contract No. 117? It appears to be the departmental schedule form. I know nothing about the figures or quantities it contains.

2570. With reference to Ahearn's contract, No. 101, will you give me the length of the aqueduct in chains? It appears to be 29 chains.

2571. Will you have prepared a document showing the contract cost and length of contracts No. 101, No. 112, and No. 77? Some of these contracts are not yet finished. I suppose you mean the cost, as we think it will run out at the schedule rates. Of course, in some cases we have to vary the quantities.

2572. I am assuming your estimate to be absolutely correct? I understand.

2573. The sewerage plan in contract No. 112 was altered [from three pipes to an open aqueduct;—I presume that the open aqueduct will have to carry the contents of the three pipes? No; I think not.

2574. If the three sewers discharge into it, would not that be so? I think there was an off-take on each side between 101 and 112. I am speaking from memory, but I think you will find that there was an off-take. [*Vide Appendix F.*]

2575. What would be the size of the off-take? That I could not say; but I think there were two distributing sewers to the sewerage farm.

2575½. Still, there would be three 6-foot sewers joined on to the aqueduct? Yes; but of course No. 112 would not have the capacity of No. 101.

George

George McCredie recalled and further examined.—

G. McCredie.  
12 June, 1896.

2576. Will you tell His Honor what you saw and what generally happened yesterday in the course of your inspection upon Contracts 79A and 79? We started at No. 24 shaft beside the ferry. Mr. Davis and two men accompanied me. I got on to a trolley, having with me a 7-lb. hammer. I tested carefully the brickwork forming the arch or crown of the sewer all the way along. The first apparent cavity I came to was on the up-stream side of shaft No. 23. From the sound when I tapped with the hammer I was inclined to have it opened. An opening having been made, I found a small cavity 12 inches square by 3 inches deep. I continued testing as I went along, and another hole was made between shafts No. 18 and No. 19. I thought from the sound that there was a cavity behind it. When the opening was made I found only a half-inch between the back of the brick and the face of the rock.
2577. *His Honor.*] You mean an opening of half-an-inch which had not been filled in? Yes; about midway between 16 and 17 down stream. I had another opening made and found that the packing was hard up against the brickwork.
2578. *Mr. Parkes.*] Do you mean the packing or the rock? In that case there was packing. Twenty feet further on I found that the brickwork was hard up against the rock. My opinion is that the tunnel at that end goes through solid rock, and that the brickwork is pretty hard up against it all the way. I continued testing right on until we came to a point between shafts No. 12 and No. 13. When I came to a point about 125 feet up-stream from No. 12 shaft—of course the distance is only approximate; but it is as nearly as I can give it—I found a space behind the brickwork 9 feet long and 3 feet wide with an average depth of 9 inches. I tested on to the mouth of the shaft and found no other cavity. I went on through, I think, No. 79 Contract. The sewer there is I think a little deeper than in the preceding contract, and is cemented all round. I had the sewer tapped all the way along, and as far as I could judge there were no defects.
2579. *Mr. Parkes.*] Did you measure the hole you found upon the occasion of your first inspection? Yes; I measured it again yesterday to make sure of its dimensions.
2580. What were they? It was 7 ft. 6 in. by 3 feet;—I found it just the same—exactly the measurements I gave you before.
2581. You found yesterday an additional hole then? Yes.
2582. I understand you to say that Contract 79 is rendered in cement? Yes; it is cemented all round.
2583. Was 79A similarly cemented? No; it was struck-joint in the arch, and the bottom was cement.
2584. If you look at that voucher in connection with Contract 79A, you will see the quantity of cement facing paid for is 2,522 yards at 2s. 6d., giving a total of £315 5s.? Yes.
2585. What is the length of that tunnel, speaking roughly? I could not say.
2586. Would it be a mile? I should think so, but I could not say definitely.
2587. It was not cemented on the face anywhere? No; only on the bottom of the channel.
2588. Will you have measurements made upon that contract to see what the total of cement facing is? Yes.
2589. Do you feel absolutely confident that the tapping you made in the course of your inspection yesterday is a sufficient test of the soundness of the work? It is the only test you can get after the work is completed. The only other test you could get would be to strip all off, and that would be out of the question. I tapped yesterday with a hammer from the top of the arch right round the haunch. I could tell when I came to the haunches of the arch whether the work behind was solid or not. If I came to any spot where I thought the sound was at all hollow I would tap for a foot or two all round it, and if I found that solid I did not think it worth while to have an opening made. Where I was satisfied that the cavity was not of any great size I did not think it was a sufficiently serious matter to have an opening made.
2590. But you did detect hollow sounds in places besides those which you had opened? Yes.
2591. Round these places you think the work was solid? Yes.
2592. And generally you think that in the lower end of the sewer the work is correctly done? Yes.
2593. You think the brickwork is close to the rock? I think it is pretty close up to the rock.
2594. And you think you applied a fairly accurate test? Yes.
2595. *Mr. Hickson.*] As regards Contract 79, you think after an examination of it that the work there is all right? Yes.
2596. If you were a responsible officer you would be quite satisfied with that work? Yes.
2597. As to Contract 79A—the work, by the way, was not done under me—you are aware that evidence has been given here by a man named Dawson? Yes.
2598. The cavity you found yesterday was close to the cavity you found on the occasion of your last inspection? Yes; it was on the other side of the tunnel nearer to the next manhole.
2599. I suppose that if an unprincipled man deliberately made up his mind, when the Inspector's back is turned, to leave a cavity, there would be no possible way of preventing that kind of thing happening except by having an Inspector over every man at work? If a man were determined to leave the cavity, unless he were watched closely, he could leave it. Of course there is no doubt about that.
2600. The workmanship you saw all through was generally good, was it not? Yes; the brickwork was very good.
2601. You cannot call it bad work in the ordinary sense when a certain part is deliberately left out? Quite so. The larger cavities certainly looked as if they had been deliberately left out.
2602. The workmanship all through, you say, was, in your opinion, good? Yes; very fair.
2603. *Mr. Gummow.*] You said that Mr. Davis and two workmen went down with you yesterday;—did any other person go down? Yes; at shaft No. 13 Dawson went down.
2604. Did he take any part in showing you these places? I went on tapping to find out hollow places, and I told him to shout out if he wanted me to make a hole at any particular point. When we came to the cavity I have described, of course anyone could hear that there was a hollow, and Dawson asked that it might be opened out.
2605. Did he appear to know pretty well where these places were? I could not tell, because he was away behind me.
2606. But he asked you to have the openings made at these particular places? Yes.
2607. *His Honor.*] Taking the particular section between shafts 13 and 14, in addition to the very bad places you have named, did you find any other suspicious places? No other suspicious places.

- G. McCredie. 2608. In other sections you found suspicious places, but you thought there was not a sufficient indication of a cavity to warrant you in having an opening made? That is so. For instance, I might come across a small cavity, say about a foot or perhaps not as much. It is not always possible to pack thoroughly at the back of the brickwork, and a little space might be left not intentionally—because no benefit would be derived from leaving these small pockets—but because of the difficulty of packing.
2609. The small spaces to which you refer would be little hollows in the rock which, as the brickwork went on, would practically be covered up in such a way that it would not be possible to pack them? Yes. When I came to such places I tested down to the haunches, and I felt satisfied that if there were no concrete behind I should be able to tell at once.
2610. *Mr. Parkes.*] I will now take you back to Contract No. 77—the contract upon which the Monier arch was substituted for the original design of the Department;—you have taken out the quantities of the Monier arches and aqueducts? Yes. [*Vide Appendix No. 15.*]
2611. You have thoroughly checked them? Yes.
2612. Did you re-check them? Yes.
2613. And you are absolutely sure that the quantities are correct? Yes.
2614. You have no doubt about it at all? Not the slightest doubt.
2615. Upon the whole of Contract No. 77 the only parts affected by the Monier system are the arches and the aqueducts? Yes, that would be at White's Creek and Johnstone's Creek.
2616. First of all you measured up the compo? Yes.
2617. What did you make out the quantities to be? 1,084 cubic yards.
2618. *His Honor.*] You are speaking of the Monier system as it is being worked out on this particular contract? Yes.
2619. Your observations apply to both the White's Creek and Johnstone's Creek aqueducts? Yes.
2620. *Mr. Parkes.*] You did not see the Government estimates during the time you were making your own computation? No. [*Vide Appendix No. 12.*]
2621. You were afterwards shown the Departmental estimates for the two aqueducts? Yes.
2622. Will you look at item No. 21, special bluestone concrete, and tell me what the quantity is? 1,050 yards. My own quantity was 1,084.
2623. *His Honor.*] I understand that cement mortar was substituted for the special bluestone concrete? Yes.
2624. *Mr. Parkes.*] You consider that that is a fair computation of the quantities? Yes; it is as nearly as you could get at them.
2625. Take the ironwork, the next material used in the Monier system; what is your total weight of ironwork? Do you include cast-iron?
2626. I mean the total weight of iron used in construction? Sixty-two tons.
2627. What is the computation of the Department? Sixty-six tons.
2628. Those are the principal items in this particular work, and they tally very fairly with the estimated quantities of the Government as you see by this document? Yes. [*Vide Appendix No. 12.*]
2629. How would you estimate the value of the quantity of compo., 3 to 1? I make it up in this way: Take 3 yards of sand at 2s. 6d.; that would be 7s. 6d.; 1 yard of cement, at six casks to the yard, at 9s. 6d. a cask, would be £2 17s. If you add those items together you will get £3 4s. 6d. That would make 3 yards of stuff? If you divide the total by 3 you would get £1 1s. 6d. That is the cost of the material. I allow 8s. 6d. for labour, covering, timbering, mixing, and everything in connection with it. That brings the value up to £1 10s. I therefore put the compo. down as worth £1 10s. a cubic yard.
2630. There is no doubt, making the measurements in that way, as to the accuracy of your statements? No.
2631. It is universally acknowledged, for instance, that six casks of cement go to a yard? Yes.
2632. If you look at the item 51 in the Government schedule you will find that 13s. a cask is allowed for cement? Yes.
2633. That is the schedule applying to Contract No. 77? Yes. [*Vide Appendix No. 12.*]
2634. If, then, the compo. was put down at £3 10s. a yard, would not that be an extravagant price? I think so.
2635. If the price of compo. were stated at £6 a cubic yard, would not that be an absurdly high price? I should think so.
2636. The two documents before you are departmental schedule forms for contracts, are they not? Yes.
2637. You know Contract No. 77? Yes.
2638. And you know the adjoining Contract running from it, No. 117? Yes. [*Vide Appendix No. 16.*]
2639. There is no doubt that the nature of the two contracts is the same, and that they are going on at one and the same time? Yes.
2640. Can you understand why, in the case of Contract 117, excavations in solid rock with 4 lb. charges of powder are put down at £1 8s. a cubic yard, and why, in the case of Contract 77, the excavation in solid rock is put down at £2 17s. 6d. per cubic yard—100 per cent. difference;—can you understand upon what principle those values are made out? I cannot.
2641. If the excavation in the case of Contract 117 was worth £1 8s. per cubic yard, there is no doubt in your mind that the excavations in the adjoining Contract No. 77, was worth a similar sum? Well, they are upon the same line of country.
2642. Bluestone concrete, 3, 2, and 1, is bluestone concrete all the world over? Yes.
2643. Can you understand why bluestone concrete should be put down in Contract No. 77 at £2 10s. per cubic yard, and in Contract 117 at £2 a cubic yard? I do not understand it.
2644. It would be of the same value in both works? It should be.
2645. Take the excavations in hard rock where guttering and gadding only is permitted—can you understand how it is that in Contract No. 77 the item for excavation in hard rock where only guttering and gadding is permitted is put down at £3 5s. per cubic yard, while in the adjoining contract it is put down at £1 16s. per cubic yard—about 100 per cent. difference? No; I cannot understand the difference.
2646. Does it not seem to you ridiculous? It does not seem right. I do not understand the reason for it.
2647. If in the case of Contract No. 77 special bluestone concrete is put down at £3 per yard, and in Contract No. 117 at £2 10s. per yard, does not that also seem to you absurd? It does not seem right.
2648. You will see that brickwork in the case of Contract No. 77 is put down at £2 10s. a cubic yard, and in the case of No. 117 at £2 5s. a cubic yard—is not that a very extraordinary thing considering that the two contracts were going on at one and the same time? It does seem extraordinary. 2649.

2649. Can you understand the difference? Not upon the assumption that the two contracts were let at about the same time. G. McCredie.
2650. If the two contracts were let within six months of each other could you understand the difference? No. 12 June, 1896.
2651. Take item No. 23, cement facing 1 to 2;—that is put down at 2s. 3d. per square yard in the case of Contract 77, and in the case of Contract 117 at 2s. per square yard;—then take item 24, special cement facing 1 to 1;—it is put down in Contract No. 77 at 2s. 6d. per square yard, and in the case of Contract 117 at 2s. 3d. per square yard;—you will see that in almost every case the prices in the case of Contract No. 77 are greatly increased;—do you think that even if there were a period of six months between the letting of the two contracts that would justify such an extraordinary increase amounting in some cases to 100 per cent.? I do not think so.
2652. You have had considerable experience as an engineer, and you have been able to keep your estimates at about one value, have you not? We keep them at the prices going at the time. In working out every job we go according to the prices current, but there has been so little difference in prices for the last two years that our estimates are pretty well all based upon the same figures.
2653. You, as an engineer, would not care to be responsible for two documents such as those which I have placed before you, would you? You mean as to the different prices—no.
2654. Does it not look like what is called “rigging” a schedule? I do not know what reason there could be for the difference, which is very great upon many of the items.
2655. Have you not lately carried out a good deal of excavation work through rock in connection with a telephone tunnel? Yes; we have the work in hand at the present time.
2656. What are the prices you have paid for excavation in hard rock? From 9s. to 12s. per yard. The highest we have had has been 14s. I am giving you the net cost.
2657. Have you ever made much research as to the construction of sewers in England or on the continent of Europe? I have never had occasion to go into that matter very deeply.
2658. You have never noticed the cost at which this work is done upon the continent of Europe? No.
2659. Your total estimate for the aqueducts under the Monier system, deducting the piers shown in both cases, would be £4,570 for both aqueducts? Yes. [*Vide Appendix No. 15.*]
2660. You are absolutely certain of your quantities? I am.
2661. What do you base them upon? My calculations are made upon what I myself could carry the work out for.
2662. You guarantee that you yourself could do the work for that price? I could.
2663. Taking your estimate, the balance of the contract which is not connected with the Monier patent would represent the sum of about £9,200? Yes.
2664. Twenty-eight and a half per cent. taken off that amount would bring it down to about £6,300, would it not? Yes.
- 2665-6. And that amount added to £4,570 would give you a total of £10,870 for the whole of the work? Yes.
2667. Do you feel absolutely sure, from your experience as an engineer, that that is the total price which would be paid for the entire Contract No. 77, including the Monier patent? I think so.
- 2668-9. Therefore, if the Government of this country are paying £15,500 for that contract they are paying, in your opinion, an excess in value of about £4,700? Yes.
2670. You have also made out a valuation of the aqueduct shown in the original office plan? Yes.
2671. Will you give a general description of the difference between the two plans, as regards the material, for instance? In the case of the original departmental design there is a good deal of brickwork; then the piers are much closer together. There are more piers. There is no brickwork, in fact, in the other design, and it is a very big item in the original design. Then the stonework in the original design is also a good item.
2672. Is the stone not rubbed, dressed, and moulded? Yes; it is supposed to be worked stone. It is a more expensive structure altogether as compared with the Monier.
2673. Is there not a great deal of concrete? Yes; there is more concrete than in the Monier plan.
2674. You have also made an estimate of the aqueducts in the original design, and I believe it amounts to £9,679, does it not? Yes.
2675. That is also computed upon the prices ruling at the present day? Yes; and upon the same basis of price as my valuation in the case of the Monier system.
2676. Therefore, there is a difference as between the Monier plan and the original plan as regards this part of the work of £4,215? Yes; that is the difference between £9,679 and £5,464.
2677. Then, taking Carter, Gummow, & Co.’s tender for the office designs at £15,750, and taking their tender for the substituted plan at £15,500, the country loses on the bargain £4,215? Yes.
2678. There is no doubt about that? There is no doubt about the two values of the work.
2679. You went out to examine this Monier work, did you not? Yes.
2680. What did you see? I had a good look round at the work. The first aqueduct at White’s Creek was pretty well completed.
2681. Was the work as far as you could see being carried out in a special fashion or in the ordinary way? There seemed to be nothing special about the carrying out of the work. The centerings were practically the same as those used in ordinary brickwork. The concrete, too, seemed to be mixed in the usual way. It seemed to be the same as that in use upon other work.
2682. Did you notice whether all the arches you saw had centres under them? No; some had not.
2683. How many centres were being used? I could not tell you, speaking from memory. In the case of the first aqueduct I think they were all down. I remember walking underneath some arches in which they had been taken out.
2684. How many arches would you think they had been taken out of? I could not say. I made no special note of it.
2685. You have had a great deal of experience in constructing builders’ and contractors’ plant? Yes.
2686. Is not the cost of centering for an elliptical arch almost double the cost of centering for a segmental arch? I would not say that the cost is double, but the centre for an elliptical arch costs considerably more.
2687. Almost any tradesman could make the centering for a segmental arch? Yes.

