The work comprised in the second item is now being carried out by Carter & Co. Its position is shown on plan starting from point "C," and it is intended to terminate at "E," supposing sufficient funds are at disposal for the purpose, the contract being a schedule one. It was found during the progress of this work that an earthen drain was required from point "C" to "F" on plan, running along the course of Shea's Creek Canal. This work was one which it was first understood would be carried out by the Harbours and Rivers Branch in connection with the canal works, but it was subsequently decided to include the work in the Roads Branch Contract. This earthen drain will absorb £4,000 of the money, leaving a deficiency on the vote of something like £9,000. The contract of Messrs. Parry and Farley has been shown as terminating at point "B" on plan, and a small gap has been left between "B" and "D," which it is estimated will cost £1,264 to complete. This can be paid for out of the balance available on the £8,500 vote. It will be seen, therefore, that a further sum of £9,000 will be required to complete the whole of the work from "E" to "F." Of this sum £4,000 is required on account of the earthen drain referred to, and which was not contemplated when the work was undertaken, and the balance, £5,000, is required to complete the work up to "E." In other words, the £9,000 represents "extras," not contemplated when the contract was let.

It is represented that the matter is so urgent that the Minister is asked whether special arrangements cannot be made to permit of this work being proceeded with, in anticipation of further funds being voted. None of the additional sum will be required until next year. This further amount will bring the cost of the Munni-street sewer to about £25,000. [Vide Appendix J.] J.B.

That minute would show that the matter was brought before the Minister.

21671. But this explanation by Mr. Barling seems to show that this was the first notice he had received of the matter, because he says, "This work was one which it was first understood would be carried out by the Harbours and Rivers Branch," and then again, "It is represented that the matter is so urgent that the Minister is asked whether special arrangements cannot be made to permit of this work being proceeded with in anticipation of further funds being voted. None of the additional sum will be required until next year. This further amount will bring the cost of the Munni-street sewer to about £25,000." That seems to have been the first intimation sent to the Minister for his approval? I really could not say. There is no indication in that minute when he first became aware of the facts. I can only say that I have never, without Ministerial approval, exceeded my instruction to approve of extras up to £500 and no more.

21672. Can you produce any notification of the alteration of the contract with Ministerial approval? I will produce it if there be such a document.

21673. It is not among the papers sent to the Commission? Then I presume it is not to be found, and that is all I can say. To the best of my knowledge, everything was sent to the Commission. There was another matter in connection with Mr. Bruce Smith's minute as to these sewers which I might mention, and it is this—that just about this time there was an epidemic of typhoid fever in this locality, and Mr. Bruce Smith was very anxious, on that account, that these works should be pushed on as expeditiously as possible. It is probable, therefore, that this matter may have been arranged conversationally. Mr.

Barling

Barling will probably be able to enlighten you on that matter. He has a better memory than I have, and a great many of these negotiations went through him.

21674. In your evidence yesterday you said you anticipated that the injunction obtained by McNamara would be dissolved;—on what grounds did you anticipate that? I thought it was a most extraordinary thing that he should have obtained it at all.

21675. Did the Minister tell you that there was any likelihood of an arrangement being come to? The Minister did not say so. He did not know, I suppose; but it might have been expected that some arrangement would be made, because everyone concerned in the Shea's Creek work was pushing to get the work gone on with as soon as possible, and it was anticipated at that time that the injunction would not stand for any length of time.

21676. But you knew the injunction existed, and when plans were prepared you must have seen that they would interfere with the injunction? No. I took every precaution.

21677. In what way? Well, McNamara was only a weekly tenant. Therefore there was no occasion to go to him; but I went to the agent of the property, Mr. Hill, and made all the necessary arrangements with him about the carrying out of the work. If he had not agreed to the suggestions which were made the work would not have been gone on with, but he agreed to them, and therefore the work was proceeded with.

21678. How came McNamara afterwards to enforce his claim? That I cannot tell you.

*His Honor: I may say that, in summing up, Judge Owen specially called the attention of the jury to the fact that the department in making the earth channel were in no sense wrong-doers: and, taking his view of the law and the facts, he said it would look at first sight as if the department had disobeyed the injunction by cutting the canal; but, under all the circumstances, which he very carefully went into, he said it was quite clear that they had not done so, and that they were in no sense wrong-doers. It was only a question of the assessment of damages, to discover whether any legal damage had been caused by the cutting of the earth channel or the making of the storm-water channel.*

*Mr. Hickson: Perhaps, for Mr. Parkes's information, I might read a portion of the Judge's summing up. He said, "The provisions referred to had been carried out to the letter by the Government, with one exception, and that was that they put in a cement flume instead of a wooden one." In other words, that we did the work better than we were asked to do it.*

21679. *Mr. Parkes.*] You cannot produce any authority for making any alteration in the position of this contract as it was first contemplated? No, not at this moment; but, if there is such a document in existence, I will find it out and let you have it.

21680. What is the date of the report of the Public Works Committee of which you have spoken? 12th July, 1892.

21681. And the contract for No. 72 was let on the 16th March, 1891? Yes.

21682. *His Honor.*] It was not, I understand, that the matter was ever submitted to the Public Works Committee, but that it was alluded to afterwards? It was not submitted to the committee, but the whole question of the storm-water sewers, and the fact of two of them being under £20,000, was mentioned to the committee.

21683. The knocking off of £3,000 was finally done by order of the Ministerial Branch of the department for the purpose of evading a reference to the Public Works Committee, when it was found that the amount of the tender was in excess of £20,000? I will not say that it was done for that purpose, because there was no occasion to do it for that purpose. As I have already explained, the whole matter was brought before the committee, and it was not hidden in any way. The whole action of the department was exhibited to the committee. It was pointed out that there was an epidemic of typhoid fever in the district, and that, by hook or by crook, the work had to be carried out.

21684. Mr. Bruce Smith, and Mr. Barling acting under him, wished to get the thing through without any further hitch on account of the works being so very necessary; and the hitch would have been the necessity of bringing the matter before the Public Works Committee? Mr. Barling will be better able to explain that matter to your Honor.

21685. I understand that you, in your capacity as Engineer-in-Chief, had nothing whatever to do with the action taken in connection with the particular question whether or not the amount came within or exceeded £20,000? It would be decided, of course, by the Under Secretary whether a certain work should go to the Public Works Committee or not. As Under Secretary at the present time, I have before me three cases in connection with which I am going to the Minister this afternoon upon the question whether they really come within the provisions of the Public Works Act, and will or will not have to be submitted to the committee. Mr. Davis, who is the engineer for one of these works, will not know until the question has been decided by the Minister what is to be done in the matter; and at the time to which you have been referring I was in precisely the same position.

21686. You were then only managing the engineering part of the work;—you had nothing to do with the financing? Quite so.

21687. *Mr. Gummow.*] Did you know the contractors personally when they obtained Contract 72? To the best of my belief, I had not met any of the contractors until that contract was let.

21688. Did you know them before they were engaged upon this canal? I do not think so—in fact, I think the first time I ever met Mr. Carter was in that very swamp. If I am not mistaken, that is the first time I ever spoke to him. I remember going very nearly out of sight in the swamp, and Mr. Carter putting a plank down for me.

21689. That would be after the contractors got the canal work to do? Yes.

John Carter recalled and further examined:—

21690. *His Honor.*] I want you to tell me the date upon which the water was let into the section of the carrier in Contract 77, which is now filled? I could not name the particular day, but the water has been there for several weeks.

21691. For as long as three weeks, do you think? I should think so. Your Honor will remember that I spoke to you about it on one occasion, and told you that the dam had broken away. On the following morning I had the ends of the section bricked in. That would be some weeks ago. The water has been there since then.

21692.

R. R. P.  
Hickson.

4 Nov., 1896.

J. Carter.

4 Nov., 1896.

- J. Carter.  
4 Nov., 1896.
21692. To what depth have you filled the carrier? It is three-parts full, or more. I should think it would be up to the cover-plate. I told them to put in as much water as it would conveniently hold.
21693. It is nearly up to the cover-plates, you think? Yes.
21694. Which length of the carrier has been filled, numbering the lengths from the north-west end? The third or fourth.
21695. Could you not fix it by remembering the height of the piers? I should say it would be the fourth length.
21696. It is one which stands well up above the ground? Yes.
- His Honor: I may say, Mr. Parkes, that looking from the carrier from the outside it is impossible to tell in which length the water is, and that, I take it, is the best test of any that could be suggested.*

Joseph Barling recalled and further examined:—

- J. Barling.  
4 Nov., 1896.
21697. *Mr. Parkes.*] Do you recollect anything about the letting of Contract No. 72? Yes.
21698. Do you recollect that when it was let there was some trouble about the question of funds? I have not seen the papers for some years now, and since receiving a communication from the Commission yesterday I have not had access to the papers. The main facts of the case, however, are pretty clear in my mind.
21699. You remember that when the work was let it was proposed to keep it within the sum of £15,500? I forget what the exact amount was, but it was under £20,000.
21700. Was that done with the object of preventing the work from going to the Public Works Committee? Certainly not.
21701. Mr. Hickson, in his minute of February 5th, 1892, said, "This tender was accepted on the understanding that the cost of the work would be reduced so as to bring the cost of the work within the amount allowed without reference to the Public Works Committee";—is that so? That is perfectly true; but, as far as I can ascertain from inquiry, and can judge from what has appeared in the newspapers in connection with the proceedings of the Commission, one great fact in connection with this storm-water sewer has been overlooked—I mean the extreme urgency of the case. There was at the time this work was undertaken a typhoid epidemic, and a large number of persons were being carried off by the disease. It was especially severe in that part of the suburbs which was severed by this channel. There was, therefore, in the view of the department, extreme urgency in the carrying out of these works, and especially the work near Munni-street, it being a thickly-populated district. Representations were made by the Members for the district, and it was well-known to the department that what they stated was actually true. It was not a mere question of getting a bridge or a road, or anything of that sort. It was a question affecting the lives and health of a number of people. Mr. Bruce Smith at that time filled the office of Secretary for Public Works; and, when it was found that the work could not be carried out under the sum of £20,000, he, knowing the extreme urgency of the case—I am speaking now from memory—wanted to know whether an effective work could not be carried out to afford immediate relief to the district for a less sum of money. Mr. Hickson, as far as I can recollect, then pointed out that the work could be carried out for a less sum by omitting a certain portion of it and by making the proposed canal the outlet of the sewer. When the work came to be carried out, it was found that some mistake had been made in the levels. This was not known at the time, and, in consequence of that mistake, instead of the upper part being first carried out, the lower part was carried out. I may mention that Mr. Bruce Smith took a great interest in the question of stormwater sewers for the reason which I have mentioned; and in that connection I should like to draw your Honor's attention to a minute which he wrote upon the question under date of 17th September, 1890. It is a very important minute, and it will redound greatly to Mr. Bruce Smith's credit, and indeed will be remembered throughout his life, inasmuch as it is to the action he took in carrying out the stormwater sewers in advance of the sewerage system proper that we owe the present comparatively healthy condition of the city and suburbs. It is admitted, I think, on all hands, that the carrying out of these stormwater sewers has greatly conduced to the health of the districts affected. Mr. Bruce Smith, taking into account the fact that the sewerage works proper could not be carried out for some years, and that people in the meantime were dying off from typhoid and other fell diseases, brought about by the unsatisfactory condition of the suburban drainage, conceived the idea that the stormwater sewers could, for the time being, be made a channel for carrying off the foul water which, when the sewerage system proper was completed, would be discharged into the sewers proper. Having regard to the large and abundant supply of water which we had, he thought these stormwater sewers should be constructed, and that for the time they would take away the foul water other than faecal matter, and that by flushing these sewers the abomination which then existed in the shape of foetid matter in the natural channels might be taken away, mitigating, to a large extent, the danger of disease. As I have said before, I think that one of the laurels which Mr. Bruce Smith took away with him from the office is the recollection of his having carried out a system of sewerage which has been the means of saving hundreds of lives. It was just in the midst of the epidemic of which I have spoken, or immediately afterwards, that this matter came up, and if anything would justify a Minister in almost straining the law—as a matter of fact it was not done in this case—it would be circumstances of this kind, where the health and even the lives of a large number of people were concerned. The Minister, seeing that the full work could not be carried out, asked whether it was not possible to do something to mitigate the evil from which this district was suffering. It must be remembered that it was a district in which comparatively poor people resided. Had it been populated by a different class of people, by people in better circumstances, they could have moved into the country; but, as it happened, the people in this particular neighbourhood were not in a position to do that, and in the interest of humanity itself this work was carried out. Every succeeding Minister, I am glad to say, regarded the work in the same humane light.
21702. Then why did not the Minister, under the circumstances you have named, call for two contracts to complete the work? I am speaking now from memory; but I believe it was at first thought possible that the whole work could be carried out. Provision, however, was made in the contract that part of it only might be carried out if the entire work could not be carried out for a sum under £20,000.
21703. The department having made that provision for a variation of the contract, and admitting of a portion of the work being left out, why was the work commenced at the extreme end? I am not clear upon the engineering part of the question. I have explained why, as far as I can recollect, the alteration was

- was made. When they came to carry out the work it was found that they could not get a discharge for the sewer at the upper part, and that it was necessary to go to the lower part for it.
- 21704-5. Were you consulted about that? No; I should not have been consulted upon a question of that kind. It was an engineering question.
21706. Supposing the engineers commenced at a position which did not belong to the contract, or supposing that they wanted to do so, would you not be asked to authorise the alteration? I would not say that that was done.
21707. On 28th October, 1891, you wrote a minute with reference to this work which you will find upon page 516 of the printed evidence. I think you will see from the terms of that minute that you then had your first intimation as to the excess in the work? I cannot remember all the details because the thing happened some years ago. I have not been able to bring the exact circumstances to my mind. I cannot tell you now the precise dates upon which the excess of work would be brought under my notice. It would be impossible for me to remember that now. I have given you the impression in my mind as far as I can remember the circumstances of the case.
21708. Supposing the work commenced at the lower end of the contract, there is a clause which you yourself said you put into the contract to keep it within a certain amount of money, cutting that very portion off? I do not think I said that I put the clause in.
21709. I think you said in your evidence that you gave instructions that the clause should be put in? I do not think so. I may have said that it was arranged that a clause should be put in.
21710. Who would make that arrangement? It would be the engineers. As far as I can remember these are features of the case of which I was not aware until they were brought under my attention at the particular time to which you refer.
21711. But you knew of the existence of the clause at that date? I do not remember the exact words of the clause now, but I knew of it, because, before the contract was signed, care was taken that it was framed in such a way that a certain portion might be left out.
21712. Would it not have been wise, seeing that you started this additional work first, before you came to the contract work, if there was any necessity for alteration at all, to have eliminated the upper portion? I think power was given in the contract to eliminate any portion.
21713. Was Mr. Bruce Smith consulted about all these matters? I have no doubt he was.
21714. Do you know for certain whether he gave his consent? The contract could not have been accepted without it.
21715. Was his consent obtained to the drain which was cut down the bed of Shea's Creek? I cannot remember that, but as far as I was concerned, I always kept the Minister acquainted with everything I knew in connection with this and every other matter.
21716. Do you recollect whether you were consulted about it? I do not think so; I do not remember it.
21717. It was reported to you afterwards? It was, as far as I know, afterwards. I should just like to say one word with regard to this matter. The whole question as to this Munni-street sewer was really brought before the Public Works Committee when the proposal for the Johnstone's Bay sewer was before the Committee. I specially drew attention to the circumstances, and the Committee in their report have also drawn attention to them. After giving an account of what money had been voted for the storm-water sewers, the Committee say:—"Of the total amount, £208,283 was for works forming part of the Western Suburbs scheme, and most of the money on those works, as on the others included in the votes mentioned, will be expended without any previous reference to this Committee for the reason that in all instances but two the estimated cost of the sewer is under £20,000." The Committee then proceeded to refer to the sewers, which were the sewers discharging into Johnstone's Bay and the sewer from Munni-street, Newtown, through Macdonaldtown to Shea's Creek, and it was pointed out that the latter work was not at first estimated by the authorities of the Public Works Department to cost £20,000, and that under that impression the work was commenced and was being carried on, it not having, for that reason, been referred to the Committee. It will be seen that the whole of the particulars were brought out before the Committee, and that there has been no attempt whatever to burke the question.
21718. The portion of the report to which you refer is only a repetition of your explanation? Yes; all that I am insisting on is that the thing was brought out. There was not the slightest attempt made to keep anything back.
21719. *His Honor.*] The explanation, I understand you to say, was volunteered to the Committee? The Committee did ask me a question in reference to the matter, but my minute, dated the 28th January, 1892, in which I referred to it, was brought out on my own motion. It was not asked for. My minute was in these terms:—

## Minute Paper—Storm-water Drains, Western Suburbs.

Department of Public Works, Sydney, 28 January, 1892.

MR. HICKSON has frequently brought under attention the necessity for coming to a determination with regard to the question of the storm-water sewers, which may be looked upon as accessories and subsidiary to the main sewerage scheme for the Western Suburbs already approved by the Public Works Committee. In 1891 the amounts shown on the attached list were voted for the purpose of carrying out storm-water sewers in the several localities named, but it appears that in two instances the cost will exceed the sum of £20,000, viz., the Munni-street sewer by £6,000, and Johnstone's Creek by £18,200. These are the only cases which can be ascertained at present where the £20,000 limit will be exceeded.

The question, therefore, arises as to whether, under the terms of the Act authorising the construction of the main Western Suburbs Sewerage Works, we can include these particular sewers, viz., the Munni-street sewer and the Johnstone's Creek channel. Mr. Hickson points out that the storm-water sewers are an essential to, and really form part of, the main sewerage scheme.

The sum of £1,143,592\* has been voted for those portions of the works to be constructed by the department, and by the 16th section of the Public Works Act the constructing authority is authorised to carry out the works, provided they shall not exceed in the aggregate more than 10 per cent. of the estimate submitted. Ten per cent. of the amount voted for works to be carried out by the department will amount to £114,359, and, judging from the cost of the works already executed and in course of execution, Mr. Hickson thinks that this sum will be ample to cover not only any extras on the contracts, but the cost of these storm-water sewers also.

I

\* Amounts voted:—

|   |          |
|---|----------|
| Loan Act, 1889—Western Suburbs—Main scheme .....  | £830,000 |
| Loan Act, 1891—Completion of Western Suburbs Sewerage Scheme (Schedule B of Act 54 Vic. No. 17) ..... | 313,592  |

Total..... £1,143,592

J. Barling.

4 Nov., 1896.

I have, therefore, to submit to the Minister the question whether we are not justified in at once proceeding with these works, and to point out that the Public Works Committee, in their report upon the whole subject, make the following remarks (page 10, paragraph 13):—

“Storm-water may cause considerable difficulty in any system of sewerage, and the subject has not been overlooked in the present proposals. Overflow weirs will carry off any excess of storm-water; or, if necessary, at some future time, relief sewers can be provided, and the small quantity of sewage contained in storm-water so discharged into natural water-courses would be so greatly diluted, it is considered, as to render it perfectly unobjectionable. The provisions for storm-water would not be sufficient to prevent flooding in a portion of the Marrickville Valley, and for the effectual draining of that locality from any excess of storm-water certain special works would have to be carried out. The same thing would probably be necessary in some other localities.”

It is clear, therefore, that the Committee contemplated the carrying out of such works.

In conclusion, I would point out that the work is of such extreme urgency that it hardly admits of a day's delay, and, further, that in the event of Mr. Hickson's calculations proving incorrect as to the cost of the works, there will be ample opportunity of bringing the whole subject before the Public Works Committee before we have actually exceeded the amount authorised, as the works will occupy many years in completing—probably ten at least.

J. BURLING.

I was summoned before the Committee, and I gave my own statement, my minute being included in that statement of the facts. I think that the more the question is investigated the more it will be seen that credit attaches to the department for meeting the urgent necessity which existed for the construction of this storm-water sewer. I do not hesitate to say that hundreds of lives were saved by reason of the action of the department in the matter of storm-water sewers.

21720. The Committee did not in any way find fault with what had been done? No. Had I myself been in the position of Minister I should have considered the carrying out of these storm-water sewers, to which I have referred, one of the best feathers in my cap. I feel very strongly upon the question, and I should like to draw your Honor's attention to the minute by Mr. Bruce Smith, which I also laid before the Committee. I do not know whether your Honor would like me to read the minute?

21721. As it may be thought that Mr. Bruce Smith went out of his way to evade the operation of the Public Works Act, I think that it is fair that the minute should appear as part of the evidence? It will be seen that what Mr. Bruce Smith did was certainly not in the way of evading it. His minute is as follows:—

Minute Paper—Storm-water Drainage.

Department of Public Works, Sydney, 17 September, 1890.

As the Commissioner for Roads is aware, I have been considering the question of hastening on the sewerage works of the city and suburbs, the subject being one of the gravest concern, as so largely affecting the health of the citizens. After going fully into the matter, I am satisfied that Mr. Hickson is doing his utmost to press on with the work, but I cannot disguise from myself the serious consequences following the delay which must necessarily take place before these works are completed; and I have therefore been carefully considering whether something cannot be done quickly to (in a measure) mitigate the evils which are constantly resulting from the want of a proper sewerage system, more especially as regards the western suburbs. These districts are growing with great rapidity, and the evils I have referred to are becoming intensified in a corresponding degree, but the scheme now being undertaken cannot, I regret, reach them for some years to come. It has, however, occurred to me that some measure of relief might be obtained by carrying out quickly what will eventually form the “storm-water” portion of the general scheme. At present the watercourses which serve to carry off storm-waters are almost entirely in their natural state, and are the receptacles of the sewerage of the large populations which have settled in these suburbs, becoming in consequence a series of fetid pools which menace the health of the whole population. If these storm-water sewers can be at once constructed they can be utilised for a time for the more rapid and satisfactory discharge of the sewage matter, which must of necessity, under present circumstances, find its way into them, and thus, I feel sure, be the means of preventing a large amount of sickness.

We have now an abundant water supply, the capacity of the Nepean scheme being something like 50,000,000 gallons per diem. The normal consumption is about 10,000,000 gallons per diem, and the present pipe-line will deliver about 18,000,000 gallons per diem, which will be nearly doubled when the second pipe-line, about to be put down, is completed. Taking into account this large reserve of water, there can be no difficulty, I imagine, in utilising it in flushing down these proposed storm-water sewers; and, indeed, it cannot, I think, be put to a more profitable use. Of course, as soon as the sewerage system proper is complete, these drains will revert to their intended use, *i.e.*, channels for the conveyance of storm-waters only. One thing which must, however, be carefully avoided is, that under the term of storm-water sewers we are not led into carrying out what is practically municipal work, and not coming under the designation of storm-water sewers proper. It will, I apprehend, be easy for the municipalities to make temporary connections with the storm-water drains, and so render them effective for the purpose I have suggested.

I therefore wish Mr. Hickson to at once take this matter into his most serious consideration. The surveys necessary for the work I have already authorised to be carried out. What I desire him to do is to push on with these, and give an estimate of the cost; I will then do my utmost to obtain the necessary funds, so that tenders can be invited. Every possible endeavour should be made to carry these instructions into effect, delay, as I have already pointed out, meaning the sacrifice of health and life. I can see clearly that the municipalities in these matters are almost powerless; it is only the central authority which can effectually deal with them. The cost will, of course, form a part of the sewerage debt, and I feel convinced that both my colleagues and Parliament will bear me out in every effort I may make to ameliorate the serious condition of affairs which now exists in our midst for the want of a proper system of sewerage. I rely upon Mr. Hickson to give energetic effect to these instructions so far as it lies within the scope of his branch; and I hope by next summer, at all events, a large portion of this system of storm-water drainage may be in operation.

Before concluding, I would desire to draw attention to some passages from the speeches of Drs. Maclaurin and Ashburton Thompson, in regard to the sewerage of these districts, which were made at a meeting of the representatives of the various municipalities held at this office on the 6th December, 1888, and which speak very eloquently for themselves:—

*Dr. Maclaurin* said:— \* \* \* “It was impossible to go on as we are doing at present, as the population was increasing so rapidly that the present state of matters could not continue without causing great inconvenience. It was scarcely necessary to bring forward any arguments in this connection from a sanitary point of view, as it was well known what injury would arise from an accumulation of foul waters in many ways, and particularly by contaminating the water supply. The evil results of the accumulation of faecal matters show themselves in two ways—first, by the existence of typhoid fever, and, secondly, by the high rate of mortality of young children under 5 years of age. With respect to both of these matters, it is very clear that the health of the suburbs is not what it might naturally be expected to be.”

*Dr. Ashburton Thompson* said:— \* \* \* “You know how prevalent typhoid has been for many years; but you may not, perhaps, have sufficiently observed that the importance of this disease is not to be measured by number of deaths alone, but also by the number of non-fatal attacks of sickness, and best of all by the ages of the persons seized with it. I can tell you that here this prevalent and fatal disease attacks by preference, roughly speaking, persons between the ages of 15 and 35—persons, that is to say, at ages when their usefulness is highest, their ordinary liability to death lowest, and when their sickness causes the greatest pecuniary loss to the community. But this is not the only disease of this kind from which we suffer very heavy losses—diphtheria, diarrhoea, cholera, and dysentery, are others of the same kind, and all of them are preventable diseases which, under the most favourable conditions, might almost be abolished. Now you are asked to join in spending money; and many things in the world have to be brought to the test of the pocket. Even in matters of life and death we have to consider profit and loss, ways and means. I am afraid I cannot show that the money you are now asked to spend on behalf of your individual municipalities will clearly return a profit to your individual coffers; but I think you must be ready to admit that a life saved is, in reality, money saved, and above that, that a diminution in the average annual number of days of sickness (such as sewerage will undoubtedly result in) is a real and great pecuniary saving. You see a saving of seven days sickness per annum per head upon 52,000 males, means, in fact, a saving to the community in one year of all the profit and advantage derivable from 1,000 years of toil for every single year that that reduction

reduction is effected in that population. Now, the prosperity of nations is correlative with the prosperity of its parts—say of its municipalities. I do not wish to push this argument too far, but if you spend money in reducing sickness—and you will spend it to that end if you spend it on sewers—I think you will, on reflection, see that this expenditure—this bread cast upon the waters—will at last be returned to you.”

Mr. Hickson.—J.B., 17/9/90.

BRUCE SMITH.

21722. In the absence of that minute it might look as if there had been a contemplated evasion of the Act? Quite so; but there was not. It is a cruel injustice to Mr. Bruce Smith to insinuate that he ever attempted to evade the Public Works Act.

21723. *Mr. Parkes.*] The questions I asked were whether you and Mr. Bruce Smith had been informed of the way in which the contract was being carried on? I have no doubt the Minister was informed; but it impossible for me to remember all the circumstances now.

*His Honor:* I may say that I certainly would have called Mr. Bruce Smith in reference to this matter, but he has endeavoured to remember, but finds that he cannot do so after all these years, what really did take place.

*Mr. Barling:* I know that his earnest attention was given to the whole matter of mitigating, as far as possible, the terrible state of affairs which existed in Sydney at that time.

21724. *His Honor.*] I understand that the financial part of the business did rest in your part of the office more than in the engineering branch? I do not know in what direction you mean. I think I explained to your Honor before that I had nothing to do with the vouchers. They did not come to me at all. The heads of the branches are direct accounting officers, but matters of policy would certainly be dealt with by the Minister in concert with me. All that I can say—and I am only too pleased to say it—is that I went heart and soul with Mr. Bruce Smith in this matter, and I feel that in assisting him in it, to the extent to which I did, I have earned in some degree the gratitude of the community. I feel very strongly upon the question, because I myself know what it has been to suffer from the want of works of this kind.

21725. *Mr. Parkes.*] Would the Chief Engineer at any time carry out unauthorised a piece of work in excess of the contract amount? If there were any serious departure from the contract it would undoubtedly be his duty to bring the matter before the Minister.

21726. *His Honor.*] You cannot recollect, I suppose, whether special mention was made of the earth channel at an early stage of the work? I cannot exactly fix the time, and it is not to be wondered at, seeing that the matter transpired so many years ago.

21727. You know nothing of how it came about that the quantities appertaining to the earth channel were not added to the quantities shown in the schedule of the contract? No; I could not go into that matter. It would be utterly impossible for me to do so. There are something like 5,000 contracts in the Works Department in the course of a year, and there is, of course, a large and expensive staff to deal with all such matters. If the Under Secretary were the finest engineer in the world he could not give attention to such details. If my attention had been directed, for instance, to the question of the bluestone pitchers in the schedule of Contract 69, I should have been quick enough to ask for an explanation; but, as I say, I was not at the time aware of it, and it would be unreasonable to expect me to be aware of it. My attention was not directed to it, and I knew nothing about it.

Christian Hermann Ohlfsen-Bagge recalled and further examined:—

21728. *Mr. Parkes.*] Did you make up the schedule for Contract 72? It was made out in the office. The schedules are always re-checked by me.

21729. Had you plans before you when the schedule was made up? Yes.

21730. Could you identify the plans? I think so.

21731. Had you a plan or a tracing before you when the schedule was made up? We had the original plan.

21732. Would the tracing now before you be a copy of it? This looks like a copy of the plan, but it is not the contract plan.

21733. What was the portion on the original plan for which you took out quantities? I think the quantities were taken out from Shea's Creek to the bottom of Munni-street.

21734. Was that the complete contract? Yes; I think so. I am sure of it.

21735. Do you recollect anything about the carrying out of the contract? Mr. Davis took me there several times.

21736. Was Mr. Davis the supervising engineer? Yes.

21737. Where did you see the work going on? I think I saw the work going on over the whole line, more or less. I have been over the line several times. I could not tell you now exactly how many times.

21738. Do you recollect putting a clause in the specification, to the effect that thirteen or twenty-seven chains might be cut off if the department found that it had not sufficient money with which to carry out the whole work? Yes.

21739. Under whose instructions did you put in that clause? Under Mr. Hickson's.

21740. Did he give you the instructions himself? Yes, verbally; and I put in the clause accordingly.

21741. Why did you fix the two points which were named? It is rather a complicated affair. It happened a long time ago, and it is hard for me to speak definitely about it; but to the best of my belief the plan was drawn upon the supposition that the ship-canal would have been completed when we started the work. When pressure was brought to bear upon the department, and we were ordered to proceed with the work, it was found that the canal had not been constructed. It was, therefore, very difficult to get an outlet. We could not let the water run into the swamp, because it might get into various races below and cause trouble. I rather think it was before tendering—that we found that the contract would exceed the sum which we had available for this work. It was then decided that I should put in a clause giving us the option of leaving out a certain portion—I think from Shea's Creek to Mitchell Road—in the event of sufficient money not being available.

21742. Why did you take these special points? We intended first of all to start from Shea's Creek. Every storm-water channel is generally started from the outlet end, so that we may work against stream. Then, if flood-water comes down, no harm is done. The outlet at the end being closed up on account of the ship-canal's not being built, other outlets were taken into consideration, at Mitchell Road for instance. There is a usual clause in contracts allowing a reduction of any part of them; but this clause was specially put in on account of the difficulties which arose when Mr. Hickson saw there was no chance of the canal's being cut.

21743.

J. Barling.  
4 Nov., 1896.

C. H.  
Ohlfsen-  
Bagge.  
4 Nov., 1896.

C. H. Ohlfsen-Bagge.  
4 Nov., 1896.

21743. Do you recollect when the earth channel was added to the plan? It is very difficult to say. I have been thinking over the matter, and I have been reading through some of the correspondence to see what I could make of the affair. It looks to me to be a little confused. I should think, however, that the information you want could easily be ascertained. I saw, for instance, a minute from Mr. Barling, in which he stated that during the construction of the work it was found that there was no outlet, thus necessitating the construction of the earth channel at the end of the contract. I think Mr. Barling is right there. I recollect its being discovered that there was no outlet at Mitchell Road, and that once, at a time of heavy flood, Mr. Davis took me out and said, "This channel, through which it was intended to let the water run, is all silted up. After all, we shall have to finish down to the ship canal site; we cannot get rid of the water otherwise." When it had once been decided to build down to the canal site it became a necessity to cut an earth channel within the width of the proposed canal.

21744. *His Honor*] If you remembered the fact that the work was actually begun with the earth channel—that that was the very first work done—would not that put a different aspect upon the matter? Upon that point I cannot agree with what has been said. I cannot recollect that the earth channel was done first. To the best of my belief the contract had been started when the contractors received a notification from the department that their tender was accepted, and it may have been some time afterwards that the bond was signed. That is the only way in which I can explain it.

21745. *Mr. Parkes*.] Do you not see, on reference to the minute of Mr. Barling to which you have referred, that the first work done must have been in connection with the earth channel? I see Mr. Barling says in his minute, "It was found during the progress of this work that an earthen drain was required."

21746. That must have been the first intimation which Mr. Barling received of the matter; but have you read Mr. Tillet's minute of 16th March, 1891? I have seen the minute; it is possible that the contract was started on receipt of the notification of acceptance. Mr. Barling's minute is in distinct agreement with my recollection of what occurred as to the earth channel.

21747. He must have got his information at a later date? No, the information would be laid before him at the time when the necessity of cutting an earth offset channel arose.

21748. Is it possible that they did a portion of the upper work and afterwards the earth channel, and that the two portions were subsequently connected? Yes, and I believe they worked from Mitchell Road upwards and that the work was stopped when it was found that the stormwater would do mischief on account of there being no outlet. My impression is, that on that's being discovered, the earth channel was proceeded with. When the discovery was made I am inclined to think that the contractors were at work on the upper portion of the job—that is, on the portion above Mitchell Road.

21749. Were you out on the ground in the early part of the work? I was out there several times, and I am under the impression that the upper portion was in course of construction before the outlet end of our channel and the earth channel were commenced.

21750. Did you estimate in your original quantities the excavation of the earth channel? That I think must have been an after consideration. We also thought that the earth channel when constructed would be paid for by the Harbours and Rivers Department.

*His Honor*.] *Perhaps if Mr. Bagge were to look at the journal it would refresh his memory as to the point at which the work began.*

21751. Having looked over the journal, what is your impression as to the point at which the work commenced? As far as I can see the journal does not prove that the work started at the earth channel.

21752. How long was it after the work had been started when you first went out there? That I could not tell.

21753. Do you recollect whether, in taking the quantities off the plan, you calculated in those quantities the earth channel? Unless I saw the quantities it would be difficult for me to say. My impression is that the earth channel was an after consideration.

John Carter recalled and further examined:—

J. Carter.  
4 Nov., 1896.

21754. *His Honor*.] Do you remember when you tendered for and obtained Contract No. 72, what it was for which you really tendered? Yes; I remember that when we got the contract I went out with Mr. Snodgrass to the site of the works. I had not been there previously, and Mr. Snodgrass took me down to what has been spoken of before the Commission as the injunction line below the Shea's Creek swamp. We walked through the whole of that morass, and I remember that the reeds were 8 or 9 feet high. We walked up the line marked out for a canal, and I recollect that we had considerable difficulty in walking through the swamp. It took us two hours to walk through. That is conclusive proof, to my mind, that that portion of the work was included in the contract, although I do not remember the quantities. It is not at all likely that we should have walked through that swamp unless we had something to do there.

21755. Would it have been possible at all to open the lower end of the concrete channel into the swamp without making a cut? No, decidedly not.

21756. The levels would not allow of it? No.

21757. You would have been some feet underground? Yes. I know that in one or two cases, until we got an outlet, we had to pump the water out of the excavation.

21758. At the very end, what was the difference between the level of the swamp and the level of the bottom of the concrete channel? It was a matter of feet.

21759. How many feet do you suppose? Two feet, anyhow.

21760. What was the depth of what is known as the earth channel? 5 ft. 6 in.

21761. Did it run about level with the bottom of the concrete channel when it was excavated? It would be practically level with the invert of the concrete channel.

21762. So that the invert would have been so much underground if the earth channel had not been made? Yes.

21763. The swamp runs nearly level—the fall is very slight? Yes.

21764. So that without the channel it would have been quite impossible to make an outlet at that point? Yes.

21765. Do you remember the alternative outlets? One was near Mitchell Road. We could see that here was no outlet there.

21766.

21766. If you began your work at the very bottom, that would not have been considered? No. I remember standing under the bridge one day, and we saw that that point was of no use as an outlet.
21767. That is what is known as Macdonaldtown Creek? Yes.
21768. Which portion of the work did you start first of all? The earth channel. We cut a channel to drain the surrounding ground, and then we began at what is said to be Shea's Creek. That is where we began with the excavation for the concrete channel.
21769. Between the time your tender was accepted and the time the work began, what delay was there—do you remember? There was no delay as far as I know.
21770. Was there any deliberation in which the contractors were consulted;—was there any question put by the contractors to the department as to what the contract was to be considered to be? No; I do not recollect any.
21771. As far as you recollect, was it taken as a matter of course? We went into the contract, as far as I know, just as we would go into any other contract.
21772. Just as if the work upon which you began had previously been in it? Yes. I remember no question or hitch of any sort.
21773. As far as you can remember the question of whether a proviso should be put in was not considered? Not so far as my recollection goes.
21774. Whatever had been done about that matter of the proviso had been really settled before your tender was accepted? I should think so.
21775. *Mr. Davis.*] It was evident to you when you went over the ground that there was no outlet in Mitchell Road? Quite evident. If there had been an outlet at Mitchell Road we should have been glad to use it temporarily, at all events, to keep the excavation dry.
21776. Will you look at the longitudinal section and tell me to what extent the invert of the channel is below the bed of the creek at Mitchell Road? 4 ft. 3 in.
21777. *Mr. Gummow.*] You did not start the work of the contract from above Mitchell Road? No; we started the work at the lower end. We got as far down as we could get.
21778. *His Honor.*] What have you to say about the value of the stuff, per cubic yard, which you took out? We had a fair price for it. There was nothing extraordinary about it. In those days the tender rate was almost the market rate. We were all on the same footing. I do not think 2s. 6d. was by any means an exorbitant price. I remember that in many places in the canal the men practically stood still for three weeks or more. They were constantly working and wheeling without getting a yard further ahead. The stuff kept running in as fast as we took it out.
21779. Did you take out a lot of stuff beyond your measurement? Yes; I remember Mr. Snodgrass saying "I do not know whether it was brought out before the Commission, but you would be quite safe in saying that we lost 10,000 yards of excavation upon that contract." I know that there was one particular place on the contract where we had to pull Chiene out with a rope. I know that at several places, for weeks and weeks, we were working for nothing. We were getting the stuff out, and it was running back again. I think the price we had for the contract was just about a fair one taking it all through.
21780. Mr. Snodgrass, I suppose, made out the tender as usual;—did he or did he not mention to you that the department must have made some big blunder in the schedule of quantities as to the excavation? No; he did not. I am quite certain of that. I think that in this case the tender was made out rather hurriedly. I do not think Mr. Snodgrass adopted his usual method in making it out.
21781. As far as you know he must have taken the probable quantities as though they were correct? I am positive from what transpired that he took whatever was in the schedule. He took out no quantities for this particular contract. He must have assumed that the quantities in the schedule were correct. He would have had no motive in putting an extra price upon the excavation or anything of that kind. He put in an average price for the whole lot.

J. Carter.  
4 Nov., 1896.

TUESDAY, 10 NOVEMBER, 1896.

Joseph Davis recalled and further examined:—

21782. *His Honor.*] As to the 12 square yards of probable quantity which appeared in error in connection with the bluestone pitchers in the schedule of Contract 69—on looking through the schedule it struck me as probable that there had been a transposition between the numbers appropriate to sandstone pitchers and the numbers appropriate to bluestone pitchers. Have you gone into the question to find out what the proper quantities of the sandstone pitchers and bluestone pitchers respectively would be? Yes. The only sandstone pitching shown on the drawings is on drawing No. 12, in connection with a culvert at 2 miles 51 chains 11 links on the Illawarra Road. It is there shown that there are to be 6 feet of pitching at each end of the culvert; and, taking the width of the pitching shown, 8 feet 6 inches, it would work out to close upon 12 yards. That appears to correspond with the 12 yards which is put opposite the item of bluestone pitchers. The bluestone pitchers shown on the drawings originally would work out to about 38 square yards, and 38 square yards has been put opposite the item of freestone pitchers. So that, while I have not succeeded in finding in the quantities anything to confirm your Honor's opinion, still it does seem to be a very remarkable coincidence, to say the least of it, that these probable quantities should have been put opposite items Nos. 36 and 37 as 12 and 38 yards, and that the numbers so placed should agree respectively with the quantities for freestone and bluestone pitchers as provided in the contract.
21783. So that it really looks reasonable to suppose that the foundation of the error lay in a transposition of quantities? That certainly does seem to be the most reasonable solution of the mistake. I have found the original quantities, and there is no mention made in them of bluestone or sandstone pitching, so that they do not help us.
21784. The pitchers were not worked out in the draft quantities you have found? No. I found these quantities this morning among some old papers, and I find that neither the bluestone nor freestone pitchers are given.
21785. Can you account for their not being given? The only reason I can suggest would be that no calculation of any consequence would be required—that is to say, one could make in one's mind the calculation necessary to arrive at the probable quantities to include in the schedule.
21786. I suppose the quantities would be given at the nearest integer to the result? Yes; they would not go into decimals.

J. Davis.  
10 Nov., 1896.

- J. Davis. 21787. As to the way in which the bluestone pitchers were shown on the plan, they are apparently to be put round the manholes of certain shafts;—I should like you, having examined the plans, to explain that?  
 10 Nov., 1896. To begin with, the specification provides that the whole of the manhole covers are to be pitched with bluestone pitchers.
21788. That is the way in which you read that clause in the specification? Yes.
21789. Which may mean, however, the way in which the pitching is to be done, may it not? Yes. The specification explains the way in which the pitching is to be done round certain covers, such as manhole covers, ventilating covers, and street boxes, so that I regard it as indicating that these covers are to be pitched, the clause simply stating how they are to be pitched.
21790. But that clause would not distinguish in any way between one set of manhole covers, or whatever it might be, and another;—you will remember that, when the question arose whether the shafts should have these bluestone pitchers round them, Mr. Hickson, in his minute, distinguished between those which were shown to be pitched and those which were not shown to be pitched with bluestone pitchers;—how do you explain that? In the original drawings some of the shafts were shown to be pitched and others were not. Only a few were shown not to be pitched, and I should imagine that even that was an accident on the part of the draftsman, because it was certainly intended that the whole of the shaft coverings should be pitched. Mr. Hickson took advantage of that, and he decided that the pitching was to be carried out only where the drawings showed it, and in no other cases.
21791. In what way are the pitchers shown in the drawing? In the cross-sections of the shafts the pitchers are shown in section, with a black line running outside of the pitching, the section being coloured with Prussian blue.
21792. Is that blue colour known and accepted to be the indication of bluestone pitchers? Yes.
21793. I have not been able to find any interpretation of colours upon the plans;—is there a regularly accepted scale of colouring? Yes; there is a uniform practice in the office with regard to colouring. There is no interpretation of the colours which are used in ordinary sewerage work, but in the case of ironwork the specification states what is cast-iron, what is wrought-iron, and what is gun-metal. There is no index of the colouring in the ordinary sewer work. There are really so very few materials that it would be almost impossible to make a mistake. For instance, there is bluestone concrete, sandstone concrete—which, by the way, would not be shown, I think, in the case of this particular contract—brickwork, and bluestone and sandstone pitching; excepting, of course, the ironwork.
21794. I believe  $36\frac{1}{2}$  was the number of yards of bluestone pitching actually paid for in the final voucher of Contract 69? Yes.
21795. That was in excess of the quantity that would be shown by the number of shafts clearly indicated to be surrounded with bluestone pitchers? Yes.
21796. Do you know how that came about? To the best of my belief it arose in this way—while the original drawing did not show bluestone pitchers, the supplementary drawings sent out by the office during the progress of the work showed that these pitchers were to be put in, and the contractors carried them out accordingly. The minute which Mr. Hickson wrote seems not to have been acted upon in that respect, as far as the draftsmen were concerned. The contractors carried out the pitching as they were ordered to do in the supplementary drawings.
21797. And there was about  $1\frac{1}{2}$  yard difference between the  $36\frac{1}{2}$  yards and the 38 yards, that being, I suppose, the quantity of pitching which would have surrounded the one shaft which you have mentioned as being left unpitched? I think 38 yards would be about the quantity, if the whole of the shafts shown on the original drawings had been carried out by Carter, Gummow, & Co.; but two or three of the shafts—I think three of them—were, as has already been explained in the evidence, constructed by Mr. McSweeney, and those shafts would not, therefore, have to be pitched under Contract 69, and the quantity would be reduced in that way. Then again, during the course of the contract, there were some shafts which were altered, and supplementary drawings were issued; in those supplementary drawings pitchers were shown, increasing the quantity over and above that which I stated in my minute—which you will find upon page 125 of the Parliamentary Return. I there say, “The quantity likely to be used, if the whole of the manholes are to be pitched, will be 35 square yards.” That quantity, for the reason I have explained, was increased to  $36\frac{1}{2}$  yards.
21798. But how was it that 38 yards was originally the appropriate number—I suppose a cutting down took place? The number was cut down in consequence of Mr. McSweeney having carried out certain shafts, including the manholes, to expedite the construction of the Marrickville to Burwood railway.
21799. The changes which were afterwards made, as I understand, would have been made after Mr. Hickson had given up charge of these works? To the best of my belief, yes. I would not like to say positively because I have not looked into the matter. I am pretty confident, however, that that is the case.
21800. At what stage of sewer construction does this work usually come in? At the end.
21801. At the very end or towards the end? Towards the end. It would be almost the last work done. It is usually done in the maintenance period. At the same time, in shallow shafts, where there may be short tunnels, and, again, in man-holes in open cuttings, the work would be carried out early in the contract. The shafts would be pitched as soon as they were constructed.
21802. The object, I presume, being to get rid of the obstruction caused by the hoardings? Yes, to finish off the street, so that the traffic may be turned on to it.
21803. As long as the hoardings are there the pitchers would not have been put down? No.
21804. There was one little question which occurred to me in connection with Contracts 72 and 75. First of all, as to the numbering of these contracts. I should like to know what is the principle upon which they are numbered? They are numbered in the drawing office as the designs are being made. The chief draftsman usually arranges it under the present management; but formerly Mr. Bagge used to give the numbers himself to the chief draftsman. The chief draftsman, in preparing the drawings, would want to know what number was to be put upon them. Mr. Bagge would then give him the number, and that would be the number of the particular work.
21805. Would that number depend upon the order in which Mr. Bagge had given out instructions for drawings? Yes. It would not necessarily be the order of the work at all.
21806. It would show then that the drawings for No. 72 must have been given out before those for No. 75? It is very likely, because that would be the first work to be designed. No. 75 would have no outlet until No. 72 had been carried out.
- 21807.

J. Davis.  
10 Nov., 1896.

21807. Just above No. 75 is No. 55? Yes; that was carried out first.

21808. And then there are some high numbers? Yes. That was due to the works having been carried out higher up the creek before the lower portion was carried out at all. Then the higher portion had to be altered a little, and the high numbers came into that. I know the circumstances to which your Honor refers.

21809. There was a gap between No. 72 and No. 75, which, I think, is mentioned in Mr. Nardin's minute, and which, I understand, was not part of either Contract No. 72 or No. 75 originally. It was computed that the work would cost £1,264 upon the basis of the work in Contract No. 72? I am under that impression—but I should like to look at the drawings before committing myself to the statement—that No. 75 commenced where No. 72 terminated.

21810. If No. 72 and No. 75 did not close, then for some reason No. 75 was drawn short, because No. 72 was intended to join on to some contract? What was not constructed in No. 72 was constructed in No. 75.

21811. Was the piece of work spoken of by Mr. Nardin done as part of the work in Contract No. 72? I do not quite know. I cannot speak positively upon the point. The thing occurred such a long time ago. I will look at the plan of Contract No. 75, and I can then say definitely what was done.

21812. Darcus, in his evidence, spoke of a lot of unnecessary concrete filling being put into the Premier-street shaft in the excavation which was not afterwards required, but which had been partly done, instead of ordinary earth or stone filling, which, according to him, would have been sufficient;—do you know anything about that? As far as that shaft is concerned, it was not increased in size from the 5 feet by 12 feet originally sunk by McSweeney.

21813. But it was not built up to the excavation? Yes, the shaft was rather neatly sunk. It was 5 feet by 12 feet, and there was a 9-inch lining of concrete put inside the excavation.

21814. It was not increased to 8 x 18? No, it was not increased in size.

21815. At that rate Darcus must have been talking about the ordinary filling? I do not know what he had in his mind, but in regard to this shaft there was most certainly no unnecessary filling there.

21816. Was there at one of the other shafts? No; at the other shafts there was ordinary earth filling. The shaft was built up in the centre or side of the excavation and the space behind was filled in with earth.

21817. In the case of the lining of the shaft being smaller than the shaft itself, which frequently happens, I believe, is it ever the practice to fill in with concrete behind the lining? Formerly the large shafts used to be lined with brick, and the packing between the brickwork and the excavation was sandstone concrete.

21818. That, I understand, was in narrow spaces? Yes; but in the shafts as carried out upon Contract 69, with the exception of Premier-street, which was lined in the way I have described with a small lining of bluestone concrete, the shafts were small, very much smaller than the excavation itself, and between the brickwork and the excavation there was ordinary filling.

21819. So that you do not know what Darcus would be alluding to? I do not know whether he had in his mind the chamber. I cannot quite call to mind the answers he gave.

21820. I was referring to his answer to Question 2162, as to the substitution of a small chamber. Darcus gave this evidence:—

2162. When that drawing was substituted the spiral stairways of stone were taken out and iron ladders were substituted in a comparatively small shaft? After the excavation for the larger chamber, not including the stairway, had been made it was found that a great deal of space had been shot out which had to be filled in with concrete. The ground had been shot out, and when the altered plan came in of course it had to be filled in.

2163. What then took place? The excavation was filled in with concrete, and the contractors, I suppose, were paid for the excavation and for the extra filling.

Can you say whether there was, in point of fact, a lot of extra filling there? There was a little extra filling there, but not unnecessary filling. It arose in this way: The excavation for the shaft-chamber at Premier-street was taken out at the time it was decided to substitute the one for the two sewers, and the internal dimensions of the chamber where it was decided to make the alteration had necessarily to be reduced to some extent—not to any great extent, but to some extent. Previously provision had been made for four sewers to discharge into the shaft-chamber into three sewers on the lower side of the shaft-chamber.

21821. Three sewers being the outlet for the discharge into the chamber of four? Yes. It was proposed in the alteration to put in a larger sewer to take the place of two of the smaller ones, and that necessitated a slight alteration being made to the chamber, but not to any great extent. I should like to point out, however, that Darcus is not consistent in what he says, because, first of all, he says that an unnecessary quantity of bluestone was put in, and he then goes on to say that upon one occasion he considered that the concrete that was being put in was not sufficiently rich for the work, and requested that better concrete should be sent down to him, which, I need scarcely say, was quite out of his province, because the contractors were supposed to be carrying out the specification, and it would not be likely that they would alter the quality of the concrete.

21822. I understood Darcus to refer to the way in which the concrete was made up, and not to the description of concrete? I understood that he wanted sent down better concrete than was specified.

21823. *Mr. Gummow.*] The bluestone pitchers were coloured on the plans of Contract 69 in just the same way as they were coloured upon the plans of previous contracts? Yes.

21824. So that contractors who had carried out previous contracts could easily see that the colouring upon the plans would apply to bluestone pitchers? Yes. Even a strange contractor could find out what was meant, because the specification would help him. While the drawings did not specifically say that one colour meant bluestone concrete and another colour meant bluestone pitchers, the specification would say where bluestone pitching and where bluestone concrete was to be put. Taking the specification in conjunction with the plans, there could be no doubt as to what was meant.

21825. There could be no doubt in anyone's mind but that the colouring in this instance meant bluestone pitching? There could be no doubt about that, because the bluestone concrete would be shown in neutral tint, which is quite a different colour from Prussian blue. I do not think any sandstone concrete was shown in the case of this contract; but, if it were shown, it would be in a light wash of Indian ink.

21826. *Mr. Parkes.*] The voucher I now hand you is dated the 7th August, 1894? Yes.

21827. How much bluestone pitching is there paid for? Six yards.

21828.

- J. Davis.  
10 Nov., 1896.
21828. The voucher I now hand you is dated 20th May, 1895? Yes.
21829. How much bluestone pitching is there paid for? Twenty-one yards.
21830. The intervening vouchers would carry the increase? Yes.
21831. That would be the quantity paid for up to the date of the change in the department? Yes.
21832. The first voucher signed by Mr. Darley had 22 yards of bluestone pitching in it, had it not? The voucher of the 30th May is signed by Mr. Smail, Mr. Darley's substitute.
21833. But the former one is not signed by him? No; the first voucher signed by Mr. Smail bears the date of 20th May, 1895.
21834. *His Honor.*] Having referred to the site plan of No 75, what do you find to be the case in reference to the matter upon which I questioned you just now? The two contracts appear to coincide. There is a piece shown on Contract No. 72 drawing to be constructed on the Ashmore-street side of the junction. The two contracts close.
21835. I find I was mistaken · it was not Mr. Nardin, but Mr. Barling, who, in his minute of 28th October, 1891, says: "And a small gap has been left between 'B' and 'D,' which, it is estimated, will cost £1,264 to complete"? I imagine the explanation of that is simply this—that at the date of the minute there remained £1,200 worth of work to be completed at the lower end of Contract No. 75, and that had to be taken into consideration in providing the funds. It was not that it was not included in the contract.
21836. *Mr. Parkes.*] What do I understand that you infer from Darcus's evidence with reference to the concrete? I understand Darcus's evidence in this way. He swore that he had seen five mixings of bluestone concrete in which he considered that a few shovelfuls of extra stone had been put into the mixture, and I further understood that when he was down in the Premier-street chamber he wanted better concrete than was being sent down. He did not say anything about the quality of the concrete on that occasion. But, when he was questioned with reference to the quality of the concrete, he said he had actually seen five mixings himself in which he considered there was more bluestone than there should have been. When he was speaking of the kind of concrete sent down, I also understood him to say that he did not see it, but that he thought that the class of work he was carrying out—that is, the putting of concrete into an arch—required better concrete than the men were sending down. He did not say anything as to the qualities not being in accordance with the specification. That was not the point.
21837. Did you not understand from his evidence that he asked for good concrete because the men were sending down inferior concrete? No; I understood him to say that he wanted better concrete put into the work that he had in hand.
21838. When the excavation of the sewer was made for the duplicate sewer in the case of Contract 69, the excavation was also made for the Premier-street chamber, was it not? Yes.
21839. The chamber and shaft? Not the shaft. The shaft was not included, as far as excavation was concerned, under Contract 69.
21840. When you wrote your minute, which appears upon page 133 of the Parliamentary return, in which you say that the size of the shaft in Premier-street, excavated under Contract 62, was 12 ft. x 5 ft., you referred to an excavation which was not carried out under Carter, Gummow, & Co.'s contract at all? No; the excavation was done under McSweeney's contract, No. 62.
21841. It was then excavated to the full size of 12 ft. x 5 ft.? Yes, under Contract 62, but it was originally intended, under Contract 69, to increase the shaft from 12 ft. x 5 ft. to 18 ft. x 8 ft. That was the original intention, and that is what you will find in the specification. Then, as has been explained, the size of the shaft was reduced to 14 ft. x 7 ft.
21842. To the size shown in the present drawing? It is in the second drawing. The first drawing was cancelled. The third drawing issued to the contractors provided for the shaft as it stood only. There was no excavation whatever to be done under Contract 69. In other words, the 12 ft. x 5 ft. excavation was done under Contract 62, and the lining of the shaft, 12 ft. x 5 ft., was done under Contract 69.
21843. That was done in accordance with the latest plan given? Yes.
21844. *His Honor.*] And there you say there would be no filling at all? No, there would be no filling.
21845. *Mr. Norrie.*] Will you turn to Darcus's evidence, at Question 2149, as to the quality of the concrete? Yes; that referred to the material which Darcus asked might be given to him when he was putting in the shaft-chamber at Premier-street. The question and answer read thus:—  
"Was the material bad? I did not consider that it was good enough, and I applied for better."
21846. Will you now read what Darcus says in reply to Question 2143? Yes. He was asked by Mr. Parkes what was his occupation, and he said he was a carpenter. It will be seen that it was a little out of his province to ask for better material in connection with the concreting.

John Carter recalled and further examined:—

- J. Carter.  
10 Nov., 1896.
21847. *His Honor.*] Can you throw any light upon the question of the drawings of Contract 69 in relation to the pitchers? I know that we received supplementary drawings from time to time showing bluestone pitchers, and that we carried them out according to those drawings.
21848. You did carry out, in point of fact, more than Mr. Hickson intended that you should carry out, as it would appear? Yes, certainly; but it was not our province to send the drawings back and to ask the office to cut out the bluestone pitchers. They sent us out drawings from time to time extending over a period of some months, and upon those drawings the pitchers were shown, and we put them in accordingly.
21849. There is one matter about which I wish to ask you a question, Mr. Carter, and it is one in which, exercising my discretion, I do not wish to be made public. I do not think that it is right that it should be made public. I will, therefore, request the press—if they do not see any reason to decline to do so, for I will not make any order—to leave. The reporters would themselves recognise, if they knew the nature of the question I intend to put, that it would be very unfair that it should go forth.  
[The reporters withdrew.]
- A witness, Mr. Carter, mentioned some gentleman who had been in a very good position whom you and other persons at North Shore had assisted in practically supporting, or, at any rate, whom you had helped to support. I am not going to ask you the name of the gentleman, even now. If you would rather put the name down on paper than give it orally I will allow you to do so? I can think of only one gentleman to whom your Honor can be referring, and I should prefer to put the name down upon paper.
- 21850.

21850. There was no one else excepting the gentleman whose name you have handed to me to whom the statement to which I have referred could apply? No; I think the name I handed to your Honor must be that of the gentleman referred to. J. Carter.  
10 Nov., 1896.

*Mr. Parkes: Would there be any objection, your Honor, to my knowing the name?*

*His Honor: I would have let you know the name, Mr. Parkes, if it had been in the least degree material; but it is utterly immaterial, and it is therefore fair, I think, that I should not disclose the name.*

21851. *His Honor.*] I desire to know from you, Mr. Carter, whether you were acquainted with Mr. Edward Moriarty? Only to a very slight extent.

21852. He was living at North Shore, was he not? Yes; but my acquaintance with him was of the very slightest—in fact, I really could not claim any acquaintance with him at all.

21853. When did he leave North Shore? Some considerable time ago. In the interval between my boyhood and the time of Mr. Moriarty's leaving I was away in the country surveying, so that I saw nothing of him.

21854. He was not living at North Shore at the time you were carrying on any work for the Government? No.

21855. You did carry on some work during his connection with the department, did you not? I do not think so. I think Mr. Moriarty relinquished his position in January, 1889, and I had only just appeared on the scene as a contractor then. It is barely seven years since I returned to Sydney from Tasmania.

21856. Did you ever, directly or indirectly, have any money or business dealings with Mr. Moriarty? None whatever.

21857. You are perfectly certain of that? Yes.

21858. You never directly or indirectly assisted Mr. Moriarty in any way? No.

21859. You are quite sure of that? Quite sure of it.

21860. Do you know whether Mr. Snodgrass, Mr. Forrest, or any one of your partners, was an acquaintance of Mr. Moriarty? No; I think that would be quite out of the question. I do not think they knew him ever so slightly.

## INDEX TO APPENDICES.

| NO.   | PAGE. |

# PUBLIC WORKS INQUIRY COMMISSION.

## APPENDICES.

### Appendix No. 1.

“B.”

#### SPECIFICATION.

##### 1. *Description of Contract.*

This contract comprises the provision by the contractor of all labour, machinery, tools, plant, and everything that may be necessary for the construction of the Northern Main Sewer, Leichhardt and Annandale Section, as described in detail in the specification, schedule to specification, special condition, and general conditions, and as shown on the following drawings:—

- No. 1. General plan showing sites of sewers, &c.
- No. 2. Longitudinal sections of main and branch sewers.
- No. 3. Cross-sections of road deviations, &c.
- No. 4. General elevation of Johnstone's Creek aqueduct, road crossings, and details.
- No. 5. Details of Nelson-street crossing, general cross-sections of sewer, &c.
- No. 6. General elevation of White's Creek aqueduct, road crossings, &c.
- No. 7. Details of White's Creek aqueduct.
- No. 8. General details of White's Creek and Johnstone's Creek aqueducts.
- No. 9. Designs and details of shafts.
- No. 10. Details of Johnstone's Creek and White's Creek aqueducts.

##### 2. *Materials.*

The materials are to be of the quality specified in clauses 7 to 39 of the schedule to specification.

The bricks to be used in these works to be of the quality and description specified in clauses 11 and 12 of the schedule to specification, excepting all red bricks to be used in piers, arches, haunches, spandrels, parapets, and in approaches to aqueducts, up to the level of underside of coping, which are to be as specified, but to be dry-pressed bricks of approved manufacture, dimensions, form, and colour, as per sample to be seen at the Engineer's office. The dry-pressed red bricks, when immersed in water twenty-four hours, not to increase in weight more than 7.85 per cent., and the average breaking strain of twelve bricks to be taken from each parcel not to be less than 5,553 lb. All brickwork is tinted red on plans and sections; the areas on elevations of aqueducts as arches, abutments, piers, spandrels, circular panels over piers, parapets, pilasters, corbels, &c., which are to be specially faced with red and white bricks, are tinted red and white accordingly. The white bricks round circular panels to be specially formed and radiated bricks. All white bricks to be double-pressed plastic bricks, and as hereinbefore specified.

The sandstone to be used in these works to be of the quality specified in clause 15 of the schedule to specification, but the stone to be used in stop-blocks at ends of aqueducts, in copings, string-courses, and skewbacks of the aqueducts herein described to be Pyrmont bottom block sandstone, and as specified.

##### 3. *Excavation.*

The excavation for all the works comprised in this contract to be executed in accordance with clauses 40 to 80, 83 to 87, and 107 of the schedule to specification.

The excavation for the foundations of piers, abutments, abutment piers, and approaches to aqueducts to be executed as specified in the schedule to specification, and to the various depths, widths, steps, &c., as shown on drawings, or to such lesser or greater depths and widths as may be directed, said excavations to be measured to the outside of timbering where such has been approved of.

All logs, existing pitching, masonry, brick, or concrete work, oval or circular drains, sewers, &c., met with in excavations shall, in the first instance, be put aside beyond actual site of works in separate spoil-banks, to be measured and paid for at schedule prices under items of excavation of open trenches, tunnels, shafts, &c.

In connection with clause 63 of the schedule to specification, it is to be understood that the Engineer may, according to the nature of the ground, allow a margin of lining round sewer not exceeding 3 inches, consisting of concrete below level of springing and of sand-packing above level of springing. The filling round brick or concrete shafts to be executed as specified in clause 90 of the schedule to specification.

In connection with clauses 72 and 73 of the schedule to specification, it is to be distinctly understood that all sumps which the contractor may think necessary to sink on lines of sewers shall be sunk only of approved dimensions, and the cost of sinking, timbering, unwatering, removing the excavated materials, timbering, &c., and the filling in, to be defrayed entirely by the contractor.

Shafts are to be sunk as specified in clauses 65, 66, 68 to 71, and 76 to the schedule to specification, and as shown on drawing; but if during the progress of the works the Engineer may deem it necessary to omit any of the shafts shown the contractor shall omit such shaft or shafts where ordered, and such omission shall not entitle him to any claim for loss, damage, or compensation; he shall be only entitled to be paid for the shafts ordered to be sunk at schedule rates.

The price of 1 cubic yard of excavation for all work comprised in this contract (excepting refilling and disposing of surplus materials) shall include the cost of all work herein specified and described in the various clauses of the schedule to specification herein enumerated.

##### 4. *Subducts.*

Subducts to be constructed on lines of tunnels and open trenches, where ordered, as specified in clauses 78 and 79 of the schedule to specification.

##### 5. *Filling.*

The filling in of all excavations, and in any situation comprised in this contract, including the filling in round shafts, concrete foundations of piers, abutment piers, approaches to aqueducts, retaining-walls, and sand-packing over and round closing arch of sewers, &c., to be executed as shown, and as specified in clauses 85 to 97, and 101 to 107 of the schedule to specification.

The price of 1 cubic yard of filling in any situation comprised in this contract (except disposing of surplus materials) shall include the cost of all work herein specified and described in the various clauses of the schedule to specification herein enumerated.

##### 6. *Temporary and Permanent Shoring, Timbering, Piling, &c.*

The shoring and timbering, including all iron used in fixing same, required in the construction of these works to be provided, erected, placed in position, withdrawn, covered up, and measured up as specified in clauses 87, 125, and 126 of the schedule to specification.

If

If during the progress of the contract, in the opinion of the Engineer, pile foundations under piers of aqueducts is considered necessary, it shall be executed as shown on drawing, and as specified in clauses 110 to 126 of schedule to specification.

The piles to be not less than 15 inches diameter at the small end, and 17.50 inches diameter at large end, and they are to be driven until a 20-cwt. ram falling 10 feet does not drive them more than  $\frac{1}{4}$  inch at the last stroke.

#### 7. Ordnance Fences.

Road embankments to be protected by sawn hardwood ordnance fences to the extent and as shown on drawings, and as specified in clauses 197, 210, and 211, of the schedule to specification. The fences required for this contract to be two-rail only, and all posts to be 6 in. x 4 in. x 6 ft. long, the lower 2 feet to be walled into upper portion of concrete retaining-walls. All woodwork, ironwork, &c., to be painted and tarred as specified in clauses 269, 270, and 273 of the schedule to specification.

#### 8. Roadmaking.

The different road deviations and roads under, over, and at sides of main sewer, within the resumed land or otherwise, along Crescent-lane, Nelson-street, Young-street, lanes on each side of same, along White's Creek and White-street, to be constructed on embankments, in excavations, and along surface of ground, to be formed, sloped, bored out, ballasted, metalled, &c., as shown on drawings, as may be directed and as specified in clauses 200 to 204 in the schedule to specification.

#### 9. Tarred Metal Deck.

All sand filling over sewer in aqueduct to be covered with tarred metal deck, as specified in clauses 205 to 208 of the schedule to specification. The metal to be used in decking for this contract to be of  $1\frac{1}{2}$ -inch gauge, as specified in clause 140 of the schedule to specification. The tarred metal to be spread 3 inches thick over the sand-filling.

#### 10. Sewers, Storm-water Channels, &c.

The various works comprising this contract are to be executed in conformity with clauses 132 to 139 of the schedule to specification.

The Leichhardt and Annandale section of the Northern Main Sewer commences at 6 miles 51.2515 chains; to be built in open cutting of 4 ft. 6 in. x 3 ft. 6 in. internal dimensions, of concrete, extending for about 9 feet under Crescent-lane; it is then to cross the Johnstone Creek Valley, built of concrete, brick, and stone, on piers, and ten flat brick arches of 12-foot span for the length of about 159.6 feet; on pile foundations, where ordered, and on piers and twelve elliptical brick arches of 48-foot span for a length of about 633.316 feet; on abutment piers and one flat arch of 57-foot span, over Nelson-street, for a length of about 76.333 feet, and on rock foundation with one flat arch of 12-foot span, of concrete, brick, and stone facings, for a length of about 88 feet up to 6 miles 65.8478 chains. A water-escape drain, consisting of 24-inch diameter stoneware pipe, about 130 feet in length, with gullies complete, and open rock cutting about 10 feet in length, from Nelson-street towards Johnstone's Creek, to be constructed as shown.

From 6 miles 65.8478 chains to 6 miles 67.30 chains the sewer to be built in open cutting of concrete; from 6 miles 67.30 chains to 6 miles 78.24 chains of brick and concrete in tunnel in rock; and from 6 miles 78.24 chains of 4 ft. 3 in. x 3 ft. 3 in. internal dimensions of brick and concrete in tunnel in rock up to 7 miles 5.1941 chains; and then of concrete only in open cutting up to 7 miles 6.9091 chains.

The sewer then to cross the White Creek Valley, built of concrete, brick, and stone, on rock foundation and on piers, and seventeen flat brick arches of 12-foot span for a length of about 359.1 feet; on piers and nine elliptical arches of 48-foot span for a length of about 474.09 feet; on abutment piers and one flat arch of 33-foot span over White-street for a length of about 58 feet, on which length the sewer to be provided with two storm-water escape weirs and 12-inch diameter stoneware vertical off-let pipes, discharging into a water-escape drain consisting of 24-inch diameter stoneware pipes about 200 feet in length, with gullies complete; and open cutting only, about 10 feet in length, from White-street towards White's Creek, to be constructed as shown. The sewer then to be constructed on rock foundations and on piers and four flat brick arches of 12-foot span for a length of 241.79 feet up to 7 miles 23.0758 chains.

Then from 7 miles 23.0758 chains to 7 miles 23.9840 chains the sewer to be constructed of concrete only in open cutting, and from 7 miles 23.9840 chains to 7 miles 30.4840 chains the sewer to be constructed of brick and concrete in tunnel in rock, but the lining of this length of tunnel shall not be commenced until specially ordered.

A branch sewer in tunnel in rock of 3 ft. 3 in. x 2 ft. 2 in. internal dimensions to be constructed along Johnstone-street from Piper-street to Rose-street.

If during the progress of the contract the Engineer may deem it necessary to omit or alter any of the sewers, shafts, junctions, drops, inlets, or other works shown or described in the clauses herein quoted, then the contractor shall be bound to omit altogether, or alter, as may be ordered at the time, any sewers, shafts, junctions, drops, inlets, &c., as the case may be, and such omission or alteration shall not entitle him to any claim for loss, damage, or compensation. He shall be only entitled to be paid for the work actually ordered and carried out at the various schedule rates referring to such work.

#### 11. Concrete work.

The concrete to be used in foundations of all piers, and in all piers and abutment piers, for the 12-foot, 33-foot, 48-foot, and 57-foot span arches up to level of springing and top of plinths, in haunches and spandrels, between and over all arches between external brick facings up to level of underside of string-course (6 inches below invert of sewer), in retaining walls along road deviations and roads, round storm-water discharge pipes, round stoneware pipe where directed, and where ordered in any situation in the construction of these works, to be sandstone concrete of the quality specified in clause 142 of the schedule to specification.

The concrete to be used in inner sewer lining (between brick facings) of aqueducts to be special bluestone concrete of the quality specified in clause 141 of the schedule to specification, except that in this instance the bluestone metal to be broken to a size to pass freely with its largest dimensions through a ring of  $\frac{3}{4}$  inch in diameter, to be screened and washed as specified in clause 140 of the schedule to specification.

The concrete to be used in lining sewers in tunnels, open cuttings, in ventilating shafts, drops, weir-chambers, inlets, flushing, gas-check, and other chambers, and where ordered in the construction of these works, to be bluestone concrete of the quality specified in clause 140 of the schedule to specification. The whole of the concrete work comprised in this contract to be commenced, executed, and completed (including the iron bond-rods in concrete lining of sewer on lines of aqueducts, as described in clause 164 of the schedule to specification), as shown on drawings, and as specified in the schedule to specification in clauses 140 to 171.

#### 12. Cement facing.

All exposed, internal, and external concrete surfaces to be protected by cement facing prepared of cement and sand in the proportion of one cement to two of sand, except all internal concrete surfaces of sewer over aqueducts, which are to be protected by special cement facing prepared in the proportion of one cement to one of sand. The cement facing to be executed as specified in clauses 180 and 181 of the schedule to specification, complete with all battered faces, recesses, chamfers, weatherings, &c., as shown, and as shall be directed.

#### 13. Brickwork.

The brickwork comprised in this contract to be executed and completed as shown on drawings, and as specified in clauses 172 to 179 of the schedule to specification and clause 2, except that in this instance the 12-foot span arches in aqueducts are not to be built in  $4\frac{1}{2}$ -inch rings, but they are to be built in radiating through courses of rubbed and gauged or radiated bricks, as shown, and as shall be directed. The 48-foot span arches to be built as specified, and to be thickened out at the haunches, so as to abut against the sandstone concrete filling over piers between the arches, and between the external brick facings as shown.

#### 14. Masonry.

All freestone ashlar in skewbacks, string-courses, copings, 6 ft. 8 in. x 2 ft. x 9 in. stop-blocks at ends of aqueducts, and steps, to be provided, dressed, set in cement and built in where shown on drawings and where directed, as specified in clauses 15, 182, and 183 of the schedule to specification, and in clause 2. The exposed faces of skewbacks to be finished with 2-inch parallel drafted margins along each exposed arris, stopped in at inner edges, and the surface of stones between to be picked down, the projecting parts to be level with true line of wall.

15. *Squared bluestone pitching.*

Squared bluestone pitching to be provided and set round manhole covers, and where ordered, to be 7½ inches deep, and as specified in clause 186 of the schedule to specification.

16. *Squared freestone pitching and channelling.*

Squared freestone pitching to be set round gully gratings, and in road-channels as shown, and where ordered, as specified in clause 187 of the schedule to specification.

17. *Freestone curbing and gully covers.*

Freestone curbing to be set along edges of footpaths, at gully-gratings, &c., to be of the exact dimensions, dressed and sunk as shown, and as specified in clause 188 of the schedule to specification. Gully-covers, 3 ft. 3 in. x 3 ft. x 9 in., to be provided and set, dressed to the exact dimensions, where shown, as specified in clause 183 of the schedule to specification.

18. *Pipe-laying and Jointing.*

The providing, laying, and jointing of glazed stoneware pipes to be executed as specified in clauses 13, 14, 137, 170, 189 to 194 of the schedule to specification.

19. *Scupper-pipes, slate covers, &c.*

The 4-inch diameter glazed stoneware scupper-pipes along footpaths over sewer on lines of aqueducts to have cistern heads built of concrete, covered on top with 16 in. x 9 in. x 1 in. slate covers set in cement as shown.

20. *Cast-iron and Wrought-iron work.*

All cast-iron ventilating grates and closed manhole covers with frames, gas-check frames, gully-gratings and frames, galvanised wrought-iron step-irons, &c., required for this contract to be supplied by the Government to the contractor, and to be received and removed by him when not required as provided in clauses 264 and 265 of the schedule to specification. Contractor to place said ironwork in position, wall in, joint, and fix same in the works, as specified in clauses 138, 139, 163, and 170 of the schedule to specification, as shown on drawings, and as shall be directed.

21. *Order of works.*

The excavation of all shafts to be commenced simultaneously within three weeks after the date the contract has been signed, and all shafts to be completed within nine weeks after commencement of excavation. The five working shafts shown on lines of tunnels provide seven working faces. The driving of the tunnels to be commenced from all faces simultaneously, and the average total progress at all working faces during every day of twenty-four hours to be not less than 11'666 feet or 70 feet during every week of six working days of tunnel excavation complete.

The various excavations of open trenches for sewers, piers, and abutment piers of aqueducts, approaches to same, roads, &c., to be commenced in each length from the different faces simultaneously. The piling, where such has been ordered for foundations of piers of aqueducts, all pipe-laying, concrete work, brickwork, masonry, &c., required in shafts, chambers, junctions, tunnels, foundations of piers, and abutment piers of aqueducts to level of top of plinths and springing of arches, and in sewers in open cuttings approaching aqueducts, &c., to form the first part of the works.

The construction and completion of all brickwork, concrete work, and masonry of all piers, abutment piers, with all arches, of 12-foot, 33-foot, 48-foot, and 57-foot span and spandrels up to level of tops of said arches, to form the second part of the works.

The construction and completion of all concrete work, brickwork, masonry, &c., of all sewers over aqueducts from top of arches to level of top of all parapets, including weir chambers, storm-water discharge pipes, sand filling, and asphalt covering over aqueducts; road-making, road-repairing, and every other work required in the completion of the whole contract, to form the third part of the work.

In constructing the various items forming the first and second part of the works, it is to be distinctly understood that all piers and abutment piers for arches of 12-foot, 33-foot, 48-foot, and 57-foot span must be built and completed up to level of springing and top of skewbacks, as the case may be, throughout each respective length of aqueduct over each valley, before any of the arches are commenced.

On completion and approval of all piers and abutment piers, each series of arches over each valley to be commenced (unless otherwise directed) at its eastern end, and to advance to its western end, with not less than six centres at a time for the arches of 48-foot span, and with five centres for the arches of 12-foot span, that is to say—

After the first six centres of 48-foot span and the first five centres of the 12-foot span arches are placed in position, the arches over same are to be built and completed one after another, then the spandrels between the 48-foot span arches are to be built with concrete between brick-facings to a height of 11 ft. 3 in. above the springing, after which the centres from underneath the first arch of each series, after the specified period allowed for settlement has expired, to be removed and at once to be re-erected over the sixth or seventh openings, as the case may be, then the centres from the second arch to be removed and re-erected over the seventh and eighth openings, and so on, and the same system to be continued until all arches of one aqueduct have been built and completed.

All centres of arches, cambered as shall be directed, to be strong enough in every part to carry the weight of each arch to be built thereon. Centres under the 12-foot span arches shall not be removed until fourteen days after the completion of each arch. Centres under the 48-foot span arches shall not be removed until twenty-eight days after completion of each arch, and the concrete and brickwork of spandrels between the arches from springing of arch to a height of 11 ft. 3 in. above same, and the centres of the 33-foot span and the 57-foot span arches shall not be removed until fourteen days after the completion of each arch, and until the centres of the adjoining arches at each side of each respective arch have been removed.

After all arches of one aqueduct have been completed as specified, and approved of, the concrete, brickwork, and masonry, as the case may be, to be built in between and above same, in horizontal layers transversely and parallel with gradient of sewer longitudinally, so that all arches of one aqueduct (except where otherwise directed) shall be gradually, uniformly, and equally weighted, as the superstructure rises to the levels hereinbefore specified.

22. *Schedule to specification, special condition, and conditions of contract.*

Notwithstanding that certain clauses of the schedule to specification are especially enumerated, it is to be understood that the schedule to specification, special condition, and the general conditions attached to the specification, shall be held binding in all matters relating to this contract, as far as the Engineer may deem the same applicable.

23. *Note.*

Parties tendering are particularly requested to observe that they must name only one rate of percentage above or below all the prices in schedule, and not one rate of percentage upon certain items, and another rate or rates upon others.