- G. McCredie.  
12 June, 1896.
2688. But it takes a man with special knowledge to make a centering for an elliptical arch? Yes.
2689. It would have to be made from five centres? Yes.
2690. And if the arch were not quite true it would be a dangerous arch? Yes.
2691. Therefore, there is not the slightest doubt but that the centerings used for the Monier arch would not be as costly as the centerings which would have had to be used in connection with the ellipse arch set forth in the original design? The arch in the original design would be a more costly arch to make altogether. It would certainly be more costly as far as the centerings are concerned.
2692. You saw the ironwork sticking out of the arches on Contract 77 the other day? Yes.
2693. Was it rusty? Yes. It had been exposed to the weather.
2694. Was it very rusty? You could see at once that it was rusty.
2695. Did you notice whether they were building over the iron while it was rusty? No; at these particular places they were not building over it. They were working on the bluestone concrete for the bed of the channel. The iron I saw was the ends sticking out of the work.
2696. And these you say were rusty? They were bound to be rusty from exposure to the weather.
2697. Did you look at the iron which was employed in the conduit—was that also rusty? Yes; the ends there were also rusty.
2698. *His Honor.*] Do you mean just at the very end? That would be all that you could see.
2699. Do you mean that only the ends of the projecting parts were rusty, or that the whole of the projecting parts were rusty? There were only about 5 or 6 inches projecting.
- 2700–2701. *Mr. Parkes.*] It is necessary to ensure the stability of this class of work that it should all be carried out as one complete job? Ordinary work of that class we like to carry out as a complete job. We engineers in this country have not had experience of the Monier system, because none of it has been carried out here. It is a matter of opinion as to whether it will stand as well as some persons think it will in a climate like ours. It looks a very light structure. One of the points claimed for the system is that it is light and economical.
2702. Supposing the iron grill were destroyed by rust, what would become of the arch? You mean if the iron became useless?
2703. Yes? From what I can see of it, I do not think there is a margin of safety in the arch itself without the iron. It appears to be too light, but it is a matter of calculation.
2704. Would you yourself enter upon a structure of that sort? Without the iron—no, I would not.
2705. Supposing you had men specially acquainted with that class of work, would you enter upon its construction then? Not unless I had really good men at it. It is work which I should say from its lightness would require the material to be of the best description. The labour would also require to be of the very best description.
2706. If you, as an engineer, had to take in hand the work in Contract No. 77, and you suggested to your employers that the Monier principle should be substituted for the work in the original plans, would you think that your employer would have to pay for the work not affected by the Monier system at the rate of 28½ per cent. in excess of the contract value? No, I should not think so.
2707. Suppose you had tendered for this particular work, and the tender was 28½ per cent. below the valuation, and suppose that only portion of the work was affected by the substituted plan, do you not think your employer would be entitled to the benefit of having the 28½ per cent. reduction upon your prices on the portion of the work not affected by the substituted plan? Yes; if there had been an arrangement for 28½ per cent. discount.
2708. With reference to the compo. used for the construction of the arches, do you think a compo. of 3 to 1 would be as good as a special bluestone concrete of 3, 2, and 1? I do not think so. There would be more substance in the concrete.
2709. Would it be more adhesive? It would be more solid and would make a much more compact job. It would stand the thrust better than the compo.
2710. How would you compare the use of this compo. in the arches with radiating brick arches;—do you think the arches of compo. would be as good? I believe in brick arches myself.
2711. To what extent are they stronger? Well, we know what brick arches can do; but we do not know what these compo. arches can do.
2712. *His Honor.*] But as to the crushing strain to be stood by compo. and by brick—for that is really the question—that is, the crushing strain that good brick will stand and the crushing strain that good compo. will stand? I believe in brick, although it is a matter of calculation to get at the crushing strain of each.
2713. *Mr. Parkes.*] You also have made an actual test of the cost of the concrete? Yes. I have taken 7 yds. of blue metal at 12s., or £4 4s., 3 yds. of crushed sandstone at 2s. 6d., or 7s. 6d., 2 yds. of cement—that is, 12 casks of cement at 9s. 6d. a cask—£5 14s.; making a total of £10 5s. 6d. That should cover 7 yds. of concrete. Divided by seven you bring the total down to £1 9s. 4d. a yard for material. I allow 10s. 8d. for labour, bringing the total up to 40s. a yard. That is about what the Government are paying with 28½ per cent. discount upon schedule rates.
2714. What is the difference between the bluestone concrete and the compo.? There is 10s. difference when it is mixed and in its place.
2715. You mean that the bluestone concrete costs 10s. a yard more than the compo.? Yes.
2716. You have arrived at this result from an actual test of the material? Yes; I had the materials mixed.
2717. So that there cannot be any doubt as to your calculation? No.
2718. You have taken the money paid for the material and the labour for the mixing of it? Yes.
2719. And the total tallies with the Government figures with 28½ per cent. off? Yes; it comes to about the same thing. There is not much difference.
2720. Have you had any experience lately in the purchase of iron for works under your control;—you know the market values of the different classes of iron per ton? I have had a great deal of work in which I have had to use iron, and I know pretty well the value of it.
2721. Is £15 a ton for tie-bars and channel-iron an excessive or a cheap rate? At the present time I should consider £15 a ton a high rate.
2722. *His Honor.*] What would you consider a fair rate? You can buy iron at £11 a ton, and making an allowance of £2 for the iron in this case it would be worth £13 a ton.

2723. *Mr. Parkes.*] Do you consider £11 3s. a ton for cast-iron plates a fair price? It is a high price just now. £10 a ton would be a good price, but you can get it for less than that. G. McCredie.  
12 June, 1896.
2724. Do you think £10 a ton for  $\frac{3}{8}$ -in. and  $\frac{1}{2}$ -in. iron rods a fair price? Do you mean to buy them?
2725. I mean fixing them and everything complete? I think £10 is about a fair value.
2726. There is not the slightest doubt but that the three items I have quoted are not  $28\frac{1}{2}$  per cent. below market value? There is no doubt about that.
2727. The figures you have given us to-day as to quantities, &c., are gathered from the most carefully selected sources and tests? Yes.
2728. You have not the slightest doubt in your own mind as to the figures you have given us being fair prices for contractors' work? I do not feel the slightest doubt about it. I am quite satisfied as to the accuracy of the prices and quantities.
2729. *Mr. Hickson.*] I suppose that really the value of a work is what the work is tendered for? That is what we generally reckon the value at—what we can get it done for.
2730. With reference to this  $28\frac{1}{2}$  per cent.—the tender upon the original design was  $28\frac{1}{2}$  per cent. below the schedule rates, bringing the bulk sum up to £15,757? Yes.
2731. Assuming that you could get an equally substantial structure of the same capacity for £257 less would you consider that in accepting it the country was robbed? You say an equally substantial one—of course that is the question. It depends upon what the substituted plan is.
2732. But assuming for argument's sake that the plan was equally substantial and of the same capacity do you think the Government would be robbed if they could get the work done for £257 less than the amount I have quoted? Not upon the assumption that it was equally substantial.
2733. In regard to your comparison between the values of the bluestone concrete and the compo., in making that comparison you did not allow for the iron work in the compo.? No; I did not include that in the compo.
2734. You have said that you have had no experience in the construction of the Monier arch? No, I have not.
2735. First of all, as regards its strength, I think you expressed a doubt as to the stability of the structure if the iron were taken out? Yes.
2736. Supposing that a calculation had been made, and that it had been found that there was a margin of safety of six, would you not think the structure sufficiently strong? I do not think there is so much in the margin of safety as in the doubt as to whether the compo. would stand our climatic changes.
2737. A composition of 3 to 1 is not an unusual thing—you have often used it? I have often used it, but not in a case of this sort.
2738. But you have used it in rendering? Yes.
2739. Would that not be upon outdoor work where climatic change would have effect upon it? Yes.
2740. Then I think that disposes of the question of climatic change affecting the compo. And if there were a margin of safety of six, do you not think that the structure would be sufficiently strong? Leaving climatic changes out of the question, I should imagine so—yes.
2741. You have put down the composition in the Monier arches at 30s. a yard, and you have also said that no work of that nature has been done in the Colony before? I think I said I did not know of any.
2742. As a matter of fact, some has been carried out? There may have been.
- 2742 $\frac{1}{2}$ . Supposing an accurate account has been kept of the work with a view to ascertain the exact cost of it, and that that cost comes out at £4 10s. per yard, would not that affect the opinion you have formed? My opinion is that at that price it would cost far too much.
2743. Supposing every penny spent upon the work had been carefully put down, and that the result showed that it was equal to £4 10s. a yard, would not that upset your calculations, seeing, as you yourself admit, that you have not had any experience in the construction of the Monier arch? No.
2744. Why would it not do so? Because I suppose that where you took on the price at £4 10s. a yard, you would be taking the whole structure.
2745. No. I am speaking only with regard to the Monier Arch portion? Then I should say that it cost far too much money.
2746. You say that there is nothing special in the construction? Not in the composition.
2747. But in the putting of it together, I mean? I do not see anything very special.
2748. Do you think that you can shovel in the composition as you could in any ordinary work? Yes. Of course there must be a certain amount of care.
2749. And you know that care in a very small measurement means money—that is to say it is labour in a small measurement? In this case I allowed a good margin for that—10s. 8d. is allowed; and a man will make at least 5 or 6 yards per day.
2750. Do you know how the composition is put in? Yes; I saw them putting some in the other day.
2751. What is the process? The same as with any ordinary composition.
2752. *His Honor.*] Did you see the men putting up the arches the other day? No. As far as they are concerned when you get the centerings in and the boarding on it is an easy matter to put in the composition.
2753. *Mr. Hickson.*] It may not be a difficult matter, but as a matter of fact you did not see the composition going into the arches? No.
2754. You do not know the amount of labour therefore which would be expended upon that portion of the work? Not of my own knowledge. I have not seen a Monier arch constructed.
2755. You were asked some questions as to the comparative prices in the schedules to contracts No. 77 and No. 117? Yes.
2756. I suppose it would not be possible for anyone to make a proper comparison unless he knew the time of tendering and the country through which the sewer was carried? That is the reason why I asked the question I did.
2757. *Mr. Gummow.*] As to the figures in relation to those two contracts which Mr. Parkes gave to you, do you know whether they are the figures upon which the contractors are being paid or whether they are merely figures in a schedule which the Government have prepared. They are printed figures, the prices of the Department, are they not? Yes.
2758. In both cases? Yes.
2759. Do you understand how tenders are put in upon those figures? I understand that the quantities are made up by the Department and that the contractors tender so much below or above the prices given, as the case may be.

- G. McCredie. 2760. If you used that system, and if a contractor did not tender at  $28\frac{1}{2}$  per cent. below your printed schedule prices, would you ask him afterwards to do the work at  $28\frac{1}{2}$  per cent. below those prices? I do not see how I could ask him to do that.
2761. What do you think he would say if you did ask him? That would depend upon the contractor.
2762. As to these arches. The arches in the original design are not a true ellipse arch, they are only approximately elliptical, are they not? That is what they really are.
2763. Is there any great difficulty as regards those arches, in setting out five different radii;—I suppose any carpenter or ordinary man can set out ribs from five different centres instead of from one centre? It is not difficult work as regards the setting out if the man understands it; but it is more difficult in construction than the ordinary centerings.
2764. The difference as far as I can see is that the work would have to be set out from five centres instead of from one; it would take a little longer, that is all? Yes; and it would take a little more labour and timber in construction.
2765. I think you said that the country would lose £4,215 by the substitution of the one plan for the other; would it pay £4,215 more? That is a matter for the Department.
2766. Supposing a better result had been arrived at in the performance of the contract? That, of course, would be a matter for proof.
2767. Take a general transaction with one of your clients. If you found that by making an alteration you could give your client a certain benefit, and if you pointed out to him that the work would not cost any more and would be much better as a job, do you think he would be likely to say to you, "Am I getting the same quantity of brickwork or timber as in the original design?" Which do you think would trouble him most—the fact that the altered job would be as good and would cost less, or the alteration in the quantities? The greatest trouble with a client generally is that he does not want to pay any extras.
2768. In your calculations have you allowed anything for a royalty on the Monier system? No.
2769. *Mr. Parkes.*] The question I really put to you was this—did not Messrs. Carter, Gummow, & Co., by getting paid upon the office schedule on the quantities contained in the Monier system get an advantage of £4,700? According to these quantities, which are correct, they do get an advantage to that extent.
2770. *Mr. Hickson.*] Do you know that these rates are only set down for progress payments, and that this is a lump sum contract. Are you not aware that it does not matter what these rates are so long as finally the sum of £15,500 is not exceeded. Do you not know that these rates are merely fixed for the convenience of progress payments. Supposing a tender amounted to £15,750, at  $28\frac{1}{2}$  per cent. below your schedule prices, and that a tender came in at a lump sum for £257 less. Assuming the work to be equally good and of the same capacity, would not your client get a distinct benefit to the extent of £257? You are assuming that the structure is equally good.
2771. *Mr. Parkes.*] In this case is the structure equally good? In my opinion it is not.
2772. *Mr. Hickson.*] Have you calculated the strains? No.
2773. Then how can you, an engineer, say that the structure is not equally good. Supposing we had had these calculations made and that we had found that we had a factor of safety of 6, should we not in that case have a structure equally good? Have you worked out the factor of safety in the case of the original design?
2774. That is beside the question. Supposing we had worked out a factor of safety, 6, in the case of the Monier arch, would you not consider that a stable structure. Would you as an engineer have any hesitation in being responsible for it? Assuming that I was satisfied that there was the factor of safety you name, I should not see any risk in the structure.
2775. *His Honor.*] That is without calculating the effect of the iron? Without calculating the effect of the iron. Of course, Mr. Hickson has apparently gone into a calculation of the strength of the Monier arch, whereas I have not yet done so.
2776. *Mr. Gummow.*] In addition to the royalty, do you not think the contractors are entitled to receive some profit on account of the risk they are taking and the guarantee for a number of years? If they take a risk in connection with the work, and if they enter into a certain bond, something, of course, must be allowed for that.
2777. *Mr. Hickson.*] Do you know the risk the contractors are taking? I do not know what the bond is.
2778. *Mr. Parkes.*] You had run out the quantities of these two designs;—you see the difference in them. Now I will ask you this question. If you had bargained for a stone building would you accept a wooden building in its place? Certainly not.
2779. Would you feel inclined to take the cheap wooden house or the stone structure, even though the one might for certain purposes be as good as the other? No.
2780. *His Honor.*] You say that it is fair to allow something where there has to be what may be called an insurance, in consequence of the plan being to a certain extent an experiment? Yes.
2781. On that account you would add something to the cost which you have worked out as the probable actual cost of the work? Yes.
2782. But how much that would be it is difficult for you to say? That is a question for the contractors. I presume they would get their 15 per cent. royalty.
2783. That would be taken by them into the amount of the tender, I presume? I should think so.

William Thompson sworn and examined :—

- W. Thompson. 2784. *M. Parkes.*] What is your profession? I am a quantity surveyor to the Builders' and Contractors Association.
- 12 June, 1896. 2785. How many years' experience have you had as a quantity surveyor? Since August, 1885, I have been engaged in measuring up works daily.
2786. Were you at any time a quantity surveyor in the employment of the Government? I have worked out schedules of quantities of buildings for the Government Architect.
2787. Have you made a careful valuation of the Monier arch portion of Contract No. 77? Yes; as far as the Johnstone's Creek aqueduct is concerned. Your instructions to me were to take out the quantities for the Johnstone's Creek aqueduct upon the two systems. I did not go into the quantities of the White's Creek aqueduct. [*Vide Appendix No. 17.*]
2788. You have a rough copy of your estimate? Yes. 2789.

W.  
Thompson.  
12 June, 1896.

2789. Deducting the piers, you estimated the Monier aqueduct at Johnstone's Creek to cost what? I took the piers from the ground level. I did not go below ground. Speaking roughly, I make the amount £2,342. [*Vide Appendix No. 17.*]
2790. Upon this one aqueduct you estimated the compo. at how much? 571 yards.
2791. In the two aqueducts the quantities would be about the same, would they not? I should think so. One would be a little longer than the other, but there would be about the same cubic contents.
2792. So that, doubling the figures you have given, you would have a total of about 1,140 cubic yards? I should think that would be about it.
2793. Take item No. 21, in the office quantities, what would it amount to? About 1,140 yards.
2794. That would be a fair allowance? Yes.
2795. There can be no doubt that the quantity in the departmental schedule is fairly correct? Taking those figures for the compo. I should think it was. It would be a little more than that if anything.
2796. Take the iron-work;—what is the total of your iron-work? The total of the three quantities of the three classes of iron-work would be about 33 tons 8 cwt.
2797. Doubling that for the two aqueducts, you would have what? 66 tons 16 cwt.
2798. The office quantities are what? 66 tons, roughly.
2799. There is no doubt, then, that the office quantities are correct, as far as you can see? As far as I can judge.
2800. You have been used to taking out the values of quantities as well as the quantities themselves, have you not? Yes.
2801. What would you estimate for a good class of compo. work—3 of sand to 1 of cement? One yard of cement and three of sand ought to make 3 yards of compo. when mixed.
2802. That is the way in which you usually compute that work? That is the usual way in the case of architects? You would have 3 yards of sand at 2s. 6d., and 1 yard of cement at £3, making a total of £3 7s. 6d. That would give you sufficient material to do 3 cubic yards, or £1 2s. 6d. a yard. Of course, there is the labour to be considered. As far as the mere mixing of the stuff is concerned, 1s. 6d. a yard would be ample for that.
2803. Suppose there were any special labour? I cannot speak as to that, but the mere mixing ought to be done for 1s. 6d. per yard.
2804. Taking the total, what is a fair sum? I have put down 30s. a yard. I have allowed 4s. or 5s. a yard for centres.
2805. You have often had to take out quantities for compo.? Yes, in building operations.
2806. And this calculation is based upon your experience? Yes.
2807. The rates you have given are the ruling rates at the present day? Yes.
2808. Taking cast-iron plates, or the most elaborate work in cast-iron, what would be a fair price for it? £11 or £12 a ton.
2809. Is that a fair price? A very good price.
2810. Taking the tie rods and channel-iron—what would be a fair price for them? I have put down two classes of wrought-iron; the channel and tie rods I have put down at £14 a ton, and the wrought-iron in the bars three-eighths inch and a quarter-inch, secured by copper wire, I have put down at £11.
2811. Those are the ruling prices to-day? Yes.
2812. And that makes your total for the one aqueduct £2,342? Yes, without the piers.
2813. Doubling that amount, you make the value in the two aqueducts £4,684? Yes; assuming that the other aqueduct is equal to this one.
2814. Do you not consider £5,000 a very fair price for the Monier patent as it is designed? I should think £2,500 would be a fair price for the design I took out, exclusive of the piers.
2815. Did you check your figures? Yes.
2816. Did you have them rechecked? Yes.
2817. Did you get anyone to assist you? No; I did it all myself. Still I checked them very carefully.
2818. Taking your proportions for the two aqueducts, £5,000 would be a fair sum? Yes, exclusive of the piers.
2819. Have you made out an estimate for the balance of the work—the work not affected by the Monier patent? Yes; but it is not yet completed.
2820. When could you give us that information? I could not have it ready before Monday at the earliest.
2821. For the purposes of calculation, the work under the departmental scheme might be represented at about £9,200;—taking off the builders 28½ per cent. undertaking, under his tender, that would make the amount what? £7,150.
2822. That, added to the sum of £5,000, would give a total of what? £12,150.
2823. Do you not think £12,150 a very fair sum to pay for the whole of the work, including the Monier aqueducts? I cannot say. I have not gone into anything beyond the Monier aqueducts.
2824. You made an estimate upon the original office design? Yes.
2825. So far as the one aqueduct was concerned? Yes.
2826. What was your estimate in respect of the Johnstone's Creek aqueduct? In that case you told me to measure from the footing, and I did so. I made the amount £4,746 5s.
2827. The proportion which the Johnstone's Creek aqueduct as constructed under the original scheme would bear to the aqueduct constructed upon the Monier plan would be about 2 to 1—nearly double the amount? It is 1 to 1.63, including the piers.
2828. You are sure your figures affecting the departmental design are correct? Yes.
2829. You have carefully checked them? Yes.
2830. There can be no doubt that the original design, as compared with the Monier system, would be in the proportion of 1.63 to 1? That is the conclusion I have arrived at.
2831. You can thoroughly guarantee the quantities you have given? To the best of my ability I can.
2832. You feel certain from your experience that these quantities are correct? Very nearly, if not absolutely.
2833. *Mr. Hickson.*] You have taken out the length of the Johnstone's Creek aqueduct? Yes.
2834. What length did you take out? I took it at 980 feet. I think it runs a shade longer going into the channel.
2835. You have put down 30s. for the compo.? Yes.
2836. I suppose you have had no experience as to how this compo. is put into the structure itself? No; but I have an idea how it is done.

- W. Thompson. 2837. Do you think 30s. per yard would be enough to cover the cost, considering the expensive way in which the compo. has to be put into the structure? I think it would very nearly cover it.
- 12 June, 1896. 2838. Suppose a similar structure had been put up, and that the actual cost, after very careful figures had been taken out by the Department, came to 90s. per yard, would that alter your opinion at all? I should wonder how the money could be spent.
2839. Supposing you could see the figures for yourself? There is no getting beyond the facts, of course.
2840. If you could see these figures showing the actual cost of the work to be what I say, that would naturally upset your estimate of 30s. a yard? Mine is a mere estimate. You say you have had the work actually done. That is another matter.
2841. Our £4 10s., of course, includes the iron, you understand that? Yes.
2842. Did you put down anything for rendering? Yes; I put down 5,540 yards superficial at 1s. 6d. per yard. I am on sure ground there. It is an item I am thoroughly used to. I think I have allowed a very fair price.
2843. What proportions did you allow for the rendering? One to 2.
2844. Supposing the proportions were 1 to 1, that would alter your price? My price would very nearly cover it. Of course, if it were all 1 to 1 it would be worth a little more; but that is not the case, I understand.
2845. *Mr. Gummow.*] Did you allow anything for supervision and profit in your estimates? No; I merely allowed for the working prices.
2846. Did you allow anything for royalty, guarantee, or insurance? Those are things I knew nothing about. I made no allowance for them.
2847. *Mr. Parkes.*] Take the schedule of the Department, and look at item 21. You will see that special bluestone concrete has been altered to special cement mortar, at 3 to 1, and that it is put down at £3 10s. per cubic yard? Yes.
2848. If you look below you will see items for ironwork charged at special rates in the schedule? Yes.
2849. They are not included in the compo. prices? No.
2850. They are independent items? Yes.
2851. You have given the prices separately, therefore, in your own estimate, have you not? Yes; I have kept the prices of the iron separately.

Thomas Griffiths sworn and examined:—

- T. Griffiths. 2852. *Mr. Parkes.*] What is your position? I am Assistant Engineer to the Water and Sewerage Board.
- 12 June, 1896. 2853. Are you a computer of values and quantities? Yes.
2854. On 9th September, 1895, you wrote to the Engineer-in-Chief for Metropolitan Sewerage Construction, Mr. Darley, as follows:—"Will the Engineer-in-Chief kindly approve the accompanying schedule of prices for use in preparing progress vouchers in this contract, the price for which is 'lump sum.' It will be observed that quantities are slightly altered from original. This has been done in order to provide for Monier work which has been substituted for brickwork?" Yes.
2855. You substituted a sheet of figures with that letter, and the document I now hand you in is a copy of it? I think so.
2856. Are these figures and quantities taken out from the plan? Yes; practically.
2857. They are correct, are they not? Yes; to the best of my knowledge.
2858. Why did you adhere to the original office figures as prices for the quantities? What original office figures do you mean?
2859. I mean the printed office figures? I do not think the tender as accepted has anything to do with the original schedule. It is a different contract.
2860. Do you not observe that the quantities are greatly reduced? I do not see that that has anything to do with it.
2861. Look at items No. 1 to No. 20; they have nothing whatever to do with the Monier arch, have they? No; nothing at all.
2862. Then why should you have paid for these items at the rate of 28½ per cent. above the contractor's undertaking? I have not paid for them at 28½ per cent. above the contractor's undertaking.
2863. Are they not paid for upon these printed figures? They are paid for according to these figures, but there is no percentage at all in the case of contract No. 77. It is a lump sum contract.
2864. The original contract price upon these printed figures came to £22,000, did it not? That does not apply to this contract. I used this schedule because it was the most convenient thing to do. I did not write out another one.
2865. When you made out the quantities for the Monier work apart from the other work altogether you put in a fair value for it I suppose? I ought to explain that the Monier arch being a part of this contract I worked out the schedule as well as I could up to the total sum. You will see that some of these quantities are altered. The red figures will show you the quantities to which I refer. Those alterations were made simply for the purpose of making the schedule agree with the lump sum.
2866. Are the quantities not correct, then? The quantities have been altered to make the total come as nearly as possible to £15,500. These figures do not affect the matter one way or the other. They are inserted here simply for the purpose of making progress payments.
2867. Do I understand, then, that 1,050 cubic yards is not the correct quantity for the compo? Yes, that is correct.
2868. And 150 yards for the brickwork, and 12,000 for cement facing? They are all practically correct.
2869. And the prices you are paying upon these items are also correct? They are only tentative; these are only progress measurements.
2870. Is £3 10s. a cubic yard for compo, not a fair value? These are merely tentative prices; they could be altered in the next voucher if we liked.
2871. But is £3 10s. a cubic yard a fair value? To the best of my belief it is.
2872. Is £11 3s. per ton a fair value for cast-iron plates? I think so.
2873. Therefore, the estimate for the Monier part of the work is not reduced in the money column whereas it is reduced in the quantity column? I do not see that that has anything to do with the matter.
- These