This is the specification marked "B", referred to in our annexed agreement with Her Majesty the Queen, dated the 16th day of May, A.D., 1895,—

## "C."

## SCHEDULE TO SPECIFICATION.

*Land required for works.*

- Access to works. 1. Access to the site of the works (other than by public roads) to be had by means of such land the Engineer may deem necessary.
- Surface area for shafts. 2. For the purpose of sinking, working, and building shafts on lines of streets, and on private ground, the contractor to have temporary possession of an area of 24 ft. by 17 ft. at the site of each shaft, unless otherwise directed.
- Surface area for open trench. 3. For the purpose of excavating open trenches, and for constructing the various works therein, and raising embankments over same, or where ordered, contractor to have temporary possession of such land, of the exact widths and lengths which, in the opinion of the Engineer, is required for these works.
- Application for land. 4. The land herein referred to, to be set out by the Engineer upon receiving written application from the contractor. Such application must be made four weeks prior to the time the said land is required.

*Setting-out work.*

5. The centre lines of sewers, &c., are shown on general plans by full lines, which will be marked on the surface of the ground, the same as on plans, as the works proceed.
6. Contractor shall at his own cost and expense at any time—by day or by night, either on working days or on Sundays or holidays—render all such assistance and supply all such labour, plant, and lighting as the Engineer or Superintending Officer may require, to set out, to check such setting out, or to inspect any portion of the works, which must for that purpose be left clear and free from any obstruction or impediment. During and for the performance of those operations, contractors shall be obliged to suspend any or all of his work, if required to do so by the Superintending Officer, and without having any claim for loss or damage on account of such temporary suspension.

*Materials.*

- Samples. 7. All materials supplied by the contractor are to be of the best quality and description of their respective kinds. Samples of each kind to be submitted for the approval of the Engineer, and retained in office; and, on approval having been obtained, they are to be delivered on the works ready for use, as per sample.

- Source of supply and manufacture. 8. The contractor shall inform the Engineer of the sources whence the various materials are supplied, or of the places of their manufacture, and afford him every facility to inspect their supply or manufacture at any stage of the same.

- Notice of delivery. 9. Due notice shall be given by contractor to the Superintending Officer when any material is brought on the ground, all of which must be neatly stacked in regular heaps, submitted for approval, and approved of in writing by the Superintending Officer, before it may be used in the works. None but that so approved shall be used.

- Gauging and weighing. Bricks. 10. The contractor to provide approved gauge-boxes or scales for measuring or weighing all materials supplied.

11. Bricks to be double-pressed, of well-mixed material of approved quality and uniform fineness; to be new, sound, hard, and well-burnt kiln bricks, free from cracks and all other defects, equal in every respect to the sample brick to be seen at the Engineer's office. They are to have sharp arrises, and to be of approved dimensions, form, and colour, and, when ordered, to be specially moulded. Radiating and specially-formed bricks to be provided for all segmental shafts. All bricks to be subjected to the following tests:—

- Tests. (a) *Tensile strength.*—The tensile strength to be tested, in the departmental testing machine, by laying the brick horizontally on its base of 3 inches, between supports 7 inches apart, and the strain applied across the centre of the brick. An average breaking strain of twelve bricks to be taken, which must not be less than 8,000 lb.

- (b) *Porosity.*—Bricks immersed in water for twenty-four hours must not increase in weight more than 3 per cent. Should the twelve bricks fracture under the foregoing average strain, or prove more porous than 3 per cent., then the Engineer may reject the whole stack of bricks from which the twelve bricks were taken.

- Defective bricks. 12. In the event of the contractor delivering bricks of a mixed description and quality, the Superintending Officer shall have the power to require of the contractor to have those bricks which, in his opinion, are suitable for the works, picked out and stacked where directed, and those unsuitable removed from the site of the contract; and in the event of the contractor refusing or failing to comply with such request within twelve hours from the time it has been made, then in all such cases the Superintending Officer shall have the power of rejecting the whole of the bricks so delivered by the contractor.

- Stoneware pipes. 13. Stoneware pipes to be of well-ground and mixed material, of tough, tenacious, impervious quality, well-burnt, sound, hard, uniform in thickness, true in section, straight longitudinally, uniformly glazed both inside and outside, free from fire and other cracks, flaws, and ash-holes, the collar perfectly joined to the barrel, and in every way equal to sample pipe to be seen at the Engineer's office.

- Dimensions. Pipes to be of the following thicknesses and depth of collars, namely:—

| Pipes, inside diameter, | 9 inches; | thickness, | $\frac{1}{10}$ inch; | depth of collar, | 2 inches.         |
|-------------------------|-----------|------------|----------------------|------------------|-------------------|
| " "                     | 12 "      | " "        | $\frac{1}{8}$ "      | " "              | 2 "               |
| " "                     | 15 "      | " "        | $\frac{1}{4}$ "      | " "              | 2 $\frac{1}{4}$ " |
| " "                     | 16 "      | " "        | $\frac{1}{4}$ "      | " "              | 2 $\frac{1}{4}$ " |
| " "                     | 18 "      | " "        | $\frac{1}{2}$ "      | " "              | 2 $\frac{3}{4}$ " |
| " "                     | 21 "      | " "        | $\frac{1}{2}$ "      | " "              | 2 $\frac{5}{8}$ " |
| " "                     | 24 "      | " "        | $\frac{1}{2}$ "      | " "              | 2 $\frac{3}{4}$ " |

- Tests. All parcels of pipes used in these works will be tested and submitted to the following crushing strains, as applied in the departmental testing machine:—

24-inch diameter pipe, 165 lb. per square inch of bearing surface.

|      |     |       |     |     |
|------|-----|-------|-----|-----|
| 21 " | " " | 165 " | " " | " " |
| 18 " | " " | 142 " | " " | " " |
| 16 " | " " | 142 " | " " | " " |
| 12 " | " " | 142 " | " " | " " |
| 9 "  | " " | 142 " | " " | " " |

If the Engineer deems it necessary, the pipes will also be tested for porosity. Should the pipes fracture under the foregoing strains, or not prove impervious to water, then the Engineer may reject the whole parcel from which the pipes were taken.

- Defective pipes, &c. 14. In the event of the contractor delivering quantities of pipes, bends, and junctions of a mixed description and quality, the Superintending Officer shall have the power to require of the contractor to pick out and stack, where directed, those pipes, bends, and junctions which, in his opinion, are suitable for the works, and those unsuitable removed from the site of the contract; and in the event of the contractor refusing or failing to comply with such request within twelve hours from the time it has been made, then in all such cases the Superintending Officer shall have the power of rejecting the whole of the pipes, bends, and junctions so delivered by the contractor.

- Sandstone. 15. All sandstone used in the construction of these works to be hard, sound, and solid, of the best description, free from all defects, and as per sample to be seen in the Engineer's office, and to stand a crushing strain of 6,500 lb. per square inch. A tensile test will also be required; for this six stones must be prepared, 4 in. by 4 in. by 12 in.; these when laid on their natural beds upon supports 10 inches apart, must give an average breaking strain of not less than 4,333 lb., the strain being applied across the centre of the stone.

- Bluestone. 16. All bluestone used in the construction of these works to be of the best description of basaltic bluestone obtainable, free from honeycomb and all defects, and as per sample to be seen at Engineer's office.

- Sand. 17. Sand to be sharp quartz sand, free from all earthy, loamy, or clayey matter, equal in quality to the sample of Nepean River sand to be seen at the Engineer's office, and to be washed perfectly clean whenever the Engineer deems it necessary.

- Cement. Condition. 18. The cement to be used throughout these works to be well packed in strongly-made casks; to be the best Portland cement, of approved brands and manufacture, delivered in thoroughly sound condition, fit for immediate use, and without requiring seasoning or air-slacking; to be free from any symptoms of staleness, caking, damage to the packing, hard or set lumps; and no barrel or portion of same to be used until it has been examined and approved. The Engineer may

may delay approval of any parcel of cement pending tests extending over a longer period than hereinafter specified. Samples taken from various casks, from each parcel brought on the works, to be submitted for testing. Such samples shall be taken out of the package in an equal section, extending from the surface to the centre of the cask. The cement, when gauged with water to a stiff paste, must set in a damp atmosphere in from one and a half to six and a half hours. Neat cement, of the consistency abovementioned, will be made into pats, kept in moist air until set, and then placed in water at a temperature of between 65° and 80° F., and also in Deval's hot bath, at a temperature of 180° F. These test pats will be examined from day to day, and should they show systems of blowing, or any alteration or variation in form or volume, or imperfect setting capacity, the whole parcel from which the cement was taken will be rejected. The cement shall weigh not less than 100 lb. per imperial struck bushel, filled from the hopper. Each cask shall contain not less than 374 lb., exclusive of weight of packing. The specific gravity to be not less than 3.00; but cement up to or exceeding the specified degree of fineness, if of a lighter weight than herein stipulated, but otherwise equal to the specified tests, may be accepted subject to the decision of the Engineer, provided that the deficiency in weight is made up in quantity. The cement must be ground so fine that the residue on a sieve of 6,400 meshes per square inch, without rubbing, shall not exceed 20 per cent., and on a sieve of 14,500 meshes not more than 30 per cent. For the test for tensile strength, the cement will be gauged with three times its weight of standard sand (viz., sand from crushed sandstone, washed, dried, and sifted through a sieve of 400 and retained upon one of 900 meshes to the square inch), and mixed with an average of about 10 per cent. of their weight of water, and made into briquettes formed in moulds of 1 inch sectional area at the weakest part. Such briquettes to be kept in a damp atmosphere, and put into water twenty-four hours after they have been made, and remain in water at a temperature of between 60° and 70° F., until their tensile strength is tested. These briquettes must bear a tensile stress of not less than 100 lb. per square inch after seven days, and 200 lb. per square inch after twenty-eight days from being moulded. Cement, when tested neat, must bear a tensile stress of at least 300 lb. to the square inch after three days, two of them in water; and 450 lb. after seven days, six of them in water; and 550 lb. after twenty-eight days, twenty-seven of them in water. Briquettes shall also, after being in a damp atmosphere for twenty-four hours, be kept in water at a temperature of 180° F. for six days, when the tensile stress must be equal to that specified for twenty-eight days at normal temperature. The tensile strength will be ascertained in the Government testing-machine, with the load increasing at the rate of 200 lb. per minute, and the average breaking weight of six briquettes will be taken for each test. Any cement which absorbs in proportion more than 2 milligrams of carbonic acid to 3 grains of cement shall be taken as containing more than the permissible quantity of free lime or magnesia. Should the sample fail in any or all of these tests, or show irregularity in quality, or not show a proper progressive increase in strength with age of briquette, then the Engineer may reject the whole parcel from which the sample was taken, and the contractor shall at once remove the said parcel of cement from the site of the works at his own expense; failing which, the Engineer may have it removed at the contractor's cost without further notice. Empty casks to be immediately broken up and removed from off the works. To facilitate the gauging of cement throughout the contract, cement casks will be taken as equal to holding 4 cubic feet; otherwise, the contractor to provide and make approved gauge-boxes, holding exactly 4 cubic feet, for measuring cement.

Cement is to be brought on the ground in quantities of not less than fifty casks, provided that this quantity is sufficient for fourteen days' supply, but in no case is less than fourteen days' supply (whatever that may prove to be) to be brought on the ground in one parcel; nor is the supply stored on works to be at any time less than fourteen days' supply. All cement to be kept on the ground in approved weather-tight sheds, under lock and key, which shall be in the custody of the Superintending Officer.

19. The mortar to be used in these works to be composed of one part of Portland cement and of two parts of clean washed sharp sand, as described in clauses 17 and 18, the proportion of each to be correctly ascertained by measurement, the whole to be mixed with fresh water, as may be directed, to be well incorporated, and to be used fresh. Any mortar which has become hard or set to be at once rejected. All mortar to be mixed on approved sawn timber platforms close to where it is required.

20. Special mortar, composed of one part of cement and one part of sand, and prepared as before described, to be provided and used in all portions of the work where specially specified or directed.

21. The grout to be made of mortar as described in clause 20, to be mixed fluid in tubs, close to where it is required, and to be used fresh.

22. Puddle to consist of the best clay to be obtained in the district within a radius of 5 miles; to be carefully turned over and mixed with fresh clean water until the clay, in the opinion of the Engineer, has become of one even and uniform colour and plasticity.

23. Spun-yarn to be of the best description of  $\frac{3}{8}$ -inch New Zealand flax.

24. Lead to be of approved quality, of the best description of soft pig lead, and to be delivered in pigs, which must show the brand or mark of the manufacturer.

25. Wrought-iron and steel to be of the very best description and quality, with square arrises, free from scales, blisters, laminations, and all other defects, and subject to tests hereinafter specified.

26. The tests for rolled iron shall be as follows:—A piece of iron of such width as shall not exceed 2 inches, or exceed 1 square inch in cross-section, and of a sufficient length to have 10 inches under actual tension, shall be cut, as directed by the Engineer, from any plate or bar about to be used on the work, and the following tensile stresses shall be applied:—

|   | Stress per square inch without fracture. | Ultimate elongation. | Ultimate contraction of area. |
|---|--|----------------------|-------------------------------|
| Rolled girders...   | 20 tons                                  | 8 per cent.          | 10 per cent.                  |
| Plates—across grain ...   | 18 "                                     | 4 "                  | 6 "                           |
| Plates—across grain ...   | 22 "                                     | 10 "                 | 12 "                          |
| T, L, and bulb T bars ...   | 22 "                                     | 10 "                 | 15 "                          |
| L bars ...  | 23 "                                     | 12 "                 | 18 "                          |
| Square, flat, and round bars, and bolts over 4 inches sectional area ...  | 23 "                                     | 12 "                 | 18 "                          |
| Square, flat, and round bars, and bolts up to 4 inches sectional area ... | 24 "                                     | 12 "                 | 25 "                          |

Iron within 10 per cent. of above specified stress will be accepted if the contraction of area and elongation are proportionately higher.

The wrought-iron to be further tested for ductility, as follows:—

A plate planed and rounded on both edges, about 4 in. wide and 1 ft. long, shall bend cold over a slab, the corner of which is rounded to  $\frac{1}{2}$  inch radius, for the following angles, without showing any sign of injury or fracture:—

|                      | With grain. | Across grain. |
|----------------------|-------------|---------------|
| 1-inch plate for ... | 15 degrees  | 5 degrees     |
| " ...                | 25 "        | 10 "          |
| " ...                | 30 "        | 12 "          |
| " ...                | 35 "        | 15 "          |
| " ...                | 52 "        | 20 "          |
| " ...                | 70 "        | 30 "          |

27. Rivet-iron must be capable of being bent cold until the sides are in close contact, without sign of fracture on the convex side.

28. The tests for rolled steel shall be as follows:—

The steel to be of a mild quality, having an ultimate tensile strength, either lengthways or crossways, of not less than 26 tons, and not more than 31 tons per square inch, on a test bar, cut in a similar manner to those for rolled iron, with a minimum elongation of 20 per cent., and a minimum contraction of area of 40 per cent.

Strips cut from any steel plate, angle, or bar, to be heated to a low cherry red, and cooled in water of 82 degrees Fahrenheit, must, when cold, stand bending double round a curve, of which the radius is not more than one and a half times the thickness of the plates tested, without showing any sign of injury or fracture.

29. Cast-iron to be equal to No. 2 pig-iron, or of a proper mixture of No. 1 and No. 3 pig-iron, according to the description of iron-work and pattern; said iron to be of the best quality, tough, close-grained, and capable of being chipped and drilled without difficulty.

|                      |   |
|----------------------|---|
| Tests                | 30. Branded test-bars, 2 in. x 1 in x 3 ft 6 in, to be cast vertically, in the presence of the Superintending Officer, from the cupola from which castings are being run, and to be then carefully marked with the date. These test bars will be placed on bearings 3 feet apart, and submitted in the centre to a weight not exceeding 28 cwt, and the deflection caused by this weight must not be less than $\frac{3}{8}$ inch before fracture; if the bars do not stand thus test to the satisfaction of the Engineer, then the whole of the castings which have been cast of iron of the same quality shall be at once rejected  |
| Tests of castings    | 31 All castings of every description, before they leave the foundry, to be carefully examined and weighed, to be slung on chains above ground, and to be sounded with a hammer, and they are again to be carefully examined, slung, and sounded with a hammer when delivery of same is taken at the site of the works   |
| Tests of pipes       | 32 All straight pipes required in the contract, before delivery of same is taken on the works, shall be, at the foundry or at the site of the works, as shall be directed, duly proved under hydrostatic pressure equal to a column of water of 200 feet, and when under pressure to be thoroughly sounded quickly all over with a hammer of not less than 4 lb.  |
| Gun metal            | 33 The gun metal required throughout these works to be an alloy composed of eight part of copper to one part of tin, unless otherwise specified   |
| Cast steel tests     | 34 The tests for cast steel shall be as follows —<br>Bars turned to $\frac{3}{8}$ inch diameter for a sufficient length to have 5 inches under actual tension, shall have an ultimate tensile strength of not less than 26 tons per square inch, and a minimum elongation of 18 per cent  |
| Cost of tests        | 35. The cost of providing the materials and wrought and cast iron works, &c, herein described, required by the Engineer for testing purposes, and the carriage of same to the Public Works testing-room, place of manufacture, site of works, or to the University, as the case may be, and as shall be directed, shall be borne solely by the contractor; and any of the materials, or any part of the wrought iron and gun metal work, or any of the pipes, casting, &c, injured or broken by the testing, shall be immediately replaced by new and sound materials at contractor's expense; wrought iron, gun-metal, cast iron pipes, or other castings, to be again tested as before described, until the whole have been tested to the entire satisfaction of the Engineer |
| Timber               | 36 Timber to be of the best description, sound, straight, free from sap, large or loose knots, wanes, shakes, gum-veins, pipes, or other defects  |
| Hardwood             | 37 Hardwood used in the works to be of approved timber<br>Round timber to be carefully barked; the diameter given on drawing is to be measured at the small ends<br>Hewn timber is to be squared true on all sides, and dressed fair and clean with the adze, so as to show no axe-marks, to be of full dimensions, free from sapwood, and no heart timber must appear on the outside<br>Sawn timber to have clean sharp arrises, to be cut die square, free from heart timber, and of the full dimensions shown or specified.  |
| Softwood             | 38 Softwood timber to be of the best Baltic or yellow deals, and of the exact dimensions specified when finished  |
| Split fencing timber | 39 Split posts and rails for fencing must be perfectly straight and cleanly split, free from large knots, splinters, and other defects  |

#### *Earth borings*

40. When earth borings have been taken the results have been shown on drawings, but the Government undertake no guarantee whatever regarding the kinds of soil that will be met with or the firmness or stratification of the ground to be excavated, or the amount of unwatering to be done, or the strength of the timbering that may be required, or the nature and extent of other precautions which may have to be adopted

#### *Clearing and Grubbing*

41 The areas of the sites for all excavations and of all embankments, together with a margin of 10 feet in width beyond all these areas, to be cleared and grubbed of all trees, scrub, stumps, roots (to the depth of same), and dead timber, and the whole of such trees, scrub, stumps, roots, and dead timber thus grubbed and cleared to be removed and cleared away from any lands set apart for the purposes of this contract. The cost of all clearing and grubbing to be covered by and included in the schedule price for excavation

#### *Excavation.*

42. No excavation to be commenced on any portion of the contract until, in the opinion of the Engineer, sufficient building materials are on the ground, together with the necessary appliances and plant to ensure the uninterrupted progress and continuance of the works, after they once have been commenced, at any locality, without any delay or stoppage

43 It is to be distinctly understood that, when sinking shafts and driving tunnels, the materials excavated, on their arrival at level of staging above mouth of shaft, are to be at once removed; and when materials, &c, are to be conveyed through shafts to the tunnel works, that all such materials, on arrival at mouth of shafts, must be at once conveyed to the works underground, as the contractor cannot be allowed to occupy a larger area than that authorised by the Engineer.

44 When excavating in open trenches, if ordered, the materials excavated and raised to the surface are to be at once removed; and when materials are being conveyed to open trenches, where they occur in public roads, they must be at once taken into the work, so as not to impede the usual traffic.

45 The road metal, ballast, pitching, wood paving, concrete, asphalt, flagging, sodding, &c, when they are met with in excavation, are to be carefully removed, put aside, and stacked where directed

Cross sections to vary

46 The cross sections of tunnel excavation are shown on drawings, but they will vary with the solidity of the ground, and as the Engineer directs

Method of excavation in trenches with out timbering

47 Wherever the solidity of the ground permits it, the excavation in trenches for concrete or brickwork to be taken out with vertical sides to level of springing of sewer arch, and to the exact widths of concrete or brickwork shown on drawings, and below that level to bottom of trench with curved or vertical sides, as shall be directed

Width of trenches where timbering is required

48 Where timbering is required, trenches 8 feet deep and under shall have vertical sides, and shall be 1 ft 3 in wider to outside of polling boards than width of concrete or brickwork. Where trenches are over 8 feet deep and require timbering, they shall have vertical sides, and shall be 1 ft 3 in wider to outside of polling boards than the width of the concrete or brickwork for the lower 8 feet. Above that level they shall be 2 feet wider to outside of polling boards than concrete or brickwork

For embankments

49 The excavation for foundation of embankments to be taken out, where ordered, 12 inches below surface of ground, and to such widths and lengths as shall be directed, or as ordered for benching

Width of trenches

50 The excavation in solid rock for pipe trenches shall have vertical sides, and be of the following sizes, viz —

|  |       |                 |
|--|-------|-----------------|
| For 24 inch diameter stoneware pipe sewers |       | 3 ft 9 in wide. |
| 21-inch                                    | ” ” ” | 3 ft 4 in ”     |
| 18 inch                                    | ” ” ” | 3 ft 0 in ”     |
| 15 inch                                    | ” ” ” | 2 ft 6 in. ”    |
| 12 inch                                    | ” ” ” | 2 ft 0 in ”     |
| 9-inch                                     | ” ” ” | 2 ft 0 in. ”    |

51 When timbering is not required in excavation in all other ground for pipe trenches, the trenches shall be of the same widths as those in solid rock. Where timbering is required, the excavation for pipe-trenches 8 feet deep and under shall have vertical sides, and shall be of the following sizes to the outside of the polling boards, viz —

|  |       |                |
|--|-------|----------------|
| 24 inch diameter stoneware pipe sewers |       | 4 ft 0 in wide |
| 21 inch                                | ” ” ” | 3 ft 7 in. ”   |
| 18 inch                                | ” ” ” | 3 ft 3 in ”    |
| 15 inch                                | ” ” ” | 2 ft 9 in ”    |
| 12 inch                                | ” ” ” | 2 ft 3 in ”    |
| 9 inch                                 | ” ” ” | 2 ft 3 in ”    |

Width of trenches

52 Where timbering is required, the excavation for pipe trenches more than 8 feet deep shall have vertical sides, and shall be the widths given in clause 61 for the lower 8 feet, and for any depth over and above 8 feet the trenches shall be of the following sizes to the outside of the 1 $\frac{1}{2}$  inch polling boards (unless otherwise ordered in writing), viz —

|  |       |                |
|--|-------|----------------|
| 24 inch diameter stoneware pipe sewers |       | 4 ft 9 in wide |
| 21 inch                                | ” ” ” | 4 ft 4 in ”    |
| 18 inch                                | ” ” ” | 4 ft 0 in ”    |
| 15 inch                                | ” ” ” | 3 ft 6 in ”    |
| 12 inch                                | ” ” ” | 3 ft 0 in ”    |
| 9 inch                                 | ” ” ” | 3 ft 0 in. ”   |

53. Transverse and other cheeks to be excavated to receive pipe-sockets and junctions, and for the purpose of making the joints. Cheeks.
54. The trenches for the cast-iron pipe-sewers to be excavated to the depths and widths which the Engineer may order. Joint-holes to be excavated to the dimensions specified or ordered by the Engineer. Cast-iron pipe trenches.
55. The excavation of trenches to be carried on in such a manner that they shall be always completed and approved for a length of 48 feet (unless otherwise directed) in advance of sewers or other works. Trenches.
56. In ground which, in the opinion of the Engineer, does not require blasting, the excavation is to be carried on by means of picking, and when the ground, in the opinion of the Engineer, is hard and suitable for blasting, charges of compressed powder, not exceeding 4 inches in length by 1½ inch in diameter, shall be used. The Engineer, however, reserves to himself the right of ordering any excavation which he may consider blasting would facilitate, to be taken out by means of charges of compressed powder not exceeding 2 inches in length by 1½ inch diameter, or he may prohibit the use of explosives altogether, when the excavation shall then be done by means of guttering and gadding. If explosives, other than compressed powder, are permitted to be used, the charges thereof will be determined by the Engineer. The use of explosives.
57. When the use of explosives is authorised, the contractor shall use every precaution and carry on such operations with such limited charges of powder only, or other approved explosives, as will loosen the shale, rock, &c., without shattering the same; and to employ approved means to prevent, effectually and thoroughly, all stones or other materials from being thrown out of trench, tunnel mouth, or shaft. Precautions.
58. Blasting will not be allowed between the hours of 10 p.m. and 6 a.m., nor after 1 p.m. on Saturdays, except by the written authority of the Engineer. Working hours.
59. Every hole drilled for blasting purposes will be measured by an inspector, and charged under his supervision. Drilling and charging holes.
60. No larger quantity of explosives shall be taken underground than is likely to be used during any current shift. Storage of explosives.
61. When pipe-sewers are to be laid in tunnels, the dimensions of tunnel to be 4 ft. x 3 ft. exclusive of timbering. Pipesewer tunnels.
62. If the contractor has exceeded the sectional area of excavation ordered, he shall remove such extra excavation, and in the case of trenches make good and fill in same at sides of trench with approved materials, and at bottom of trench with concrete described in clause 142, at his sole cost; the actual cubic contents only of the excavation and of the concrete work shown on drawings and ordered for each special length of sewer in open trench shall be paid for; and in the case of excavation in tunnels and shafts the contractor shall remove such extra excavation, and make good and fill in same with concrete or brickwork, in the manner herein specified, at his sole cost; the actual cubic contents only of the excavation and of the brick and concrete work shown on drawings, and ordered for each special length of tunnel or shaft, shall be paid for. Excessive excavation.
63. If, however, in cases where the use of explosives is ordered (and in no other case) the Engineer considers it impracticable to excavate any particular length of tunnel or shaft to the exact sectional area ordered, then he may, according to the nature of the ground, allow a margin of concrete lining not exceeding 3 inches over and above that ordered. Maximum allowance.
64. Unless otherwise directed, the excavation of the various tunnels to be commenced from the different faces described in the specification, simultaneously within the specified time after the date the contract has been signed. Starting tunnel excavation.
65. Ventilating fans or other approved means to be provided and worked by the contractor at all working shafts and tunnel faces where directed by the Engineer. Ventilation.
66. In all cases where a greater thickness of lining, or a greater cross-section area of tunnel or shaft is ordered to be executed, from whatever cause, after the length of tunnel or shaft in question has been excavated to the profile ordered in the first instance, or if any portion of the excavation of open trench is ordered to be deepened, the excess of excavation so ordered shall be paid for at schedule rates for tunnel, shaft, or open trench excavation, as the case may be, and as the Engineer shall classify and direct at the time. Enlarging shaft or tunnel.
67. No concrete or brickwork shall be commenced until the portion of sewer excavation in tunnel or open trench to be operated upon has been cleaned and levelled, and until the Engineer has examined and approved of same. Inspection and approval.
68. Shafts are to be sunk at the various sites shown on longitudinal sections and on general plans, or in lieu of those shown, at such other sites as the Engineer from time to time may determine. Wherever shafts are ordered they are to be sunk truly plumb, and of the full dimensions shown on drawings, or as may be ordered at the time, clear of timbering. Shafts.
69. All excavation for shafts situated within the lengths of open trenches is to be paid for as "excavation in open trench." Shafts in open trenches.
70. If the contractor desires, to suit his own convenience, to sink temporary shafts, they are to be sunk only at approved places, and on completion of work to be filled in, as specified in clause 95, to the satisfaction of the Engineer. The cost of sinking, timbering, unwatering, &c., and of filling in, withdrawing, or covering up timber of such shafts, to be defrayed entirely by the contractor. Temporary shafts.
- All temporary shafts to be sunk to the dimensions directed, clear of timber.
71. All shafts, temporary or permanent, to be provided and fitted during their construction and completion, or during the progress of the contract, if deemed necessary by the Engineer, with approved winding engines and steel-wire ropes capable of resisting a strain equal to six times that of the working maximum strain, or with such other winding arrangements, ladders, staging, &c., as shall be directed and approved of by the Engineer. Shaft plant.
72. Where directed, sumps are to be sunk at the bottom of shafts not less than 6 feet deep below invert of sewer, and afterwards to be filled in with concrete, as specified in clause 142. Sumps.
73. Any other sumps which the contractor, for his own convenience, may think fit to sink on line of sewer, in tunnel or in open trenches, during the construction of these works, are to be filled in with concrete, as specified in clause 142, and the cost of sinking, timbering, unwatering, and filling in with concrete, and removing the materials, &c., to be defrayed entirely by the contractor.
74. The excavation for sub-ducts in tunnel and open trench to be made below invert of sewer, or as shall be directed, with a fall towards each working shaft or face, and of such dimensions and gradients as may be determined at the time. Sub-ducts.
75. Any material obtained from the excavation, which in the opinion of the Engineer, is suitable for refilling or other works comprised in this contract, shall be put aside in separate spoil-banks beyond the site of the works. Material for "filling."
76. In the case of tunnel and shaft excavation, when "solid rock" or "more or less hard material," or "solid rock" and "more or less hard material" occur, provision is made on the longitudinal section and in the schedule of quantities for the materials to be classified under these headings. No guarantee is given as to the means which may be ordered for excavating such work. The actual excavation done in tunnels, shafts, and open trenches will, however, be paid for, not exceeding that ordered or specified. Classification of material from shafts and tunnels.
77. The schedule price for 1 cubic yard of excavation in any situation shall include the cost of taking out and placing said excavation aside in separate temporary spoil-banks beyond the actual site of work, together with the works comprised in clauses 41 and 107. Works covered by 1 cubic yard of excavation.

#### Sub-ducts.

78. Sub-ducts to be constructed, when decided on, along lines of tunnels and open trenches, commencing on each length midway, or thereabouts, between two working shafts or faces, 33 inches below invert of sewer, &c., or as shall be directed at the time, and having a fall towards each working shaft, or face of such gradients as may be determined at the time. Sub-ducts of 9 inches, or of a greater or less internal diameter, to be laid immediately underneath the timber floor of tunnel or open trench, or at sides of sewer, in hardwood boxes varying in size and dimensions as shown on drawing. Said boxes to be laid straight and true to levels decided upon, and the pipes to be laid therein, upon, and surrounded by sandstone chippings and quarry refuse. Dry sandstone packing, 4-inch gauge, to be put over pipes.
79. In solid and disintegrated rock the excavation for sub-duct to be executed as shown on cross-sections, and as shall be directed, and the sub-duct to consist of glazed stoneware spigot and faucet pipes of 9 inches internal diameter, more or less as the case may be. The pipes to be jointed dry, and the filling above same up to under size of sewer lining to be of dry stone, hand-packed, as before described. The Engineer may also, if he deems it necessary, order the pipes to be jointed altogether, or in part, with tarred gasket, 1½ inch deep, and cement mortar 1½ inch deep. The mortar to be prepared of 1 part cement to 2 parts of sand.

#### Existing Gas, Water, and Sewer Pipes, and Sewers.

80. During the excavation and construction of these works, the contractor is to take every precaution and provide and execute all, which in the opinion of the Engineer is necessary, to prevent the existing gas, water, or sewer pipes, and sewers wherever met with, or that are adjacent to these works, from injury, and to maintain the same at his sole cost, until, in the opinion of the Engineer, the refilling of excavation and the general progress of the works render further precaution unnecessary. All damage to existing water, gas, or sewer pipes, and sewers, to be repaired at once by contractor at his own cost to the satisfaction of the Engineer. Railway

*Railway and Tramway.*

81. Before proceeding to excavate underneath or near any railway or tramway, the contractor must give ample notice in writing to the District Railway or Tramway Engineer of his intention to commence operations; and he must adopt such precautions as the said Engineer may think necessary or prudent for the safety or preservation of the traffic over the said railway or tramway. The contractor will be held wholly responsible for all stoppage of traffic, delays, accidents, &c., that he or his men may cause, no matter how brought about, during the execution of the work under or near any railway or tramway.

82. The Railway Commissioners may, if they consider it advisable, place a watchman or watchmen on all work to be executed under or near any railway or tramway, for the purpose of seeing that no danger to the traffic is allowed to occur; but this shall not relieve the contractor of any of the responsibilities set forth in the foregoing clause, and the expense of such watchman or watchmen is to be borne by the contractor.

*Diverting Water.*

83. During the construction of these works the contractor shall, at his own cost, do all work which may be required for the effectual diversion of surface-water, subsoil water, and storm-water, across and beyond the site of the works, to keep the trenches free from water during the whole time the works are in progress, and in preventing any injury to the works by floods or any other causes.

*Diverting Sewage.*

84. During the construction of the works in general, and of all points of intersection of existing and new sewers, and until completion of all works connected therewith, the contractor, at his own cost, to execute all the works of every description required to prevent injury to private property or to the existing or new works by sewage, and erect and construct watertight fluming across sites of works for the purpose of conveying constantly the whole of the sewage which may flow in said sewers at any time, to the entire satisfaction of the Engineer.

*Unwatering.*

85. All water which, during the progress of the work, may drain into excavations, to be properly, effectively, and continually pumped out, and the whole to be kept dry until after the completion, setting, and hardening of all brick and concrete work and pipe sewers, at the sole cost of the contractor. The greatest care to be taken to prevent running water passing over any of the brick, concrete, and pipe-work until it has set perfectly hard; any concrete, mortar, and cement jointing exposed to wash of water must be taken up at once, and replaced by fresh concrete, mortar, and jointing, at contractor's expense.

*Temporary Bridges, Roads, Fences, &c.*

86. The contractor shall provide, erect, and maintain all necessary temporary bridges, footways, &c., over rivers, creeks, water-courses, open trenches, and underneath railways, tramways, roads, streets, and footpaths, so as to ensure that the flow of water or traffic is uninterrupted, as the case may be, during the period of contract. He shall also provide, erect, and maintain all temporary fences, hoarding-barriers, night-lights, &c., necessary to thoroughly protect both the general public, land, and property; and shall also properly ballast the temporary roads which may be required for the convenience of the public, and which the Engineer may order.

In the event of the contractor refusing or neglecting to carry out any of the above work, the Engineer shall have power (after having given twenty-four hours' notice in writing of such intention) to do the same at the contractor's expense, and the cost thereof shall be charged to the contractor on account of this contract.

*Temporary Timbering.*

87. During the excavation the contractor to adopt every precaution, and provide all materials, as planking, strutting, shoring, timbering, piling, sheet-piling; all packing materials, as straw, asphalted felt, bags, tarred gasket, puddle, &c., and carefully execute (unless where otherwise specified) all piling, sheet-piling, timbering, &c., where they are required, and carefully and securely close up and pack against the outside of all joints and open spaces between polling-boards, sheet-piles, or timbering, wherever they occur, and caulk open joints where directed, and execute whatever may be required to prevent any buildings, or other superstructures, road and other surfaces over and adjacent to the line of sewer from settling, cracking, being shaken, slipping, or falling in, and to prevent any portion of the floors, sides, roofs, and end faces of excavation, beyond the exact cross-sections and dimensions determined on, from slipping, falling, running in, or being forced through joints and open spaces in the timbering and sheet-piling, and maintain said timbering, piling, shoring, &c., where and when directed till completion of the works, to the entire satisfaction of the Engineer and at the contractor's sole cost.

*Filling.*

88. The materials referred to in clauses 75 and 93, to be used in filling in the spaces between sides of excavation, and of concrete and brickwork, over sewers, into headings, filling in abandoned open channels, low ground adjoining channels, into roads and other embankments, &c., as shown on drawings and as ordered by the Engineer. Sand only to be used in filling over sewer between copings on lines of aqueducts. All filling, unless otherwise specified, to be brought up in level layers, spread 6 inches thick, each layer to be rammed (and watered if directed) until approved of, before the succeeding layer is put on. This filling to be carried up to the surface of the ground, or to such other level or slope, &c., as may be directed at the time. Embankments to be formed as shown on longitudinal sections, to be finished in horizontal layers 9 inches thick after spreading, to be well rammed (and watered when directed) until approved of before the succeeding layer is put on, with side slopes and top widths, as shown on drawings, or as may be determined at the time; to be finished with such benches and curves as shall be directed. Only iron-shod rammers of not less than 10 lb. weight, of approved pattern, to be used, and one man to be employed in ramming to each man employed in filling.

Embankments.

Rammers.

Filling pipe trenches.

89. Material only of approved quality shall be used in refilling the spaces between sides of pipes, &c., and sides of excavation, and over pipes, &c. The refilling to be done in level layers, spread 6 inches thick (and watered when directed), each layer to be carefully and separately rammed as hereinbefore specified. The lower layers up to level of top of pipes to be carefully packed and rammed solidly under and at sides of pipes and socket-joints with spades or other narrow tools. The filling to be done as above described, to such a distance below the level of the street, road, path, &c., as the case may be, to admit of the ballasting, metal, or other covering being replaced.

90. On completion of concrete, brickwork, &c., in shafts, the space between the sides of excavation and outer face of brickwork or concrete to be filled in in 6-inch layers, well rammed (and watered where directed) with materials provided for in clauses 75 and 93, great care being taken in lowering the materials to the bottom, so that stones do not fall on top, or against sides of pipe-shafts, brick or concrete lining. Where stones are permitted to be used as filling they are to be put in in alternate layers with the earth, and at least 12 inches of earth to be placed nearest and round the pipe-shafts, brick or concrete lining.

91. Shafts not required as manholes or ventilators, on completion of contract, or when directed by the Engineer, to have all timber withdrawn (as specified in clause 95), and to be carefully filled in.

Quarry filling.

92. Where it is found necessary to carry the excavation deeper than the underside of concrete foundations, in order to obtain a compact solid bottom, the portion so excavated to be filled in to the underside of concrete foundation, or as may be directed, with good quarry filling, spread 6 inches thick, rammed and watered until approved. The price per cubic yard for providing and putting in position quarry filling is to be 1 cubic yard of "filling."

Extra material required.

93. All soil, sand, and other materials which the excavations of this contract do not supply, and which it is necessary to obtain for the completion of the embankments and filling of every description, the contractor shall procure, of approved quality, from any other source or land outside the limits of this contract. The cost of providing to be included in the price per cubic yard for "filling."

Timber left in.

94. As the works proceed, all shoring, timbering, staging, temporary bridges, piling, sheet-piling, &c., shall be withdrawn, excepting permanent timbering, as shown on drawings, and in all other cases where, in the opinion of the Engineer, the withdrawing of the same is impracticable, or would endanger the safety of the works, buildings, streets, and other surfaces over and adjacent to the works, when the contractor must obtain an order in writing, signed by the Engineer, to the effect that piling, sheet-piling, shoring, timbering, &c., may be covered up.

95. In withdrawing timbering from open trenches and shafts the same shall be commenced from bottom of excavation, or, as the Engineer may direct, from lowest practicable portion of same, and continued upwards; the contractor to exercise every precaution by means of intermediate shoring, plankings, props, &c., and the filling in around and above sewer and shaft lining to be carried on simultaneously with the withdrawing of the timbering. The cost of withdrawing to be included in the price per cubic yard for "filling." Withdrawing timbering.
96. Refilling into excavation shall be measured the net dimensions of excavation less the actual displacement of any permanent works. Any other "filling" shall be measured the actual cross-sections ordered. Measurement of "filling."
97. The schedule price for one (1) cubic yard of filling in any situation shall include the cost of removing the materials from temporary spoil-banks, or from other sources outside the limits of this contract, and the depositing same in accordance with the plans and specification, together with the work and material described in clauses 92, 93, 95, and 107. Work covered by 1 cubic yard of filling.

*Surplus Material.*

98. The excavated material not required, or approved for filling, to be removed off the works to such places as shall be ordered, spread and trimmed, and to be paid for as lead. Lead on spoil.
99. The surplus materials to be measured the actual net excavations less the actual net refilling. Measurements.
100. The distance of lead shall be measured from top of shaft or end of open cutting to centre of spoil-bank or other place of deposit. Length of lead.

*Restoration of Roads and other Surfaces.*

101. After the filling in of sewer trenches and shafts has been consolidated and approved, the surfaces of roads, streets, paths, &c., to be at once restored in the manner hereafter described, viz.: In the case of streets which are wood-blocked on concrete the City Surveyor will replace same on behalf of the contractor, at the rate per square yard stated in specification; in the case of roads or streets which are ballasted and metalled 9 inches of ballast shall be laid thereon, and after this has been blinded with selected and approved material the metal put aside, as specified in clause No. 45, shall be evenly spread and rammed until approved; in the case of roads or streets which are ballasted only 9 inches of ballast shall be laid thereon, and blinded as above; and in the case of other coverings, the surfaces to be restored to the same condition as they were before the commencement of the work. Materials damaged, injured, or otherwise not approved of as fit for reinstating surfaces to be replaced by contractor with new, sound, and approved materials of their respective kinds, together with any additional ballast which may be required, over and above that found on the site of the excavation and referred to in clause 45. If, however, in the opinion of the Engineer sufficient hard rock is excavated from the tunnels, shafts, and open cuttings, the contractor will be allowed to break such rock to a 4-inch gauge, and use same for restoring road surfaces. Wood-blocked streets.  
Ballasted and metalled streets.  
Ballasted only streets.  
Damaged materials from road surfaces.
102. Immediately the pipes are laid, or concrete and other work in connection with shafts, manholes, lampholes, &c., are executed, and the ground filled in over same in any length of sewer, it is to be distinctly understood that all surplus material is to be carted away, the road cleaned until approved, and the road and other surface to be made good, flush with surrounding surfaces of roads, paths, &c., to the satisfaction of the Municipal authorities and the Engineer, in accordance with the specification; and if the contractor fails to do this the Engineer shall be at liberty, without further notice, to get the roads cleaned, and the road and other surfaces made good at contractor's cost. 4-inch gauge sandstone ballast.  
Clearing roads and streets.
103. The contractor shall maintain the surface of the roads, streets, &c., after the excavations have been filled in, where the streets, roads, &c., have been broken up or injured during the progress of the work, during the period of the contract time, and afterwards during the period of maintenance, and shall from time to time make good any sinkings in the surface, and shall provide any additional metal, ballast, or other material that may be necessary during these periods. Maintenance of roads, streets, &c.
104. The whole cost of work and materials in connection with the restoration of road and other surfaces to be solely borne by the contractor. Cost.
105. The contractor shall, at the termination of the period of maintenance, procure certificates from the Municipal authorities concerned that the roads, &c., in their respective districts are in a satisfactory condition. Municipal certificates.

*Restoring Buildings, Walls, Fences, &c.*

106. All buildings, walls, fences, and works of any description met with on the site of the works that it is found necessary to remove or that may be disturbed, are to be replaced or repaired, at the sole cost of the contractor, and left, at the completion of the works, in the same order and condition as they were before the commencement of the works.

*Trimming.*

107. On completion of all embankments, cuttings, and filling, all top surfaces and slopes to be dressed and trimmed off to the specified inclinations and surfaces, and to such other inclinations, slopes, and surfaces as may be directed at the time; and all materials accumulating after trimming and levelling top surfaces and slopes, &c., shall, at the completion of the works, be removed, carted away, or spread about, as may be directed by the Engineer; and the schedule rates for filling and excavation shall include and cover all costs for trimming and dressing surfaces, and of removing, carting away, or spreading about all superfluous accumulations at the conclusion of contract.

*Sodding.*

108. On completion of embanking and filling, where ordered, all top surfaces and slopes to be protected by sodding. The surfaces to be sodded are to be boxed out the widths and depths required for the reception of turf-lining. The materials boxed out to be dealt with as provided in clause 107. The sods to be the best obtainable within a radius of 5 miles, of approved quality, not less than 3 inches in thickness and 10 inches square, full cut, with square arrises, to be laid in approved bond on their flat beds, close jointed over all top surfaces of filling or embanking, to be beaten down as the work proceeds with proper tools, as shall be directed, and when finished to present throughout perfectly smooth and plain surfaces. If the season requires it, the turfing to be properly and regularly watered to ensure the grass taking fresh root. The boxing out and turfing to be carried out simultaneously, and no greater area to be boxed out at any time than can be covered with turfing during two working days. The price for sodding to cover all the work described in this clause.

*Soiling and Sowing.*

109. All slopes of embankments, cuttings, and filling, after they have been trimmed, to be covered, when directed, with a layer of surface soil, to be carefully rolled, and when finished to be of a thickness of not less than 3 inches. All slopes, soiled or not soiled, or embankments, cuttings, or filling (where not sodded), after they have been trimmed, &c., and when ordered, to be sown with couch grass seed, as shall be directed, and to be rolled afterwards.

*Piling, Timbering, &c.*

110. Piling to be executed as required and ordered, but the actual quantities required can only be ascertained during the progress of the excavations, and as the trial piles are sunk. Quantities of piling.
111. The whole of the timber which, in the opinion of the Engineer, is required for each part of the various works, or for such portions of the same as he may determine at the time, shall be cut and delivered on the ground prior to contractor commencing the excavation of such part or portion of said work. All timber when brought on the ground to be at once properly and carefully stacked on even plain surfaces, and all timbers to lay perfectly straight in the stacks; all timbers bent, split, unsound, or objected to on other grounds by the Engineer shall be removed by the contractor from the ground within twenty-four hours after such objections have been made known to him, and if he neglects to do so they shall be removed without further notice by the Engineer at contractor's cost; all rejected timbers to be marked by a brand or axe-mark. Delivery.  
Stacking.  
Rejection.
112. All timbers required and delivered for each respective part of works to be, when dressed, pointed, placed, and fixed in position, of the various lengths and dimensions indicated and shown on the drawings referring to such works, or of such other dimensions which the Engineer may deem suitable for the works. Dimensions.
113. All square or round piles shall be sharpened (pointed) at the lower end, the sharpened sides to be cut to a batter of 1 to 6, finished at lowest end with a flatter diamond-cut point, as shown on drawings; the lowest point to be exactly in the straight line of the true axis of the pile, and the sharpened sides to be cut true to the axis of pile to prevent same from twisting and slanting when being driven. Pointing piling.

- Pointing sheet-piles. 114. All lower ends of sheet-piles to be sharpened on one side only to an inclined edge, as shown on drawings, and as shall be directed, to ensure the pile when being driven to drift towards the pile last driven; all sheet-piles of the same length and thickness within each respective panel to have their ends sharpened exactly the same as regards length of cut surface and inclination of bottom edge.
- Dressing piles. 115. All round, square, and sheet piles to be straight-grown timber, and before being driven all square, angle, and guide-piles to be faced truly straight on the sides against which sheet-piles are to be driven and finished as shown on plans; all round piles for staging across rivers, against which planked sides for concrete filling are to be fixed, to be finished with a straight adzed face the depth required for reception of said planking.
- Ringing and shoeing piles. 116. All sheet-piles to be perfectly parallel, and before being driven to be truly faced and fitted to each other within each panel (between each pair of guide-piles), as shown on drawings, forming a straight close joint.
117. All round, square, and sheet-piles are to be hooped with wrought-iron rings at the top, such rings to be of not less than 2 in. x 1 in. iron for the square and round piles, and of not less than 2 in. x  $\frac{1}{2}$  in. iron for the sheet-piles; stronger rings to be provided and used when directed. All piles are to be pointed, as hereinbefore described, and where driven into hard ground, when directed and ordered, the points to be protected by wrought-iron steel-pointed shoes, weighing, except where otherwise directed, 28 lb. each for the main and guide piles, and 8 lb. each for the sheet-piles. All shoes to be provided and made of such shape and workmanship as the Engineer shall approve of. They are to be carefully and truly fitted and fixed on to points of piles, and the lowest points of shoes for the round and square piles to be fixed exactly in a straight line with the axis of each pile.
- Lining out, &c. 118. The exact lines and positions of all piles shall be carefully and correctly ascertained and staked out by the contractor to the satisfaction of the Engineer, and all stakes fixed in water or river-beds to extend above high-water level before any piles are placed and driven. After the staking out, piles to be placed truly plumb, or to such batters as may be directed, in their respective positions between guide-wales. All sheet-piles to be placed, truly plumb, between each pair of guide-piles, and lowered into their respective positions between two walings, fitted and fixed on both sides of guide-piles, as shown on drawings.
- Pile-driving. 119. After the excavations for the various foundations have been completed, timbered, and approved, the pile-driving as indicated on drawings, or where ordered, to be proceeded with as follows:—In order to ascertain the lengths of piles required for the foundations of the different piers and abutments, as indicated on drawings, the contractor is first to drive trial piles, in the manner hereinafter specified, in positions required for permanent purposes, one for each alternate pier, or as shall be directed. Any extra expense in connection with trial piles to be borne by the contractor. After the different lengths of piles required for the works have been in this manner ascertained the permanent piles to be placed in their exact positions, and then to be driven perfectly plumb (or to such batters as may be directed) until tested and approved, as specified.
- Weight and fall of ram. 120. Long piles from 25 feet and upwards, of 12 inches and greater diameters, to be driven with a ram weighing from 20 to 30 cwt., having a drop over head of pile of not less than 5 feet, the drop to increase in height as the pile is driven, as shall be directed. Any pile driven with a ram of 20 cwt. or more, as the case may be, falling 10 feet, to be driven until at the last stroke it does not drive more than the specified depth, and any pile not standing this test to be drawn when ordered, and to be replaced by a longer pile. Shorter piles may be driven with a ram of less weight than 20 cwt.; and when rams of lighter weight are allowed to be used over shorter piles, sheet-piles, &c., the height of drop to vary from 12 to 18 feet, as the Engineer shall direct.
- Pitching piles. 121. All piles to be pitched of such lengths as will ensure good sound heads at the levels shown on drawings, or as may be given at the time by the Engineer. No pile shall be pitched until measured and marked by an officer of the Department, nor cut off until tested and approved. Tenons, 8 in. x 4 in. x 6 in. deep, to be neatly cut on pile-heads. Any pile which may be too short, or which may have been driven out of plumb, or out of the stipulated batter, or which may split below the level of the required height when driven, to be at once drawn, and to be replaced by a sound pile, driven plumb, or battered, as the case may be, of the required length, at contractor's cost. The contractor must be careful not to pitch any pile which he is not satisfied will be long enough. Scarfing of piles is not permitted. The driving of piles to be commenced and carried on in such order of works as specified, and as shall be directed.
- Short piles. 122. Where close piling is shown on drawings, all angle-piles and guide-piles to be driven first, after which the upper guide-wales are to be fitted and fixed on to heads of main piles, and then the whole of the sheet-piles of one panel, after being prepared and fitted, to be lowered and placed into position for driving, after which they are to be driven each a few feet at a time, so that the whole panel of sheet-piles shall be driven to the specified depth, as near as possible together; in this manner each panel is to be driven, one after another, unless otherwise ordered.
- Close and sheet-piling. 123. As the sheet-piling and excavation between same proceeds the lower guide-wales to be fitted and fixed together with all transverse, diagonal, and angle struts as shown on drawings, and with such additional and intermediate struts as the Engineer may deem necessary during the progress of the works.
- Timbering, framing, staging. 124. Capsills to be accurately mortised, placed upon bearing piles, and to bear truly on pile-heads. Transverse sleepers to be spaced as shown, placed upon capsills, halved out  $1\frac{1}{2}$  inch deep at points of intersection, and planks to be laid and close fitted between sleepers upon the capsills. Sleepers and planks to be secured to capsills with wrought-iron  $\frac{1}{2}$ -inch square 9-inch spikes.
- Capsills, transverse sleepers. 125. The net quantities of all permanent timbering, planking, and piling, as shown on drawing, and where ordered, and of all other shoring, timbering, piling, sheet-piling, which the Engineer has ordered to be covered up shall be ascertained by measurement before any timbers are covered up and paid for at schedule rates, which shall cover and include the cost of timber fixed in works, iron used in fixing same, wrought-iron shoes for piles, packing materials, &c.
- Net quantities. 126. The measurements to be taken to ascertain the net quantities of timber to be paid for under this contract shall be as under, viz.:—For all hewn and sawn timber where ordered, in any situation in the construction of these works, the width multiplied by the depth and the actual length (tenons included) shall be the net measurement. For round timber, other than piles, ordered to be covered up the diameter given is to be measured, exclusive of bark, at the smallest end, and the area of such diameter multiplied by the actual length fixed in the works shall be the net measurement. For piles where ordered, in any situation in the construction of these works, the measurement shall be the actual number of lineal feet (tenons included) of each such pile as placed in position, driven, and fixed in the works.
- Measurements.

#### *Carpenter's work.*

127. The whole of the carpenter's work for girders, planks, working platforms, railings, &c., to be of the timbers specified or approved and of the best workmanship, to be framed, fitted, and fixed, finished, cleaned off, rough parts sand-papered (where directed), and completed in the best possible manner, in strict accordance with drawings and measurements indicated and dimensions figured thereon, with all necessary nails, spikes, screw-bolts, drift-bolts, wood-screws, coach-screws, wrought-iron straps, stays, and other fastenings of the best quality and approved workmanship. All holes for bolts, spikes, nails, &c., to be bored with the exact augers, and all mortise holes and tenons, &c., to be cut so as to fit exactly to prevent timbers from splitting. All timber split during the progress of the work and its term of maintenance to be at once replaced by sound timber. All scantlings requiring scarfing in places are to be joined together as shown on sections, and as shall be directed.

#### *Cylinders.*

128. The cylinders for piers, buildings, &c., to be bolted up in the necessary lengths, accurately placed in position, lowered, and the sinking proceeded with by weighting as long as cylinders continue to go down, the tops to be finished at same level. As the cylinders are sinking into the ground the materials inside to be removed by such excavating appliances as may be approved. On completing the excavation of each cylinder to secure and approved foundations the water to be expelled by pressure of air or other approved method, and on having ascertained the cylinder to be perfectly true in position and plumb the bottom to be thoroughly cleaned and levelled, after which the concrete, as specified in clauses 140 to 145, and 148, to be filled in for the first 6 feet under air pressure, or as shall be directed, till twenty-four hours after having deposited same in position. Above this level the cylinders to be filled in with concrete, as specified, to level of top of cast-iron cap.

Concrete filling.

129. The sinking of cylinders to be continued, if required, to greater depths than shown on drawings; such additional depths to be paid for at schedule rate, which is to include all charges, except cost of extra lengths of cast-iron cylinder; a corresponding deduction to be made if secure foundations are obtained at lesser depths.

Sinking to greater depths.

130. If rock, boulders, dead logs, &c., are met with in an irregular manner, or at one side, while sinking cylinders, Rock, &c. the air-lock, or other approved method, must be applied, and the obstructions removed, so as to ensure the cylinders to sink plumb, and to rest on a perfectly flat and solid bottom; no powder or other explosives to be used in the removal of such obstacles. The sinking to be proceeded with as soon as possible after delivery of ironwork, to ensure the erection of bridges, &c., without delay.

131. After the sinking is completed, making up or fitting lengths are to be provided and cast, at schedule rate, so Fitting lengths. as to bring the top of the cylinders to the exact level shown on drawings.

*Sewers, Storm-water Channels, &c.*

132. As the cross-section area of each respective length of tunnel and open trench has been excavated, cleaned, and approved, the sewers, storm-water channels, and other works specified, shown on drawing and determined by the Engineer, to be built therein.

133. In rock and other compact formation the concrete and brick lining to be filled in solid between internal surfaces Tunnel lining. of sewer, storm-water channel, &c. (less, in the case of concrete,  $\frac{3}{8}$ -inch space required for cement facing), and surfaces of tunnel or open trench.

134. Under all shafts, when ordered, relieving arches of brick or concrete to be built of a thickness, form, and width Relieving as shall be directed at the time. Under temporary shafts excavated by contractor for his own convenience, the extra brick arches. and concrete work to be at the contractor's cost.

135. The thickness and description of the lining, whether concrete only, of brick and concrete, or of brick only, Lining. required for the different portions of tunnels and open trenches, depends upon the nature of the ground through which they are driven or excavated, as the case may be, and shall be determined by the Engineer as the excavation advances.

136. In strong compact rock,  $4\frac{1}{2}$ -inch concrete and brick lining will be requisite; and, as the materials occur less compact, two or three rings of brickwork or brick and concrete lining, as shall be determined by the Engineer as the tunnel proceeds, may be required.

137. Junction chambers for sub-main and reticulating pipes, upper inlet chambers in shafts for junctions with Junctions and reticulating pipe-sewers, drop-shafts, penstock and gas-check chambers, flushing-stations, weir-chambers with storm- inlet chambers. water discharge pipes, ventilating shafts, aqueducts on arches, and on wrought-iron girders, syphons, buildings, bridges, culverts, storm-water channel junctions, intersections with existing roads, sewers, and water pipes, branch inlets, man-holes, gullies, road work, &c., to be constructed in connection with main sewers, branch sewers, and storm-water channels of concrete, brickwork, masonry, cement-facing, iron, timber, stoneware, and cast-iron pipes, &c., of the exact sizes, heights, shapes, forms, curves, and with such ornamental red, white, and other bricks, panels, mouldings, piling, &c., as shown on drawings, and as may be ordered and directed at the time. Shafts to be built of concrete or brickwork, at the option of the Engineer, to the thickness and shape shown on drawings, or as shall be directed. Curved junctions for branch, oval, Curved junctions. or pipe sewers, as shown on drawings, and where ordered, to be constructed in concrete, to enter the main sewers at such levels above the invert, with such radius and longitudinal fall as shown, or as shall be determined at the time.

138. Cast-iron pipes, landing platforms,  $\perp$  bars, scupper boxes, gully gratings, girders, over weir and shaft-chambers, Cast-iron work. or other castings, flushing-valves, gas-check frames, penstocks, man-hole covers, saddles, stop-board grooves, &c., to be walled and built in, as shown on drawings; at points of intersection, branch junctions, gas-check chambers, pipe ventilating shafts, where ordered, &c.

139. Step-irons, supports to wrought-iron ladders, holdfasts, ends of wrought and cast-iron girders, bars, &c., to be Building in built into side walls of shafts, and anchor bolts for fixing cast-iron frame for penstocks, gas-checks, &c., to be built into wrought-iron walls of shaft chambers as shall be directed. Flap-traps to be built in where ordered. Permanent putlog holes in shapes of reveals, for temporary staging, are to be left in walls of gas-check chambers, shaft chambers, and shafts where directed; and, in all cases, unless otherwise ordered, the reveals are to be built round of the same thickness of brick or concrete as shown on walls of shafts or chambers at the places referred to. Putlog holes to be included in the schedule price for brick-work. Stop-board grooves to be formed in concrete where ordered.

*Concrete Work.*

140. Bluestone concrete used in these works to be composed of one part of concrete, two parts of sand, and four Bluestone con- parts of bluestone metal. The bluestone metal to be broken to a size to pass freely with its largest dimensions, through a crete. ring of  $1\frac{1}{2}$  inch in diameter, to be free from dirt, quarry refuse, and to be screened through a sieve of  $\frac{1}{8}$  inch meshes, and then to be washed with fresh water until approved.

141. Special concrete, if required, to be composed of 2 parts of cement, 3 parts of sand, and 7 parts of bluestone Special concrete: metal, prepared as specified in clause 140.

142. Sandstone concrete, where ordered to be used in these works, to be composed of 1 part of cement, 2 parts of Sandstone con- sand, and 5 parts of sandstone metal. The sandstone metal to be free from dirt, quarry refuse, sieved (as specified in clause crete. 140), washed, and of a size to pass with its largest dimensions through a ring of 2 inches in diameter.

143. All concrete to be prepared close to where it is required on a sawn timber plank platform. All proportions to Mixing. be correctly ascertained by measurement, the metal to be well washed when put on the platform and levelled at top, the sand to be placed in a level layer upon the metal, and the cement to be placed in a level layer upon the sand; after which all materials to be carefully mixed and turned over twice, and then the whole to be mixed with fresh clean water, and thoroughly turned over twice, and oftener if required, until, in the opinion of the Engineer, it shall be fit for the work before it leaves the platform; it shall then be conveyed to the works as shall be directed, and be used fresh. Referring to clause 10, the gauge-boxes are to be made to the following internal dimensions, viz.:—For stone 3 feet square in plan, and for sand 2 ft. 6 in. square. The depth of each box to be made so as to give the correct proportion of material.

144. If the concrete is made by machinery, all materials to be prepared as previously described, then to be mixed Mixing by dry, and afterwards with fresh clean water, as may be directed and as shall be approved of; to be used fresh. machinery.

145. The different kinds of concrete described under clauses 140, 141, and 142, as bluestone concrete, special concrete, and sandstone concrete respectively, shall be used in the various parts of these works as specified, and as may be ordered at the time.

146. After the excavation for foundation of each respective part of the works, and the piling, planking, timbering, Order of work staging, &c., for same have been completed, and the bottom of excavations has been cleared and approved, the concrete work to be built thereon to the exact dimensions, and of such forms and shapes as shown on the drawings referring to each respective part of said works.

147. The contractor to provide, at his own cost, approved concrete-boxes, centres, staging, shoring, planking, &c., of Boxing, the exact forms, shapes, curves, &c., required; in a proper, secure, and substantial manner, due allowance being made for timbering,  $\frac{5}{8}$  inch thick cement-facing over all internal exposed surfaces of concrete work; and great care being taken that all centering centering. and concrete-boxes can be easily withdrawn. After completion of any portion of the concrete, the concrete-boxes and the centering, as the case may be, shall not be removed until the Engineer or his Superintending Officer has given written permission to that effect.

148. The concrete, after it has been approved of, to be conveyed into cast-iron cylinders, shafts, excavations for Method of work, piers, and other deep foundations, in skips of approved size, and to every other part of the work as may be directed, and as shall be approved of, and tipped into same and upon the surface of each layer from a height not exceeding 18 inches, to be quickly spread out in layers not exceeding 9 inches in thickness. Commencing at each part of the work at lowest level of excavation or surface of work, the concrete to be brought up in horizontal layers or parallel with specified longitudinal gradients of works; each layer, when spread, to be quickly and evenly rammed all over until approved of.

149. In circular, oval, elliptical, and open channels, the concrete to be filled first into central pads, or, in accordance Below springing with the transverse curvature of invert or bottom of channel, into central strips, not exceeding 2 feet in width for wide line. open channels, then into bottom layer right up to extreme width at sides, and then into the curved sides, as shown on drawings, up to top of side walls in open channels, or to level of springing in closed channels.

150. After the concrete has been carried up to the level of springing, all concrete arches to be commenced at both Above springing walls or abutments simultaneously, and carried on towards centre line in radiating parallel strips, spread 9 inches thick, of line. the whole width of arch, or in lengths as specified in clauses 157 and 158, and as shall be directed at the time, and rammed as before described. Where the arch is thicker than 9 inches, the lower layer to be always completed throughout 12 inches in advance of the upper succeeding layer.

- Above arches.** 151. After completion of the closing arch, all concrete work above springing of the same, at sides of arch, in man-holes, chambers, shafts, &c., to be carried up in the same manner as specified in clause 148, and of the exact dimensions, curves, and thicknesses, &c., as shown on drawings.
- Covering up work.** 152. No portion of the concrete work described in the previous clauses (unless otherwise directed in writing) to be covered up with earth or brickwork until it has been examined and approved of by the Engineer. Any leakage that may appear in each layer to be carefully attended to and be made good and repaired at the time, as shall be approved, before each succeeding layer is put on.
- Leakage.** 153. All end faces of layers of concrete to be stepped back at each respective length of sewer or other work, as shall be directed, to be carefully washed clean with fresh water, and then to be grouted prior to each layer of the adjoining length being commenced and joined on to the same.
- Joining lengths.** 154. No traffic shall pass over any fresh concrete work except where such is duly protected against injury by boarding, planks, or any other means approved of by the Engineer or Superintending Officer at the time.
- Injury to work.** 155. In the event of any stoppage occurring to the work, from whatever cause, or in anticipation of rainfall, the contractor, before temporarily stopping work, shall finish it off at whatever level the work may be raised at the time, by thoroughly grouting the whole of the surface with cement grout. The contractor also to provide and have always on hand approved tarpaulins for the purpose of covering all fresh concrete work and brickwork, when ordered, so as to protect the same during all stoppages in the daytime and at night from sun and rain, and during hot or dry weather, to keep said tarpaulins watered to prevent the work from cracking and setting too quickly on the outside.
- Treatment after any stoppage.** 156. In all cases where a layer at mid-day or at evening is left incomplete the said layer shall not be continued after any stoppage until the surface of the lower and the end of the upper layer have been washed clean and then grouted with cement grout.
- Order of work in open trench.** 157. The concrete and brickwork in sewers and channels to be built in open trenches, in three continuous lengths of 40 feet each (unless otherwise directed), that is to say, when the arching-in of the first 40 feet commences, the next length of 40 feet must be completed up to the springing of arch, and the third 40 feet length must be in progress, and the latter so timed that the work is raised up to springing of arch by the time the closing-in of the adjoining length commences.
- Order of work in tunnel.** 158. The concrete and brickwork in sewers and channels on completion of each length of tunnel to be carried on in each length, from the middle towards each end simultaneously, in three continuous lengths of 16 ft. 6 in. each, unless otherwise directed; that is to say, when the arching of the first 16 ft. 6 in. commences; the next 16 ft. 6 in. length must be in progress from height of invert up to the springing of arch; the third 16 ft. 6 in. length must be in progress between floor of tunnel and level of invert of sewer.
- Order of works.** 159. At all plinths for piers of arches and abutments, piers of arches, abutments, between wings of abutments, pilasters, foundations, of buildings, culverts, &c., unless otherwise directed, each layer to be completed right through the whole length and width of the work before the succeeding layer is put on. Where concrete has to be walled or filled in against and between brick facings or masonry, the latter in each case to be well wetted and grouted, and then to be covered with a coat of cement mortar  $\frac{1}{2}$  inch thick before the concrete is built against it, and it is to be brought up simultaneously with same in layers 6 inches thick after ramming, the brick or masonry facings, however, being always kept 6 inches (or more, as the case may be) higher than the concrete work up to the level of string-course or other defined limit, when the work has to be finished level all through.
- Sundry.** 160. The brickwork, masonry, and concrete-filling between all arches and at sides of end-arches to be carried up simultaneously over the whole length and width of every aqueduct, building, or other structure (unless otherwise directed), so that all arches or other structures shall be simultaneously and equally weighted as the brick, stone, and concrete work rises against and over same.
- Aqueducts.** 161. The concrete in piers of arches of aqueducts, abutments, and approaches to aqueducts to be carried up in the first instance from bottom of excavations to level of top of plinths; in the second instance to level of top of skewbacks; in the third instance to level of underside of stringcourse; and in the fourth instance to level of top of coping of aqueducts.
- Aqueducts.** 162. When all piers and abutments of aqueducts have been built to a level of springing of arches or to top of skewbacks, as the case may be, the concrete, brick, and stone arches, as specified, to be built one after another over the openings upon centres, cambered as shall be directed, of such number as shall be specified, strong enough in every part to carry the weight of the arch to be built thereon, till all openings of one aqueduct are arched over, after which the whole of the arches shall be allowed two weeks' time to set and harden before the brick and stone facings, and the concrete, &c., between the arches and at sides of end-arches is commenced. In filling in, between arches and at sides of end-arches the various layers of concrete, of the thickness specified in clauses 148 and 159, as the case may be, to be brought up extending on to extrados of arches till the thickness of each layer at its end is reduced to  $4\frac{1}{2}$  inches above extrados, when it is to be finished at the time with a radiating end face before the succeeding layer is put on. The junctions of the storm-water sewers to be constructed with such curves, shapes, forms, flat arches between wrought-iron rolled girders, &c., as shown on drawings. On completion of junctions, or any lengths of storm-water channel, as may be specified, to exact level of underside of iron girders, the latter to be laid transversely over side-walls of junctions or channels, bedded in and upon special cement mortar,  $\frac{1}{2}$ -inch thick, truly parallel to each other, and spaced 4 feet from centre to centre, or as may be specified, after which the concrete filling along side-walls, between and over ends of girders, to be completed. The arches of 4-feet span or thereabout, with a rise of 5 inches in centre between the girders, to be commenced from lower end, and to advance to the upper end of the junction or channel in each case (all girders being carefully stiffened and held in position by props, as shall be directed), with not less than twelve centres, or as may be directed, of the exact width of junction or channel between side walls. The arches to be built as specified in clause 150, and on completion to form a level concrete decking 3 inches above level of top of girders.
- Junctions.** 163. The concrete lining round sewer on lines of aqueducts and approaches (between underside of string-course and underside of coping, unless where otherwise specified) to be brought up between brick and stone facings (where such occur) simultaneously with same, as specified in clause 159. The concrete to be finished transversely level with underside of copings. This work to be carried on along each line of aqueduct in the manner and in lengths as specified in clauses 161 and 162.
- Iron girders.** 164. In conjunction with the concrete surrounding sewer, where the latter is built upon arches and in embankments, the contractor to provide, fit, place in position, and wall in with the concrete, longitudinally in each corner at top and bottom of concrete lining  $\frac{5}{8}$ -inch diameter bond-rods in 16 feet lengths. The ends to overlap 12 inches, and tied together with binding-wire, and, transversely,  $\frac{5}{8}$ -inch diameter bond-rods  $4\frac{1}{2}$  inches above soffit of sewer of such lengths as to fit between the outer brick lining, or as shall be directed, spaced 10 feet from centre to centre. The cost of providing, fitting, placing, and walling-in said bond-rods to be included in the schedule price per cubic yard of concrete.
- Jack arches.** 165. Special care to be taken by contractor to prevent the concrete, &c., from cracking at ends of each respective and successive length of sewer and channel in any situation in consequence of the draught in same, by providing and carefully closing up ends of sewers or channels with canvas or wooden shields or doors, and by carrying the works on in continuous lengths, without delays and stoppages, so as to prevent air cracks or shrinkage.
- Lining round sewer on arches.** 166. Should, however, cracks occur at ends of any length of sewer, storm-water channel, or other work, during its construction and time of maintenance, they shall be opened up for their whole length and depth, and of such width as may be directed at the time, and filled in with neat cement mortar and grout by the contractor, at his own expense, to the satisfaction of the Engineer, or he may order such cracked parts of the works to be taken down and rebuilt at contractor's cost.
- Bond-rods.** 167. The concrete work comprised in this contract to be completed to the exact dimensions shown on drawings, less  $\frac{5}{8}$  inch at all exposed inner and outer surfaces, and after the boxes and centerings have been removed, all exposed outer and inner surfaces shall present compact, solid, even, plain faces. All faulty and honeycomb portions, cavities, holes, or other defects, to be at once repaired by the contractor, at his own cost, with concrete or mortar, as the case may require, to the satisfaction of the Engineer. No portion of the concrete work to be covered up with earth or brickwork until it has been examined and approved.
- Cracking.** 168. After the concrete or masonry has been built to the exact height and gradient (leaving sufficient space for jointing), the whole of the cast and wrought iron work, after having been washed clean with fresh water, is to be truly laid and jointed in its exact positions, lines and gradients, on fillets of mortar; and as the concrete rises against and around the castings, bond rods, &c., leaving a space of not less than  $\frac{1}{2}$ -inch all round between the concrete and iron, this space round the invert, or underneath bottom of plates and rods, as the case may be, to be filled in with grout or mortar, as shall be directed at the time, whilst above the springing line the outer surface of the castings, &c., to be grouted, and then to be covered with a coat of special mortar  $\frac{1}{2}$  inch thick before the concrete is built on to and around said pipes, castings, frames, &c.
- Repairing cracks.**
- Allowance for rendering.**
- Bedding and fixing cast and wrought iron-work.**

169. All anchor-bolts in connection with cast-iron and wrought-iron work to be placed in the exact positions required ; Anchor-bolts to be washed clean, wetted, bedded upon, and surrounded with special mortar in each case before the concrete is built round same.

170. All stoneware or cast-iron pipes, &c., where they are shown to be or ordered to be surrounded with concrete, to be clean washed with fresh water, to be laid and jointed in the exact lines and gradients on fillets of mortar, and to be grouted all round as the concrete is being built round same. Laying and fixing cast-iron and stoneware pipes.

171. Prior to commencing any concrete which has to be built on to and against rock faces, all shaken and loose rock to be removed ; all rock surfaces to be well cleaned, washed, and wetted, and all beds, open joints, and spaces between concrete and rock faces to be carefully filled in with cement mortar, and the cost of thus preparing rock faces, washing, grouting, flushing, &c., to be included in and covered by the schedule price per cube yard for the concrete. Building on or against rock.

#### *Brickwork.*

172. In executing the brickwork in any situation in the construction of these works, all bricks to be thoroughly soaked in clean fresh water immediately before being used, and all work to be built with whole bricks (except where otherwise directed), of approved shape and dimensions, to ensure the bond of each particular part of the work being executed, in the manner as shown on drawings, and as may be ordered at the time with  $\frac{1}{4}$ -inch joints, each brick to be set full upon and rubbed in cement mortar, and every course to be carefully and thoroughly grouted, and well wetted before the succeeding course is put on, care being taken to keep the inner and outer faces of work clean by placing fillets of mortar on outer and inner edges before grouting. Method of work.

173. The brickwork in arches up to 12-foot span to be built as shown on longitudinal and cross sections in radiating courses, with radiated bricks where ordered, in  $4\frac{1}{2}$ -inch rings in approved bond, the bricks of each course to break joint over the centre of those above or below. Where the brickwork consists of two or more rings, said rings to be built simultaneously, the lower ring to be always completed throughout  $4\frac{1}{2}$  inches in advance of the upper succeeding ring, each brick to be set full upon and rubbed in cement mortar, and each ring to be keyed in centre and to be covered with a coat of cement mortar  $\frac{1}{2}$  inch thick, to ensure the thorough bonding between the different rings. When completing any length of brick closing arch of main sewer, storm-water channels, &c., the courses at end of same to be stepped back, as shall be directed, and the end face of each ring or course to be well wetted, and then grouted, prior to each ring of the succeeding length being commenced. Radiating bricks.

174. The brickwork in arches over 12-foot span to be built in radiating through-courses, of rubbed and gauged bricks if directed, in approved bond ; to be commenced at both abutments simultaneously, the whole width of same, and to be completed in the most perfect manner throughout the full width and thickness of arch, and to be keyed in centre. Arches over 12-foot spans.

175. The brickwork in abutments, abutment piers, wings, parapets, pilasters, spandrels, piers, facewalls, &c., to be built of the various heights, thicknesses, and other dimensions, together with all recesses, projections, panelling, &c., and carried up at each special part or length of work simultaneously with the concrete and masonry, in English or other approved bond, in truly level courses or in courses truly parallel with longitudinal gradient of work, and in such other lines and curves as shown on drawings, or as may be ordered at the time. Where directed, all outer and inner faces of walls to be carried up straight, square, and plumb, with perfectly fair and even faces. Simultaneous progress of various works.

176. Weep-holes of the sizes shown to be left through the brick walls where directed, and everything to be made good where necessary. Faces.

177. The brick-on-edge flooring of invert of storm-water channels on steep gradients, as shown on drawings, and where ordered, in any situation in the construction of these works, to be laid in approved bond ; each brick to be set full upon and rubbed in special cement mortar, after which the whole of the surfaces of the brick-on-edge flooring to be carefully and thoroughly grouted. Weep-holes.

178. The  $\frac{1}{2}$ -inch thick mortar covering (pargetting) of outside faces of brickwork or concrete of ventilating shafts, manholes, sewer-chambers, and sewers, as shown on drawings, shall not be measured and paid for as cement facing, but included in the measurement of the brick or concrete work, and paid for as such. Brick inverts in storm-water channels.

179. All putlog holes to be filled in, taking particular care to match the bricks and the mortar. All external faces of brickwork to be thoroughly cleaned, and all joints to be raked (if ordered  $\frac{3}{4}$  inch deep), and pointed with special cement mortar, and to be finished off with a neatly struck and cut joint. Pargetting shafts.

#### *Cement Facing.*

180. The whole of the internal and external concrete (and brick surfaces, if ordered), where such is shown on drawings, and in any situation in the construction of these works, to be protected by a cement facing to be put on in two thicknesses ; the facing throughout, when finished, to be  $\frac{5}{8}$  inch in thickness. All surfaces of concrete or brickwork to be well wetted before the cement facing is put on. The cement facing of all surfaces of works to be finished, as shown on drawings, and, where directed, with joints struck in imitation of ashlar masonry. Thickness.

181. The different kinds of cement facing with which the exposed surfaces of these works are to be protected are :—  
Cement facing, prepared of cement and sand in the proportion of 1 of cement to 2 of sand ; and special cement facing, prepared of cement and sand in the proportion of 1 in cement and 1 of sand. The different qualities of cement facing, as above described, to be executed in the various parts of these works as shall be specified, and as may be ordered at the time. Proportions.  
Qualities.

#### *Masonry.*

182. All freestone and bluestone ashlar of the exact sizes, forms, and shapes, to be built in where shown on drawings, and where directed, simultaneously with the concrete and brickwork. Stones to be washed clean and to be well wetted with fresh clean water immediately before being used, to be laid upon their natural beds in approved bond, and set solidly upon and in cement mortar in the exact positions required ; after which all joints between stones, between stones and brickwork, and between stones and concrete, to be carefully filled in with grout. Prior to each succeeding course being put on, the surface of the previous course to be well wetted and washed clean. All ashlar stones to be properly lifted by lewis, or as shall be directed when being placed in position. All beds and joints to be punched, axed, and picked, so as to form  $\frac{3}{4}$ -inch joints throughout. All exposed joints of masonry, and between masonry and brickwork, &c., to be carefully raked out,  $\frac{3}{4}$  inch deep, and filled in solid with special mortar, neatly pointed, finished flush with outside faces of work. All masonry to be left perfectly clean at completion of works. Method of building ashlar.