- These quantities and prices are merely tentative. They are subject to alteration from time to time, and as I have already explained they had nothing at all to do with the contract. T. Griffiths.
2872. As a fair thing between the taxpayers and the contractor, if the quantities are diminished ought not the prices to be diminished also? Not in the case of a lump sum contract. We cannot estimate the exact quantity of work done from time to time. 12 June, 1896.
2873. Supposing the lump sum reveals the fact that the contractors are getting a clear 30 per cent. advantage? I cannot look at the matter in that way. The 28½ per cent. you refer to has nothing at all to do with this contract. It was a separate tender.
2874. What was the object of the Department in calling for tenders at all upon their original elaborate design if they intended to give Messrs. Carter, Gummow, and Co. the contract upon the Monier plan without any competition? You are now asking me a question I cannot possibly answer.
2875. I am basing the question upon your statement that the Monier arch tender is a lump sum tender to be paid for upon these prices? I said that the whole contract must be taken as a lump sum contract. You must include the Monier arch with the other portions of the work.
2876. But they are being paid for at the office estimate of cost? As I have told you this schedule is only made out as a progress measurement. Supposing, for instance, that the work could not be completed at these prices the sum of £15,500 would, nevertheless, be all that would be paid for it.
2877. Supposing an extra takes place—take the contract agreement as drawn up—supposing an extra takes place upon the tunnel excavation, could not the contractors upon their agreement obtain it? I do not think so.
2878. Have you looked at the specifications? Yes; but this is a lump sum contract.
2879. That makes no difference; the quantities of the lump sum come out so as to make the exact sum of £15,500? Yes.
2880. That £15,500 is made up by the payment on certain reduced quantities which you admit are right;—the payment is being made upon the original office values? Yes.
2881. It is not likely that the contract can exceed the amount, because you have carefully made up your estimated cost;—you have made up your quantities and have attached your prices, and they make the exact sum of £15,500? Exactly.
2882. Then how can the question of whether the amount is exceeded or not come in? I do not quite understand you.
2883. You say that the quantities are right? Practically; but they are only approximate. The contract must not exceed the £15,500. The prices which are attached to make up that amount for the purpose of progress payments could be altered in the next voucher if it were necessary.
2884. The prices for payment? Yes.
2885. Have you not, as a matter of fact, paid £9,000 at these prices? Because they have worked in.
2886. When, then, do you propose to alter them? If at any time we are found to be out one way or the other they can be altered. They are not fixed prices at all.
2887. You are paying for a certain quantity of excavation at 57s. 6d.? Yes. I do not at this moment remember the exact price.
2888. That is the original office value? I think it is.
2889. That is not 28½ per cent. off? No.
2890. Are you not paying upon other items at original office rates? You will see that I have reduced these quantities in some cases. For instance, the brickwork has been reduced by a considerable amount.
2891. But you have not reduced the price? You cannot expect a person to build a ring of brickwork in a tunnel at the same price as that at which he would build 14 inch or 18 inch work outside.
2892. Is not the cost of the finished work in your original plan much higher than the cost of the tunnel work? No.
2893. Is it pointed in this case as it is supposed to be pointed in the case of the original plan? No.
2894. Is there not a considerable item put down for stone;—is there not a great reduction in the quantity there? I do not consider the schedule of the original design in the matter at all. A schedule has to be prepared for progress payments upon the £15,500 contract, and it is not binding on the Department or the contractors.
2895. When you wrote your letter under date of 9th September, 1895, you sent in the quantities for this work? Yes.
2896. On what date were the quantities taken out in respect of Contract No. 117? I could not say. Those quantities were prepared by the chief draftsmen in the office.
2897. You took out the quantities for the Monier arches? Yes.
2898. Upon what did you base those quantities? They were only fixed to arrive at the sum of £15,500.
2899. I take it that the excavation through sandstone is about the same in most cases? It varies constantly.
2900. There is an average taken for sandstone excavation? Not necessarily.
2901. What is the difference between the tunnel work of Contract 117 and Contract 77 in the hard rock excavation? I cannot say offhand.
2902. Does not the tunnel in each case go through hard rock? But there are other things to consider besides the hard rock.
2903. I am taking the excavation by 4-in. charges of powder in hard rock;—what justification would there be for paying the contractor, upon Contract 77, 100 per cent. more than you are paying the contractor upon Contract 117? I do not think the prices in respect of Contract 77 should be considered part of the contract. They are tentative prices for the purpose of arriving at some estimate within a reasonable distance of the lump sum.
2904. *His Honor.*] But take the original estimate;—when the Department originally called for tenders the quantities shown upon the document before you were taken out, and the amounts placed opposite to the various quantities were supposed to be fair prices for those quantities? Yes.
- 2905–6. The question is, whether the two different schedules issued within a short time of one another do not show very different estimates? Yes. At the time this Contract 117 was tendered for—and I think it was something below the schedule—a contract at North Shore was accepted 24 per cent. above the schedule, so that there was a difference of 30 per cent. within a few weeks.
2907. That is a difference as between North Shore and Annandale? Yes.

- T. Griffiths. 2908. *Mr. Parkes.*] In preparing your schedules you have some method which brings you to the contract value? We try to do so, but sometimes we cannot get near the contractors.
- 12 June, 1896. 2909. Take your estimate for concrete; concrete is not a thing which varies with the nature of the ground; it is concrete at any time and in any situation;—why do you put concrete in the schedule of No. 77—your own making up—at £2 10s. when concrete is put in for the next job at £2? I do not see how you can compare the two things. In the one case there is a lump-sum tender and in the other case there is a percentage off schedule rates. In the case of this particular work I distributed the price over the quantities as well as I was able. I looked at the original schedule, and I saw that brickwork was cut down considerably and that sandstone and bluestone were also reduced, and I thought the price I put in was a fair price for the payment of progress vouchers. The whole job is in a lump sum, and these prices of mine do not necessarily represent the value of the work.
2910. *His Honor.*] Is there any difference, with the exception of the compo., between the prices tendered for in the case of No. 77 and the prices in this estimate made under the lump-sum contract? There is some additional work.
2911. *Mr. Parkes.*] But the only alteration is in the compo.? Yes; I think I put the compo. at 10s. a yard more than the special bluestone concrete.
2912. When you found that the work upon contract 77 was so much less than the work on the original design, do you not think you were justified in asking for a payment at 28½ per cent. below the price put in by the contractor? I had no power to do it. A tender had been accepted at £15,500, and it had nothing to do with the old schedule in any shape or form. I merely wanted to give the contractors a progress voucher, and I prepared a schedule accordingly. It can be altered at any time. It is not binding upon the Department or the contractors. As a matter of fact, when the work is finished the contractors will have received £15,500. The quantities are not binding in any lump-sum contracts.
2913. When you made up this estimate did you refer back to Mr. Hickson? I did not make this estimate, as you call it. I so arranged the schedule that the aggregate amount would come to £15,500.
2914. Did you have any communication at all with Mr. Hickson about the matter? No.
2915. Did you come back to the office at all when you were making these prices come out at the lump sum? I did not see Mr. Hickson; I saw Mr. Darley. He was my chief.
2916. You did not see Mr. Hickson in connection with the fixing of this schedule? No, we were in two distinct Departments. I fixed the schedule, and asked Mr. Darley to approve of it. He did so, and I sent a copy of it to the resident engineer so that he might prepare a progress voucher.
2917. When you gave the schedule to Mr. Darley did you tell him that you were paying at the office rates? I did not; he would see that certain items were not required, and he would see the other prices.
2918. Did you have any conversation with Mr. Darley as to whether you would pay office rates or on a 28½ per cent. reduction? It was not necessary. The prices here are not fixed. They are not binding. They have nothing to do with the final voucher in any shape or form.
2919. When the whole contract is paid for, will it not, as a matter of fact, have been paid for at these office rates? No.
2920. At what rates? At rates within the lump sum.
2921. *His Honor.*] I take it that what Mr. Parkes wishes to ascertain from you is how you think these prices will work out as between the contractors and the lump sum—that is to say, will the thing work out at office rates, or something below office rates? I could not say. The sum of £15,500 is not to be exceeded. The contractors have already done extra work for which they will not be paid.
- 2921½. *Mr. Parkes.*] Where is any excess likely to come in? In the foundations, for instance. We could not estimate the exact cost of the piling, and they have exceeded the quantity.
2922. A clause in your specifications throws the responsibility upon them under any circumstances? Exactly. They have exceeded the quantity.
2923. And they have to take the builder's risk? Yes.
2924. As a matter of fact, you have paid for the excavations;—the tunnel is completed? It was not completed when I was there last. To the best of my belief, it will not be finished for some time yet.
2925. You have put it in your voucher as completed? No.
2926. What is the amount there? 1,024 yards at 57s. 6d., or £2,944.
2927. Take the item of excavation in hard rock, 1,160 yards at 6s.—that is completed and paid for? You cannot say that the thing is completed because these quantities are only tentative.
2928. As a matter of fact, was not this schedule made out to arrive at your estimate of the work? No. It was made out for progress payments, which is a very different thing.
2929. Was it not made out with a view to the quantities of the work? No. It was prepared for the purpose of paying progress measurements. It is arbitrary, and can be altered to-morrow.
2930. But for the purpose of paying contractors, would you not make it accurate? It is accurate as far as it goes. If to-morrow the work is finished, and according to measurement, the contractors are entitled to £3,000, and that amount comes within the total sum they would receive, because it is a lump sum contract.
2931. *His Honor.*] And if you find out that your prices run out to the full amount, less the retention money, you will stop payment altogether? Yes. We do not pay them more than £15,500 under any circumstances. Mr. Parkes says that we are charging the same rates as the contractor tendered at with 28½ per cent. off; but the quantities supplied to the contractor are not the quantities supplied in my schedule, which alters the matter altogether. The quantities supplied to the contractors in the first instance are not the quantities on which I base my schedule.
2932. *Mr. Parkes.*] Are not some of them? Yes.
2933. Are the majority of them? Well, some of the bigger items are altered.
2934. Are the excavations altered? I think they are practically the same. You are not representing matters as they ought to be represented. You ought to point out that while 28½ per cent. was taken off the original quantities because they were certain quantities, those quantities have since been reduced. You cannot, in fact, make a comparison between the two cases.
2935. You are not forgetting that the value of the aqueduct, as proposed by the Department, was not £22,000, and that its real value was £15,750? Exactly; but I have nothing to do with that.
2936. That would not be the value at the prices you have here? You are now asking me about a thing with which I have nothing whatever to do.

T. Griffiths.  
12 June, 1896.

2937. After tenders have been called for, and the contractors have tendered at 28½ per cent. off the office values, those office values disappear? I know nothing at all about that. I am supposed to carry out Contract No. 77 on the Monier principle. I have nothing whatever to do with 28½ per cent. I am not supposed to be aware, as a matter of fact, that the 28½ per cent. was taken off the £22,000.

2938. *His Honor.*] Did you make out the prices for the original tender upon Contract 77? No.

2939. You did not, I understand, make out the prices upon Contract 117? Not finally; but they were submitted to me before they were approved. [*Vide Appendix 16.*]

2940. *Mr. Parkes.*] Did you approve of them? Yes.

2941. *His Honor.*] How did you arrive at them? I considered that prices were being continually cut down. Take the North Shore contract, for instance. We could not get within 25 per cent. of the contractors in those days. I could not cut down many items, but I cut down excavations really with the object of seeing if I could not get within reach of the contractors.

2942. You had found that the tenders had been a long way below? Yes; reaching 30 per cent. below office prices.

2943. That was shown when the tenders for Contract 77 were called for? That is not the only case.

2944. And that opened your eyes to the fact that the office had been fixing rates which were too high? Yes. I considered also that material was cheaper; that the contractors were getting the necessary experience, and that they had their working plant in hand. All these things had a tendency to cheapen the cost of the work.

2945. *Mr. Hickson.*] I suppose it is really impossible to make a comparison between any two sets of tenders with regard to the price? You cannot do it.

2946. As a matter of fact, did you not, within a few weeks, get a tender some 28½ per cent. below the office prices and another tender as high as 24 per cent. above them? I have just pointed that out in connection with Contract 117 at Balmain. I made the prices low for the reason I mentioned, and the contractors accepted at 9 per cent. below the office schedule. Speaking from memory, a week or two afterwards, going over the North Shore work, I considered that owing to the great difficulties attending the work, from the depth of shaft and one or two other things, I could not get the work done at the same price. When I came back to the office I altered the prices and made them higher, with the result that, although I increased the schedule considerably, there was, in one case, I think, a tender 24 per cent. above, so that there was an actual difference in a week or so of pretty well 50 per cent.

2947. Between the 9 per cent. below and the 24 per cent. above? Yes.

2948. In connection with this Contract 77, is it really material what prices you put down opposite each item, so long as you do not finally exceed the £15,500? No.

2949. You might have paid for the contract upon a principle which is known to have been adopted before, estimating one-tenth of the work and paying for that one-tenth? Yes.

2950. You might have paid for the work without any quantities at all? Yes.

2951. In a lump sum contract it is usual, however, to put in schedule prices? As a guide for progress measurements.

2952. In this case had not the contractors to do all the work, no matter what it cost them, for £15,500? Yes.

2953. Have they not already had a considerable increase upon the foundations of one of the piers? Speaking from memory, I think the area of the abutment on the Forest Lodge side was considerably increased. There was a large area of extra excavation and a large quantity of extra concrete.

2954. Do you propose to pay the contractors for that? No. They have never asked for payment, and they have never suggested that they should receive any payment for it. They have done nothing beyond pointing out the increased size of the abutment.

2955. You have had good experience in sewerage work, and you have an idea of the value of that work? Yes.

2956. Have you made an estimate of the value of the compo. with the iron bars in it, known as the Monier arch? I have. I think the schedule works out nearly at £4 10s. a yard, including the ironwork.

2957. Do you think that that is about a fair value for it? I think it is a very fair value. An arch with a 75-foot span would have a specially designed centre sufficiently strong to support the building during construction, and would of course have to be put up very accurately, involving a large quantity of timber and iron work. It has to be made in such a way that it can be put up and taken down again.

2958. Will you describe the process of putting up the arch itself? After getting the material on the ground there is, of course, the gauging. The sand has to be passed through a sieve, and then it is put in the usual way into the gauge-box. The compo. is gauged at 3 to 1, and then a certain percentage of water is put in. It is turned over, I think, four times. I have watched the process, and I know that it means handling the stuff six or seven times in all. After it has been properly turned over, the compo. has to be taken on to the work, and, as you will see from the drawings, it has to be lifted up in some cases 30 feet. Then, unlike any other work I have ever seen, it has to be put in in small quantities. It is more like weighing out sugar than carrying out a big public work. It is put in with wooden rammers, care being taken that the ironwork of the grill is not displaced. There are little pieces of wood attached to the back of the lagging, which keep the grill in its proper place a certain distance from the face of the work. There are two or three men there; and occasionally a little water has to be added, according to the consistency of the stuff. I do not know of any other public work where that class of work is done, and where so much care is required. Then the arch has to be kept damp during the whole time. Sand, as a rule, is put right over the arch, and it is kept moist for the purpose of letting the necessary chemical action take place before it gets too dry. The iron is left in within an inch of the soffit of the arch, and when it is not long enough a lap is allowed of about 8 inches, and it is tied up with wire. I consider that the mixing of the compo. bears a very small proportion to the actual labour involved in making the Monier arch. You have these huge centres to lift for a comparatively speaking small bit of work. The arches are narrow, and there being such small quantities there is nothing to cover the expense, as in ordinary concrete and brickwork. The labour is very tedious, and the levels and the various contours have to be carefully preserved. I ought to have explained that all the ironwork passes through a machine, and has to be carefully curved to a certain radius. As far as I have been able to judge, it is a very expensive process as far as actual labour is concerned. I therefore put down 10s. a yard more for the

compo.

- T. Griffiths.  
12 June, 1896.
- compo. than I put down for special bluestone concrete in the same position. Then there is the extra size of the centres to be considered. You cannot handle a 75-foot centre as you would handle a 25-foot centre.
2958. The mesh of the ironwork is 4 inches. Yes.
2959. And it is within an inch or an inch and a half of the face of the rendering? Yes.
2960. A great deal of care has to be taken in putting the compo. underneath—it cannot be shovelled in? No.
2961. Of course, the centring is put in first, and then the grid? Yes; and at certain distances pieces of wood of the necessary thickness are nailed on to the lagging.
2962. If any person has described this as ordinary compo.-work he would be quite wrong? Yes.
2963. The work is what is commonly known as all labour and no measurement? Yes; we should consider it all labour and no cubic measurement after all the work is gone into.
2964. And you think the prices you put down for progress payments are not too much? No.
2965. You would not be surprised to hear that a concrete arch which the Department put up some time ago upon the Parramatta Road came to £4 10s. a yard? I daresay it would. I do not know what the span of the arch would be.
2966. *Mr. Gummow.*] As to the payments to the contractors, you said that the method is sometimes adopted of paying them, what is considered a fair amount, as they go on with their job? Yes; that is sometimes done.
2967. Do you consider that as good a method as having a schedule fixed up? Certainly not.
2969. Do you think that the method of having a schedule made up prevents disputes with contractors? Certainly; it is a far better method. You cannot measure public works in the same way that you would measure an ordinary building. You cannot make one payment on one joist, and another payment on the second joist, and so on.
2970. Do you not know that in this particular case the contractors have done a lot of work which they will not be paid for, and which they have not asked to be paid for? Yes. I have already explained that the size of one abutment would be considerably increased. If the contractors had been paid for the increase it would have come to a considerable sum. Then the piling was increased in the piers.
2971. Have you been in touch with this contract for the last two months? No. Speaking with reference to extras, there was some galvanised iron substituted for ordinary iron.
2972. *Mr. Hickson.*] In the piers? Yes. I know that some iron was placed in the concrete without any extra payment.
2973. *Mr. Parkes.*] Had you anything to do with the construction of the Parramatta Road test of the Monier arch? No.
2974. *His Honor.*] Do I understand that the grid for a large arch is made in one piece? On account of the length of the arch it is necessary to scarf it. That is done by tying it with wire.
2975. Then it is made into one large piece? Yes; the whole arch is one grid, you may say, extending from end to end.
2976. It rests on the centerings with the ends projecting over the piers? Yes.
2977. *Mr. Hickson.*] Did you not ask the contractors to make a test arch? Yes; we got them to make three altogether.
2978. Were they not very elaborately tested? Yes; the tests were made in Mr. Darley's presence and my own.
2979. Did you pay the contractors for that? No; not one penny.
2980. That had to come out of the £15,500? Yes.
2981. *His Honor.*] What were the dimensions of these test arches? There were two 24 ft. 6 in. by about 22 inches rise, 3 inches thick at the crown, and with 5-inch haunches.
2982. What would be the breadth? About 3 feet. These arches were tested to see what was the elasticity. Seventy tons were put on the two arches—35 tons on each. In the first series of experiments we got the arches covered with sand, and we got all the men on the work—I think about sixty—to mark time as soldiers would do on it. We then observed the deflection to see whether it was a permanent one. It was found that there was no permanent deflection. A 70-ton load was left on all night. When the biggest load was on there was a little deflection, but on the following morning, when the load was removed, the arch resumed its normal position.
2983. What would have been the result had those arches been without the iron grill? I have not gone into that calculation.
2984. Do you think they could have stood that weight? Nothing like it without the iron. There was no permanent deflection.
2985. *Mr. Hickson.*] How long had the arches been built when the test was applied? Nine weeks.
2986. Are you as an engineer satisfied with the stability of the Monier arches in Contract 77? Perfectly.
2987. You would not describe them as Cheap Jack structures? No; certainly not.

MONDAY, 15 JUNE, 1895.

George Stanley Brown sworn and examined:—

- G. S. Brown.  
15 June, 1896.
2988. *Mr. Parkes.*] What is your position? I am Librarian at the Patents Office.
2989. You have charge of all the documents there? Yes.
2990. You have a knowledge of the whole of the information upon which patents are granted? Yes.
2991. You now produce the papers upon which what is known as the Monier arch patent was granted? The patent which we identify as the Monier patent was taken out by Messrs. Carter, Snodgrass, and Baltzer. I produce now the patent grant and the whole of the papers connected with it. [*Vide Appendix 18.*]
2992. Is there among these patents any authority from the original Monier patentee for the use of this patent? No, none whatever. The patentees have applied as introducers of the invention by virtue of a communication from abroad.
2993. What was the communication? The invention itself would be the communication.
2994. They had no distinct authority from M. Monier himself for the introduction of this patent? Not so far as the papers show; but it would not be necessary for them to have any authority to apply for letters patent for a foreign invention in this Colony.

2995.

2995. Have you made any comparison between the patent granted under the letters patent you produce and the original Monier patent? No. G. S. Brown.
2996. Do you think the patent which you have referred is the full patent? No; I think not, from what I have seen of the English patent. 15 June, 1896.
2997. It is only a part of the patent? That is all, I think.
2998. Supposing the original Monier patent included any particular silicate in the compo. or anything of an unknown nature which really formed the patent, it is not unlikely that Messrs. Carter, Gummow, & Co. would know of it? They would know by receiving a communication from original patentees.
2999. But do you think a man who patented such a thing as this would be likely to allow a communication of that character to go abroad? I could not answer such a question as that.
3000. I ask you whether it is likely that he would do so? I could not say.
3001. In any case there was no production of any particular authority from the original patentee in this case? There was nothing beyond the communication to which I have already referred.
3002. *His Honor.*] What communication would that be? The invention itself. These persons applied to us as introducers of the patent into the Colony.
3003. That is all, I suppose, that you would usually get? Yes; we recognise the introducer as the author and designer as far as this Colony is concerned.
3004. *Mr. Parkes.*] Supposing M. Monier had some secret formula of strains or anything of that sort which Messrs. Carter, Gummow, & Co. have not, and that M. Monier were to come here and take out letters patent, what effect would that have upon the issue of this patent to Messrs. Carter, Gummow, & Co.? Messrs. Carter, Gummow, & Co. would have patented the invention previously.
3005. But supposing they had patented a system which was not the correct Monier system? Of course it would depend upon what was disclosed in the new specifications and drawings.
3006. Supposing Messrs. Carter, Gummow, & Co. had obtained a patent upon a system which was not the right Monier system, what would happen? If there were any additional novelty in the invention the office, of course, would grant a patent.
3007. And in that case the patent issued by Messrs. Carter, Gummow, & Co. would be superseded? Not necessarily.
3008. How is that? It would be superseded only so far as the improvement was concerned.
3009. As a matter of fact, is not this patent what might be called a pirating of the original patent? I would not say that it was a pirating of the original patent, because the law here admits of an introducer patenting a foreign invention within this Colony.
3010. But supposing the patent turned out not to be the Monier patent at all, would not M. Monier have redress against the Government for the use of part of his patent? Not unless he had patented his invention here.
3011. But suppose that he had patented the complete patent—suppose there was a secret in the original patent, and that Messrs. Carter, Gummow, & Co. did not know of it, and supposing that afterwards M. Monier came here and took out the full patent, would he not have redress against Messrs. Carter, Gummow, & Co. for using part of his patent? I think not, in view of their being the first applicants.
3012. Were any plans produced in connection with this patent? Yes.
3013. Are they here? Yes. They are attached to the grant of the patent.
3014. Was any printed journal produced in connection with the application? No.
3015. Was there any letter? There is a letter among the papers from Mr. Waters, the patent agent.
3016. *His Honor.*] It was through his agency, I presume, that the patent was taken out? Yes.
3017. *Mr. Parkes.*] Was not Mr. Baltzer one of the patentees? Yes.
3018. Was there a transfer to him from anyone? It is not upon our records.
3019. What address did Mr. Baltzer give when he patented this invention? They all gave the same address—"of North Sydney, in the Colony of New South Wales."

Thomas Wright recalled and further examined:—

3020. *Mr. Parkes.*] After you had had the interview with Mr. Davis, which you described to us when you were last here, and when you were endeavouring to get back into your former employ, you went across to North Sydney and had an interview with Mr. Forrest? Yes. T. Wright.
3021. What did he say? He said, "Tom, this is a bad job; on account of your dispute, and the kicking up of a row the other day, I am nearly £40 to the bad in measurements." What he meant by it I do not know. 15 June, 1896.
3022. Did he mean by that that the inspector had forced him to do good work? I do not know what he meant, but that is what he said.
3023. Do you not know perfectly well what he meant? I fancy he meant that there would have been £40 more in his pocket if I had been there.
3024. You also had a conversation with Mr. Carter, or some other member of the firm, in connection with the making of a wager? Not with Mr. Carter; but coming over in the boat, I, myself, made a bet one Saturday evening with Mr. Inwood, the inspector. It was as to the time when the Duke of Edinburgh was here and was shot. I said that it was so many years ago, and he said that it was not. He said, "I will bet you a new hat that it happened at such and such a time, and mind the new hat is to cost half-a-sov." A few days afterwards he came to me to pay me the half-sov. He had blood all about his face. Mr. Forrest afterwards came up and I told him what had happened between Inwood and myself. I thought he was not very well pleased because I took the money, and I said so. Mr. Forrest then told me that he and Inwood had been in a public-house most of the day playing 6d. and 1s. a corner for drinks. He said that he had lost a lot of money to Inwood, and that Inwood afterwards began to cheek him, when he struck him on the face. Mr. Davis came over, and, seeing Inwood's face, asked him what was the matter with him, when he said that he had fallen down a cutting. In another instance a man was at work laying pipes, and Mr. Carter made him a wager of half a sovereign that he could not lay so many pipes in a day. I think it was something like 180. Afterwards the inspector reported that so many pipes had been laid, and Mr. Carter gave the man a half-sovereign.
3025. Did you see him do so? No; but the man who got the half-sovereign told me of it.
3026. Could a man properly lay the number of pipes you mention in a day? Of course he could not; especially if he were working in rock. 3027.

- T. Wright. 3027. *Mr. Davis.*] You said on Wednesday last that you made a complaint as to condemned cement being used upon Contract No. 60 at North Shore? Yes.
- 15 June, 1896. 3028. Did you ever make such a complaint in connection with Contract No. 61? I do not know about the number of the contract, but the complaint I made was that condemned cement was being used.
3029. You made a certain complaint with regard to Contract 60 at North Shore, and you put that complaint in writing;—did you ever make such a complaint with regard to Contract No. 61? I did not mention the Alexandria contract at that time. I meant that bad cement was being used at the other place.
3030. Are you sure that you wrote more than one letter to me? I think I wrote you two.
3031. Did you write to me first of all with regard to Contract No. 60? I did.
3032. To whom did you address your second letter? To you.
3033. Did you address a second letter to the Minister? I did, I think.
3034. And after that did you address a letter to the Hon. J. Davies? No; I gave him the letter to which I referred the other day at the Temperance Hall. I took it to him myself.
3035. Did you write a letter to the Minister, under date January 19th, 1891, commencing with these words:—"I have been working on the sewerage close upon ten years for different contractors," signing yourself "Thomas Wright"? Yes; that is mine.
3036. Can you say that you wrote more than two letters to the Department? I said I wrote two or three letters. I do not know quite how many letters there were.
3037. You wrote one letter to me, one to the Secretary for Public Works, and one to the Hon. J. Davies, did you not? I think I wrote you two letters.
3038. In the letter you wrote to me did you not use these words:—"Sir,—As Mr. Hanlon and Inwood done all they could to deprive me of my work. I charge them with allowing Carter & Co. to use condemned cement all the time at North Shore";—that is your letter to me? Yes.
3039. Does that letter say anything about the use of condemned cement at Alexandria? No.
3040. *His Honor.*] Did you at any time write to Mr. Davis a letter in which you mentioned the Alexandria contract? No.
3041. *Mr. Davis.*] You told us the other day that it was the "Lion" brand of cement that was condemned at the Alexandria Park Works? Yes.
3042. Are you sure it was the "Lion" brand? I am not sure about the brand which was used at Alexandria and which was condemned, but I am sure that it was the "Lion" brand which was condemned at North Shore.
3043. *Mr. Gummow.*] Do you know anything about pipe-laying? I do not know very much.
3044. What is your occupation? I am a carpenter.
3045. Do you know how many pipes a man could lay in a day? I think that if a man laid a hundred, he would do very well.
3046. And how many pipes do you say were laid in the case you referred to? 180.
3047. You are quite sure you know the number? I could not give you the exact number.
3048. On Wednesday last you said that the inspector and Mr. Forrest came to you pretty well drunk;—was that so? Yes.
3049. You are quite sure of that? Very sure.
3050. What did Mr. Forrest say—did he say anything to you? Mr. Forrest and the inspector came along to where we were working. There was another inspector there seeing that everything was done right. When the two of them came down, Inwood drove his foot through the metal, and swore as I told you the other day. When the screen was put up, nothing but clean metal came through.
3051. Was Mr. Forrest there at all? Yes.
3052. You are quite certain of that? Yes.
3053. Do you know on what day that happened? Yes; on the Saturday before Eight-hours Day.
3054. Do you know the year? I think it was in 1890.
3055. You say that Mr. Inwood and Mr. Forrest both came together, and that Mr. Inwood put his foot through the metal? Yes.
3056. Did you answer Mr. Inwood back;—did you say that you would gouge his eyes out with a chisel, and rip his liver out with a sword? No.
3057. You are certain of that? Quite certain.
3058. In your previous evidence you said that when the inquiry was over Mr. Davies turned round to you and said you had no business to interfere with the contractor when he said what he did? That refers to what took place at the Public Works Department, when Mr. Davies and Mr. Bagge were making an inquiry. When it was finished Mr. Davies turned round and told me I had no business to interfere.
3059. With whom? With Inwood, I suppose.
3060. But you said the contractor? I did not mean the contractor. What Mr. Davies told me was that I had no business to interfere.
3061. But with whom—the contractor, the inspector, or the workmen? He turned round and said that I had no business to interfere, and that the contractor had told him of it.
3062. But to interfere with whom? I do not know what he meant.
3063. Did you see the concrete mixed on this job? Yes.
3064. Who mixed it? I know the men by sight, but I do not remember their names.
3065. Did you set up the timber for the putting up of the concrete? Yes; a cask of condemned cement was standing by the inspector when he kicked up the row, but he did not know it.
3066. How did you know it was condemned? All of us over at North Shore knew that it was condemned.
3067. But how did you know? I was there.
3068. But how did you know absolutely that it had been condemned? Word always came in as the cement was condemned.
3069. But how did you know definitely? I was on the job and I knew as well as the rest.
3070. But how? Five times out of six when cement is being tested the men are walking about idle. As soon as the cement is tested they start work again. When they start working it is known whether the cement has been passed or not.
3071. Suppose there happens to be some passed cement on the work, are the men kept idle then? Of course they are kept going while there is cement there to go on with.
3072. You said the other day that three casks of passed cement were put on to a dray with three casks of condemned

condemned cement, and according to what you now say the work would not be stopped while there was any passed cement on the spot ;—now you tell us that the work was stopped? I do not think I said it was stopped. T. Wright,  
15 June, 1896.

3073. Indeed you did ;—you said just now that the work was stopped for a certain time, and that is how you men knew whether the cement had been passed or not? The work is almost always stopped when the cement is being tested.

3074. But where was the necessity for stopping the work if there was some passed cement there ; you have just said that three casks of passed cement were put on to the dray with three casks of condemned cement ;—you will see that your answers are not consistent? Why, Mr. Forrest himself said the cement was condemned, and that I was not to let the men see it going out of the shed. I was given the key of the shed. There was some rack-a-rock and some dynamite there, and it was not supposed to be used for a long time, until Mr. Davis came over and gave him permission to use it.

3075. Do you, as a matter of fact, know anything at all about the cement that was used ;—do you know whether it was good, bad, or indifferent? I am quite sure it was bad. Mr. Forrest himself said it was condemned, and I was told by him not to let the men see the condemned cement being used.

3076. If Mr. Forrest told you that he was wrong, you also must be wrong in what you say ;—supposing he said the cement was condemned, when, as a matter of fact, it was not condemned? Then what did they take it away for?

3077. I thought you said just now that they used it all? Not all.

3078. Do you know how much cement was used on the job? I do not.

3079. As to the Alexandria contract, will you still swear that condemned cement was used on that contract? Yes.

3080. You said the other day that some of the cement, when Mr. Davis and Mr. Snodgrass tried it, set in fifteen minutes ;—should cement be allowed to be used if it sets in fifteen minutes? It is no good then.