183. Freestone ashlar, to be provided in any situation in the construction of these works, of the exact dimensions, moulded, sunk, weathered, throated, checked, grooved, radiated, curved, channeled, fine-axed, battered, hammer-dressed, worked, rubbed where directed, and finished off in the best possible manner, as shown on drawings, and in accordance with any details which the Engineer may provide during the progress of the works. All stones to be in lengths, as shown, and as shall be directed, with truly squared and axe-dressed beds, joints, and backs. All joints from exposed surfaces of stones, and from faces of concrete work, as the case may be, to be axed-in 2 inches deep. The plinths, where shown on drawings, to be weathered with 2 inches parallel drafted margin, under edge of weathering and at all external angles of same. All external faces of plinths, skewbacks, abutments, piers, wings of abutments, &c., to be pitched-faced, no part of which to project more than approved of beyond true line of wall, with a true pitched line along each exposed arris, and with 2-inch parallel drafted margin as shown. All capstones over pilasters to be of one stone. Holes for lewis-bolts to be sunk where directed, of the depth and size required. All quoins, of the exact sizes specified, to be set in and out bonds to all angles. Freestone ashlar.

184. Bluestone ashlar to be provided in any situation in the construction of these works, of the exact dimensions, forms, shapes, moulded, weathered, throated, fine-axed, sunk for reception of cast-iron bearing plates ; and faces of weir-crest stones to be radiated, and to have vertical bird's-mouth grooves sunk along centre line of joints, as shall be directed ; to be built in with the concrete, brickwork, and freestone masonry, as the case may be, and as the latter rises, where shown on drawings, and as may be directed, to be lewised and set as specified in clause 182. All stones to be washed clean and to be well wetted before being used. Holes for lewis and anchor bolts to be sunk, where directed, of the depth and size required. Bluestone ashlar.

185. Squared freestone rubble masonry in any situation in the construction of these works, to be built of squared hammer-dressed throughstones, unless otherwise directed, in from 10 to 14 inch level courses, as may be directed at the time, or on lines of open channels in courses parallel with longitudinal gradient. Said masonry to be built straight, curved, battered, or sloped, every stone to be set full up on and in cement mortar. When the exposed face of wall is battered, the surface of each course to be at right angles with line of batter, the top course to be built of larger stones, level at top and squared. Squared rubble masonry.

squared at back. All stones to be punched, dressed, and picked to the exact thicknesses, sizes, and forms required, and set in the most approved bond, with joints throughout not exceeding  $\frac{1}{2}$  inch in thickness. All stones to be washed clean and wetted with clean fresh water before being used. Every course to be carefully grouted before the succeeding course is put on. All masonry to be finished with a neatly struck and cut joint as the work proceeds, and to be left perfectly clean on completion.

*Squared Bluestone Pitching.*

186. Squared bluestone pitchers, in any situation in the construction of these works, to be set in sand, in regular 9 inch courses, lengthwise across the channel, in the most approved bond, and in single ring or course round manhole covers, &c. All stones to be dressed and picked so as to ensure the joints all through not to exceed  $\frac{1}{2}$  inch in thickness. No stone to be less than 9 in. x 9 in. x 9 in., but to be longer, curved, and radiated if directed.

*Squared Freestone Pitching and Channeling.*

187. Squared freestone pitchers, in any situation in the construction of these works, to be set upon their natural beds in sand or in cement mortar, as may be specified, in regular 12-inch courses, lengthwise across the course of the channel, in approved bond, with  $\frac{1}{2}$ -inch wide joints throughout. No stone to be less than 12 inches deep, 12 inches wide, and 12 inches in length, but to be longer, curved, and radiated if directed. If the pitchers are set in cement, all stones to be washed clean and well wetted with clean fresh water before being used, to be set full upon and in cement mortar, and on completion of pitching, all joints to be carefully filled with cement grout. All pitching in road channels to be set in sand in regular courses parallel with kerb-stones, in approved bond, with  $\frac{1}{2}$ -inch joints, no stone to be less than 12 inches wide, 3 inches deep, unless otherwise specified, and 18 inches long, but to be longer, curved, and radiated, if directed. On completion of pitching set in sand all joints to be carefully filled in with sand.

*Freestone Kerbing*

188. Kerb-stones in such lengths, picked and axed dressed to such widths, depths, shapes, and forms, with squared and axed ends, insuring  $\frac{1}{4}$ -inch joints throughout, to be set upon their natural beds in sand, in any situation in the construction of these works, along such lines, levels, gradients, and curves as shown on drawings, and as may be directed at the time.

*Pipe laying and Jointing.*

189. After the trenches have been excavated to the exact depths, levels, and gradients, and after the foundation layer of concrete has been filled in where ordered, as the case may be (leaving sufficient room for jointing), glazed stoneware pipes of the required diameter to be laid thereon, along such lines, curves, and inclinations as shown on general plans and longitudinal sections, true, straight, and solid; and for all vertical branch pipe-sewers and ventilating pipe-shafts, the pipes to be set true, straight, and plumb.

190. In clay or similar soil the pipes to rest direct and solid upon the soil. In rock they are to be laid as shown on drawing, on a 1-inch bed of poor mortar, composed of one part of cement and six parts of sand, the cost of same to be included in items for pipe-laying. In soil liable to be scoured out or easily shifted they shall, if directed by the Engineer, be laid on sandstone concrete, as shown on drawing.

191. In every case the pipes shall be laid in such a manner that their barrels shall bear firmly and evenly on their bed, the sockets being entirely free from pressure in the joint-hole, and the spigots concentric with the sockets.

192. The pipes are to be jointed as follows—The 6-inch pipes with tarred gasket  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{1}{4}$  inch deep within socket of pipe; the 9-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 10-inch pipes with tarred gasket  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 12-inch pipes with tarred gasket  $\frac{5}{8}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 15-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 16-inch pipes with tarred gasket  $\frac{7}{8}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 18-inch pipes with tarred gasket  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{3}{4}$  inch deep within socket of pipe; the 21-inch pipes with tarred gasket  $\frac{5}{8}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 24-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar 2 inches deep within socket of pipe.

193. The tarred gasket to be placed in the faucet and set tight round spigot end of pipe, after which the remaining space in faucet to be cleaned, wetted, and filled in with stiff special cement mortar, packed in solid, splayed off outside to an angle of 45 degrees, and neatly finished off. The inner joints between pipes to be carefully filled with special cement mortar all round, neatly wiped off as a finish. Each pipe-length thus finished to be carefully cleaned out before another pipe-length is added.

194. Junction pipes of any desired size are to be laid into the line of pipe-sewers wherever required by the Engineer. The socket ends of all junction pipes, junction blocks, junction holes, ventilating pipes, and dead ends are to be protected against the ingress of foreign substances, and made easily accessible for effecting future connections, by being closed with earthenware discs having a temporary watertight joint all round, the cost of providing and fixing same to be included in items for pipe-laying.

*Cast-iron Pipe laying.*

195. After the pipe-trenches have been excavated to the exact depths, levels, and gradients required, cast iron pipes of the diameters shown or ordered, to be laid along lines (curved or straight), and solid upon the bottom of the trench, or upon a foundation layer of concrete, and the vertical pipes placed as shown, leaving sufficient room for jointing.

196. The pipes are to be jointed as follows—The 6-inch and 7-inch diameter pipes with spun-yarn  $2\frac{3}{4}$  inches and 3 inches deep respectively after setting up, and soft lead  $1\frac{1}{2}$  inch deep after setting up; the 8-inch, 9-inch, and 10-inch diameter pipes with spun yarn 3 inches,  $3\frac{1}{4}$  inches, and  $3\frac{1}{2}$  inches deep respectively after setting up, and soft lead  $1\frac{1}{2}$  inch deep after setting up; the 11-inch, 12-inch, 14-inch, 15-inch, and 18 inch diameter pipes with spun yarn 3 inches, 3 inches,  $3\frac{1}{2}$  inches,  $3\frac{1}{2}$  inches, and  $3\frac{1}{2}$  inches deep respectively after setting up, and soft lead  $1\frac{3}{8}$  inch deep after setting up; the 20-inch, 22-inch, 24 inch, 26-inch, 28-inch, 30-inch, 32-inch, 34-inch, and 36 inch diameter pipes with spun-yarn 3 inches,  $3\frac{1}{4}$  inches,  $3\frac{1}{2}$  inches,  $3\frac{1}{2}$  inches,  $3\frac{1}{2}$  inches,  $3\frac{1}{2}$  inches,  $3\frac{1}{2}$  inches, and  $3\frac{1}{2}$  inches deep respectively after setting up, and soft lead 2 inches deep after setting up.

197. Should the faucets of pipes used in these works, in places, be of greater or lesser depths than indicated in the previous clause, then the spun yarn packing is to be of greater or lesser depths as may be required, the depths of the lead joints to remain as specified. Expansion joints to be made in the same manner, but of such special depth of lead joint, with or without spun-yarn packing, as shown on drawings and as may be ordered at the time. All curves on lines of pipe-sewers to be accurately formed with the spigot and faucet joints of the pipes without any abrupt horizontal and vertical dip, rise, or bend. The spun-yarn to be tightly platted or laid round each spigot end, so as to fill the socket of each pipe after setting up to the exact depth specified, leaving in each instance the remaining depth of faucet for the specified lead joint, the latter to be made at each joint in the trench with one running, and when cold to be set up with proper irons to one smooth, even, plain surface all round the pipe, and  $\frac{1}{8}$  inch within socket of same.

198. The setting up of all lead joints to be made with a proper set of setting irons, commencing from outer surface of spigot end with  $\frac{1}{8}$  inch thick setting irons, and continuing towards outer edge of lead joint, with setting irons advancing gradually by  $\frac{1}{16}$  inch in thickness at the time. Special setting irons to be used for setting up expansion joints. After the pipes have been laid and the joints of every description made, examined, and approved, they are at once to be covered up, but in no case are they to remain longer than twelve hours uncovered after they have been approved of.

199. Faulty and objectionable lead joints to be immediately and carefully chiseled out (they are not allowed to be burnt out) and fresh lead joints to be made and set up until approved of. Attempts to repair defective joints are under no consideration to be permitted.

*Road-making.*

200. The different roads shown on drawings are to be formed 30 feet wide between edges of slopes, whether on embankments or in cuttings. The longitudinal gradients of approaches to be at an inclination of 1 in 20, or as shall be directed. All roadways to be formed with a crown, which at the centre line is to be 6 inches higher than the edges.

201. After the roadway has been formed and approved, it is to be carefully boxed out along centre line, if ordered, for the reception of the road material, 8 inches deep for ballast, and 4 inches deep for metal—12 inches in all, by a width of 24 feet.

202. After the boxing-out has been completed, its bottom surface to be covered by a layer of 4-inch gauge sandstone ballast, spread 8 inches thick throughout, and then covered with bluestone metal spread 4 inches thick throughout. Ballasting and metalling.

203. After the metalling has been completed and approved, the whole of its surface to be covered with about one-eighth of its own bulk of bluestone chippings of a uniform thickness, after which the whole road surface to be watered and rolled until approved. Blinding.

204. The stone used for metalling to be basalt or other similar hard stone of approved quality; to be broken to angular fragments of a size to pass freely with their largest dimensions through a ring  $2\frac{1}{2}$  inches diameter, and to be free from dirt, quarry refuse, &c. Quality of metal, size.

The prices per cubic yard for bluestone metal and sandstone ballast for road surface to include the cost of providing and spreading blinding.

#### *Tarred Metal Deck.*

205. After the tarring of upper surface of metal flooring, and after the sand-filling over arches and abutments of aqueducts has been completed, levelled, and approved, or in any other situation in the construction of these works, the whole of these surfaces as shown on drawings, to the thickness figured or ordered at the time, to be covered with the tarred metal decking, as follows:—

206. The stone to be basalt, broken to a 2-inch gauge, free from dirt; the screenings to be crushed from the same stone, and to pass through a  $\frac{5}{16}$ -inch sieve. All stones and screenings to be perfectly clean and dry, to be heated before admixture with tar. The tar to be coal-tar, free from all adulterations, and boiled a sufficient time to get rid of the light oils before being used. Stone for tar.

The stones and screenings to be mixed with the boiled tar separately; to be then stacked where directed, so as to allow the surplus tar to drain away for at least three weeks before being laid in position. Tarring and stacking.

207. The 2-inch stone to be spread over the whole bridge, upon the concrete filling of roadway, and upon the 7-inch thick sand layer of footpaths, between kerb-logs, to such thicknesses and surfaces, and with such curvature to roadway, when rolled, as shown in drawing, and to be then covered with about one-eighth of its own bulk of screenings. Both layers to be well rolled and cross-rolled with a 30-cwt. roller, having not less than a 3 feet width of face, until they form solid compact surfaces to the required levels and curvature. Laying and rolling.

208. The sides along kerb-logs and all places where the roller cannot work, to be well punned by hand with a flat-faced 42-lb. iron rammer. When approved by the Engineer, the whole of the surfaces to be brushed over with a coat of hot coal-tar, and a layer of heated fine bluestone screenings, with dust left in, spread over it. Punning.

#### *Coke Concrete Deck.*

209. Coke concrete to be provided, placed in position where directed in the manner specified for other concrete, and to be mixed as described in clause 143, but in the following proportions:—16 cubic feet of approved coke broken to a strict 1-inch gauge, 8 cubic feet of sand, and 1 cask of cement.

#### *Fencing.*

210. Fencing is to be erected in such line and situation, and of such description as shall be directed, and as marked out by the Superintending Officer, and of the form and to the dimensions marked on the drawings. Land to be fenced where required.

211. Ordnance fences to be provided, framed, fitted, and erected where ordered, of sawn hardwood timber, unless where otherwise specified, as viz.: Posts 6 in. x 4 in. x 6 ft. 6 in., top rail 4 in. x 4 in., intermediate and lower rails, 4 in. x 3 in. Posts spaced 6 ft. 6 in. from centre to centre, sunk in rock not less than 18 in., and into other ground not less than 2 ft. 6 in. deep. On road embankments, where ordered, posts to be 7 ft. 9 in. long, mortised into sills 9 in. diameter x 5 ft. long, secured by 1 inch diameter hardwood tree-nail, stayed to posts by 4 in. x 4 in. struts, secured to posts and sills by  $\frac{5}{8}$ -inch screw-bolts; and  $\frac{3}{4}$ -inch diameter spikes,  $7\frac{1}{2}$  inches long. Angle and end posts, 10 inches diameter at smallest end, x 8 feet long, to be sunk 3 feet deep in the ground, mortised 6 inches deep for reception of ends of rails. Tops of round posts to be protected by caps of 6-lb. sheet-lead, secured to posts by lead-headed nails 2 inches long, and wrought-iron 2 in. x  $\frac{1}{4}$  in. rings, secured each by four 3-inch wood screws. Sawn posts to be notched at top for reception of top rail and halved out for reception of intermediate and lower rails, spaced as shown. Top rail to be laid aris uppermost into notches, secured to posts with 2 in. x  $\frac{1}{8}$ -in. hoop-straps, and four 2-inch long wood screws to each strap. Intermediate and lower rails to be fitted flush with inner faces of sawn posts, and secured to each with two 4-inch wood screws. All sawn timber above ground to be planed, all scarf-joints of rails to be made as directed, over posts only, and all sills, struts, and ends of posts under ground to be charred thoroughly. The ground round posts to be well rammed, and the clearing spaces round ends of posts stepped in rock holes, to be carefully filled in with cement grout. Ordnance fencing.

212. The split timber fencing may be of one or more of the three following descriptions:—

1st. Fence, consisting of split hardwood posts, two split rails (wired if shown), and round posts where required. Description of split timber fences.

2nd. Fence, consisting of split hardwood posts, three split rails, and round posts where required.

3rd. Fence consisting of split hardwood posts, two split rails, covered with split hardwood palings, with round posts where required.

213. Posts to 6 ft. 6 in. long, 8 inches broad by  $2\frac{1}{2}$  inches thick, except those for the paling-fence, which shall be 7 feet long, with mortises 6 in. x 3 in., cut square to the gauge shown on the drawings. All posts to be charred for a length of 2 ft. 6 in. from the bottom, sunk 2 feet into the ground, set uniform and upright, and spaced 8 ft. 3 in. apart from centre to centre, and the earth well rammed in round them until the posts stand solid and firm. Posts.

214. Rails to be 9 feet long, the top rail not less than 7 in. x 2 in., and the bottom rail not less than 8 in. x 2 in. in the two-rail fencing, and in the three-rail fencing the centre rail to be not less than 8 in. x 2 in., and the bottom rail 7 in. x 2 in. Tenons to be 6 inches long, carefully adzed to fit closely into the mortises, shouldered square with the saw, and fitted so as to butt close up to the posts. Rails.

215. Palings are to be sound, straight, cleanly split, and free from sap, and of approved timber, 5 feet long, not less than 4 inches wide, and  $\frac{1}{2}$  inch thick. They are to be sawn off square, placed upright, close together, and to a straight line on top, and securely fixed by  $1\frac{1}{2}$  inch strong wire nails, two nails to every paling in each rail. They are to be further secured along the rails by galvanised hoop-iron of 18-gauge, 1 inch wide, well nailed by  $1\frac{1}{4}$  inch clout nails at intervals not exceeding 12 inches apart. Palings.

216. At all intersections with existing fences, and at all angles, a round post is to be provided and fixed, 9 inches in diameter, charred for a length of 3 feet from the bottom, and sunk 2 ft. 6 in. into the ground, and the earth well rammed in until the post stands solid and firm. These posts are to be of such length as to leave the top 6 inches above the upper rail. At existing fences the junctions are to be made good and connected with these posts, which are to be mortised for the rails to suit the fence in the same manner as shown on drawing. Round posts.

217. Where necessary, posts, either round or split, are to have a hardwood strut 6 in. x 3 in., checked at upper end into the post, and secured by a 6 in. x  $\frac{1}{2}$  in. round spike. A hardwood stake, 3 ft. long x 8 in. x 3 in., to be driven close into the foot of the strut, as shown on drawing. Post strutted where necessary.

218. The crossing of ditches, watercourses, or hollows in the ground, are to be made secure, either by supporting the fence on logs, extra long posts, or as may be directed. Crossing ditches or sudden depressions.

219. The fencing is to be erected to a true line on top, and is not to follow the minor irregularities of the ground.

220. The wire used in fences to be that known as No. 8 "best best annealed drawn," or other approved fencing wire; to be passed through the posts, which are to be bored for the purpose with a quarter ( $\frac{1}{4}$ ) inch auger, and strained tight by means of F. Morton & Co.'s or other approved straining bracket, fixed to the straining posts by wood screws or spikes, so as to suit the gauge, as shown on the drawing. Fencing wire and straining brackets.

The works and materials comprised in clauses Nos. 217, 218, and 220 to be included in the schedule rates for fencing.

#### *Wrought-iron Work.*

221. All wrought-iron spindles, bolts, L, T, and U irons, flat and round bar, plates, straps, axles, pins, anchor-bolts, rolled girders, nuts, washers, rods, rivets, holding-down bars, gratings, frames, keys, chains, &c., to be of the exact dimensions and forms shown on drawings. The greatest care to be taken in any welds to ensure perfect soundness, and the contractor to be at the expense of any test which the Engineer shall think fit to submit the welds to. All plates, bars, channel-irons, rods, &c., to be perfectly true and of even uniform thickness; all angle-irons and bars to be sound, uniform, and Wrought-iron work.

and Welds.

and regular on edges; all joints and edges to be truly planed to the dimensions on drawings; all wrought-iron parts to be rolled or forged out of one piece, unless otherwise specified and directed. Ends of spindles, shackles, &c., to be forged with eye-holes, and holes for male and female joints of the exact forms. All bolts, handles, hand-rails, spindles, keys, chains, pins, axles, bars, crosses, &c., to be forged with protecting necks, and welded with ends of large diameters or otherwise for screw ends, and made of the exact shapes, forms, dimensions, lengths, widths, and diameters shown on drawings, with angular and square threads, as the case may be, to all bolts, spindles, &c., with the correct pitch, angle, and depth. All portions fastened with screws, bolts, or rivets to fit close together. The chains attached to blades of penstocks, and the whole of the wrought-iron gratings, channel-irons, &c., connected therewith, wrought-iron girders to working platforms, hand-rails to platforms and stairs, to be galvanised before being fixed in the works.

- Joints.** 222. All joints in plate, angle T irons, &c., to be made only in such positions as shown on drawings and where directed; and all covering plates, wrappers, T, and angle irons to be truly cut at ends to insure a perfect fit.
- Screw-bolts and screws.** 223. All screw-bolts and screws to flanged pipes, penstocks, valves, all other castings and wrought ironwork of every description to be of the exact diameters and lengths shown on drawings, with hexagon heads and nuts, and to be angular threaded with the correct pitch and angle of the Whitworth screw.
- Joints of shafts, &c.** 224. Joints of shafts, spindles for penstocks, axle shafts for strainers and traveller, engines, &c., to be made by said shafts being truly turned and cut at ends, and cast-iron flanged and turned sockets, with turned spigot and faucet, the internal diameter of socket to be turned exactly, and slightly of less diameter than ends of shafts. Sockets and ends of shafts to be grooved, as shown for steel key. Sockets to be heated and then fitted on to ends of shafts with keys, after which the flanges to be bolted together, forming coupling, as shown on drawings.
- Joints and working parts.** 225. All joints and working parts of wrought iron on penstocks, valves, strainers, standards, engines, travelling cranes, travellers, gratings, troughs, louvre shutters, brackets, &c., to be turned, scraped, or ground and glazed bright, as the case may require, and as shall be directed.
- Handles and levers.** 226. All handles and levers for working penstocks, valves, strainers, travellers, travelling cranes, &c., to be ground and glazed bright.
- Rivets and bolts.** 227. The rivets throughout to be made from  $\frac{1}{2}$ -inch,  $\frac{3}{8}$ -inch,  $\frac{1}{2}$ -inch,  $\frac{3}{4}$ -inch, 1-inch, and  $1\frac{1}{2}$ -inch iron respectively, with heads and necks, as shown on drawings. The Engineer may require any holes to be drilled and the bolts turned for same, or he may order bolts to be substituted for rivets, or other changes of the kind, in such places as he may consider necessary, without extra charge.
- Holes for rivets, bolts, &c.** 228. All rivet, bolt, and screw-holes to correspond as to diameter and position with the drawings, and to be carefully drilled parallel, and at right angles with face of work. All the holes in booms of main girders, bearing-plates, lattice-bars, wrought-iron aqueduct pipes, rolled L, channel, T, and flat bar irons to be drilled—the respective pieces being clamped in their proper positions and secured under drill and bored right through; holes in cylinder-bracing, cross-girders, and wind-bracing girders may be punched. No drifting or rhymering to be done without the consent of the officer in charge, and then rhymering only when the plates can in no other way be made to coincide. Holes which are directed to be punched or drilled at the building site to be about  $\frac{1}{16}$  inch narrower than the diameter of the rivet required, so as to ensure a good fit after its being enlarged with the rhymer. Where several holes meet each other in the parts to be united, a horizontal dislocation of not more than 5 per cent. of the diameter of the hole is allowable, the hole then to be made perfectly equal with the rhymer, and not by filing on one side, and rivet-bolts of proportionately large size to be used in holes thus enlarged.
- Riveting.** 229. All rivets to be inserted at a bright heat, after being carefully freed from scales, into the duly cleared holes, to be quite firm after the head is completed. If not firm, rivets to be at once removed and replaced by others, and of larger size when directed. In putting together parts, care to be taken that none of them are forced into one-sided tension; any portions distorted in riveting the connections to be at once loosened and the faults remedied. All rivets to be finished with cup heads, and when countersunk the sinking to be drilled and the heads to be finished perfectly flush. All rivets and heads of bolts to be countersunk where plates, when fixed, will bear on other work, and where they form the inner surfaces of aqueduct pipes. All riveting to be done in the neatest and most workmanlike manner.
- Wrought-iron gratings.** 230. Wrought-iron gratings to be of the exact dimensions, straight or curved, as the case may be, the bars spaced and riveted as shown, all bars to have rounded-off top surfaces. All hooks, rings, and chains attached to flushing-valves, &c., to be galvanised before being fixed in the works.
- Wrought-iron ladders.** 231. Wrought-iron ladders, in lengths shown on drawing, and as may be ordered, consisting of  $2\frac{1}{2}$  in. x  $\frac{5}{8}$  in. uprights, spaced  $13\frac{3}{4}$  inches apart, and  $\frac{3}{4}$ -inch round bar-rungs spaced 12 inches from centre to centre. Joints of uprights to occur only at supports, where directed. Supports, spaced as shown, to consist of two 6 in. x 3 in. x  $\frac{3}{4}$  in. channel-irons fixed to uprights with  $\frac{3}{4}$ -inch screw-bolts, stiffened off at ends, at top and bottom, with  $\frac{1}{4}$ -inch plates varying from 12 inches to  $13\frac{1}{2}$  inches in length, riveted on to top and bottom flanges of channel-irons, as shown.
- Cast-iron Work.*
- Castings.** 232. The whole of the castings to be perfectly sound, free from all cold shuts, honeycomb, holes, or other defects; to be cast in dry sand moulds, unless where otherwise directed.
- Castings.** 233. All castings to be true in sectional form, straight longitudinally where shown to be so, or of such shapes, projections, curves, angles, and forms as shown on drawings; and each portion of such castings to be of equal strength and of the specified thickness throughout its respective length.
- Castings.** 234. The external and interval services of all castings to be perfectly clean and smooth, and in strict accordance with sections.
- Castings cylinders and pipes.** 235. All cylinders and pipes to be cast vertically, with the socket or flanged end downwards; to be straight longitudinally; all straight pipes with faucet, or flanged, and with spigot ends, to have the latter cast 9 inches longer than shown on drawings; all cylinders to be cast with such head of metal as shall be directed. After the castings have been cleaned and coated, the head of metal over the cylinders, and the 9 inches at spigot ends of pipes to be cut off, so as to leave same perfectly square on section and true and equal in circumference, so as to fit the socket, leaving an equal space all round of the exact thickness shown on drawings for lead joints.
- Faucet ends.** 236. The faucet of each pipe or casting to be perfectly square and true, of the exact dimensions shown on drawings, and to be cast with a groove of the size and depth as required by the Engineer. The faucet of large circular and oval pipe for expansion joints to be cast as shown with an inner narrower faucet and projecting rim, and both inner sides of narrower faucet and of projecting rim to be truly turned and polished.
- Faucet for expansion joint.** 237. The feathers and flanges, where such are shown, to be of the exact widths, forms, and thicknesses, and all surfaces of contact to be planed and turned to true and even faces.
- Feathers and flanges.** 238. All spigot ends for expansion joints, where shown on drawings, to be cast with a recessed end for reception of wrought-iron ferrule on inner face, and a corresponding projecting face on the outside; said recessed inner and projecting outside faces to be truly turned and polished to the exact cross section for reception of lead joint, gun-metal packing ring, and wrought-iron cover-plate, as the case may be.
- Spigot ends for expansion joints.** 239. The thimbles for expansion joints for large, circular, and oval pipes, to be cast with faucets as described in clause 236, and with web-plates, ribs, and bed-plates cored out, with bosses truly bored for heads of anchor-bolts; the whole to be of the exact shapes, forms, and dimensions as shown on drawings.
- Thimbles for expansion joints.** 240. The flanges of gas-check frames to be provided with a projecting face, planed and turned to true and even faces, of the exact dimensions shown on drawings.
- Gas-check frames.** 241. All holes in hinge-brackets at top of gas-check frames to be truly bored to the diameter required for the reception of hinge-bolts.
- Boring holes.** 242. All bolt-holes to be of the exact sizes, spaced as shown, and to be truly bored and turned.
- Bolt holes.** 243. All flange-joints, unless where otherwise directed, to be made tight with red lead.
- Flange joints.** 244. Frames of penstocks to be of the different parts, and of the exact shapes, forms, and dimensions, with all screw and bolt holes, and the exact circular valve openings, with flanged end at back, projecting rim round opening in front and at sides of same, with cap-pieces on top, upright slide frames, flanged, bolted together, cored out with bosses and web-plates between, to receive front guide-plate, with inner projecting faces screwed into bosses of upright frames. Guide-pieces, with flange and web, faced on surface of contact, with boss in centre, the latter truly bored and turned for reception of brasses and spindle to pass through, fitted with bolt-holes, and screwed on to guide-plates.
- Penstock frames.** 245. All landing and other plates and grates to be complete with ribs, flanges, hinged and other lids, close or ventilating covers, girders of the exact shapes, forms, dimensions, projections, recesses, &c., as shown on drawing.
- Landing grates and plates.**

246. Valve blades to be of the exact diameters, forms, shapes, and dimensions, with circular projecting faces back and front, and vertical projecting faces corresponding with and bearing on projecting faces of guide-plates and framing, and vertical racks or brackets, with eyeholes truly bored for fixing foot of valve spindle, as the case may be. All seatings to be truly faced and bored out to receive gun-metal faces, and all stuffing boxes, glands, foot-step bearings, and journal boxes to be bored and turned and polished where directed. Valve blades for penstocks.

247. All girders, brackets, standards, wheels for chains, and balance weights, tubes, boxes, glands, plumber-blocks, and boxes for lifting or turning spindles, as the case may be, foot-brackets for upper spindles, flanged pipes for spindles, street-boxes, &c., of the different parts, and of the exact lengths, forms, and dimensions, to be truly faced, turned, and polished at all joints, bored and turned for reception of screws, nuts, and brasses, with all bolts and screw-holes of the sizes shown, bolted at all joints, and all faces of flange-joints and working parts and other faces, where directed, to be truly planed, turned, faced, and scraped, to the necessary surfaces. Sundry ironwork to be turned and bored.

248. All penstocks, scour-valves, &c., to be carefully and truly fitted and fixed together, with all lifting and turning gear, gun-metal facings, spindles, wrought-iron work, street-boxes, screws, bolts, nuts, &c., complete, in strict accordance with drawings and dimensions figured thereon, and all valves to close watertight. Penstocks, scour-valves to be fitted.

249. The frame and flap-valve of flushing valve, with bracket, pulley, &c., to be complete, with wrought-iron galvanised chain, to be cast of the exact diameter, shapes, forms, and dimensions; the flushing valves to have a projecting rim all round, the inner face truly faced and turned to a "V shape" of the exact dimensions, so that when the flap is placed in position the edge of the V rim to lie exactly against the centre line of the square tuck or lead-packing of opposite groove in frame, planed out to a dovetail for the purpose. Flushing valve.

250. Couplings, flanged, turned, bored, faced, with turned and bored spigot and faucet, and bolt-holes of the exact diameters, to be of the exact forms and dimensions for making joints of valve-spindles, &c. Couplings.

251. Cast-iron frame with 22-inch diameter opening, with non-ventilating lid fitting easily into frame, complete, with sawn and tarred ironbark wood-bricks fitted into panels, the whole to be in strict accordance with drawings and dimensions shown thereon. Cast-iron frame.

252. Scupper-pipes, with cistern-heads and grating-cover for inlets of scupper-pipes, and plain cover-plates over inlets of scupper-pipes, as shown, to be cast to the exact shapes, forms, with the exact openings, and to the dimensions figured on drawings. Scupper-pipes, grating-covers, and cover-plates.

253. All grooves for stop-boards to be cast with a connecting ledge at top, to be cut off when casting is completed. All grooves to be cast true, of the exact dimensions, shapes, and forms; and all working parts of frames and slide-valves, grooves, and stop-plates, to be truly planed and faced so as to fit, but not too tight. All stop-plates to be complete with wrought-iron shackles, 12-foot galvanised chain, hook, and rings. Stop-board grooves.

#### Gun-metal Work.

254. All portions tinted yellow on drawings, as in nuts, bolts, shackles, bearings, and working parts, nuts and naves of wheels, seatings of valves, penstocks, standards, hangers, and brackets, and all other brasses in working and lifting gear, &c., to be made of gun-metal. The gas-check flaps to be of muntz or delta metal. Gun-metal tinted yellow. Gas-check flaps.

255. The whole of the castings to be solid and perfectly sound, and free from all honeycomb, holes, or other defects. Castings.

256. All spindles to be cast on end, having a riser on top of each not less than 3 feet in height, after which they are to be turned and finished to the exact lengths and diameters; to be straight, and work true in stuffing boxes, nuts, glands, &c. Spindles.

257. All screw ends and nuts, unless where otherwise specified and directed, to be angular, threaded with the correct pitch and angle; and all naves of wheels, nuts for lifting gear in standards and for off-let valves, bearing nuts of end brackets for shafts, &c., where shown, to be turned with the square thread and correct pitch and angle of the Whitworth screw. Nuts and screws.

258. All nuts, naves, pins, lubricators, shackles, eyeholes, sockets, hinges, hinge-bolts, guide and other brasses in plumber-blocks, brackets, standards, valves, penstocks, &c., to be truly bored, turned, faced, and finished to the exact lengths and diameters, shapes, and forms, and to be straight and work true on all bearings and working faces. General directions for finished work.

259. All projecting rims, straps, eye-hole brackets, &c., to be provided and fitted on to gas-check flaps, to be cast of the sizes, shapes, and forms as shown on drawings, to be faced on surface of contact, and to be soldered on to the flaps with zinc, after having been placed truly in position, and then riveted as shown. All gas-check flaps to be of the exact thickness shown on drawings. When the rims and straps for each flap are not cast in one casting, then they are to be cast in parts as shall be directed; and prior to fixing such parts in position, they are to be truly fitted and jointed together. All such joints to be scarfed and braced, as, viz., the edges filed or scraped clean and bright, covered with spelter and powdered borax, and exposed in a clear fire to a heat sufficient to melt the solder, which, for all scarf-joints, to be an alloy composed of four parts of copper to three of zinc. All scarf joints to be placed where directed. All hinge-axes to be truly turned. All links of shackles to be made with one joint, scarfed, brazed, and riveted together. Gas-checks. Soldering.

260. At expansion joints of large cast-iron pipes, where shown, a gun-metal packing ring of the size specified to be provided, placed, and fitted round spigot end of pipe, carefully set up flush with end face of inner recess of faucet. Packing ring.

261. All portions of castings, as exposed surfaces of nuts, hinge-bolts, hinges, shackles, rims, straps, brackets, hooks, links, &c., are to be cleaned as they leave the mould, and all irregularities to be removed. All other portions of gun-metal work to be truly faced on all surfaces. All gun-metal facings and fittings to be truly turned and faced on all surfaces, to fit exactly, to be forced into positions, screwed where shown, and to sit perfectly firm and true.

#### Wrought-iron Work, Gun-metal Work, and Cast-iron Work.

262. The whole of the wrought-iron, cast-iron, and gun-metal work to be of first-rate quality and workmanship, in strict accordance with the specification and the dimensions and patterns shown on the drawings, and any details which the Engineer may provide during the progress of the contract. Quality and workmanship.

263. Wrought and cast ironwork and gun-metal work not to be more than 3 per cent. below the scheduled weight, and the contractor shall only be entitled to payment of the weights as per schedule, at the various prices set forth therein, and payment will not be made for any excess on such weights. Weights.

264. All ironwork and gun-metal work supplied by Government to the contractor to be delivered free of charge at the various sites of the works where they are required. For each article so delivered the contractor shall give a written receipt, after which he shall be held solely responsible for same; and shall, if any such article be lost, stolen, damaged, or destroyed, refund the cost to the Government. Contractor to give a receipt for ironwork supplied.

265. All ironwork and gun-metal work, &c., provided by the Government which, at the completion of the contract, by direction of the Engineer has not been built or permanently fixed in the works shall be conveyed by the contractor to the site of the Field Office, or to the iron store at Camperdown, as may be directed. Surplus ironwork.

#### Painting.

266. All wrought-iron work (except where otherwise specified and directed) before leaving the foundry to be scraped and cleaned, and well coated with boiled linseed oil; and prior to being fixed in position (excluding internal surfaces of circular and oval wrought-iron tubing, and excepting all working parts) after it has been cleaned and scraped free from scales, &c., and inspected, to receive two coats of anti-corrosive paint over all surfaces, and after being fixed in position, to be finished with two coats of best oil-colour, in approved tints. Wrought-iron work.

267. All bolt-heads, washers, nuts, straps, and all other exposed ironwork of timber bridges above level of kerbs, ordnance fencing, &c., to be finished with two coats of black varnish instead of oil-colour.

268. The whole of the cast-iron work to be properly cleaned immediately after completion; and, after being inspected, except where otherwise specified, to receive over all surfaces two coats of anti-corrosive paint (except working parts and joints), and to be finished afterwards with two coats of best oil-colour, in approved tints. Cast-iron work.

269. All carpenter's work of timber bridges above level of kerbs, and all ordnance fencing above ground, handrails, travelling cranes, &c., to be properly prepared, knotted and primed, and painted with four coats of best oil-colour, finished with approved tints. All tenons, mortises, notches, halvings, joints, scarfs, and butting surfaces to receive two coats of approved paint before being fixed in position. Carpenter's work.

270. No paint to be applied during or immediately after wet weather, or while surface of timber or metal work is wet; and an interval of forty-eight hours must elapse between each application.

#### Tarring.

*Tarring.*

- Castings.** 271. All cast-iron cylinders, pipes, short lengths, bends, junctions, and any other castings, &c., which will be placed or laid under water, or which are to be covered up in earth, concrete, &c., and all non-ventilating man-hole covers, street-boxes, flushing-flaps and frames, scupper pipes, precipitating tanks, grooves, landing-plates and frames, grates, cover-plates, gully grates, &c., as soon as they have been cast and inspected, to be properly cleaned and then heated, and whilst hot to be dipped or coated twice in hot gas-tar.
- Wrought-iron work.** 272. All flat, segmental, and buckled plates, rolled girders, bulb T irons, &c., before being placed in position, unless otherwise ordered, to receive one coat of tar, and after erection is completed to receive a second coat; the tar to be coal-tar, mixed with kerosene in the proportion of three of tar to one of kerosene, and applied hot.
- Timber work.** 273. Kerbs, flooring planks, timber in girders, longitudinal stringers, cross-girders, corbels, capsills, sills, piles, pier-bracing, abutment platforms, ends of handrail posts below level of tops of kerbs to receive three coats of tar and composition; the first coat to be all tar laid on hot; the second and third coats to be composed of seven parts coal-tar, four parts of Stockholm tar, and one part of pitch thoroughly melted together and applied hot, the last coat on top of deck to be well sprinkled with a layer of clean sharp sand and lime. All joints and butting surfaces to be well payed with the hot composition before fixing, and in finished work the composition to be poured into interstices and joints. Any timber inaccessible for tarring when fixed to receive three coats before being placed in position.
274. No tar to be applied during or immediately after wet weather, or while surface of iron or timber is wet; and an interval of forty-eight hours to elapse between each application.

*Tar Varnish.*

- Interior surfaces of wrought-iron work.** 275. The whole of the interior surfaces (working parts and joints excepted) of the wrought-iron circular and oval tubes, cast-iron thimbles, expansion joint castings, short lengths of cast-iron circular and oval pipes, &c., after having been placed in position in the works, to be thoroughly cleansed of all scales, rust, and previous coating of linseed oil or paint, &c., and then to be coated twice with a tar varnish composed of 30 gal. of coal-tar, fresh, with all its naphtha retained, 6 lb. tallow, 1½ lb. resin, 3 lb. lamp-black, and 30 lb. freshly-slacked lime finely sifted; all materials to be approved of, and then to be intimately mixed as shall be directed, and applied hot, like paint.

*Day Labour.*

- Prices given in schedule.** 276. When "day labour" is required by the Superintending Officer to execute any works other than those for which a special price is given in the schedule of quantities and prices, the contractor shall provide the same at the several rates for "day labour" inserted in said schedule.
- To include.** The price for day labour is to include supervision as well as all tools, lighting, and implements of every kind necessary for carrying on the work, and shall be returned in the usual monthly progress certificate.
- Accounts to be sent in half-weekly.** 277. The accounts for this "day labour" shall, however, be rendered by contractor to the Superintending Officer in half-weekly intervals, that is to say, during the forenoon of every Monday and Thursday, failing this he shall lose all claim to payments for the "day labour" performed by him during the preceding three days.
- Length of day.** 278. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

*Measurements and Payments.*

- Contractor to be present.** 279. The contractor shall be present at all measurements, and, if required, assist in making the same. If he fail to attend after twenty-four hours' notice in writing has been delivered to him of the Superintending Officer's intention to take measurements, and clearly setting forth the locality of such intended operation, the measurements made by the Superintending Officer shall be binding on the contractor.
- When and how measurements are to be made.** 280. On satisfactory completion of any portion of the works, and at all other suitable times, the dimensions of such work shall be measured by the Superintending Officer, as specified, and recorded in a book kept for that purpose; and these quantities shall serve as the basis for arriving at the contract sum on completion of contract.
- Progress payments.** 281. For the purpose of making progress payments, the dimensions of still unfinished portions of the work will be measured in a summary way monthly, or as near as may be, but without prejudice to the ultimate acceptance or rejection of such unfinished portion of work.
- Contractor to sign measurement book.** 282. The contractor shall sign the measurement book each month, before the monthly progress payments are made, accepting the detailed quantities, prices, and amounts. Should he, however, disagree with the detailed quantities, prices, and amounts, he is at once to state in the measurement book in what particulars he disagrees, and the grounds of his disagreement; and unless this is done it is to be distinctly understood that the detailed quantities, prices, and amounts, as recorded in the measurement book, shall be binding.
- Final measurements.** 283. The final measurements, based upon the measurements made during the progress of the works, will be prepared within thirty days, or as nearly as may be after the completion of the work; and the contractor will be required to accept such measurement before the fixed deposit is returned.

*Junction with other Contracts.*

284. If two different contractors execute simultaneously two adjoining sections of the works, they shall be held jointly and severally responsible for effecting a proper junction of the sections.

*Suspension of Works.*

285. The contractor shall suspend the whole or any portion of the works, on receiving a written notice to that effect from the Engineer. He shall have no claim for loss or damage on this account, and such suspension shall in no wise vitiate the contract, but a commensurate extension of time for completing the works will be granted to the contractor, as set forth in clause 24 of the general conditions.

*Duties.*

286. In the event of any materials being imported by contractor for use on this contract, no refund will be made of any duties which may be legally chargeable on such materials; and the contractor shall bear and pay all duty stamps, licenses, building or surveyor's fees or other charges or fees whatsoever legally demanded by any municipal or other authorities.

*Testing the whole of the Works.*

287. It is to be distinctly understood that on completion of the works the Engineer shall have the power of ordering, and having the sewers, or portions of same, &c., closed in such order as he shall direct, and the whole of the sewers and aqueduct tubes, &c., filled with water for such a time as he may deem necessary for the purpose of testing the works; and any injuries, faults of whatsoever description, caused by or detected in consequence of such testing, to the work, shall be at once repaired, replaced by new work, and made good, the whole expense being borne solely by the contractor; and after the completion of these repairs, replacing with new works, and making good any damages, injuries, faults, &c., the whole of the works shall again be tested, as before described, until they shall be satisfactory to the Engineer.

This is the schedule to specification marked "C" referred to in our annexed agreement with Her Majesty the Queen, dated the 16th day of May, A.D. 1895.

GEO. FORREST.  
"D."

## "D."

## GENERAL CONDITIONS.

*Interpretation of Terms.*

1. WHENEVER the terms hereafter explained in the present clause occur in these or any special conditions, or in the contract or specification, they shall be held to mean, and shall mean, as follows:—

"Government" shall mean the Government of New South Wales promoting this undertaking.

"Minister" shall mean the Secretary for Public Works of the Colony of New South Wales for the time being.

"Engineer" shall mean the Engineer-in-Chief having the principal charge of the works, or the person acting as such for the time being.

"Superintending Officer" shall mean any person or persons who may from time to time be entrusted with the superintendence of the works on behalf of the Government.

"Contractor" shall mean the person or persons who contracted to execute the works.

"Special conditions" shall mean any "special conditions" hereto attached and forming part of the contract; and such special conditions shall be read with the general conditions as part and parcel of the contract.

"Schedule of prices" shall mean the rates at which the contractor has offered or agreed to execute the contract, where the same is based on a schedule of prices; and be the basis on which the value of any extra works or of any deductions shall be calculated, and progress payments made, whether the contract be one of a schedule of prices or a bulk sum.

"Plans" shall mean and include all drawings referring to the works and explanatory of, or supplementary to, the specification.

"Works" shall mean the works set out in the specification and plans, or, in the event of there being no plans, in the specification only.

"Net claim" shall mean the sum claimed by the contractor after deducting therefrom the sum acknowledged by the Department to be due.

"Net award" shall mean the sum awarded on arbitration, after deducting therefrom the sum acknowledged by the Department to be due.

*Supply of Labour, Materials, and Plant.*

2. The contractor shall, except in so far as the specification may expressly state to the contrary, provide at his own cost and expense all labour, materials, and plant, and everything which the Engineer may consider necessary for the proper and complete performance of this contract. No materials or plant placed on the site of the works shall be removed therefrom, or otherwise disposed of, without the consent of the Engineer.

*Plans, Specifications, &c.*

3. The plans and specifications represent generally the form, dimensions, and description of the several works. Where any discrepancy exists between the dimensions as indicated by the scale and those marked in figures, the figures are to be considered as correct, and are to be taken in all cases in preference to the measurements by scale. Or if there be any discrepancy between the figures or dimensions, or the form of construction, or the material as indicated in the plans; and the dimensions and materials given in the specification, the directions of the specification shall be adopted; and in all cases of defective description, or any ambiguity, the explanation given by the Engineer shall be binding upon the contractor. Also, anything contained in the plans, and not in the specification, or anything contained in the specification and not shown in the plans, shall be equally binding as if it were contained in both. If neither specification nor plans contain any mention of minor parts, which, in the opinion of the Engineer, are reasonably and obviously necessary for the satisfactory completion of the works, such parts are to be provided by the contractor without any extra charge, as if they were specially mentioned, and shall be deemed to be, and hereby are, included in this contract.

All works described in, or implied by, the specification or shown in any of the plans, or set forth in any lists or tables thereon, or attached thereto, as well as those expressly provided for, are to be made and executed in every detail conformably to the several plans already prepared or which may be prepared hereafter for the purpose of this contract, in strict accordance with the provisions of the specification and conditions, and to the entire satisfaction of the Engineer.

*Copies of Plans, &c.*

4. A copy of all plans and specifications required by the contractor for carrying on the works will be provided by the Government, but must be returned before a final certificate for the work can be given. Any additional copies which may be required and are supplied by the Department shall be paid for by the contractor at a rate to be fixed by the Engineer.

*Setting out Works.*

5. The works will be set out—that is to say, all necessary centre lines and levels will be given to the contractor—except in the case of buildings, when, in the absence of setting out, a block plan will be supplied, from which he must work; but the contractor must satisfy himself of the accuracy of the setting out, as no work incorrectly set out or improperly executed will be paid for.

*Protecting and Maintaining Signals and Marks.*

6. All bench marks, pegs, and signals on the surface, and all alignments, and level marks underground put in by the Engineer or Superintending Officer for the purpose of checking the contractor's work, will be confided to the care of the contractor. He shall, at his own expense, take all proper and reasonable precaution and care to preserve and maintain them in their true position; in the event, however, of their being disturbed or obliterated by accident or from any other cause whatever, they may, if necessary, be replaced by the Engineer or Superintending Officer at the contractor's expense, and the cost thereof deducted from any moneys then due or thereafter becoming due to the contractor.

*Possession of Ground.*

7. In giving the contractor possession of the site it shall not be deemed that he is to have the exclusive possession, but only a limited possession—that is to say, such possession as will enable him to perform the works comprised in this contract. The Minister may at any time take possession of any portion of the works or ground or intended site of the works for the purpose of carrying on any other works or for any purpose whatsoever. The contractor must procure for himself all other land which he may deem requisite for any temporary purposes, or for his own convenience.

*Access to Works.*

8. The Engineer, or any other person authorised by him, shall have free and uninterrupted access at all times to the works, and during working hours to any workshop or premises, not on the site of the works, where materials may be in preparation or stored for the purpose of this contract. The contractor shall give the Engineer all particulars as to the mode and place of manufacture of any of the materials proposed to be used in connection with this contract, and shall facilitate in every way the inspection of the same.

*Contractor's Risk.*

9. The contractor shall take upon himself the whole risk of executing the works to the satisfaction of the Engineer, and in accordance with the plans, sections, and specifications.

*Contractor to be represented.*

10. The contractor at all times during the progress of the works, when he is not personally superintending them, must have a responsible agent or overseer in charge to receive instructions from the Superintending Officer or Engineer, and to represent the contractor for all purposes of this contract.

Any notice or any written instructions to be given or delivered to the contractor under this contract shall be deemed to have been so given or delivered when given or delivered to the contractor or his representative at the work, or left at the contractor's usual or last-known place of abode or business.

*Order*

*Order of Procedure.*

11. The Engineer shall have full power to decide in what order in point of time the various parts of the work or works comprised under this contract shall be carried out.

*Power of Entry.*

12. The Engineer shall have the power, at his discretion, without vacating this contract, to enter upon, by himself or his agents, and make use of any part or parts of the work comprised under this contract, and his doing so shall in no wise be held as a waiver of the responsibility of the contractor in respect of this contract, except in so far as any injury may accrue to such work so entered upon, by reason of any proved carelessness, to the satisfaction of the Engineer, of any employee of the Government, in which event the contractor shall be free from liability on account thereof, but not otherwise.

*Instructions to be obeyed.*

13. Should the contractor refuse or neglect to carry out the instructions of the Engineer or the Superintending Officer, the Engineer shall have the power of suspending the usual monthly certificate until such instructions have been complied with.

*Power to dismiss men*

14. The Engineer may require the dismissal, within twenty-four hours, by the contractor, of any agent, overseer, foreman, workman, or other person employed on the works, and in the event of the contractor refusing or neglecting to comply with such requisitions, all further payments on account of the work may be stopped until such dismissal is effected.

*Bad Materials or Improper Works to be removed.*

15. The contractor shall be bound to remove, within twenty four hours, if written notice from the Engineer or Superintending Officer to that effect be given, any materials or work, whether fixed or not, which may appear to the Engineer to be of an inferior or improper description, and, in case of refusal, the Engineer shall have the power to get such materials or work removed at the contractor's expense, and to withhold all payments until such instructions have been complied with.

*Extra Works—Omissions of Works.*

16. If at any time whilst the works are in hand it shall be deemed expedient by the Engineer to order material or work of a different description to that specified, or to increase or diminish the dimensions or extent of any works to be done under this contract, or to alter their situation or vary the form or dimensions of any of the said works, or of any part thereof, or to make any deviation or to substitute one class of work for another, he shall have full power to do so, and to order and direct any such increase, diminution, alteration, deviation, or substitution, and the works involved in any such increase, alteration, deviation, or substitution, shall be executed by the contractor if of the class of works provided for in the schedule of prices, at such schedule prices; and no such increase, diminution, alteration, deviation, or substitution of works shall in any way annul or set aside this contract, or extend the time for the completion thereof, unless the Minister shall see fit to grant such extension; but such additions or alterations shall be measured and paid for, or deducted from the contractor's account, as the case may require, according to the schedule of prices. Provided that if any portion of the works so ordered to be done shall not be, in the opinion of the Engineer, of the same value or class of works provided for in the schedule of prices, the same shall be executed by the contractor at such prices as may be agreed upon with the Engineer; but if the contractor and Engineer cannot agree as to the price to be paid, the Engineer may order and direct the same to be done by such person or persons as he may think fit. Before any extra work, or work of an altered value or class, is undertaken by the contractor, it shall be imperative for him to procure an order in writing from the Engineer for carrying out such extra or variation of work, and the contractor shall not be entitled to any payment for such extras or variations unless he produce the written order for the same, as aforesaid, and he shall not be entitled to plead that the Engineer omitted to give such written order, as it is to be distinctly understood that the onus of obtaining such order shall be on the contractor. The contractor shall not be entitled to any other rate than the schedule rate on any plea that the work was in a different position, or of a different class from, or in a more difficult position than that shown on plan or specification, or carried out under circumstances not contemplated in the specification, unless an agreement entitling him to payment by other than the schedule rates shall have been previously made and signed by the Engineer and the contractor.

*Valuation of Omissions.*

17. The Engineer shall have the power to direct the omission of the carrying out of any part or parts of the said works, but not amounting to the omission of the whole; and the value of such work so omitted in such case, calculated at the schedule rates, or in the event of there being no schedule rates, calculated on the basis of the proportionate value which such work bears to the lump sum, as ascertained by the Engineer, whose decision on that point shall be final, shall be deducted from the contract sum, subject, however, to arbitration clauses Nos 36 to 41.

*Net Measurements.*

18. The whole of the work shall be executed and paid for according to the contract dimensions, and no allowance will be made for any excess of dimensions above those found on the working plans now exhibited, or which may be afterwards supplied, notwithstanding any general or local custom to the contrary, unless such excess has been expressly ordered. In the case of dressed masonry all cubic measurements will be taken at the extremes, and in the case of rock faced masonry all measurements will be taken to the draft. With regard to timber, all framed work will be paid to extremes, but in no case will scarfs in hewn or round logs be paid for.

*Contractor liable for injury to adjoining Lands, Properties, &c.*

19. The contractor shall not commit any act of trespass, and shall effectually protect all adjoining properties and owners thereof against any loss, damage, or injury that may occur through the carrying on of the works, whether to buildings, goods, property of any kind, or to persons; and in case any such trespass be committed, or any such loss, damage, or injury occur, the contractor shall make full compensation, and shall make good all or any such loss, damage, or injury; and if any such compensation for trespass, or any such loss, damage, or injury be recovered against the Government in the first instance, it may be deducted from any money due or coming due to the contractor under this contract, or may be recoverable from the contractor or his sureties as liquidated damages in that respect incurred.

*Damages, &c., to be paid for by the Contractor.*

20. All damage, injury, or loss that may happen to the works from any cause whatever during their progress must be made good by the contractor at his own expense; and the whole of the works must be delivered up complete in every respect, according to this contract, and the care and maintenance of all works under this contract shall remain with the contractor until the Engineer shall, by notice in writing under his hand, inform the contractor that he has taken charge thereof; and until such notice shall have been given, the contractor shall be responsible for all accidents, from whatever cause arising, and shall make good all damages thereto.

*Contractor not to Sublet Works or Assign Moneys.*

21. The contractor shall not assign or underlet this contract, or any part thereof, or assign or mortgage, charge or encumber all or any of the moneys payable or to become payable under this contract, or any other benefit whatsoever arising, or which may arise, under this contract, to any person without the consent in writing of the Minister being first obtained. The contractor for each and every breach of this condition shall be liable to pay to the Government the sum of £50 as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the contractor under this or any other contract with the Government. And any permission to assign or underlet works to be done under this contract shall not discharge the contractor from any liability in respect of this contract, and shall extend only to the permission actually given, but not so as to prevent any proceedings for any subsequent breach of this condition; and all rights under these conditions shall remain in full force, and shall be available as against any such subsequent breach.

*Truck System not allowed.*

22. The workmen and labourers of every class employed on the works shall be paid their wages in full, in money, current coin of the Colony, at least once in every month, and no ticket or other system of payment by provisions, liquors, or goods will on any pretence be allowed; nor shall the contractor, or any person or persons employed by him, or in any way connected with him, establish any shop for the supply of provisions, liquors, or goods; nor shall the contractor oblige his workmen to take provisions, liquors, or goods of any kind from any person in particular. The workmen and labourers of every class shall be paid on the works if it be possible, or in some building in the vicinity; and in no case shall they be paid at a public-house or other place where liquors or refreshments are sold. The contractor, for each and every breach of this condition, shall pay to the Government the sum of £50 as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the contractor under this or any other contract with the Government.

*Power of the Government to pay Workmen and Tradesmen.*

23. Before the payment of any money to the contractor, the Engineer may require from him a statutory declaration that the tradesmen supplying materials for or incidental to the works, and the workmen and labourers of every class employed on the works, have been paid their claims of every kind in full, in current coin of the Colony, and to the latest date at which such wages or claims are due; and the Engineer may withhold the payment of any money that may be due or become due to the contractor until such declaration has been made and delivered to him.

If the contractor shall fail or omit to pay the claims of any such tradesmen, workmen, or labourers, in the current coin of the Colony, it shall be lawful for the Minister or the Engineer, as often as the same shall happen, upon complaint of such failure or omission made by any such tradesman, workman, or labourer, and upon proof to the satisfaction of the Minister or Engineer of such failure or omission to pay the amount of such claim to such tradesman, workman, or labourer, and to deduct the same amount from any money then due or owing, or thereafter to become due or owing, to the contractor under this contract.

*Delay by Minister.*

24. If the contractor shall not be able to obtain possession of any portion of the ground required for the execution of the works to be done in connection with this contract, or if from the non-delivery, or any delay in the delivery to the contractor, of any materials which under this contract the Minister is to supply, or from any cause whatever arising out of the acts or defaults of the Minister, or any officers or servants in his employment, or from any accident happening to the said works during their progress not arising from the neglect or default of the contractor or his servants or workmen, the contractor shall be delayed or impeded in the execution of his contract, the contractor may from time to time within seven days of the happening or occurring of such act, default, or accident, apply in writing to the Engineer for an extension of time on account of such act, default, or accident, setting forth the cause of such application, and the Engineer shall, if the Minister think the cause sufficient, but not otherwise, allow by writing under his hand such an extension of time as the Minister shall think adequate; and the penalties, sets-off, and deductions to which under this contract the contractor is liable shall not attach until the expiration of such extension of time, but shall attach, and the contractor shall become liable to the same from the date of the expiration of such extended time or times. And unless the contractor shall make such application within the time and in the manner aforesaid, and unless and until the Minister shall allow such extension or extensions of time as aforesaid, the contractor shall not by reason of any delay arising from the cause or causes aforesaid, or any of them, be relieved in any way or to any extent of his liability to finish and complete the works within the time in this contract specified; and in default of his so doing, to pay and be subject to the liquidated damages, deductions, and sets-off as in these conditions provided; nor shall the Minister be deprived in any way or to any extent of his right to deduct or recover any sum or sums as liquidated damages, and not as or in the nature of a penalty or to make deductions or sets-off which under this contract he is entitled to make, deduct, set-off, or receive from the contractor for or by reason or on account of any delay in the completion of the work or any portion of the same, nor shall the rights, powers, and authorities by these conditions given to or vested in him be in any way affected.

*Patent Rights to be included.*

25. The contractor is to include in his tender the amount of all patent rights and royalties which may be claimed by any patentee or patentees for the manufacture and use of any portion of this work, and must undertake to liquidate the same when required to do so.

*Free Passes, &c.*

26. No free passes on any of the Government railways will be granted either to the contractor or his agents, nor will any materials or articles of any description be conveyed free of charge.

*Conditions not to be Waived.*

27. None of the conditions of this contract shall be varied, waived, and discharged, or released, either at law or in equity, unless by the express consent of the Minister, testified in writing under his hand.

*Progress Payments without Prejudice.*

28. No progress payment given to the contractor shall prevent the Engineer from at any future time before the final settlement rejecting all unsound materials and improper workmanship discovered subsequently to the giving of any previous payment; and notwithstanding any approval given or made by the Superintending Officer that portions or the whole of the works have been satisfactorily performed, the Engineer may require the contractor to remove or amend at any future time previously to the final payment on account of the work, any work that may be found not in accordance with this contract; and the contractor must remove and amend at his own cost all such work when so required; and if he refuse or neglect to do so, the Engineer shall have the power to carry out such work, and to deduct the whole cost thereof from any moneys that may be due, or that may become due, to the contractor.

If, in the opinion of the Engineer, further inquiry is necessary or desirable before any progress payment is made, he shall have the power to withhold the certificate on which such payment would have been made, for any period which he may consider necessary for the purpose of such inquiry.

*Security.*

29. Within fourteen days after the notice of the acceptance of his tender shall have been given to the contractor, or posted to the address of his last-known place of business or residence, he shall deposit with the Minister, or at the option of the Minister, in some bank or banks in Sydney, upon fixed deposit in the name of the Minister, a sum calculated at the rate of £5 for every £100 or part thereof on the amount of his tender up to the sum of £100,000, and at the rate of £1 for every £100 or part thereof in addition, for any amount over that sum, to be held by the Minister as security for the due and proper performance and completion of this contract until the Engineer has certified that the whole of the work in the said contract has been completed to his satisfaction, or until this contract has been cancelled by the Minister under the power given to him in that respect under clause 32 of these conditions, in which last-mentioned event happening the money so deposited shall become forfeited to the Crown, and shall be held by the Colonial Treasurer, for and on behalf of Her Majesty the Queen, as liquidated damages. If, however, this contract shall not have been cancelled under the said clause, and if the works comprised in this contract are not completed within the time mentioned in clause 34 of these conditions, the liquidated damages which under the last-mentioned clause are made payable to the Minister may be deducted and taken from the money so deposited.

If the contractor fail to deposit the sum as hereinbefore provided within fourteen days from the acceptance of the tender, or if he fail to execute the contract for the due performance of the works mentioned in the said tender, the Minister shall have the option of and full power and authority to declare such acceptance to be annulled, in which case the amount of the preliminary deposit will be absolutely forfeited to the Crown, as provided by the Regulations of the Tender Board.

No tenderer will be authorised to proceed with the work tendered for until he has made the deposit as aforesaid, and has executed the required contract for the due performance of the said works, it being hereby declared that for all or any work done or materials found and provided by the contractor before the due execution of the said contract, or the said moneys being deposited as aforesaid, he shall not have any right of action, claim, or demand against the Minister.

The

The contractor will be entitled to receive any interest that may be payable upon the fixed deposit of the money, if the money be placed in a bank at fixed deposit, as such interest becomes payable; but it is expressly declared that the Minister is not to be held liable or answerable in any way for any loss on the money so deposited, or for any loss of interest from the fixed deposit not being renewed.

*Payments.*

30. Progress payments may be made once in every month, unless the same shall become not payable by reason of anything contained in these conditions, on the certificate of the Engineer, as the work proceeds, in the proportion of 80 per cent. of the value of the work returned, until the sum retained reaches the amount of the deposit provided for in the preceding clause, when no further deductions will be made. The amount of the retention money will be held by the Minister, in addition to the cash security, unless otherwise provided for in the specification, until the Engineer has certified that the whole of the works have been satisfactorily completed, and the period specified for the maintenance of the said works has expired, and all accounts finally adjusted, when the retention money, in addition to the cash security, will be paid to the contractor; and it is expressly declared that until a certificate has been given by the Engineer to the Minister that the work done by the contractor has been executed and completed to his satisfaction, the contractor shall have no right or claim in respect of any work done or materials provided, nor to the payments from time to time to be made under this contract, or to the final payment upon the whole of the works being finished.

*Delay or Bad Work, Bankruptcy, &c.*

31. In case the Engineer shall be at any time dissatisfied with the mode of proceeding, or at the rate of progress of the works or any part thereof, or in case the contractor shall at any time neglect or omit to carry out the instructions of the Engineer, or to dismiss any person employed when required, or shall neglect or omit to remove any materials or work which he is required to remove under condition 15, or in case the contractor shall assign or underlet this contract, or any part thereof, or assign or mortgage, charge or encumber, or attempt to assign, mortgage, charge or encumber, all or any of the moneys payable or to become payable under this contract, or any other benefit whatsoever arising or which may arise under this contract, without the consent in writing of the Minister being first obtained, or in case the contractor shall make default in insuring and keeping insured, in cases where insurance is specified, and depositing the policies and receipts for premiums in accordance with these conditions, or in case the contractor shall become bankrupt, or shall make an assignment of his estate for the benefit of creditors, or shall make an arrangement or composition with his creditors, then and in every such case the Minister shall be at liberty, without vitiating this contract, and without prejudice to any right that may have accrued to liquidated damages under any of these conditions, to take the works wholly or partially out of the hands of the contractor, and to employ or contract with any other person or persons to execute the same, and for that purpose to take possession of and use all horses, materials, plant, tools, implements and things on, or about the said works, without making any allowances for the same, and all damages and expenses thereby incurred shall be ascertained and certified by the Engineer, and, together with any sum payable as liquidated damages under these conditions, shall be deducted from any money that may be then due, or may thereafter become due to the contractor, or may have been deposited by him; and if the money then due, or thereafter becoming due, to the contractor, or deposited by him, be not sufficient for that purpose, the balance remaining unpaid shall be a debt due by the contractor to the Minister, and may be recovered accordingly.

*Cancellation of Contract.*

32. In any or either of the events mentioned in the last preceding clause of these conditions, the Minister shall have the option and full power and authority in lieu of proceeding under such clause, and without prejudice to any right that may have accrued to liquidated damages under any of these conditions, to cancel this contract, whether there are any works remaining to be done or not; and in such case the moneys which shall have been previously paid to the contractor on account of the works executed shall be taken by him as full payment for all works done under this contract; and upon notice in writing under the hand of the Minister that he, under the authority of this condition, cancels this contract, being given to the contractor, this contract shall be cancelled, and thereupon all sums of money that may be due to the contractor, or unpaid, together with all implements in his possession, and all materials provided by him, upon the ground upon which the work is being carried on, or adjacent thereto, shall be forfeited, and all sums of money held as security or named as liquidated damages for the non-fulfilment of this contract, within the time specified, shall also be forfeited and become payable to the Government, and the said implements and materials shall become and be the absolute property of the Government, and with the moneys so forfeited and payable as aforesaid shall be considered as ascertained damages for breach of contract.

*Insurance.*

33. The contractor shall from time to time, when required to do so by the terms of the specification, insure the works against loss or damage by fire, in an office to be approved, in the name of the Minister, for the amount of the full value of the work completed, as determined by the Engineer, and shall lodge with the Engineer the policies and receipts for the premiums for such insurance, and shall continue such policies until possession is given up by the Government; in default of which the Minister shall be at liberty to insure and deduct the amount of the premiums paid from any moneys payable to the contractor, and may refuse payment of any certificate until such policies and receipts are handed in as aforesaid; but this insurance is to be no limit or bar to the liability and obligation of the contractor to deliver up the works to the Minister completed in all respects according to the contract. In case of loss or damage by fire the moneys payable under any such insurance shall be received and retained by the Minister until the works are finally completed, and shall then be credited to the contractor in the final settlement of accounts in the event of the contract not having been previously cancelled under these conditions.

*Time of Completion, &c.*

34. The contractor shall complete the whole of the works comprised in this contract within seventy-eight weeks from the date of the acceptance of his tender, and in the event of their non-completion at the specified times, should the Engineer not have proceeded under clauses Nos. 31 and 32 of these conditions, or either of them, the contractor shall pay, by way of liquidated damages, and not as or in the nature of a penalty, the sum of \_\_\_\_\_ pounds sterling for every week, or for every part of a week, that shall elapse after such specified time, until their completion, and which sum or sums may be deducted from any money payable to the contractor under this or any other contract. The contractor shall have no right to a certificate for payment after the date specified in these conditions for the completion of this contract until the whole of the works shall have been properly completed to the satisfaction of the Engineer, unless the time for the completion of this contract shall have been extended by the Minister, in which case such extended time shall become the time for the completion of this contract, and it is to be expressly understood that the fact of the time having been so extended shall not in any way be taken as a waiver of this contract, or as annulling or setting aside this contract in any respect, nor be taken as releasing the contractor from any of the responsibilities or obligations of this contract, which, in all other respects, shall remain the same as if the time had not been extended.

The like liability also shall hold good as to the obligation of the contractor in the event of any advance being made to him from the retention money, or on material on the ground and not *in situ*.

*Maintenance.*

35. The contractor will be bound to maintain the works for a period of three months after their final completion and use by the Government; and if any part should within that period show signs of weakness, or of giving way, or if any defective workmanship or materials be detected, the contractor, when called upon to do so, shall make good the same at his own expense, to the satisfaction of the Engineer, before any moneys held by the Government on account of this contract will be paid. It is also to be distinctly understood that the Government shall have the full, free, and unrestricted use of the said works, without any interference whatever on the part of the contractor during the currency of this period of maintenance; and such use of the said works on the part of the Government shall not be held as relieving the contractor of any liabilities or obligations whatever in respect of his contract.

*Arbitration.*

36. The following matters shall be decided by the Engineer, whose decision shall be absolute and final:—(1) All questions or disputes which shall arise respecting the true construction or meaning of the plans or specification, or the quality of the workmanship, or quantity or quality of materials necessary for the whole or any part of the contract. (2) All questions and disputes when the net claim shall not amount to the sum of £500.

37. All questions and disputes not hereinbefore provided for shall, if the net claim be £500 or upwards, upon the completion of the works under the said contract, and before payment of the retention money and the money deposited as security for the due carrying out of the contract, be fixed and determined by arbitration as hereinafter provided.

38. If either party consider that he has claims in respect of any matter in which arbitration may be claimed, he shall, within one month of the date of the final certificate, furnish to the other party full particulars in writing of such claims, breaches, doubts, disputes, and differences in respect of which he desires arbitration, giving distinct and separate items, and the amount, if any, claimed under each item; and the other party may thereupon furnish particulars of all claims he has in respect of such matters, irrespective of the aggregate amount of such claims; and the party furnishing the same shall be bound by such particulars; and no claim not included in such statement shall be taken into consideration at such arbitration, or become subject of arbitration or action; and the claim or respective claims so made as aforesaid shall be determined by arbitration, in the manner as hereinafter provided.

39. If both parties concur in the appointment of a single arbitrator, then the reference shall be to such single arbitrator; but if the parties for twenty-one days after the particulars first mentioned in the last preceding clause shall have been furnished, cannot concur in the appointment of a single arbitrator, the reference shall be to two arbitrators, one to be appointed by each party, or their umpire to be appointed in writing by such arbitrators before they commence the business of the reference; and the arbitration shall, subject to the express provisions herein contained, be made and held pursuant and subject to the Arbitration Act of 1892, or any statutory modification or re-enactment thereof for the time being in force.

40. The costs of and incidental to the arbitration shall be paid or borne by or between the parties in manner herein after mentioned, that is to say:—

1. If the sum awarded does not exceed the amount acknowledged by the Department to be due, the contractor shall pay all the costs of and incidental to the arbitration.
2. If the sum awarded shall amount to the sum claimed by the contractor, the Government shall pay all the costs of and incidental to the arbitration.
3. If the sum awarded exceeds the amount acknowledged by the Department to be due, but is less than the sum claimed by the contractor, the costs of both parties shall be added together and the total cost so ascertained shall be paid by the parties in the proportions following, namely:—The Government shall pay such sum as bears the same proportion to the total cost as the net award bears to the net claim, and the balance shall be paid by the contractor.

The award shall direct to, and by whom, and in what proportions the costs shall be paid, in accordance with the provisions hereinbefore contained; but the award need not specify the amount of such costs. Such amount shall, in the event of disagreement, be taxed or settled by the arbitrators or umpire, as between party and party, after the award is made. No costs shall be allowed as between solicitor and client. If either party shall be dissatisfied with the costs allowed by the arbitrators or umpire, the same may be taxed by the Prothonotary or other proper officer of the Supreme Court.

41. It is to be distinctly understood that all claims by either party to have any of the matters which may be submitted to arbitration so dealt with, must be made upon the whole of the work being completed, and before payment to the contractor of the retention money, or of the money deposited as security for the due performance of the contract, and that the acceptance by the contractor of payment of the retention money in cases where a bond to secure the completion of the works has been given, and in other cases of the retention money, or of any balance thereof, and of the money deposited as security for the due performance of the contract, shall be conclusive proof that the contractor has no such claim or claims.

SPECIAL CONDITIONS.

*Rates of Wages to be Paid.*

NOT less than the several rates of wages as set out in the schedule herein shall be paid by the contractor (or—in the event of the Minister approving of the subletting of any portion or portions of the works—by the subcontractor) for the various services to be performed under this contract, and in case of dispute as to the classification of workmen, the decision of the Engineer shall be final; the rates, however, do not include those to be paid to apprentices or boys.

With respect to overtime, the recognised rules of the particular trade then prevailing in the district where the work is situated shall be observed.

If it shall at any time be proved to the satisfaction of the Minister that the contractor or any approved subcontractor is paying or has paid a lesser rate of wage for services rendered during the progress of the works to any workman employed thereon than is set out in the following schedule, the Minister shall have the option and full power and authority to cancel the contract, as if such breach was and is one of the events mentioned in clause 32 of the general conditions. Any permission to sublet shall not discharge the contractor from any liability in respect of the rate of wages to be paid under this contract.

In all classes of labour forty-eight hours shall be considered as a week's work. This rule, however, shall not apply to those workman, the necessities of whose employment demand that longer hours shall be worked, as in the case of firemen, who usually have to get up steam in readiness for the day's work. The necessity for longer hours of labour in special cases shall be determined by the Engineer, whose decision shall be final.

The following is the schedule referred to:—

| Trade.   | Rate.        |
|--|--------------|
|  | s. d.        |
| Carpenters .....                                 | 8 0 per day. |
| Masons .....                                     | 10 0 "       |
| Bricklayers .....                                | 9 0 "        |
| Plasterers .....                                 | 9 0 "        |
| Blacksmiths .....                                | 8 6 "        |
| Boilermakers and riveters .....                  | 9 0 "        |
| Fitters .....                                    | 9 0 "        |
| Painters .....                                   | 7 6 "        |
| Plumbers .....                                   | 8 6 "        |
| Shipwrights .....                                | 9 6 "        |
| Copper and brass workers .....                   | 9 0 "        |
| Moulders .....                                   | 7 0 "        |
| Engine drivers .....                             | 7 6 "        |
| Workmen not included in the foregoing list ..... | 6 0 "        |

Department of Public Works, Roads, Bridges, and Sewerage Branch.

TENDER FORM.

IN pursuance of advertisement in the *Government Gazette*, we the undersigned, do hereby tender to provide the material and perform the various works required in about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Amundale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected and lodged by us for the sum of £15,500, and to complete the same within eighteen months from the date of the acceptance of this tender; and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works, a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and we enclose herewith our cheque for the sum of £160 as a preliminary deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw same, or if, in the event of this tender being accepted, we fail to complete the abovementioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board Regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of March, 1895.

CARTER, GUMMOW, & CO.,  
Box No. 10, North Sydney.

Witness,—A. R. BURKITT.

TENDER BOARD REGULATIONS.

No Tender shall be received after eleven a.m. on the day named for the receipt of such Tender unless there are circumstances which, in the opinion of the Member, of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

|   |         |
|---|---------|
| For amounts up to £500 inclusive...                 | £5 0 0  |
| For amounts exceeding £500 and not exceeding £1,000 | £10 0 0 |

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a Tender, the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

This is the tender marked "F" referred to in the annexed agreement with Her Majesty the Queen, dated the 16th day of May, A.D., 1895.

## "G."

## SUPPLEMENTARY SPECIFICATION.

THE structure above the level of the skewbacks of main arches to be constructed as shown on drawing which accompanies the contractor's tender of cement mortar (except the cement facing), composed of one part of cement to three parts of sand, and wrought-iron rods on the "Monier system."

The foundations of piers are to be in conformity with the drawings attached to the contract, except as regards to the extra size necessitated by the larger pier shown on the contractor's plan, and are to be to the satisfaction of the Engineer.

Should the piers be required to be put down to a greater depth than shown on the drawings, or a greater number of them require piling than shown, the work is to be executed as ordered without extra payment being made.

The piers are to be built with sandstone concrete of the quality specified, and faced with cement mortar composed of one part of cement and two parts of sand.

The cement facing of the structure, above the level of the springing of main arches, is to be composed of one part of cement and one part of sand.

The works generally are to be carried out in accordance with the specification, schedule to specification, and the plans therein referred to, save and except such structural parts as are to be carried out under the "Monier system," or necessarily enlarged to meet the requirements of the contractor's plan, and within the time set out in the general conditions.

The contractors shall continue to maintain the said works at their own cost after the period of maintenance set forth in the general conditions, for a further period of three years, computed from such date, to the satisfaction of the Engineer, whose decision shall be final and conclusive upon all points concerning workmanship and materials, and the permanency and durability of the said works, and the contractors shall enter into a bond to Her Majesty the Queen in the penal sum of £12,000, and find two sufficient sureties to enter into separate bonds in the penal sum of £6,000 each, to secure the removal of so much of the said works as shall have been constructed on the "Monier system," if the Engineer shall be dissatisfied with the same at any time during the said periods of maintenance, and to re-erect and construct the said works at their own cost and expense in accordance with all things with the specification, schedule to specification, and plans therein referred to, within thirty-nine weeks from the date of being called upon so to do.

This is the supplementary specification marked "G" referred to in our annexed agreement with Her Majesty the Queen, dated the            day of            A.D. 1895.

JOHN CARTER.  
FRANK MOOREHOUSE GUMMOW

If tenderers are not desirous of abiding by the prices fixed, they must quote only one rate of percentage above or below all prices in the schedule, and not one rate of percentage upon certain items and another rate or rates upon others.

The quantities are approximate, and are merely for the guidance of tenderers, and are subject to omissions, deductions, alterations, and additions.

The prices in the schedule are for each kind of work in place, complete, as specified.

They also include continual maintenance of the works during the whole time of construction and up to the day of their being formally taken over by the Engineer.

G.C. NOTE.—Item No. 8 should be read as "ton" and not "cwt."

Witness,—GEO. CHAPMAN.

JOHN CARTER,  
F. M. GUMMOW.

This is the schedule of quantities and prices marked "H" referred to in our annexed agreement with Her Majesty the Queen, dated the 7th day of May, A.D. 1896.

Witness,—GEO. CHAPMAN.

JOHN CARTER,  
F. M. GUMMOW.

## Appendix No. 3.

95-283—Sewerage.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 29 July, 1895.

W. Schill v. Carter, Gummow, &amp; Co. ; A. Schill v. Carter, Gummow, &amp; Co.

Amount paid verdict to plaintiffs' cost of actions.

Engineer-in-Chief for Public Works,—

THESE actions were brought to recover compensation for damage to the plaintiff's houses which, it was alleged, had been caused by blasting on the sewerage Contract No. 69.

The cases were tried in the District Court, and whilst the officers of the Department who gave evidence considered that no damage had been sustained by the plaintiffs, the jury thought otherwise, and assessed the damage in the case of W. Schill to be £20, and in that of A. Schill £30.

The costs in the actions, it appears, amounted to £146 17s. 4d.

In September, 1892, the question of liability in connection with such cases as those under consideration was referred to the Crown Solicitor for his advice, and he replied as follows:—

“ No. 92/663—92/2165.