3081. How do you know that? Well, I have seen a good deal of cement.

3082. But how would you get to know that the cement was no good if it sets in fifteen minutes? One gets to know a great many things, but one cannot exactly say how one gets to know them.

3083. What would be the source of your information in this particular case? I do not know.

3084. If the specifications in this contract said that quick-setting cement could be used you would be in the wrong? But it would not be used. The specifications would not say any such thing.

3085. But suppose the specifications did say so? Then those who wrote them would not know what they were writing about.

3086. That is another matter—suppose the specification said so? I do not think any specification would say such a thing.

3087. But if it did? Then I should say that it was no good.

3088. I suppose quick-setting cement would be allowed to be used if the specification provided for its use? If the specification said so, you could use it, no doubt. They could not stop you.

3089. Do you know if any cement was removed from the Alexandria job? Yes.

3090. Was any good cement removed? If it were good it would not be taken away.

3091. You are sure it was condemned cement that was removed? Yes.

3092. As to the bluestone metal of which you spoke in connection with that contract—do you know what good bluestone metal is? Yes.

3093. Do you know what is specified as good bluestone metal? Yes ; I have seen a good deal of it. I think the specification says “clean bluestone metal  $1\frac{1}{2}$  inches.”

3094. Does not the specification say that  $1\frac{1}{2}$ -inch metal can be used screened through an  $\frac{1}{8}$ -inch screen? I do not know about that.

3095. Then you do not know the size of the blue-metal upon this particular contract? I think  $1\frac{1}{2}$ -inch metal was specified,

3096. Does it not say that it was to be screened through an  $\frac{1}{8}$ -inch screen? It was not screened.

3097. Do you know, as a matter of fact, what the specification says in regard to this contract—you seem to know all about it? I do not know about the contract, but I know about the material which was used.

3098. But you say that the metal was too fine? Yes ; there was a lot of rubbish.

3099. And you are sure it should have been  $1\frac{1}{2}$ -inch metal? Yes.

3100. You are certain that that was specified? Yes, upon the Alexandria job.

3101. Do you know the size of the sewer in that contract? I think it was about 7 feet wide, but it was constructed six years ago, and it is hard to remember now.

3102. What height would it be? About 3 ft. 6 in. in the crown, I should say.

3103. It was not 7 ft. 6 in. by 7 ft.? No ; I do not think so.

3104. You were asked the other day whether provisions were made for an invert of 9 inches of concrete in a sewer 7 ft. 6 in. by 7 ft., and if that quantity were not put in whether there would not be a large saving ;—you said that you had thought many times that there was £100 saved in one little place? Yes ; I meant in the cement bed. I think more than £100 was saved in the material.

3105. How did you arrive at that £100? I know by what the material would be worth.

3106. Explain how you arrived at the £100? I could not go into an explanation now. It was worth so much a yard. Perhaps it might be worth 35s. a yard, and I had a rough idea as to how many yards there would be.

3107. How many yards do you suppose? I could not say now.

3108. What is the length of the sewer? I do not know.

3109. Did you not say that this little place to which you refer was about 30 or 40 feet long? It might be more or it might be less.

3110. Take it at 40 feet ;—would it be less than that? Well, all over the sewer there is bad stuff.

3111. But you said that over £100 was saved in the little place to which you refer? When I said that, I meant the sewer itself. From the point where it commences to the point where it finishes it is no great distance. It is only a short sewer.

3112. Do you think, then, that £100 would be saved all over the sewer, or that it would be saved at the little place to which you referred? What I said referred to the sewer. It is only a short bit of work.

3113. You mean the whole work, not a little bit of it? Yes.

3114. You said the other day that if the sewer were open you could show easily enough where this bad work

- T. Wright. work was;—what is the difficulty of your showing us now where it is to be found? Well, it is all covered up now.
- 15 June, 1896. 3115. Take the 30 or 40 feet to which you referred so strongly;—could you not find that spot? You could find it yourself. I told you that it was at the very end of the work. If you followed the work up from the end you would find that all I have told you is true.
3116. Do you think you could find the spot? I think I could go very near it.
3117. Is there a branch sewer coming in near the spot? Not that I know of.
3118. Did you not build the moulds in connection with the bringing in of a branch sewer? The work itself ran into an old sewer, and finished near the Chinaman's garden.
3119. But did you not make moulds for a branch sewer? No; it was a pipe sewer running into the side of it.
3120. It was not a concrete sewer? No; not at the time I was there.
3121. You are sure you did not fix up moulds to go into a concrete sewer there? Where the pipes came in there might be a little concrete round about them, but I could not tell you how much.
3122. Did you fix up the moulds in that 30 or 40 feet to which you have referred near the outlet? I think so. But one day I was on the North Shore job, and another day somewhere else. It is possible that some one else fixed some of them, but I could not say definitely.
3123. With regard to the pegs, you said the other day that thirty or forty pegs had to be shifted. In answer to His Honor you said that as you went down the sewer you found it necessary to drive in some of the pegs? The pegs had to be driven in where there was no room for the mould.
3124. You said that thirty or forty pegs had to be shifted? If I said that I said what was wrong. What I meant to say was that the pegs were in no depth—that they were striking up through the concrete—through the bottom of the sewer. The pegs are allowed to stop there until you fill in the top.
3125. What did they drive the pegs into? The ground.
3126. What sort of ground was it? Soft ground.
3127. These pegs were standing up in it? Yes; or you would not know where to go. There was a 9-inch bottom of concrete, and it had to go in in two layers about  $4\frac{1}{2}$  inches each. These were supposed to come up to the top of the peg.
3128. Are you prepared to swear that this 9-inch bottom was put in in two layers? I am prepared to swear that in some instances the second layer could not go in simply because there was no room for it.
3129. But where there was room, you say that the 9 inches had to go in in two layers? Yes; I think there was  $8\frac{3}{4}$  inches of concrete altogether.
3130. And did you see that go in? I think I saw most of it.
3131. Was there nothing below the  $8\frac{3}{4}$  inches of concrete? I cannot be sure. The reason I cannot answer all your questions is that I was at Alexandria one day and at North Shore the following day.
3132. Was the concrete on rock or sand? I could not say.
3133. But if you were setting the moulds you would know, would you not? All the bottom was in before I went in at all.
3134. You said that when you were putting up some of the moulds you found there was room for only a half thickness of cement? Because the bottom was too high.
3135. But did you know the thickness of concrete below—did you test it below? No; I did not.
3136. Then how do you know how much concrete was there? Well, there should have been two layers of about  $4\frac{1}{2}$  inches each, one on top of the other.
3137. Did they not go in? I do not know. If they did, they did not come to the top of the pegs.
3138. Would they be able to drive a peg through the concrete? Not a wooden peg.
3139. But you did not test the depth of concrete, so as to be able to say definitely that there was no  $8\frac{3}{4}$  inches there? I had to chip some of it off, and I fancy, from what I saw at some places, that the pick was nearly through.
3140. But you did not get through? No; but I was very near it.
3141. There might have been 6 inches underneath those places? You can easily try it.
3142. Could you find the place at which we could try it? Yes.
3143. In answer to His Honor, the other day, you said you knew of this bad work by testing it yourself? Yes.
3144. You were working on the top of the bluestone concrete? Yes.
3145. Then you must have tested it to ascertain the actual depth? I did not say I tested it.
3146. Then what did you mean by telling His Honor that you had tested it;—you said you knew the bad work by testing it yourself? Well, the tests were these: I had to pick the top off to get room for the moulds, and I knew that the bottom could not be of any thickness at all.
3147. How did you know that? I did not go right down to the bottom as I have told you, but I knew.
3148. You knew the thickness of the concrete? I could not tell you to a quarter or half an inch, but I had a good idea.
3149. What we want to know is whether there were 9 inches or 3 inches, or what depth there was? I do not believe there was more than 3 inches in many places.
3150. How do you know that? I am telling you what I think.
3151. But why could there not have been a greater depth? From working on the top with my pick, I did not think the concrete was of the required thickness.
3152. You said just now that you knew it was not? Well I knew, and I did not know. I knew the thing was not properly done as it should be.
3153. What do you mean by saying that you knew and you did not know? Well; I knew that things were not all right.
3154. Can you swear that there was not a depth of  $8\frac{3}{4}$  inches? I will swear that there was not 9 inches.
3155. *Mr. Parkes.*] Do you remember the name of the cement which was condemned on the Alexandria contract? I should not like to state the brand definitely in the case of that contract.
3156. Was it what is known as Red Hand cement? I do not know.
3157. You said just now in reply to Mr. Gummow that the sum of only £100 was saved, and that the sewer was only of very short length—do you know what length it was? It is a short sewer altogether.
3158. About how long would it be? Perhaps 3 or 4 chains long.
3159. Do you mean the portion of the sewer upon which the bad work was done? I mean that about £100 worth of stuff was saved upon what they did.
- 3160.

T. Wright.  
15 June, 1896.

3160. But how many chains would that be, roughly speaking? I do not know.  
 3161. Would it be 2 chains? More than that; it might have been 5 or 6 chains.  
 3162. You said in your former evidence that you had, in putting the moulds in, to knock the pegs down some inches into the ground? Yes; the pegs were sticking up through the bottom.  
 3163. And they were measured for a depth of concrete of about 9 inches? Yes; I believe I broke the first peg off to get the moulds down on to it.  
 3164. How far apart were the pegs? I believe they would be 20 or 30 feet apart.  
 3165. And how many did you break off or knock down? I could not say. Perhaps four or five of them. It might be more, or it might be less.  
 3166. In picking away at any of these places to get the moulds in, did any of the concrete give way, or how could you tell there was a thickness of only 3 inches at places? By the way it chipped. I could tell from the tapping. I had some idea from the quantity I took off.  
 3167. As a matter of fact you knew that the pegs should have measured a depth of 9 inches? Yes. They give the depth of stuff which is supposed to be put in.  
 3168. When you came to put in the moulds, did you find the pegs of uniform height? Yes.  
 3169. And you had to knock them in to get in the moulds? Yes.  
 3170. You told Mr. Gummow just now that sometimes you were at North Shore and sometimes upon the other work? Yes.  
 3171. But on the portion of the work of which you have spoken you fixed the moulds yourself? Yes.  
 3172. All of them? I think so.  
 3173. Did anyone fix the moulds further on? I am not quite sure; but I think one of the inspectors on the job had a son, and I think his son came and fixed a mould.  
 3174. Was that a Government Inspector? Yes.  
 3175. And you say that the son of this Government Inspector came and fixed a mould? Yes; I fancy he did.  
 3176. What was his name? Clymer, I think. I believe he was a builder at one time. He lived at Balmain.  
 3177. What street did he live in? I cannot say.  
 3178. When you were knocking down the pegs on which you have spoken in order to fix in the moulds, did you notice whether, further on, the pegs needed knocking down? Further on they did not need knocking down. They came all right.  
 3179. How far on? I could not say.  
 3180. If condemned cement was used, and if an insufficient quantity of concrete was being put in under the sewer, surely there would have been a saving of more than £100 upon the total length of it? What I meant was that £100 would be saved from part of the bottom being left out. Then, of course, there is the bad stuff to be considered. The metal itself was very bad. I believe it would go about 30 feet to a banker.  
 3181. Was young Clymer an employee of the contractors. I do not know. I never saw him doing the work, but it runs in my head that he did something there at one time when I was at North Shore.  
 3182. With reference to the total saving effected by the bad work put into the sewer, do you not think that if you allow for the bad material it would be likely to come to more than £100? I am confident that it came to that amount anyhow.  
 3183. As a matter of fact you could not form an idea as to how much was saved? No, I could not.

Robert Rowan Purdon Hickson, recalled and further examined :—

3184. *Mr. Parkes.*] Contract 112, M'Sweeney's contract, was for a triplicate sewer? Yes.  
 3185. I understood you to say the other day that the original departmental plan of Contract No. 77 would cost about the same as Contract No. 112 per foot run? I am having prepared the length and cost of several of the contracts you have referred to. The information will be available presently.  
 3186. What is the tender cost of M'Sweeney's 112 Contract? It is a schedule-rate contract.  
 3187. Does it not work out at £17,300? I do not know. It was accepted at schedule rates.  
 3188. Was not Mr. M'Sweeney right the other day when he said that it would work out at between £17,000 and £20,000? I could not say without seeing the papers.  
 3189. While Mr. M'Sweeney was giving evidence the other day with reference to Contract No. 112 you asked him whether he was not aware that he had nothing to do with the Monier plates, and that the office had to buy them and to pay the royalty? The office would have provided them had they been used.  
 3190. Would the office have had to pay the royalty? If the plates had been used, certainly.  
 3191. Would that amount have had to be paid outside of the contract? Yes; but we did not use them at all, so that the question does not come in.  
 3192. If they had been used the office would have had to pay for them outside of the price of M'Sweeney's contract? They were put into the contract in the first instance, and afterwards taken out.  
 3193. They were taken out by Mr. Darley, I believe? No.  
 3194. Did not Mr. M'Sweeney say they were taken out by him? He did at first, I believe, but he afterwards corrected himself. He said finally that they were taken out by me. As a matter of fact it was I who took them out of the contract.  
 3195. Did you not write a minute to the Secretary for Public Works when this contract was being tendered for, and before this tender was accepted, in these terms :—"I would point out that the specification, under clause 25 of the general conditions, throws the whole of the responsibility for the patent rights on to the contractors"? Yes; if there were any patent in the contract.  
 3196. But that was written with reference to a query as to the patent rights? Yes.  
 3197. Therefore you told the Minister that the contractor was responsible, and that he would have to pay for the patent rights? If it were a patent, but there was no patent in the arch. That was the point under discussion at the time.  
 3198. In the discussion which took place about the putting of the Monier patent in the arch, in order to reassure the Minister, you wrote the minute containing the words I have just quoted? That is quite right, but there was none of the patent used.

R. R. P.  
Hickson.  
15 June, 1896.

R. R. P.  
Hickson.  
15 June, 1896.

3199. Then why did you take out the patent after the contract was signed? You are confusing two things. There is no Monier patent in the arches.

3200. Were Monier plates used in the contract anywhere? There were a few, and the discussion arose upon a claim made by the contractors for patent fees upon the whole of the structure. I pointed out to Mr. M'Sweeney verbally that the patentees, in my opinion, had no right to claim any royalty, because there was no patent used in the work, but that if they could substantiate their claim, then, under the general conditions, the contractor would, of course, have to bear the cost.

3201. *His Honor*] Are the few plates you have spoken of plates covering the top of the carrier? They were a substitute for the ordinary covers to, I think, a sump. I thought we might advantageously use these plates. Sumps are generally covered with iron plates, and I thought we would try a few of the Monier plates instead. Rather than raise the question of royalty, however, I struck them out altogether and went back to the old system.

3202. The Monier plates are those shown upon drawing No. 4? Yes. The plates are intended to cover little recesses at the shore end of the abutment.

3203. For what are the recesses intended? They are merely put there for lightness.

3204. Under the invert of the carrier? Yes.

3205. The plates which cover the aqueduct were not upon the Monier principle? No, certainly not.

3206. *Mr. Parkes*.] Then why could you not have used the same method of construction in Contract No. 77? We could have done so, most undoubtedly.

3207. Therefore, there was no need for you to pay the royalty upon this patent? There was need from my point of view to introduce the new system when I could do so at no extra cost to the Department, the whole risk being borne by the contractors.