92/2385, 29/10.

“ Sir,

Crown Solicitor's Office, Sydney, 26 October, 1892.

“ I have the honor to return herewith the minute of the Engineer-in-Chief of the Sewerage Branch relating to the liability of the Department for damaged property caused by blasting in sewer tunnels, sent to me for advice on two questions submitted.

“ It is stated that claims are frequently made on the Department for damage done to houses owing to blasting operations carried out by sewerage contractors, and that hitherto the Department has been able, acting under clause 11 of the General Conditions, to transfer the liability to the contractors.

“ It is understood that one of the contractors has recently been advised by his solicitor that the Department is liable, on what grounds is not known.

“ I am now asked to advise:—

“ 1. Whether the contractor who carries out the work as specified, as regards size of charges, is liable.

“ 2. Whether an action lies against the contractor or the Department.

“ The questions involved in the consideration of this matter have frequently come before Courts in England, and the result of these cases, and the general principles on which they go, have been stated by a learned judge in a Scotch case, which is accepted as a correct interpretation of the law. He says as follows:—

“ On carefully considering the very numerous cases on this branch of the law, and of which we have had in the argument a very full citation, I think that the principle which governs the decision in such cases is that the principal or superior, be he called either master or employer, who has reserved or who has assumed the *direct and personal control* over the subordinate, be he called servant or workman, who committed the fault or negligence, is liable for the damage thereby caused. In such case ‘*Respondeat Superior*’—the superior is answerable for the negligence of his subordinate: and the test always is, I think—had the superior personal control or power over the acting or mode of acting of the subordinate? I use the expression ‘*personal control*’ because I think that this is always the turning-point in such cases. Was there a control or direction of the person in opposition to a mere right to object to the quality or description of the work done? Where this element of personal control is found, then responsibility, either for malfeasance or nonfeasance, for fault or negligence, will attach, not only to the servant or workman (he is always liable), but to him who has the personal control over him who was his superior in the sense of the maxim. On the other hand, if an employer has no such personal control, but has merely the right to reject work that is ill-done, or to stop work that is not being rightly done, but has no power over the person or time of the workman or artisan employed, then will he not be their superior in the sense of the maxim, and not answerable for their fault or negligence.

“ From this it will be seen that the test of who is liable, the contractor or the employer, is which retained the power of controlling the work. If this power of control is retained by the employer, it would seem that he is liable as well as the contractor for any damage that may be done in carrying out the work.

“ Turning to the General Conditions used in this case, I find in clause No. 14, under the head of explosives, the following condition:—‘The use by the contractor on the work of blasting powder or any other explosive material shall be confined strictly to the limit which shall be set by an *order in writing* of the Engineer as to the locality, time, quantity, particular kind of material, and precautions to be taken during its use.’

“ Under this clause it is quite clear that the Department, through its Engineer, exercises a complete ‘*personal control or power*’ over the use of these explosives, and, on the principle above stated, I think the Department would be liable for any damage that might be caused. On turning to clause 11, referred to in the minute of the Engineer-in-Chief, it will be seen that it is provided as follows:—

“ During the whole time of construction of the work, and during the period of their maintenance, the contractor shall be liable for any accident, damage, or injury, whatsoever, to the public or to any individual which may be caused by his operations or his neglect.’

“ Under this clause, I think that as between the Department and the contractor, the damage caused by the operations must be paid by the contractor, but this does not affect the liability of the Department to the person injured.

“ I have, therefore, the honor to advise as follows:—

“ 1. The contractor who carried out the work, as specified, as regards size of charges, is liable to an action for damage caused by his operations, although he may have received the directions in writing of the Engineer under clause 14.

“ 2. An action would, in my opinion, lie not only against the contractor but also against the Department for any damage that is caused by operations carried out under the direction of the Engineer in accordance with clause 14.

“ As between the Department and the contractor, however, I think clause 11 will give the Department the right to charge the contractor with any damage which the Department may have been called upon to pay.

“ In view of the liability attached to the Department, I think it is the duty of the engineer-in-charge, and he should be so instructed, to take every possible care, in exercising his functions under clause 14 with regard to explosives, that in authorising the use of any such explosives no possibility of any damage to any building or property could arise.

“ If there is any risk, I think that he should not give his order in writing.

“ I have, &c.,

“ E. A. SMITH,

“ Crown Solicitor.”

## Appendix No. 4.

W. SCHILL v. CARTER, GUMMOW, &amp; Co. ; A. Schill v. Carter, Gummow, &amp; Co.

Minute by Mr. Davis upon Crown Solicitor's opinion.

FROM this it would appear that the contractors are, strictly speaking, liable, and that the Department, seeing that it had “*personal control*” by specifying the sizes of charges to be used, and by measuring depth of holes, &c. (see clauses 65 and 66 of the Schedule to Specification), is also to some extent responsible.

When in carrying out work under instructions damage has been done to property, not through any neglect on the part of the contractor, but what might be regarded as incidental to the carrying out of the work, and to be expected in the natural course of events, the Department, and not the contractor, has satisfied the claims, except in those cases in which the compensation sought has only been very small.

In the present instance, if the claimants had brought their suit against the Department, as they should have done, according to the Crown Solicitor, the cases could no doubt have been defended, because:—

Firstly,—The officers of the Department were strongly of opinion that no damage had been done to the properties in question.

And Secondly,—Many other property-owners who were asking for compensation were similarly situated to the Schills, and, if they had been settled with, the others must have been treated in the same way.

The contractors, knowing what was involved, determined, and properly, I think, to resist the claims.

There were three of these cases up to the end of March. The first two went against the contractors, but the third against the property-owner, and the failure in that instance has, I believe, had the effect of making many hesitate before bringing a suit to recover compensation for alleged damages.

Under

Under these circumstances, I am inclined to think that the Department would only be acting in accordance with its usual custom in refunding the £196 17s. 4d. At the same time, I desire to point out that, so far as I am aware, this is the only case in which matters of this description have been dealt with through the contractor.

J. DAVIS.

Papers might be forwarded to Mr. Darley. When the Minister has decided the question, I should like to see the papers, for my guidance.—ROBT. HICKSON, Engineer-in-Chief for Public Works, 5/8/95. Under Secretary. Mr. Darley, J.B., 9/8/95.

### Appendix No. 5.

Mr. R. A. Arnold to The Under Secretary for Public Works.

Contract No. 79A.—North Sydney Sewerage Works.

Sir,

I desire to bring under your notice the following facts, and ask for your prompt and favourable consideration of the same.

During the tunnelling from the upper shaft in M'Dougall-street (just completed) for that portion of the North Sydney Sewerage Scheme, I had on several occasions to complain to the Engineer in charge of the work (first Mr. Boys, and latterly Mr. Weedon) that the vibration from the blasting was so severe as to shake my whole cottage (a solidly built stone structure); that some of my windows had been broken; and that the walls and ceilings were cracking in all directions. I also made similar communications to the contractors Messrs. Carter, Gummow, and Co., and intimated that I should expect the damage done to my building to be made good.

The damage actually apparent is the breakage of six large panes of glass (one of which I was obliged to have replaced in August last at a cost of 22s. 6d.), cracks in many places in the walls and ceilings, and the opening of what were before mere hair cracks, and the breaking of several slates in the roof.

I estimate that it will cost me to repair the damage:—

|   | £   | s. | d. |
|---|-----|----|----|
| Five large panes of glass, about 5 ft. x 3 ft.; labour of fitting, &c., at, say, 22s. each.....               | 5   | 10 | 0  |
| One smaller pane, about 2 ft. 6 in. square, say .....   | 0   | 10 | 0  |
| Cleaning out and refilling cracks in plaster of the walls and ceilings, say .....                             | 3   | 0  | 0  |
| Towards recolouring the walls, &c., a work only rendered immediately necessary for the damaged one, say ..... | 10  | 0  | 0  |
| Damage to slates on the roof .....  | 1   | 0  | 0  |
|   | £20 | 0  | 0  |

Besides this, there is the damage done to the structure by the shaking it has received, which is difficult to estimate at a fixed sum, but on which I shall be pleased to confer with any officer who may be able to report on the matter.

As I am desirous of having the necessary work of repairing done as soon as possible, I shall be glad if you will have my claim inquired into at once.

I am, &c.,

RICHD. A. ARNOLD.

Mr. Smail for report for U.S.—JNO. P., 26/6/95. Mr. Smail for report.—C.D., 1/7/95. Mr. Cook.—T.G., 1/7/95. Report and tracing herewith.—W.E.C., 3/7/95. Fwd. J. M. Smail, Esq.—T.G., 4/7/95. Mr. Boys might be asked if he knows anything about this claim.—J.M.S., 15/7/95. Mr. Griffiths. Mr. Cook saw Mr. Weedon yesterday and discussed the matter with him, the latter gentleman handing in two letters herewith attached. It was thought that £10 might be offered as a reasonable compensation.—T.G., 16/7/95. Mr. Arnold's claim does not on the face of it appear an unreasonable or made-up claim. If our works did all the damage stated, he should be recompensed by either the Department or the contractor. The two officers who had charge of the work at the time (Messrs. Weedon and Boys) have not been transferred to this Branch, so perhaps Mr. Hickson might be asked to obtain their reports as to what they know of the occurrence. I gather from Mr. Arnold's letters that they visited the house.—C.D., 17/7/95. The U.S., P.W. Mr. Hickson for report for U.S.—JNO. P., 18/7/95. Mr. Boys for report in first instance.—W.S., 19/7/95. Messrs. Boys and Weedon's reports attached.—J. DAVIS, 30/7/95, for Engineer-in-Chief for Public Works. Under Secretary. Mr. Darley, for U.S.—JNO. P., 30/7/95. From perusal of the reports, there is no doubt but that the blasting must be in a great measure the cause of the injury to Mr. Arnold's house. I, therefore, recommend that the sum of £10 be offered in full discharge.—C.D., Engineer-in-Chief, Metropolitan Sewerage Division, 2/8/95. The U.S., P.W. For approval, £10 without prejudice.—J. BARLING, Secretary for Public Works, 5/8/95. Appd.—J.H.Y., 6/8/95. Write, 6/8/95. R. A. Arnold, Esq., 7/8/95. Resubmit with reply.—JNO. P., 7/8/95.

### Appendix No. 6.

Inspector G. A. Fowle to Resident-Engineer Weedon.

Sir,

19 February, 1894.

I beg to report that on several occasions I have had to complain about the time the sandstone concrete is mixed for packing brickwork in shafts. To-day two 20-foot mixings were made up at 2 p.m. at No. 5 shaft. This concrete will not be put down shaft for use till 5.30 p.m. I have instructed Connors' foreman, who has charge of this work, not to have the concrete mixed so long before being used. He states to me that he has to take his instructions from the firm.

I saw Mr. Snodgrass last Friday, and complained to him about this matter, when he promised it should not be mixed until one hour before it is required to be used. I spoke to Reid (contractors' representative) to-day, and he states that they shall mix the cement when convenient for themselves.

Inspector Reid informs me that on Saturday last, 17th February, about 1 p.m., at No. 6 shaft, it required half mixing 10 feet of sandstone concrete to finish brickwork packing in shaft. Henderson, bricklayer, working in shaft, was on mixing board, and started to assist labourer gauge the stone. Inspector Reid instructed Henderson to use the fork in place of shovel in filling gauge-box, as the stone which is broken close to mixing-board is not free from refuse. Inspector Reid asked Henderson the second time to use fork. Henderson replied that it did not want forking. Connor's foreman came on the scene and said to Henderson, "Go on; don't take any notice of him; he is only a damn big buck navy."

G. A. FOWLE,

Inspector.

### Appendix No. 7.

Mr. A. Armstrong (Agent for Messrs. Carter & Co.) to The Hon. W. J. Lyne.

Sir,

5, Spring-street, Sydney, 3 April, 1893.

I have the honor to direct your attention to a patent, No. 4,084, issued on 3rd November, 1892, to Messrs. Carter, Snodgrass, and Baltzer, for the purpose of strengthening, and at the same time cheapening, the construction of sewer and other arches, as described in such patent as "invention of improvements" in concrete, cement, and mortar building, and other constructions and manufactures.

I am desired by my clients to state that they are willing to dispose of their sole powers and rights granted in such patent, and to offer the same to your Department for the sum of £1,500.

I have, &c.,

A. ARMSTRONG,

Agent for Messrs. Carter & Co.

## Appendix No. 8.

Messrs. Carter, Gummow, &amp; Co. to The Engineer-in-Chief for Sewerage.

Marrickville, 11 November, 1894.  
 Sir, In reply to your letter of 11th October, with regard to alteration of design between Premier-street shaft and Illawarra Road, we beg leave to state that we will accept the terms therein, provided a special item be arranged for the filling, at the rate of 5s. per cubic yard.

Yours, &c.,  
 CARTER, GUMMOW, & CO.,  
 Contract No. 69.

Mr. Davis.—R.H., 11/11/94. Commissioner for Roads.—D.C.M.L. (*pro* U.S.), B.C., 15/11/94. Will Mr. Weedon please let me have quantity of filling.—J.D., 17/11/94. Quantity of filling, due to alteration in design, 410 cubic yards.—S.H.W., 20/11/94.

The schedule rate for filling is 6d. per cubic yard; but it is manifest that the contractors, in giving this low price, did not contemplate doing the kind of filling required in connection with the western branch sewer, between Premier-street and Illawarra Road. The 5s. asked is, I consider, a little high; but I suppose, as they will lose something by the reduction of concrete and brickwork, occasioned by the alteration, it will be just to take this into account, and allow them what they ask. There will be about 400 cubic yards of this filling, which, at 5s. per cubic yard, would amount to £100. I recommend that the price named be approved.—J.D., 21/11/94. Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage.

This addition is caused by an alteration in the original design, which has the effect of reducing the cost of the work in this contract by about £750, and a further reduction on the whole work of £10,000. Recommended for approval.—R.H., 21/11/94.

For approval.—J.B., 28/11/94. Approved.—J.H.Y., 29/11/94. Roads.—D.C.M.L. (*pro* U.S.), B.C., 29/11/94. Seen.—R.H., 30/11/94. Mr. Weedon to note.—J.D., 4/12/94. Noted.—S.H.W., 6/12/94. File.—J.D., 7/12/94.

## Appendix No. 9.

No. 1.

C. H. Ohlfsen-Bagge, Esq., to The Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage.

21 September, 1894.

WESTERN OUTFALL SEWER—4TH DIVISION—ABOUT 40 CHAINS IN LENGTH.

THREE designs are herewith submitted for the consideration of the Engineer-in-Chief, each design with an open aqueduct carried upon arches and piers. The aqueduct, or main carrier, is capable of discharging 11,000 cubic feet of sewage per minute, which is equal to two 6-foot diameter outfall sewers, running three-quarter full, with a gradient of 1 in 2,000.

The sewerage aqueducts have hitherto been constructed here in such a manner, method, and of such materials, that any competent tradesman, in his special line, obtainable in the Colony, could do the work.

Now, however, as it is a matter of the greatest importance to reduce the cost of the works, there seems to be no other way of accomplishing this object, but to adopt for this Colony a more or less experimental system of construction for these aqueducts,—of increasing the spans of arches, introducing arches with joints, of constructing the whole in concrete, and of constructing the whole of the work of concrete and mortar and iron.

In the Old Home countries these novel systems of construction have caused in the commencement failures, owing to the works being carried out by more or less inexperienced and untrained engineers and artisans; hence the various State Governments would not entertain and construct works on these novel methods until special companies established themselves, who made it their special business to carry out such works with artisans who had had time to gain the necessary experience, and who had been practically and specially trained in the construction of such work.

It was only to such companies that works, which are termed purely and simply specialities, were entrusted, after they had given adequate security for the faithful, careful, and competent execution of same.

1st Scheme.

To be constructed on the system of Road-Engineer Koch, of Ulm, as reported by the Association of German Cement Manufactures, in their publication of 1892.

The concrete aqueduct rests on 50-foot span arches, concrete piers, and pile foundations. The piers are to be built on sixteen 18-inch diameter hardwood round piles, assumed to be 30 feet in length; each pile will have to carry 25 tons.

The pile-heads to be cut off level at a depth of 7 feet below datum, and from 9 inches below heads of piles, to a depth of 3 feet. They are to be filled in between with rubble packing, to make a footing for the concrete foundation course; the latter to be built of sandstone concrete.

The pier itself to be built of bluestone concrete, rounded on top as shown, and the rounded surface to be covered  $\frac{3}{4}$ -inch thick with asphalt (bitumen and cork), while the faces of the skewback are to be covered with Val de Travers' asphalt,  $\frac{5}{8}$ -inch thick.

In former sewerage aqueducts, which were built on piers and brick arches, it was specified, in order to reduce the cost of the centering, that not less than six arches should be constructed at a time, which necessitated an abutment-pier at the end of each series of six arches. These abutment-piers are, for economical reasons, not to be introduced in any of these schemes. It will, therefore, be necessary to at once provide in the construction for more centerings, perhaps fifteen at a time, which would be sufficient for about one-third of the length of the aqueduct, as all arches built of concrete require at the very least four weeks' time to harden before the centres can be removed.

A concrete arch of 50 feet span settles the moment the centres are removed. The more rigid and the more watertight the centres are made the less settlement of the arch takes place, which will vary from 5 inches to 1 inch accordingly; and the longer the centres are left under the arch, the less settlement takes place, provided always that the centres are made thoroughly watertight.

The removal of the centres has to be done with utmost care. The 50-foot span arches, having each a radius of 47 feet, and a rise of 7.2 feet, are 12 inches thick at the crown and 18 inches at the springing, with a  $\frac{3}{8}$ -inch thick transverse butt-joint at the crown, filled in with Val de Travers' asphalt, and the total horizontal thrust at this joint is 235 tons, with a safety factor of 8.7 at the area of cross-section in centre of arch. The arches are calculated upon Scheffler's theory, as described in Ira O. Baker, C.E., treatise on masonry construction, pages 474 to 479, of 1891. This arch is given liberty to contract and expand and move up and down without cracking. The tendency of concrete is the same as wrought-iron as regards expansion and contraction. The rise and fall of the arch should not exceed 1 inch at a difference of 60 degrees in the temperature.

The arches are to be built of bluestone concrete, and jointed, require very rigid centerings, and very careful, uniform manipulation, handling, and filling in of the concrete.

After the arches are completed, the concrete between the haunches (spandrels) to be built in, the outer faces 18 inches thick of bluestone concrete, and the inner filling of gravel concrete in the proportion of 1 cement, 3 sand, and 6 gravel.

There is to be a vertical butt-joint over centre of pier of  $\frac{5}{8}$ -inch, filled in with  $\frac{5}{8}$ -inch mastic plate. The joint extends right across and from top of pier to 9 inches below invert of aqueduct. It is to allow the arch to expand and contract without causing cracks in the concrete.

The main carrier (aqueduct, 8 ft. 8 $\frac{1}{2}$  in. x 5 ft. 3 in.) is to be built of bluestone concrete, its side walls on the reservoir dam principle, and to prevent its cracking, in consequence of expansion and contraction taking place, the concrete is strengthened and held together longitudinally at the base of each side-wall by four  $\frac{3}{4}$ -inch diameter iron bond-rods, and in the upper part of each side-wall by six  $\frac{3}{8}$ -inch diameter iron bond-rods, spaced as shown, and walled in with the concrete as the work progresses. The cement adheres to the iron rods with a force of about 675 lb. to the square inch surface of iron rod.

Over the centre of each pier the concrete of aqueduct has a transverse vertical butt-joint,  $\frac{5}{8}$ -inch wide, filled in with mastic plate, and the joint is made watertight by a 5-in. x 10-in. channel, built down in the side-walls and underneath invert of carrier, filled in with mastic.

PROBABLE

## PROBABLE Estimate of the Cost of 58 feet length of Aqueduct, from centre line of Pier to centre line of Pier.

At per lineal foot, £9 11s. 5d. ; or at per lineal yard, £28 14s. 3d.

## 2nd Scheme.

The 2nd scheme proposed is to be built on the same principle, the rise and spans of arches, &c., as the 1st scheme, with the exception of the main carrier, which, although of the same internal dimensions, is to be built with much thinner side walls, which reduces the outside width of aqueduct from 14 feet to 10 ft. 8 in., and thus materially diminishes the general quantities.

The side walls of the aqueduct, being so much thinner, are to be strengthened, each wall, by vertical  $\frac{3}{8}$ -inch diameter wrought-iron bond-rods, spaced 2 ft. 7 $\frac{1}{2}$  in. from centre to centre, and nine longitudinal  $\frac{3}{4}$ -inch diameter wrought-iron bond-rods, spaced and built in as shown. Along the outside faces of copings a 4-in. x 2-in. x  $\frac{1}{4}$ -in. channel-iron to be built in, and transverse, 2 $\frac{3}{4}$ -in. x 2 $\frac{3}{4}$ -in. x  $\frac{3}{8}$ -in.  $\Gamma$  iron braces are to be placed, spaced 7 ft. 10 in. from centre to centre, and bolted on to the channel-iron of each side wall.

The transverse butt-joints in concrete work of aqueduct are similar to those of the 1st scheme, with the exception of the 5-in. x 10-in. channel-joint round the aqueduct, which is to be left out in this instance, and a  $\frac{3}{8}$ -in. straight transverse joint is provided instead over centre line of pier, filled in with mastic plate.

The 50-foot span arch, with rise of 7.2 feet, is 12 inches thick in centre and 21 inches at the springing, and has a transverse butt-joint in the centre of  $\frac{3}{8}$  inch, filled in with asphalt (Val de Travers). The total horizontal thrust at centre is 144 tons, with a safety factor of 10 at the area of cross-section in centre of arch.

The piers to be built on twelve 18-inch diameter piles, filled in between at top, 3 feet deep, with rubble-stone packing to make sound footing for concrete pier. Each pile has to carry 22 tons, as against 25 tons of the 1st scheme.

The foundation courses under each pier to be built of sandstone concrete; the pier, arches, aqueduct, and outer faces of spandrels to be built of bluestone concrete, while the filling in between the haunches of arches to be done with gravel concrete.

## PROBABLE Estimates of the Cost of 58 feet length of Aqueduct, from centre line of Pier to centre line of Pier.

At per lineal foot, £6 16s. 11.3d. ; or per lineal yard, £20 10s. 10d.

In support of the system applied for the construction of the two schemes just described, I can refer, amongst similar structures, to the one built by Mr. Road-Engineer Koch, of Ulm, as reported in the publication of the Association of German Portland Cement Manufactures in 1892, and to one road bridge built by Von Liebbrand, as reported in the Proceedings of the Association of German Engineers of 28th July, 1894 (page 908).

Mr. Koch's concrete bridge was built near Erbach, on the Danube, in Württemberg, with a jointed arch of 104.98-foot span, rise of arch 13 feet, thickness at the crown 1 ft. 7 $\frac{1}{2}$  in., and at the springing 2 ft. 4 in., and a width of roadway between parapets of 19 ft. 6 in. The arch was built in transverse slips 31.49 inches in width, with radiating end faces held by boards, well rammed. On removal of centering (after two months) the arch settled at the crown about 1.9685 inch, and after the road material had been placed in position the total settlement at the crown amounted to 4.7244 inches. This bridge was built by the Association of German Portland Cement Manufacturers.

Mr. Von Liebbrand's concrete bridge was built over the Danube in one arch of 162.5-foot span, with a rise of 16.25 feet, 3.25 feet thick in centre, and 3.6 feet thick at the springing. The arch rests at one side upon hard limestone rock, and on the other side on a pile foundation. The bridge is also a road bridge, 25 feet wide between parapets; it has been built near Munderkingen, in Württemberg, and has stood, at the time when it was reported, from 16th November, 1893, till 28th July, 1894.

These bridges carry roadways, whereas those of the two schemes herein described will have to carry an aqueduct, with such precautionary arrangements, however, which should be sufficient to prevent the concrete from cracking.

## Drawings accompanying Schemes Nos. 1 and 2.

Schemes Nos. 1 and 2 are accompanied each by one sheet of drawing, showing the proposed general design, and one sheet of drawing showing diagram of forces on the arch and at the abutment pier at Muddy Creek. The blue lines in arches and abutments show the line of pressure as the result of Scheffler's theory, and the red lines in the other diagrams show the resultants in size and direction.

The diagram at side wall of aqueduct of the first scheme shows the resultant in position, size, and direction of water pressure and weight of water at a point 45 inches below top of wall when aqueduct is supposed to be running full up to level of top of coping.

## 3rd Scheme.

Proposed to be constructed on the Monier system, with concrete piers on pile foundations, 75-foot span arches of 80 feet radius, rise of arch 9.3 feet; spandrels of dwarf-piers and small arches carrying the aqueduct.

The piers to be built on 12 18-inch diameter piles, assumed to be 30 feet in length, each pile to carry 22.25 tons. Pile heads to be cut off level at a depth of 7 feet below datum. From 1 ft. 6 in. below heads of piles, and for a depth of 3 feet, the piles to be filled in between with rubble-stone packing to ensure a solid foundation for the concrete foundation courses, to be built of bluestone concrete.

The piers to be built of bluestone concrete, excepting recesses for reception of footing of arch, which, when the latter is being built, will be filled in with cement mortar the same as arch.

The 75-foot span arch to be constructed on perfectly rigid and watertight box centering, of which no less than 10 should be provided at a time.

The arches to be 10 inches thick at the crown and 14 inches thick at the springing; total width, 9 ft. 5 in., to be constructed of cement mortar in the proportion of 1 to 3, strengthened by a wrought-iron network for the whole length and width, placed  $\frac{3}{4}$  inch above intrados of arch, and a similar network placed  $\frac{3}{4}$  inch below extrados of arch, extending from each springing for a length of about 29 feet up the arch. The building of each arch to be commenced at both ends simultaneously and continued towards the crown without intermission until completion.

The lower and upper wrought-iron network to consist of  $\frac{3}{8}$ -inch diameter longitudinal rods, spaced 2 $\frac{1}{2}$  inches from centre to centre, and the cross-bars to be  $\frac{1}{2}$ -inch diameter rods, spaced 3 inches from centre to centre.

The total horizontal thrust at crown of arch is 180 tons, equal to 356 lb. per square inch of sectional area of same, whereas a square inch ought to stand 2,000 lb. (factor of safety, 5.618).

The spandrels, between extrados of main arches and underside of aqueduct, to be constructed of dwarf-piers and small arches as shown. The dwarf-piers to be built of bluestone concrete, but the plinths of said piers to be built of cement mortar of the same quality as to be used in the main arches, and simultaneously with the arches. Dwarf-piers to be 12 inches thick, excepting the 2-foot piers between main arches; all piers to be built of concrete up to springing of small arches, and above that level they are to be completed with cement mortar, built in simultaneously with the small arches. The upper part of central pier to be rounded off at top as shown, and covered 1 inch thick with asphalt (bitumen and cork).

The vertical 1-inch joint to be filled in with mastic plate, and the 3-inch by 4-inch channel joint to be filled in with mastic.

The piers in the first instance to be built up to level of springing throughout a length of 660 feet at a time, and, on completion of the piers of the second length of 660 feet, the small arches of a series of 60 at the time to be constructed over the piers over the first length of 660 feet, and so on, to ensure the whole structure being evenly and uniformly weighted as it progresses.

The piers are spaced 7 ft. 3 in. apart, and closed in at top with arches built of cement mortar (1 to 3) and wrought-iron. The small arches with a radius of 6 ft 7 $\frac{1}{2}$  in. and 13 inches rise, to be built on rigid watertight box centerings; they are to be 3 inches thick at the crown and 5 inches thick at the springing, 9 ft. 5 in. in width, and strengthened by a wrought-iron network of the same description as that for the 75-foot span arches, placed  $\frac{3}{4}$ -inch above intrados of arches.

The total horizontal thrust at crown of small arches is 13 tons, which gives 85 lb. per square inch of sectional area, equal to twenty-three times security.

The spandrels between extrados of small arches and underside of aqueduct and the narrow portion of spandrels near crown of main arch to be built in with fine bluestone (bluestone toppings) concrete.

The aqueduct to be 8 ft. 1 $\frac{1}{2}$  in. wide at top and 5 ft. 3 in. deep, although a few inches less in width than the aqueducts of the 1st and 2nd schemes, its sides are less battered, and its bottom or invert being straighter, has the same cross-section area, and can therefore discharge the same quantity of sewage.

The side walls and invert to be constructed of cement mortar in the proportion 1 in 2, the side walls at the top to be 4 $\frac{1}{2}$  inches thick, and at a depth of 3 ft. 9 in. from the top to be 6 inches thick; the level portion of invert to be also 6 inches thick. The walls and invert to be strengthened by wrought-iron network, one to be placed 1 $\frac{1}{2}$  inch below inner face of aqueduct, and one to be placed vertical 1 $\frac{1}{2}$  inch below outside faces of side walls of same.

These networks to be made of  $\frac{1}{4}$ -inch diameter longitudinal rods, with the exception of the six upper rods in each side wall, which are to be  $\frac{3}{8}$ -inch diameter; all to be spaced 2 $\frac{3}{4}$  inches from centre to centre, and the cross-bars to be  $\frac{3}{8}$ -inch diameter, spaced 2 $\frac{1}{2}$  inches from centre to centre on the inside of aqueduct, while for the outside faces of same the longitudinal rods to be 3 inches and the vertical cross-bars 4 inches from centre to centre.

To prevent the aqueduct from cracking there is to be an inch butt-joint right across same over the centre of the main pier, to be filled in with mastic plate. The joint to be made water tight by a 3-in. x 4-in. channel joint running vertically down the side walls and underneath invert of aqueduct, to be filled in with mastic.

The inner and outer surfaces of aqueduct, front elevation of main arches, dwarf-piers, and small arches, and main piers all round, to be rendered  $\frac{5}{8}$ -inch thick with cement mortar (1 to 2).

The main piers of aqueduct are corbelled out on elevations of same, as shown, to be built up to the level of top of side walls, leaving an inch space between it and outer face of side wall, to be filled in with mastic plate.

## Drawings accompanying the 3rd Scheme.

Scheme No. 3 is accompanied by one sheet of drawing, showing the proposed general designs, and by a second sheet of drawing showing diagrams of forces on the 75-foot span arches, loaded and not loaded, and on the 7 ft. 3 in. arches loaded only. The blue lines in the diagrams show the line of pressure as the result of Scheffer's theory, checked by the theory of elastic arches (by W. M. Cain, C.E.), and the red lines in the diagrams show the resultants in size and direction.

## PROBABLE Estimates of the Cost of 83 feet length of Aqueduct, from centre line of Pier to centre line of Pier.

| Item | Description of Works.  | Unit.           | Quantity. | Rate.   | Amount.  |

At per lineal foot, £6 6s. 8.3d.; or at per lineal yard, £19 0s. 1d.

## Calculations.

All that we know so far of the mode of constructing works designed on the Monier system is described in pamphlets giving a number of works carried out by the patentees, accompanied by sketches and photos of said works, and furnishing the reason for which the work was carried out, and the sizes and dimensions on the sketch drawings, but giving no clue whatever as to any formula or principle that ought to be used in calculating the forces which should have to be contended with in the various structures enumerated in said pamphlets.

In order to meet this difficulty the radius of the 75-foot span arch of Scheme No. 3 had to be so selected that the centre line of forces (line of resistance) should always keep within the middle third of the arch ring.

The centre line of resistance was constructed by Scheffler's theory, and checked by the theory of elastic arches (W. M. Cain, C.E.), after which the thickness of the arch was determined in a manner so that at no part the compression exceeds 400 lb. per square inch, which, in this instance, fixed the minimum thickness of arch at 10 inches at the crown and at 14 inches at the springing, giving a safety factor of 5.618.

The wrought-iron network was mainly to be laid in as additional security, to strengthen the arch, on account of the low factor of safety and the light structure of the arch.

Exactly the same system has been adhered to in the construction and calculation of the arches in the spandrels.

With respect to the aqueduct in connection with the third scheme, on the Monier system, it must be borne in mind that the office had also to adopt its own method for ascertaining the strength and dimensions for the invert and sidewalls of same, which resulted in fixing the width of top of sidewall at 4½ inches, the outer faces of sidewalls to be vertical, and at a depth 3 ft. 9 in. from top of sidewall, the latter to 6 inches thick, the invert at end of side curve to be always 6 inches thick.

Summary.

| Name of Scheme.  | Span of Arch. | Rise of Arch. | Factor of Safety. | Cost per lineal foot. | Cost per lineal yard. | Length of Work. | Total Cost. |

Mr. Ahern's present outfall sewer, Contract No. 101, if calculated for two sewers  
of 6 feet diameter, would cost ... .. £10 16 1 £32 8 3

C. H. OHLFSEN-BAGGE.

No. 2.

Mr. C. H. Ohlfesen-Bagge to The Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage.

Sydney, 14 March, 1894.

THE tenders for the construction of the northern main sewer, Annandale and Leichhardt sections, Contract No. 77, have now been checked, the lowest being that of Messrs. Carter, Gummow, & Co., at 28½ per cent. below schedule rates, amounting to £15,757 ls. 9d.

The following are the other tenderers :—

|                                       |  |

| Carter, Gummow, & Co. ....            | Lump sum of £15,500.                   |

With respect to Messrs. Carter, Gummow, & Co.'s second tender for a lump sum of £15,500, I find that it is accompanied by a special design on the "Monier" system.

The plans for the White's Creek and Johnstone's Creek aqueducts as designed in this office, for which tenders were invited, were prepared with a view to securing the most substantial and enduring structure at the most reasonable cost. At the time that this design was made I had as full particulars regarding the "Monier" principle as it was possible to obtain in the Colonies. I would also like to point out that in Europe this class of work is made a speciality, being patented, and is wholly in the hands of private companies, who are required to give a substantial guarantee for the stability of their work. I think it would not be advisable to construct at the outset a work of such importance on the "Monier" principle.

ROBERT HICKSON,  
Vice-President of Tender Board.

No. 4.

No. 4.  
Report by Board of Reference.

Board of Reference.—Tenders for Contract No. 77, Main Northern Sewer, Annandale and Leichhardt Sections.

THE tenders for this work were submitted to the Board to-day. In doing so, Mr. Hickson pointed out that fifteen tenders had been received, the lowest being that of Carter, Gummow, & Co., at 28½ per cent. below schedule rates—amounting approximately to £15,757 ls. 9d. The same firm also submitted a lump sum tender for carrying out the work, according to a plan sent in by them, for the sum of £15,500. The plan submitted is for constructing the work on the "Monier" arch principle. This system has been extensively used during recent years on the Continent of Europe with successful results, and Mr. Hickson sees no reason why, under certain restrictions, the opportunity should not be taken to introduce the system in the public works of this Colony. The advantages claimed by the patentees are that works can be carried out at a much cheaper rate wherever this method of construction is used. Mr. Hickson said he had no doubt that the design submitted was thoroughly suitable and likely to be effective, and as the main principles as regards size and inclination of sewer were as provided for in the Departmental design, he was prepared to recommend it; but if it was decided to accept the tender, a short specification of the work should be included in the bond, and provision also made for the maintenance of the work by the contractors for a certain period after completion.

Mr. Hickson further said, that as Mr. Darley would be the responsible officer for carrying out this work, he had gone into the matter very thoroughly with that gentleman, and Mr. Darley was quite prepared to endorse his views.

The Board, in view of the fact that Messrs. Darley and Hickson are satisfied that the principle is a sound one, and that the adoption of the plan will result in considerable economy, are prepared to endorse the recommendation of these gentlemen, and now submit the matter for the Minister's consideration.

J. BARLING,  
Chairman.  
C. W. DARLEY,  
Engineer-in-Chief, Harbours and Rivers.  
ROBERT HICKSON,  
Commissioner for Roads.  
H. DEANE,  
Engineer-in-Chief, Railway Construction.  
W. L. VERNON,  
Government Architect.

J. W. HOLLIMAN, Secretary,  
20 March, 1895.

Submitted.—J.B., 27/3/95. Before approving of this proposal I should like an estimate of the actual value of the work to be carried out by the contractors under the substituted scheme.—J.H.Y., 27/3/95. Mr. Hickson.—J.B., 28/3/95.

To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm, estimates were made for the work on the Monier system, as well as on the Department's designs. The result was that the estimate of both works was practically the same. Applying that comparison to this case, it would mean that the Departmental estimate for the work under consideration would be £22,000.—ROBERT HICKSON, 28/3/95. Under Secretary.

Submitted.—J. BARLING, 28/3/95. This is quite sufficient for me, and I now approve of the recommendation of the Board being carried out.—J.H.Y., 29/3/95. Accept.—D.C.McL. (*pro* U.S.), 29/3/95.

No. 5.

Messrs. Carter, Gummow, & Co. to The Secretary for Public Works.

Sir,

North Sydney, 4 April, 1895.

We have the honor to draw your attention to the conditions upon which the acceptance of our tender depends for Contract No. 77, Balmain Sewerage Works, and to our conversation with you of even date in connection with security required for its due performance.

We respectfully submit that our personal sureties for the amount necessary should be taken for its completion and maintenance, and as a sufficient guarantee for the proper carrying out of the work.

We are a firm of sound financial standing, well and favourably known to your Department as contractors for many large and important contracts extending over a period of eight or nine years under the Departments of Harbours and Rivers, and Roads, Bridges, and Sewerage, which facts we trust will satisfy you as to our *bona-fides* in this matter.

We have, &c.,  
CARTER, GUMMOW, & CO.

No. 6.

The Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage to The Under Secretary for Public Works.

Sydney, 5 April, 1895.

THE accompanying letter of 4th April, 1895, from Messrs. Carter, Gummow, & Co., is a protest against the stringent supplementary specification prepared by Mr. Norrie, at my suggestion, with regard to the alteration in the design of Contract No. 77.

The last paragraph of this specification states: "And the contractors shall enter into a bond to Her Majesty the Queen in the penal sum of £12,000, with two sufficient sureties in the penal sum of £6,000 each, to secure the removal of so much of the said works as shall have been constructed on the Monier system, &c., &c."

The amount of £12,000 is the sum it would cost the Department, at Departmental rates, to renew that portion of this sewer which is built on the Monier system.

It is right, however, to say, that the tendered rates for this portion of the work would only come to £9,000, but prices being abnormally low, I think it is only right to put in a sum at which the Department really values the work.

Messrs. Carter and Gummow ask that their own "personal sureties for the amount named," *i.e.*, £12,000 (an amount which they do not dispute), "should be taken for its completion and maintenance, and as a sufficient guarantee for the proper carrying out of the work."

They go on to say that they are "a firm of sound financial standing, well and favourably known to the Department as contractors." This is quite true. They are a firm in which I have every confidence. They have done a great deal of work under me, and I can testify that their aim always has been to turn out the very best class of work possible. At the same time, misfortunes happen the very soundest firms of contractors, and the Department must look a little way into the future. Their own bond of £12,000 would be really of no use if they were unfortunate enough in the meantime to become bankrupt.

I think, therefore, it is right that the sureties should be insisted upon. They give the names of two men, Mr. George Forrest and Mr. James Gillan. From inquiries made, I believe these men to be financially sound, and I think, if their names were accepted as the sureties in the penal sum of £6,000 each, the Department would be secured as far as it is reasonably possible to be.

This work will be carried out under Mr. Darley, and I recommend that the whole of the papers be sent him to give his opinion thereon.

ROBERT HICKSON.

Mr. Darley for report.—J.B., 5/4/95.

I concur with Mr. Hickson. I think in accepting a new patent of this kind, and adopting it in a large and costly contract, that the Department cannot be too careful in securing its position by leaving all the risk in the hands of the contractors and patentees. I, therefore, recommend that the personal names be required for further security. The names mentioned may, I think, be accepted.—C.D., Engineer-in-Chief, Metropolitan Sewerage Construction, 8/4/95.

For Minister's approval as to course suggested in regard to sureties.—J. BARLING, Under Secretary, 9/4/95. Approved.—J.H.Y., 10/4/95. Mr. Norrie.—J.No. P., 10/4/95. Messrs. Carter, Gummow, & Co., Auditor-General, Mr. Norrie, 11/4/95.

## No. 7.

## Purchase of Messrs. Carter, Snodgrass, and Baltzer's Patent.

THE patent herein referred to is, I believe, based upon the "System Monier." Monsieur Monier was the proprietor of a garden near Paris, who, in endeavouring to construct large and durable flower pots of cement mortar, which enclosed a frame of wire netting, detected the extraordinary strength of this material as compared with cement only, and in this manner speedily developed this system in manufacturing and constructing upon the same principle—bridges, roofs, gas and water tanks, ceilings, walls, &c., until the extraordinary strength of the Monier material became gradually very favourably known. Messrs. G. A. Wayfs & Co., in Berlin and Leipzig, are the patentees for Germany. They manufacture from the "Monier material," floors, wells, tanks, arched ceilings, roofs, bridges, stairs, pipes, columns, &c., in such a manner and to such an extent that the Monier system has been very creditably mentioned in the proceedings of the Association of Engineers in Germany since early in 1888.

The Monier construction system has been founded and developed by experiments on natural scale (which have been carefully watched by this Department for some years) and can only be carried on by persons trained in the works, or trained by experiments under the guidance of initiated persons. It should therefore be introduced here in a manufactory, and by an agent of the company experienced in the work, who should be in a position to offer the manufactured articles at their prices, subject to any tests which the authorities might deem necessary to enforce.

As regards the patent offered by Messrs. Carter, Snodgrass, and Baltzer, I have not had the opportunity of examining it to discover in what way it differs from the "Monier patent," nor do I know if the Monier system has been patented in this Colony. If it has not, I presume it is free to public use, as it has been known in the Colony for some years.

The patentees might be requested to furnish a copy of their patent, with drawings and calculations of strength, so that further examination of its merits may be made.

C. H. OHLFSEN BAGGE, 7/4/93.

Ask one of the firm to see me.—R.H., 10/4/93.

Carter & Co. informed.—F.C.P., 11/4/93.

I find Messrs. Carter & Co. have patented in Australia "Monier's patent concrete arch." This arch has been under my consideration for some time, long before it was patented here, and as soon as funds are available I have arranged for the erection of a small culvert on this principle, without a patent fee. In any case I could not recommend compliance with this request. A small fee per bridge might be granted if it is found desirable to erect any more on this design.—R.H., 12/4/93.

List to so inform.—J.B., 17/4/93. Approved by Minister.—W.J.L. Order No. 1,225.—D.C.M'L., 24/4/93. Inform.—J.B., 24/4/93. A. Armstrong, Esq., 28/4/93. Will Mr. Hickson kindly see me about this at his convenience.—J.B., 8/5/93. Put away for the present.—R.H., 16/6/93.

## Appendix No. 10.

Divisional Engineer.—August, 1894.—Metropolitan Division.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 18 July, 1894.

Minute Paper.

Subject:—"Monier System of Concrete Arching."

THE Monier system of concrete arching has been patented in the Colony by Messrs. Carter & Co. Where applicable, it reduces the cost of spanning an opening by about 50 per cent.

The patentees are willing to allow the Department to use the patent on payment of a royalty of 15 per cent. on the cost of the arch. I recommend this for the Minister's approval.

I might state I have just completed (with the permission of the patentees) a culvert on the Parramatta Road, built on this principle, with most satisfactory results, financially and otherwise.

ROBT. HICKSON.

Mr. Hickson's recommendation approved.—J.H.Y., 6/8/94.

## Appendix No. 11.

Divisional Engineer.—2 July, 9.—Metropolitan Division.

Sir, Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 2 February, 1894.

Referring to our conversation *re* the use of our patent system of bridge and culvert building, we hereby inform you that the royalty we require for the use of the same by your Department will be 15 per cent. on the cost of construction.

We are, &c.,

CARTER & CO.

## Appendix No. 12.

Department of Public Works, Engineer-in-Chief for Metropolitan Sewerage Construction,  
341, Pitt-street, Sydney, 9 September, 1895.

Contract 77.

WILL the Engineer-in-Chief kindly approve the accompanying schedule of prices for use in preparing progress vouchers in this contract, the price for which is "lump sum"?

It will be observed that quantities are slightly altered from original. This has been done in order to provide for "Monier" work, which has been substituted for brickwork.

T. GRIFFITHS,

Supervising Engineer, Metropolitan Sewerage Construction.

Engineer-in-Chief, Metropolitan Sewerage Construction.

CONTRACT No. 77.

This is the Schedule of Quantities and Prices hereinbefore referred to.

| No. of Item. | Description of Works.   | Unit.      | Probable Quantity. | Rate per Unit. |
|--------------|---|------------|--------------------|----------------|
|              | Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing, pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21:— |            |                    | £ s. d.        |

| 53           | Artizan or mechanic, supplied by Contractor.....  | day ....    | "                  | 0              | 11 0  |
| 54           | Quarryman or other skilled labourer, supplied by Contractor .....   | "           | "                  | 0              | 10 0  |
| 55           | Ordinary labourer, supplied by Contractor .....   | "           | "                  | 0              | 8 0   |
| 56           | Cart, with one horse and driver, supplied by Contractor.....  | "           | "                  | 0              | 11 0  |
| 56           | One additional horse, supplied by Contractor .....  | "           | "                  | 0              | 5 6   |

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56 are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer-dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## CONTRACT No. 77.

This is the Schedule of Quantities and Prices hereinbefore referred to.

(The printing in heavier type indicates additions and alterations to original Schedule).

| No. of Item. | Description of Works.   | Unit.      | Probable Quantity. | Rate per Unit. |                  |
|--------------|---|------------|--------------------|----------------|------------------|
|              | Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21 :— |            |                    | £              | s. d.            |
| 1            | Excavation in road surfaces, soil, sand, loam, clay, ironstone, soft rock only .....  | cubic yard | 4,244              | 0              | 2 0 — 424 8 0    |
| 2            | Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....   | "          | 140                | 0              | 7 0 — 49 0 0     |
| 3            | Excavation in hard rock where charges of powder 4 in. in length x 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....   | "          | 1,160              | 0              | 6 0 — 348 0 0    |
| 4            | Excavation in tunnels in solid rock for main and branch sewers, junctions, subducts, curves, &c., as specified in clauses 3, 4, 10, and 21 :—   |            |                    |                |                  |
| 5            | Excavation in hard rock where guttering and gadding only is permitted .....   | "          | 90                 | 3              | 5 0 — 292 10 0   |
| 6            | Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted .....  | "          | 100                | 3              | 0 0 — 300 0 0    |
| 6            | Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted .....   | "          | 1,000              | 2              | 17 6 — 2,875 0 0 |
| 7            | Excavation in more or less hard materials and in solid rock, in shafts and shaft-chambers, as specified in clauses 3, 6, 10, and 21 :—  |            |                    |                |                  |
| 8            | Excavation in road surfaces, loam, ironstone, shale, and soft rock only...  | "          | 20                 | 0              | 6 0 — 6 0 0      |
| 8            | Excavation in hard rock where charges of powder 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted .....   | "          | 4                  | 1              | 2 6 —            |

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56 are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer-dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting watercourses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

CARTER, GUMMOW, & Co., Contractors for Contract No. 77. Progress Return, No. 9, showing quantity and value of work executed or fixed, and material advanced on, on the 12th day of May, 1896.

### Appendix No. 13.

EXTRACT FROM *Hansard*, 19 MAY, 1896.

\* \* \* \* \*

Mr. REID: No, I do not think there was; because the hon. gentleman came to me to press this matter forward as one of great urgency, and gave me a reason for it, and I immediately summoned a Cabinet to meet that afternoon out of the regular time. That is the reason there was not a full Cabinet. I quite agreed with the hon. member that there should be no delay. We all know how witnesses are got out of the way if there is any time.

Mr. PARKES: I can tell you Mr. Hickson's son has gone!

Mr. REID: The hon. member will see that I recognise what he says.

Mr. YOUNG: The hon. gentleman made a very unfair imputation. He has been gone a month.

Mr. CRICK: How did the hon. gentleman know that?

Mr. YOUNG: I was told so yesterday?

Mr. REID: My hon. colleague would naturally ask about it, after all that has been said about it. Surely he is entitled to ask in his own Department.

Mr. PARKES: I hope the hon. member knows where he is?

Mr. YOUNG: I do not!

Mr. REID: If he went months ago, the hon. member has found a little mare's nest this time.

## Appendix No. 16.

DEPARTMENT OF PUBLIC WORKS.—METROPOLITAN SEWERAGE CONSTRUCTION.—TENDER FORM.—BALMAIN AND LEICHHARDT EXTENSION, 3RD DIVISION, NORTHERN MAIN SEWER.

Contract No. 117.

IN pursuance of an advertisement in the *Government Gazette* (I or we), the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Balmain and Leichhardt Extension, 3rd Division of the Northern Main Sewer, agreeably to the Plan, Specification, Schedule to Specification, Special Conditions, and General Conditions, which have been inspected by (me or us), at \_\_\_\_\_ per cent. the prices affixed to each item, in the Schedule of Prices annexed hereto, and to complete the same within ten months from the date of the acceptance of this Tender; and (I or we) do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rate quoted above, or if not in Schedule, at a price to be agreed upon at the time, and (I or we) hereby undertake that (I or we) will, within fourteen days from the date of the notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works a valid legal Contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said General Conditions; and (I or we) enclose herewith (our or my) cheque for the sum of £77 as a preliminary deposit; and (I or we) agree that such sum shall be absolutely forfeited if (I or we) at any time within thirty days after the said Tender is opened withdraw the same, or if in the event of this Tender being accepted (I or we) fail to complete the above-mentioned Contract document within fourteen days thereafter; and further, that this Tender is made subject to the Conditions contained in the Tender Board Regulations, printed on the back hereof, and by which (I or we) agree to be bound.

Dated this \_\_\_\_\_ day of \_\_\_\_\_ 189 \_\_\_\_\_  
 This is the Tender marked “ \_\_\_\_\_ ” referred to in \_\_\_\_\_ annexed Agreement with Her Majesty the Queen,  
 dated the \_\_\_\_\_ day of \_\_\_\_\_ A.D. 189 \_\_\_\_\_  
 Witness—

## TENDER BOARD REGULATIONS.

No tender shall be received after 11.30 a.m. on the day named for the receipt of such Tender, unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received. The

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

|   |         |
|---|---------|
| For amounts up to £500 inclusive .....                    | £5 0 0  |
| For amounts exceeding £500 and not exceeding £1,000 ..... | £10 0 0 |

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any Contract being tendered for at a Schedule of Rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a Tender the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

#### CONTRACT No. 117.

This is the Schedule of Prices hereinbefore referred to.

NOTE.—Unless especially notified otherwise, all reference to Clauses occurring throughout this Schedule of Prices are to be understood to refer to Clauses of the Specification hereunto attached.

| No. of Item. | Description of Work.  | Unit.      | Rate.   | Amount. |

Tenderers must state only one rate of percentage above or below all the prices in the above Schedule

All work herein enumerated shall be understood as being placed in position where specified and ordered and in complete working condition, in accordance with the Specification

The above Schedule Prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer

Prices for items Nos 41, 42, 43, 44, and 45 are to be for such as are able bodied and efficient. The Schedule rates per day are for the day of eight hours. In the event of overtime and night work being ordered, it is to be paid for at 25 per cent advance on the time rates set down for day work

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water courses and surface water, diverting and maintaining the traffic along roads, crossing over pipe sewers, disposal and removal of surplus materials on completion of Contract, reinstating all roads and other surfaces, &c, and any other thing necessary in executing and completing each respective item in accordance with plans and Specification.

This is the Schedule of Prices marked " " referred to in annexed Agreement with Her Majesty the Queen, dated the                      day of                      A D 189 .

W. THOMPSON.  
Appendix

## Appendix No. 18.

Sir, Patent's Office, Sydney, N.S.W., 3-(17) November, 1892.  
I beg to make application for Letters Patent for an invention of "Improvements in concrete and cement mortar building and other constructions and manufactures." The petitioners being Messrs. J. Carter, D. G. Snodgrass and W. Baltzer.

In connection with this application, I enclose the following documents:—

1. A petition in the form prescribed by law.
2. A complete specification of the invention.
3. A copy of the specification.
4. Two sheets of drawings (in duplicate).
5. A Treasury receipt for £5.

Yours, &c.,  
FRED WALSH,  
Manager.

The Examiner of Patents.

The 7th sub-sec. of Reg. 22 has not been complied with.—P.P.P., 4/11/92.

I cannot report in favour of this application, as it seems to me that the alleged improvements have been anticipated in the invention revealed in the specification attached to Letters Patent of this Colony, No. 3,147. Inform agent.—J. B. O'C., 9/12/92.

International Patent and Trade Marks Office, established,—Melbourne, 1859; Sydney, 1882; Brisbane, 1887; Sydney, 22nd December, 1892.

Sir, Re Carter and others application for Letters Patent, No. 4,084. 11 January, 1893.

I have to thank you for yours of 9th instant herein, and specially for the reference you make to Letters Patent, 3,147.

My clients, however, were aware of the patent mentioned, and believed that in their claims they have avoided claiming anything included in the claims of that prior patent or shown in the specification thereof.

I would point out that in the former patent it is essential that *beams* be used, and it is over and between the beams that the patentee places or droops a *wire fabric*, the whole being embedded in concrete. My clients dispense with the beams altogether, and use solid bars tied together to form a skeleton on which the concrete is supported, and there is no wire fabric in the strict sense of the term used in my clients constructions. The claims of Messrs. Carter and others are not wide, being simply for the material consisting of bars laid across each other and tied at their intersections, embedded in concrete, as an improvement in building. Should you require it, I am willing to insert the words "and tied at their intersections" after the words "other" and "another" in the first and second claims respectively.

I trust in view of the foregoing you will see your way clear to recommend the grant of my clients' application.

Yours, &c.,  
FRED WALSH,  
Manager.

The Examiner of Patents, Patents Office, Sydney.

Upon reconsideration, and in view of the communication from Mr. Walsh, I am now of opinion that if the suggested amendments be made in the specification Letters Patent might issue to his clients. Inform.—J. B. O'C., 12/1/93.

(A.)

## COMPLETE SPECIFICATION.

Improvements in concrete and cement mortar building and other constructions and manufactures.

We, John Carter, David Graham Snodgrass, and William Baltzer, all of North Sydney, in the Colony of New South Wales, engineers, do hereby declare the nature of the abovenamed invention or improvement to be as follows:—

This invention, consisting of improvements in concrete and cement mortar building and other constructions and manufactures, is especially adapted for constructing buildings, bridges, arches, sewers, pipes, water tanks, gas reservoirs, walls, floorings, ceilings, roofings, stairs, columns, and fire-proof structures, and concrete or cement mortar constructions and manufactures of all kinds and conditions in which strength and safety from fire, together with economy in cost, are required. It is especially useful in the construction or production of culverts, arched and other bridges, subways, aqueducts, bridge flooring, outside partition and double walls, fire and burglar proof receptacles and strong rooms, arched and level ceilings, roofs, arches, girders, steps, staircases, columns, baths, hollow bricks and masonry, chimneys, water tanks, gas reservoirs, cattle and other troughs, swimming basins, flower-pots, pipes for water, gas, telegraph wires, conduits for cable ways, lining for tunnels, shafts, wells, and cesspits, locks and gates for rivers, flagging for yards, floors, and footpaths, walls and floors of silos, sewers, open channels, factory chimneys, and light-houses, and for similar purposes. Among the many advantages which buildings and other structures and manufactures constructed according to this invention possess over similar ordinary work are speed of erection without prejudice to durability and security of the work, immunity from injury by water, extraordinary power of resisting very high and variable temperatures, great strength, lightness, saving of space, the satisfying of all acoustic and hygienic demands, and cheapness and neatness.

In carrying out these improvements, a lattice or skeleton work consisting of a number of iron bars or rods is first formed, the bars being held in their relative positions by binding at their intersections. Should the bars be insufficiently long to reach from end to end of the structure or article, they are overlapped and held by a similar thin binding. Any other suitable method, however, for holding the bars together at their intersections or overlappings might be employed. The bars used are of different sizes, and are placed to suit the various stresses to which the structure is likely to be subjected, the larger or stronger being placed in the direction of the tension and the thinner being placed across them, thus forming open angular meshes of suitable size and angle. The binding is of sufficient strength to hold the bars in position, during the process of packing the concrete around them. This lattice or skeleton work is erected in the required position and is supported in the manner most suitable for the construction for which it is intended, care being taken that the iron-work is kept at a sufficient distance from the intended outside face of the concrete that a good covering thereof will be ensured round the said iron. The bars having been properly arranged and secured in their places, concrete or cement mortar, or plastic material of sufficient strength of any suitable description, is pressed in the usual manner of moulding such structures or articles round the bars or lattice or skeleton work to the required thickness in such a manner that a good solid body is formed. In setting, the concrete for mortar or plastic material shrinks, and takes a firm hold of the iron, thus forming one homogenous mass of the description desired.

So far as described the construction takes place *in situ*, but this is not an essential feature of the invention, as the structures might be made up of plates or mouldings separately constructed, and bolted or otherwise fastened or jointed together or to other frames, as in the case of pipes, columns, and other manufactures: but, at the same time, where possible, it is preferable to construct the latticed concrete or cement work in its permanent position.

The accompanying drawings, illustrating the main features of this invention, will be easily understood without further reference than a description of each particular figure: Figure 1 is a plan of lattice or skeleton work, showing one manner in which the rods are laid; but it is not necessary that they should always be at right angles. Figure 2 is a section of the lattice or skeleton work surrounded by concrete or cement mortar or plastic material. Figure 3 is an isometrical drawing, showing a portion of lattice or skeleton work partly covered by concrete or cement mortar. Figure 4 is a design for roofing, according to this invention, in which the side pressure is taken up by two girders held in position by tie-rods. Figure 5 is a design for a ceiling, according to this invention, and showing an ordinary flooring for the upper storey. Figure 6 is a design for a combined floor and ceiling, according to this invention.

Having now particularly described and explained the nature of this said invention, and in what manner the same is to be performed, we declare that what we claim is—

First, as an improvement in concrete and cement mortar building and other constructions and manufactures, a material consisting of a metal lattice or skeleton work, formed of bars laid across each other and tied at their intersections, in conjunction with concrete or cement mortar or other plastic material, moulded on or around it, substantially, as herein described and explained.

Second,

Second, as an improvement in concrete and cement mortar building, and other constructions and manufactures, the formation of a metal lattice or skeleton work of bars across one another and tied at their intersections in permanent position, and the embedding of the same in concrete or cement mortar, &c., of the desired configuration, substantially, as herein described and explained.

Dated this 3rd day of November, 1892.

*pro* Treasurer.

PETITION FOR LETTERS PATENT.

To His Excellency the Governor of the Colony of New South Wales. (4,084.)

The humble Petition of John Carter, David Graham Snodgrass, and William Baltzer, all of North Sydney, in the Colony of New South Wales, Engineers,—  
Sheweth:—

That your Petitioners are the authors or designers, by virtue of a communication from abroad, of a certain invention or improvement to the arts or manufactures which your Petitioners desire to introduce into the Colony of New South Wales, and for which they are desirous of obtaining Letters Patent of the said Colony.

2. That communications from the Patent Office relative to this application may be forwarded to your Petitioners' agent, Mr. Edward Waters (Fred Walsh, Manager), 26 Elizabeth-street, Sydney.

3. That, in connection herewith, your Petitioners have paid to the Colonial Treasurer the sum of five pounds sterling.

4. The title of the said invention is "Improvements in concrete and cement mortar, building and other constructions and manufactures."

5. That, to the best of your Petitioners' knowledge and belief, the invention has not been publicly used or published, or offered for sale, within the Colony of New South Wales.

6. That a detailed specification of the said invention, illustrated by drawings, is annexed hereto.

Your Petitioners therefore humbly pray that your Excellency, with the advice of the Executive Council, will be pleased to grant unto them, their executors, administrators, and assigns, Letters Patent for the said invention for the term of fourteen years, in accordance with the provisions of the Act 16 Victoria, No. 24, and the Patents Law Amendment Act of 1887.

And your Petitioners will ever pray, &c.

JOHN CARTER.  
D. G. SNODGRASS.  
W. BALTZER.

Dated at Sydney, N.S.W., this 3rd day of November, 1892.

Sir,

Patents Office, Sydney, 24 January, 1893.

In the matter of the application of J. Carter, D. G. Snodgrass, and W. Baltzer, for Letters Patent.

Having examined the Petition relating to the above, I do myself the honor to report, for the information of the Minister of Justice, that I see no objection to the prayer of the Petitioners being complied with.

I have, &c.,

J. B. O'CONNOR,  
Examiner of Patents.

The Under Secretary of Justice.

MINUTE PAPER FOR THE EXECUTIVE COUNCIL.

Department of Justice, Sydney, 24 January, 1893.

Issue of Letters Patent to John Carter, David Graham Snodgrass, and William Baltzer.

HAVING examined the petition for Letters Patent from J. Carter, D. G. Snodgrass, and W. Baltzer, for an invention of "Improvements in Concrete and Cement Mortar Building and other Constructions and Manufactures," and having also examined the report thereon of the Examiner of Patents, I now approve of the prayer of the petitioners, and recommend the issue of Letters Patent, securing to the aforesaid petitioners for fourteen years the benefit of the said inventions.

R. E. O'CONNOR.

Executive Council Office, February 1, 1893.—No. 569.

The Executive Council advise that Letters Patent be issued for the invention specified.—A. C. BUDGE, Clerk of the Council. Min. 93-5, 7/2/93. Confirmed, 14/2/93. Approved.—JERSEY, 7/2/93. His Excellency the Governor and the Executive Council. Regd., 15/2/93.

LETTERS PATENT TO JOHN CARTER, DAVID GRAHAM SNODGRASS, AND WILLIAM BALTZER.

By His Excellency the Right Honorable Victor Albert George, Earl of Jersey, a member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

To all to whom these presents shall come Greeting:—

WHEREAS John Carter, David Graham Snodgrass, and William Baltzer, all of North Sydney, in the Colony aforesaid, engineers, have by their petition represented to me that they are by virtue of a communication from abroad the authors or designers of a certain invention in, or improvement to, the arts or manufactures, that is to say, of an invention of "Improvements in Concrete and Cement Mortar Building and other Constructions and Manufactures," which is more particularly described in the specification marked "A" and the two sheets of drawings marked "B" and "C" respectively, which are hereunto annexed. And that they, the said petitioners, have deposited with the Colonial Treasurer of the said Colony of New South Wales the sum of five pounds sterling, as required by the "Patents Law Amendment Act of 1887," and have prayed that I would be pleased to grant Letters Patent whereby the exclusive enjoyment and advantage of the said invention or improvement might be secured to them for a period of fourteen years. And whereas I have received a report from the Minister of Justice to the effect that, after examination of the said petition, and of the report thereon of the Examiner of Patents, the Minister of Justice approves of the prayer of the said petitioners. Now, therefore, I, being willing to give encouragement to all inventions in, and improvements to, the arts or manufactures which may be for the public good, am pleased, with the advice of the Executive Council, and in exercise of the power and authority given to me by the beforementioned Act and the Act of Council, Sixteenth Victoria Number Twenty-four, to grant, and do by these Letters Patent grant, unto the said John Carter, David Graham Snodgrass, and William Baltzer, their executors, administrators, and assigns, the exclusive enjoyment and advantage of the said invention or improvement for and during the term of fourteen years from the date hereof. To have, hold, and exercise, unto the said John Carter, David Graham Snodgrass, and William Baltzer, their executors, administrators, and assigns, the exclusive enjoyment and advantage thereof for and during and unto the full end and term of fourteen years from the date of these presents next and immediately ensuing and fully

fully to be complete and ended. In witness whereof I have hereunto set my sign manual, and have caused the present Letters Patent to be sealed with the seal of the said Colony of New South Wales, at Government House, Sydney, in New South Wales, and dated as of the third day of November in the year of our Lord one thousand eight hundred and ninety-two.

JERSEY.

REGISTERED by me and entered of Record in the Patents Office of New South Wales this 1st day of March, A.D., 1893, in pursuance of the Act 51st Victoria No. 3, section 13, No. 4,084, Book 4.

J. B. O'CONNOR,  
Examiner of Patents.

### Appendix No. 19.

#### DEED OF PARTNERSHIP—MESSRS. CARTER, GUMMOW, & Co.

THIS indenture made the twenty-fifth day of August, one thousand eight hundred and ninety-two, between John Carter, of North Sydney, in New South Wales, contractor, of the first part; David Graham Snodgrass, of North Sydney aforesaid, contractor, of the second part; George Forrest, of Waverley, Sydney, in New South Wales, contractor, of the third part; Frank Moorhouse Gummow, of Glebe Point, Sydney aforesaid, contractor, of the fourth part; James Gillan, of Dulwich Hill, Sydney aforesaid, contractor, of the fifth part; George Maddison, of Petersham, Sydney aforesaid, contractor, of the sixth part; and Peter Ewing, of Newtown, Sydney aforesaid, contractor, of the seventh part; whereas the said parties hereto have lately entered into a contract with the Government of South Australia, for the construction of certain works in or near Adelaide, in South Australia, called Contract Number 60, Inlet Tunnel, Happy Valley Waterworks; Now this indenture witnesseth that, in pursuance of the said agreement and in consideration of the confidence which the said parties have in each other, each of them, the said John Carter, David Graham Snodgrass, George Forrest, Frank Moorhouse Gummow, James Gillan, George Maddison, and Peter Ewing, doth hereby for himself, his heirs, executors, and administrators (so far as the agreements and provisions hereinafter contained are or ought to be performed or observed by him, his executors, or administrators) covenant with the others of them, their executors and administrators, in the manner following, that is to say,—

1. The said parties hereto will become and remain partners under the name, style, or firm, of "Carter, Gummow, & Co.," in the trade or business of Contractors, for the purposes of carrying out and completing the contract hereinbefore referred to, and any other contracts which the said parties shall mutually agree upon and shall obtain.

2. The capital of the partnership shall be the sum of ten thousand pounds, to be contributed by the said parties in the manner following, that is to say, the sum of five thousand pounds shall be contributed by the said John Carter, David Graham Snodgrass, and George Forrest, jointly, and the sum of five thousand pounds by the said Frank Moorhouse Gummow, James Gillan, George Maddison, and Peter Ewing, jointly.

3. The whole of the capital of the said partnership and the receipts and earnings of the said partnership business shall be employed in the said partnership business: and, in the event of the capital of the said partnership business being insufficient to carry on and complete the contracts aforesaid, then the said parties shall contribute the additional moneys necessary for such carrying on or completion in the proportions and manner in which the original capital is to be contributed.

4. All material, plant, tackle, tools, implements, machinery, goods, chattels, effects, and things, necessary and requisite in and about the construction of the works the subject of the said contracts shall be purchased, and all wages and salaries of persons employed in connection with the same works, and all other outgoings and other expenses, losses, and damages, incurred in connection with the said partnership business or in any wise relating thereto, shall be paid out of the capital receipts and earnings of the said partnership business: and, in case of deficiency, then such deficiency shall be borne as to one-half by the said John Carter, David Graham Snodgrass, and George Forrest, jointly; and as to the other half by the said Frank Moorhouse Gummow, James Gillan, George Maddison, and Peter Ewing, jointly.

5. The partners shall be entitled to the profits of the partnership business in the following shares, that is to say, one-half to the said John Carter, David Graham Snodgrass, and George Forrest, jointly; and one-half to the said Frank Moorhouse Gummow, James Gillan, George Maddison, and Peter Ewing, jointly: the said profits shall be divided between the said partners, so soon after the completion or determination of all the contracts, for the time being, in hand, as a general account shall have been taken, and the assets collected, and liabilities discharged, as provided in paragraph twenty of these presents.

6. During such time as any of the said partners shall be engaged or employed upon, or in connection with, the said partnership business, he shall be entitled to draw out of the partnership funds the sum of ten pounds per week, as salary for his personal services in connection with the said business; but no partner shall be allowed, or entitled to draw, any other moneys out of the partnership funds during the continuance of the partnership.

7. The bankers of the partnership shall be the Bank of New Zealand, or such other bankers as the partners shall from time to time mutually determine; and all moneys, notes, bills, and securities, which shall from time to time be received by the partners, or any or either of them, for or on account of or belonging to the partnership, shall be immediately paid to the credit of the partnership, with the bankers for the time being of the partnership, in the same drafts bills or cash in which the same are received. And all disbursements for or on account of the partnership shall be made by cheque on such bankers or through the medium of the cash clerk of the partnership.

8. All cheques, bills, and promissory notes, drawn for or on account of the partnership, shall be signed in the name of the firm by either the said John Carter or the said Frank Moorhouse Gummow.

9. None of the partners shall buy, order, or contract for, any goods or articles, or pledge the credit of the partnership, to an amount exceeding ten pounds, without the previous consent, in writing, of the others of them; and, in the event of any partner so doing, the other partner shall have the option either to take the goods or articles so bought, ordered, or contracted for, on behalf of the partnership, or to insist that the same shall remain and be for the separate use of the partner so buying, ordering, or contracting, in which case he shall pay for the same out of his own separate moneys.

10. Each partner shall be just and faithful to the other partners in all transactions relating to the business of the partnership, and shall give a true account of the same to them and each of them when and so often as the same shall reasonably be required, and shall also inform the other partners of all letters, accounts, writings, and other things, which shall come to his hands or knowledge concerning the business of the partnership, and shall also join with the other partners in doing and performing all matters and things necessary for the beneficial working of the partnership business.

11. None of the partners shall take or go upon any journey or voyage on account of the partnership without the consent of the others of them: and, if any partner shall take or go upon any journey or voyage on account of the partnership with such consent, he shall be allowed his reasonable expenses of travelling and subsistence during such voyage or journey.

12. No partner shall use any of the moneys goods or effects of the partnership, or engage the credit thereof, except upon the account and for the benefit of the partnership.

13. No partner shall, without the consent of the others, do or knowingly suffer anything whereby the property of the partnership may be seized, attached, or taken in execution.

14. No partner shall, without the previous consent in writing of the other partners, assign alienate or encumber his share or interest in the partnership.

15. No partner shall, without the written consent of the others of them, compound or release any debt or right which shall be due or owing or belonging to, or any action brought by, the partnership: and, if any partner shall so do, he shall if required pay to the partnership the full amount or value of the debt, right, or claim, which he shall so release or compound for.

16. Each partner shall punctually pay and discharge his present and future separate and private debts and engagements, and shall at all times keep indemnified the other partners and their executors and administrators and the property of the partnership against the same, and all actions proceedings and claims and demands in respect thereof.

17. Proper books of account shall be kept by the partners, and entries shall be made therein of all such matters transactions and things as are usually and properly entered in books of account kept by persons engaged in concerns of a similar nature. And the same shall be posted up quarterly or as near thereto as practicable, and signed by all the partners, and when so signed shall be binding on all the partners; except that, if any manifest error shall be discovered in any such account, and shall be signified by any partner to the others within one calendar month after signing of such account, such

error

error shall be rectified. And the said books of account, and all letters, papers, and documents, belonging to the partnership, except such as are to be kept at the bankers, shall be kept at the principal office of the partnership, and each partner shall at all times have free access to examine and copy the same.

18. In the event of the death of any of the partners, the executors or administrators of such deceased partner shall be at liberty to appoint some person, to be approved of by the other partners, to assist in the management of the partnership business, and completion of the said contracts. Provided always that if there shall be any dispute or difference as to the person to be so appointed such dispute or difference shall be settled by arbitration as hereinafter provided.

19. In the event of the death of any partner, his executors or administrators shall be entitled to require the payment to the estate of such deceased partner of an allowance, not exceeding six pounds per week until the completion of the said contracts, provided the prospects and finances of the partnership are such that such allowance can be paid without causing any loss to the said partnership, and such allowance shall not be deemed to be paid on account of, but shall be in addition to, the share to which such deceased partner or his estate would be entitled on the winding up and final distribution of the assets of the partnership.

20. Upon the completion of all the contracts for the time being in hand, or upon the happening of any event rendering it impracticable for the partnership to carry out and complete the same, whichever shall first happen, the partnership shall be dissolved, and a general account taken of the assets and liabilities of the partnership, and ; with all convenient speed, the assets shall be realised, and the debts due to the partnership collected and got in ; and the proceeds shall be applied in discharge of the liabilities of the partnership, and the expense of liquidating the same and realising the assets thereof, and, in the next place, in payment to the partners, or their respective representatives, of the proportionate parts of the capital contributed by the partners respectively : and the surplus (if any) of the moneys realised as aforesaid shall be divided between the partners, or their representatives, in the shares in which the partners are interested in the profits of the partnership, as provided by the fifth paragraph of these presents : and each partner, or his representatives, shall execute such release to the other partners, or their representatives, from all claims on account of the partnership as is usual and proper in such cases.

21. In case any of the partners shall be guilty of any wilful breach of or fail or neglect to observe all or any of the provisions herein contained, for the space of twenty-one days after having received notice in writing from the other partners to fulfil the same, the defaulting partner shall, at the election of the other partners, be deprived of having any voice in the management of the partnership business, and shall not be entitled to any salary or allowance during such deprivation : and in any such case the other partners shall be at liberty to carry on and complete the said contracts and to all things necessary therefor, without any hindrance or interference from or by the said defaulting partner, and shall be at liberty to receive and give discharges for all moneys payable to the partnership, and pay all debts due by the partnership. And, if it shall seem fit to the other partners, they may, in their discretion, remove the disability of the defaulting partner and restore him to all the rights and privileges of partnership.

22. If any dispute or difference shall at any time arise between the partners, or their executors or administrators, or between the executors or administrators of any deceased partner or partners and the surviving partners or partner, or any of them, touching the partnership or any matter or thing relating thereto, then the dispute, matter, or difference, shall be determined by arbitration, under the provisions of the Arbitration Act of 1892 or other the enactments for the time being in force relating to arbitration.

IN WITNESS whereof the said parties to these presents have hereunto set their hands and seals the day and year first above written :—

PETER EWING.

### Appendix No. 21.

Department of Public Works, Roads, Bridges, and Sewerage Branch.

#### TENDER FORM.

IN pursuance of advertisement in the *Government Gazette* (I or we), the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Western Outfall Sewer Extension, 4th Division (Contract No. 112), agreeably to the Plans, Specification, Schedule to Specification, Special Condition, and General Conditions, which have been inspected by (me or us), at \_\_\_\_\_ per cent.\*

the prices affixed to each item, in the Schedule of Quantities and Prices annexed hereto, and to complete the same within twenty months from the date of the acceptance of this Tender ; and (I or we) do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or if not in Schedule, at a price to be agreed upon at the time, and (I or we) hereby undertake that (I or we) will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works, a valid legal Contract with Her Majesty the Queen, embodying the Terms and Conditions above mentioned, and to provide the security required by clause 29 of the said General Conditions ; and (I or we) enclose herewith (our or my) cheque for the sum of £ \_\_\_\_\_ as a preliminary deposit ; and (I or we) agree that such sum shall be absolutely forfeited

\*Here insert "under" or above, as the case may be, or erase the words "per cent." if the party is desirous to abide by the prices affixed.

forfeited if (I or we) at any time within thirty days after the said Tender is opened, withdraw the same, or if in the event of this tender being accepted (I or we) fail to complete the above-mentioned Contract within fourteen days thereafter ; and, further, that this tender is made subject to the Conditions contained in the Tender Board Regulations, printed on the back hereof, and by which (I or we) agree to be bound.

Witness—  
 Dated this \_\_\_\_\_ day of \_\_\_\_\_ 189 .  
 This is the Tender marked “ \_\_\_\_\_ ”, referred to in the annexed Agreement with Her Majesty the Queen,  
 dated the \_\_\_\_\_ day of \_\_\_\_\_ A.D. 189 .  
 Witness—

Insert date.  
 Signature of party tendering here, with address. In the case of a firm tendering, the name and address of each member must be given in full.

*Tender Board Regulations.*

No Tender shall be received after 11 a.m. on the day named for the receipt of such Tender, unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work, and the name of the lowest Tenderer ; but no Tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

|  |         |
|--|---------|
| For amounts up to £500 inclusive ... ..                    | £5 0 0  |
| For amounts exceeding £500 and not exceeding £1,000 ... .. | £10 0 0 |

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a Bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof, or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted ; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a Tender, the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

CONTRACT No. 112.

THIS is the Schedule of quantities and prices hereinbefore referred to.

| No. of Item. | Description of Works.  | Unit.       | Probable Quantity. | Rate per Unit.   |
|--------------|--|-------------|--------------------|------------------|
| 1            | Excavation in open trenches in sand, mud, clay, for foundations of main and branch carriers, straining chambers, abutments for Muddy Creek bridge, piers of arches of aqueduct, offset-pipes, &c., including removing any pitching, masonry, brick or concrete work, logs, drains, &c., met with in excavations, as specified in clauses 3, 6, and 7 .....   | cubic yard  | 4,400              | £ s. d.<br>0 3 0 |
| 2            | Filling in all excavations round all concrete foundations of piers, abutments, straining chambers, main carrier, round pipe-sewers, and in any situation in the construction of these works, including all sand filling, as specified in clauses 4, 6, 7 .....   | "           | 1,820              | 0 0 6            |
| 3            | Removal of surplus materials from all excavations, as specified in clause 5 .....  | "           | 2,580              | 0 0 6            |
| 4            | Timber ordered in writing to be left in excavations, as specified in clause 6, including all iron used in fixing same. ....  | cubic foot  | 1,000              | 0 1 9            |
| 5            | Supplying and fixing hardwood round timber in piles where ordered, including and fixing all iron shoes and other iron-work used in driving same, as specified in clause 6 .....  | lineal foot | 10,400             | 0 3 6            |
| 6            | Sandstone ballast of the description specified in clause 202 of the schedule to specification, provided and packed solid, 4 feet thick, between heads of piles, when directed .....  | cubic yard  | 740                | 0 5 0            |
| 7            | Supplying, placing in position, sawn hardwood turpentine timber in floor joists, plank floors, and where ordered, including all iron-work required in fixing same, and tarring, as specified in clauses 2, 16, and 18 .....  | cubic foot  | 145                | 0 3 6            |
| 8            | Sandstone concrete, in any situation, in any shape, form, thickness, with pear-shaped openings in spandrels, including providing and placing in position and jointing bitumen and cork plates and mastic plates, as specified in clauses 7 and 8 .....   | cubic yard  | 3,125              | 1 8 0            |

The quantities are not guaranteed as correct, and are merely for the guidance of tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 46, 47, 48, 49, and 50 are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

### Appendix No. 22.

Department of Public Works, Roads and Bridges and Sewerage Branch.