3208. You say that the minute from which I have quoted was written upon the dispute occurring between the contractor and the patentees? Yes; I was under that impression.

3209. Was it not, as a matter of fact, written when you were submitting tenders to the Board of Reference? I could not say till I see the papers. I see that a minute was written when the tenders were submitted.

3210. And not when the dispute with Mr. M'Sweeney occurred? No. But I knew that the claim had been made by the patentees in connection with their patent.

3211. Did you know that when you put these Monier plates in? No. I knew that the patentees claimed that the carriers into which we introduced the iron bars were on the Monier principle.

3212. Did you know before the contract was let that the patentees would make a claim? I could not say that, but I knew of it very early in the transaction.

3213. When you submitted the tenders to the Tender Board you knew that the patentees would make a claim? Yes.

3214. Before the contract was let? Yes.

3215. Then why did you not before letting the contract take the Monier plates out—why did you wait until Mr. M'Sweeney made his protest before you took them out? The few plates were not worth speaking of. They were a very small portion of the job.

3216. *His Honor*.] I understood one of your answers just now to have reference to the iron bars in the carriers? Yes; that is another matter.

3217. *Mr. Parkes*.] They do not belong to the Monier system, you say? No.

3218. Nevertheless the Monier patentees were about to make a claim upon the whole of the job? Yes.

3219. *His Honor*.] What was done in relation to the part of the claim affecting the bars in the carrier;—they were allowed to remain, were they not? Yes. My contention always was that they did not constitute the Monier patent, and that the patentees had no right to a royalty upon them.

3220. The Monier patent, as you understood it, being confined to the building of arches? No; it is the way in which the iron is introduced into the concrete.

3221. In the form of a grill? Yes; it would be absurd to say that you could not put an iron bar into a concrete structure without having to pay a royalty on the Monier patent. This is exactly a parallel case. We put iron bars in about 3 feet apart, and my contention was that that was not the Monier patent in any form.

3222. As to that matter, is it or is it not a fact that a great many years before the Monier patent was heard of the Americans had adopted a plan of laying railway irons in a concrete foundation to stiffen it? Yes; I had done so myself long before I knew there was such a thing as the Monier patent.

3223. That would explain your contention that the mere putting of bars into concrete work would not justify the Monier patentees in making any claims in respect of that work? Yes.

3224. It is the grill-work which is the peculiarity of the Monier patent? Yes; that is a part of it.

3225. *Mr. Parkes*.] This aqueduct has to carry a great quantity of water and a great weight as compared with the aqueduct in Contract 77? Yes.

3226. Then a greater strain would be upon it? The greater the volume the greater the strain, of course.

3227. Then why could you not have applied this principle to Contract 77 instead of applying the Monier patent to it? Because I thoroughly believed in the Monier system. And I had an opportunity to introduce it at no loss to the Department, while throwing the whole risk upon the patentees. Under those circumstances I think I was quite justified in doing so.

3228. Is it done entirely at the risk of the patentees? Entirely.

3229. Then the Department is not supposed to pay the patentees risk fees or anything of that sort? I do not know what you mean by paying risk fees.

3230. Let me put the question in this way—if the Department were negotiating with the patent-holders to use a certain patent, you would not expect the Department to pay for the risk of that patent? If I were calling for tenders on the Monier principle, I should make the Department liable; but if the contractors offered to do the work upon the Monier principle, they would be liable for the risk. That is why I would not call for tenders. Had I done so, I should have had to prepare my own designs, and the Department would have been responsible for the work.

3231. Was not the design of Messrs. Carter, Gummow, & Co.'s Monier arch work in Contract 77 made in your office? Not to my knowledge.

3232. Was it not made by Mr. Baltzer? Not to my knowledge. I am almost certain it was not done in office hours. I am sure my chief draughtsman would not have allowed such a thing as that to take place.

3233. Was Mr. Baltzer your chief draughtsman? No; Mr. Hammer. He was immediately responsible to Mr. Bagge, and I am sure neither of them would allow anything of the sort to take place.

R. R. P.  
Hickson.

3234. I see you now have the paper of which you were speaking, showing the total length and cost of Contract 112 and other contracts;—what would be the total cost of 112? There is no contract cost. The estimated cost upon which the tenders were compared was £17,362, I think.

15 June, 1896.

3235. *His Honor.*] Do I understand that that is the office estimate reduced by the tender percentage? That is our estimate of the work carried out on the contractor's schedule rates, but it is not the contract sum. It might be exceeded by (say) £4,000 or diminished by £4,000.

3236. *Mr. Parkes.*] With extras, you mean? No. It is not a question of extras, but when the whole work is measured up, instead of there being 50 yards of brickwork, there might be only 40, and so forth.

3237. Upon what did you base your replies to His Honor's questions the other day concerning Contracts Nos. 112, 101, and 77;—practically, what you said to His Honor was that there was no difference between Contract No. 77 and Contract No. 112—that they stood at almost the same cost? Yes; very much the same.

3238. You did say that? Yes.

3239. That, I suppose, would be taking the departmental plans? Yes.

3240. On what did you base your estimate per foot? On the office quantities we took out when we were making the estimate in the first instance.

3241. Did you not base your answer on the actual cost? How could I give the actual cost when the work was not finished?

3242. The estimated cost of No. 112, you say, was £17,362, taking the office estimate reduced by the contractors' tendering percentage? Yes; but that is not the contract amount.

3243. What is the length of the contract? 2,625 feet.

3244. That aqueduct is to carry the capacity of the three 6-ft. pipes flowing into it? No.

3245. Does not John Ahearn's Contract No. 101 join this aqueduct? Yes.

3246. Does not that carry three 6-foot pipes? Yes.

3247. Does not that discharge into this one aqueduct? A portion of it does. The rest goes out in two distributing sewers—one to the right and one to the left. They are not constructed yet. There is no sewerage coming down so far.

3248. Now let us take the dimensions;—is not the aqueduct in Contract 112 8 ft. 8 in. by 4 ft. 6 in. deep? No.

3249. Do you mean to say that it is not 8 ft. 8 in. in width? On the top.

3250. Is it not approximately 4 feet in depth? I suppose it would be about 4 feet.

3251. Then it is 8 ft. 8 in. by 4 ft.? No, it is not. The aqueduct diminishes in size as it goes down. The average would be about 8 feet. You might say that it is 8 ft. by 4 ft.

3252. What are the dimensions of the aqueduct proposed over White's Creek and Johnstone's Creek? Smaller, of course.

3253. Is it not 4 ft. 6 in. by 3 ft. 6 in.? Four feet 6 in. in the deepest part of it, and 3 ft. 6 in. in the widest part.

3254. Therefore, it has but one-half the capacity of the other aqueduct? Yes.

3255. It would be a fair thing to say that it should be made for about one-half the cost? Certainly not.

3256. Why not? It is such a silly question that it is hard to answer it.

3257. *His Honor.*] Have you any formula by which you can approximately give the relation between cost and capacity—the capacity of the carriers, and the running cost of the aqueduct, at a given height, of course, above the ground? Not at all accurately. The question that was put to me by Mr. Parkes was whether, supposing the sewer in Contract No. 112 to be double the capacity of the sewer in Contract 77, was it fair to say that the cost of No. 77 sewer should be one-half the cost of the sewer in Contract 112, and I say that that is absurd.

3258. Have you any idea of the ratio? Not in proportion to the decrease in size. For instance, suppose that a carrier 10 feet wide costs £10 a foot, if you reduce the width to 1 foot you would find that it would cost a great deal more than £1 a foot to construct the carrier at the reduced width.

3259. *Mr. Parkes.*] I believe you desire to make some rather important corrections in some of your replies to my questions. Question and answer No. 1252 are as follows:—

1252. Did you not use words to this effect, "Does Mr. Bagge know anything about this patent"? I used those words, because I knew that he had gone into the question. As a matter of fact, I had at that time put up a small culvert on the Parramatta Road on the Monier system.

I believe that what you now wish to say is that instead of your having at the time you referred to put up a small culvert on the Parramatta Road on the Monier system, what you now desire to say is that you had arranged to put it up? Yes. If you read the evidence a little further on you will see that I corrected myself, because I there say that I had arranged to put it up.

3260. Did you not, on the 18th July, 1894, write in the following terms to the Minister: "The Monier system of concrete arching has been patented in the Colony by Messrs. Carter & Co. Where applicable, it reduces the cost of spanning an opening by about 50 per cent. The patentees are willing to allow the Department to use the patent on payment of a royalty of 15 per cent. on the cost of the arch. I recommend this for the Minister's approval. I might state I have just completed, with the permission of the patentees, a culvert on the Parramatta Road, built on this principle, with most satisfactory results, financially and otherwise"? Yes; I wrote that on the 18th July, 1894.

3261. And on the 5th April, 1893, you asked Mr. Bagge the following question: "Does Mr. Bagge know anything about this patent"? Yes; that was on the 5th April, 1893.

3262. The letter which I have quoted having been written on 18th July, 1894, I presume that at that time the bridge was being constructed? I forget the date at which the bridge was constructed at this moment, but I daresay I can get it for you.

3263. I understand that you also desire to make a correction in your evidence at Questions 1361 and 1362. They are as follow:—

1361. You say these estimates are carried out upon a triplicate-sewer plan? Yes; all these three schemes.

1362. And is Ahearn's based upon a triplicate system, too? Yes.

I ought to point out to you that my Question 1361 should read "duplicate-sewer plan" instead of "triplicate-sewer plan," and that the word "triplicate" in Question 1362 should also be "duplicate"? Well, Mr.

- R. R. P. Hickson.  
15 June, 1896.
- Mr. Bagge's schemes Nos. 1, 2, and 3 are for single carriers. So far as Question 1362 is concerned, of course, if you alter the word "triplicate" to the word "duplicate," my answer would be "No."
3264. Then what is the meaning of Mr. Bagge's report when he says: "Three designs are herewith submitted for the consideration of the Engineer-in-Chief, each design with an open aqueduct carried upon arches and piers. The aqueduct or main carrier is capable of discharging 11,000 cubic feet of sewage per minute, which is equal to two 6-foot diameter outfall sewers";—should you not say from that that Mr. Bagge's report was based upon the discharge of two sewers; I suppose the office work was the only thing upon which a comparison could be made at that time? Certainly not; three designs were submitted by Mr. Bagge for the consideration of the Engineer-in-Chief. These three designs were for single carriers, not for triplicate or duplicate carriers.
3265. Then I ask you is Ahearn's contract a duplicate system? No; that is a triplicate system.
3266. Is it not calculated in Mr. Bagge's report as a duplicate system? I think Mr. Bagge did in a footnote refer to it as a duplicate system.
3267. *His Honor.*] Although there was a triplicate system up to a certain point, the line of sewer was continued with a discharge which reduced the necessary carrying capacity of the extension to that of a duplicate sewer? There was an extension of the three-sewer system; but it was not proposed to carry the same amount of sewerage as would be carried in the three sewers.
3268. The extension was supposed to carry the contents of two 6-foot sewers? As a matter of fact, it would only be required to carry a little over that, because at the intersection there are branches to the right and left to distribute the sewage over the sewerage farm.
3269. You are referring now to M'Sweeney's contract, following upon Ahearn's? Yes.
3270. Then, if we know the actual capacity of the single carrier in M'Sweeney's case, we shall know how far it was an extension of the preceding line of sewer, or what the reduction was? Yes.
3271. *Mr. Parkes.*] With regard to your answer to Question 1385, I asked you how Mr. Young came to tell the House that your son had left some months before the meeting of Parliament, and you said in reply to me, "He made a mistake in saying months; he should have said weeks";—I believe you wish to correct that statement by striking out the words "he should have said weeks"? It is not very material. Strictly speaking, weeks is correct, because it was five weeks before that that my son got notice to leave.
3272. *Mr. Gummow.*] With regard to the Monier plates in Contract 112, which have been referred to, had Mr. M'Sweeney to supply them? No; they would have been supplied by the Department.
3273. What had Mr. M'Sweeney to do with them? He had to put them in.
- 3274-5. Would he have had to pay a royalty simply for putting them in? No; I have already said that he would not.

WEDNESDAY, 17 JUNE, 1896.

Mr. Robert Rowan Purdon Hickson recalled and further examined:—

- R. R. P. Hickson.  
17 June, 1896.
3276. *His Honor.*] You were asked some questions the other day with reference to the area of various carriers? Yes; the area of the carrier in Contract 112 is as nearly as possible  $31\frac{1}{2}$  feet when full. The area of one 6-foot sewer when full is  $28\frac{1}{2}$  feet, so that the area in Contract 112 is only 3 feet more than the area of the one sewer in Contract 101. Flowing as they are supposed to do at the maximum of two-thirds full the area is as nearly as possible the same in both cases.

Mr. Peter Ewing sworn and examined:—

- P. Ewing.  
17 June, 1896.
3277. *Mr. Parkes.*] What is your occupation? I am a contractor.
3278. Some eighteen months ago you were a member of the firm of Carter, Gummow, & Co.? Yes.
3279. There was a partnership deed, was there not? Yes.
3280. Some time in June, 1895, I believe you had a conversation with Mr. Carter near the Bank of New Zealand? Yes.
3281. What did Mr. Carter tell you? Mr. Maddison asked Mr. Carter if it were true that Mr. Hickson, jun., had been engaged by the firm, and Mr. Carter said "Yes." Mr. Hickson, he said, wanted to join the firm, but he had told him that he had better wait two or three years.
3282. Join in what capacity or how? Mr. Carter simply said that Mr. Hickson wanted to join the firm, but that he could not do so for some years, although he would be taken on as an employee.
3283. Had you need of Mr. Hickson as an engineer at that time? There was not much work going on at that time. There was only the Adelaide job.
3284. What salary was he paid? I could not say. I was told £200 a year.
3285. *His Honor.*] Who told you that? Carter.
3286. *Mr. Parkes.*] From what Mr. Carter said to you you were under the impression that Mr. Hickson, jun., was ultimately to be a partner in the firm? We did not inquire very much about those affairs. Mr. Maddison and I met Mr. Carter, and asked him if it were true that Mr. Hickson, jun., had been put on to the work. He said that it was true that Mr. Hickson, sen., wanted his son to join the firm, but that he had said he had better wait for two or three years.
3287. Did Mr. Hickson, jun., discharge any duties for the firm? I never saw him discharge any on this side, but he may have done so in Adelaide.
3288. Was he of any use at all to the firm? That I could not say.
3289. After becoming an employee of the firm did he go direct to Adelaide? I think so.
3290. Who were the partners of the firm who were in Adelaide? Mr. Gummow and Mr. Gillan.
3291. Later on Mr. Gillan returned to Sydney? Yes.
3292. Did young Mr. Hickson return with him? I do not think so.
3293. When did Mr. Gillan return? I do not know.
3294. Do you know whether young Mr. Hickson came to Sydney at any time at about the same date as Mr. Gillan? I only knew of his coming over from Adelaide once before he came over permanently.
3295. But he had been in Sydney once before that, you say? Yes.
3296. You had a conversation with Mr. Gillan, had you not, when he came to sign a bond? Yes.
3297. What did he tell you? He asked whether we had been asked anything about putting young Mr. Hickson on the works. I said we knew nothing about it until he was put on. He said he had seen a telegram from Sydney dealing with that particular point. He did not say what the telegram was.