#### TENDER FORM.

IN pursuance of advertisement in the *Government Gazette* (I or we), the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the western outfall sewer, 3rd Division (Contract No. 101), agreeably to the Plans, Specification, Schedule to Specification, and General Conditions, which have been inspected by (me or us), for or at the rates entered in the Schedule of Quantities and Prices annexed hereto, and to complete the same within fifteen months from the date of the acceptance of this Tender; and (I or we) do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Quantities and Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and (I or we) hereby undertake that (I or we) will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said General Conditions; and (I or we) enclose herewith (our or my) cheque for the sum of £ \_\_\_\_\_ as a preliminary deposit; and (I or we) agree that such sum shall be absolutely forfeited if (I or we) at any time within thirty days after the said Tender is opened withdraw same, or if in the event of this Tender being accepted (I or we) fail to complete the above-mentioned Contract within fourteen days thereafter; and further, that this Tender is made subject to the Conditions contained in the Tender Board Regulations, printed on the back hereof, and by which (I or we) agree to be bound.

Witness— Dated this \_\_\_\_\_ day of \_\_\_\_\_ 189 \_\_\_\_ . Insert date.

#### Tender Board Regulations.

No Tender shall be received after 11 a.m. on the day named for the receipt of such Tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

|   |         |
|---|---------|
| For amounts up to £500 inclusive                    | £5 0 0  |
| For amounts exceeding £500 and not exceeding £1,000 | £10 0 0 |

For all sums over £1,000, 1 per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a Bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any Contract being tendered for at a Schedule of Rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a Tender, the full Christian name of the Tenderer must be given, or, when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

THIS IS THE SCHEDULE OF QUANTITIES AND PRICES HEREINBEFORE REFERRED TO.

| No. of Item. | Description of Work.   | Unit.       | Quantity.     | Rate.            |
|--------------|--|-------------|---------------|------------------|

Notes.

1. The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, who must satisfy themselves as to their accuracy, which is not in any way guaranteed by the Government, and they are subject to omissions, deductions, and alterations.

2. All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the specification.

3. The above Schedule prices include, in every case, continual maintenance of the works during the whole time of construction during the specified period of maintenance, and up to the day of their being formally taken over by the Engineer.

4. Prices for items Nos. 14, 15, 16, 17, 18, 19, 20, and 21 are to be for materials in strict accordance with specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case Contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the Contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other source, and the Contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

5. Prices for items Nos. 22, 23, 24, and 25 are to be for such as are able-bodied and efficient. The Schedule rates per day are for the day of eight hours. In the event of overtime and nightwork being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

Appendix No. 23.

RETURN of Payments made to Messrs. Carter, Gummow, & Co., on account of Sewerage Contracts during period 1892 to 1896 inclusive.

## Appendix No. 24.

Know all Men by the Presents,—That I, George Forrest, of Marrickville, in the Colony of New South Wales, householder, am held and firmly bound unto Her Most Gracious Majesty, Queen Victoria, in the penal sum of £6,000 sterling, to be paid in Sydney, in the said Colony, to Her said Majesty, her heirs or successors, for which payment well and truly to be made, I bind myself, my and each and every of my heirs, executors, and administrators firmly by these presents.

Sealed with my seal, dated the 16th day of May, in the year of our Lord, 1895.

WHEREAS by agreement, bearing even date herewith, and expressed to be made between John Carter, Frank Moorehouse Gummow, and David Graham Snodgrass, carrying on business together as contractors, under the name, style, or firm of “Carter, Gummow, and Company,” and therein and hereinafter called the contractors, of the one part, and Her said Majesty of the other part, the said contractors covenanted to perform the various works required in and about the full and proper construction, erection, and completion of the northern main sewer, Leichhardt and Annandale sections, Contract No. 77, Sydney Sewerage, according to the copy notice, specification, schedule to specification, general conditions, special condition, supplementary specification, tender, copy letter of acceptance of tender, and letter of assent thereto, thereunto annexed, and marked “A,” “B,” “C,” “D,” “E,” “F,” “G,” “H,” and “I,” respectively, and certain drawings relating thereto, now in the office of the Engineer-in-Chief for Metropolitan Sewerage Construction, and marked “No. 1” to “No. 11,” both inclusive.

And whereas the contractors have entered into a bond to Her said Majesty, dated the 16th day of May, 1895, conditioned to remove at their own cost so much of the said works as shall have been constructed on the “Monier System” if the Engineer shall be dissatisfied with the same at any time during either of the periods of maintenance set out in the said General Conditions and Supplementary Specification respectively, and for the re-erection and construction of the said works, and to provide for the free and uninterrupted flow of sewage during the progress of such rebuilding, at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, special condition, and plans therein respectively referred to, and within thirty-nine weeks from the date of being called upon to do so. And whereas I, the said George Forrest, have offered to become bound to Her said Majesty, her heirs and successors, for the due performance and fulfilment of the said contract, according to the said agreement, and the several annexures thereto, so far as the removal of a portion of the said works constructed on the “Monier System” is concerned, if the Engineer shall be dissatisfied with the same at any time during either of the periods of maintenance referred to, and the re-erection of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding, at the contractor's expense, in the manner provided for in the original specification, schedule to specification, general conditions, and plans within the time lastly hereinbefore set out. Now the condition of the above-written bond and obligation is such that if the contractors do and shall well and truly remove so much of the said works as shall have been constructed on the “Monier System,” if the Engineer shall be dissatisfied with the same at any time during the respective periods of maintenance set out in the said general conditions and supplementary specification, and re-erect and construct the said works, and provide for the free and uninterrupted flow of sewage during the progress of such rebuilding at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, and special condition, and the plans therein respectively referred to within thirty-nine weeks from the date of being called upon to do so. Then this obligation will be void, and of none effect, otherwise to remain in full force and virtue.

Sworn, sealed, and delivered by the abovenamed }  
George Forrest, in the presence of,—

GEO. FORREST.

HAROLD F. NORRIE.

## STATUTORY DECLARATION.

I, GEORGE FORREST, of Marrickville, in the Colony of New South Wales, householder, do hereby solemnly declare and affirm that I am possessed of property to the value of £6,000 sterling and more, and that such property consists of—Freehold property, £5,700; cash in bank, £300 sterling. And I make this solemn declaration as to the matters aforesaid, according to the law in this behalf made and subject to the punishment by law provided for any wilfully false statement in any such declaration.

Taken and declared at Marrickville, this 1st day }  
of June, 1895, before me,—

GEO. FORREST.

ROBERT ANDERSON, J.P.

Know all Men by these Presents,—That I, James Gillan, of Dulwich Hill, in the Colony of New South Wales, householder, am held and firmly bound unto Her Most Gracious Majesty Queen Victoria, in the penal sum of £6,000 sterling, to be paid in Sydney, in the said Colony, to Her said Majesty, her heirs or successors, for which payment well and truly to be made I bind myself, my and each and every of my heirs, executors and administrators firmly by these presents.

Sealed with my seal, dated the 16th day of May, in the year of our Lord, 1895.

WHEREAS, by agreement bearing even date herewith, and expressed to be made between John Carter, Frank Moorhouse Gummow, and David Graham Snodgrass, carrying on business together as contractors, under the name, style, or form of “Carter, Gummow, & Co.” and therein and hereinafter called the contractors of the one part, and Her said Majesty of the other part, the said contractors covenanted to perform the various works required in and about the full and proper construction, erection, and completion of the northern main sewer, Leichhardt and Annandale sections, Contract No. 77, Sydney sewerage, according to the copy notice, specification, schedule to specification, general conditions, special condition, supplementary specification, tender, copy, letter of acceptance of tender, and letter of assent thereto, thereunto annexed and marked “A,” “B,” “C,” “D,” “E,” “F,” “G,” “H,” and “I” respectively, and certain drawings relating thereto, now in the office of the Engineer-in-Chief for Metropolitan Sewerage Construction, and marked No. 1 to No. 11,” both inclusive.

And whereas the contractors have entered into a bond to Her said Majesty, dated the 16th day of May, 1895, conditioned to remove at their own cost so much of the said works as shall have been constructed on the “Monier System” if the Engineer shall be dissatisfied with the same at any time during either of the periods of maintenance set out in the said general conditions and supplementary specifications respectively, and for the re-erection and construction of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding, at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, special conditions and plans

plans therein respectively referred to, and within thirty-nine weeks from the date of being called upon to do so. And whereas I, the said James Gillan, have offered to become bound to Her said Majesty, her heirs and successors for the due performance and fulfilment of the said contract, according to the said agreement and the several annexures thereto, so far as the removal of the portion of the said works constructed on the "Monier System" is concerned, if the Engineer shall be dissatisfied with the same, at any time during the periods of maintenance referred to and the re-erection of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding at the contractor's expense, in the manner provided for in the original specification, schedule to specification, general conditions, and plans within the time lastly hereinbefore set out. Now the condition of the above-written bond and obligation is such that if the contractors do and shall well and truly remove so much of the said works as shall have been constructed on the "Monier System," if the Engineer shall be dissatisfied with the same, at any time during either of the respective periods of maintenance set out in the said general conditions and supplementary specification, and re-erect and construct the said works, and provide for the free and uninterrupted flow of sewage during the progress of such rebuilding at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, and special condition, and the plans therein respectively referred to within thirty-nine weeks from the date of being called upon to do so. Then this obligation will be void and of none effect, otherwise to remain in full force and virtue.

Signed, sealed, and delivered by the abovenamed }  
James Gillan, in the presence of, — HAROLD F. NORRIE.

JAMES GILLAN.

## STATUTORY DECLARATION.

I, JAMES GILLAN, of Dulwich Hill, in the Colony of New South Wales, householder, do hereby solemnly declare and affirm that I am possessed of property to the value of £6,000 sterling and more, and that such property consists of cash at bankers, freehold, and other property. And I make this solemn declaration as to the matters aforesaid according to the law in this behalf made, and subject to the punishment by law provided for any wilfully false statement in any such declaration.

Taken and declared at Sydney, this 27th day }  
of May, 1895, before me, — HAROLD F. NORRIE, J.P.

JAMES GILLAN.

\* Mr. Gummow assigned his interest to Mr. Rochester.  
† Mr. Richards assigned his interest to Messrs. Carter and Snodgrass.

## Appendix No. 26.

Sureties—Contract 77.

Mr. Darley for report.—J.B., 5/4/95. I concur with Mr. Hickson. I think in accepting a new patent of this kind, and adopting it on a large and costly contract, that the Department cannot be too careful in securing its position by leaving all the risk on the hands of the contractors and patentees. I therefore recommend that the personal names be required for further surety. The names mentioned may, I think, be accepted.—C.D., Engineer-in-Chief, Metropolitan Sewerage Construction, 8/4/95.

For Minister's approval as to course suggested in regard to sureties.—J. BARLING, Under Secretary for Public Works, 9/4/95. Approved.—J.H.Y., 10/4/95. Mr. Norrie.—JNO. P., 10/4/95.

## Appendix No. 27.

List of Sewerage Contracts in which Sureties have been accepted.

| No. of Contract. | Contractor.   | Sureties.   | Penal Sum. | Date when Contract was signed. |

HAROLD F. NORRIE,  
Clerk in Charge of Bonds and Contracts.

## Appendix No. 28.

The Engineer-in-Chief for Sewerage to The Under Secretary for Public Works.

*Minute Paper.*

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 5 April, 1895.

THE accompanying letter of 4th April, 1895, from Messrs. Carter, Gummow, & Co., is a protest against the stringent supplementary specification prepared by Mr. Norrie, at my suggestion, with regard to the alteration in the design of Contract No. 77.

The last paragraph of this specification states:—"And the contractors shall enter into a bond with Her Majesty the Queen in the penal sum of £12,000, with two sufficient sureties in the penal sum of £6,000 each, to secure the removal of so much of the said works as shall have been constructed on the Monier system, &c., &c."

The amount of £12,000 is the sum it would cost the Department, at departmental rates, to renew that portion of this sewer which is built on the Monier system.

It is right, however, to say that the tendered rates for this portion of the work would only come to £9,000; but, prices being abnormally low, I think it is only right to put in a sum at which the Department really values the work.

Messrs. Carter and Gummow ask that their own "personal sureties for the amount named," i.e., £12,000 (an amount which they do not dispute), "should be taken for its completion and maintenance, and as a sufficient guarantee for the proper carrying out of the work."

They go on to say that they are "a firm of sound financial standing, well\*and favourably known to the Department as contractors." This is quite true; they are a firm in which I have every confidence. They have done a great deal of work under me, and I can testify that their aim always has been to turn out the very best class of work possible. At the same time, misfortunes happen the very soundest firms of contractors, and the Department must look a little way into the future. Their own bond for £12,000 would be really of no use if they were unfortunate enough in the meantime to become bankrupt.

I think, therefore, it is right that the sureties should be insisted upon. They give the names of two men, Mr. George Forrest and Mr. James Gillan. From inquiries made, I believe these men to be financially sound; and, I think, if their names were accepted as the sureties in the penal sum of £6,000 each the Department would be secured as far as it is reasonably possible to be.

This work will be carried out under Mr. Darley, and I recommend that the whole of the papers be sent him to give his opinion thereon.

ROBT. HICKSON,  
Engineer-in-Chief for Public Works.

D. C. McLACHLAN,  
10/6/91.I recommend acceptance of Bond and Hudson's tender at schedule rates.—R.H., 10/6/91. Under Secretary.  
J. BARLING, Vice-President of Tender Board.

## Appendix No. 33.

Contract No. 72.—Munni-street Sewer.

Sir,

St. John's Road, Glebe, 15 February, 1892.

We have the honor to forward herewith our account in connection with Sewerage Contract No. 72, amounting to £6,625 2s., and we beg to request that you will issue a certificate in our favour for that amount.

A further account for day-work, now in progress, and for maintenance will be forwarded on the expiration of our contract period of maintenance, when we will ask that the amount of our deposit, viz., £900, may be refunded to us.

The Engineer-in-Chief, Sewerage, Sydney.

We are, &c.,  
CARTER & CO.

For report.—R.H., 18/2/92. Mr. Davis.—C.H.O.-B., 22/2/92. This matter has now been settled, I understand. The contractors have signed the office measurements accepting them.—J.D., 26/2/92. Mr. Bagge. This paper might now be put aside, in accordance with Mr. Davis' minute.—C. H. OHLFSEN-BAGGE, 26/2/92. Engineer-in-Chief.

**Appendix No. 34.**

CONTRACT 72.

13 October, 1891.

Gentlemen,  
With reference to your Contract No. 72, Sydney Sewerage Works (Munni-street to Shea's Creek Stormwater Channel), I have the honor to inform you that in accordance with clause No 3 of the specification, which gives me power to make such permanent alterations as may be considered necessary, I have decided to terminate the contract after the construction of the Junction Chamber and connection with the Macdonaldtown Park Stormwater Channel at 41·30 chains, thereby omitting that portion of the contract from such junction upwards to the point of termination of the sewer (as shown on drawings) at Union-street, and hereby give you notice that the Munni street Stormwater Channel is not to be carried on beyond the before-mentioned junction.

I have, &c ,  
R. R. P. HICKSON,  
Engineer-in-Chief for Sewerage.

Messrs. Carter &amp; Co., Contractors for Contract No. 72

**Appendix No. 35.**

CONTRACT 79

95. The concrete, after it has been approved of, to be conveyed to the work as may be directed, and as shall be approved of, and tipped into same and upon the surface of each layer from a height not exceeding 18 inches. Commencing at each part of the work at lowest level of excavation, the concrete to be brought up in horizontal and even layers, and on lines of sewer, branch and pipe sewers, junctions, gas check and shaft chambers, inspecting chambers, &c , unless where otherwise directed, in even layers parallel with specified longitudinal gradients of works ; each layer, when spread, to be 9 inches thick throughout before ramming, and, after spreading, to be quickly and evenly rammed all over until approved of, and then allowed time to set before the succeeding layer is put on.

**Appendix No. 36.**

CONTRACT 69.

*Extra Works—Omissions of Works.*

16. If at any time whilst the works are in hand it shall be deemed expedient by the Engineer to order material or work of a different description to that specified, or to increase or diminish the dimensions or extent of any works to be done under this contract, or to alter their situation or vary the form or dimensions of any of the said works, or of any part thereof, or to make any deviation or to substitute one class of work for another, he shall have full power to do so, and to order and direct any such increase, diminution, alteration, deviation, or substitution, and the works involved in any such increase, alteration, deviation, or substitution, shall be executed by the contractor if of the class of works provided for in the schedule of prices, at such schedule prices ; and no such increase, diminution, alteration, deviation, or substitution of works shall in any way annul or set aside this contract, or extend the time for the completion thereof, unless the Minister shall see fit to grant such extension ; but such additions or alterations shall be measured and paid for, or deducted from the contractor's account as the case may require, according to the schedule of prices. Provided that if any portion of the works so ordered to be done shall not be, in the opinion of the Engineer, of the same value or class of works provided for in the schedule of prices, the same shall be executed by the contractor at such prices as may be agreed upon with the Engineer ; but if the contractor and Engineer cannot agree as to the price to be paid, the Engineer may order and direct the same to be done by such person or persons as he may think fit. Before any extra work, or work of an altered value or class, is undertaken by the contractor, it shall be imperative for him to procure an order in writing from the Engineer for carrying out such extra or variation of work, and the contractor shall not be entitled to any payment for such extras or variations unless he produce the written order for the same, as aforesaid, and he shall not be entitled to plead that the Engineer omitted to give such written order, as it is to be distinctly understood that the onus of obtaining such order shall be on the contractor. The contractor shall not be entitled to any other rate than the schedule rate on any plea that the work was in a different position or of a different class from, or in a more difficult position than that shown on plan or specification, or carried out under circumstances not contemplated in the specification, unless an agreement entitling him to payment by other than the schedule rates shall have been previously made and signed by the Engineer and the contractor.

*Valuation of Omissions.*

17. The Engineer shall have the power to direct the omission of the carrying out of any part or parts of the said works, but not amounting to the omission of the whole ; and the value of such works so omitted in such case, calculated at the schedule rates, or in the event of there being no schedule rates, calculated on the basis of the proportionate value which such work bears to the lump sum, as ascertained by the Engineer, whose decision on that point shall be final, shall be deducted from the contract sum, subject, however, to arbitration clauses Nos. 36 to 41.

**Appendix No. 37.***Particulars of Landed Property held by Carter, Gummow, & Co.*

Detached cottage, Illawarra Road, Marrickville. Frontage, 35 ft 8 in. ; depth, 128 ft. 6 in. Certificate of title—Vol. 1,128, folio 191 ; in the name of John Carter, but held in trust by him for F. M. Gummow, G. Forrest, James Gillan, and self equally.

This is included in properties held as security by S. H. Weedon for loan of £2,000.

Appendix No. 40.

MONIER CULVERT, BURWOOD.

Analysis of W. A. Smith's Statement re Expenditure.

| Voucher No.                   | Description   | £  | s. | d.   |
|-------------------------------|---|----|----|------|
| 389                           | Mr. Smith is quite in error in stating that fourteen casks of cement charged were not used, the fact being that none, or but very little, was left over, as can be shown from the fact that a fresh supply was needed and obtained for the next work  | 9  | 9  | 0    |
| 275 & 354                     | Bramston had but little else to attend to while this work was in progress; therefore the whole of two months' pay was rightly charged to this work. Deduction wrongly claimed by Mr. Smith  | 25 | 16 | 0    |
| 414                           | The previous wages voucher dated July 28th: Thus to August 2nd occurs an interval of four work days; five men's wages for this time amounts to  | 7  | 4  | 0    |
| 201                           | Bolts were not used in the culvert, but in making the centres, &c.  | 0  | 10 | 5    |
| 327                           | The whole this was for repair of tools used upon the work.  | 0  | 8  | 3    |
| 467, 8, 9                     | The Water and Sewerage Board's charges for removal of main, &c., were consequent upon this (more than necessarily) large culvert being put in   | 12 | 5  | 9    |
| Monier Culvert—Wages Account. |   |    |    |      |
| 189                           | This is a correct charge; <i>Isles</i> did not do all the carting for culvert, but merely the cartage of plant to the work. W. Thompson (the road carter) did more of it, such as carting gravel and sand from railway, metal to make good the roadway, spoil from excavation, removal of plant, &c. No record was kept of this; but the whole of this would probably amount to twelve days for one man, horse, and cart, 10s.  | 6  | 0  | 0    |
| 190, 224, 270, 363, 414.      | The whole of these wages (or, approximately the whole) had to do, either directly or incidentally, with the construction of this culvert, and consequently are a correct charge against it. The division of time I look upon as fictitious, <i>i.e.</i> , the old rotten brick structure was scarcely any hindrance to excavating trench for the men. And the cutting of outlet drain is mentioned; whereas this item of work was done prior to the work on the culvert being commenced, and is not charged against it. |    |    |      |
| 220                           | This item had to do with preparing centre, &c., for the culvert. Mr. Smith's statement as to the man Davis (or Davison) is incomprehensible. The man's time (49½ days) I believe to be correct. He was on the work till nearly the finish, and certainly did not go to gas-works bridge until September. Deductions incorrectly claimed by Mr. Smith on above items   | 48 | 2  | 0    |
|                               |   |    |    | L1st |

## Appendix No. 44.

## SUB-DUCTS.

104. Sub-ducts to be constructed, when decided on, along lines of tunnels and open trenches commencing on each length midway, or thereabouts, between two working shafts or faces, 33 inches below invert of main sewer, branches, &c., or as shall be directed at the time, and having a fall towards each working shaft or face of such gradients as may be determined at the time, after the thickness of sewer-lining required for each length between shafts or faces has been ascertained and ordered. Sub ducts of 9 inches, or of a greater or less internal diameter, if directed, to be laid immediately underneath the timber floor of tunnel or open trench, or at sides of sewer, in hardwood boxes varying in size and dimensions as shown on drawing. Said boxes to be laid straight and true to levels decided upon, and the pipes to be laid therein, upon, and surrounded by sandstone chippings and quarry refuse. Dry stone packing to be put over pipes, as specified in clause 21.

105. In solid and disintegrated rock the excavation for sub-duct to be executed as shown on cross-sections, and as shall be directed, and the sub-duct to consist of glazed stoneware spigot and faucet pipes of 9 inches internal diameter, more or less, as the case may be. The pipes to be jointed dry, and the filling above same, up to underside of sewer lining, to be of dry stone, hand-packed, as above described. The Engineer may also, if he deems it necessary, order the pipes to be jointed altogether, or in part with tarred gasket, 1½ inch deep, and cement mortar, 1¼ inch deep. The mortar to be prepared of one part cement to two parts of sand.

|    |   |               |     |     |
|----|---|---------------|-----|-----|
| 23 | Sub-duct in hard rock, with tile covers, as specified in clause 8   | lineal yard . | 5/- | 280 |
|    | Sub-duct, as specified in clause 8, in "more or less hard material," including dry or cement jointing for stoneware pipes :—                                |               |     |     |

|              | Excavation in tunnels, in hard rock, for sewer, branches, pipe-sewers, junctions, curves, &c., as specified in clauses 38, 42, 45, 48 to 68, including subducts, timbering, unwatering, and removing the excavated materials beyond actual site of works, as viz. :—                            |             |                    |       | £ s. d.    |
| 1            | Excavation in hard rock, where gadding only is permitted .....  | cubic yard  | 800                | 63/-  | 2,520 0 0  |
| 2            | Excavation in hard rock, where charges of powder 2 inches in length by 1½ inch in diameter, and such depths of boreholes as shall be directed only are permitted .....  | "           | 835                | 61/-  | 2,546 15 0 |
| 3            | Excavation in hard rock, where charges of powder 4 inches in length by 1½ inch in diameter, and such depths of boreholes as shall be directed only are permitted .....  | "           | 3,000              | 60/-  | 9,000 0 0  |
|              | Excavation in shafts, shaft-chambers, and sumps, as specified in clauses 39, 52, 53, 71, and 72, including timbering, unwatering, and removing the excavated materials beyond actual site of works, as viz. :—  |             |                    |       |            |
| 4            | Excavation in road surfaces, sand, soil, clay, pipeclay, shale, and soft rock only .....  | "           | 75                 | 78/-  | 292 10 0   |
| 5            | Excavation in hard rock, where gadding only is permitted .....  | "           | 361                | 83/-  | 1,498 3 0  |
| 6            | Excavation in hard rock, where charges of powder 2 inches in length by 1½ inch in diameter, and such depths of boreholes as shall be directed only are permitted .....  | "           | 500                | 79/-  | 1,975 0 0  |
| 7            | Excavation in hard rock, where charges of powder 4 inches in length by 1½ inch in diameter, and such depths of boreholes as shall be directed only are permitted .....  | "           | 2,500              | 78/-  | 9,750 0 0  |
| 8            | Filling in round brick and concrete work of ventilating and intercepting shafts and chambers, manholes, and into all shafts, as specified in clauses 40, 41, 42, 43, 71, and 72, including withdrawing of timber, depositing in layers, replacing road and other surfaces, ramming, &c. ....    | "           | 120                | 1/-   | 6 0 0      |
| 9            | Timber ordered in writing to be left in tunnels, shafts, as specified in clauses 36 and 37, including all iron used in fixing same .....  | cubic feet  | 500                | -/1   | 2 1 8      |
| 10           | Subduct in hard rock, with tile covers, as specified in clauses 76 and 77 .....   | lineal yard | 250                | -/1   | 1 0 10     |
|              | Subduct, as specified in clauses 76 and 78, in more or less hard material, including dry or cement jointing for stoneware pipes, &c. :—   |             |                    |       |            |
| 11           | Of 6 inches internal diameter .....   | "           | 100                | -/1   | 0 8 4      |
| 12           | Of 9 " " " .....  | "           | 100                | -/1   | 0 8 4      |
|              | Subduct in water-charged loose ground, as specified in clause 76, including hardwood boxes with packing in same, and dry or cement jointing for pipes of :—   |             |                    |       |            |
| 13           | 6 inches internal diameter .....  | "           | 100                | -/1   | 0 8 4      |
| 14           | 9 " " " .....   | "           | 100                | -/1   | 0 8 4      |
| 15           | 10 " " " .....  | "           | 100                | -/1   | 0 8 4      |
| 16           | Hand-packed stone-filling, 4-inch gauge, as specified in clauses 17, 69, 76 to 78, over subducts, and when ordered, round sewers, and pipe-sewers in tunnels, including depositing, packing, and ramming .....  | cubic yard  | 300                | -/1   | 1 5 0      |
| 17           | Sandstone concrete, any shape, form, or thickness, in shafts, tunnels, sumps, round stoneware pipes, and, where ordered, in any situation in the construction of these works, as specified in clauses 26, 27, 93 to 109, including washing, dry surfaces, wetting, and grouting, complete ..... | "           | 1,020              | 37/6  | 1,912 10 0 |
| 18           | Bluestone concrete, any shape, form, thickness, arched, circular, or otherwise, in sewer, curved junctions, arches, manholes, &c., as specified in clauses 24, 27, 93 to 109, including washing dry surfaces, wetting, and grouting, complete.....  | "           | 1,390              | 56/-  | 3,892 0 0  |

| No. of Item | Description of Work.   | Unit.       | Probable Quantity. | Rate. | Amount.    |
|-------------|--|-------------|--------------------|-------|------------|
|             |  |             |                    |       | £ s. d.    |
| 19          | Brickwork in cement in sewer, junctions, shaft-chambers circular, curved, arched, or otherwise, any shape or form or thickness, as specified in clauses 110 to 113, including wetting, flushing, grouting, collar-joints, pointing, where ordered, &c. :—  | cubic yard  | 520                | 50/-  | 1,300 0 0  |
| 20          | Of one ring or portion of a ring .....   | "           | 180                | 20/-  | 180 0 0    |
| 21          | Cement facing in two thicknesses, $\frac{3}{8}$ inch thick when finished, as specified in clause 114, to all internal (and external, where ordered) surfaces of sewer, junctions, shaft-chambers, culverts, manholes, and where ordered in any situation in the construction of these works .....  | square yd.  | 8,900              | 2/-   | 890 0 0    |
| 22          | Bluestone concrete, any shape, form, or thickness, arched, circular, or otherwise, in shafts, over shaft-chambers, as specified in clauses 93 to 109, including washing dry surfaces, wetting and grouting, complete .....   | cubic yard  | 150                | 60/-  | 450 0 0    |
| 23          | Brickwork in cement, circular, arched, curved, or otherwise, any shape, form, or thickness, as specified in clauses 110 to 113, in shafts, over shaft-chambers, including wetting, flushing, grouting, pointing, where ordered, collar-joints, &c., complete .....   | "           | 870                | 65/-  | 2,827 10 0 |
| 24          | Cement facing in two thicknesses, $\frac{3}{8}$ inch thick when finished, to all internal and external surfaces of shafts, where ordered, as specified in clause 114 .....   | square yd.  | 290                | 2/-   | 29 0 0     |
| 25          | Pyrmont sandstone, ashlar, set in cement, on top of ventilating shafts, and where ordered, as specified in clauses 16 and 115, complete .....  | cubic feet  | 185                | 6/-   | 55 10 0    |
| 26          | Squared bluestone pitchers, 9 inches deep, set in sand, round cast-iron ventilating grates of shafts, where ordered, as specified in clause 116, complete .....  | square yd.  | 20                 | 30/-  | 30 0 0     |
| 27          | Providing, laying, and jointing glazed stoneware, plain pipes, in trenches, and where ordered, including fixing discs, as specified, and including bed joints, in mortar, where required :—  | lineal feet | 2                  | 10/-  | 1 0 0      |
| 28          | 18 inches diameter .....   | "           | 60                 | 2/-   | 6 0 0      |

| 40          | Sawn hardwood, in scantlings or planks (clause 30) .....   | cubic feet  | 50                 | 2/-   | 5 0 0      |
| 41          | Oregon timber, in scantlings or planks .....   | "           | 50                 | 2/6   | 6 5 0      |
| 42          | Wrought-iron in bolts, galvanised step-irons, screws, nails, spikes, straps, &c. (clause 31) .....   | cwt.        | 3                  | 56/-  | 8 8 0      |
| 43          | Portland cement .....  | cask        | 10                 | 16/-  | 8 0 0      |
| 44          | Artisan or mechanic, supplied by contractor .....  | day         | 15                 | 12/-  | 9 0 0      |
| 45          | Quarryman or other skilled labourer, supplied by contractor .....  | "           | 15                 | 10/-  | 7 10 0     |
| 46          | Ordinary labourer, supplied by contractor .....  | "           | 30                 | 10/-  | 15 0 0     |
| 47          | Cart, with one horse and driver, supplied by contractor .....  | "           | 10                 | 20/-  | 10 0 0     |
| 48          | One additional horse, supplied by contractor .....   | "           | 10                 | 10/-  | 5 0 0      |
|             | <b>MAINTENANCE.</b>  |             |                    |       |            |
| 49          | Three months' maintenance after formal delivery of works .....   | lump sum    | .....              | ...   | 21 18 2    |
|             | Total .....  | .....       | .....              | ...   | 39,890 0 0 |

This is the Schedule of Quantities and Prices referred to in our annexed agreement with Her Majesty the Queen, dated the 10th day of March, A.D. 1892.

Witness,—V. C. LUMSDAINE.

JOHN CARTER,  
D. G. SNODGRASS.

Appendix No. 48.

CONTRACT No. 69.—Return showing the relative amounts of the various tenders received based upon the quantities actually paid for. (Note—The first money columns represent the values where the schedule quantities have been exceeded, the second where they have been reduced, and the third where no appreciable difference in quantity has been made.)

| Item.    | Description                  | Estimated Quantity         | Quantity paid for. | Messrs Carter, Gummow, & Co. |               |            | Mr John Ahern. |      |            |            | Messrs Keble & Keble |         |             |            |             |

## Appendix No. 53.

## No. 1.

Messrs. Carter &amp; Co. and Messrs. Gummow and Gillan to the President of Tender Board.

Sir,

Sydney, 10 June, 1891.

We have the honor to enter our protests against the acceptance of the tender of Messrs. Bond and Hudson for Contract No. 79, North Shore sewerage, on the following grounds:—

1. That the tender of Messrs. Bond and Hudson for Contract No. 56, Potts' Point sewerage, was accepted by your Board and not taken up by them.

2. Upon fresh tenders being called the tender of Mr. G. E. Hudson was the lowest, but was not accepted by the Board, in accordance with their rules and regulations.

Upon these grounds we, as tenderers for the North Shore sewerage, beg to protest against the tender of Messrs. Bond and Hudson being now accepted.

We have, &amp;c.,

GUMMOW AND GILLAN.  
CARTER & CO.

Let me have papers *re* Bond and Hudson's tender for Contract 56.—R.H., 10/6/91. Herewith.—J.C.P., 10/6/91.  
Mr. Hickson for report.—J.B., 10/6/91.

In January, 1890, C. S. Bond (afterwards Bond and Hudson) tendered for Sewerage Contract No. 56, at a ridiculously low figure, and, as anticipated, had to throw up the contract and forfeit deposit. They were the lowest again when fresh tenders were invited, but did not get the work, they being ineligible under the Tender Board Regulations, clause 14. The same firm now (some sixteen months later) are the lowest tenderers for Sewerage Contract 79, and it is contended by the writers of the within letter that their tender should not be accepted. I cannot recommend that this course be taken. It is true, under clause 14, they can be excluded from competing for other works at the pleasure of the President. But in all fairness there must be some limit (when no fraudulent action has taken place) to this prohibition; and it seems to me, after sixteen months, all bar to their tendering should be removed. In recommendation on face of tender.—R.H., 10/6/91. Under Sec.

Resubmit when we deal with the tenders.—J.B., 30/12/91.

## No. 2.

E. M. Clark, Esq., M.P., to the Secretary for Public Works.

Sir,

Parliament House, Sydney, 30 July, 1891.

I understand that tenders were accepted some time ago for the outfall sewerage to Long Bay, St. Leonards. The successful contractors were, I understand, Messrs. Bond and Hudson; and, as the work is a very urgent one, I think they should be compelled to go on with the work.

Trusting you will hurry the matter on.

I have, &amp;c.

EDWARD M. CLARK.

Resubmit with the tender, which I do not think has been accepted.—J.B., 3/8/91. Tenders for Contract No. 79 (91/1524) and all previous papers submitted, 13/7/91.—R.H., 3/8/91. All papers herewith.—D.C.M'L., 4/8/91. To stand over.—J.B., 7/7/91. Roads, B.C. Seen.—R.H., 8/9/91.

## No. 3.

E. M. Clark, Esq., M.P., to the Secretary for Public Works.

Sir,

Parliament House, Sydney, 18 August, 1891.

I shall be glad to know how far the matter of proceeding with the "outfall sewer to Middle Harbour," in my electorate, has progressed.

I might say I wrote you on the matter a fortnight ago.

Yours, &amp;c.

EDWARD M. CLARK.

91/1,991, and all previous papers, sent Under Secretary, 4/8/91. Tenders are awaiting acceptance; amount, £36,900, loan.—J.B., 19/8/91. Submitted.—J.D., 19/8/91. Inform must stand over until the question of further loan expenditure has been determined.—B.S., 21/8/91. Inform to-day.—J.B., 21/8/91. E. M. Clark, Esq., M.P., 21/8/91. Seen.—R.H., 24/8/91.

## No. 4.

Messrs. Bond and Hudson to The Secretary for Public Works.

*In re* Contract No. 79, Sydney Sewerage Works.

Dear Sir,

88, Sussex-street, Sydney, 28 September, 1891.

On the 10th June, of this year, we had the pleasure of submitting a tender for the above works, and we believe, were successful in being the lowest tenderers.

We have been anticipating the acceptance of our tender for some months, but not hearing from your Department, we have, in the meantime, entered upon other obligations, and must consequently respectfully ask you to permit us to withdraw our tender, and to return us the deposit attached thereto now lying in your hands, viz., £369.

We are, &amp;c.,

C. B. BOND,

(Bond and Hudson).

How does this matter stand?—D.C.M'L., 30/9/91. Messrs. Bond and Hudson's tender was recommended for acceptance on 10/6/91. Papers herewith.—F.C.P., 1/10/91. Return deposit.—J.B., 2/10/91. Accountant to return deposit, 2/10/91. I recommend that fresh tenders be invited.—R.H., 6/10/91. Under Secretary. Submitted.—J.B., 9/10/91. Approved.—W.J.L., 22/2/92. Insert notice, 22/2/92. Notice to *Gazette*, 22/2/92. Tenders for 9th March, 1892.

Since writing my minute of 6/10/91, complications have arisen with Carter & Co., *re* their Contract No. 72 having been stopped. They have made large claims on this account, some of which no doubt could not be entertained, but on some items they have made a good case. They are prepared, if they obtained this work, to waive all claims on No. 72. As their tender is a reasonable one, and some £3,600 below the estimate, I think it might fairly be accepted. If this course were adopted work would be given at once to a large number of men.—R.H., 23/2/92. Under Secretary. Important.

As Mr. Hickson thinks Messrs. Carter & Co. could make good a claim for something like £2,000 as compensation on Contract 72 (Munni-street, partly), should they be willing to forego this claim, their tender may be accepted for construction of the main outfall sewer, North Sydney—£39,890, as worked out at schedule rates. If this firm will not agree to the condition imposed, fresh tenders to be invited.—W.J.L., 23/2/92.

Mr. Hickson.—D.C.M'L., for U.S., B.C., 23/2/92. Please see me with Messrs. Carter & Co.—J.B., 23/2/92.  
Mr. Hickson.

## No. 5.

*Précis* of case up to return of Messrs. Bond and Hudson's deposit.

Department of Public Works, Roads and Bridges and Sewerage Branch,

Sydney, 29 January, 1892.

*Minute Paper.**Subject*:—North Shore Outfall Sewer, Contract No. 79, Sydney Sewerage Works.

TENDERS were received on the 10th June, 1891, for this work, that of Messrs. Bond and Hudson, at £37,254 10s., being the lowest. On the same date Messrs. Carter & Co. and Messrs. Gummow and Gillan conjointly wrote in protesting against the acceptance of Bond and Hudson's tender, as that firm had, on a previous occasion, thrown up a contract, but the protest was not allowed on account of the lapse of time, and as no fraudulent action had taken place, their tender was therefore recommended for acceptance.

On

On 28th September, 1891, Messrs. Bond and Hudson wrote in asking for the return of their deposit, and to be allowed to withdraw their tender owing to the delay in acceptance of same, and their having entered into other large engagements.

The deposit was returned accordingly on the 7th October, 1891.  
The Engineer-in-Chief for Sewerage.

No. 6.

The Chief Clerk to The Tender Board Clerk:

Department of Public Works, Sydney, 23 February, 1892.

*Minute Paper.**Subject*:—Main Outfall Sewer, North Sydney.

WITHDRAW notice inviting tenders for the above.

Done, 23/2/92. Put with the papers, 25/2/92.

No. 7.

The Under Secretary for Public Works to Messrs. Carter &amp; Co.

Department of Public Works, Sydney, 10 March, 1892.

Sirs,

I have the honor, by direction of the Secretary for Public Works, to inform you that your tender, dated 10th June last, is accepted for construction of the North Shore Main Outfall Sewer, from near Long Bay to Mount-street—Contract No. 79, Sydney Sewerage—at your schedule of prices.

The work is to be carried out in strict accordance with the several contract exhibits relating to this contract, and to be completed within twenty-four months from this date.

I have to refer you to the Commissioner for Roads for further information, and to request that you will call upon the officer in charge of bonds and contracts at this office, for the purpose of executing the necessary documents for the due observance of your contract.

I am, &amp;c.,

J. BARLING,

Under Secretary.

## Appendix No. 54.

CONTRACT No. 72.—Schedule of quantities and prices for constructing and completing concrete and stoneware pipe storm-water sewer, from Munni-street along Macdonald-street to Mitchell Road and Shea's Creek, with manholes, flushing chambers, junctions, &c., subject to omissions, additions, deviations, or alterations, as provided. The quantities in this schedule are not guaranteed as correct, but are merely given for the guidance of intending contractors, this being a schedule of prices contract.

| No. of Item. | Description of Works.   | Unit.       | Probable quantity. | Rate per unit. | Amount.     |
|--------------|---|-------------|--------------------|----------------|-------------|
| 1            | General excavation in open trenches for sewers, junctions, curves, manholes, pipe-drains, &c., including grubbing, clearing, timbering, unwatering, road restoring, coffer-dam, removing of old stone abutments and timber-decking of existing road bridge, depositing the excavated materials beyond actual site of works in separate spoil-banks, complete, as specified in clauses 34 to 36, and 37 to 54, inclusive .....   | cubic yard  | 26,200             | 2/6            | £ 3,275 0 0 |
| 2            | Filling in below, at sides, and over sewers, junctions, curves, manholes, into abandoned open channels, road embankment, &c., including the providing of quarry filling, lead from sites of excavations or temporary spoil-banks, or any other sources outside the limits of this contract, to the place of permanent deposit, breaking, road restoring, ramming, watering, leading surplus and rejected material to spoil, as specified in clauses 47, 50, 51, 53 to 62, inclusive ..... | "           | 12,000             | 1/-            | 600 0 0     |
| 3            | Sodding at both sides of new channels, and where ordered, complete, as specified in clause 63 .....   | squareyard  | 1,000              | 1/-            | 50 0 0      |
| 4            | Brickwork, any thickness, shape, arched, &c., where ordered, in any situation, as specified in clauses 96 to 99 .....   | cubic yard  | 110                | 80/-           | 440 0 0     |
| 5            | Sandstone concrete, any shape, form, thickness, arched, &c., where ordered, in any situation, as specified in clauses 73 to 95 inclusive .....  | "           | 8,100              | 34/-           | 13,770 0 0  |
| 6            | Cement facing $\frac{3}{4}$ inch thick, where ordered, in any situation, as specified in clause 112 .....   | squareyard  | 11,600             | 2/6            | 1,450 0 0   |
|              | Providing, laying, and joining glazed stoneware plain pipes, in trenches, and where ordered, including fixed discs, as specified in clauses 16, 40-42, 44, and 73 to 77:—   |             |                    |                |             |

STEPHEN H. WEEDON,  
Resident Engineer, Contract No. 72.

J. DAVIS,  
Supervising Engineer.

Amount of contract .....

£29,650

Actual amount of payments, including present advance .....

£25,264 19s. 4d.

Contractor's name—CARTER & CO,

I,

I hereby certify that I examined the work generally and found it in accordance with specifications, and have checked the quantities with the plans, and that they generally agree with same, and that rates are correct.

C. H. OHLFSEN-BAGGÉ,  
Chief Assistant Engineer.

I certify that the amount charged in this voucher as to computations, castings, and rates is correct, that the service has been faithfully performed, and that the expenditure is duly authorised in terms of the Audit Act.

ROBT. HICKSON,  
Head of the Department.

Received on the \_\_\_\_\_ day of \_\_\_\_\_ 189\_\_\_\_, the sum of eight hundred and sixteen pounds seventeen shillings and seven pence, sterling, in full payment for the whole of the works mentioned in the above account, the quantities stated having been finally agreed upon, and settled to be the whole of the work done and materials provided, for which payment is to be made in respect of the Contract for Munni-street to Shea's Creek, S.W. Sewer, Ct. 72, and all extra works in connection with the said Contract, and we declare that the sum hereby acknowledged to be received by us includes the percentages retained until the final completion of the work, and is in full payment and satisfaction of all our claims for or in respect of, or arising out of, our Contract for the said work, and for everything in connection therewith, in respect whereof we have any claim whatsoever.  
(Witness)

## Appendix No. 56.

Inspector Fowle to Engineer Weedon.

Contract 79, North Sydney,  
19 February, 1894.

Sir,

I beg to report that on several occasions I have had to complain about the time the sandstone concrete is mixed for packing brickwork in shafts. To-day two 20-foot mixings were made up at 2 p.m. at No. 5 shaft. This concrete will not be put down shaft for use till 5.30 p.m. I have instructed Connors (foreman), who has charge of this work, not to have the concrete mixed so long before being used. He states to me that he has to take his instructions from the firm. I saw Mr. Snodgrass last Friday and complained to him about this matter, when he promised it should not be mixed until one hour before it is required to be used. I spoke to Reid (contractors' representative) to-day, and he states that they shall mix the concrete when convenient for themselves.

Inspector Reid informs me that on Saturday last, 17th February, about 1 p.m. at No. 6 shaft, it required half mixing 10 feet of sandstone concrete to finish brickwork packing in shaft. Henderson, bricklayer working in shaft, was on mixing board, and started to assist labourer gauge the stone. Inspector Reid instructed Henderson to use the fork in place of shovel in filling the gauge-box, as the stone which is broken close to the mixing-board, is not free from refuse. Inspector Reid asked Henderson the second time to use the fork. Henderson replied that it did not want forking. Connor's foreman came on the scene and said to Henderson, "Go on; do not take any notice of him, he's only a damned big buck navvy."

I have, &amp;c.,

G. A. FOWLE,

Inspector.

Correct.—R. G. REID.

When I first observed mixed concrete on the board at mouth of shaft No. 5, and found from Inspector Reid that it would not be used before evening, I pointed out to him that this was too long for it to stand, for though mixed dry, the stone had been soaked with water and the sand wetted by the rain. He told me the matter had been inquired into and settled by yourself and the contractors. I am still of opinion that it is detrimental to the strength of the concrete for cement to be mixed for hours with the other wetted materials before going into the work. I beg to point out that such friction, as is evident by this report, between our inspector and the contractors' men should be put a stop to at once by removing the offending party from the works, as no satisfactory work can be done under the strained conditions obtaining at present.—S.H.W., 20/2/94. Mr. Davis.

Ask Carter &amp; Co. to see me.—R.H., 31/2/94.

The Engineer-in-Chief decided that Connor was to be removed from the North Shore contract, and that Reid was to leave when the work in Contract No. 79 was finished. Inspector Reid is also to go from Contract No. 79. I have already instructed Mr. Weedon to let Inspector Reid change places with Inspector Eyre.—J.D., 22/2/94. Mr. Weedon.

Accordingly.—S.H.W., 23/2/94. File.—J.D., 26/2/94.

## Appendix No. 57.

Improved method of Construction for use in connection with Works in which Cement and its mixtures are employed.

Contents:—(1.) Introductory description. (2.) System as applied to Bridges. (3.) System as applied to Culverts, Tunnels, and Pipes. (4.) System as applied to Iron Bridges.

## INTRODUCTORY DESCRIPTION.

## IMPROVED METHOD OF CONSTRUCTION FOR USE IN CONNECTION WITH WORKS IN WHICH CEMENT AND ITS MIXTURES ARE EMPLOYED.

THE principle of this method of construction is to increase the extremely small tensile strength of cement and its mixtures, which is to its compressive strength in the ratio of 1 to 10, by embedding wrought-iron bars in the mortar in such places where the construction is subject to tension. The compressive strength of a mixture of 1 cement and 3 sand is from 2,000 lb. to 2,450 lb., the tensile only 200 lb. to 245 lb. per square inch.

The iron bars used are round, from  $\frac{3}{8}$ -inch to 1-inch diameter, as found necessary, and are so placed that the stronger are in the direction of the tension, the thinner resting on the former, usually at right angles to them, thus forming a lattice work. The bars are only held together at their intersection by thin binding wire just sufficient to hold them in position during the process of packing the cement mortar round them, which will keep them in place when once set.

If not sufficiently long the bars are jointed by a very simple method. They are so placed as to overlap each other by twenty times the diameter of the bars, and then tied together. The cohesion between iron and cement, which is, according to Professor Bauschinger, of Munich, 500 lb. to 600 lb. per square inch, and which is not diminished by heat, is quite sufficient to form a bond.

The lattice work is calculated to withstand all the tension the structure is likely to be subjected to. To achieve this it is only necessary to take the bars in the direction of the tension into consideration, as the others are only to distribute the pressure equally over the former. When the iron structure is finished the cement mortar, usually of 1 cement to 3 sand, is pressed through the meshes in convenient thicknesses of not over 9 inches on to the centering, which is generally  $\frac{3}{4}$  inch clear of the iron, and well rammed. In setting, the cement mortar shrinks and gets a firm grip round the iron, and as the cohesion between the two materials is very great, the whole forms one homogeneous mass. The physical properties of this combination are very favourable. The coefficient of expansion of cement mortar is from 0.000137 to 0.000148, that of iron 0.000145, or nearly the same; and even if a small difference should exist, the elasticity of the mortar is sufficient to equalise the difference. Further, in this combination the iron loses its unfortunate liability to oxidation, as cement has proved itself one of the best preservatives of iron. The very thin layer of cement surrounding the iron forms a silicate with it, very difficult to separate, which explains why iron in cement mortar does not oxidize. Not only does cement preserve iron, but actually frees it from rust, as experiments have proved that iron bars covered with rust, if placed in cement mortar, become, after a time, perfectly clean.

A structure of the foregoing description consequently combines all the good qualities of stone, its strength and immunity from injury by the weather, with the elasticity of the iron, and daily increases in strength rather than deteriorates.

The advantages of this system compared with other methods are:—

1. Quickness of erection without prejudice to durability and security of the work.
2. Immunity from injury by water.
3. Extraordinary power of resisting very high and variable temperatures.
4. Great strength.
5. Lightness as compared with other structures in iron or concrete alone.
6. Saving in space.
7. Cheapness and neatness.

That a building material of such splendid qualities has found a very extensive application is not to be wondered at. It has already been successfully applied to bridges, sewers, reservoirs, roofs, arches, walls, floors, stairs, columns, &c.

The invention and introduction of this system has placed at the disposal of the engineering profession a building material which has, in the last few years, revolutionised the construction of bridges, culverts, tunnels, and all structures in which the principle of the arch is employed.

Where only a limited height is available for such structures, and where strong brick arches with great versed sine are inapplicable, this system offers an excellent means of overcoming the difficulty. The iron network is placed close to the intrados of the arch, as the same is there subject to tension. The stronger bars, vertical to the springing (except in skew arches), are extended into the abutments, which are preferably built of concrete. An arch is hereby created, immovably fixed at each end, which from the nature of its construction exerts a less horizontal thrust against its abutments than concrete, brick, or stone arches.

It

It has been proved by many tests made by Professor Bauschinger and others that a structure of cement mortar with iron rods inserted in the places where it is subject to tension acts as an elastic body, and that, therefore, the formulæ for the calculation of the strength of elastic bodies are applicable in its case.

In addition to the advantages already mentioned, arches built on this principle possess the following additional advantages over those built on other principles:—

1. Lightness of staying and centering for erection.
2. Simplicity in the construction of skew arches.
3. Their cheapness renders them available in many instances in which expensive iron structures have hitherto been the only means of overcoming the engineering difficulties.
4. The cost of maintenance is reduced to a minimum.
5. The portability of the materials for this system of construction renders it applicable in districts where suitable building materials cannot be obtained, and where their transport or the carriage of iron structures is surrounded with difficulty.

The cement and iron bars required for buildings on this principle are easy of carriage, and the sand for the mortar is easily obtained in most localities.

#### SYSTEM AS APPLIED TO BRIDGES.

Reconstruction on this system of eight overhead bridges on the Liesing to Felixdorf line of the Austrian South Railway Company.

THE reconstruction of arched overhead bridges on the line of the Austrian South Railway Company was found necessary, as the headway of the existing bridges was insufficient to accommodate a new type of rolling-stock which was introduced. Altogether ten overhead bridges on the Liesing to Felixdorf line had to be altered, four of which were situated at stations and six on the main line.

Of the four bridges at the stations, three required widening as well as increase of headway to meet the requirements of the traffic.

As these alterations involved a large outlay of money, the means of ensuring stability of construction without undue expenditure had to be carefully gone into. Various methods of overcoming the difficulty were considered, and a short account of the objections to them will no doubt be interesting.

1. *Lowering the permanent way.*—With the four bridges at the stations this was out of the question, as it would have entailed the lowering of the station buildings. In the case of the remaining six bridges, with one exception, this plan was found impracticable on account of the drainage of the surrounding country.

2. *Substitution of flat segmental brick arches for the existing elliptical arches of the same material.*—On this plan very thick arches would have been needed, whose great weight would have entailed very massive centering which would have blocked the traffic on the lines. This plan would also have entailed the strengthening of the abutments to meet the increased thrust against them. To accommodate the extra thickness of the arch would have necessitated the raising of the street levels, which in most cases was out of question.

3. *Substitution of iron superstructures for the existing arches.*—This plan proved too expensive, and in the case of the bridge near Mödling it was inadmissible, as the Government authorities insisted upon the lowering of the street level over the bridge.

In the case of the bridge at Leobersdorf station only was it found practicable to substitute an iron bridge of 55 feet 9 inch span for the existing brick arches. Under the circumstances it was necessary to find a more suitable form of construction than any of the foregoing. The reconstruction of the remaining bridges on this new system now came under consideration, and inquiries as to its suitability were ordered to be made in Germany, where the system had been employed in constructions of the most diverse character.

The result of this inquiry was embodied in a report by Engineer Carl Prenninger, which, while dealing principally with works executed at Berlin, Leipsic, Dresden, and Munich, goes fully into the question of the possibility of overhead bridges for vehicular traffic being constructed on this principle.

The greatest number of the works inspected during the course of the inquiry pertain properly to the building department, but some, such as the weir near Pirna, in Saxony, were entirely subject to the influence of the weather, and were reported to have satisfactorily answered the purpose for which they were intended. Professor Bauschinger, of Munich, expressed himself very favourably on this system, and did not doubt its successful application to road bridges, as experiments made by him with arches had given results hardly to be credited.

Professor Bauschinger, of Munich, gives the result of a test of an arch on this system in the following table.

The dimensions of the arch experimented upon were:—

Span = 32·8 feet.  
 Versed sine = 3·28 feet.  
 Width = 3·28 feet.  
 Thickness =  $3\frac{3}{8}$  to  $4\frac{3}{8}$  inches.

It had a single iron network composed of 19 longitudinal or main rods of  $\frac{3}{8}$  inch diameter, and 180 cross-rods  $\frac{22}{16}$  inch diameter and 158 of  $\frac{5}{16}$  inch diameter, forming a  $2\frac{3}{8}$ -inch mesh from centre to centre of rods. The main or longitudinal rods were 12·30 feet long, jointed where necessary by overlapping about 9 inches, and bound together by thin wire, but arranged so as to break joint. The abutments were of concrete, and connected by two tie-rods.

In testing, the arch was first loaded with a layer of pig-iron equally distributed over its entire length and then unloaded, first the one then the other half. The arch was then reloaded with layers of pig-iron, first the right and then the left half, and so on until eight layers were piled upon it. No more pig-iron being available, bundles of wires 11 ft. 6 in. long, and weighing 55 lb. each, were placed on top twenty-one pieces deep at a time, loading first the right, then the left, and last the middle. Three layers of wire bundles were piled on without fracturing the arch. This was only effected by removing wire and pig-iron to the extent of 7,968 lb. weight from one side of the arch, thus causing a one-sided load. The deflections due to the loading and unloading were recorded at nine stations marked A to I, 3·28 feet apart, the first being situated 3·28 feet from the abutment, so that station E came in the centre of the span.

The results of these tests are recorded in the accompanying table, in which "x" denotes lateral and "y" vertical deflections. The positive sign prefixed to these values indicates a movement of the point to the right or upwards respectively, the negative sign, to the left or downwards respectively. The zero point of each gauge was adjusted to the centre line of the unloaded arch previous to testing. The arch was erected 13th July, 1889, and tested 7th October of the same year.

As there was, however, no structure in existence similar to those proposed to be erected by the railway authorities, the Austrian Government insisted on a trial arch being erected and submitted to severe trial loads before sanctioning their erection.

The Railway Company selected Matzleindorf goods station, and built an arch of the dimensions shown on attached drawing, completing the work on the 19th October, 1889.

On the 10th December, 1889, the Railway Company tested the bridge in presence of a Commission of Government officers, and again on the 16th and 17th May, 1890. Both tests giving such favourable results as to dispel all doubts as to the suitability of the system for bridges, the Austrian Government, acting on the recommendation of the Commission, permitted the construction of the overhead bridges on the new system.

*First trial tests of the experimental arch constructed on this system at Matzleindorf goods station, 10th December, 1889.*

The dimensions of the arch were as under:—

Span = 32·8 feet.  
 Width = 13·12 feet.  
 Thickness at crown = 5·91 inches.  
 „ near abutment = 7·87 inches.

The abutments were of brick, 6·56 feet thick, surrounded by 3·28 feet of concrete on top and back. The spandrel walls resting on the arch were of brick; the spandrel filling was of gravel, on which were laid 2 ft.  $7\frac{1}{2}$  in. apart the sleepers of a temporary line; a sleeper was thus placed directly over the crown of the arch. A joint in the rails occurred over the first quarter of the span from the left abutment. The arch was erected in a pit or excavation, so as to bring the rails over it, down to the level of the existing lines, and so allow the rolling stock in use to be run on to the arch for the trials. The arch

arch was erected on the 19th October. The weight of the rails was 72 lb. per lin. yard, and that of the whole dead load 2 cwt. 2 qr. 26 lb. per square foot. To measure the deflections of the arch, caused by the test loads, nine sliding scales were fixed, arranged in sets of three, one set in the first quarter of the span, one set in the centre, and one set in the third quarter of the free span. The following sketch shows the position, and distinguishing numbers of the different points of observation.

Eleven tests were made with the railway rolling stock, the loads being slowly run on to the arch and then removed. Particulars of the loads and deflections are given in the tables appended, and were in every respect satisfactory, as no cracks or evidence of strains could be discerned in any part of the arch.

*Second series of trial tests of the experimental arch on this system at the Matzleindorf goods station, 16th and 17th May, 1890.*

The arch was the same as was used for the first series of tests made on the 10th December, 1889. It being 210 days from date of erection, and 157 days from date of last test. The gauges used for observation in this series of tests recorded lateral as well as vertical movements of the arch, and are shown in the adjoining sketch.

Gauges were placed in the same positions as in the tests of 10th December, 1889, and also at the heels of the arch Nos. 10, 11, 12, 13. There were, therefore, five on each face of the arch, and three under the centre line of the bridge.

The tests were begun on 16th May, 1890, by shunting first a six-wheel, and then an eight-wheel locomotive on to the Matzleindorf half of the arch. As no damaging alterations of form took place the locomotive was removed, and the other (Vienna) half was loaded with a successively increasing load of rails. This load was increased until it reached 88 tons 7 cwt. 3 qr. 12 lb., equal to 8 cwt. 0 qr. 24 lb. per square foot, when the spandril walls commenced to separate from the Vienna abutment, the crack extending also through two-thirds of the thickness of the arch near the heel.

The load was then increased to 98 tons 4 cwt. 1 qr. 4 lb., or 9 cwt. 0 qr. 14 lb. per square foot, when cracks showed in both spandril walls, near the middle of the unloaded half. This load was maintained for three and a half hours, from 11.15 a.m. to 2.45 p.m., and then removed.

On the following day, 17th May, 1890, the load (No. 4 test) was reimposed and increased to 176 tons 15 cwt. 2 qr. 24 lb., when the Matzleindorf abutment began to crack considerably, in consequence of which the arch sank until it rested upon the underlying scaffold in several places.

The scaffold being lowered free from the intrados, the deflection still increased without the arch showing any further crack than that already mentioned as occurring at the Vienna abutment, but it was found that the top course of bricks in both abutments were completely crushed. The load was then increased to 192 tons 13 cwt. 3 qr. 20 lb., or 17 cwt. 3 qr. 18 lb. per square foot. The cracks increased, and both abutments were pushed out from  $\frac{3}{4}$  in. to  $1\frac{1}{2}$  in., in consequence of which the deflection of the arch increased so that it again took a bearing upon the scaffold below in several places, and showed a crack on the lower side or intrados of the unloaded half at about 1 ft. 7 $\frac{1}{2}$  in. from the crown, and extending over the whole width of the arch, indicating its complete destruction.

If the dimensions of a concrete arch constructed without iron network are calculated like an iron arch, when tested it will give results quite at variance with what the calculations would lead one to expect, the actual strength being always greater than the theoretical.

With, moreover, an iron network inserted, there is a further considerable increase in strength, as comparative tests of ordinary concrete arches and arches on this system have proved, where the latter have borne from five to six times greater loads than the ordinary concrete arch of equal dimensions.

The proposed overhead bridges were so designed that the concrete arch without an iron lattice network would be able to carry with safety the normal load for first-class street bridges. In addition, an iron network was inserted throughout the arch, and an additional one, extending from the heel to the first eighth of the arch of such dimensions, as to be able of itself to withstand the tensile and part of the compressive forces. The dimensions thus arrived at would give altogether about twenty times the required strength.

It will be as well to explain the reason for inserting an additional iron network in the upper side of the arch from the heel to the first eighth of the arch.

Let the arch be so constructed that the line of equilibrium coincides with the centre line of the arch when the ordinary working load is equally distributed over the whole span. If the whole load be now equally distributed over one-half of the span, allowing the horizontal thrust to remain equal, the equilibrium line will be altered, and the greatest deviation can be expressed by the formula of Müller-Breslau—

$$\frac{pl^2}{64 Q}$$

where p = working load per square foot.  
 l = the span.  
 Q = horizontal thrust.

The

The deviations of the equilibrium line from the centre line of the arch can be determined by the ordinates of a parabola constructed over half the span. The line of equilibrium will assume the position shown on plate attached. This figure shows plainly that in the first eighth of the arch the line of equilibrium of the loaded half lies underneath the centre line of the arch, so that tensile struts are created in the back of the arch, to counterbalance this tensile strain an iron network was inserted near the outside surface of the back of the arch.

This second iron network, of the same dimensions as the main one, reached 2 feet into the abutment, and about 1 foot over the first eighth of the arch. As the bridge near Modling was the largest and also the first to be reconstructed, a full description of the demolition of the existing and erection of the new spans at that place will be of interest. After erecting a temporary wooden bridge to divert the street traffic, the work of demolition was commenced. The railway traffic, which was very heavy (intervals of a quarter of an hour being exceptional), could on no account be interrupted, and as in consequence of the limited headway no scaffolding could be used, and everything had to be handled in a very limited space, this part of the work proved the most difficult and exciting, and it was only through the faithful fulfilment of their duty by all persons engaged in the work that no accident happened, and that during the whole period not a single train was delayed by the work.

The existing bridge connected Old and New Modling, crossing the railway line at an angle of about 70 degrees by three spans, giving space for four lines of rails. The new bridge crosses at the same angle, and has also three spans, but admits of six lines of rails, two in each bay.

The dimensions are —

|                                   |                     |
|-----------------------------------|---------------------|
| Width of spans . . . . .          | = 29 ft 6½ in each. |
| Versed sine . . . . .             | = 3 ,, 7¼ ,,        |
| Thickness at crown . . . . .      | = 6 inches.         |
| Thickness near abutment . . . . . | = 12 ,,             |
| Total width . . . . .             | = 36 ft 5 in.       |
| Width of carriageway . . . . .    | = 26 ,, 3 ,,        |
| Width of footways . . . . .       | = 10 ,, 2 ,,        |

When the pulling down was completed, the erection of the centre piers and abutments, containing about 956 cubic yards of concrete, was proceeded with and finished in twelve days.

The centering for the new arches was then commenced, and was arranged as follows — Twenty four ribs for each arch were formed of 12½-inch by 2½-inch planks, four to each rib, securely fastened together by bolts and nuts. The ribs were placed 2 ft. 4½ in apart from centre to centre at right angles to the lines of rails, and were supported at the ends by longitudinal bearers running along the sides of the piers and abutments, and resting upon capsills parallel to them. Between the bearers and capsills were placed the wedges for adjusting the centering. The capsills were secured to uprights resting upon and morticed into groundsills. Owing to the skew of arch, the three outside ribs of either end of each bay received no support from the piers or abutments, and their supports were, therefore, strengthened by struts extending from the capsills to the ground. After covering the ribs with 1½ inch lagging, a fascia board was fixed in position to form the face of the arch.

The centering was now ready for the construction of the arches.

The proportions of materials in the cement mortar and concrete were specified to be the same as in the trial bridge at Matzleindorf, viz. —

For the arch—1 Portland cement ; 3 clean sand.

For the abutments—1 Portland cement ; 4 clean sand ; 6 broken stone.

The cement used had given satisfactory results on other important works, and had established for itself a reputation for tensile and compressive strength and constancy of volume.

The specification provided that on completion of the work the contractors were to be paid 90 per cent. of the contract price, and were to maintain the work for a period of three years, receiving the balance of contract money, 10 per cent., at the end of twelve months, and then to give a guarantee for the maintenance at their own cost for the remaining two years.

About 459 cubic yards of cement mortar were required for the arches and 215 cubic yards of concrete for the piers and abutments, for the remaining portion above the springing line of the arches, and mixing was performed by two of Amann's concrete mixers, driven by a steam engine. The mixers were placed on the approaches to the bridge, and a cart track was constructed from them along the middle of the work to ensure quick transmission of the concrete and cement mortar to the spot where it was to be used.

The erection of the arches was done in the following manner —

The longitudinal iron rods and the transverse ones, bound together so as to form a net work of the desired mesh, were placed in position, supported at the requisite height above the lagging by flat stones laid at intervals on its surface.

The concreting of the arches was then commenced starting from both abutments, with mortar of 1 cement to 3 of sand.

The mortar thoroughly mixed and moistened to the consistency of moist earth, was spread over the network, and beaten into it with broad iron trowels until the water showed on the surface and the whole became a shaking mass. In this manner the concreting advanced towards the crown of the arch ; at the same time further layers were being added, always commencing from the abutments. These last layers were punned with flat iron rammers, used at right angle to the extrados of the arch. When the proper height was reached, the second netting was put in position, and concreted over in the same manner. When the intended thickness of the arch was attained, the surface was smoothed down, again beaten with the trowel, and lightly rubbed, so as to leave a smooth and compact surface.

The three arches were completed in two days, so that only one month elapsed from the commencement of the work to the finishing of the arches. During the two days 197 cubic yards of concrete and mortar were used.

During the following days the erection of the spandrel face walls and spandrel filling over the arches with concrete was executed, and then a layer of 3 inches of sand was spread over the arches, and kept constantly moist. The weather was unfavourable, inasmuch as the temperature reached 111 degrees Fahr. during the concreting of the arches, necessitating more copious watering than is usually the case. In spite of all precautions, the cement-mortar dried in places before the succeeding layer could be spread over it. In such cases a watering of cement water was used to ensure the proper union of the layers.

Two weeks after the completion of the arches, the centering was struck, but its removal proved a tedious job, for when the wedges were drawn, it was found that the centering had spread with the ramming of the cement mortar, and jammed the heels of the ribs against their abutments with sufficient force to sustain the whole centering in position, relieving the uprights entirely of its weight.

After the removal of the centerings, the remaining seven bridges were proceeded with, and only a sufficient number of workmen retained to complete the roadway, and footpaths, &c, over the bridge. The final examination of the bridge demonstrated the faultless condition of the structure, which was handed over to the public exactly two and a half months from the commencement of the work. The completion of the whole of the eight bridges occupied little more than three months, and all of them gave entire satisfaction to the Railway Company.

#### *Road Bridge over the Canal of the Portland Cement Factory of R Zurlinden, Aarau (Switzerland)—Erected 1890.*

The bridge crosses the canal at an angle of 45 degrees, and has a clear span of 121 ¾ feet, measured at right angles to the abutments, and 171 63 feet along the face of the arch, with a versed sine of 11 feet 6 inches, and a width of 12 feet 9½ inches.

The thickness of the arch is 6½ inches at the crown, and 9½ inches near the abutments. The bridge was tested on the 14th November, 1890, in the presence of the President of the Zurich Association of Engineers, Mr Metzger, by submitting it to a load of 17 tons 19 cwt distributed over one-half of the arch equal to 61 lb per square foot.

No measurable deflection could be observed. At the conclusion of this test a waggon, loaded with sand, and drawn by four bullocks—a total weight of 5 tons 6 cwt—was driven across the bridge, but no vibrations in the opposite spandrel of the arch were recorded by the gauges.

The result of these tests being satisfactory, it was considered to be proved that the bridge would bear with safety the greatest load equally distributed over one half the span that could occur in practice, namely, a crowd of people, which would be equal to (700 48 x 92) 28 tons 15 cwt 1 qt 21 lb.

*Road Bridge across a Canal at Steyr (Upper Austria)—Erected 1890.*

The bridge crosses the canal at an angle of 60 degrees. The span is 52 ft. 5 in., with a versed sine of 9 ft. 7½ in. The thickness of the arch at the crown is 7½ inches, and near the abutment 11½ inches.

To test the bridge a heavily laden waggon drawn by four heavy horses, a total weight of 8 tons 7 cwt., was used. The greatest deflection recorded by gauges at three points of observation was ¼ inch, leaving a permanent deflection of 1½ inch.

This result was considered satisfactory, as the bridge was designed to carry maximum loads of 3 tons 18 cwt.

*Road Bridge across the Galga at Püspök-Hatvan, near Aszod (Hungary)—Erected 1890.*

Span of bridge, 33 ft. 5½ in., with a versed sine of 3 ft. 7½ in. The arch is 6½ inches thick at the crown. The arch and spandrel walls are constructed on this system. The abutments and foundations are of concrete.

Designed for a load of 2·94 tons per wheel, and 92 lb. per square foot if loaded with a crowd of people.

*Road Bridge across the Nador Canal, near Sarbogard, Hungary—Erected 1890.*

The bridge has a span of 59 feet, with a versed sine of 7 feet. The thickness of the arch at the crown is 7½ inches. The spandrel walls, abutments, and foundations are of concrete. Designed for a load of 2·94 tons per wheel, and 92 lb. per square foot if crowded with people.

*Bridge for Passenger Traffic erected at the North-West German Trade and Industry Exhibition at Bremen, 1890.*

The span of the arch is 131 ft. 2¾ in., with a versed sine of 14 ft. 9 in. The width of the bridge at the crown of the arch was 9 ft. 10½ in., widening towards the abutments, where it was 26 ft. 3 in. The thickness of the arch at the crown was 9½ inches, and 21½ inches near the abutment. The bridge spanned an artificial sheet of water, and being at a considerable elevation above it, was approached at either end by a flight of steps 14 ft. 9 in. wide, constructed on the extrados of an arch whose thickness was 2 inches. The proportions of the bridge were designed for a working load of 204 lb. per square foot with a safety co-efficient of 10. It was erected within six weeks, during the spring of 1890, as an exhibit. The arch being constructed in thirty-six hours. It was taken down in the beginning of 1891 by cutting the arch through at the crown.

*Railway Bridge across the Canal of Portland Cement Factory, at Neustadt, Western Prussia—Erected 1890.*

The bridge has a span of 42 feet, with a versed sine of 7 feet. The thickness of the arch at the crown is 8 inches and near the abutment 12 inches.

The abutments and foundations are of concrete, and the spandrel walls of brick. The bridge is 14 feet wide, and carries two lines of rails, 2-ft. 4-in. gauge, for the transport of cement from the factory to the Neustadt railway station.

The bridge is calculated for a working load of 204 lb. per square foot, with a safety co-efficient of 10. The filling over crown of arch amounted to 12 inches.

## SYSTEM AS APPLIED TO CULVERTS, TUNNELS, AND PIPES.

## APPLICATION TO CULVERTS, TUNNELS, AND PIPES.

A wide field for the use of this system presents itself in the construction of culverts and tunnels, the principle of the system admitting of so many different forms of section that it can be applied in the form which by calculation is found will best meet the requirements of each particular case.

In the case of a tunnel or a culvert through an embankment where the depth of the superincumbent material above the crown equals or exceeds the vertical height of the opening of the culvert, a semi-elliptical form of cross-section will be advisable, both on account of strength and economy.

Its form and thickness should be such that under the uniform maximum load the equilibrium line will be identical with the centre line of the arch. To counterbalance unforeseen tensile stresses, caused, for example, by a heavy rolling load, or by an unequal pressure of the filling, an iron network must be inserted in the arch near its inner surface.

If the foundation for the springing of the arch is rock or ordinary good material, the ends of the arch may be widened to give a sufficient bearing or base, as shown in the figure:—

The width of the base will, of course, depend upon the nature of the foundation, and it is constructed with an iron network close to its three surfaces, to ensure safety against tensile stresses at any point of it.

If, on the contrary, the foundation of the tunnel or culvert is soft and yielding, the ends of the arch must be tied together, as shown in the figure opposite, by a plate on this system, which forms the floor of the tunnel or culvert.

This floor or base acts like a girder, subject to a load pressing from below, and whose points of support are the ends or heels of the arch. If the foundation is very soft, it is often found necessary to extend this plate beyond the heels of the arch, an iron network being inserted in the position indicated in the figure.

When culverts have a sectional area of less than 24 square feet (say under 6·6 feet diameter), it is better to construct them as pipes.

When preparing alternative estimates, in 1888, for the drainage of the town of Königsberg, in Prussia, Mr. Krause, the Government Engineer, made some instructive experiments with pipes constructed on this system. He started with the supposition that the conduit, or pipe-line, when complete, would, unlike pipes surrounded by water or pure sand, be subject to pressure from the superincumbent and surrounding filling varying at different points of the same cross-section.

It was necessary, therefore, to ascertain with accuracy where tensile strains would be brought into play, and to arrange the network to counteract it. He found by calculation and experiments, that the strains were greatest at the crown, the invert, and at the extremities of the horizontal diameter, decreasing in the quadrants and becoming 0 at the middle of the quadrants, so that at the crown and invert the inner surface was subject to tension, and at the points opposite to them the outer surface of the pipe was in tension. To counteract these stresses, then, the network would have to be elliptical in shape. This was awkward to make, and in addition there was the risk of unskilled workmen laying the pipes with the wrong side up. It was, therefore, decided to make the pipes with two wire nettings, one near the inner, the other near the outer surface. A pipe, 6 ft. 6 in. diameter, 5 feet long, and 4 inches thick, was constructed in this way, and submitted to a severe trial in the following manner by Mr. Krause:—

A trench was excavated 12 feet wide by 6 feet long, and about 3 feet deep, and filled in again with loose earth, turf, &c. A concrete plate, 7 ft. 6 in. x 5 ft 0 in x 9 $\frac{1}{2}$  in., was laid on top in the centre, and on this the pipe was placed for testing.

The load applied consisted of sandbags, arranged round the sides of the pipe, and retained in position by wooden bulkheads at each side shoved up by struts. The load on top was partly sandbags and partly iron rails.

The pipe was constructed on the 19th November, 1887, and tested between the 16th and 20th April, 1888.

With a top load of 17.5 cwt per square foot the concrete-plate beneath the pipe cracked in the middle, but the pipe remained free of cracks, only showing a reduction of  $\frac{1}{8}$  inch in the vertical height, and an increase of an equal amount in the horizontal diameter. The whole mass sank 2 inches.

With a top load of 23.5 cwt. per square foot the first hair-cracks in the pipe were caused. These occurred on the inside of the pipe exactly at the crown and invert; the diminution of the vertical diameter and the increase of the horizontal diameter being each  $\frac{1}{16}$  inch. The whole mass sank 3 inches.

A further increase of the load caused hair-cracks on the outside surface at the extremities of the horizontal diameter.

With a top load of 38.7 cwt. per square foot the deflections of the diameters were respectively — and + 2 $\frac{3}{8}$  inches. The whole had sunk 9 $\frac{1}{2}$  inches. On removal of the load the pipe showed permanent alteration of the diameters of 2 inches. The cracks did not extend through the thickness of the pipe, but reached only to the middle, either from the inside or the outside.

A second pipe of equal diameter and thickness, but only 3 ft. 3 $\frac{1}{2}$  in. long, closed at both ends with zinc-lined wooden plates, was subjected to an inside pressure by water. As the wooden plates did not make a very tight joint, only a mean pressure of 24.5 feet head of water could be applied, which the pipe stood very well, inasmuch as it only caused water to sweat through at a few places.

These pipes have the advantage that they can be manufactured to any bend or curve required without any difficulty, and without increasing the cost to any considerable extent. The attached drawing shows a pipe-drain under a railway embankment following the natural depression of the ground.

Up to 12 inches the price of these pipes is pretty much the same as common cement pipes, but a saving of 10 to 12 per cent. is effected in larger pipes. The weight of a cement pipe of 3.28 feet diameter is, per lineal foot, 504 to 571 lb.; a pipe on this principle of the same diameter weighs only 215 lb. per lineal foot.

A sewer of 48.5 chains length and 4.92 feet diameter was constructed at Offenbach, Germany, in the year 1886, and showed, when inspected by the authorities in 1890, neither injury to the cement, mortar, nor oxidizing of the iron.

#### *Culvert on the Great Venezuela Railway, La Guayra to La Victoria.*

This railway winds along the mountain slopes, and crosses numerous creeks and gorges, which, during the time of the tropical rains, have tremendous quantities of water to discharge.

The drawing attached shows one of the largest size of culverts constructed. It has a clear width of 32 feet 10 inches and a height of 16 feet 6 inches.

#### *Double Culvert on the road from Budapest to Semlin, in the Municipality of Solt, Hungary—Erected 1889.*

The width of both parabolic arches is 16 feet 5 inches, with a height of 9 feet 10 inches. The width of roadway is 19 feet 6 inches. Spandrel walls, wing walls, and foundations are built of concrete.

Designed for a load of 2.94 tons per wheel, and 92 lb. per square foot if loaded with a crowd of people. The culverts were tested 10th December, 1889, by a one-sided load of 178 lb. per square foot, without any measurable deflections being observable.

In consequence of floods, combined with strong ice drift, in the Danube, 1891, breaking the dams, the road was completely submerged, without damaging the culverts in the least.

#### *Culvert under the Embankment of the Steam Tramway at Tellow—Erected 1890*

This culvert, 36 feet long, is built in the form of a parabola, with a width at the invert of 6 ft. 6 $\frac{3}{4}$  in., and a height of 4 ft. 11 in. The thickness of the arch at the crown is 4 inches, near the foot 6 inches. The wing walls at both ends of the culvert are likewise erected on this system, and are strengthened by ribs. The culvert, resting on a gravel filling of 3.28 feet, necessitated by the boggy nature of the ground, is covered with 3 ft. 9 in. of filling.

#### *Culvert overbridging the Hungarian North-East Railway at Borsó, near Satorallya-Ughely—Erected 1891.*

The arch has a span of 42 ft. 7 $\frac{1}{2}$  in. and a height of 16 ft. 2 in. Designed for a load of 2.94 tons per wheel, or 92 lb. per square foot if crowded with people.

### SYSTEM AS APPLIED TO IRON BRIDGES

#### APPLICATION IN FORM OF PLATES AND SEGMENTAL ARCHES IN CONNECTION WITH IRON BRIDGES.

In the last few years this system has gained considerably in favour as a bridge decking in connection with iron structures, as it is lighter than brick or concrete, allowing of lighter sections of iron, more durable than buckled plates, corrugated iron, or wood-decking. Segmental arches are used for the roadway and plates for the footpaths.

These segmental arches are used up to a span of 16 ft. 6 in., with thicknesses accordingly.

An arch of 6-foot span and 1 $\frac{1}{2}$ -inch thickness tested gave the following results:—

|  |    |    |                      |
|--|----|----|----------------------|
| A load of 2,000 lb. caused a deflection of | .. | .. | $\frac{5}{16}$ inch. |
| "   2,900 lb.   "   "   "   "   "          | .. | .. | $\frac{7}{8}$ "      |
| "   3,300 lb.   "   "   "   "   "          | .. | .. | $\frac{1}{2}$ "      |

The load removed, the arch completely regained its former position. Twenty days later the same arch was loaded with 12,000 lb., which caused a deflection of  $\frac{3}{4}$  inch, being caused to a certain extent by the supports giving way about  $\frac{1}{8}$  inch. The arch showed, after removal of the load, a permanent deflection of  $\frac{3}{8}$  inch.

The results of two more tests are shown on accompanying drawing, fig. 1 and fig. 2.

A plate on supports 6 feet apart with a thickness of 2 inches was tested nine days after construction.

|  |    |    |    |    |    |                      |
|--|----|----|----|----|----|----------------------|
| A load of 873 lb. caused a deflection of | .. | .. | .. | .. | .. | $\frac{3}{16}$ inch. |
| "   1,183   "   "   "   "   "            | .. | .. | .. | .. | .. | $\frac{1}{8}$ "      |
| "   1,737   "   "   "   "   "            | .. | .. | .. | .. | .. | $\frac{1}{8}$ "      |
| "   2,477   "   "   "   "   "            | .. | .. | .. | .. | .. | $\frac{1}{4}$ "      |
| "   2,857   "   "   "   "   "            | .. | .. | .. | .. | .. | $\frac{1}{4}$ "      |

Although the last load amounted to 238 lb. per square foot, no injury was done to the plate, which, after the removal of the load, went almost completely back to its original position, only leaving a permanent deflection of  $\frac{1}{8}$  inch. A similar plate, but of cement mortar alone, was not able to carry its own weight when placed on supports 6 feet apart.

A similar plate to that above mentioned, but on supports 3 ft. 10 in. apart, showed a fine crack at the under side when subjected to a load of 9,000 lb. When this load, in which was included five men, was set moving, it cracked the plate, which, notwithstanding this, carried the load, showing only a deflection of 1 $\frac{1}{2}$  inch.

A plate 3 $\frac{1}{2}$  inch thick with a more ingenious lattice, and supported 3 ft. 9 in. apart, carried a load of 18,000 lb. on 11.7 square feet, or 1,538 lb. per square foot. This load caused a deflection of  $\frac{1}{2}$  inch without cracking the plate or causing any other damage.

#### *Spittel Bridge, near Jessnitz (Germany)—Erected 1891.*

Between the cross I irons 9 feet apart are spanned segmental arches, the spandrels of which, to top of girders, are filled in with concrete, and on this a layer of asphalt concrete is spread. The roadway is 12 ft. 9 in. wide, the footpaths 6 ft. 6 in. The latter are covered with plates. The bridge is calculated for heaviest traffic.

#### *Iron Bridge across the Lahn at the Iron Foundry of Buderus, near Wetzlar (Germany)—Erected 1887.*

Between the I irons 2 ft. 3 $\frac{1}{2}$  in. apart of the roadway are spanned arches of 2 inch thickness and 3 $\frac{1}{2}$ -inch versed sine, stiffened off at the I with concrete, covered with pumice-stone concrete to the top of the I irons, and then metallized.

The construction is calculated for 2.94 tons pressure per wheel. The footpaths are 4 ft. 7 $\frac{1}{2}$  in. wide, and formed of plates which rest on C irons fixed on top of the girders.

1. Cracks in the ground show that the right abutment is pushed out the tie rods are noticeably strained.

2. Cracks in the ground near the right abutment are getting larger.

## Appendix No. 58.

### Report on the Monier System.

THE Monier system of construction was invented by a gardener named Monier, in Paris, while endeavouring to manufacture large flower-pots of greater durability than when made of wood, and lighter than of cement alone. This experiment so far exceeded his expectations that he applied it to water tanks with equal success. The attention of French engineers being drawn to this novel construction, they investigated it, and found that a building material of remarkable strength had been discovered. For several years the French engineers applied it successfully to constructing gas and water tanks, of which over 1,000 have been carried out in France, some of them with a diameter of 60 feet. But it was not until G. A. Wayss, a German engineer, assisted by the Government Architect in Berlin, Mr. Koenen, seeing a greater field open for so strong a building material, and experimenting with it, that it acquired its present importance to the engineering profession. They worked out the mathematical theory of straight and arched Monier constructions, which are at present considered the best, and are used in all calculations on the subject.

By the Monier system, the extremely small tensile strength of cement and its mixtures, which is to its compressive strength in the ratio of 1 to 10, is increased, by embedding wrought-iron bars in the mortar in places where the construction is subject to tension. The compressive strength of a mixture of 1 cement and 3 sand is from 2,000 to 2,450 lb.; the tensile only 200 to 245 lb. per square inch.

The iron bars used are round, from 7-32-inch to 1 inch in diameter, as found necessary, and are so placed that the stronger are in the direction of the tension, the thinner resting on the former at right angles to them, thus forming a lattice-work with rectangular meshes. The bars are only held together, at their intersection, by thin binding-wire, just sufficient to hold them in position during the process of packing the cement mortar round them, which will keep them in place when once set. If not sufficiently long, the bars are jointed by a very simple method. They are so placed as to overlap each other by twenty times the diameter of the bars, and then tied together. The cohesion between iron and cement, which is, according to Professor Baushinger, of Munich, 500 to 600 lb. per square inch, and which is not diminished by heat, is quite sufficient to form a bond. The lattice-work is calculated to withstand all the tension the structure is likely to be subjected to. To achieve this it is only necessary to take the bars in the direction of the tension into consideration, as the others are only to distribute the pressure equally over the former. When the iron structure is finished, the cement mortar, usually of 1 cement to 3 sand, is pressed through the meshes in convenient thicknesses of not over 9 inches on to the centering, which is generally  $\frac{3}{4}$ -inch clear of the iron, and well rammed. In setting, the cement mortar shrinks, and gets a firm grip round the iron, and as the cohesion between the two materials is very great, the whole forms one homogenous mass. The physical properties of this combination are very favourable. The coefficient of expansion of cement mortar is from 0.0000137 to 0.0000148, that of iron 0.0000145, or nearly the same; and even if a small difference should exist, the elasticity of the mortar is sufficient to equalise the difference. Further, in this combination the iron loses its unfortunate liability to oxidation, as cement has proved itself one of the best preservatives of iron. The very thin layer of cement surrounding the iron forms a silicate with it, very difficult to separate, which explains why iron in cement mortar does not oxidise. An aqueduct built thirteen years ago at Amiens (France) was examined, and the iron bars found not only free from rust, but in as perfect condition as when newly manufactured. Not only does cement preserve iron, but actually frees it from rust, as experiments have proved that iron bars covered with rust, if placed in cement mortar, become, after a time, perfectly clean. A structure of the foregoing description, consequently, combines all the good qualities of stone, its strength, and immunity from injury by the weather, with the elasticity of iron and daily increases in strength rather than deteriorates.

The advantages of this system compared with others are:—

- (1.) Quickness of erection without prejudice to durability and security of the work.
- (2.) Immunity from injury by water.
- (3.) Extraordinary power of resisting very high and variable temperatures.
- (4.) Great strength.
- (5.) Lightness as compared to other structures in iron or concrete alone.
- (6.) Saving in space.
- (7.) Satisfying all demands of acoustic and hygiene.
- (8.) Cheapness and neatness.

That a building material of such splendid qualities has found a very extensive application is not to be wondered at. It has already been successfully applied to bridges, sewers, reservoirs, roofs, arches, walls, floors, stairs, columns, &c.

Bridge construction by the Monier system has practically only commenced, but engineers, particularly those who have used it, are of opinion that in this direction it has especially a great future before it. It was at first very cautiously applied to bridges of small span to see how it would be effected by the vibration of vehicles and the varying loads, and as these experiments proved very successful, the width of the span was gradually increased, each fresh construction helping to give more confidence in the new system. That many authorities still reserve their opinion is quite natural. However, the many bridges which have been built under that system seem to intimate that a great number of engineers have been favourably impressed by the results, otherwise the authorities of the different countries would not have given their consent to its use in the construction of bridges, some of considerable span.

In bridge construction, the stronger bars are vertical to the springing, and reach into the interior of the abutments, which are judiciously constructed of concrete.

The South Austrian Railway Company constructed a trial bridge at Matzleindorf, in Lower Austria. The bridge had a clear span of 32.8 feet, a versed sine of 3.28 feet, and a thickness at crown of 6 inches, which increased to 8 inches towards the abutments. The iron lattice-work embedded in the cement mortar was of  $2\frac{1}{4}$ -inch mesh, with bars of  $\frac{1}{2}$ -inch and  $\frac{3}{8}$ -inch diameter, and was  $\frac{3}{4}$ -inch clear of the intrados. The cement mortar of 1 cement to 3 of sand, was laid in 9-inch layers, and rammed.

The trials consisted in placing a locomotive of 36 tons weight, and then one of 48 tons weight on the bridge, and observations made at thirteen places to measure the deflection, showed a maximum of only  $\frac{3}{8}$  inches. Then a surface of 215.29 square feet was subjected to a total weight of 98 tons 8 cwt. 1 qr. 18 lb., giving a pressure of 1,024 lb. per square foot, which caused a deflection at crown of arch of  $\frac{1}{4}$  inches. After unloading on the following day, the bridge went almost completely back to its original position. At a further trial, up to 167 tons 6 cwt. 1 qr. 5 lb., the abutments began to give way, but the total destruction of the arch was only effected when the load had been increased to 193 tons 2 cwt., or a pressure of 2,009 lb. per square foot.

The Railway Company was so satisfied with these results that they intend to rebuild all overhead street crossings on the Vienna-Neustadt line, by the Monier system.

In 1890, at the Exhibition in Bremen, a bridge for foot-passengers, of 130.6 feet span, was constructed, with a thickness of only 9 $\frac{3}{4}$ -inch at the crown.

But bridges of the same span have also been erected for vehicular traffic; for example, at Wildegg, Switzerland, with a thickness of 8 inches at crown and 9 $\frac{1}{2}$  inches at springing.

The following bridge in the park of the cement factory, "Stern," Germany, shows the immense strength of the new system, compared with structures of concrete alone, in the most striking manner.

Side by side with an arch built of concrete alone of a span of 114.8 feet, 13.12 feet versed sine, and a thickness at crown of 3.28 feet, another was erected by the Monier system of about the same span and versed sine, but a thickness at the crown of only 4 inches. Both together carry a pavilion entirely constructed by the Monier system. The centerings of the Monier arch were taken away after five days 14 hours, and notwithstanding the very great weight it was subjected to, even if the weight of the pavilion be omitted, being still 485.04 lb. per square inch compression, and 180.6 lb. tension, the arch did not show the least deflection. A design for a bridge of 260 feet span for a county in Thuringen, Germany, was exhibited in spring, 1890, but no further particulars are to hand.

In bridges of very great spans it has been found advisable not to use this system exclusively, but conjointly with iron constructions, especially for bridge decking, as it is lighter than brick or concrete, and more durable than buckled-plates. In underground work the Monier system has especially been used for pipes and sewers, but also for tunnel constructions both in Germany and Venezuela.

In the construction of sewers two iron lattices are used, one near the inner surface and one near the outer surface of the sewer, or one lattice forming an ellipse with the larger axis corresponding with the springing-line, so that the lattice nears the inner surface at crown and invert, and the outer surface of sewer at springing, thus counterbalancing all tension in the construction.

Pipes

Pipes of 6.56 feet diameter and 4 inches in thickness all round were used in Königsberg. These showed only cracks, when subjected to a compression 1 ton 3 cwt. per square foot, and at a compression of 1 ton 18 cwt. per square foot, the pipes showed a deflection of  $9\frac{1}{2}$  inches, which left a permanent deflection of only 2 inches. The same pipes subjected to inside pressure, commenced to show a little expansion at 62 feet head of water, or 26.87 lb. per square inch.

Up to 12 inches the price of these pipes is pretty much the same as common cement pipes, but a saving of 10 to 12 per cent. is effected in larger pipes. The weight of a cement-pipe of 3.28 feet diameter is per lineal foot 504 to 571 lb., a Monier pipe of the same dimensions weighs only 215 lb. per lineal foot.

A sewer of 48.5 chains length and 4.92 feet diameter was constructed at Offenbach, Germany, in the year 1886, and showed when inspected by the authorities in 1890, neither injury to the cement mortar, nor oxidizing of the iron. A length of  $4\frac{3}{4}$  miles is now in process of construction.

Canals for water and gas pipes, cables and electric wires, have proved so successful that in Berlin there is already a length of  $3\frac{3}{4}$  miles laid down.

The Monier system is chiefly applied to buildings. It is used for walls, floors, staircases, roofs, and even whole houses with hardly any other material. The illustrations attached show some of its most general applications. Strength, saving in space, fire-proof condition, lightness, &c., brought it into such favour as a building material. A great number of experiments were made to test its suitability, before using it in new constructions, and as this illustrates better its remarkable advantages compared with other building materials, the most important may here be mentioned.

Two exactly similar plates, one of Monier construction, the other of cement-mortar alone,  $1\frac{1}{2}$  inch thick, and each on supports 3 ft.  $3\frac{3}{8}$  in. apart, were loaded. The plate of cement mortar, on being subjected to a pressure of 108 lb. per square foot, broke. The Monier plate carried 573 lb. per square foot, and showed a deflection of  $\frac{1}{2}$ -inch, but was still able to carry the load.

Professor Baushinger's experiments show a still greater difference. A plate of cement mortar on supports 4 ft. 11 in. apart carried 136.8 lb. per square foot, while a Monier plate of the same thickness carried 1,658 lb. per square foot, or about twelve times as large a weight, which the lattice-work still supported after the plate cracked.

A Monier plate on supports 6 feet apart, with a thickness of 2 inches, was tested nine days after construction.

|  |
|--|
| A load of 873 lb. caused a deflection of $1\frac{3}{16}$ inches. |
| "   1,183   "   "   " $1\frac{1}{8}$ "                           |
| "   1,737   "   "   " $1\frac{5}{8}$ "                           |
| "   2,477   "   "   " $1\frac{3}{4}$ "                           |
| "   2,857   "   "   " $1\frac{7}{8}$ "                           |

Although the last load amounted to 238 lb. per square foot, no injury was done to the plate which, after the removal of the load, went almost completely back to its original position, only leaving a permanent deflection of  $\frac{1}{2}$ -inch. A similar plate, but of cement mortar alone, was not able to carry its own weight if placed on supports 6 feet apart.

A similar Monier plate, but on supports 3 ft. 10 in. apart, showed a fine crack at the under side when subject to a load of 9,000 lb. When this load, in which was included five men, was set moving it cracked the plate, which, notwithstanding this, carried the load, showing only a deflection of  $1\frac{1}{2}$ -inch.

A Monier plate  $3\frac{1}{2}$  inches thick, with a more ingenious lattice, and supported 3 ft. 9 in. apart, carried a load of 18,000 lb. on 11.7 square feet, or 1,538 lb. per square foot. This load caused a deflection of  $\frac{1}{2}$ -inch without cracking the plate, or causing any other damage.

Monier plates, if placed vertically, will serve as walls, and tested as to their strength for this purpose, have given splendid results.

A standing wall free of support for 12 feet, was loaded with 20,000 lb., and showed no trace of damage, even after holes were cut through it to try its strength. The reason why a Monier wall is able to carry such a great load if free of support up to a considerable distance, is that it may be considered a kind of lattice girder, of considerable height. In arch form it is applied to ceilings, roofs, &c.

In the case of an arch of 6 feet span and  $1\frac{1}{2}$ -inch thickness:—

|   |
|---|
| A load of 2,000 lb. caused a deflection of $\frac{5}{16}$ inches. |
| "   2,900   "   "   " $\frac{1}{2}$ "                             |
| "   3,300   "   "   " $\frac{3}{8}$ "                             |

The load being removed the arch completely regained its former position. Twenty days later the same arch was loaded with 12,000 lb., which caused a deflection of  $\frac{3}{4}$ -inch, being caused to a certain extent by the supports giving way about  $\frac{1}{8}$ -inch. The load being removed showed a permanent deflection of  $\frac{3}{8}$ -inch.

The results of two more tests are shown on accompanying drawing, fig. 1 and fig. 2.

Tests made to ascertain the heat-resisting qualities of Monier constructions gave even more remarkable results. A Monier pipe 6 feet  $6\frac{1}{2}$  inches long,  $1\frac{1}{2}$  inches thick, and  $27\frac{1}{2}$  inches diameter was placed perpendicularly and used as a furnace. Above the pipe were placed on iron bars two Monier plates of 2 inch thickness. Amongst other alloys of tin, zinc, and lead placed in the furnace for fixing the temperatures was a bar of brass 40 inches over the fire bars. After two hours burning the alloys melted, and the iron bars below the Monier plates became dark red, indicating a temperature of about 1,300 degrees Fahrenheit, at the under side of the plate. When the plates were taken off lead, placed on them, melted. One of the plates 40 inches long, 2 inches thick, and  $25\frac{1}{2}$  inches wide, showing a deflection of  $\frac{1}{2}$ -inch, and some fire cracks was then laid on two supports, and loaded in the centre up to 575 lb., without altering in the least. When the load was increased to 1,140 lb. and 1,375 lb., there were deflections of  $\frac{5}{16}$  inches and  $\frac{1}{2}$  inches, respectively. As the plate cooled the deflection was reduced to  $\frac{1}{16}$ -inch, which diminished to nearly  $\frac{1}{4}$ -inch, when the load was taken away. An examination of the plate showed that with the exception of the fire cracks it had not been damaged, and was still able to carry a load sufficient for general purposes.

That the plate is bent more when the heat is increased is theoretically right, and proves that the expansion of the iron and the cement mortar is the same, as the latter would otherwise have broken.

The pipe used as the furnace stood a temperature of more than 1,900 degrees Fahrenheit (the brass bars melted), for more than two hours, and was very little damaged. A gauge about 40 inches long showed the greatest expansion as  $\frac{1}{16}$  inches. The pipe showed fine fire cracks, but otherwise retained its shape and strength.

An experiment made at Copenhagen with a Monier plate which was placed on supports 40 inches apart, and loaded with 1,400 lb., at only 12 inches above a very fierce fire. After an hour exposure, the deflection of the plate amounted to  $\frac{1}{2}$ -inch, which was reduced to  $\frac{3}{8}$ -inch by cooling with water. After two hours' more exposure to the heat, the deflection amounted again to  $\frac{1}{2}$ -inch, but the plate having been cooled by water, assumed very nearly its original shape. The plate was completely unhurt and free from fire cracks.

The fire of Mr. H. Helbing's spirit distillery, in Wandsbeck, near Hamburg, on 21st December, 1889, may be taken as an experiment on a very large scale. The roof above a  $1\frac{1}{2}$ -inch thick Monier floor caught fire and was completely burnt. The floor not only completely resisted the immense heat and the falling fragments of roof, but also the sudden reduction in temperature caused by the water, and thus protected entirely the large spirit store underneath.

To show that already several years ago the authorities in Germany recognised the good qualities of the new system, it may be mentioned that the President of Police in Berlin allowed, on the 18th June, 1887, the use of the Monier system in the erection of perfectly fire-proof constructions.

Arched Monier constructions, forming ceilings for lower storeys and floors for the one above, have been extensively used for factories, warehouses, &c. The goods stores round the harbour of Trieste have 64 acres and Loewe's rifle factory in Berlin, 29.5 acres of Monier ceilings.

In a printing office in Berlin a printing machine is working on an arched Monier ceiling of 16.5-foot span without doing it any injury.

At Copenhagen, arched ceilings of 12 feet span have been built for the new steam laundry at St. John's Hospital, and of 24 feet to 30 feet span for the new Art Gallery.

This kind of construction will answer equally well for roofs, and is used to a great extent in Germany and Austria. The glass works at Stralan, near Berlin, and latterly those for Hellerup, near Copenhagen, where the roofs have a span of 30 feet to 40 feet, and are  $2\frac{1}{2}$  inches to  $2\frac{3}{4}$  inches thick at crown, may here be mentioned. They are covered with Goudron paint, which has to be applied hot, and which has made a name for itself in Germany.

These arched ceilings and roofs are used with advantage where it is necessary to economise the materials of the outer walls, as the thrust with this construction is very small,

Perfectly level ceilings, answering at the same time for floors of the storey above, have also been constructed, the Monier plates resting on girders. Whole houses have, in fact, been built under that system, amongst which may be cited the glass works at Stralau, near Berlin, with walls of great height; the Crystal Palace, in Leipsic; a bathing establishment and a church at Munich; ice-houses in Potsdam, for which walls were built double, connected at intervals, and the intermediate space filled with a non-conducting material. Monier plates also make a very good flagging for footpaths, yards, &c. Its lightness and great strength greatly facilitate the laying of pipes for water and gas without being liable to break if not properly handled and sufficiently packed underneath. It has also been successfully applied to bomb-proof rooms in the fortifications of Germany.

At the new harbour at Copenhagen it was used for breakwaters. Hollow blocks of concrete of fixed magnitude, without exceeding a certain weight, were used, and connected on the Monier system.  
8 June, 1892.

W. BALTZER.

Appendix No. 59.

(Papers referred to on stress sheet of Monier arch, Contract No. 77.)

FORMULÆ for the calculation of Monier beams, plates, &c.

A BEAM or girder built on the Monier principle is briefly a concrete or compo. structure fortified with an iron mesh comprised of bars laid longitudinally and transversely and bound at crossings with wire, the iron mesh being inserted on the side subjected to tension. It can be seen at once that if the tensile strength of concrete was as great as the compressive, instead of the

modulus of rupture being about 150 lb. it would be nearer 2,000 lb., and there seems no reason why iron should not be inserted for this object, more especially as the expansion of the iron and concrete is, under ordinary circumstances, almost identical, namely, .000012 for every degree Cent. There is also in favour of this class of structure the great amount of cohesion between the iron and the concrete varying from 350 lb. up to 500 lb., so that in rods of small diameter, if twenty times the diameter of the rod be embedded in the concrete it will have the same holding power as the strength of the rod, and moreover the cement protects the iron in such a way as to permanently arrest oxidation. To arrive at the formulæ necessary to calculate the strength of a Monier plate or beam, we must first analyse the existing formulæ for girders. Taking the ordinary formula for a rectangular beam, we have the moment of rupture  $C \times B \times D^2$  where C = strength of material, B = breadth, D = depth.

We may arrive at the same result by the following method. In any rectangular girder in which the material has the same tensile and compressive strength the neutral axis must be the centre of the girder, and the outer edge has the maximum strain which will diminish to nothing at the centre, and therefore the triangle ABC in Fig. 3 shows the section of material strained, and the line joining the centre of gravity of the two triangles represents the leverage—thus taking an example, say, a girder 20" deep by 6" broad constructed of iron, capable of standing, say, 5 tons per square inch, then by the ordinary formula we have—

$$\frac{400 \times 6 \times 5}{6} = \text{modulus of rupture} = 2,000 \text{ tons.}$$

By method No. 2. Area of either triangle would equal  $10 \times 3$ , and the leverage would be equal to  $2^2$  of 20. ∴ modulus of rupture =  $\frac{5 \times 10 \times 3 \times 20 \times 2}{3} = 2,000$  which is the same result.

But in the case of a girder constructed of concrete, the tensile and compressive strength of which, we will assume, is as 400 is to 2,000, it is natural to suppose that the neutral axis will, before rupture takes place, deviate from the centre of the figure as the girder will be in equilibrium round the neutral axis; therefore, in Fig. 9, if we call  $x$  the distance of the neutral axis from the nearest edge—A, the breadth of the beam, and H the total height, we have  $5 \times A \times x \times \frac{2}{3}x = A \times (H - x) \times \frac{2}{3}(H - x)$

$$\phi \therefore x = \frac{-H \pm \sqrt{5H^2}}{4} \text{ and solving this we have}$$

$x = .3089$  when  $H = 1$ . If we take a girder therefore 6" wide and 20" deep, the neutral axis would be  $20 \times .3089$  or 6.178" from the nearest edge, and the moment of resistance would be

|   |                   |                |
|---|-------------------|----------------|
| Area.   | Leverage.         | Strain.        |
| $(3 \times 6.178) \times (6.178 \times 2 \times 2)$ | $\frac{2,000}{3}$ | $\times 2,000$ |
| = 305,336.  |                   |                |

working this same girder by ordinary formula, taking the modulus of rupture as equal to the tensile strength, say 400 lb., the moment of resistance would be 160,000 lb. If we consider another example of the same girder, but taking the tensile strength at 200, and the compressive strength at 2,000 or as 1 is to 10, then we have—

$$10 \times (A \times x) \times (\frac{2}{3}x) = (A \times (H - x)) \times \frac{2}{3}(H - x)$$

$$10 A x^2 = A (H - x)^2$$

$$x = \frac{-H \pm \sqrt{10H^2}}{9}$$

if  $H = 1$  then  $x = .2402$ , and the distance of neutral axis from the nearest edge =  $20 \times .2402$  or 4.804 inches; and the moment of resistance

$$= (3 \times 4.804) \times \frac{(4.804 \times 2 \times 2)}{3} \times 2,000$$

$$= 3 \times 23.078 \times 4 \times 2,000 = 184,626.$$

Then by ordinary formula the moment of resistance would be 80,000 lb. If we take an example of a cast-iron beam, in which we may assume the tensile strength to be about 16,000 lb., and the compressive about 96,000 lb., that is to say as 1 : 6, we have  $6ax \times \frac{2}{3}x = a \times (H - x) \times \frac{2}{3}(H - x)$

$$6ax^2 = a(H - x)^2$$

$$x = \frac{-H \pm \sqrt{6H^2}}{5}$$

and if  $H = 1$  then  $x = .2899$ , and taking the same girder, that is  $20'' + 6''$ , the distance of the neutral axis from the nearest edge  $= 20 \times .9$  or  $5.8''$ , and the moment of rupture would equal  $\frac{3 \times 5.8 \times 5.8 \times 2 \times 2 \times 96,000}{3} = 33.64 \times 4 + 96,000 = 12,917,760$

Now by ordinary formula taking modulus of rupture as deduced from experiment by Rankine we have  $\frac{400 \times 6 \times 40,000}{6} = 16,000,000$

which is a result slightly in excess of my formula, but this might easily be explained by the great variation in strength of cast-iron. We shall now consider a Monier plate girder tested by Mr. Roberts, of the Public Works Department, N.S.W., the dimensions of the girder being as follows:—Breadth,  $18''$ ; depth,  $2''$ ; distance from centre of bars to top  $1.5625''$  and area of bars  $.392''$ . Let  $A$  = area of iron;  $b$  = breadth of girder;  $h$  = height of girder;  $x$  = distance of neutral axis from bottom of girder.  $C$  = tensile strain in iron (say 5 tons) =  $11,200$  lb.;  $D$  = compression strain in concrete (say  $400$  lb.);  $\therefore C : D :: 28 : 1$ , and by formula

$$CAx = \frac{b}{2}(h-x) \times \frac{2}{3}(h-x) \times D$$

$$28Ax = \frac{b}{3}(h-x)^2$$

$$A = 0.392 \quad b = 18'' \quad h = 1.5625''$$

$$\therefore 28 \times .392 \times x = \frac{18}{3}(1.5625 - x)^2$$

$$10.966x = 6(1.5625 - x)^2$$

$$1.8293x = (1.5625 - x)^2$$

$$x^2 - 4.9543x = 2.4414$$

$$x = .555$$

Deducting .555 from the real depth  $1.5625$  we have  $1''$  as distance from outer edge, and the moment of resistance will be  $\frac{\text{Area} \times \text{Leverage}}{(9'' \times 1) \times (1 \times 2 \times 2) \times 2,000} = 24,000$  lb.

The girder was broken by  $3,900$  lb. applied at centre, supports being  $30''$  apart; therefore bending moment  $= \frac{3,900 \times 30}{4} = 29,250$

which is slightly in excess of the result obtained by the formula. There is very little doubt, however, that the neutral axis does not deviate from the centre of gravity of the figure until the modulus of elasticity is exceeded; if this be the case, it would be advisable in a Monier beam to proportion the iron so that the neutral axis would be in the centre until rupture took place. The solution of the equation would then be:—Let  $A$  = Area of iron;  $d$  = depth of girder (measured from centre of iron to upper side of concrete);  $B$  = breadth;  $C$  = compressive strength in concrete;  $P$  = tensile strength in iron;

$$P \times \frac{d}{2} \times A = \frac{(B \times d)}{4} \times \left(\frac{d}{2} \times \frac{2}{3}\right) \times C$$

$$P \times \frac{d}{2} \times A = \frac{B \times d \times d}{4} \times C$$

$$A = \frac{12}{B \times d \times d \times C \times 2} \times P \times d$$

$$A = \frac{6 \times P}{B \times d \times C}$$

Take for example a concrete beam  $2.5''$  deep and  $12''$  broad. Then  $A$  would equal

$$\frac{12 \times 2.5 \times 500}{11,200 \times 6} = \frac{150.0}{672} = .223 \text{ inches}$$

Say bars  $5/16''$  dia.  $= .(767) \cdot \frac{.2230}{.2301} (3)$

$= 3$  bars per foot  $5/16''$  dia.

I have included a table based on actual experiments on concrete beams, and it is interesting to note that as the age of the concrete advances and the final strength is approached the results obtained by experiment are almost identical with the results obtained by my formula, and are obtained with a substance having compressive strength nearly eleven times the tensile strength. Taking the last two examples, in one we have the moment of resistance by the above formula as  $186,700$  and by experiment  $183,000$  lb.; and in the last experiment the moment of resistance by my formula is  $202,184$  lb., and as deduced from the experiment  $218,484$  lb.

## Appendix No. 60.

PAPERS.—CONTRACT 79.

No. 1.

The Secretary of the Sewerage Miners' Association to Thos. Houghton, Esq., M.P.

Dear Sir,

40, Charles-lane, Woolloomooloo.

Having been requested by my Association to write to the Works Department to obtain particulars whether there is any provision made for miners being provided with air, I done so through the secretary of the Trades Hall, thinking that it would have more effect, but up to the present it is nil.

Although we are a registered association, up to the present we are not recognised by the Board of Conciliation and of Arbitration, though we are looking forward to it, as in all probability we may be the first to use that Board, us being engaged on Government contracts, and our case is a calamity. I urge upon you to act on our behalf at once. *Re* this information, our general meeting is next Saturday, 30th instant.

My reason for being so urgent is this—our men are dying off so fast; I have to report another death no later than last Tuesday. We sent two to Victoria to benefit their health. I am expecting to hear of their death every day, as their case is hopeless. One of our members came to me to-day; he says, "This is terrible; I am dying—lingering in misery"; has not been able to work this six months; a walking skeleton. We have always a large percentage to support out of our pittance, which, God knows, is only an average of 5s. per day. Out of this our fellows subscribe manfully. We are sure our turn is not far off. There is no man following this work who can live long; we all feel the effects—a husky cough, and galloping consumption follows, and our end is not far off. When we apply to the hospital we are sent to Little Bay as incurable. We have to rush smoke and foul air and dust, and work in unnatural positions to obtain even that average wage. I have pay-sheets to prove my statements, and a glance at my books may prove a death-rate that would not be believed,—that is 10 per cent.—the result of us rushing this foul air and not being able to eat during working-hours. Our wives has to nurse us and bathe our aching heads at night, as we are at times almost lunatics when we ought to be resting. Our limbs weaken, and we can no longer work. We are forced to accept this death or starve our wives and children, and we do accept death to obtain them bread. There is terrible suffering amongst our members. They are willing to work, but the work is shut down from them. Although the Works Department let the contracts, they are powerless to compel them to employ labour. The North Shore underground sewerage job, Messrs. Carter & Co., has kept their shafts idle for weeks past. Men who sunk the shafts—some as deep as 250 feet odd—has been forced to fill the ranks of the unemployed. They are actually starving us into a death price. Up to the present we have never been provided with air; what air we have had we had to provide ourselves; so hoping you will take steps on our behalf,

I remain, &amp;c.,

JOS. LYNCH.

Sec., S.M.A., Sydney.

Received by me 4/8/92.—R.H., 8/8/92. Will Mr. Hudson please have this looked into at once.—J.B., 2/5/92.  
T. Houghton, M.P., 2/5/92. Mr. Davis.—F.C.P., 5/8/92.

No. 2.

Supervising-Engineer Davis to Resident-Engineer Boys.

MEMO.

WILL Mr. Boys please let me have report generally upon this letter, with the following particulars, by to-morrow morning:—

1. Description of fans, pipes, &c., used for ventilating each shaft?
2. Whether it is a fact that shafts have been standing for weeks past, and, if so, for what reason?
3. Whether the appliances are sufficient to keep the tunnel in a good state of ventilation, and, if not in any instance, what he recommends?

J.D., 5/8/92.

1. All steam-power fans at present used on 2, 3, 4, 5, 6, 7, 8 with black iron 9-inch pipes.
2. It is a fact in one instance, but that was on account of the water met with.
3. The appliances are excellent in every way, with the exception of No. 12 shaft, and I am informed that a hand-power fan is to be placed there at once by the contractor.

J.W.T.B., 5/8/92.

No. 3.

Resident-Engineer Boys to Supervising-Engineer Davis.

*Subject*:—Secretary, Sewerage Miners' Association—Want of provision for supplying miners with air, Contract 79, North Sydney, cited as an example.

Department of Public Works, Roads and Bridges and Sewerage Branch, 6 August, 1892.

THE Secretary asks whether there is any provision made for miners being provided with air.

Clause 79 of the specification, Contract 79, provides that the contractor shall provide suitable apparatus for clearing the tunnels.

The contractors have provided fans and pipes to nearly all the principal shafts on this contract, namely at 2, 3, 4, 5, 6, 7, 8. These fans are of approved make, and are driven off the winding engines at each of these shafts. The pipes are excellent, and are 9-inch diameter, and made of black iron, well tarred inside and out, preventing leakage at the joints.

I have heard no complaints on the score of bad air from any of the miners, with the exception of those at No. 12 shaft.

The following describes the means of working each shaft, and the time each was idle:—

No. 1 is at work, but was idle for a week, miners asking more pay for driving. The air is good, and no fan required, owing to there being an open end.

No. 2. Miners finished sinking shaft on 12th July. A fan and hose was put in this shaft after the first 100 feet was sunk, and this was also the case at 3, 4, 5, 6, and 7. These fans were driven off the winding engine. Since the 12th, 9-inch black iron pipes have been permanently fixed.

No. 3 was stopped for a week to enable air-pipes to be fixed permanently.

No. 4 was botomed on 8th July, and driving started 26th July. During this time air-pipes were fixed. There was a disagreement about the price of driving, and old gang refused to continue the work.

No. 5. No stoppage at this shaft beyond shifting position of shaft.

No. 6. No stoppage.

No. 7. No stoppage.

No. 8 was idle for three or four days after sinking. The fan and air-pipes and pump were fixed to this shaft after the sinking was completed. Depth of shaft, 104 feet.

No. 9. No provision made for extra air. A few days' stoppage on account of change of men.

No. 10. No provision made for extra air. There was a stoppage for a few weeks. Contractors' reasons were given that they wished 9 and 11 to be sunk the same time, so as to start the driving together.

No. 11 stopped for about four weeks—11th June to 6th July—on account of large amount of water met with. Contractors waited to see if it would take up. This shaft is now down to full depth. No provision for extra air.

No. 12. No provision made as yet for extra air. Shaft has been stopped for the last ten days. The men complain of bad air and the smoke hanging for a long time. This is the only case of bad air, and I am informed that the contractors are about to put a hand-fan at this shaft, which is 95 feet deep, and the drive is 44 feet in.

The appliances on the work are in good order, and quite sufficient wherever steam-power is used, namely, at shafts 2, 3, 4, 5, 6, 7, 8.

It will soon be necessary to have air driven into 9 and 10.

Nos. 9, 10, and 11 are shallow shafts, and the drives between them are not long. Hand-power fans will be sufficient for these shafts, but are not necessary just yet.

No. 12 shaft should be supplied with a fan at once.

J. W. T. BOYS, 6/8/92.

## No. 4.

Resident-Engineer Rudolph to Supervising-Engineer Davis.

*Subject* :—Want of provision for supplying miners with air.Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 8 August, 1892.

Re the provision of supplying miners with air on Contract No. 80, I have to report that nothing has been done yet. I spoke both to Mr. Farley and his foreman about this subject repeatedly, and was assured on one occasion that windsails had been ordered, and on another occasion I heard Mr. Farley give instructions to find out if Carter & Co. had any blowers for sale suitable for his work, but up to the present nothing but the bends for down-pipes are on the ground. Our drives, in most instances, have not been too far away from the face of the shafts, but now there is no doubt but it becomes a necessity to have ventilation provided at every shaft, and it will be still more wanted if the weather should get warmer. I therefore beg leave to recommend that the contractor be instructed to provide such means as are wanted to send fresh air into the drives, and that his attention may be specially called upon to have the air blown right into the faces where men are employed in gadding out the work, to help as much as possible for the quick setting down of the stone-dust in these places.

H. RUDOLPH,  
Resident Engineer.

## No. 5.

Supervising-Engineer Davis to the Engineer-in-Chief for Sewerage.

*Minute Paper.**Subject* :—North Shore and Darling Point Sewers—Ventilation of Tunnels.Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 8 August, 1892.

THE only tunnelling which is at present being done in this branch is at North Sydney and Darling Point, and as the Secretary of the Sydney Miners' Association makes general statements with reference to the lack of fresh air supplied to miners, I have obtained reports from the resident engineers who are in charge of these two sewers, which I enclose.

There are twelve shafts on the North Sydney works, and of these seven are provided with blowers driven by steam-power, three do not require artificial ventilation at present, and at the remaining two fans are necessary at once. Where the ventilation is done by steam-power, it is all that can be desired, and the contractors, I understand, are making arrangements to supply the two shafts with the fans necessary.

Mr. Lynch states what is certainly not a fact when he says that shafts at North Sydney have been idle for weeks past on account of a lack of adequate ventilation. Messrs. Carter & Co. have made excellent progress with their work, and, with the exception of one shaft (which was not standing for bad ventilation), the rate of progress has been far more than provided by the contract.

At Darling Point the shafts are shallow, and there is not, therefore, the same necessity as at North Sydney for steam-power for driving the fans. Hand-fans will meet all the requirements, and now that the tunnels are being driven, the contractors have been requested to provide means of artificial ventilation, which they have promised to do.

Miners' work is clearly an unhealthy occupation, and no doubt they must feel the effects of the class of work they do. I do not think, however, that more can be done at North Sydney, except in the case of the two shafts referred to above. At Darling Point hand-fans or some such contrivance must be adopted for forcing the air into the tunnels.

There is a clause in each of these tunnel contracts binding the contractors to provide "blowing machine with ventilating fans \* \* \* capable \* \* \* of removing the foul air in one minute after blasting at each working-face."

J. DAVIS.

Mr. Houghton might be sent a copy of these reports, and informed that the department will exercise its full powers as regards compelling all our contractors to provide suitable ventilating appliances.—R.H., 8/8/92. Under Secretary. Write.—J.B., 8/8/92. T. J. Houghton, Esq., M.P., 12/8/92. Seen.—R.H., 15/8/92. Mr. Davis to note.—F.C.P., 15/8/92. Noted.—J.D., 15/8/92.

## No. 6.

Resident-Engineer Boys to Messrs. Carter &amp; Co.

Dear Sirs, North Shore, 12 August, 1892.

Will you kindly inform me why there is no one working at the shafts and drives to-day?

Yours, &c.,  
J. W. T. BOYS.

In the absence of the contractors I cannot say further than that I think the men demand more money.—Jno. R. RAID.

## No. 7.

Inspector J. Parsons to The Resident Engineer.

INSPECTOR'S DAILY REPORT OF CONTRACT NO. 79.

North Shore, 12 August, 1892.

WORKMEN employed by Contractor—

|   |   |
|---|---|
| Labourers .....                               | 2 |
| Carpenters .....                              | 2 |
| Masons and other mechanics, blacksmiths ..... | 2 |

*Remarks.*—No work going on here to-day. The men all came out on strike this morning. The reason is they want more money, not being able to make wages at what they have been getting.

JOHN PARSONS,  
Inspector.

It appears from these reports that the miners employed on the North Shore Outfall Sewer are out on strike for an increase of wages.—J.D., 13/8/92. Engineer-in-Chief. Seen.—R.H., 15/8/92. ## T. J. Houghton, Esq., M.P., to The Under Secretary for Public Works.

Dear Mr. Barling, Parliament House, Sydney, 28 September, 1892.

I enclose a letter I have just received from the Secretary of the Sewerage Employees' Union, and would feel obliged if you would kindly have the matter attended to at once, and let me know the result.

Yours, &amp;c.,

T. J. HOUGHTON.

Mr. Hickson.—J.B.; B.C., 29/9/92. Urgent. For report.—R.H., 31/9/92. Mr. Davis. Report herewith.—J.W.T.B., 4/10/92.

[Enclosure.]

Sir,

Sydney, 27 September, 1892.

I am directed by our Association to once more trouble you to visit the Works Department *re* the ventilation of No. 10 shaft on Carter & Co.'s sewerage contract, North Shore.

There is a hand-fan erected on the shaft, and pipes are connected to the bottom of the shaft only, and the drives are in from 60 to 80 feet.

The contractor refuses to connect any pipes into the drives where the men are at work; also refuses to put labour on to pump the supply of air. Therefore our men are working under deplorable conditions, and the inspectors insist that they cannot act on our behalf. Hoping you will see to this.

I remain, &amp;c.,

JAS. LYNCH, Secretary,

Sewerage Miners' Association.

T. J. Houghton, Esq., M.P.

## No. 12.

## Resident-Engineer Boys to Supervising-Engineer Davis.

*Minute Paper.*

*Subject*.—Complaints *re* ventilation of Shaft No. 10, Contract 79. [See letter 92-2,160, 30th September.]

Department of Public Works, Roads and Bridges and Sewerage Branch, North Sydney, 4 October, 1892.

THERE is a hand-power fan and pipes in this shaft, and the pipes are within 30 feet of the face in the north drive. This is as near to the face as practicable.

In the south drive the pipes are in 16 ft. 6 in., and there are plenty of pipes ready at the shaft to be joined in when required.

The contractors state that, by their arrangement with the men, the contractors supply pipes and put them in to the bottom of the shaft and fix a T piece on, and that the men are supplied with pipes.

The men fix the pipes in the drives and supply the labour for driving in the air as required.

The inspector reports to me and to the contractors whenever the men require anything, or have any complaints to make, and the men themselves have never made any formal complaint to me.

The inspector states that it is necessary to blow the fan continually now to keep the drives fresh, but at present the men only blow out the smoke after firing.

J. W. T. BOYS.

## No. 13.

## Supervising-Engineer Davis to The Engineer-in-Chief for Sewerage.

*Minute Paper.*

*Subject*.—Contract No. 79, North Shore Outfall—*Re* ventilation of Shaft No. 10.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 4 October, 1892.

I HAVE seen the contractors with reference to Mr. Lynch's complaint, and I have also obtained a report from Mr. Boys, which I enclose. It appears that the miners, by arrangement, have undertaken to fix the air-pipes in the drives, and that, therefore, if there was delay in these pipes being put in position, it was due to the miners themselves. Since Mr. Lynch wrote his letter, they have fixed the pipes from the shaft to within about 30 feet of the face of north drive, and within about 50 feet of the face of south drive, and pipes are available, so that this last drive can be ventilated in the same way as the north drive. If the pipes are carried within 30 feet of the face, it is as near as they should be, as they would be damaged by the blasting if taken nearer.

The contractors state that the price paid for excavating the tunnel was to include the cost of turning the hand-fan. At present it is only being turned immediately after a shot is fired, but this is not sufficient. Arrangements should be made for the fan to be kept in motion the whole time miners are engaged in the tunnels.

I would suggest that the contractors be written to in terms of the draft letter attached.

J. DAVIS.

See letter written to contractors. It appears, however, that it is really the miners' own fault that sufficient air is not supplied.—R.H., 5/10/92. Under Secretary. Inform.—J.B., 5/10/92. T. J. Houghton, Esq., M.P., 10/10/92.

## No. 14.

## The Engineer-in-Chief for Sewerage to Messrs. Carter &amp; Co.

Gentlemen,

4 October, 1892.

It is reported to me by the resident engineer that the ventilation at shaft No. 10 is not at all satisfactory. The air-pipes are only fixed a short distance from the shaft in the tunnel which is being driven in a southerly direction, and there is about 45 feet of the drive without pipes, and that the hand-fan is only being turned immediately after shots are fired, instead of being kept constantly going. I have, therefore, to draw your particular attention to clause 79 of the specification, and to request that immediate steps be taken to lay additional air-pipes, and also that the fan be kept in motion the whole time miners are engaged in the tunnel.

I have, &amp;c.,

ROBT. HICKSON,

Engineer-in-Chief for Sewerage.

**Appendix No. 61.**

PAPERS—CONTRACT 69.

No. 1.

Supervising-Engineer Davis to The Engineer-in-Chief for Sewerage.

Minute Paper.

Department of Public Works, Roads and Bridges and Sewerage Branch.

Sydney, 18 January, 1894.

*Subject* :—Contract No. 69. Eastern Branch, Western Suburbs, cross-sections of sewer to be adopted.

PROVISION has been made in this contract for constructing the sewers and shafts wholly in concrete, or in brick and concrete. With a view of ascertaining which would be the cheaper method to adopt, I have had comparative estimates prepared at the contract schedule rates, which I attach.

I beg to recommend that the following sections for sewers be adopted :—

- (a) For open cutting—No. 2 cross-section.
- (b) For tunnels where timber is required—No. 3 cross-section.
- (c) For tunnels in soft ground where timbering is not required—No. 5 cross-section.
- (d) For tunnels in hard ground—No. 6 cross-section.

It will be seen that the cheaper shafts are those built with brick, and I recommend that this description of shaft be adopted.

Approved.—R.R.P.H., 19/1/94. Messrs. Carter, Gummow, & Co., 20/1/94. Mr. Millner to note.—J.D., 20/1/94. Noted.—W.J.M., 24/1/94. File.—J.D., 1/2/94. The Engineer-in-Chief has decided that in the case of Sydenham-road sewer, in open cutting, the No. 3 section, may be adopted instead of No. 2, on the understanding that the No. 2 is put in other open cuttings, and that in the case of Sydenham-road specially selected material be put in the sides and round the arch up to the level of crown.—J.D., 9/3/94. Mr. Millner. Noted.—W.J.M., 9/3/94. File.—J.D., 13/3/94.

J. DAVIS.

COMPARATIVE estimate for constructing sewers and shafts wholly in concrete or in brick and concrete.

*Shafts.*

|  |            |
|--|------------|
| Cost of (9-inch) brick shaft per 100 lineal feet ..... | £78 14 7   |
| Cost of { Concrete, 9-inch, do .....                   | £65 17 1 } |
| { Cement facing, 5/8-inch, do .....                    | 21 15 0 }  |
| 5' 1" x 4' 1" .....                                    |            |

J.D., 19/1/94.

No. 2.

Supervising-Engineer Davis to Messrs. Carter, Gummow, & Co.

Gentlemen,

Department of Public Works, Sydney, 20 January, 1894.

I have the honor to enclose, for your information, a tracing showing the different cross-sections of sewer-lining which the Engineer-in-Chief has decided to adopt on your Sewerage Contract No. 69.

With regard to cross-sections Nos. 5 and 6, you will receive instructions as the work proceeds which of these sections will be used.

The shafts will be built of bricks where such are shown on contract drawings.

I have, &c.,

J. DAVIS,  
Supervising Engineer for Sewerage.

(Through Mr. Millner.)

No. 3.

Supervising-Engineer Davis to Messrs. Carter, Gummow, & Co.

Gentlemen,

Department of Public Works, Sydney, 18 January, 1894.

I beg herewith to enclose a list of the sizes of shaft excavation. The sizes are to the inside of the timber, and do not include the extra excavation required for the chambers, down-pipes, &c. This additional excavation may either be done at the time you are sinking the shafts, or afterwards, as it suits your convenience. Where sumps are required they are to be sunk the size of the shafts. Mr. Millner will decide at the time a shaft is excavated whether a sump will be necessary, and give you instructions accordingly.

With reference to the excavation in tunnels in "more or less hard material," which in the opinion of the engineer requires blasting, I have to inform you that any ground of this description in the lower part of the tunnels where timbering is used in the upper part, must be taken out for two-ring lining without the use of blasting, by means of guttering and gadding, and will be paid for under schedule item No. 6.

With regard to other lengths of the tunnels requiring blasting, special instructions will be issued for each length.

As to tunnels in "more or less hard material" which require timbering, I have to request that you will excavate the same to the cross-sections shown in the margin.

The tunnels in "solid rock" are to be excavated for one-ring lining by means of 4-inch charges of compressed powder.

I have, &c.,  
J. DAVIS,  
Supervising Engineer for Sewerage.

List

List of Shafts on Contract No. 69.

| Shafts, &c        | Position                          | Chainage at centre of Manholes | Size of Shafts                          |
|-------------------|-----------------------------------|--------------------------------|---|
| Penstock chamber  | Premier street                    | m c l<br>2 16 87 57            | Enlarged, as shown on contract drawings |
| Ventilating shaft | Illawarra road, Canterbury Branch | 2 24 87 33                     | 6' x 5'                                 |
| "                 | Carey street, Northern Branch     | 2 23 90                        | 6' x 5'                                 |

| " pipe shaft      | "                                 | 3 57 0                         | 6' x 5'                                 |
| " shaft           | Agai and Emily Streets            | 3 62 54 20                     | 7' x 6'                                 |
| "                 | Emily street                      | 3 69 0                         | 6' x 5'                                 |

## No. 4.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Department of Public Works, Sydney, 19 January, 1894.  
I have the honor to inform you that you are at liberty for the present to dispose of the surplus material as you find it convenient, and that you will be paid for same under schedule item No 43

(Through Mr Millner )

I have, &c,  
J. DAVIS,  
Supervising Engineer for Sewerage.

## No 5.

Supervising-Engineer Davis to Messrs Carter, Gummow, &amp; Co

Gentlemen, Department of Public Works, Sydney, 24 January, 1894.  
Referring to clause 6 of the specification, I have the honor to inform you that you may excavate shafts No 4 at 2 m 33 chs 5 lks from 9 feet below the surface, No 5 at 2 m 40 chs 50 lks from 6 feet below the surface, and No 14 at 3 m 69 chs from 18 feet below the surface, with the use of 4 inch charges of compressed powder

(Through Mr Millner )

I have, &c,  
J. DAVIS,  
Supervising Engineer for Sewerage

## No 6

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co

Gentlemen, Department of Public Works, Sydney, 3 February, 1894.  
Referring to clause 6 of the specification, I have the honor to inform you that you may excavate shafts No. 2A at 3 m. 27 chs 90 lks from 3 feet below the surface, No 3 at 2 m 38 chs from 7 feet below the surface, No 3A at 2 m 34 chs from 3 feet below the surface, No 11 at 3 m 33 chs 85 lks from 27 feet below the surface, and No. 10 at 3 m. 30 chs. 28 13 lks from 26 feet below the surface, with the use of 4 inch charges of compressed powder

(Through Mr Millner )

I have, &c.,  
J. DAVIS,  
Supervising Engineer for Sewerage.

## No 7

Supervising-Engineer Davis to Messrs Carter, Gummow, &amp; Co.

Gentlemen, Public Works Department, Sewerage Branch, 19 February, 1894  
Referring to clause 6 of the specification, I have the honor to inform you that you may excavate shafts No. 2 at 2 m 22 chs 80 lks from 10 feet below the surface, and No 6 at 2 m 69 chs 70 lks from 18 feet below the surface, with the use of 4-inch charges of compressed powder

(Through Mr Millner )

I have, &c.,  
J. DAVIS,  
Supervising Engineer for Sewerage.

No. 8.

No. 8.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen,

Public Works Department, Sewerage Branch, 12 March, 1894.

I have the honor to forward herewith an additional drawing, showing slight modification in the details of shafts at 2 m. 73 chs. 863 lks. and Emily-street, and the upper portion of the pipe-shafts. You will notice that the cast-iron plates shown on the drawing attached to the contract, on the ledges at the bottom of the shafts, are substituted for boards, that the sandstone ashlar at the top of the shafts is substituted for concrete, and that the top of the pipe-shafts is altered. Will you please bear in mind that these alterations apply to the whole of the shafts in your contract.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

(Through Mr. Millner.)

No. 9.

Supervising-Engineer Davis to Inspector Millner.

*Minute Paper.*

Department of Public Works, Roads and Bridges and Sewerage Branch,

Sydney, 2 May, 1894.

*Subject:—Contract No. 69.—Substituting Tunnelling for open Cutting.*

I UNDERSTAND that the contractors wish to substitute tunnelling for open cutting in two or three instances. They must write, asking permission to do this, before any excavation is paid for in such cases, as it will be necessary to clearly understand on what conditions the concession is granted. Will you please see contractors with reference to this matter.

J.D.

I have seen contractors and verbally informed them of this.—W.J.M., 14/5/94. Mr. Davis. This might now be filed.—J.D., 22/5/94.

No. 10.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen,

Department of Public Works, Sewerage Branch, 23 June, 1894.

I understand it is your intention to substitute tunnelling for open cutting in the Illawarra Road for a portion or the whole of the length between 2 m. 54 chs. and 2 m. 87 chs., and I desire to inform you that there will be no objection to this course, but it must be distinctly understood that you will be paid as though the excavation had been done in the manner shown on the drawings attached to the contract.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

No. 11.

Supervising-Engineer Davis to The Engineer-in-Chief for Sewerage.

*Minute Paper.*

Department of Public Works, Roads and Bridges and Sewerage Branch,

Sydney, 9 May, 1894.

*Subject:—Contract No. 69, Eastern Branch, Western Suburbs.—Pitching round Manhole Covers.*

As some of the manholes on this contract are being constructed, I should like the Engineer-in-Chief's decision as to the kind of pitching, if any, which is to be put round the manhole covers.

Twelve square yards of squared bluestone pitching were included in the schedule of quantities, which the contractors have priced at £50 per square yard. The quantity likely to be used, if the whole of the manholes are to be pitched, will be 35 square yards, which, at schedule rates, will amount to £1,750.

Special bluestone concrete will answer the same purpose as bluestone pitchers, and will only cost 9 cubic yards, at 50s. = £22 10s.

The fair price for bluestone pitching is about 25s. per square yard, and, as the schedule rate is so much higher than the market rate, the question arises whether the pitching should not be omitted. If, however, this course is considered to be unfair to the contractors, then only the quantity included in the schedule of quantities need be carried out.

J.D.

We cannot in fairness omit an item for which, no doubt, the price is absurdly high, while we know that on other items the price is equally low. Where bluestone pitchers are shown on drawing contractors must be paid for same at schedule rates.—R.R.P.H., 11/5/94.

Mr. Millner to note.—J.D., 11/5/94. Noted.—W.J.M., 14/5/94. Mr. Davis. File.—J.D., 15/5/94.

No. 12.

Inspector Millner to Supervising-Engineer Davis.

Sewerage Office, Arncliffe, 21 August, 1894.

Contract 69, *re* extra lining of Tunnel, between 2 miles 38 chains and 2 miles 45 chains.

I THINK that it will be advisable that the extra lining of tunnel (ordered between 2 miles 40½ chains and 2 miles 45 chains) should start at 2 miles 38 chains. The ground in this extra 2½ chains is of a very similar nature to the other.

Register.—J.D., 23/8/94.

Will Mr. Piper please attach the paper referred to?—J.D., 25/8/94. W. J. MILLNER.

Has Mr. Millner these papers?—J.D., 28/8/94. Previous papers, 94-1,078, Mr. Davis, 25/6/94. I have not got these papers.—W.J.M., 29/8/94. Mr. Davis. What will the extra cost be?—J.D., 31/8/94. Mr. Adams. The extra cost from 2 miles 38 chains to shaft at 2 m. 40 chs. 50 lks. will be £206 3s. 9d.—W.E.A., 31/8/94.

Will the Engineer-in-Chief please approve of 10 inches of lining for this length of tunnel? It was driven for 5 inches in the first instance. The ground has proved to be of a soft nature, and therefore requiring an extra thickness of lining. This additional work is fully provided for in the contract, and included in schedule of quantities.—J.D., 31/8/94. Engineer-in-Chief.

Approved.—R.R.P.H., 1/9/94.

Contractors informed.

Mr. Millner to note.—J.D., 7/9/94.

Noted.—

W.J.M., 11/9/94. File.—J.D., 17/9/94.

No. 13.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen,

Public Works Department, Sewerage Branch, 28 June, 1894.

I have to request that you will please excavate the tunnel between 2 miles 40½ chains and 2 miles 45 chains, to admit of two-ring lining being put in. The excavation you will be paid for under item No. 9, and the bluestone concrete and additional brickwork under items Nos. 32 and 33 respectively.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

No. 14.

## No. 14.

Messrs. Carter, Gummow, &amp; Co. to The Under Secretary for Public Works.

Sir,

North Sydney, 6 July, 1894.  
 With reference to our Contract No. 69, Sydney Sewerage, we are willing that the Government shall exercise the option of paying us all sums now due or to accrue due in respect of this contract, either in cash or Funded Stock, as may be thought fit.

We have, &amp;c.,

JOHN CARTER.  
 FRANK MOORHOUSE GUMMOW  
 (By his Attorney, JOHN CARTER).  
 D. G. SNODGRASS.  
 GEORGE MADDISON.  
 PETER EWING.

Witness,—ROBERT MILLER, J.P.

We, the sureties named in the bond in connection with the above contract, consent hereto.

Witness,—FRED. WOOLCOTT-WALEY, J.P.

CHAS. J. HENTY.  
 R. L. SCRUTTON.

Treasury informed, 9/7/94. For approval.—J.B., 10/7/94. Approved.—W.J.L. Accountant, Roads, to  
 note.—F.C.P., 24/7/94. Seen;—Mr. H. to note.—O.C., 24/7/94. Mr. Wallwork,—Please place with Bond Ct.  
 69.—E.H., 24/7/94.

## No. 15.

The Council Clerk, Marrickville, to The Commissioner for Roads.

Sir,

Borough of Marrickville, Town Hall, 24 August, 1894.  
 I am directed by his Worship the Mayor to draw your attention to the enclosed letter, received by him from the borough engineer, and to request that the department will cause such steps to be taken in this matter as may be deemed necessary, so as to avert what would be an intolerable and continuous nuisance.

I have, &amp;c.,

HENRY H. BROWN,  
 Council Clerk.

For report.—R.R.P.H., 27/8/94. Report herewith.—J.D., 6/9/94. Council Clerk.—J.D., 13/9/94.

Sir,

I have the honor to bring before your notice the following:—The Government Sewerage Department is taking up a culvert on the Illawarra Road, near Addison Road, and intend substituting one that will act as a siphon. It is needless for me to point out the nuisance and trouble this will be to the Council. But I wish to bring under your notice the fact that it is quite unnecessary to have a siphon. Below the culvert there is a fall of 4 ft. 6 in. in 7½ chains, which if worked out would give sufficient fall for the drain, and clear the culvert altogether. As it is a matter of great importance, I have brought it before your notice without loss of time.

I am, &amp;c.,

J. P. WEBSTER.

## No. 16.

Supervising-Engineer Davis to The Engineer-in-Chief for Sewerage.

*Minute Paper.*

Department of Public Works, Roads and Bridges and Sewerage Branch,  
 Sydney, 6 September, 1894.

*Subject*:—Contract No. 69, Eastern Branch Sewer, Western Suburbs, Culvert under Sewer near Addison Road.  
 THIS culvert is shown on the contract drawings to be built as a siphon under the Eastern Branch Sewer. Siphons are always objectionable, and should, if possible, be avoided, especially where, as in this case, there will be large quantities of heavy silt carried with the water, which will undoubtedly settle in it.

With a view of finding out whether the siphon in this instance could be dispensed with, I have had levels taken of the stream below the culvert, and I find that by lowering the bed of the creek for a length of 287 feet, and carrying the culvert 75 feet to the east of the Illawarra Road, to support a cottage which is built on the edge of the creek, the siphon need not be constructed.

The cost of lowering the creek and extending the culvert will be about £125, and I would strongly recommend that this extra be incurred.

Longitudinal section of creek and drawing of proposed culvert submitted with this report. Approved.—R.R.P.H., 6/9/94. Mr. Davis. Contractors informed.—J.D., 13/9/94. Mr. Millner to see. Seen.—W.J.M., 14/9/94. File.—J.D., 17/9/94. J.D.

## No. 17.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen,

Public Works Department, Sewerage Branch, 12 September, 1894.

Referring to your Contract No. 69, I have to honor to inform you that the Engineer-in-Chief has decided to dispense with the siphon culvert under the sewer near Addison Road, and to substitute a culvert, as shown on the sketch handed to you by Mr. Millner. Will you please also extend the culvert as shown to support the cottage built on the edge of the creek, and deepen the creek to give an outlet for the culvert.

You will be paid at schedule rates for this work.

I have, &amp;c.,

J. DAVIS,  
 Supervising Engineer for Sewerage.

## No. 18.

Messrs. Carter, Gummow, &amp; Co. to The Engineer-in-Chief for Sewerage.

Contract No. 69, Western Suburbs Sewerage.

Sir,

North Sydney, 20 September, 1894.  
 Having now completed a considerable portion of the above contract, for the performance of which your department hold security to the extent of about £6,800, being £4,500 as guaranteed by our sureties and £2,300 retention money for work already done, we have the honor to ask you to allow the payment to us of £1,000 from the latter amount, leaving £5,800 still remaining as security for the due fulfilment of the remaining portion of the work.

We would remind you that our sureties are two of the most reliable firms in the city, viz., Parbury, Henty, & Co., Pitt-street, and R. L. Scrutton & Co., Clarence-street; and also that the amount of security required had the contract been accepted in the ordinary way would not have exceeded £4,500.

We have, &amp;c.,

CARTER, GUMMOW, &amp; CO.

Personal security has been given on this contract for double the usual amount of cash security; so that, in addition to the retention money, which amounts to nearly £2,300, the department has security for £4,520, making a total of personal and cash security for the due performance of the contract of £6,820. The amount of the contract is £45,207, of which there has been about £30,000 worth of work done. This being the case, and the personal security being Messrs. Henty & Co. and Mr. R. L. Scrutton (firms, I suppose, which are safe), I think £1,000 of the retention money might be returned.—J.D., 21/9/94. Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage.

Recommended.—R.H., 21/9/94. Under Secretary. For approval.—J.B., 21/9/94. Approved.—J.H.Y., 21/9/94. Mr. Millner to include in next progress return.—J.D., 21/9/94. Included.—W.J.M., 24/9/94. Accountant.—J.D., 26/9/94. Voted.—O.C. (*per E.H.*), 2/10/94. Mr. Piper.

No. 19.  
 Supervising-Engineer Davis to The Engineer-in-Chief for Sewerage.  
 Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 21 September, 1894.

Minute Paper.

Subject:—Western Branch, Western Suburbs, recommending that a single sewer be substituted for the two sewers originally proposed.

In the original scheme for the drainage of the western suburbs two sewers are provided to run side by side from Premier-street to a point in the Terrace Road where the Canterbury sewer branches off to that suburb, a length of 70 chains. Over twelve months ago the survey was completed for the two sewers, and in anticipation of them being continued the length of tunnelling and lining from Premier-street to the Illawarra Road was included in the contract for the eastern branch. The tunnel is now driven for the two sewers for this length, and the lining will be proceeded with in a few days.

With a view of seeing how the cost of a single sewer would compare with that of a double one, estimates have been prepared which I attach. They show that the double sewer—

|   |         |    |    |
|---|---------|----|----|
| For the length from Premier-street to Terrace Road, exclusive of shafts and aqueduct, to be ..... | £       | s. | d. |
| And the single sewer, 7 ft. 8 in. x 6 ft. 8 in., to be, on same basis .....                       | 22,867  | 3  | 9  |
|   | 13,758  | 13 | 9  |
| <hr/>   |         |    |    |
| Saving in favour of one sewer .....   | 8,108   | 10 | 0  |
| To this must be added saving in shafts .....  | 1,000   | 0  | 0  |
| And saving in cost of aqueduct .....  | 1,500   | 0  | 0  |
| <hr/>   |         |    |    |
| Total saving in favour of one sewer .....   | £10,608 | 10 | 0  |

The only objection to the single sewer is in the fact that the flow line will be raised 5½ inches, and this will affect the area drained by the Canterbury branch to that extent.

I have consulted with Mr. Bagge as to the desirability of making the proposed change, and he quite agrees with me that it should be made.

I beg, therefore, on the score of economy, that the single sewer should be substituted for the double sewer.

I have seen Messrs. Carter & Co. with reference to making the change in the length between Premier-street and Illawarra Road, and they are willing to build the single in place of the double sewer, provided they are recouped for any expense they may have gone to in making centering for this particular length. If the Engineer-in-Chief so decides, the two sewers could be built, and a chamber and shaft built at Illawarra Road to connect the single and double sewer, as shown on attached tracing.

J. DAVIS.

One sewer from Premier-street approved.—R.H., 24/9/94. Will Mr. Millner please note and report what expense the contractors have been put to in preparing centering. I will then write contractors, instructing them to carry out the single sewer in lieu of double one.—J.D., 24/9/94. Mr. Millner. Noted and report herewith.—W.J.M., 29/9/94. Contractors informed.—J.D., 11/10/94. Will Mr. Bagge please have drawings prepared for Illawarra Road shaft, providing for inlet from east, and also of any alteration he wishes made in invert of Premier-street chamber.—J.D., 11/10/94. Mr. Bagge. Mr. Baltzer for details.—C.H.O.-B., 11/10/94. Details are nearly finished.—C.H.O.-B., 15/10/94.

Resident Engineer's Office, Arncliffe, 9 October, 1893.

CONTRACT No. 69.—Alteration of Sewer, Premier-street to Illawarra Road.

THE attached tracing shows the cross section of tunnel excavation between Premier-street shaft and Illawarra Road, and the distance the centre line will require to be moved to substitute the 7 ft. 8 in. x 6 ft. 8 in. sewer for the duplicate sewer.

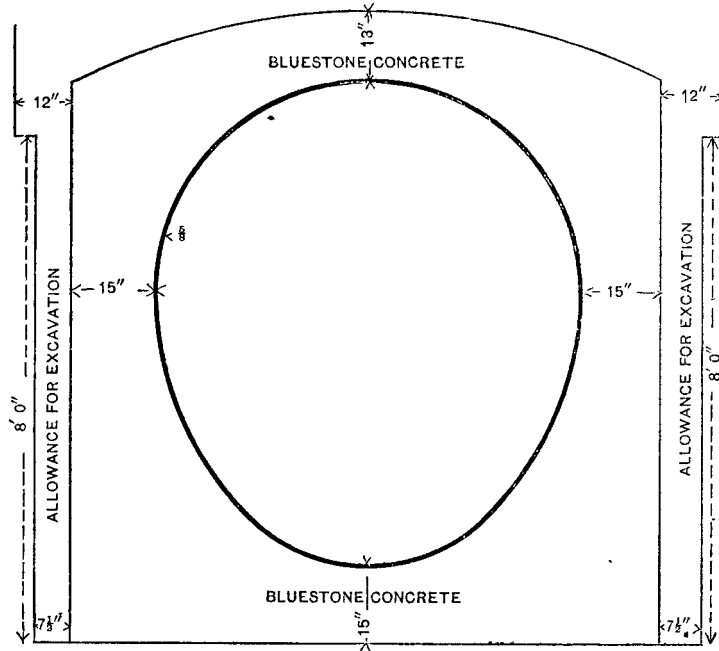

W. J. MILLNER.

Mr. Davis.

WESTERN BRANCH—Cross Section, Tunnel Excavation. Scale, ½ inch.

PROPOSED SEWER (7 ft. 8 in. x 6 ft. 8 in. SEWER).

*In open cutting (in soft ground).*

Resident Engineer's Office, Arncliffe, 29 September, 1894.

WESTERN Branch Sewer.—*Re* altering sewer between Premier-street and Illawarra Road.

I HAVE seen contractors *re* expense incurred in centres, &c., which they claim to be—

|  |          |
|--|----------|
| Centres for 5 ft. 10 in. x 6 ft. 10 in. sewer .....        | 16 0 0   |
| Altering centres for 5 ft. 2 in. x 4 ft. 2 in. sewer ..... | 2 10 0   |
| Section mould .....  | 1 0 0    |
| Concrete in pats .....                                     | 15 0 0   |
| Altering road .....  | 3 0 0    |
|  | £37 10 0 |

Mr. Davis.

W. J. MILLNER.

No. 20.

Supervising-Engineer Davis to Messrs. Carter, Gummow, & Co.

Gentlemen, Department of Public Works, Sewerage Branch, 11 October, 1894.

Referring to the conversation which I recently had with you, and to the interview which Mr. Millner had with you two weeks ago respecting the substituting of a single sewer for the double one, shown on contract drawings, between Premier-street shaft and the shaft at the Illawarra Road, I have the honor to inform you that the Engineer-in-Chief has decided to substitute a 7 ft. 8 in. x 6 ft. 8 in. sewer for the double one, and that you will be allowed for the expense you have been put to in connection with the double sewer, as arranged with Mr. Millner, viz., £37 10s.

The cross section of sewer will be as shown on attached tracing. Drawings will be forwarded in a few days of the shaft at the Illawarra Road, and of any slight alteration it may be necessary to make in the inverts of the Premier-street shaft chamber.

In the meantime you will please proceed with the construction of the single sewer, as shown on the tracing attached.

I have, &c.,  
J. DAVIS,  
Supervising Engineer for Sewerage.

No. 21.

Messrs. Carter, Gummow, & Co. to The Engineer-in-Chief for Sewerage.

Sir, Marrickville, 11 November, 1894.

In reply to your letter of 11th October, with regard to alteration of design between Premier-street shaft and Illawarra Road, we beg leave to state that we will accept the terms therein, provided a special item be arranged for the filling at the rate of 5s. per cubic yard.

Yours, &c.,  
CARTER, GUMMOW, & CO.,  
Contract No. 69.

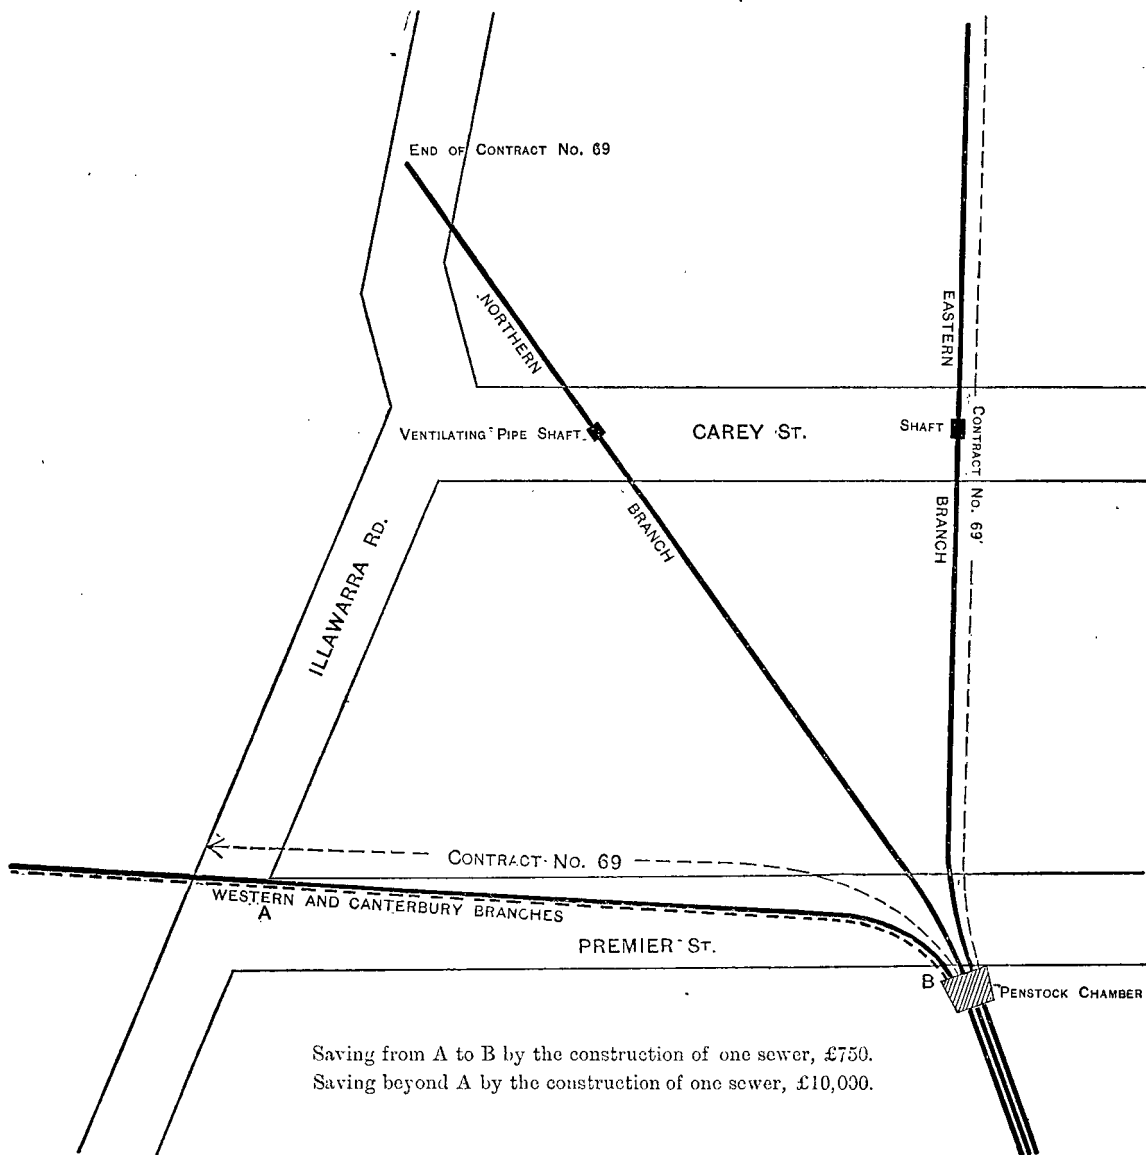

Mr. Davis.—R.H., 11/11/94. Commissioner for Roads.—D.C.M.L. (*pro* U.S.), B.C., 15/11/94. Will Mr. Weedon please let me have quantity of filling.—J.D., 17/11/94. Quantity of filling, due to alteration in design, 410 cubic yards.—S.H.W., 20/11/94.

The

The schedule rate for filling is 6d. per cubic yard, but it is manifest that the contractors, in giving this low price, did not contemplate doing the kind of filling required in connection with the western branch sewer, between Premier-street and Illawarra Road. The 5s. asked is, I consider, a little high, but I suppose, as they will lose something by the reduction of concrete and brickwork, occasioned by the alteration, it will be just to take this into account, and allow them what they ask. There will be about 400 cubic yards of this filling, which, at 5s. per cubic yard, would amount to £100. I recommend that the price named be approved.—J.D., 21/11/94. Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage.

This addition is caused by an alteration in the original design, which has the effect of reducing the cost of the work in this contract by about £750, and a further reduction on the whole work of £10,000. Recommended for approval.—R.H., 21/11/94.

For approval.—J.B., 28/11/94. Approved.—J.H.Y., 29/11/94. Roads.—D.C.M.L. (*pro* U.S.), B.C., 29/11/94. Seen.—R.H., 30/11/94. Mr. Weedon to note.—J.D., 4/12/94. Noted.—S.H.W., 6/12/94. File.—J.D., 7/12/94.

Dotted lines indicate original duplicate sewers; full lines indicate sewer as carried out.

## No. 22.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Public Works Department, Sewerage Branch, 3 December, 1894.  
 In reply to yours of the 11th ultimo, accepting the terms stated in mine of the 11th October, relative to the alteration of design between Premier-street shaft and Illawarra Road, conditionally upon a special item being arranged for the filling at the rate of 5s. per cubic yard, I have the honor to inform you that the Minister has approved of your being paid for the filling in of this length at the price you name.

I have, &c.,  
 J. DAVIS,  
 Supervising Engineer for Sewerage.

## No. 23.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Public Works Department, Sewerage Branch, 8 December, 1894.  
 Referring to my letter of the 11th October last, informing you that the Engineer-in-Chief had decided to substitute one sewer for the two shown on the contract drawing between Premier-street and Illawarra Road, and instructed you to proceed with the construction of the single sewer, I now beg to forward herewith the drawing showing the alteration which this change necessitated in the chamber of the Premier-street shaft.

I have, &c.,  
 J. DAVIS,  
 Supervising Engineer for Sewerage.

(Through Mr. Millner.)

## No. 24.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Department of Public Works, Roads and Bridges and Sewerage Branch,  
 Sydney, 23 March, 1895.