P. Ewing.

17 June, 1896.

3298. Did he not say what the wording of the telegram was? No; I never asked him.
3299. When you left the firm of Carter, Gummow, & Co., on what date was the bond signed? I do not know. Mr. Maddison has a copy at home.
3300. *His Honor.*] Where is the original, do you know? I cannot say. We saw it, and that was all. It was signed at the "Australia Hotel."
3301. *Mr. Parkes.*] Did you understand that there was to be a lasting partnership? Yes.
3302. Does not clause 20 of the agreement say, "Upon the completion of all the contracts for the time being in hand, or upon the happening of any event rendering it impracticable for the partnership to carry out and complete the same, whichever shall first happen the partnership shall be dissolved, and a general account taken of the assets and liabilities of the partnership, &c."? I never heard it read before, and I never read it.
3303. There can be no doubt that that deed of partnership was drawn up in respect of all contracts which were going on? Yes; we were supposed to put in so much money, which was to go for certain works.
3304. Will you tell me whether Mr. Gillan and Mr. Forrest were contractors upon any works in this Colony prior to April, 1895? Yes; we tendered for work together, and we signed contracts together.
3305. Will you tell me why you desired to leave this firm? Well, we could not get on very well together. Things were not going so as to suit me, and so I left them.
3306. Since you left the firm, have you had any Government contracts? I have tendered several times.
3307. But you have found it very difficult to get contracts? I could never get near them at all.
3308. *His Honor.*] I suppose that what you mean is that you did not tender low enough? No.
3309. *Mr. Parkes.*] You were one of the party of contractors who waited on me some twelve months ago? Yes.
3310. What did you request me to do at that time? We wanted everyone to have a fair opportunity of tendering.
3311. What did you tell me at that time? That we thought that everyone should have a fair show in tendering.
3312. But what was the object of the deputation of contractors which waited upon me;—what did they say to me? As nearly as I can remember it was this—that a lump sum contract had been accepted upon what was known as the Monier job, and we thought that it was not right for any firm to put in a lump tender when schedule rates had been issued for the work.
3313. Were there no other reasons which you gave for waiting upon me? I do not know of anything else.
3314. Was nothing said about the impossibility of contractors obtaining contracts because of the concessions which were given to Messrs. Carter, Gummow, & Co.? I was not there the first time they waited upon you. I was there the second time.
3315. *His Honor.*] Then there were two deputations? Yes.
3316. And you attended with the second one? Yes.
3317. *Mr. Parkes.*] On the first occasion I declined to do anything until I had made inquiries, and on the second occasion I made the contractors lay certain matters before me;—is not that so? Yes; the contractors did not think that the matter of the Monier tender had been properly dealt with.
3318. Were no other matters laid before me;—do you not recollect other matters being laid before me in connection with other contracts? I forget now what they were.
3319. *His Honor.*] Who was the spokesman at the deputation at which you attended? There were several spokesmen.
3320. Did you yourself say anything? I said I did not think the Government had any right to call for tenders at special rates, and on the top of that to accept a lump sum tender, because that did not give the other contractors a fair chance at the tender-box.
3321. *Mr. Parkes.*] I suppose there is no doubt about this—that if you had had a chance of tendering you and the other contractors could have done the Monier work? I did not go into the matter, but I am sure there are plenty of contractors who could have done it.
3322. You had no chance of tendering upon the Monier plan? I did not go into the matter at all. I did not think it worth while.
3323. But were you given a chance at all to tender from that plan? As far as I could hear, a lump sum tender was to receive consideration, and, that being so, it did not look as if it were worth the while of anyone else to try for the work.
3324. *His Honor.*] Before you sent in your tender at all did you hear anything about the Monier system being likely to be tendered for;—had you any opportunity yourself of sending in a tender upon the Monier system founded upon the departmental plans and schedules? It was of no use to tender.
3325. But you had a chance if the plans were given to you? The plan given to us was a different thing altogether.
3326. *Mr. Parkes.*] You never saw the substituted plan of No. 77? No.
3327. Did you tender for Contract No. 101? I do not recollect.
3328. Were you a member of the firm when Mr. Hickson, junior, came back from Adelaide? No.
3329. Upon all contracts which which were going on under your partnership deed you had an interest in common with the others? Yes.
3330. Messrs. Carter, Gummow, & Co., did not draw up separate deeds for each job? No.
3331. After you had brought this matter of Messrs. Carter, Gummow, & Co.'s before me, at the instigation of a number of contractors, you had a conversation with Mr. Carter, had you not? Yes.
3332. Where did that conversation take place? Down near the Bank of New Zealand.
3333. What did he say to you? He asked me if I remembered the conversation that we had had before.
3334. And what did you say? I said that I did.
3335. *His Honor.*] What conversation was that? About putting Mr. Hickson, junr., on at the start-off.
3336. *Mr. Parkes.*] There was no further conversation? No.
3337. When did that happen? I could not say the exact date.
3338. Would it be after October, 1895? Yes.
3339. *Mr. Smith.*] Besides the deed which you have just seen, was there any other deed of partnership? There was a similar deed between Mr. Gillan, Mr. Maddison, Mr. Gummow, and myself.
3340. When was that signed? They were both signed on the one day.
3341. The first of the two conversations with Mr. Carter which you have referred to took place at the Bank of New Zealand? Yes.

- P. Ewing. 3342. And that you say was about June, 1895? It was at the time that Mr. Hickson, junr., went over to Adelaide.
- 17 June, 1896. 3343. When he was first engaged? Yes.
3344. *His Honor.*] Cannot you fix the date approximately? It must have been in 1893, I think.
3345. *Mr. Smith.*] At that time you had a contract in Adelaide? Yes.
3346. The deed to which you have already referred is dated 25th August, 1892;—it refers to the fact that you had already entered into a contract with the Government of South Australia for the construction of certain works in or near Adelaide called Contract No. 60? Yes.
3347. You knew that Mr. Hickson, junr., was to be employed on that Adelaide job? After he was engaged—yes.
3348. You have said, I think, that you never saw him on the works here? I have seen him on a visit here, but not doing any work.
3349. When was it that you saw him here on a visit? I could not exactly say. He was having a holiday at the time, I think.
3350. And that was the only time that you saw him here at all? Yes.
3351. I think you told us that on the occasion on which Mr. Gillan came up to Sydney Mr. Hickson did not come up with him? He might have done so, but I did not see him.
3352. Who were the other contractors who waited with you upon Mr. Parkes;—kindly mention a few of the names? The biggest part of the local contractors were there. There were O'Neill, Rhodes, Butcher Bros., Gilliver, and Maddison.
3353. By Maddison you mean your partner? Yes.
3354. And all that you can remember is that you objected to this lump sum tender being accepted in regard to Contract No. 77? Yes.
3355. That is all you can tell us with regard to the objections which you put before Mr. Parkes? Yes.
3356. I think you said that you and other contractors could not get near the contracts now? Yes.
3357. You sent in a tender for the particular contract in respect of which a lump sum tender was afterwards accepted? Yes.
3358. What was your figure? It was  $8\frac{1}{2}$  per cent. below the Government schedule.
3359. Did you know the tender price of Messrs. Carter, Gummow, & Co.? Yes. It was  $28\frac{1}{2}$  per cent. below the schedule rates.
3360. So that there was 20 per cent. difference between you;—did it not occur to you that that perhaps was the reason why you could not get near the contract? We knew that if a lump sum tender were to be accepted we could not get near the contract at all.
3361. I suppose other contractors tendered for No. 77? Yes.
3362. And their tenders were all above the tender of Messrs. Carter, Gummow, & Co.? Yes.
3363. You say Mr. Carter told you that Mr. Hickson, junr., wanted to become a partner, but that he had told him that he would have to wait for two or three years? Yes.
3364. Beyond that you never heard any suggestion as to Mr. Hickson becoming a partner? That is all the conversation I had in reference to it.
3365. As a matter of fact, he never was at any time a partner? Not that I know of.
3366. If there had been a partnership under a deed you would have known of it? Yes, according to the deed.
3367. You signed this deed, did you not? Yes.
3368. I wish to draw your attention to the first clause, "The parties hereto will become and remain partners under the name, style, or firm of Carter, Gummow, & Co., in the trade or business of contractors, for the purpose of carrying out and completing the contract hereinbefore referred to, and any other contracts which the said parties shall mutually agree upon and shall obtain"—it is, therefore, clear to your mind that this is a partnership agreement relating only to the Adelaide contract, or any other contract upon which the parties shall mutually agree? Yes.
3369. As to clause 20, "From the completion of all the contracts for the time being in hand, or upon the happening of any event rendering it impracticable for the partnership to carry out and complete the same, whichever shall first happen, the partnership shall be dissolved, and a general account taken";—that, I presume, refers to the contracts in hand when the partnership was agreed upon? Yes.
3370. It is provided that when those are completed and the partnership is to be dissolved an account is to be taken? Yes.
3371. So that apart from the Adelaide contract the deed relates only to those contracts upon which the parties shall mutually agree? Yes.
3372. It leaves the parties entitled to go into any other contracts outside if they like? I do not know about that.
3373. As a matter of fact, did any of the parties do so? If money is to be found I do not think that could be done, could it.
3374. As a matter of fact, did any of those persons under this partnership deed go into any contract outside it? I do not know that they did.
3375. This is a partnership which was dissolved in April, 1895? Yes.
3376. *Mr. Gummow.*] I understood you to say that at the time you signed this particular deed you signed another deed of partnership? Yes.
3377. Were Messrs. Carter, Snodgrass, and Forrest in the other deed of partnership which was drawn up? No; I think not. You signed it, and said that it was just the same as the other one.
3378. Do you know whether Messrs. Snodgrass, Carter, and Forrest were in the other deed? No.
3379. If there was a general partnership, would it be necessary to have another partnership deed between us? Yes; if we found the money. It was necessary to have an agreement between Messrs. Maddison, Gillan, myself, and yourself.
3380. Can you tell me the date of the deputation which waited upon Mr. Parkes at which you attended? No.
3381. Was it after Mr. Parkes' first speech in the House? I think it was just after one of the speeches. I attended upon the second deputation. I was away when the first deputation waited upon him.
3382. Did you ever mention to Mr. Parkes that you had seen a telegram which had been sent by Mr. Carter to Adelaide? I was told there was one.
3383. Do you know what was in it? I do not.

3384. Did you ever see a copy of it? No.

3385. You and Maddison were often together, I suppose, talking over this and other matters? Yes.

3386. You were in daily communication with one another at this time? We were pretty often together.

3387. If Mr. Maddison had had such a telegram as that referred to, do you not think it likely that he would have shown it to you? He might have done.

3388. *Mr. Smith.*] In reply to Mr. Parkes, I understood you to say there were ten or twelve contractors who attended upon the deputation to him; you have mentioned the names of five only;—can you remember the names of the others? I have given you the names as far as I can remember them.

3389. *Mr. Parkes.*] Are you sure that it was after one of my speeches that you came to me in the House? I am not sure whether it was before your speeches or not.

3390. Do you not think it was before? I could not say. I know that a deputation waited upon you while I was away.

3391. You will remember that I asked for a second interview;—cannot you recollect whether that took place before or after I made my speeches? I forget. I think it was before.

3392. If you had had a chance of constructing the Monier arches, seeing that they are upon an absolutely different plan from that of the original design, it is quite possible that you might have beaten Carter, Gummow, & Co. in your tendering? If we went in for the thing properly, we might have done it as cheaply as they could do it.

3393. You say Mr. Carter told you distinctly that Mr. Hickson, sen., had asked that his son might be taken into the firm? Yes.

3394. The agreement which has been quoted to you to-day was the agreement proper of the partnership? Yes.

3395. And there can be no doubt but that it was to control all contracts then in hand? It was supposed to do so, as far as I knew.

3396. Was one of the contracts the Annandale job? No; that was let afterwards.

3397. Was not this agreement drawn up when you left the firm? No; when I joined Carter, Gummow, & Co.

3398. The agreement to which I have been referring was the one drawn up on 1st April, a notification of which appears in the *Sydney Morning Herald*? I have been referring to the agreement drawn up at the time Messrs. Gummow and Gillan joined Carter & Co.

3399. Do you consider that you yourself and other contractors have a difficulty in getting work in the Works Office from the way in which concessions are given to Messrs. Carter, Gummow, & Co.;—what is your opinion about that? I could not say.

3400. *Mr. Gummow.*] As to the conversation which you had with Mr. Carter down near the Bank of New Zealand—the last one, I mean—was it before Mr. Parkes' speech in the House or afterwards? It was after it.

George Maddison sworn and examined:—

3401. *Mr. Parkes.*] What is your occupation? You might call me an unemployed contractor just now.

3402. Did you at one time belong to the firm of Messrs. Carter, Gummow, & Co.? Yes.

3403. But you no longer belong to it? No.

3404. You know Mr. Ewing? Yes.

3405. Did you in the company of Mr. Ewing have a conversation at one time with Mr. Carter near the Bank of New Zealand in Sydney? Yes.

3406. Will you tell His Honor what it was? It amounted to this—that Mr. Hickson, jun., had been retrenched out of the Department, and that Mr. Hickson, sen., wished to find him employment of some sort, and had asked Mr. Carter if he could find anything for him to do, or whether they would take him in as a member of the firm. The reply which I understood Mr. Carter made to that request was that Mr. Hickson, jun., could not be taken into the firm within five or six years.

3407. *His Honor.*] That I understand was the account Mr. Carter gave you of what had happened? Yes.

3408. *Mr. Parkes.*] Upon what date after that did you leave the firm? It was some considerable time after that. I could not give you the precise date at which the conversation took place, but I think I gave notice of leaving at the latter end of October, or at the beginning of November, 1894.

3409. How long before that was it that the conversation took place? I suppose it must have been eight or ten months. It might have been more, but I could not say to a month or two.

3410. Did you take any exception to the action of Mr. Carter? Not the slightest.

3411. You were quite agreeable to what he did? Yes.

3412. Did you think the services of Mr. Hickson, jun., would be of benefit to the firm or otherwise? I did not know what his abilities were. I supposed that he would be of some use, or he would not have been taken on.

3413. That is what you thought of the matter? Yes.

3414. And you agreed to what was done? Yes.

3415. Later on Mr. Gillan, one of the members of the partnership, came up to Sydney from Adelaide, did he not? Yes; some considerable time afterwards.

3416. And you, in company with Mr. Ewing, had a conversation with him? Yes; we were talking about things in general.

3417. What did he say? He said he had seen a wire which had come from Sydney to this effect—that Mr. Hickson, sen., wanted his son taken into the firm.

3418. Did that part of the conversation go any further? No.

3419. There was not a general discussion about it? No; nothing more was said, to the best of my recollection.

3420. What brought up that conversation? I could not say now. I paid very little attention to what was said. I do not even know whether he went into the firm afterwards or not.

3421. When you heard the first conversation to which reference has been made, did you think, concerning Mr. Hickson, jun., that the firm were bound to take him in? I did not think they were bound to take him in.

P. Ewing.

17 June, 1896.

G. Maddison.

17 June, 1896.