*Minute Paper.**Subject:—Shaft at Premier-street.*

THE present size of the shaft at Premier-street, excavated under Contract No. 62, is 12 ft. x 5 ft. In Messrs. Carter & Co.'s Contract, No. 69, provision has been made for enlarging the shaft to 14 ft. x 7 ft., and to line it with brickwork. The top of the shaft is left open, and surrounded by an iron railing, which would not prevent children and others getting into this shaft.

I do not think that there is any necessity to make the shaft larger than it is at the present time, and the iron railing would certainly be dangerous.

I recommend that the shaft be not increased in size, that it be lined with bluestone concrete, and that it be arched over, and a manhole cover be put on in the usual way. The saving that will thereby be effected will amount to £50.

J. D.

Approved.—R.P.H., 25/3/95. Messrs. Carter, Gummow, & Co., 25/3/95. Mr. Millner to note.—J.D., 25/3/95.  
 Noted.—W.J.M., 29/3/95. Mr. Davis. File.—J.D., 30/3/95.

## No. 25.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Public Works Department, Sewerage Branch, 25 March, 1895.  
 I have the honor to request that instead of enlarging the Premier-street shaft to the size (14 ft. x 7 ft.) shown on the contract drawings and lining it with brickwork, that you will please line the shaft with bluestone concrete in the usual way, not increasing its size; and instead of putting the iron fencing round the top as shown on contract drawings, that you put a concrete arch with manhole cover as is the habit in such cases.

I have, &c.,  
 J. DAVIS,  
 Supervising Engineer for Sewerage.

## Appendix No. 62.

## UNDERTAKING.

hereby acknowledge to have received of and from The Minister for Public Works in and for the Colony of New South Wales the sum of \_\_\_\_\_ sterling being the amount originally placed at fixed deposit to the credit of the said Minister as security for the due performance by \_\_\_\_\_ of \_\_\_\_\_ Contract for \_\_\_\_\_ which amount \_\_\_\_\_ admit is paid over to \_\_\_\_\_ as a matter of grace and not of right and \_\_\_\_\_ hereby undertake and agree that this payment shall not operate as a bar to \_\_\_\_\_ maintaining the said works for the full period nor as a waiver of any of the rights or remedies of Her Majesty the Queen the Government of the said Colony the constructing authority or the said Minister under \_\_\_\_\_ said Contract.

As witness \_\_\_\_\_ hand and seal at Sydney this \_\_\_\_\_ day \_\_\_\_\_ in the year of Our Lord one thousand eight hundred and ninety \_\_\_\_\_

Signed sealed and delivered by \_\_\_\_\_  
 in the presence of \_\_\_\_\_

## Appendix No. 63.

TUESDAY, NOVEMBER 19th, 1878.

*Present*—Arbitrators:—The Hon. Sir William Milne, Knight, on behalf of the Government; Samuel Tomkinson, Esquire, on behalf of Messrs. Wells Bros.; The Hon. Sir Henry Ayers, K.C.M.G., Umpire.

Mr. Downer, Q.C., appeared as Counsel for the claimants (Messrs. Wells Bros.); Mr. Symon appeared on behalf of the South Australian Government.

Mr. Robert Hickson sworn.

*Examined by Mr. Symon:* I believe you are the Engineer of Harbours and Jetties for the South Australian Government? Yes.

You know Messrs. Wells Bros.—that is, Mr. George Wells and Percy Wells? I do.

Did you see Mr. George Wells in the year 1876? Yes.

I believe you yourself came to this Colony in the same year, and entered on your present duties? I did.

In what month? In May, 1876.

Did you know Mr. Cheesewright then? Not at that time. I knew him very soon afterwards.

Had you any communication with Mr. George Wells with reference to Mr. Cheesewright? Mr. George Wells called at my office soon after I came, and mentioned the fact that Mr. Cheesewright was here as his agent, and was prepared to tender for two piers—one at Kingston and the other at Rivoli. He said he had to leave the colony and go home to London soon after that.

Was

Was there a contract at that time for the Tiparra lighthouse? Yes; that contract was made before I came out here. That was signed by Mr. George Wells, I believe? Yes.

How did Mr. George Wells get that work? He supplied the plans and put in a tender.

*By Mr. Downer:* Do you know that yourself—I mean of your own knowledge? Yes; he offered to do the work for a certain sum.

Was the tender in writing? Yes; and the acceptance too. That is how I know the circumstances connected with that contract, the documents being in my office.

*By Mr. Symon:* You have the documents now, I suppose? Yes, in the office.

They can be put in, if necessary, at the proper time. Can you tell me how the Rivoli Bay and Kingston contracts were arranged for? I understood the same arrangement was made as in the case of the Tiparra lighthouse.

That is to say that plans and estimates were to be sent in by Messrs. Wells Bros., tenders not being publicly invited? Yes.

Do you remember Mr. George Wells leaving for England? Yes, I remember the fact of his leaving.

Pursuant to what you have told us, were plans and estimates sent in by Mr. Cheesewright for those two works? Yes.

I think these are the plans, are they not [*pointing to M1 and N1*]? Yes.

*The Umpire* (Sir Henry Ayers): Other documents connected with those drawings have been put in, and marked O1 and R1.

*Mr. Symon:* Yes; I propose to refer to them.

*To the Witness:* The documents marked O1 are the estimates which accompanied the drawings M1 and N1, are they not? Yes.

I believe nothing was done upon these plans? No.

Why was that? The Government decided to call for tenders from a few firms, and applications were made to five or six different firms to send in tenders. For that purpose plans were sent to London.

What plans did you send to London? Tracings were made of the drawings M1 and N1, and sent to London. From those tracings lithographs were prepared, and upon the lithographed drawings tenders were invited.

*By Mr. Downer:* Have you got the original drawings? No.

But the drawings which you have there—the contract drawings—are printed papers. I should like to see the original? I have not got the original; it went to London, and from it the lithograph was prepared.

*The Umpire* (Sir Henry Ayers): It is clear that the original drawing is not in the possession of the Government, and I think, therefore, it is competent for the learned counsel for the Crown to make use of the lithographs prepared from that original drawing as secondary evidence.

*By Mr. Symon:* Can you tell me why such a short time as three weeks was fixed for the sending in of those tenders? Virtually, I looked upon it that Messrs Wells had the contract, and that it was practically useless to keep the drawings on view for any length of time in London. I looked upon it as merely a matter of form sending the drawings Home.

I think the contract was signed in London; but with regard to that, you, of course, know nothing personally? No.

Do you recollect Mr. Percy Wells coming out here? Yes; he was in the office one day, and I mentioned the fact to him, that the tenders sent in by the London firm were somewhat lower than the tenders sent in by Cheesewright, and he explained that.

What did he explain? He said that his firm were very anxious to get the work. They found that Mr. Cheesewright's tender here would be known; and they found, on examining the estimates, that they could somewhat reduce the contingency item, or the item for erection. That was the reason they gave for the London tender being lower than the Adelaide tender.

Did Mr. Percy Wells, at that interview, raise any question about Mr. Cheesewright's authority? No.

After Mr. Percy Wells came here, was any other plan of Mr. Cheesewright's sent into the Government in connection with other work? Yes; there was an offer to erect the Port Adelaide beacons.

Have you a drawing of that? Yes; this [*producing the same*], is a drawing sent in June, 1877, signed at the top by Messrs. Wells, and at the bottom by Mr. F. H. Cheesewright. [*The same was handed in and marked V1.*]

Do you also produce the tender based upon that plan for the Port Adelaide beacons? Yes, here it is [*producing the same*]. [*The same was handed in and marked W1.*]

*Sir William Milne:* Do I understand that Mr. Cheesewright sent in that plan?

*Mr. Downer:* No, that is not the case—Mr. Cheesewright designed it; he was the draftsman only. Messrs. Wells sent the drawing in, and the letter containing the tender was signed by Messrs. Wells Brothers.

*By Mr. Symon:* Did anyone assist Mr. Cheesewright in the preparation of the plans for the piers at Rivoli Bay and Kingston? Yes. He told me that Mr. Edmond Wells was assisting him in the preparation of those drawings, and I may say that, on one occasion, I saw Mr. Edmond Wells assisting Mr. Cheesewright on those drawings.

That is the gentleman who was examined here as a witness, I think? Yes, a son of Mr. Percy Wells.

Will you look at contract drawing No. 2;—is that drawing intended to show the exact length of the piles at the sections marked thereon? With the exception of the cross-section at YY, it is not.

Is the fact that the piles appear to be broken off above the screw in any way conclusive as to the length of the piles? Not in my opinion. We sometimes break them off, and sometimes we do not.

Would anyone, whether he were a contractor or an engineer taking a glance at the plan, see at once that that drawing did not give the length of the piles? Certainly.

Will you explain that with reference to section SS and the section of the wide part? At those sections the piles are shown of exactly the same length. This section of the wide part at Kingston Jetty refers to three different portions of the pier; one at a short distance from the end, another at 3,200 feet out, and a third 900 feet beyond that again. If that section were intended to show the exact length of the piles at all those places, the piles should be of the same length at each of the wide places, which would be manifestly absurd.

What does section SS show? It shows the narrow part of the pier at any portion.

For what purpose? It is intended to show the detail of the superstructure.

Mr. Percy Wells stated that the Government were to be congratulated on the contractors not accepting that drawing No. 2, as giving the length of the piles. What would have been the result if they had done so? The result would have been that in some cases instead of going 9 or 6 feet into the ground the piles would have gone down some 16 feet into the ground; and further out they would not have reached the ground at all, but would have been suspended in the water like candles in a row.

Now look at the contract drawing No. 1;—in your opinion, would any contractor or engineer accept that drawing as giving him the accurate length of the piles to be furnished for the jetty? Certainly not.

What would be the course which a contractor would adopt with reference to that plan, if he had no other information? There are two courses which a contractor would adopt. The first would be to refuse to tender, until he was furnished with further information, and the second would be that which appears to have been adopted by the other tenderers in this case—to put on a large sum for risk. The tenders were very wide indeed, some of them being much above the price quoted by Messrs. Wells.

I understand you to say that the second course was the one adopted by the other contractors or tenderers on this very occasion? I presume that that was so, because the other tenders were so much higher.

What was the difference between the tender sent in by Messrs. Wells and the other tenders received? Messrs. Wells' tender for the work at Rivoli Bay was £23,000, the next was £32,000, the third £34,000, and the fourth £29,000. I may mention that the fourth tender was only for the one jetty at Rivoli Bay. For the work at Kingston Messrs. Wells' tender was £30,000, the second tender £45,000, and the third tender £50,000.

If that drawing, No. 1, were to be accepted as showing the length of the piles in any case, is there any reason why you should measure from the deck to the ground-line rather than to the flange of the screw? If the drawings were to such a scale that it could be practically done, the more reasonable course would be to take the measurement from the deck-line to the flange, the total length of the pile.

I need hardly ask you, after the evidence we have had, whether it is possible to scale accurately the length of the piles required from that drawing? I should say certainly not.

If that drawing were to scale, would you expect to find all of it to scale? Most decidedly.

Would you kindly point out to the Arbitrators the tests which any reasonable man would apply? If scalable, the plan should be scalable in every part. The width of the deck, the distance of the piles from one another, and the curves should be accurately shown.

Do you agree with Mr. Rees that the curves are not drawn to a radius? They are drawn with a pen and rule only; they are not drawn to any radius. In almost every place that you try the drawing it is not done accurately to scale. The landing stairs, for instance, are quite out.

Is it possible in any way from Drawing No. 1 to ascertain the material required for the jetty? Not as to the length of the piles. The drawing will give what it was intended to give, viz., the number of the piles and general information.

What Mr. Rees, I think, called a general indication? Yes, and what I should call a general indication—that is to say, the number and width apart of the piles and the position of the turn-outs, &c., but not as to the length of any pile.

You have heard about the deck-level at Rivoli Bay;—at the time that the deck-level was fixed was the Admiralty bench-mark found? No; I did not even know that there was an Admiralty bench-mark there at that time.

It has been found since? Yes.

How much is the deck-level above or below the Admiralty mark? Where it starts it is some 11 or 12 inches, I think, higher than the Admiralty bench-mark.

You have no doubt heard that there has been a fall in the construction of the jetty of some 15 inches? Yes.

So that the net result would be that the deck-level of the jetty is an inch or two below the right level? Yes, some 3 inches.

How did that fall come about? Through the careless workmanship of the contractors.

Is there any other instance of their carelessness in the case of the Rivoli Bay jetty? Yes; the jetty is supposed to be straight, but there is a very considerable curve in it.

The jetty has only been constructed up to the 40th bay, I believe? Yes; it is 6 feet out of the curve—that is, the height of the curve is 6 feet out in that distance.

You remember, no doubt, that a claim was made by the contractors in respect of the alteration of the site? Yes.

When that claim was made, did you go down there? Yes; I went there as soon as I could.

With what result? I could not see that the contractors had any claim at all.

Will you explain what you found? On examination I saw that the contractors' material was stretched along the beach in this way—(the witness proceeded to explain to the Arbitrators the relative positions of the present jetty, the temporary jetty, the site originally fixed, the contractors' material, &c.)

Is there any reason whatever for saying that the contractors incurred additional cost by restacking or moving any material? Not the slightest, in my opinion.

When did you last see the site? Just about when the works were stopped—about a month afterwards.

Was the material in the same position then as before? There was a little more perhaps, but not very much.

Will you kindly tell the Arbitrators how much open beach there was;—was it possible to lay any of the material on the flat beach without levelling the sandhills? No.

Was this levelling of the sandhills in any way attributable to the change of site? Not in the slightest.

Was there any extra expense incurred by the change of site? No; for the convenience of the work it could not be better stacked than it was.

What would be the value of any rejected piles per ton on the ground, assuming that there were no other works there to which they could be immediately applied? Assuming that they had to go back to England, I should say £10 or £12 per ton.

*The Umpire* (Sir Henry Ayres): What is the first cost? About £7 per ton.

*Sir W. Milne*: I cannot understand that. Is the freight included in the £10 per ton to which you refer? Because, if so, that must be deducted in calculating the value of the piles if sold in England.

*The Umpire* (Sir H. Ayres): There is evidently some misunderstanding. If they are only worth £7 per ton in the manufacturer's yard, they clearly will not be worth £12 per ton when returned.

*The Witness*: The cost of the piles would be a great deal more than £7 per ton. I thought the question asked me was meant to apply to the cost of ordinary rolled wrought-iron, which would be about £7 per ton.

*The Umpire* (Sir Henry Ayres): What would be the original cost of those wrought-iron piles in England? About £10 per ton.

I understood the interrogation of the learned counsel to be as to the value of the piles if sent home to England for sale after rejection; but, supposing that they were rejected and sold here, what should you say would be a fair price to give for them on the ground? About £12.

*Sir W. Milne*: That would depend, I presume, upon whether the piles could be put to any use in the Colony. In other words, the price which the piles would fetch would very much vary with the demand which might exist for wrought-iron in that shape? Yes, that is so.

*Mr. Symon*: Have you any knowledge of screws with larger flanges than were at first contemplated by the contractors having been used at Kingston? Yes; they got some screws with large flanges from Rivoli Bay, when they came to ground which was of a soft nature, so as to secure the requisite basis for the piles.

Have you examined the piles that have been put down there? Yes; I saw a few of them.

Did you thereupon appoint a clerk of works to superintend the progress of the jetty? Yes; I did not think the work was going on satisfactorily. The result of my own examination was to convince me that the work was not progressing as satisfactorily as it ought to do.

In what way? There was the curve of the jetty to which I have referred, and both jetties were out of level, which made me think that the supervision of the work was exceedingly careless.

In what way was there a departure from the correct level? The platform of the jetty was out of level, being in some places 7 inches higher than in others.

Had the work been done carefully it would not have been out of level? No.

I think you have personally checked the returns of the contractors with the scaling, as far as it is possible, of contract drawing No. 1? Yes.

Have the contractors ordered their piles in any way according to the scaling of contract drawing No. 1? No.

Do you know anything about the changing nature of the bottom, the shifting of the sand, and so on? Not of my own knowledge.

Nor as to the nature of the ground-line at Rivoli Bay? No.

*Cross-examined by Mr. Downer*: When was it that the Government first resolved on building these jetties? It was not actually resolved on until the passing of the Bill in Parliament. I understand that the consideration of the desirability of constructing the jetties was on the *tapis* before I came.

They were being talked about when you came here? Yes.

Had anything been said about the erection of the jetty at Rivoli Bay at that time? Yes; before I got here.

In what month was it that you saw Mr. George Wells? It was either in May or June.

What was it that Mr. George Wells saw you about? It was specially in reference to a pier in Largs Bay.

Was it not about the Cape Jaffa Causeway? There was nothing said about that for months afterwards—at least, not to me.

When Mr. George Wells saw you the first time was not that the subject of conversation between you? Certainly not.

How many times did Mr. George Wells see you? About two or three times—twice in my house, and once at Mr. Wright's.

And the Cape Jaffa Causeway was not the subject of conversation at the first interview? I think not. I do not believe Mr. George Wells spoke to me about it.

Are you quite sure that you spoke to him about the Kingston and Rivoli Bay Piers? He spoke to me.

And he told you that Mr. Cheesewright was here as his agent to tender for the jetty? Yes.

Was there any other work going on at that time that Messrs. Wells were interested in? There was the Tiparra Lighthouse, in which Mr. George Wells was interested.

And you know that Mr. Cheesewright came out to superintend that work? Yes.

How long after you saw Mr. Wells was it that you communicated with Mr. Cheesewright as to those jetties? He communicated with me.

How long was that after you saw Mr. Wells? The date of his drawing would show the time. The drawing is dated September 13th, and probably the first communication was in June.

Did you ask him to do anything for you in respect of those jetties? No.

Did

Did he ever go to the site of the jetties? Yes; he went to Kingston with me.

Was he ever at Rivoli? I do not know.

Do you not know that he was not? I have heard that he was not at Rivoli Bay.

Do you know how many times he was at Kingston? I do not. I know he was there once, and took a lot of soundings.

Was that when he was with you? He went down with me, but he took the soundings on his own account.

Were you there then? Not taking the soundings. I went away to Mount Gambier, and as I was on my way I saw him out in a boat taking soundings.

Did you invite him to go with you? I did not invite him to go with me. I told him I was going, and that if he liked to come with me he might. So far I invited him.

Did you pay his expenses? Subsequently they were paid. I recommended the Government to pay Mr. Cheesewright's expenses when they decided to call for tenders.

I think in that recommendation you said that Mr. Cheesewright went down chiefly to assist you? Words to that effect. I thought they should pay his expenses under the circumstances.

Was not the reason you gave for his expenses being paid that he went down to assist you? I could not tell without reference to the letters; I daresay it was. As it turned out, the work he had done before on his own account came to be of value to me.

Do you know that Mr. Cheesewright's expenses were paid before the Government resolved upon inviting tenders? They were not paid until I heard that the Government had resolved on inviting tenders.

When did Mr. Cheesewright and you go to Kingston together? I really could not fix the date.

About when? I should think somewhere about July.

When was it that he sent in a tender? He sent in a tender in September, but one had been sent in by him as early as June.

Did you know before Mr. Cheesewright sent in this tender that the Government intended to invite tenders in England? I could not say that I knew officially, but practically I did know.

Then Mr. Cheesewright's sending in tenders was rather an empty form? I did not tell him to send in the tenders. As I have said, he thought proper to send in a tender in September.

*The Umpire* (Sir H. Ayers): The letter is dated 7th September, 1876; that is to say, a few days earlier than the plans.

*By Mr. Downer*: Did you recommend that Mr. Cheesewright's expenses should be paid before the 7th September? I do not think it was till after that date, but I am not quite sure.

Did you not on the 2nd September recommend that Mr. Cheesewright's expenses should be paid? I think it was about that date.

Did you not report to the Government that Mr. Cheesewright did not go so much as an intending tenderer as for the purpose of ascertaining the relative advantages of an iron and a wooden structure? Yes.

Was that what he went for? Yes. He at one time refused payment himself on the ground that he might be a tenderer. But, as I have said, the information which he went down to obtain on his own account came to be of value to me, and therefore it was only right that the Government should pay his expenses when they decided to call for tenders.

Therefore it appears to me that your recommendation to the Government was not very accurately worded when you said that Mr. Cheesewright did not go so much as an intending tenderer as for the purpose of ascertaining the relative advantages of an iron and a wooden structure? It was not quite accurate, strictly speaking.

Did you know that it was, strictly speaking, inaccurate when you wrote that recommendation? —

Mr. Symon remarked that he was at a loss to understand how the minutes from which his learned friend was quoting came into the possession of the claimants. He must say that the whole thing appeared a little extraordinary in the absence of any explanation.

*Mr. Downer* (to the witness): Did you know at the time you wrote that letter that it was inaccurate? I can see now that it is not, strictly speaking, accurate.

I suppose when you wrote it you did not consider whether it was true or not? That is putting it rather strongly.

Did you consider when you wrote it that it was true? Yes.

Then you had no thought that it was inaccurate when you wrote it? No.

Did Mr. Cheesewright prepare the plans for you? No; he prepared them for Mr. George Wells.

Were they prepared in the Government office? He asked me to allow him to use my office, and I did so.

I think you informed the Government that if Mr. Cheesewright had not done the drawings you would have had to employ someone qualified to prepare them;—did you report to the Government that from Mr. Cheesewright's extensive experience in these matters you considered him the most competent person to supply information in connection with those jetties? Yes, I did. I considered him a very competent man.

I think you reported that if he had not done the work you would have been compelled to get some addition to the present staff, even supposing you could have got it done at all, which you thought was doubtful? Yes.

How long after that was it that the plans were sent home? The plans were sent home at the end of that year. I could not say, from memory, exactly when.

Towards the end of the year? Yes.

*By the Umpire* (Sir H. Ayers): Probably soon after the Bill was passed? Yes; probably soon after. The Session closed in the end of November.

*By Mr. Downer*: I understood you to say, in reply to my learned friend, that you saw Mr. Cheesewright taking soundings from a boat? Yes.

At that time was the site of Kingston jetty resolved upon? Yes; it was resolved upon before I came here.

Will you say that the jetty is built on the site that was then resolved on? Not quite.

Within a quarter of a mile? Yes; it goes exactly from the same point on the shore.

Will you swear that? The site that was pointed out to me as being the site first fixed upon is exactly the same as regards the shore end, though the direction out to sea is somewhat different.

Was not the first site fixed upon south of the present jetty? No; not the one at present fixed upon.

Was it not south of the wooden jetty that Mr. Cheesewright was taking soundings? I cannot say where it was exactly that he took the soundings.

Did you not show him the place in which he had better take soundings? I only showed him the starting-point of the present site.

Had any borings been taken at that time? I think not at that time. If you mean at the time Mr. Cheesewright had been there, borings had been taken then, but not when the site was first determined on.

Did you employ anyone to take borings? Yes; Mr. Wright.

Mr. Cheesewright made no borings? I think not.

Did he not write and tell you that he had taken none? I do not remember, but he certainly did not take them the day that I was there.

When were any borings taken? I cannot fix the date.

Have you heard that they were taken south of the old wooden jetty? I have not heard that.

*By Mr. Tomkinson*: You said that you saw Mr. Cheesewright taking soundings. You were not with him in the boat at the time, I understand? No; Mr. Cheesewright was out in a boat at some considerable distance from the shore, whereas I was on the land, and not in a direct line with the boat, so that I cannot tell exactly where he was taking his soundings.

Was it on the north or south side? I presume it was on the line I showed him.

The jetty, now in course of construction, is a little to the north of the old jetty, is it not? I gave him a general idea of the site of the jetty, and, I think, I gave him a landmark indicating the line of the jetty as then proposed.

And then he took soundings? Yes.

Did he give you the result of his soundings? That is the result of his soundings [*pointing to the drawing No. 1*].

*By the Umpire* (Sir H. Ayers): Was that the intention of the Government at first, to have a wooden jetty? I cannot say from personal knowledge.

*By Mr. Downer*: When Mr. Cheesewright went with you I thought you were under the impression, as you said afterwards, that the principal object was to test the relative merits of a wooden or an iron structure? I do not know that the Government really intended to put up a wooden structure—at any rate, an iron one was decided upon.

*By the Umpire* (Sir H. Ayers): Probably Mr. Cheesewright came into the matter because he understood that the Government thought of having iron instead of wood, and that alteration had a personal interest for him? Yes, no doubt.

*By Mr. Downer*: Did you prepare any plans here? Yes; we prepared them from Mr. Cheesewright's drawings. No. 1 was a tracing of Mr. Cheesewright's drawing, and from that the lithograph was prepared. Drawing No. 2 was altered, because the superstructure designed by Mr. Cheesewright was not considered adapted to the purpose for which it was intended.

Have you scaled Mr. Cheesewright's drawing, No. 1, with your drawing, No. 1? I have put one over the other, which is a better way of comparing them.

Are there not great differences between them, varying in some places from 3 to 6, and even 7 feet? Lengthways, I expect, there is more than that.

In the ground line what difference would there be? I daresay there might be 18 inches, because a line on that scale would make the difference.

Looking at this drawing, No. 1, do you say that it is lithographed from a copy of Mr. Cheesewright's drawing? It must have been.

Have you scaled the two comparatively? No. I have put one over the other.

Are there not places where the difference from the ground line to the platform of the jetty amounts to as much as 5 feet? I do not think so.

3 feet? I do not think so.

I shall have to trouble you to see. Will you try the 250th pile, at Rivoli Bay? There is a difference of 2 feet, apparently, on the scale in the drawings; but the next pile to that appears to be exactly right.

Try 260? There is also a difference of 2 feet.

Take pile 240? There is hardly any difference at all.

Pile 230? There is about 2 feet difference.

*By Mr. Symon*: I suppose that difference is hardly perceptible on so small a scale? No. I should be really very much surprised if it were exactly the same, considering that it has been lithographed from a tracing of a tracing.

*By Mr. Downer*: Try pile No. 10? The top line here is very thick, and represents on the scale to which the plan is drawn about 2 feet. I will take from the centre, that is also about 2 feet out. The tracing appears to have shrunk.

Try No. 80? That is as nearly as possible 3 feet wrong. The lithograph plan has been shorter all the way through, owing, I suppose, to the shrinking of the paper.

Try No. 90? That is 3 feet out—that is to say, the lithograph makes the pile appear shorter than it does on the tracing.

*By Mr. Tomkinson*: Would that cause the piles to be sent out wrong? I say not; because the piles could not be taken from this drawing at all.

*By Mr. Downer*: Take No. 60? That is about 2½ feet out.

Try pile No. 100? That is the same. It is out to about the extent of the width of the top line.

Will you take pile No. 160? That is about the same.

Now turn to Kingston, pile No. 220? It is almost exactly the same, as near as I can get it. The top line at this pile is a little over 2 feet wide, and I have taken the centre; I can make 4 feet difference between them, by taking the bottom of the one and the top of the other.

Try pile No. 230? It is about 1 foot out.

*By Mr. Tomkinson*: Are you measuring from the deck of the jetty to the ground line? Yes. In pile 280 Cheesewright's plan makes it appear 1 foot longer.

*By Mr. Downer*: Try No. 200? It is almost exactly the same.

Take pile No. 90? There I make them to agree.

*By Sir William Milne*: I would like to test Mr. Cheesewright's drawing in a regular gradation. Take pile No. 16, what is its total length? 11 ft. 8 in. after deducting the superstructure.

Try pile 52? 14 ft. 8 in.

Pile 86? 15 ft. 8 in.

124? That is also 15 ft. 8 in.

160? 18 ft. 8 in.

196? 20 ft. 8 in.

230? 21 ft. 8 in.

268? 23 ft. 8 in.

302? 24 ft. 8 in.

340? 26 ft. 8 in.

374? 28 ft. 8 in.

393? 29 ft. 8 in.

Now, will you turn to the 11th pile, at Rivoli Bay? 20 ft. 8 in.

35th pile? 16 ft. 8 in.

59th pile? 19 ft. 8 in.

The 83rd pile? 22 ft. 8 in.

The 131st pile? 28 ft. 8 in.

The 155th pile? 30 ft. 8 in.

The 179th pile? 30 ft. 8 in. also.

The 203rd pile? That is 38 ft. 8 in.

The 227th pile? 31 ft. 8 in.

The 251st pile? 32 ft. 8 in.

The 263rd pile? That is 31 ft. 8 in.

Sir William Milne stated that in the questions he had just addressed to the witness he had been examining from the papers put in, showing the piles sent out from England, and he had taken them in regular gradations at the points where the contractors increased their lengths of piles by 2 feet at a time, as shown by the documents marked E 1 and K.

*Mr. Downer* (to the witness): You say that Mr. Cheesewright took the soundings? Yes.

What length did you intend the jetty to be when you went down with Mr. Cheesewright to Kingston? It was to be the same length as it is now, 6,080 feet.

Was it not to be 4,000 feet? No; that was Rivoli Bay. The Rivoli Bay jetty was to be either 4,000 feet or 4,700 feet long. The Kingston pier was to be 6,080 feet long.

Was it not the original intention that the Kingston jetty should be 4,000 feet long? Not in my time. It was to be 6,080 feet long.

Will you look at the letter marked O 1;—I believe that is a letter dated the 7th September, and signed by Mr. Cheesewright? Yes; that is the letter which Mr. Cheesewright sent.

You say that the Government resolved to send the plans Home in order to get tenders? Yes.

How many people were invited to send in tenders? I do not know.

Did you not send Home a lot of names of persons who ought to be invited to tender? No, certainly not.

What plans were sent Home to tender by? There were five plans sent Home, one of them being common to both jetties.

You say you never sent Home the names of persons who were to be asked to tender;—did you not recommend that a person of the name of Gibson should be invited to tender? Yes; I think I did. He was a man who had done a lot of work for me.

Not anybody else? No. There were two reasons why I recommended Mr. Gibson. One was that I knew him to be a good man, and the other that his son was here on the spot, and was getting the same information as was obtained by Mr. Cheesewright.

You say that a contractor who was a stranger, and who knew nothing about the place, would have found a great difficulty in tendering on your plans? Yes, great difficulty.

Such a man would not have taken the ground line as correct? No.

He might have asked for further information? Yes; or he might have put on a large sum for risk.

But

But you see, in the way you put it, that ground-line meant nothing at all, and there might, consistently with those plans, have been a chasm between the start and the finish? There could not have been, because there was the Admiralty survey to guide them. There was an Admiralty survey on drawing No. 5, which would have helped them in the event of any great discrepancy. This is the drawing [pointing to drawing No. 5, marked G].

Have you ever invited tenders for any work of that kind? Yes, from Mr. George Wells himself, but it was not jetty work.

Is it not usual in inviting tenders to give the contractors some better information than is afforded by the drawings now lying on that table? Most undoubtedly, and it would have been given in this case only that the contract was regarded as virtually let to Mr. Wells.

Why did you think that, when the Government had decided to invite tenders from other people? Because he was the only man who had the requisite information.

And you thought none could be got from your drawings? To make proper contract drawings it would have delayed the work some months, and a drawing to a proper scale would have been about 60 feet long.

Is it not usual to give sectional drawings? Yes.

Why did you recommend Mr. Gibson? I recommended Mr. Gibson because his son was here; but he was placed in some difficulty, as the son was in my employ at the time, and I do not think he did send the information Home.

Have you heard that Messrs. Wells Bros. repudiated Mr. Cheesewright's authority to tender at all? Yes, I have heard of it.

When did you first hear that? The first mention of it, to my knowledge, was after this work had commenced. I think Mr. Percy Wells was the first who told me.

Do you remember when you first saw Mr. Percy Wells here? He called on me in 1876. I think he came out here after I did.

You saw Mr. Percy Wells, at any rate, soon after he came here? Yes.

Did you tell him anything about those tenders of Cheesewright's? I do not know whether I did or not. I had no occasion to make reference to them.

Did you have any conversation with him about those piers at Kingston and Rivoli Bay? I think most likely we had some conversation, but I have no recollection of it.

You saw him frequently? Yes, very often.

But do not recollect that he came to you on the subject of those piers? I do not think he did specially.

Did you tell him that you were going to send those drawings Home, or did you tell him afterwards that you had done so? I think it is very likely.

Did you have any conversation with Mr. Percy Wells about Mr. Cheesewright? Yes.

Did Mr. Percy Wells tell you that Mr. Cheesewright had no authority, except to erect certain works? Certainly not.

Did you make any calculations yourself as to the cost of erecting those piers? Yes.

On what data? I made a rough estimate on those plans.

On the information which you got from Mr. Cheesewright? Yes.

You had no information beyond what you got from Mr. Cheesewright? Yes; we had a great deal. All the details are ours. Mr. Cheesewright's detail drawings were so very bad that I had to alter them.

When did you find out that Mr. Cheesewright's detail drawings were so bad that you would have to alter them—was that directly after they were sent in? Yes; just immediately afterwards. The details were made without any regard to the strength which would be required to enable the structure to carry waggons and so on.

Drawing No. 1, you say, was only intended to show the number of piles required, and the general appearance? Yes; the number of piles is over-riden, I think, by the specification as to the length.

I am asking you whether drawing No. 1 was intended to show correctly the number of piles? Yes.

Was it intended to show anything else correctly? The length of the jetty, the position of the turnouts, the width and general appearance of the T-head, &c. The depth of the pier-head was also shown.

That was practically all that it was intended to show? Yes.

Did you make any estimate of the quantity of ironwork that would be required? Yes; a rough estimate.

Not such an estimate as people would tender upon? No.

Have you got your estimate book? Not here.

Is the estimate entered in your estimate book? Yes; it is sure to be.

How did you get at the quantity of iron that would be required? We took the mean between the end and the commencement; that is the way in which a rough estimate is prepared. We made two estimates—the preliminary and —

At any rate you say you got at the quantity of iron work by taking the mean between the end and the commencement. I suppose you made your calculations for one or two bays at the beginning and end of the jetty, and struck an average? That is so.

How much iron did you calculate upon? I could not say from memory, but on reference to my book I could tell.

*The Umpire* (Sir Henry Ayers): I do not think the matter is one of much importance.

*Mr. Downer*: The arbitrators will, I think, see that the point is material; but I only proposed to put one or two questions on the point. [*To the Witness*]: Have you had any experience in the erection of screw-pile jetties? Not in the erection of screw-pile jetties, which is the simplest form of that kind of work, but I have put up screw-pile lighthouses—one at Barrow-in-Furness and two in Ireland, for which Mr. George Wells tendered. We put that work up ourselves, however.

You say that Mr. Cheesewright prepared the drawings for you for Rivoli Bay Pier? Not exactly.

He prepared the drawings in your office? He prepared the drawing No. 1, which we used.

Did you know at the time that he prepared the drawing No. 1 for Rivoli that he had never been at Rivoli? No; certainly not.

Did he lead you to suppose that he had been there? He said nothing either one way or the other.

How many soundings did he tell you he had taken at Kingston? He did not tell me, and I did not ask him.

So that, without knowing whether he had ever been at Rivoli Bay at all, you took his drawings? I took his drawings without being responsible for them.

And you sent them Home? Yes.

*By Mr. Tomkinson*: Do I understand that Mr. Cheesewright had not been at Rivoli Bay at all? I do not know whether he went to Rivoli Bay or not.

*By Mr. Downer*: Did you make a statement of the wrought-iron that you would require? I never reckoned the exact quantity of iron. I made a rough estimate, but I find it is not here. The way I did it was to say that in the 6,080 feet of the Kingston jetty there would be a certain quantity of iron at so much per foot run.

But your impression is that you did reckon the quantity of iron that would be required? I think I did, but it is not in my book.

Do you know the quantity of iron that was sent out, in fact? No.

Are those your figures [*handing a paper to the Witness*]? Yes.

*By Mr. Symon*: Where did that come from? It appears to have come from my office. It is a pencil document which apparently ought to have been torn up.

Mr. Symon protested against an examination based on a document which was merely a private memorandum belonging to the witness. No notice had been given to produce the paper in question, nor the docketed letters from which quotations had previously been made by his learned friend in the course of the examination of the present witness.

Mr. Downer replied that it was out of place for his learned friend to address the arbitrators on this point at this stage of the case. The documents referred to were in the hands of the claimants, and it had nothing to do with the case how the claimants got them.

Sir William Milne did not see that the documents, however obtained, were in any way relevant to the case.

Mr. Symon said that he must most emphatically protest against a document being produced which was the private property of the witness. He had no information as to how it was obtained, but it appeared to him to be discreditable that the case for the claimants should be conducted on the basis of documents procured apparently without the proper notice to produce being given to his clients.

Mr. Tomkinson did not consider it necessary that the matter should be gone into at this stage of the proceedings.

Mr. Downer said that whenever it became necessary for him to explain he should be happy to show how the documents had been obtained. There was no foundation for the suggestion of his learned friend that the document had been surreptitiously obtained, and therefore there was nothing which his learned friend had a right to describe as being discreditable in the conduct of the case. [*To the Witness*]:—Do you know that 100 tons more iron were required than is set down on this document; it is put down here at 553 tons? I really cannot say; this is an old paper, which is merely a pencil memorandum, and probably one out of half a dozen similar rough estimates.

Sir William Milne was of opinion that time would be merely wasted by examining on such a document as the one in question.

The Umpire (Sir Henry Ayers) concurred in the view taken by Sir William Milne, and did not see how any estimate made by Mr. Hickson for his own guidance would have any effect on the tenderers. It was not information which the tenderers ought to have had. No private memoranda prepared by the witness to assist himself or the Government in arriving at the probable cost could possibly affect the contract.

Mr. Downer urged that the Government were in this case trying to prove that Mr. Cheesewright represented Messrs. Wells Bros. or Mr. George Wells; but Mr. Cheesewright was not acting for his clients, and nothing that took place between Mr. Cheesewright and Mr. Hickson had anything to do with them. Incidentally he wanted to show that Mr. Cheesewright and Mr. Hickson were in the habit of conferring together.

Sir William Milne pointed out that it had not been shown that Messrs. Wells Bros. or Mr. Cheesewright knew anything at all about Mr. Hickson's memoranda, and therefore he really could not see how the paper under discussion had any bearing on the question in dispute.

Mr. Downer said that the witness's contention had been that the contractors had no right to notice the ground-line at all; but the inference to be drawn from the memoranda was that the ground-line must be taken into account.

The Umpire (Sir Henry Ayers) observed that it had been shown that the contractors, in taking out their quantities, took an average from the shore to the pier head. They took the Admiralty soundings and the best information they could otherwise obtain, and, running a certain risk, would take the average for the whole length.

Sir William Milne thought that was very clearly shown by the documents K and E 1.

The Umpire (Sir Henry Ayers) observed that in his opinion both parties to the reference appeared to continue to attach much more importance to Mr. Cheesewright's connection with the matter than it really deserved. It was altogether subsequent to any action of Mr. Cheesewright's that the tenders were sent in.

Sir William Milne said that the same plans which were open to the other tenderers were available for Messrs. Wells Bros., and thus Mr. Cheesewright might be left out of the question altogether for the purposes of the present reference. It appeared to him that they were drifting into matters which had no bearing on the case whatever.

Mr. Tomkinson remarked that the references to Mr. Cheesewright arose out of the statement by the learned counsel for the Crown that the Government always treated Mr. Cheesewright as representing Messrs. Wells Bros., and it appeared to him that Mr. Downer on behalf of the claimants was endeavouring to contradict that view as being a point material to the interests of his clients.

Sir William Milne thought no objection could be raised to the evidence in connection with Mr. Cheesewright relative to the affair, supposing it could be shown that it in any way bore on the case, but that had not been proved.

Mr. Downer would only ask one or two questions on the memorandum, with the permission of the arbitrators, and they would relate to the quantity of wrought iron in the piers.

*To the Witness*: What quantity of wrought-iron did you estimate for Rivoli Bay? 426 tons, and for the Kingston 553 tons; and there would be 100 tons more of cast-iron. I am quoting now from the memorandum you have handed me. Have you ever seen the original tender put in by Messrs. Wells Bros. in England? No; but we have copies.

Sir William Milne said that the tender was superseded by the contract.

Mr. Downer desired to put in a copy of the tender, as he thought it would have some bearing on his case. [*The same was handed in and marked X 1.*]

Mr. Downer then proposed to put in a document which had accompanied the tender, but Mr. Symon objected, and the document was withdrawn.

*Mr. Downer [to the Witness]*: How did you fix high-water mark on the ground? From a few observations which we took.

Did you make any observations personally? No.

The high-water mark was not fixed from any observation of your own? No.

Do you know who took the soundings at Rivoli Bay? There were none taken at Rivoli Bay.

In that drawing, marked No. 2, there are two sections of the wide part, are there not? There are three at Kingston, and one at Rivoli Bay.

Which of those wide parts is the section intended to show? Either of them. They are exactly the same in cross-section.

Were those drawings made rather vague intentionally? No.

Sir William Milne inquired which of the drawings was referred to by the learned counsel.

Mr. Downer said he referred to all the drawings.

Sir William Milne remarked that the evidence showed that the drawing No. 1 was traced from Mr. Cheesewright's drawing.

*Mr. Downer [to the Witness]*: You say that if you had expected that anyone but Messrs. Wells Brothers would have had the contract, more detailed information would have been sent? Yes; if it were to be put to open competition.

The Government intended that it should be put up to open competition, did they not? A few people were invited to tender, certainly.

Mr. Cheesewright's plans were for piers 12 ft. and 17 ft. wide? Yes.

And the contract, as signed, says 10 ft. and 15 ft.? Yes. This plan of ours shows the piers 12 ft. and 17 ft. wide, as Mr. Cheesewright had drawn it. We just traced it off, and did not alter it. It scales to 12 ft. and 17 ft., and, as I say, we just traced his drawing, only altering the figures.

*Re-examined by Mr. Symon*: Do you know how these minutes and reports of yours got into the possession of the claimants? No.

Sir William Milne protested against this matter being gone into at all. The documents might have been obtained in a perfectly regular manner, or they might have been obtained in a way which would throw blame on someone; but, however obtained—even if they were stolen—it was not of the slightest consequence to the arbitrators, in whose opinion the papers were altogether irrelevant to the question at issue.

Mr. Symon only wanted to clear up any difficulty that might exist in reference to the matter, as the examination-in-chief had been partly directed to the documents.

Mr. Tomkinson said that the arbitrators were very desirous of keeping strictly to the points on which they would have to decide, and were of opinion that the papers in question threw no fresh light on the matter.

Mr. Symon said that his object was to rebut any allegations founded upon Mr. Hickson's memoranda or minutes, and if it were necessary to go into that, he could put in the whole of the reports and minutes bearing on the subject, when it would be seen that one qualified the other very materially. However, in deference to the ruling of the arbitrators, he would not go any further into the point.

*To the Witness*: You were asked about Mr. Cheesewright and the payment of his expenses. After his expenses were paid, did he send in a tender dated the 23rd day of November, 1876, on behalf of Messrs. Wells, and marked R 1 in the documents which have been put in? Yes; there was a tender of the 7th of September and the 23rd of November.

What is the document of the 23rd of November? That was a distinct tender.

I understand your explanation of the payment of Mr. Cheesewright's expenses to be, that at the time when there was a talk about inviting other tenderers to send in offers, you thought that it was only fair that he should be paid the expenses which he incurred in going down to get the information which the Government used? Yes.

Did he get paid anything more than his travelling expenses? No.

Did he ever get paid anything for any of his plans, estimates, or tenders? Only his travelling expenses. There was no payment beyond that. These are the items: Fares to and from Kingston, £6; meals, 10s. 6d. The amount of the cheque given to him was £6 10s. 6d.

*By Sir William Milne*: Can you say, of your knowledge and recollection, whether there was any conversation between Mr. Percy Wells and yourself as to Mr. Cheesewright having put in tenders on behalf of the firm? I think it is highly probable that we did have some such conversation, but I really do not recollect specially mentioning the matter to Mr. Percy Wells.

Your

Your never alluded to the amount of the contract in any way? The amount was alluded to afterwards, when Mr. Percy Wells spoke about the amount being different from the London tender. He never repudiated it. On the contrary, Mr. Percy Wells gave an explanation of how it happened that Mr. Cheesewright's tender differed from the one prepared in London. He led me to believe that Mr. Cheesewright's tender would have been binding had the Government accepted it on the spot.

*By Mr. Symon:* The explanation of the difference was that they put in a tender which was lower than Mr. Cheesewright's, because they thought Mr. Cheesewright's tender might have got wind, and they were anxious to secure the work? Yes; and he said that they were able to reduce the item for contingencies.

It appears from Mr. Percy Wells' statement that he knew about all these things when he arrived? Yes.

With reference to that memorandum and those weights of iron of which you have spoken, that document may be one of a great many memoranda which you made for your own guidance? Yes; I know that it must be one of a great many, but whether it is the last or not I cannot say. From the general appearance of it, I should certainly say that it was not the last.

You said that there would be something for cast iron also, I think? There were 553 tons of wrought iron and 100 tons of cast iron.

You have been examined as to a comparison of the two drawings of Cheesewright and the contract drawings. I understand that the contract drawings are drawn from Cheesewright's drawings;—are the differences greater than you would expect in a tracing from a drawing of that scale? No; not when it is considered that they were traced and then lithographed.

You say that at Kingston you gave the starting point to Mr. Cheesewright;—that is the same point as that at which the jetty was ultimately fixed? Yes.

How long were you with him at Kingston;—how long did you remain there when you went down with him? I got there at about 11 or 12 o'clock in the day, and I left there at night about 10 o'clock. I think I went by the mail. I was there about half a day.

You said that you never heard of any question as to Mr. Cheesewright's authority until this dispute;—do you mean this dispute, which is now the subject of this arbitration? Yes.

That was about the beginning of this year? Yes; about the beginning of this. I think that was the first I heard of it.

There is a drawing here showing a straight line from one end of the pier to the other, which, I think, puts in a concrete shape what is deducible from the papers put in as to the way in which the contractors arrived at the lengths of their piles? Yes; this [*producing a drawing*] is a copy of the drawing No. 1. On it I have marked in a red line showing the depths to which the piles ordered by the contractors would come.

It shows that the piles as they go further out do not touch the ground at all? Mr. Tomkinson said that that appeared from the papers that had been put in. The only question was: whose fault was it?

Sir William Milne remarked that the contractors themselves had shown that the piles as ordered by them would not touch the ground, and had said that they were misled by the drawings.

Mr. Downer maintained that the piles, as ordered according to paper F1, were substantially in accordance with the scaling of the drawings.

Sir William Milne did not see how that could be, because the piles shown in papers K and F1 were ordered in regular gradations, increasing in size 2 ft. at a time.

The Umpire (Sir Henry Ayers) said that the evidence of the claimants' own witnesses was that the piles were not ordered from the drawings at all.

Mr. Downer could not admit that. The contractors, not having detailed information, and seeing an almost even gradation, took the ground line as a straight line with a gradual incline.

Sir Henry Ayers said that that was just the point. The contractors took a straight line from the bottom of the pile at the shore end to the bottom of the pile furthest out to sea, and drew a straight line between the two points; and he did not see what other course they could adopt.

Sir William Milne said that practically the drawings were rejected.

Mr. Downer replied that he would take a later opportunity of showing the practical effect of the contract drawings on the contractors' action with regard to the ordering of the piles. He would like, with the arbitrators' permission, to ask a question as to when Messrs. Wells first repudiated Mr. Cheesewright's authority?

*To the witness:* Do you remember, in March, 1877, Mr. Wells showing you a letter from his brother repudiating Mr. Cheesewright's authority? No; I do not.

Here is the letter to which I refer [*handing a document to the witness*]? I really forget it. I may mention that Mr. Percy Wells has shown me a considerable number of letters, very few of which I read. It is a letter from Mr. Cheesewright to Mr. M. C. Davies.

Did he not, in March, 1877, tell you that Mr. Cheesewright had no authority to tender? I do not remember his doing so.

Although I have shown you that letter you say that you cannot recollect the circumstance? No.

[*The letter was put in and marked Y1.*]

There were disputes, were there not, with the Government in reference to Mr. Cheesewright having tendered without authority? Certainly not.

That you positively deny? Yes.

Do you remember Mr. Percy Wells showing you a letter, in August, 1877, from Mr. George Wells, repudiating Mr. Cheesewright's authority to tender? No.

Have you any recollection of the circumstance? Not the slightest.

*Mr. Symon:* That is in March, 1877. The plan you put in, signed by Mr. Cheesewright, as to the Port Adelaide beacons, is dated June, 1877.

*By the Umpire* (Sir Henry Ayers): March, 1877, was after Messrs. Wells had tendered for the Rivoli Bay and Kingston Piers? Yes.

*By Mr. Downer:* The drawing is, however, signed by Mr. Cheesewright, as draftsman? Yes.

[Adjourned to the next day, at 10 o'clock.]

THURSDAY, 25TH SEPTEMBER, 1879.

*Present:*—Mr. R. D. Ross (in the Chair), Commissioner of Public Works (Hon. G. C. Hawker), Hon. L. Glyde, Mr. Bower, Mr. Furner, and Mr. Peacock.

Mr. Thomas Higginbotham, M.I.C.E., further examined:—

Have you inspected the Kingston and Rivoli Bay Jetties? I saw them both on my way here.

Were you specially instructed by the Government to report upon them? The Treasurer asked me to inspect them; but I said I had seen enough of them on my way here to enable me to report, and therefore I thought it would be a waste of time and money to go down there specially.

Will you favour us with your remarks as to the Rivoli Bay Jetty first? The Rivoli Bay Jetty was originally designed to be 4,000 feet long, with a T head 152 feet long. The design for the jetty (I should now say I am speaking from hearsay only) was prepared by Messrs. Wells Brothers, or their agents, who also, as I understand, prepared the estimates. Tenders were called for in London, and Messrs. Wells Brothers obtained the contract, as might have been expected, they being in possession of such special information on the subject as would render any efficient competition impossible. The Treasurer wished me particularly to inquire into the connection of Mr. Hickson, the Engineer of Harbours and Jetties, with the designs for those two works. I have made inquiries as to how far the Engineer of Harbours and Jetties is responsible for the designs, and I confess I do not altogether approve of the course he pursued in the matter. I find that Mr. Hickson, on his arrival here, found the designs prepared, and that Messrs. Wells Brothers had given an estimate of the cost of the construction. Mr. Hickson made some slight alterations in the designs, and arriving without any official experience or knowledge of the way in which such works had been carried on here, he, I think, imprudently signed them. So far he, in some degree, connected himself with the designs and the mode of contracting for work. I think that mode was most objectionable.

objectionable. It should be said, in Mr. Hickson's justification, as regards the course that he followed in the case of the Rivoli Bay and Kingston Jetties, that he found that a similar course had been pursued in the case of the Tiparra Lighthouse. In the case of the Tiparra Lighthouse, Messrs. Wells Brothers had also furnished a design and estimate and got the work at their own price. With regard to the Rivoli Bay and Kingston Jetties, the whole contract ultimately fell through. It became the subject of an investigation by an arbitration. The decision of the arbitrators was entirely in favour of the Government. Subsequently, on communication with the Marine Board, it was determined to reduce the length of the jetties, and Mr. Hickson proposes to use the materials saved in the length to double their previous width for a length of 450 feet from the end of each jetty towards the shore. I believe that will be a very great improvement. The width at the ends will be increased from 15 feet to 30 feet, and the jetties will be efficient, though I should have myself preferred if jarrah timber had been used instead of iron.

What is your opinion with regard to the design? I think that the design was too light. With only 15 feet width at the end, which was at first proposed, I think it would be very likely that the end might be carried away in rough weather.

The object of the Commission is, as I have said, not to blame any particular officer or department of the Government Service, but to inquire into the present working, and ascertain how the works of the Colony may in future be carried out with the greatest economy. For that purpose the Commission are very anxious to obtain your opinion as to the class of jetty which is most suitable? I should have no hesitation in advising that jetties of that description should be in future constructed of jarrah, and not of iron.

Do you think that the design is not sufficiently substantial? No. As far as bearing the weight for which they are designed is concerned, I think there is no danger. I think the jetties of which we are speaking will amply carry the traffic for which they are designed. The danger would have been from ships lying alongside the jetty in rough weather; but that danger will be obviated now by the proposed widening of the jetty which is being carried out.

What is the length of the Sandridge Pier? I do not remember. It has been lengthened so often that I cannot carry the figures in my head.

It is a very long pier, is it not? Yes; it is a very long pier, and it is also very wide.

Does the pier at Sandridge sustain any damage from vessels lying alongside it? I think not; but it is in a very shabby condition owing to the worms having injured it very much.

*By Mr. Peacock:* Do you consider that the practice in the engineering profession is that when an engineer attaches his signature to plans and estimates he is to be taken thoroughly to concur with the method of construction to which those plans and estimates relate? Usually. I should say that that is regarded as the rule, and I think Mr. Hickson was imprudent in attaching his signature to the plans. They were not his plans, and he attached his signature to them without being fully aware of all the circumstances connected with the case. At the same time large allowance must be made for the fact that at the time Mr. Hickson attached his signature to those plans he had had no official experience in this Colony. He did not initiate the system, but he found on arrival in the Colony that a system had been initiated here by which contractors were allowed to prepare their own plans, and then tender for the construction of the work. The contractors were at that time regarded in the light of engineers also.

That is what I particularly wanted to get at. I wanted your opinion whether it was not an exceedingly unwise principle to adopt that the plans for public works carried out by the Government should be initiated by the contractor who, besides executing the work, furnished the drawing and estimates relating thereto? I should certainly characterise that as a most rotten system. It is impossible to condemn it too strongly. But in justice to Mr. Hickson, it is only fair to point out, as I have already done, that he did not initiate the system. He found it in existence on his arrival in the Colony. I think it was wrong in him to acquiesce in it; but no doubt he did so in consequence of finding it already in operation when he came here.

*By the Chairman:* On that point, I should like to say that I was in office at the time, and am fully acquainted with the whole circumstances in connection with the matter, and I do not think that Mr. Hickson was to blame. He was led to infer that Messrs. Wells Brothers, and Messrs. Wells Brothers alone, would have the contract. Just a week or two after I was in office (I am speaking from memory only) a letter was brought to me, covering plans and specifications drawn up by Mr. Cheesewright, to be forwarded to the Agent-General. That letter was drawn up in such a way as to give the work to Messrs. Wells Brothers absolutely. I at once said to the Under Treasurer, Mr. Sheppard, "I cannot sign that letter. The work must be thrown open to tender." Mr. Hickson said he understood that Messrs. Wells Brothers alone were to have the work. To which I replied, "I cannot help what you have understood; I cannot and will not be a party to the work being thrown into the hands of one firm." But I said, "I will go as far as this, that if the tender of Messrs. Wells Brothers should be on a par with any other tender sent in, they shall have the preference." Perhaps that matter will be gone into more fully when Mr. Hickson is examined before the Commission; but I think it only right to make that statement here upon the point. My opinion is, certainly, that contractors should not be permitted to draw up plans and estimates for the work which they are to be employed to construct.

*By Mr. Peacock:* I only wanted to get from you your opinion as to the soundness or unsoundness of the system? Exactly.

*By the Chairman:* Have you any remarks which you would wish to offer with regard to the jetties at Rivoli Bay or Kingston? In the course of my report to the Treasurer I made the following remarks as to the jetties at Rivoli Bay and Kingston.

*By Mr. Peacock:* Have you heard of any settlement in these jetties—any piles having gone down, so as to render the jetty uneven? Yes; I believe some of the piles did not stand the test which Mr. Hickson applied to them.

Do you know whether the Engineer of Harbours and Jetties has taken any steps to remedy this, or whether those defective piles have been allowed to remain in the structure? I understand he had taken steps to remedy it. Some of the piles furnished by Messrs. Wells Brothers were too short. They could not be screwed down to a sufficient depth to stand the weight which was applied to them as a test. In consequence of that the Engineer of Harbours and Jetties took certain steps, which ultimately led to the arbitration. Under the award of the arbitrators, I believe the contractors received no money for work done at those jetties at Rivoli Bay and Kingston. They were simply paid for the materials.

*By Mr. Bower:* In that case I suppose the Government have not sustained any loss on those jetties? I understand that is so.

---

REPORT FROM THE PUBLIC WORKS DEPARTMENT OF SOUTH AUSTRALIA FOR THE YEAR ENDED 30 JUNE, 1880.

Appendix No. 2, Page 22.

*Report on Jetties, Wharfs, and Lighthouses, by Mr. Thomas Higginbotham, M.I.C.E., to The Honorable the Treasurer.*

Sir,

Adelaide, 24 September, 1879.

In accordance with your request, I have examined the various works which have been carried out, and which are in progress under Mr. Hickson, the Chief Engineer of Harbours and Jetties, and I beg now to report to you the result of my examination. It has necessarily been general in its character, but I believe that it has been sufficient to enable me to form a correct opinion on the several works.

My first visit was made to Victor Harbour. The works for forming the pier and breakwater have been commenced, and will be in full operation in a short time. I do not propose to offer any remarks on the object with which these works have been undertaken. It has, no doubt, received mature consideration from those who have the means of judging of its importance, which I do not possess; but the design which has been adopted, so far as I could judge of it in a necessarily brief visit, appears to be well calculated to effect the improvement of the harbour, and to give security to vessels trading there.

I visited Coolwa, where the wharf has been much improved by lengthening and bringing it into line. The new approaches to this wharf, which are being made by the Railway Department, will greatly facilitate access to it.

I have also made an inspection of the Marine Yard at Port Adelaide, the Dredgers, and the new beacons which are lighted with gas for the purpose of making the port accessible at night.

It will, I think, be interesting and useful if I furnish you briefly with a few facts which show what has been accomplished in improving Port Adelaide by dredging since January, 1877, when Mr. Hickson, the Chief Engineer of Harbours, took charge of the works.

The quantity of material raised by dredging since that date is 1,014,000 cubic yards, and this has been either discharged on shore for the Port Adelaide Corporation and other municipal bodies, who have employed it in reclaiming or improving land, or sent out to sea.

Previously to January, 1877, there was a depth of water of only 14 feet on the outer bar at low water of spring tides. The dredging operations have formed a channel through this bar 250 feet wide, with a depth of 20 feet at low-water springs. In addition, several places in the port itself, which formerly had depths varying from 9 to 15 feet, have now a uniform depth of 20 feet at low-water springs.

Before the date which I have mentioned, the capacity of the dredgers employed was 50,000 cubic yards per annum for No. 1 dredger, and 40,000 cubic yards for No. 2, and the cost of their work, as nearly as it could be arrived at, was 4s. 1d. per cubic yard, including landing the silt, which cost about 1s. 3d. per cubic yard. The "Willunga" dredger, which was ordered by the Marine Board, has been employed till within the last few months on the outer bar. The material dredged there is sand, and it has to be conveyed about 2 miles only. She has, therefore, been working under very favourable circumstances. Her power is about 200,000 cubic yards per annum, in material such as she has been working in, and the cost of raising has been 9½d., and depositing 3½d., per cubic yard. This dredger would not be so successful in hard clay, either in the quantity or cost of work done. Her price delivered here was £35,000.

The dredger "Wallaroo" was built from the design of the Harbour Engineer, and cost, delivered here, nearly £26,000. Her dredging capacity when she has her full complement of barges, which are being supplied, will be about 350,000 cubic yards per annum, and from the results which have been obtained hitherto in the hard material in which she has been working, there appears to be good reason to believe that the cost of her work will not exceed 10d. per cubic yard for raising and depositing.

I have thought it worth while to give prominence to these facts, which show the great advance that has been made in less than three years in providing the machinery for improving the port, in effecting these improvements, and in reducing the cost at which they are made, when buried in the mass of official documents such facts seldom receive the amount of attention which they deserve.

The first cost of the twelve new beacons, which are lighted with gas, has been £9,300. The practicability of lighting with gas has been proved, and the annual cost of doing so will not exceed £25 per beacon, or (say) £300 a year for the twelve beacons. This estimate has been arrived at from the actual consumption of gas up to this time.

The growing importance of Port Adelaide would probably have made the lighting of the channel at night a work of necessity in a few years. There may be differences of opinion as to the present necessity for the work. I do not feel that I have sufficient knowledge of the requirements of the trade of the port to justify me in offering an opinion on this point.

I made an inspection, accompanied by Mr. Hickson, of various jetties on the coasts of St. Vincent's Gulf and Spencer's Gulf, and visited also the Althorpe and Tippara lighthouses, Wallaroo Bay and Port Pirie.

The design of the jetties is a plain and good one, and is that which is commonly used. The same design, practically, has been used in all the jetties which I saw. The piles are of jarrah timber, which the worm does not attack when the quality of the timber is good, and those which I saw were perfectly clean and sound. In many of the jetties, bluegum (or what is believed to be bluegum) timber has been used in the decks or floors, and also in the corbels, kerbs, and rail-bearers. As this timber is scarce, and very difficult to identify, I have suggested to Mr. Hickson not to specify it in future for any of the works under his control.

On almost all the jetties which I saw, the railway is made by screwing an iron plate to a longitudinal wooden sleeper. This plan has been adopted for the sake of economy, but I think it is a mistake. A light iron rail would not have cost much more in the first instance, and would be much cheaper to maintain, while the traction would be much lighter. Several of the jetties would be much improved by a small additional expenditure in metallating the approaches, and widening them to allow bullock-teams to turn.

I have heard it remarked that the sites of many of the jetties have been badly chosen. The statement was made generally, and I do not recollect any particular instance having been given. Such statements ought to be taken with much reserve, because each person whose interest has not been consulted is ready to believe that a site which does not suit him must be a bad one. I could not, with the time at my disposal, form any opinion as to whether there were any sufficient grounds to justify such a statement as I have referred to, but from the way in which the sites for these works are chosen, it would not be surprising if mistakes were made.

Another objection which is made to the jetties is that they are too narrow, but as produce and goods are conveyed along them in trucks on a line of railway, this objection does not appear to me to have any force; and it should be borne in mind that the cost of the jetties is almost proportional to their width. If they were made twice as wide they would cost nearly twice as much.

The jetties at Rivoli Bay and Kingston are different to those to which I have been referring, and as I do not think that they are in any way an improvement on these, I have made inquiry to ascertain who is responsible for the design on which these two jetties have been built. I find that Messrs. Wells Brothers designed them, and also contracted to build them, at practically their own prices, as, although tenders were called for in London, Messrs. Wells Brothers having made the designs, and possessing full knowledge of the locality and other circumstances affecting the cost of the works, were in a position to make effective competition impossible.

This firm had previously contracted for the Tippara lighthouse, under very similar circumstances, having furnished the design and estimate of cost, and become contractors for the work at their own price.

Mr. Hickson found this state of things existing when he arrived here; he was not responsible for its initiation, and had no official experience at that time to enable him to judge how far it might be necessary in the circumstances of the Colony. It appears to me, therefore, that he can only be accused of imprudence in having signed the plans for the jetties at Rivoli Bay and Kingston, which he found already prepared. By doing so, he connected himself in some degree with a most objectionable system which had been initiated by others, who have escaped from all responsibility in connection with it.

The determination to reduce the length of these two jetties, and to employ the material which is saved by doing so in widening the ends of the jetties from 15 feet to 30 feet for a length of 450 feet, is, I am sure, a wise one, as it will make them stiffer and better adapted for the purpose they have to serve than they would have been if the original design had been followed.

I examined the wharf at Morgan in connection with the inspection of the Government lines of railway, which I was requested to make by the Honorable the Commissioner of Public Works, and have reported to him that, in my opinion, the wharf has been built at the proper level; that it is efficient for its intended purpose, closely resembling as it does the railway wharf at Echuca, where for many years a very large business has been carried on both successfully and economically.

There was a slight defect in the design of the cranes, but this has been corrected, and I understand that they are now working most satisfactorily. The cost of remedying the defect in the four cranes has been £40.

The Althorpe and Tippara lighthouses are both very fine works. The former was designed and built by the Engineer of Harbours and Jetties. The contract for the latter was let before he arrived here, and was carried out under his supervision. He has made some additions to the original design, which, though matters of detail, add considerably to the safety and convenience of the lighthouse-keepers and their families. In the case of the Althorpe lighthouse, Mr. Hickson's estimate was exceeded by £2,500. This arose from the addition of a jetty, which was not included in the original estimate, and from the difficulty of procuring a supply of water for the works and the men who were employed on them, which made it necessary to bring the whole of the water from Port Adelaide. The cost of the lighthouse and three good cottages for the use of the men and their families has been £11,700. This does not appear to me a large sum when it is borne in mind that the work is of the first class, and was carried out under exceptionally difficult circumstances. The cost of the Tippara lighthouse was £30,900, including the purchase of a house on shore for the men off duty and their families. Valuable work has been done at Port Wakefield, where a wharf 1,000 feet long has been built, and the material, which has been raised by dredging, has been deposited behind it. Half of this wharf is built of jarrah and half of ironbark timber. The latter has, I understand, been used for the purpose of experiment, to ascertain if the worm will attack it.

At Port Pirie a large amount of dredging has been done, and the work is still in active progress. The dredge "Sarnia," which was built here under Mr. Hickson's supervision, is employed, and has been very successful. Her dredging capacity is about 150,000 cubic yards per annum, and the cost of raising and landing the silt is a fraction more than 1s. 5½d. per cubic yard. A considerable area, which was previously useless, has been raised to the level of the wharfs, and is now of great value. It is very much to be regretted that here, as at so many other ports, the frontages to the

the water have been allowed to pass into private hands, and individuals reap the benefit of the great improvements which are being made at the public expense. At Port Pirie a satisfactory alignment of the wharfs is impossible under present circumstances, though it is of the greatest importance. The railway lines are carried along the main street, where they are a nuisance, instead of along a line of wharfs, where they are required, and ought to be. At the Queen's Wharf, where the frontage to the water remains in the hands of the Government, it is impossible to connect with the lines of railway, except by using very sharp, and, therefore, most objectionable curves. I would beg to suggest for your consideration, if it would not be advisable to make an attempt to recover the frontage to the water at this port, for a depth of 100 or 150 feet. The improvements which might be effected, if this were done, would add greatly to the value of property at Port Pirie, and without these, the business—which is already a very large one, and will not fail to increase—cannot be done, either with dispatch or economy.

The anomalous position which the Engineer for Harbours and Jetties holds has necessarily forced itself on my attention in the course of the examination which you directed me to make into the works under his charge.

The Marine Board, which appears to be practically irresponsible, claims in a correspondence which took place in 1876 with the Under Treasurer, and which is printed—that the “sites, directions, and extent of all the jetties, position and character of all lighthouses, in short, in all works, whether buoys, beacons, or other shall emanate from the Board.” These wide claims are, I understand, enforced, and the President of the Marine Board proceeds, without consultation with the Engineer of Harbours or reference to him, to fix the sites of jetties and other works, which are then communicated to the Engineer of Harbours, and he examines separately the correctness of the information given to him by the President. It is evident that this mode of proceeding involved not only great waste of time and money, but, what is more serious, divided responsibility. If a mistake is made in choosing a site for a jetty or in determining its direction or extent, the Treasurer cannot hold the Engineer of Harbours and Jetties responsible, because all these particulars have been decided by the Marine Board, which, as I have already said, appears to be practically irresponsible, and I would beg leave to suggest for your consideration that the Engineer for Harbours and Jetties should be made independent of the Marine Board, and be placed under the Commissioner of Public Works, to whom he would be solely and directly responsible.

The sites of wharfs, lighthouses, and jetties, and the extent, direction, width and levels of the jetties, should be fixed by the Engineer of Harbours and the President of the Marine Board, both being officers of the Government, in consultation, after a general survey, and be made in each case the subject of a joint written report to the Minister, who would decide any matter on which the officers could not agree. To carry out this view would probably require an alteration of the Marine Board Act, and a more accurate definition of the functions of the Board.

I have, &c.,

T. HIGGINBOTHAM.

The Hon. Charles Mann, M.P., Treasurer.

### Appendix No. 64.

Department of Public Works, Roads and Bridges and Sewerage Branch.

#### TENDER FORM.

IN pursuance of advertisement in the *Government Gazette* we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper manufacture, completion, and delivery at the sites described in the specification of wrought-iron work, gun-metal work, and cast-iron work for the sewerage works in course of construction in Sydney and suburbs (Contract No. 93), agreeably to the plans, specification, schedule to specification, and general conditions, which have been inspected by us, at 30 per cent. below the prices affixed to each item, and to complete the same within twenty-four months from the date of the acceptance of this tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time, and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and we enclose herewith our cheque for the sum of £31 as a preliminary deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw same, or if, in the event of this tender being accepted, we fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board Regulations printed on the back hereof, and by which we agree to be bound.

Dated this 28th March, 1894.

COOKE AND WEBB,  
Cleveland-street, Redfern.

Witness—N. C. MAIR.

#### *Tender Board Regulations.*

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position in the Public Works Office a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

|   |         |
|---|---------|
| For amounts up to £500 inclusive .....                    | £5 0 0  |
| For amounts exceeding £500 and not exceeding £1,000 ..... | £10 0 0 |

For all sums over £1,000, 1 per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the manager of the bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless, in the opinion of the President, there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any contract being tendered for at a schedule of rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a tender the full Christian name of the tenderer must be given, or, when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

Contract

Contract No. 93.—This is the Schedule of Quantities and Prices hereinbefore referred to.

| No. of Item on Drawing. | No. of Item. | Description of Work.  | Unit. | Probable Quantity. | Rate per Unit.    | Amount.            |
|-------------------------|--------------|---|-------|--------------------|-------------------|--------------------|
| 1                       | 1            | Cast-iron ventilating grate with square frame, 22 in. diameter internal opening, tarred sawn hardwood bricks in centre, fitted into panels, circular dirt-box 8 in. deep, complete, as shown on Drawing, weighing in all 9 cwt. 0 qr. 23 lb. ....                                     | each  | 31                 | £ s. d.<br>5 15 0 | £ s. d.<br>178 5 0 |
| 8                       | 2            | Cast-iron circular ventilating grate only for 22 in. diameter opening, with wood bricks fitted into panels, as described under Item 1, without the frame and dirt-box, complete, as shown on Drawing, weighing in all 2 cwt. 2 qrs. 10 lb. ....                                       | "     | 3                  | 1 13 0            | 4 19 0             |

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work here enumerated shall be understood as being tested, painted, tarred, and delivered at the sites specified and ordered, in complete working condition, and in strict accordance with Specification.

### Appendix No. 65.

The Engineer-in-Chief for Sewerage to The Under Secretary for Public Works.

Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 14 December, 1893.

*Minute Paper.*

*Subject:* Eleven Tenders—Eastern Main Branch Sewer, Contract No. 69.

THE tenders for Contract No. 69 have now been checked, the lowest tender being that of Messrs. Carter, Gummow, & Co. at £45,207 8s. 11d.

The other tenders were:—

| Messrs.                        | £      | s. | d. |
|--------------------------------|--------|----|----|
| Messrs. John Ahearn, at ... .. | 47,061 | 3  | 9  |
| Kerle and Kerle, at ... ..     | 52,735 | 10 | 9  |
| H. McKenzie & Sons, at ... ..  | 53,505 | 2  | 7  |
| Justin McSweeney, at... ..     | 54,623 | 18 | 2  |
| Holloway Bros., at ... ..      | 55,104 | 8  | 9  |
| J. F. Carson, at ... ..        | 57,239 | 0  | 9  |
| Alex. Dean & Sons, at ... ..   | 58,165 | 10 | 8  |
| Langtree & Owen, at ... ..     | 59,676 | 16 | 1  |
| Parry and Farley, at ... ..    | 63,095 | 11 | 11 |
| J. Stewart & Co. ... ..        | 68,171 | 6  | 9  |

Messrs. Carter, Gummow, & Co. being the lowest tenderers for the construction of the Western Suburbs Main Eastern Branch Sewer, Contract No. 69, I beg to recommend acceptance of their tender, amounting to £45,207 8s. 11d., at schedule rates, on condition that they fill in and initial in their tender the average price per ton for all irregular castings, weighing in all 33 tons 12 cwt. 3 qrs. 12 lb., and the average price per ton for all cast-iron pipes, weighing in all 788 tons 8 cwt. 2 qrs. 27 lb.

C. H. OHLFSEN-BAGGE.

Not necessary.—R.H., 16/12/93. The Engineer-in-Chief. I recommend Carter, Gummow, & Co.'s tender at schedule rates.—R.H., 16/12/93. Under Secretary. Passed.—J.B., 18/12/93. Submitted to the Board of Reference, 18th December, 1893. The Board recommend acceptance of the tender of Carter, Gummow, & Co. at schedule rates.—J. W. HOLLIMAN, Secretary. Submitted.—J.B., 18/12/93. Approved; Funded Stock.—W.J.L., 21/12/93. Ask Messrs. Carter & Co., to call at 2 p.m. to-morrow. Done, 21/12/93. Tender accepted, 27/12/93. Auditor-General informed, 27/12/93.

## Appendix No. 66.

The Under Secretary for Public Works to Messrs. Carter, Gummow, & Co.

Gentlemen,

Department of Public Works, Sydney, 27 December, 1893.

I have the honor, by the direction of the Secretary for Public Works, to inform you that your tender, dated the 13th day of December instant, is accepted for the construction, erection, and completion of Eastern Main Branch Sewer, Western Suburbs Sewerage, from Premier-street to Sebastopol-street and branches (Contract 69), at the rates set forth in your schedule of prices, on the conditions following, namely:—

In lieu of paying any sums that may become due to you under the contract in cash, the same shall be applied in the purchase, in your names, of Funded Stock, under the Funded Stock Act of 1892, and the issue to you of Funded Stock to an equal amount from time to time due to you under the contract shall be accepted by you in full satisfaction of the money due under the contract; and for the carrying out of such arrangement you undertake to sign any applications, vouchers, books, or other documents that may be necessary. As the Funded Stock is issued in amounts of £10, or of some multiple of £10, any odd sum remaining above the sum issued shall be carried to your credit and be included in the next payment.

If it shall be represented to the Minister for Public Works at any time during the progress of this contract that an undue number of men are being employed thereon who have not been domiciled in this Colony for six months previously to such employment, and such allegation be proved to his satisfaction, the Minister shall have the power to call upon you to discharge any or all such men; and on such direction being conveyed in writing to you under the hand of the Under Secretary for Public Works you shall discharge such men forthwith, and in the event of your non-compliance with any such direction the Minister shall have power to declare this contract to be cancelled, as if this stipulation had been expressly set out in the cancellation clause of the general conditions relating to this contract.

The work is to be carried out in strict accordance with the plans, specification, schedule to specification, and general conditions, and to be started immediately, and completed within eighteen months from this date.

The Secretary for Public Works is willing, in response to your verbal request, to accept two approved bondsmen in the sum of £4,520 as security for the due performance by you of the contract.

I have to refer you to the Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage for further information, and to request that you will call upon the officer-in-charge of bonds and contracts at this office, for the purpose of executing the necessary agreement, &c., for the due observance of your contract.

I must also request you to be good enough to acknowledge the receipt of this letter of acceptance, and to intimate to me your assent to the terms hereof.

I am, &c.,

J. BURLING,

Under Secretary.

## Appendix No. 67.

CONTRACT 69 "A."

MEMORANDUM.

IN consideration of the Minister for Public Works, in and for the Colony of New South Wales, advancing to us the sum of £1000, and of any future advances to be made to us, we hereby agree to repay to the said Minister for Public Works the said sum of £1,000, and future advances, together with interest at the rate of £6 per centum per annum on such sums respectively from the date of advance on demand; and we hereby charge all moneys due or payable, or becoming due or payable to us under a certain contract for the construction of the Eastern Main Branch Sewer, Western Suburbs Drainage, Contract No. 69, Sydney Sewerage Works, in the said Colony, entered into by us with the Government of the said Colony; also all cement, building materials, and every other thing already used, or to be used in connection with our said contract, with the repayment of the said sum of £1,000, and any future advances and interest at the rate aforesaid; and we hereby undertake to give, whenever called upon to do so, a valid bill of sale to the said Minister for Public Works over the said cement, building materials, and every other thing used in connection with our said contract now stored in our premises at Illawarra Road, Marrickville, in the said Colony, or elsewhere, such bill of sale to contain a power of sale, and such other powers, provisos, and agreements as the said Minister for Public Works may be advised. Also, further undertake to give immediate possession of same to the said Minister, or any person appointed by him for that purpose, whenever called upon to do so.

As witness our hands, at Sydney, this 27th day of March, A.D. 1894.

Witnesses to the signatures of John Carter, Frank Moor-  
house Gummow, and David Graham Snodgrass,—

HAROLD F. NORRIE, J.P.

JOSHUA J. FARR, J.P.

Witness to the signatures of Peter Ewing and George }  
Maddison,—

J. T. WARLOW DAVIES.

JOHN CARTER.

F. M. GUMMOW

(By his attorney, J. CARTER).

D. G. SNODGRASS.

GEORGE MADDISON.

PETER EWING.

This is memorandum marked "A," referred to in the annexed declaration of John Carter, made before me this 29th day of March, A.D. 1894.

HAROLD F. NORRIE, J.P.

## STATUTORY DECLARATION.

I, JOHN CARTER, of William-street, North Sydney, in the Colony of New South Wales, contractor, do hereby solemnly declare and affirm that—

1. I am the duly constituted attorney of Frank Moorhouse Gummow, at present residing in South Australia, under and by virtue of a deed-poll or power of attorney, under the hand and seal of the said Frank Moorhouse Gummow, dated the 2nd day of January, 1894.
2. At the time of the execution by me as such attorney as aforesaid of the annexed memorandum, marked "A," I had not, nor have I since received notice of the revocation, by death or otherwise, of the abovementioned deed-poll or power of attorney.

And I make this solemn declaration as to the matters aforesaid, according to the law in this behalf made, and subject to the punishment by law provided for any wilfully false statement in any such declaration.

Taken and declared at Sydney, this 29th day }  
of March, 1894, before me,—

HAROLD F. NORRIE, J.P.

JOHN CARTER.

## Appendix No. 68.

CONTRACT 72.

AGREEMENT made this 16th day of March, in the year of our Lord 1891, between John Carter, David Graham Snodgrass, and George Forest, all of Sydney, in the Colony of New South Wales, contractors, carrying on business together under the name, style, or firm of "Carter & Co.," hereinafter styled or referred to as "The Contractors" of the one part, and Her Most Gracious Majesty Queen Victoria of the other part.

Whereas the Minister for Public Works of the said Colony recently called for tenders for the providing of all materials, labour, and every other thing requisite and necessary for, and the performance of all the works required in and about the construction, erection, completion, and maintenance of a storm-water sewer from Munni-street, Macdonald-street, Mitchell Road

Road to Shea's Creek, in the said Colony, as shown in the drawings relating thereto, and according to the specification, and under and subject to the general conditions and special conditions which are hereunto annexed. And whereas the contractors made the tender hereunto annexed, marked "C," for the providing of all plant and materials, labour, tools, and every other thing requisite and necessary for, and the performance of all the works required in and about the full and proper construction, erection, and completion and maintenance of the said works in accordance in all things with the specification, and under and subject to the general conditions and special conditions relating to the said works, and in accordance with the several plans or drawings relating thereto in the office of the Engineer-in-Chief for Sewerage, and marked No. "1" to No. "5" inclusive, and at or for the rates or prices mentioned and set out in the schedule of quantities and prices to the said tender, and to complete the said works within eight months from the date of acceptance of the said tender; that is to say, on or before the 28th day of October, 1891, as mentioned in the first clause of the said special conditions. And whereas the Minister for Public Works of the said Colony, acting on behalf of the Government of the said Colony, hath accepted the said tender of the contractors, and the contractors have, in compliance with the requirement in clause 6 of the said special conditions, deposited the sum of £900 in the Bank of New Zealand, at Sydney aforesaid, in the name of the Minister for Public Works aforesaid, at interest, upon fixed deposit, number 236,855, dated the 10th day March, 1891, for twelve months, and have handed the receipt for same to the Minister for Public Works, to be held by him as such Minister, or the Minister for Public Works for the time being of the said Colony, on behalf of Her Majesty, as security for the due performance of this contract, and all other matters and things herein contained, and which on the part of the contractors are to be done and performed. Now this agreement witnesseth that in consideration of the premises the contractors do hereby for themselves, their heirs, executors and administrators, covenant with and to Her said Majesty the Queen, Her heirs and successors.

That they, the contractors, shall and will find and provide all the materials, labour, plant, tackle, tools, implements, carriage, machinery, scaffolding, and every other thing requisite and necessary for, and shall and will perform the various works required in and about the full and proper construction, erection, completion and maintenance of a storm-water channel commencing at the junction of Union and Munni Streets, Macdonaldtown, in the said Colony, and extending more or less along the line of creek to Macdonald-street, and along that street; thence south along the course of the creek to its intersection with Mitchell Road; thence again in a southerly direction along the course of the creek to the northern angle of a Chinese garden; and thence in an easterly direction across a slight ridge to Shea's Creek, being a total distance of 77 chains and  $\frac{1}{100}$  of a chain, together with all manholes, junctions, &c., connected therewith, with such extensions or omissions as may be ordered in writing, being a portion of the works for Sydney Sewerage; this present contract being called or referred to as Contract No. 72, in accordance in all things with the specification hereunto annexed marked A, and the general conditions and special conditions hereunto annexed marked B and D, and with the several plans or drawings relating thereto in the office of the Engineer-in-Chief for Sewerage, and numbered "1" to "5" inclusive, and which are signed by the contractors, and at or for the rates or prices set out in the said schedule of quantities and prices to the said tender; it being also hereby declared that any additions to or deductions from the said works, mentioned or set out in the said specification, or shown in the said plans, are to be paid or allowed for as the case may be, at and according to the rates or prices in the said schedule of quantities and prices. And shall and will complete the whole of the said works within eight months from the date of acceptance of the said tender: that is to say, on or before the 28th day of October, 1891, as mentioned and provided in clause 1 of the said special conditions in accordance in all things with the said specification, general conditions, special conditions, and plans. And it is hereby agreed and declared between and by the said parties hereto that the said specification; general conditions, and special conditions marked respectfully as aforesaid, and the said tender marked as aforesaid, all being hereunto annexed as aforesaid, shall be read as incorporated in and forming part and parcel of these presents in like manner as if the same had been herein written and set forth at length, and that the said specification, general conditions, and special conditions, and tender, and these presents, shall together be taken to be the contract between the said parties in respect of the said works, and that all and whatsoever by the said specification, general conditions, and special conditions, or any or either of them, is to be done by the contractors, or shown on the said plans, shall be done in accordance therewith in all things by the contractors, their executors or administrators; and that all and whatsoever materials, goods, matters, and things which by the said specification, general conditions, and special conditions are to be supplied by the contractors in and about the construction and completion of the said works, shall be found, provided, and supplied by the contractors, their executors or administrators, in accordance in all things with the said specification, general conditions, special conditions, and plans. And it is hereby agreed that if the contractors, their executors or administrators, shall make default in proceeding with the said works or supplying the materials which, under the said specification, general conditions and special conditions, are to be supplied by the contractors, or in completing and finishing the said works in accordance in all things with the said specification, general conditions, and special conditions, and all things therein contained, and within the time for the completion of the said works as mentioned or provided in the said first clause of the said special conditions, the said sum of £900, so deposited as security for the due performance of this contract, shall be and become forfeited to Her Majesty the Queen, and may be used, paid, and applied so far as the same may be required in and about carrying out and completing the works in the said specification mentioned; and if any balance shall remain after the said works are completed the same shall remain to the credit of the Consolidated Revenue of the said Colony; and that the right of Her Majesty to deal with the said sum of £900 in manner aforesaid shall be in addition to all, any, or other rights or remedies which Her Majesty the Queen, or the Government of New South Wales, shall or may have or be entitled to against the contractors under these presents, or under the said specification, general conditions, and special conditions, or any or either of them, or otherwise for any breach or breaches of this contract.

In witness whereof the said parties to these presents have hereunto set their hands and seals, the day and year first before written.

#### CONTRACT 72—MEMORANDUM OF AGREEMENT.

MADE this 19th day of April, in the year of our Lord 1892, between the Honorable William John Lyne, the Minister for Public Works, in and for the Colony of New South Wales (hereinafter referred to as "the said Minister"), of the one part, and John Carter, David Graham Snodgrass, and George Forrest, of North Sydney, in the said Colony, contractors, carrying on business together under the name, style, or firm of "Carter & Co.," and hereinafter referred to as "the said contractors." Whereas by a certain agreement in writing, bearing date the 16th day of March, 1891, the said contractors covenanted with Her Majesty the Queen, her heirs or successors, to find and provide all the materials, tools, plant, labour, and every other thing requisite and necessary for and the performance of the various works required in and about the full and proper construction, erection, and completion of Munni-street, Macdonald-street, Mitchell Road to Shea's Creek storm-water channel, known as Contract No. 72, Sydney and Suburbs Storm-water Drainage, in accordance in all things with the printed notice tender specification, general conditions, and special conditions, thereunto annexed, and the plans or drawings relating thereto, and therein referred to, and to complete and finish the whole of the said works on or before the 28th day of October, 1891. And whereas the said works are still unfinished and not completed, and the said contractors have applied to and requested the said Minister to extend the time for the completion of the said works until the 18th day of August, 1892, which the said Minister hath consented to do. Now these presents witnesseth, that in consideration of the premises the said Minister, acting on behalf of the Government of the said Colony, doth hereby extend the time for completion of the works in the said agreement, tender, specification, general conditions, and special conditions, mentioned or referred to, until the 18th day of August, 1892, and that the said contractors do hereby jointly and severally covenant, promise, and agree with the said Minister, that they, the said contractors, shall, and will, well and truly complete the whole of the works mentioned in the specification, general conditions, and special conditions, and

the

the plans or drawings therein referred to, mentioned or shown, in accordance in all things with the said tender, specification, general conditions, special conditions, and plans and drawings, on or before the 18th day of August, 1892; and further, that at all times hereafter the said agreement shall be read and considered, as if the said 18th day of August, 1892, had been named in and by the said agreement, tender, specification, general conditions, and special conditions, as the day on or before which the said works were to be completed and finished by the said contractors; and that the said agreement shall not be considered as altered, or the stipulations, provisoes, and agreements therein or in the said specification, general conditions, and special conditions, in any way barred, waived, or departed from in any respect, other than as to the time within which the said works are to be completed, but that Her Majesty the Queen, her heirs and successors, the said Minister and his successors in office, and the Government of the said Colony, shall have all and every the rights, powers, and authorities, cause and causes of action, and suits, claims, and demands, given to or vested in her, or them, in and by the said agreement, tender, specification, general conditions, and special conditions in all respects against the said contractors, and each and every of them, as if the said 18th day of August, 1892, had been the day or time originally named in and appointed for the completion of the said works; and that all, and singular, the penalties, forfeitures, sum or sums of money, rights and privileges which would accrue to, or vest in Her said Majesty the Queen, her heirs or successors, the said Minister and his successors in office, or the Government of the said Colony, for or by reason, or on account of the said works not being completed and finished within the time named, and according to the said tender, specification, general conditions, special conditions, and the said agreement shall accrue to, or vest in Her said Majesty, her heirs or successors, the said Minister and his successors in office, or the Government of the said Colony, if the said works shall not be completed and finished in all things on or before the 18th day of August, 1892; and that the said agreement shall at all times be read and considered as if the said 18th day of August, 1892, was, and is the time therein named for the completion of the said works, instead of the said 28th day of October, 1891; and, lastly, that in consideration of such extension of time, as aforesaid, the said contractors shall not have any claim or demand against the Crown, or the Colonial Government, or the said Minister, for any alleged failure or delay on the part of the said Government in not setting out the said works, or furnishing plans or detailed drawings, or in not supplying machinery or materials, or otherwise arising out of any supposed failure, neglect, or default on the part of the said Government; and all such claims and demands are hereby expressly waived and surrendered. In witness whereof the said parties to these presents have herunto set their hands and seals the day and year first before written.

#### CONTRACT 79.

AGREEMENT made this 10th day of March, in the year of our Lord 1892, between John Carter and David Graham Snodgrass, of Glebe and North Shore respectively, in the Colony of New South Wales, contractors, carrying on business together at the Glebe aforesaid, as contractors, under the name, style, or firm, of "Carter & Co.," and hereinafter styled or referred to as "the Contractors," of the first part, George Forrest, of Glebe aforesaid, contractor, of the second part, and Her Most Gracious Majesty Queen Victoria of the third part.

Whereas the Minister for Public Works, of the said Colony, recently called for tenders by notice published in the *Government Gazette* (of which notice a copy is hereunto annexed), for the providing of all materials, labour, and every other thing requisite and necessary for, and the performance of all the works required in and about the construction, erection, and completion of the North Shore Main Outfall Sewer from near Long Bay to Mount-street, in the said Colony, as shown in the drawings relating thereto, and according to the specification, and under and subject to the general conditions and special conditions which are hereunto annexed, and marked respectively "A," "B," and "C." And whereas the contractors made the tender hereunto annexed, marked "D," for the providing of all plant and materials (except such materials as in and by the said specification are mentioned as to be supplied by the Government of the said Colony), labour, tools, and every other thing requisite and necessary for, and the performance of, all the works required in and about the full and proper construction, erection, and completion, and maintenance, of the said works in accordance, in all things, with the said specification, and under, and subject to, the said general conditions and special conditions, and in accordance with the several plans or drawings, relating thereto, in the office of the Engineer-in-Chief for Sewerage, and marked "No. 1," "No. 2," "No. 3," "No. 3a," and "No. 4" to "No. 8," inclusive, and at or for the rates or prices mentioned and set out in the schedule of quantities and prices to the said tender, and to complete the said works within twenty-four months from the date of the acceptance of the said tender, that is to say, on or before the 10th day of March, 1894, as mentioned in the first clause of the said special conditions. And whereas the said contractors and the said George Forrest, carrying on business under the name, style, or firm, of "Carter & Co.," sometime since entered into a contract with Her said Majesty for the construction and maintenance of a storm-water sewer from Munni-street, Macdonald-street, Mitchell Road, to Shea's Creek storm-water channel, in the said Colony—the said contract being called or known as Contract No. 72, Sydney and Suburbs Storm-water Drainage. And whereas the said contractors and the said George Forrest, in carrying out the said contract, made a claim for certain extra works in connection therewith, amounting in all to the sum of £4,050 9s. 6d., which said claim they have agreed, by letter annexed hereto, marked "E," to waive in consideration of the said Minister accepting the present tender of the contractors for the said main outfall sewer, North Shore. And whereas the Minister for Public Works of the said Colony, acting on behalf of the Government of the said Colony, hath accepted the said tender of the contractors on condition that the said contractors and the said George Forrest execute the release hereinafter contained, waiving their said claims on Contract No. 72 hereinbefore referred to. And whereas the contractors have, in compliance with the requirement in clause six of the said special conditions, deposited the sum of £2,000 in the Bank of New Zealand, at Sydney aforesaid, in the name of the Under Secretary for Public Works, aforesaid, at interest, upon fixed deposit Number A7667, dated the 10th day of March, 1892, for twelve months, and have handed the receipt for same to the said Minister for Public Works, to be held by him as such Minister, or the Minister for Public Works for the time being of the said Colony, on behalf of Her Majesty, as security for the due performance of this contract, and all other matters and things herein contained, and which, on the part of the contractors, are to be done and performed. Now this agreement witnesseth that, in pursuance of the said agreement to waive the said claims on said Contract No. 72, and for the consideration aforesaid, and of the sum of 10s. on the execution hereof to the said George Forrest, paid by Her said Majesty (the receipt, whereof the said George Forrest doth hereby admit and acknowledge). They, the said contractors and the said George Forrest do respectfully hereby release Her said Majesty, her heirs and successors, the said Minister, and his successors in office, the constructing authority, and his successors, and the Government of the said Colony from all and singular the said claim or claims, and all actions, claims, costs, damages, expenses, and demands which they, the said several parties, hereto of the first and second parts, respectively, now have, or shall, or may, or otherwise could, or might, hereafter have, claim, or demand of, from, or against Her said Majesty, her heirs or successors, or the said Minister, or his successors in office, or the constructing authority, or his successors, or the Government of the said Colony or any of them, respectively, on account of the said claim for extra work, or otherwise on said Contract No. 72, and all interest for or in respect of the same, or for or on account of any other thing relating thereto. And this agreement also witnesseth that in consideration of the premises the contractors do hereby for themselves, their heirs, executors, and administrators, covenant with and to Her said Majesty the Queen her heirs and successors: That they, the contractors, shall and will find and provide all the materials (except such materials as in the said specification are mentioned as to be supplied

supplied by the said Government), labour, plant, tackle, tools, implements, carriage, machinery, scaffolding, and every other thing requisite and necessary for, and shall and will perform the various works required in and about the full and proper construction, erection, completion, and maintenance of the main outfall sewer, North Shore, commencing at nought chains, near Long Bay, and extending under private land to Grassmere-street near the eastern boundary of Cammeray Park; under Cammeray Park to corner of Alfred and Ernest Streets; and along Alfred-street to Mount-street, where it terminates, being a total length of about 1 mile 25·3 chains, together with shafts, branches, &c., connected therewith, being a portion of the work for Sydney sewerage—this present contract being called or referred to as “Contract No. 79”—in accordance in all things with the said specification, general conditions, and special conditions, and with the said several plans or drawings, and which are signed by the contractors, and at or for the rates or prices set out in the said schedule of quantities and prices to the said tender. It being also hereby declared that any additions to or deductions from the said works mentioned, or set out in the said specification, or shown in the said plans, are to be paid or allowed for, as the case may be, and according to the rates or prices in the said schedule of quantities and prices. And shall and will complete the whole of the said works within twenty-four months from the date of acceptance of the said tender, that is to say, on or before the 10th day of March, 1894, in accordance in all things with the said specification, general conditions, special conditions, and plans. And it is hereby agreed and declared between and by the said parties hereto that the said specification, general conditions, special conditions, and tender, all being marked as aforesaid, and the said schedule of quantities and prices, all being hereunto annexed, as aforesaid, shall be read as incorporated in and forming part and parcel of these presents in like manner as if the same had been herein written and set forth at length, and that the said specification, general conditions, special conditions, tender, and schedule of quantities and prices, and these presents shall together be taken to be the contract between the said parties in respect of the said works, and that all and whatsoever by the said specification, general conditions, and special conditions, or any, or either, of them is to be done by the contractors or shown on the said plans shall be done in accordance therewith in all things by the contractors, their executors, or administrators, and that all and whatsoever materials, goods, matters, and things, which by the said specification, general conditions, and special conditions, are to be supplied by the contractors in and about the construction and completion of the said works shall be found, provided, and supplied by the contractors, their executors or administrators, in accordance in all things with the said specification, general conditions, special conditions, and plans. And it is hereby agreed that if the contractors, their executors, or administrators, shall make default in proceeding with the said works, or supplying the materials which, under the said specification, general conditions, and special conditions, are to be supplied by the contractors, or in completing and finishing the said works in accordance in all things with the said specification, general conditions, and special conditions, and all things therein contained, and within the time for the completion of the said works as mentioned or provided in the said first clause of the said special conditions, the said sum of £2,000 so deposited as security for the due performance of this contract shall be and become forfeited to Her Majesty the Queen, and may be used, paid, and applied so far as the same may be required in and about carrying out and completing the works in the said specification mentioned, and if any balance shall remain, after the said works are completed, the same shall remain to the credit of the Consolidated Revenue of the said Colony, and that the right of Her Majesty to deal with the said sum of £2,000 in manner aforesaid shall be in addition to all, any, or other rights or remedies which Her Majesty the Queen or the Government of New South Wales shall or may have or be entitled to against the contractors under these presents, or under the said specification, general conditions, and special conditions, or any or either of them or otherwise for any breach or breaches of this contract.

In witness whereof the said parties to these presents have hereunto set their hands and seals the day and year first before written.

## MEMORANDUM.

THE return of the security lodged for the due performance of the above contract is and will be accepted by us without prejudice to any of the rights of the constructing authority to enforce the penalties prescribed by the contract by reason of the non-completion within the time specified, and to all other rights of the constructing authority.

As witness our hands, at Sydney, this twentieth day of June, A.D. 1894.

Witness,—HAROLD F. NORRIE, J.P.

JOHN CARTER.  
D. G. SNODGRASS.

## Appendix No. 69.

## CONTRACT 77.

The Under Secretary for Public Works to Messrs. Carter, Gummow, & Co.

Gentlemen,

Department of Public Works, Sydney, 11 April, 1895.

I have the honor, by direction of the Secretary for Public Works, to inform you that your tender, dated the 13th March last, is accepted for the construction of the northern main sewer, Leichhardt and Annandale sections, No. 77, at the sum of £15,500, in the terms set out in the supplementary specification, a copy of which is sent herewith, and subject to the following special conditions, viz. :—

That if it shall be represented to the Secretary for Public Works at any time during the progress of this contract that an undue number of men are being employed thereon who have not been domiciled in this Colony for six months previously to such employment, and such allegations be proved to his satisfaction, the Minister shall have the power to call upon you to discharge any or all such men, and on such direction being conveyed to you, under the hand of the Under Secretary for Public Works, you shall discharge such men forthwith; and in the event of your non-compliance with any such direction, the Minister shall have the power to declare this contract to be cancelled as if this stipulation had been expressly set out in the cancellation clause of the general conditions relating to this contract.

The work is to be carried out in strict accordance with the several contract exhibits relating to this contract, modified by the supplementary specification above referred to, and the plan submitted with your tender, and to be completed within seventy-eight weeks from this date.

A fixed deposit receipt, in favour of the Secretary for Public Works, for the sum of £775, will be required as security for the due performance of contract within the stipulated time, and a personal bond in the sum of £12,000, and two bondsmen in the sum of £6,000 each, in connection with the maintenance as set out in the supplementary specification. Will you be good enough to notify to me your assent to these terms, and at the same time submit the names of two responsible persons who are willing to act as your sureties.

I have to refer you to the Engineer-in-Chief for Metropolitan Sewerage Construction for further information, and to request that you will, when required to do so, call upon the officer in charge of bonds and contracts at this office with your sureties for the purpose of executing the necessary documents for the due observance of your contract.

I have, &c.,  
J. BARLING,  
Under Secretary.

Estimate

## Estimate of the value of work to be performed.

|                                     |             |                    |        | £ 12,501 10 0 |

Agreement made this 16th day of May, in the year of our Lord 1895, between John Carter, Frank Moorhouse Gummow, and David Graham Snodgrass, of North Sydney, in the Colony of New South Wales, contractors, carrying on business together under the name, style, or firm of "Carter, Gummow, & Co." (and hereinafter styled or referred to as "the contractors"), of the one part, and Her Most Gracious Majesty Queen Victoria, of the other part.

WHEREAS the Minister for Public Works of the said Colony (hereinafter called the said Minister) recently called for tenders by notice published in the *Government Gazette* (of which notice a copy is hereunto annexed and marked "A"), for construction of the northern main sewer, Leichhardt and Annandale sections, Contract No. 77, Sydney Sewerage, as shown in the drawings relating thereto in the office of the Engineer-in-Chief for Metropolitan Sewerage Construction, and marked "No. 1" to "No. 10," both inclusive, and according to the specification, schedule to specification, general conditions, and special condition, which are hereunto annexed and marked respectively "B," "C," "D," and "E." And whereas the contractors made the tender hereunto annexed, marked "F," to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the said sewerage works agreeably to the said drawings, specification, schedule to specification, general conditions, and special condition, as modified by the supplementary specification, also hereunto annexed and marked "G," and the contractors' drawing, marked "No. 11," now in the office of the said Engineer-in-Chief for Metropolitan Sewerage Construction, and at or for the price or sum set out in the said tender. And whereas the said tender was accepted by the said Minister, and such acceptance (a copy of which is annexed hereto, and marked "H") was duly notified to the contractors on the 11th day of April now last past, and the contractors have assented thereto, as per their letter annexed hereto, marked "I." And whereas the contractors have deposited the sum of £775 in the Bank of New Zealand, at Sydney, in the said Colony, in the name of the Under Secretary for Public Works, at interest upon fixed deposit, No. 422,187, dated the 29th day of April now last past for twelve months, and have handed the receipt for the same to the said Minister to be held by him as such Minister or the Minister for Public Works for the time being of the said Colony, on behalf of Her Majesty, as security for the due performance of this contract, and all other matters and things herein contained, and which, on the part of the contractors, are to be done and performed. And whereas the said contractors have, with two approved sureties, entered into bonds to Her said Majesty conditioned to secure the due performance of the removal of so much of the said works at their own cost as shall have been constructed on the "Monier System" if the Engineer shall be dissatisfied with the same at any time during either of the periods of maintenance set out in the said general conditions and supplementary specification respectively, and for the re-erection and construction of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding at their own expense in accordance in all things with the said specification, schedule to specification, general conditions, special condition, and plans therein respectively referred to, and within thirty-nine weeks from the date of being called upon to do so. Now this agreement witnesseth that, in consideration of the premises, the contractors do hereby, for themselves, heirs, executors, and administrators, covenant with and to Her said Majesty the Queen, Her heirs, and successors: That they, the contractors, shall and will perform the various works required in and about the full and proper construction, erection, and completion of the said sewerage works in accordance in all things with the said specification, schedule to specification, general conditions, special condition, supplementary specification, and drawings, and at and after the price, and within the time in the said tender mentioned. And that they will well and truly remove so much of the said works at their own cost as shall have been constructed on the "Monier System" if the Engineer shall be dissatisfied with the same at any time during either of the respective periods of maintenance set out in the said general conditions and supplementary specification, and re-erection and construct the said works, and provide for the full and uninterrupted flow of sewage during progress of such rebuilding at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, and special condition, and the plans therein respectively referred to, within thirty-nine weeks from the date of being called upon to do so. And it is hereby agreed and declared between and by the said parties hereto that the said copy, notice, specification, schedule to specification, general conditions, special condition, supplementary specification, tender, copy, letter of acceptance of tender, and letter of assent thereto, marked as aforesaid, all being hereunto annexed as aforesaid, shall be read as incorporated in and forming part and parcel of these presents in like manner and if the same had been herein written and set forth at length, and that the said several annexures, the said drawings, and these presents shall together be taken to be the contract between the said parties in respect of the said sewerage works amplified in manner following: that is to say, that the said general conditions shall at all times be read and construed as if the stipulation contained in the said letter of acceptance of tender as to the discharge of men (not domiciled in this Colony for six months previously to their employment on the said works) employed on the said works when called upon to do so, and the penalty for non-compliance therewith had been expressly set out in the said general conditions.

In witness whereof the said parties to these presents have hereunto set their hands and seals the day and year first before written.

Signed, sealed, and delivered by the said John Carter, in the presence of,—  
HAROLD F. NORRIE.

JOHN CARTER.

Signed, sealed, and delivered by the said Frank Moorhouse Gummow, by his attorney, John Carter, acting under power of attorney, dated the 2nd day of January, 1894, in the presence of,—  
HAROLD F. NORRIE.

FRANK MOORHOUSE GUMMOW  
(By his Attorney, JOHN CARTER).

Signed, sealed, and delivered by the said David Graham Snodgrass, in the presence of,—  
HAROLD F. NORRIE.

D. G. SNODGRASS.

This is the agreement referred to in our respective bonds to Her Majesty the Queen, dated this 16th day of May, A.D. 1895.

GEORGE FORREST, } Sureties.  
JAMES GILLAN, }

Witness,—HAROLD F. NORRIE.

KNOW

Know all men by these presents,—That we, John Carter, Frank Moorhouse Gummow, and David Graham Snodgrass, of North Sydney, in the Colony of New South Wales, contractors, carrying on business together under the name, style, or firm of "Carter, Gummow, & Co." (and hereinafter referred to as the said contractors), are jointly and severally held, and firmly bound unto Her Most Gracious Majesty Queen Victoria, in the penal sum of £12,000 sterling, to be paid in Sydney, in the said Colony, to Her said Majesty, her heirs, or successors, for which payment, well and truly to be made, we bind ourselves, and each of us, our and each and every of our heirs, executors, and administrators jointly and severally firmly by these presents.

Sealed with our seals dated the 16th day of May, in the year of our Lord 1895.

WHEREAS, by agreement bearing even date herewith, and expressed to be made between the said contractors of the one part, and Her said Majesty of the other part, the said contractors covenanted to perform the various works required in and about the full and proper construction, erection, and completion of the northern main sewer, Leichhardt and Annandale sections, Contract No. 77, Sydney Sewerage, according to the copy notice, specification, schedule to specification, general conditions, special conditions, supplementary specification, tender, copy letter of acceptance of tender, and letter of assent thereto, thereunto annexed, and marked "A," "B," "C," "D," "E," "F," "G," "H," and "I" respectively, and certain drawings relating thereto, now in the office of the Engineer-in-Chief for Metropolitan Sewerage Construction, and marked No. 1 to No. 11, both inclusive.

And whereas the said contractors have severally offered to become and be bound to her said Majesty, her heirs, and successors, for the due removal of so much of the said works, at their own cost, as shall have been constructed on the "Monier System," if the Engineer shall be dissatisfied with the same, at any time during either of the periods of maintenance set out in the said general conditions and supplementary specification respectively, and for the re-erection and construction of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding, at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, special condition, and plans therein respectively referred to, and within thirty-nine weeks from the date of being called upon to do so. Now, the condition of the above-written bond and obligation is such that if the said contractors do, and shall well and truly remove so much of the said works at their own cost, as shall have been constructed on the "Monier System," if the Engineer shall be dissatisfied with the same at any time during the respective periods of maintenance set out in the said general conditions and supplementary specification, and re-erect and construct the said works, and provide for the free and uninterrupted flow of sewage during the progress of such rebuilding at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, and special condition, and the plans therein respectively referred to, within thirty-nine weeks from the date of being called upon to do so. Then this obligation will be void and of none effect, otherwise to remain in full force and virtue.

#### STATUTORY DECLARATION.

I, JOHN CARTER, of Sydney, in the Colony of New South Wales, contractor, do hereby solemnly declare and affirm that—

1. I am the duly constituted attorney of Frank Moorhouse Gummow, at present residing at Adelaide, in the province of South Australia, under and by virtue of a Deed Poll or Power of Attorney, under the hand and seal of the said Frank Moorhouse Gummow, dated the 2nd day of January, 1894.
2. From letters and telegrams recently received from the said Frank Moorhouse Gummow, I have every reason to believe, and I verily do believe, that the said Frank Moorhouse Gummow is still alive.
3. At the time of the execution by me as such Attorney as aforesaid of a bond to and agreement with Her Most Gracious Majesty Queen Victoria, and bearing date the 16th day of May, 1895, in connection with Contract No. 77, Sydney Sewerage Works, I had not nor have I since received notice of the revocation by death or otherwise of the above-mentioned Deed Poll or Power of Attorney.

And I make this solemn declaration as to the matters aforesaid according to the law in this behalf, and subject to the punishment by law provided for any wilfully false statement in any such declaration.

Taken and declared at Sydney, this 16th day of }  
May, 1895, before,— } JOHN CARTER.

HAROLD F. NORRIE, J.P.

### Appendix 70.

Messrs. Carter & Co. and Messrs. Gummow and Gillan to The President of Tender Board.

Sir,

Sydney, 10 June, 1891.

We have the honor to enter our protests against the acceptance of the tender of Messrs. Bond and Hudson for Contract No. 79, North Shore Sewerage, on the following grounds:—

1. That the tender of Messrs. Bond and Hudson for Contract No. 56, Potts' Point sewerage, was accepted by your Board and not taken up by them.
2. Upon fresh tenders being called the tender of Mr. G. E. Hudson was the lowest, but was not accepted by the Board, in accordance with their rules and regulations.

Upon these grounds we, as tenderers for the North Shore sewerage, beg to protest against the tender of Messrs. Bond and Hudson being now accepted.

We have, &c.,  
GUMMOW AND GILLAN.  
CARTER & CO.

Let me have papers *re* Bond and Hudson's tender for Contract 56.—R.H., 10/6/91. Herewith.—J.C.P., 10/6/91.  
Mr. Hickson for report.—J.B., 10/6/91.

In January, 1890, C. S. Bond (afterwards Bond and Hudson) tendered for Sewerage Contract No. 56 at a ridiculously low figure, and, as anticipated, had to throw up the contract and forfeit deposit. They were the lowest again when fresh tenders were invited, but did not get the work, they being ineligible under the Tender Board Regulations, clause 14. The same firm now (some sixteen months later) are the lowest tenderers for Sewerage Contract 79, and it is contended by the writers of the within letter that their tender should not be accepted. I cannot recommend that this course be taken. It is true, under clause 14, they can be excluded from competing for other works at the pleasure of the President. But in all fairness there must be some limit (when no fraudulent action has taken place) to this prohibition; and it seems to me, after sixteen months, all bar to their tendering should be removed. In recommendation on face of tender.—R.H., 10/6/91.  
Under Sec.

Resubmit when we deal with the tenders.—J.B., 30/12/91.

J. W. T. BOYS, 25/5/92.

## No. 2.

## Supervising-Engineer Davis to The Engineer-in-Chief for Sewerage.

*Minute Paper.**Subject:—Contract No. 79—North Sydney Outfall Sewer.—Driving of Tunnels.*Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 19 May, 1892.

THE tunnels from some of the shafts on this contract will be commenced in a few days, and it is, therefore, necessary that it should be settled how they are to be driven, whether with 4-inch charges of compressed powder, 2-inch charges or without blasting.

With a view of arriving at the method which would give the least annoyance to the residents in the vicinity of the sewer, consistent with economy, I have made comparative estimates.

The excavation by "guttering and gadding" will cost 3s. per cubic yard more than with 4-inch charges of compressed powder, but as it is impossible to drive the tunnel by blasting to the exact size desired, considerably more concrete has to be used in lining when the driving is done by blasting than when done by "guttering and gadding," and taking this into consideration, I estimate it will cost about £1,250 less to do the tunnels without blasting compared with doing it with 4 inches of powder.

The 2-inch charges, with the extra supervision that would be required, would be the most costly of any.

I wish, however, to point out that while it would save annoyance and money to drive the tunnels without explosives, it would take longer to do the work.

J. DAVIS.

Messrs. Carter & Co. have undoubtedly fixed their schedule prices speculatively to increase their profits on the contracts as much as possible, and, if so, to the loss of the Department. Mr. Davis seems, therefore justified in the suggestions made, as they would likely cause a saving of £1,000, and clause 55 of the specification is no doubt a saving clause against speculative prices.—C. H. OHLFSEN BAGGE, 19/5/92. The Engineer-in-Chief.

Ask contractors to see me on Thursday morning.—R.H., 23/5/92. Messrs. Carter & Co., 23/5/92.

While I think the Department would hardly be justified in adopting this unusual method of carrying out the work, it is very clear we should aim at getting our work done as economically as possible. Blasting may, therefore, be allowed on the understanding that the average allowance of 4 inches for concrete packing over and above specified size of tunnels be reduced to 2 inches.—R.H., 26/5/92. Mr. Davis.

Contractors informed. Copy of letter attached.—J.D., 27/5/92.

## No. 3.

## Supervising-Engineer Davis to Messrs. Carter &amp; Co.

Gentlemen,

42, Elizabeth-street, 27 May, 1893.

Referring to the conversation which your Messrs. Carter and Snodgrass had with the Engineer-in-Chief respecting the mode of driving the tunnels in your sewerage contract No. 79, and to your verbal agreement that on condition you were allowed to do the tunnel excavation under item No. 3 of the schedule of prices, by blasting with 4-inch charges of compressed powder, you would not ask to be paid for more than 7 inches of lining, such 7 inches to include the 3-inch thickness of cement rendering, I am directed to inform you that the Engineer-in-Chief has approved of the above agreement without prejudice to his right, under clause 55 of the specification, to order the excavation to be taken out otherwise should he deem it necessary to do so.

The cross-sections will be taken in the usual manner, and you will be paid for the excavation ordered, and for a maximum of 2 inches of concrete lining in excess of the excavation ordered.

Would you kindly write, intimating your acceptance of this arrangement.

Yours, &amp;c.,

J. DAVIS.

## No. 4.

## Messrs. Carter &amp; Co. to Supervising-Engineer Davis.

Contract No. 79, North Sydney Outfall Sewer:

Sir,

Box No. 10, North Sydney Post Office, 2 June, 1892.

In reply to your letter of the 27th May, we hereby agree to accept the terms of the same, viz. :—That the excavation (tunnel) on the above contract shall be carried out under item No. 3 in the schedule of prices, and that the lining shall be paid for to a maximum thickness of 2 inches over plan dimension, making a total thickness of 7½ inches instead of 7 inches as set down in your letter.

We are, &amp;c.,

CARTER &amp; CO.

This is according to contract drawings.—J.D., 6/6/92.

## No. 5.

## Messrs. Carter &amp; Co. to Supervising-Engineer Davis.

Sir,

Box No. 10, North Sydney, 10 August, 1893.

Referring to our letter of 2nd June, 1893, in which we accept a maximum thickness of 2 inches over plan dimension as to quantity to be paid for lining tunnel on contract No. 79, North Sydney sewerage; we beg to state that this was agreed to on the supposition that the ground would admit of such dimension being practicable.

In this contract, as in some others of a similar character, notably Contract No. 53, Waverley sewerage, the ground met with is of such a nature as to render it impossible to keep within the usual limits.

The 2 inches referred to was fixed as being 2 inches less than usually works out as an average cross-section, but owing to the foregoing reason, and to unavoidable errors in the alignment, we ask to be allowed cross-sections equal to those of Contract No. 53, less the 2 inches which was intended to be deducted.

We are, &amp;c.,

CARTER &amp; CO.

Register and connect papers.—J.D., 9/8/93.

Previous papers 92/1,216 herewith.—F.C.P., 10/8/93.

## No. 6.

## Supervising-Engineer Davis to The Engineer-in-Chief for Sewerage.

*Minute Paper.*

*Subject:—North Sydney Outfall Sewer, Contract No. 79—Contractors write, asking that the question of thickness of lining in tunnel should be reconsidered.*

Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 14 August, 1893.

IN June of last year, at the time the tunnelling was commenced on this contract, the contractors undertook, if they were allowed to do the excavation under item No. 3 of the schedule of prices, they would not require payment for more than 7½ inches lining or a margin of 2 inches over the cross-sections of the tunnel excavation ordered.

The tunnel excavation is nearly finished and the first length of about 18 chains of lining is in progress.

The contractors now write asking that the question of the thickness of the lining to be paid for should be reconsidered.

They allege that the ground met with in the tunnels was of an exceptional nature, and similar to that on the Waverley and Woollahra branch sewer (contract No. 53), and they, therefore, desire that they be allowed cross-sections equal to those paid for on that contract, less 2 inches.

The rock in the tunnels at Waverley and North Shore is certainly alike, and a number of "floors" and "faces" were met with at both places which materially increase the area of the tunnels. The cross-sections as a consequence were unusually large at Waverley, the average margin of the lining over the excavation ordered being about 5½ inches. Difficulties of the same nature have been experienced at North Shore, and the cross-sections are likely to work out equally as large as the Waverley ones.

The

The papers show that when the agreement was made it was thought that there would be no exceptional difficulties to be encountered in the driving, and that the lining would not exceed the cross-section of excavation by more than 4 inches. On this understanding, Messrs. Carter & Co. offered to forego 2 inches of the lining if they were allowed to do the excavation as they desired. The question now arises whether (seeing that the rock has proved to be similar to Waverley), they should have the agreement modified so as to be paid on the basis of that contract.

It was evidently the intention of the Engineer-in-Chief for the contractor to bear the expense of 2 inches of lining, and the contractors ask that by regarding Waverley and North Shore as parallel cases this should be done.

I, therefore, beg to recommend that the 2 inches to margin of tunnel-lining be increased to 3½ inches in thickness.  
J. DAVIS.

The 2 inches was decided upon on the assumption that the average allowance for concrete-packing was 4 inches. As it is now stated, this really works out at 5¼ inches. Mr. Davis' suggestion is only fair and equitable, and may therefore be adopted.—R.H., 15/8/93.

For the consideration of the Engineer-in-Chief.—C. H. OHLFSEN BAGGE, 15/8/93. Messrs. Carter & Co. informed.—J.D., 21/8/93.

No. 7.

Supervising-Engineer Davis to Messrs. Carter & Co.

Gentlemen,

Department of Public Works, Sydney, 21 August, 1893.

I have to acknowledge the receipt of yours of the 10th instant, stating the nature of the ground through which the tunnels have passed is not what was anticipated, and that therefore the maximum thickness of 2 inches over the cross-section ordered for the excavation (see my letter, 27th May, 1892), is not sufficient, and asking that as the nature of the rock is similar to that passed through in the tunnels of the Waverley and Woollahra Branch Sewer, the cases be regarded as parallel, and that you be allowed the cross-sections equal to those on that contract less 2 inches.

In reply I have to inform you that the Engineer-in-Chief has decided, on account of the nature of the rock, to modify the agreement, contained in my letter of 27th May, 1892, to the extent of increasing the margin of 2 inches thickness of lining, over the cross-section of excavation ordered, to a maximum of 3½ inches. Otherwise the terms of the letter to remain unaltered.

It is also to be understood that this additional allowance in the lining is to cover the cost of any extra concrete, which will be required through unavoidable errors in the levels and alignments of the tunnels, including those between shafts Nos. 3 and 4.

Will you please accept this modification of the agreement previously made respecting the lining of the tunnels in writing.

I have, &c.,

J. DAVIS,

Supervising Engineer.

No. 8.

Messrs. Carter & Co. to Supervising-Engineer Davis.

Ssr,

Alfred-street, North Sydney, 28 August, 1893.

We have the honor to acknowledge your letter of 21st August *re* maximum of lining to be allowed in tunnels on Contract No. 79, North Sydney Sewerage, and to inform you that we agree to accept the same according to the terms of your letter.

We have, &c.,

CARTER & CO.

Please put with other papers.—J.D., 30/8/93.

Appendix No. 72.

No. 1.

Supervising-Engineer Davis to The Engineer-in-Chief for Sewerage.

*Minute Paper.*

*Subject* :—Contract No. 79, North Shore Outfall—Recommending that Excavation be extended 85 links near Long Bay.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 26 May, 1892.

THE contractors ask that the excavation in their contract be extended 85 links nearer to Long Bay to give an outlet to the tunnel west of shaft at 0 chains. This length of excavation would have been included in Contract No. 79 to enable the surplus material to be conveniently taken to Long Bay where it has to be deposited, but at the time that contract was let the exact line of sewer east of shaft at 0 chains had not been finally settled.

I recommend that the contractors be given this short length of work, which will cost—tunnel excavation, 40 cubic yards at 60s., £120.

J. DAVIS.

Mr. Davis' statement is quite correct, and since the outlet end of this tunnel has now been decided upon, it will undoubtedly be of great convenience to the contractor to excavate the outlet end of 85 links at a cost of £120.—C. H. OHLFSEN BAGGE, 26/5/92.

The Engineer-in-Chief. Approved.—R.H., 26/5/92. Contractors informed.—J.D., 27/5/92.

No. 2.

Supervising-Engineer Davis to Messrs. Carter & Co.

Gentlemen,

42, Elizabeth-street, 27 May, 1892.

I have to acknowledge the receipt of your letter of the 21st instant, asking to be allowed to extend your tunnel excavation for 85 links east of shaft at 0 chains, and in reply I have the honor to inform you that the Engineer-in-Chief has approved of you doing as you wish, the excavation to be paid for under schedule item No. 3, and the tunnel to be taken out to admit of 4 feet by 3 feet sewer with one ring (5 inches) of mining being inserted.

You may also make a cutting from the point where the 85 links terminate, as shown on accompanying tracing, but this work must be done at your own cost.

Yours, &c.,

J. DAVIS.

Tracing showing line of sewer for the 85 links extension enclosed.—J.D.

No. 3.

Supervising-Engineer Davis to The Engineer-in-Chief for Sewerage.

*Minute Paper.*

*Subject* :—Contract No. 79, North Sydney Outfall, Ernest-street Branch Sewer.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 19 October, 1893.

A LENGTH of 33 feet of the Ernest-street branch sewer was included in the above contract. The levels of the remaining 568 feet could not be fixed at the time the contract was let, as the details of the reticulation draining to Ernest-street had not been worked out. The reticulation carried out is shown on attached plan in thick blue line, and that for which plans are ready in thin blue lines. At present the sewage from the pipes, and from the houses in the district, is draining into a creek, which crosses Walker-street near Ernest-street, and as there are great complaints from the residents of the serious nuisance

nuisance caused thereby, it is most desirable that the sewage should be diverted into the outfall sewer as soon as possible. If the balance of the Ernest-street branch is constructed simultaneously with the outfall sewer, then, on the completion of that sewer (which will be in about six months) and the outfall works (designs for which are ready), the whole of the sewerage of the district referred to and shown on plan attached will be provided for.

By carrying out this branch in conjunction with Contract No. 79 a shaft, which is estimated to cost £160, which otherwise would have to be sunk and built, can be saved.

I recommend that Messrs. Carter & Co. be asked to do the work in question at their schedule rates for Contract No. 79, amounting to £1,220.

J. DAVIS.

As Mr. Davis has explained, it will be a saving of £160 if this Ernest-street branch sewer is constructed now, while the work for the main sewer is in progress, and by the time the main sewer is completed the drainage of the Holterman and Berry Estate (which is ready for tendering) can be at once discharged into the main sewer through this branch. I beg, therefore, to submit Mr. Davis' recommendation for favourable consideration.—C. H. OHLFSEN-BAGGE, 19/10/93. Engineer-in-Chief.

Recommended. It would be a most desirable thing, from a sanitary point of view, to let this work be done now as an extension of the existing contract. Funds are available.—R.H., 20/10/93. Under Secretary. List for approval.—J.B., 21/10/93. Approved by Minister. W.J.L. Order No. 3,737.—D.C.M'L., 28/10/93. J.B. Roads.—B.C., 30/10/93. Seen. Mr. Davis to note.—R.H., 31/10/93. Contractors informed.—J.D., 27/11/93.

No. 4.

Supervising-Engineer Davis to Messrs. Carter & Co.

Gentlemen,

Department of Public Works, Sydney, 27 November, 1893.

I have the honor to inform you that the Minister has approved of your executing the Ernest-street branch sewer, as shown on the accompanying plan, in connection with your sewerage contract, No. 79, at your schedule rates for that contract.

I enclose a schedule in which is given the probable quantities of the different kinds of work in this branch sewer.

Will you please sign this schedule, undertaking to do the work at the rates referred to above, and given in the schedule.

Yours, &c.,

J. DAVIS,  
Supervising Engineer for Sewerage.  
(Through Mr. Boys.)

Appendix 73.

No. 1.

The Principal Assistant Engineer for Sewerage to The Engineer-in-Chief for Sewerage.

NECESSITY for doing that portion of the North Shore Sewerage Works which connects Milson's Point at Jeffrey-street.

THE present contract, No. 79, comprising a length of 1 mile 25·3 chains, of the main North Shore outfall sewer from Wiloughby Bay to junction of Alfred and Mount Streets, is the first section of the North Shore sewerage works.

The second section should be "the outlet works," and the third section, which might be proceeded with simultaneously with the outlet works, would be the extension of the main outfall sewer now asked for, from junction of Alfred and Mount Streets southward to the junction of Campbell and Jeffrey Streets, being (including some minor branches) a total length of about 76·90 chains.

By way of comparison, I have prepared an office estimate of the cost of this extension, according to present prices, amounting, as per detail statement attached, approximately, to £12,831 19s. 6d., and an estimate of the same work in accordance with contract prices of Contract No. 79 of the main outfall sewer in progress, which, as per detail statement attached, amounts, approximately, to £16,307 17s. 8d.

The detail plans of the outlet works are unavoidably very intricate, and it will take at least another month (if no other works come between) to complete the quantities.

The designs of the main outfall sewer extension, between Mount and Jeffrey Streets, excepting general plan and section, have not yet been commenced.

C. H. OHLFSEN-BAGGE, 15/3/94.

There is no reason why this extension should not be gone on with at once. I cannot, however, see my way to recommend that it be carried out as an extension of the existing contract, which, at schedule rates, would amount to £16,307 17s. 8d., whereas the office estimate is £12,831 19s. 6d. The greater part of this difference lies in one item, "Excavation in shafts," which, in present contract, owing to their great depth, carries a very high price, viz., 78s. per cubic yard. This Messrs. Carter & Co. are prepared to reduce to 40s. per cubic yard, which would reduce the total cost to £13,700, or about £1,000 above the office estimate. I believe, however, if tenders were invited we could get the work done under the office estimate.—R.H., 22/3/94. Under Secretary. Submitted.—J.B., 28/3/94.

Referring to the Minister's intimation this morning, that he was prepared to let Messrs. Carter & Co. carry out this work as an extension of their present contract, provided they agreed to do so for the departmental estimate of £12,831 19s. 6d., no claims whatsoever to be made for extras, and all payments to be made at the allowed schedule rates, I have had an interview with Mr. Carter, who is prepared, on the part of his firm, to comply with the Minister's decision. Submitted for formal approval.—R.H., 29/3/94.

For approval.—J.B., 30/3/94. Approved.—W.J.L., 30/3/94. Accept.—J.B., 30/3/94.

No. 2.

The Under Secretary for Public Works to Messrs. Carter & Co.

Sirs,

Department of Public Works, Sydney, 16 June, 1894.

I have the honor, by direction of the Secretary for Public Works, to inform you that your tender, dated this day, is accepted for Contract No. 79A, Sydney Sewerage Works, at the sum of twelve thousand eight hundred and thirty-one pounds nineteen shillings and sixpence (£12,831 19s. 6d.), subject to the following special condition, viz.:—If it shall be represented to the Secretary for Public Works at any time during the progress of this contract that an undue number of men are being employed thereon who have not been domiciled in this Colony for six months previously to such employment, and such allegation be proved to his satisfaction, the Minister shall have the power to call upon you to discharge any or all such men, and on such direction being conveyed to you under the hand of the Under Secretary for Public Works, you shall discharge such men forthwith; and in the event of your non-compliance with any such direction, the Minister shall have the power to declare this contract to be cancelled as if this stipulation had been expressly set out in the cancellation clause of the general conditions relating to this contract.

The work is to be carried out in strict accordance with the several contract exhibits relating to this contract, and to be completed within sixteen months from this date.

The security required on this contract will be a fixed deposit receipt, in favour of the Secretary for Public Works, for the sum of £650.

I have to refer you to the Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage for further information, and to request that you will call upon the officer-in-charge of bonds and contracts at this office, for the purpose of executing the necessary documents for the due observance of your contract.

I am, &c.,  
J. BARLING,  
Under Secretary.

"E."

" E. "

## TENDER FOR CONTRACT No. 79A, SYDNEY SEWERAGE WORKS.

To the Honorable the Minister for Public Works, Bridge-street, Sydney, N.S.W.,—

We, the undersigned, do hereby offer to construct, completely finish, and maintain the various works for Contract No. 79A, Sydney Sewerage Works, in accordance with the supplementary specification, specification, special conditions, general conditions, and drawings, prepared for that purpose in your department, for the sum of £12,831 19s. 6d. sterling, within sixteen months from the date hereof.

Should this offer be accepted, we undertake to lodge with the Under Secretary for Public Works, within seven days from the date of notification of acceptance of this tender, a bank deposit receipt, in the name of the Secretary for Public Works, for the sum of £650 sterling, as security for the due performance of the contract.

We hereby undertake to execute the required contract when called upon to do so.

JOHN CARTER.  
DAVID GRAHAM SNODGRASS.

16 June, 1894.

This is the tender marked " E.," referred to in our annexed agreement with Her Majesty the Queen, dated the 20th day of June, A.D. 1894.

Witness,—HAROLD F. NORRIE.

JOHN CARTER.  
D. G. SNODGRASS.

" F. "

## LETTER OF ACCEPTANCE.

Sirs,

Department of Public Works, Sydney, 16 June, 1894.

I have the honor, by direction of the Secretary for Public Works, to inform you that your tender, dated this day, is accepted for Contract No. 79A, Sydney Sewerage Works, at the sum of twelve thousand eight hundred and thirty-one pounds nineteen shillings and sixpence (£12,831 19s. 6d.), subject to the following special condition, viz. :—

If it shall be represented to the Secretary for Public Works at any time during the progress of this contract that an undue number of men are being employed thereon who have not been domiciled in this Colony for six months previously to such employment, and such allegation be proved to his satisfaction, the Minister shall have the power to call upon you to discharge any or all such men, and on such direction being conveyed to you under the hand of the Under Secretary for Public Works, you shall discharge such men forthwith, and in the event of your non-compliance with any such direction the Minister shall have the power to declare this contract to be cancelled as if this stipulation had been expressly set out in the cancellation clause of the general conditions relating to this contract.

The work is to be carried out in strict accordance with the several contract exhibits relating to this contract, and to be completed within sixteen months from this date.

The security required on this contract will be a fixed deposit receipt, in favour of the Secretary for Public Works, for the sum of £650.

I have to refer you to the Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage for further information, and to request that you will call upon the officer-in-charge of bonds and contracts at this office, for the purpose of executing the necessary documents for the due observance of your contract.

I am, &c.,  
J. BARLING,  
Under Secretary.

Messrs. Carter &amp; Co., Contractors, North Sydney.

This is the copy acceptance marked " F.," referred to in our annexed agreement with Her Majesty the Queen, dated the 20th day of June, A.D. 1894.

JOHN CARTER.  
D. G. SNODGRASS.

Witness,—HAROLD F. NORRIE.

## Appendix No. 74.

## PUBLIC WORKS.

(Report from the Engineer-in-Chief for Public Works, together with Minutes, respecting the Contracts let to Messrs. Carter, Gummow, & Co.)

Ordered by the Legislative Assembly to be printed, 19 December, 1895

## The Engineer-in-Chief for Public Works to The Under Secretary for Public Works.

Department of Public Works, Engineer-in-Chief's Office, Sydney, 21 November, 1895.

As there appears a likelihood of the Session closing without an opportunity being given me of denying the statements made by Mr. Varney Parkes, as regards the connection of Messrs. Carter, Gummow, & Co. with the Public Works Department, and the charges made against myself personally, I am reluctantly compelled to bring the matter again before the Minister.

Although it may be thought, as, indeed, it has been said, that I am making too much of this matter, and that no one really takes any serious notice of these statements, I need hardly point out what a serious matter it would be if they were believed, and either the Minister, my officers, contractors, or the general public lost confidence in me; and there is always a fear of this taking place when charges such as Mr. Parkes has made are not contradicted.

I would, therefore, ask the Minister to consider the advisability of having these charges and statements thoroughly investigated by some independent authority, having full powers to call witnesses and examine them on oath.

ROBT. HICKSON,  
Engineer-in-Chief for Public Works.

Submitted.—J.B., 21/11/95.

Mr. Hickson may be informed that the statements to which he refers herein have never had the effect of diminishing the complete confidence I, as Minister, have always had in him in the important office he holds. That I cannot believe they will, in the slightest degree, affect his position with reference to his officers, contractors, or the general public, and that having consulted the Cabinet as to his request for a commission of inquiry, I am able to state that my colleagues agree with what I have above written. If Mr. Hickson desires to place any rebutting statement before the public I shall have much pleasure in laying it on the Table of the Assembly.—J.H.Y., 10/12/95.

Mr. Hickson.—J.B., 11/12/95.

## The Engineer-in-Chief for Public Works to The Under Secretary for Public Works.

Department of Public Works, Engineer-in-Chief's Office, Sydney, 17 December, 1895.

WHILE I cannot disguise the fact that I feel disappointed that the Minister could not see his way to have the charges made against me in connection with the contracting firm of Messrs. Carter, Gummow, & Co. investigated by a Royal Commission, I quite understand the difficulties surrounding such a course, and very gratefully acknowledge the handsome way in which that decision is conveyed to me.

As a written reply to the charges is the only course now open to me, and as the Minister has kindly extended to me the privilege of such reply, I gladly avail myself of his permission, and ask that he will give the following statement such publicity as in his discretion he may deem desirable.

It is difficult in a report of this character to traverse all the charges in anything like an exhaustive manner, but I will endeavour to do so as clearly as possible, and in the order in which they appear in *Hansard*, avoiding all personalities and confining myself to the simple facts of the case.

With

With the first portion of Mr. Parkes' statement, that "contracting in vast sums of public money must be conducted with the greatest purity possible," I entirely concur. I contend, and I speak with a fairly large experience of tendering, not only in Australia, but in England and Ireland, that the system adopted in the Public Works Department in this Colony compares favourably with any other with which I am acquainted, in fact the department is so safeguarded with checks in its dealing with tenders that it would be practically impossible, without almost inconceivable collusion, to find a loophole for corrupt practices to creep in. The tenders are opened in public, and not only are the results published to the world in the daily press, but complete lists of the tenders received, and their amounts, are at once exhibited in the most conspicuous parts of the public offices, and before being dealt with by the responsible officers. Every subsequent action is capable of being fully criticised by an observant public; in fact, a greater publicity is given to all our transactions with tenders, so far as my experience goes, than is granted in any other country in the world.

To come now to the more specific charges, I have, for the sake of convenience, made extracts from Mr. Parkes' speech, giving my replies thereto in consecutive order.

During the week, or the week before, I asked the Secretary for Public Works whether Messrs. Gillan and Forrest were not sureties for the proper fulfilment of the contracts of this firm of Carter, Gummow, & Co. The reply I got was that Messrs. Gillan and Forrest were the sureties for those contractors. I wish honorable members to closely follow this matter. What I am about to read is a notice which appeared in the *Sydney Morning Herald* on the 13th of this month—that is, last Friday week—not very long ago. The notice shows that a dissolution of partnership took place, and that the very sureties for Carter, Gummow, & Co.—Messrs. Gillan and Forrest—are members of this business. The following is the notice:—

"Notice is hereby given that the partnership lately subsisting between us, the undersigned, John Carter, David Graham Snodgrass, George Forrest, Frank Moorhouse Gummow, James Gillan, George Maddison, and Peter Ewing, as contractors, carrying on business in Adelaide (South Australia) and Sydney (New South Wales) under the name, style, or firm of Carter, Gummow, & Co., was on the 1st day of April, 1895, dissolved by mutual consent in so far as regards the said George Maddison and Peter Ewing, who retired as from that date from the said firm. All debts due or owing by the said firm will be received and paid by the said John Carter, David Graham Snodgrass, George Forrest, Frank Moorhouse Gummow, and James Gillan, who continue the business under the same style of Carter, Gummow, & Co.

"As witness our hands this 1st day of April, A.D. 1895.

|          |                  |                  |
|----------|------------------|------------------|
| (Signed) | F. M. GUMMOW.    | GEORGE FORREST.  |
|          | JOHN CARTER.     | GEORGE MADDISON. |
|          | D. G. SNODGRASS. | PETER EWING.     |
|          | JAMES GILLAN.    |                  |

This is a nice state of affairs! I wish to point it out to honorable members, if they do not quite realise it. If the Government accept sureties consisting of persons who are members of the firm of contractors, supposing the contractors go insolvent, or cheat the Government by defective work, suppose they enter into fraud to defeat the Government in large contracts of £30,000 or £50,000, what check is there upon them? The very specification which the Government issue makes it imperative that these sureties shall be disinterested persons altogether. The object of having sureties is to have men of means at the back of the contractors, so that if anything goes wrong—if the contractors go insolvent, or defraud the Government, if they carry out bad work—the Government can come down upon the sureties. But here is a case where these contracts total nearly £100,000, with sureties of their own partnership. This is a nice state of affairs.

I wish to go further, and to show that there has seldom been a case, taking it in this way, in which any private business would offer to give away contracts to the extent of £20,000 without offering them to competition and to tender. No private individual would ever dream of going into such a business transaction such as that. Yet this firm of contractors, Messrs. Carter, Gummow, & Co., have received between £45,000 and £50,000 of Government contracts without any tender. Not that there were no contractors to tender, because we know that at the present time of dearth of employment there were any number of contractors to tender, in order to keep their plant from being idle. They were willing to tender for the smallest work possible; yet this work is given out without tender to this special firm of contractors.

I asked the Secretary for Public Works last week what connection Mr. Hickson had with the firm and with this work. I was told that Mr. Hickson was the engineer to these contractors; but I am informed, upon the most reliable authority, that of a Mr. Maddison, the contractor, who has left this firm, that Mr. Hickson took the position as a partner in the firm, he being a son of the Engineer-in-Chief. Now, it is an unfortunate position that this firm should have been allowed contracts under such circumstances as these; their engineer having to communicate with his father, who is in a position in the Public Works Department, in which he could grant all sorts of concessions. This firm are the only contractors who during the last twelve months have received these numerous concessions. I have it upon the authority of Mr. Maddison, who has undertaken to produce a copy of the telegram, that a wire was sent in March, 1894, by one of this firm of contractors, Mr. Carter, to another member of the firm, Mr. Gummow, who was then in South Australia, to this effect: "Mr. Hickson must be taken into the firm at any cost." It was about this time that Mr. Hickson left the department, as his father said, on the score of retrenchment, and took up his position as an alleged partner in this firm, or, as I have been informed by the Minister, their chief engineer.

With reference to Carter & Co.'s contracts with the Public Works Department, a cash deposit has in every case been taken, and in the case of Contract No. 77, at Balmain, an additional personal security has been given for the stability of that portion of the work constructed on the Monier system, valued by the department at £12,000. The sureties in this case are Messrs. Forrest and Gillan, who are bound in the amount of £6,000 each, whilst the contractors, Messrs. Carter, Gummow, and Snodgrass, are bound in the sum of £12,000 (£24,000 in all). This special precaution, which is unique in its way, was taken as the Monier system, though successful elsewhere, had not been previously tested in the colonies, and is far beyond the requirements of the specification, these being already covered by a cash fixed deposit of £775, which is held by the department.

In this particular contract the department recognises only Messrs. Carter, Gummow, and Snodgrass as contractors, and so long as the sureties have separate estates to the value of the security required, and on this point every care has been taken [see the printed papers laid on the Table of the House], I contend the department has been properly safeguarded, especially when, as in this case, the personal security is over and above that usually demanded.

The firm has received one contract only without public tender, viz., Contract 79A, at North Sydney, amounting to £12,832; and even this was an extension of work already in hand.

This contract was given them by the late Minister for Public Works, on the representation of Mr. E. M. Clark, M.P., who pointed out the urgent necessity for pushing on that portion of the work, not only from a sanitary point of view, but so as to prevent some 120 men then employed by Messrs. Carter and Co. on the first section of the North Shore Sewerage Works from being thrown on the already congested labour market. Even so, the extension was granted only on the contractors agreeing to a reduction of £3,476 from schedule rates.

My son is not now, nor never was, a partner in the firm, and as he happened to be in Adelaide, and, as far as I know, knew nothing about the firm's transactions in Sydney, he did not communicate with me, either directly or indirectly, in connection with the firm's business.

I know nothing about the telegram alleged to have been sent in connection with the appointment of my son, having heard of it for the first time in Mr. Parkes' statement, and cannot understand how it could have been sent, seeing that my son left the department in April, 1893, and that the telegram of March, 1894, is said to have been sent when he had already been in the employ of the firm for nearly twelve months.

Having established this connection between the Engineer-in-Chief's son and the firm, I intend presently to show what concessions were given to these contractors. In the first place, they competed for some sewerage works which were going on at Balmain. Honorable members are well aware that these contracts are tendered for nowadays at schedule prices, that is to say, quantities are taken out and the Government officers place schedule prices upon each of the items. Fifteen firms of contractors tendered for the works at Balmain at schedule prices, and the lowest tenderer was the firm of Messrs. Carter, Gummow, & Co. These contractors sent in a price ridiculously low as compared with the fourteen other firms tendering. Their tender was 28½ per cent. under the schedule prices. The next was 18½ per cent.

After their tender was accepted, and after they were notified of the acceptance, they were enabled to place plans in the department for the carrying out of the work upon an entirely new plan, called the Monier system. The other contractors had no opportunity of competing with the firm for the carrying out of the work upon this system. I am assured by other contractors that whereas Messrs. Carter, Gummow, & Co. obtained a contract at £15,500, they would have been willing to carry out the job at £12,500 to £13,200.

Under the schedule prices of which I have spoken there is one item put down for brickwork and cement arches, 2,020 yards, at £2 10s. a yard. That was substituted under the Monier system by sandstone and concrete, put down at £1 8s. per cubic yard. There was that difference in the prices for the 2,020 yards. On that item alone a concession of £1,650 was made to these contractors. Honorable members will see that when such concessions are allowed, other contractors must be quite within the mark in saying that if they had had the opportunity they could have carried out the job at a figure from £2,300 to £3,000 below that paid to this particular firm.

The same firm within the last eighteen months received a contract for sewerage works at North Shore. They received their contract under a schedule tender, and their sureties as usual were those of their own firm. No query is made as to whether they are in a good financial state or as to whether they can provide good disinterested sureties.

After they had received the first contract the member for the district, no doubt with the best intentions and with the object of finding work for the unemployed, recommended that a certain extension should be carried out. The Engineer-in-Chief reported that as a matter of urgency certain extensions to the contract should be carried out along various streets. How is it possible that the work could have been urgent seeing that the outlet into the ocean for the whole of the sewerage scheme has not even been taken in hand? Until the outlet has been completed, how could the urgency of constructing branch lines of sewerage arise? Without any contract tendering, without any preparation of plans, without an effort to save the country unnecessary expenditure, a contract of £35,000 was given to this firm without competition for this extension work. It is no wonder that the contractors of this city complain of this contract being given.

In connection with this contract, I wish to point out that the Engineer-in-Chief, upon the 22nd March, 1894, wrote this minute:

"There is no reason why this extension should not be gone on with at once. I cannot, however, see my way to recommend that it be carried out as an extension of the existing contract, which, at schedule rates, would amount to £16,307 17s. 8d., whereas the office estimate is £12,831 19s. 6d. The greater part of this difference lies in one item, "excavations in shafts," which in present contract, owing to their great depth, carries a very high price, namely 78s. per cubic yard. This Messrs. Carter & Co. are prepared to reduce to 40s. per cubic yard, which would reduce the total cost to £13,700, or about £1,000 above the office estimate. I believe, however, if tenders were invited we could get the work done under the office estimate.—R. R. P. H., 22/3/94."

It was about this time that Mr. Hickson, junior, became a member of the firm. I find this minute by the Engineer-in-Chief on the 29th of the same month:—

"Referring to the Minister's intimation this morning, that he was prepared to let Messrs. Carter & Co. carry out this work as an extension of their present contract, provided they agreed to do so for the departmental estimate of £12,831 19s. 6d., no claims whatsoever to be made for extras, and all payments to be made at the allowed schedule rates.—"

That means that they might be allowed as extras—

"I have had an interview with Mr. Carter, who is prepared, on the part of his firm, to comply with the Minister's decision. Submitted or formal approval.—R. R. P. H., 29/3/94."

This was on the 30th March, 1894. How sudden a change! It is not the Minister who has to do with this. The Minister is generally led by the head of the department, it does not matter whether it is the present or the last Minister. The heads of these departments ought to be above reproach. There ought to be the greatest possible check put upon them. When we see a rapid change like this in a minute in a few days, after a son of the gentlemen concerned has taken office under the contractors, then there is some suspicion. It is impossible to make definite charges, but the case looks so grave that it ought to be filtered out in this House.

Mr. YouNG: Does the honorable gentleman assert that the engagement of young Mr. Hickson took place in the meantime—during those two or three days?

With the exception of the arrangement made, as stated above, on Contract 79A, at North Sydney, no concessions have been made to Messrs. Carter, Gummow, & Co. Contract No. 77 (Balmain), which was let by public tender, and for which they were lowest tenderers, cannot be regarded as such, as they are allowed to construct the works in accordance with an alternative tender submitted with, and at the same time as, the others, at a slight gain in price to the department, and under conditions of the most stringent nature in case of failure.

The tenders were fairly close. [See papers laid on Table of the House.] Mr. Parkes is, therefore, mistaken in stating that the second tender was only 18½ per cent. below schedule; it was 25½ per cent., as against Carter & Co.'s 28½ per cent., besides which, 28½ per cent. is not ridiculously low; it is not an uncommon thing to have tenders 30 per cent. below schedule.

The tender, with plans for carrying out the work under the Monier system, was deposited with the Tender Board at the same time as all other tenders, and was simply an alternative one. After very careful examination by Mr. Darley and myself, the system was thought worthy of trial, under the severe conditions imposed, and the alternative proposal was recommended by the Board of Reference for acceptance.

The materials used in the Monier arches and sewer, substituted for brick and concrete, was not sandstone and concrete; it was 3 to 1 compo., and was estimated by the department at from 80s. to 90s. per cubic yard, not at 28s. as stated.

Cash security for £4,000 was taken in this case, as required by the specification. There were no sureties.

Contract 79A, an extension of the preceding work to Jeffrey's-street, was, as before stated, given to Messrs. Carter & Co. on the representations of the member for the district; but I strongly urged that tenders should be invited for the work, as I considered that it might be done more cheaply.

The cost of the extension which was taken at the departmental estimate was £12,832, not £35,000 as stated.

As already pointed out, my son was never a partner, nor did he take office under Messrs. Carter & Co. between the 22nd and 29th March, 1894, when the change of front is said to have taken place, but had already been in the employ of the firm in Adelaide since May, 1893.

In my second minute, quoted by Mr. Parkes, it will be seen that I distinctly stated that I forwarded the paper, on an intimation from the Minister that he (the Minister) was prepared to let the work to Messrs. Carter & Co., and I carefully abstained from making any recommendation, merely forwarding the paper for formal approval.

Mr. V. PARKES: I believe it was during that time.

Mr. YOUNG: Does the honorable member assert that?

Mr. V. PARKES: I believe it was.

These gentlemen have a contract at Johnstone's Bay for what they call stormwater channelling. This stormwater channelling is taken through a lot of mud flats. For four or five weeks the Government employed about forty or fifty of the unemployed to drain the water off this land for the contractors. The Government actually employed the unemployed for this purpose. I can bring plenty of evidence on oath that forty or fifty men were employed for four or five weeks draining the water off the land where these gentlemen had to carry out their contract. The effect of that was to put £250 or £300 into the pockets of the contractors.

I could cite other concessions given to these gentlemen, information as to which has been given to me not by one contractor, but by twelve or fourteen. Innumerable concessions have been given to them, and it would only be wearying the House to particularise them.

Mr. YOUNG: Let us have them all while the honorable member is about it!

Mr. V. PARKES: If an inquiry is made the House will find that there has been an undue amount of favouritism towards not only these contractors but many others.

To show the artifice with which questions are answered by the Engineer-in-Chief, on the 19th instant I asked these simple questions of the Minister:

"(7.) What connection has a Mr. Hickson with this firm or with the works? (8.) Is this Mr. Hickson a son of the present Engineer-in-Chief?"

This was the reply:

"(7.) He is engineer to the contractors. (8.) He is the son of the Engineer-in-Chief for Public Works; but the Balmain contract referred to is being carried out under the supervision of the President of the Water and Sewerage Board and Engineer-in-Chief for Sewerage Construction, Mr. Darley."

Now, Mr. Darley has only been appointed to his present position about two months, and during all the time that this contract was being carried out it was under the Engineer-in-Chief.

Mr. YOUNG: No.

Mr. V. PARKES: The Engineer-in-Chief was the chief designer of it, and the contract was not carried out under Mr. Darley. I made sure of that fact.

The Minister, in his reply, went on to say:

"In the case of the other contract referred to, namely, the sewerage works at North Sydney, which was carried out under the supervision of the Engineer-in-Chief for Public Works, I am informed that Mr. Hickson, junior, had no connection with that work, being at that time in South Australia."

But Mr. Hickson has been going backwards and forwards between here and South Australia. That makes no difference as to his connection with the firm. He is looking after their work in South Australia, and looking after their work here; and such an answer as that is, on the face of it, simply a blind, and it shows that there is some reason why there should be a full inquiry into the circumstances attending this contract.

Mr. LYNE: Before the honorable gentleman sits down perhaps I might be allowed to ask him a question. He said that the firm in question had contracts to the amount of £35,000, and he only referred to one of £13,000. What other contracts made up the total of £35,000?

Mr. V. PARKES: As far as I am informed, there was a contract of £13,000, another of £10,800, and another of £11,000, all let without tender.

The sand-pump dredging at Rozelle Bay, carried out by the department, flooded the land through which Messrs. Carter & Co. had to construct the Johnstone's Creek stormwater channel. As this would have given them a claim for compensation, a drain had to be cut to take the water off their works, and place the land in the same condition as when tenders were received, Messrs. Carter & Co. providing flood-gates at their own cost to keep the tidal waters out. The cost of the drain was about £70; it is, therefore, difficult to see how £250 to £300 can have been put into the contractors' pockets. I am quite satisfied that, by my prompt action in this case, I saved the department a large sum which the contractors could have claimed for the flooding of their works.

In any case this drain would have had to be made later on to form an outfall for Johnstone's Creek during the progress of the continuation of the present work.

It is difficult to say what is meant by "innumerable concessions" to these and other contractors, and the only cases I can think of are those of Messrs. Gilliver and Curtis, at Rookwood, and Messrs. Johnston, O'Rourke, and Gordon, at Rushcutter's Bay. The first of these had a contract for partly draining the Rookwood Necropolis, and this was extended so as to embrace the whole cemetery, at an additional cost of £5,747, at their schedule prices. The second case can scarcely be looked on as a concession, as the contract provided for the construction of a part of the whole sewer, at the discretion of the Minister. This contingency was provided for in the specification in case the adjacent landowners were unwilling to allow the sewer to be carried through their land without compensation. When the consent of all interested had been obtained, I directed the contractors—with the approval of the Minister—to carry out the whole work. The value of the extension was £2,071.

This contract was never under my supervision. It has, ever since the work commenced, been under Mr. Darley or Mr. J. M. Smail, who was acting Engineer-in-Chief for Metropolitan Sewerage Construction, during Mr. Darley's absence in New Zealand.

My son had no connection with any contract of Messrs. Carter & Co.'s in New South Wales until last August, when he returned from South Australia. He was in the latter colony from May, 1893, and did not go backwards and forwards between here and South Australia in the interest of the firm. During the whole of this time (two years and three months) he got one holiday to visit Sydney on purely private business.

He has never communicated—directly or indirectly—with me or the office in connection with Messrs. Carter, Gummow, & Co.'s works, the whole of the transactions with the office having been carried out either through Mr. Carter or Mr. Gummow.

The only contract let to Carter & Co. without tender is, as before stated, the extension of the North Shore Sewerage Works to Jeffrey's-street (Contract 79a) for £12,832.

I am quite satisfied to leave this matter now in the Minister's hands, and through him to accept the verdict of the public, knowing that I have never had, during the whole course of my professional life, any dealings with contractors which I would be afraid to expose to the most searching inquiry.

Any impartial person reading these replies, which I have made as brief as possible, can, I feel certain, only come to the conclusion that Mr. Parkes has been wilfully misled by some evil-minded person whose motives were as impure as their statements were false.

ROBT. HICKSON,  
Engineer-in-Chief for Public Works.

Minute

Minute by The Under Secretary for Public Works.

Department of Public Works, Sydney, 19 December, 1895.

Carter, Gummow, & Co.'s Contracts.

It is, I think, proper for me, in submitting this to the Minister, not only as Under Secretary but as Chairman of the Board of Reference, to express the entire confidence which the Board have in Mr. Hickson as one of its members. Every matter relating to the contracts which are referred to the Board is most critically examined, and I have great pleasure in saying that Mr. Hickson, as well as every other member of the Board, shows the utmost desire to have every phase of the various questions which arise in connection with tenders thoroughly enquired into, and to this end they willingly give all facilities to the Board.

I fully agree with Mr. Hickson in saying that it is difficult to conceive of any practical method of applying further checks in connection with our tender system. I do not think there is any country in the world where such publicity is given to proceedings in regard to this very important matter.

J. BURLING.

May be laid on Table of the Assembly.—J.H.Y., 19/12/95.

Appendix No. 75.

STATEMENT prepared by Mr. C. J. Henty, of Parbury, Henty, & Co's. Sales to Messrs. Carter & Co., and Carter, Gummow, & Co., 1st May, 1892, to 30th June, 1896.

## PAPERS—CONTRACT No. 72.

## No. 1.

The Council Clerk, Newtown, to The Secretary for Public Works.

Sir,

Borough of Newtown, Town Hall, 10 April, 1890.  
I have the honor, by direction of the Borough Council of Newtown, to ask you to be so good as to appoint a day to receive a deputation from the Councils of Newtown and Macdonaldtown for the purpose of considering the advisability of extending the present sewer from Munni-street to Shea's Creek.

I have, &amp;c.,

JESSE COWLEY,  
Council Clerk.

Say a report will first be obtained, then to Mr. Hickson.—J.B., 11/4/90. Mr. Hickson.—D.C.M'L. (*pro* U.S.), B.C., 15/4/90. Mr. Bagge.—P.H.F. (*per* W.S.), 17/4/90. Report herewith.—M.O.B., 11/6/90.  
Mr. Bagge's report herewith. This is one of the many storm-water sewers which are much required, but as I pointed out on a previous occasion, there are no funds, and to charge the work to the Western Suburbs Sewerage rate simply means that an excess will be required on that rate.—R.R.P.H., 13/6/90. Under Secretary.  
Perhaps it will be as well to get a comprehensive report on the question of storm-water sewers; it is hardly advisable to deal with it piece-meal. In the meantime, the Council to be informed of our action herein.—J.B., 17/6/90.  
Approved by Minister, 20 June, 1890.—J.B., 23/6/90. Inform, then to Mr. Hickson.—J.B., 23/6/90. Council Clerk, Newtown, 24/6/90. Mr. Hickson.—D.C.M'L. (*pro* U.S.), B.C., 28/6/90. Mr. Bagge to see me about this.—R.R.P.H., 28/6/90. I have seen the Engineer-in-Chief;—this work to be started when a vote has been passed for these surveys, &c.—C.H.O.B., 30/6/90.

## No. 2.

## Minute Paper.

Subject:—Temporary Occupation, Contract No. 72—Munni-street to Shea's Creek Storm-water Channel.

Department of Public Works, Sewerage Branch, Sydney, 27 January, 1891.

I FORWARD herewith a tracing of land which it will be necessary to occupy in connection with the construction of the above channel.

It will be seen from the papers that the lessees on Mr. William Cooper's property have given their written consent to the use of the land, but that Mr. J. R. Hill, as attorney for Mr. Cooper, refuses to do so.

I therefore enclose a notice to the owner, Mr. Cooper, in the usual form, which should be signed by the Minister, but not dated till the ground is actually required.

Mr. Bagge.

JAMES S. MOLLISON.

I beg to forward Mr. Mollison's minute *re* temporary resumption of land along the course of Munni-street storm-water channel, for the construction of which tenders are now invited.—C. H. OHLFSEN-BAGGE, 29/1/91. Engineer-in-Chief. Submitted.—F.C.P., 29/1/91. Mr. Bagge to see me.—R.R.P.H., 29/1/91. This land will eventually have to be resumed, but in order to let contractors on to it as soon as tender is accepted, temporary occupation is required.—R.R.P.H., 30/1/91. Under Secretary. Submitted signature.—J.B., 30/1/91. Please see that is done before letter is sent out.—J.B., 30/1/91. Quote Act in letter.—B.S., 30/1/91. R.R.P.H., 31/1/91. Mr. Mollison to carry out Minister's instructions.—F.C.P., 2/2/90. Act quoted and date filled in (March 5th, 1891). The letter and tracing should now be forwarded, as the contractors are about to commence work.—J.S.M., 5/3/91. Mr. Bagge. Mr. Piper please have this notice issued without delay.—C. H. OHLFSEN-BAGGE, 5/3/91. Letter delivered by Messenger Walsh to Mr. Hansard in Mr. Hill's office.—F.C.P., 5/3/91.

## No. 3.

## List of Tenders.

Number of tenders received, 12; amount of lowest tender, £20,650; name of lowest tenderer, Carter & Co.

| 11  | H. A. Brigg & Coy. ....               | 28,220 0 6        | 280 0 0      | "                  |
| 12  | Murray and Stuart—received late ..... | 28,693 10 11      | 300 0 0      | "                  |

I recommended acceptance of Carter & Co.'s tender at schedule rates.  
23/2/91.

R. R. P. HICKSON.

## No. 4.

The Principal Assistant Engineer for Sewerage to The Engineer-in-Chief.

Subject:—Temporary Occupation—Munni-street to Shea's Creek Storm-water Sewer.

Department of Public Works, Sewerage Branch, Sydney, 14 March, 1891.

HEREWITH I forward a notice of temporary occupation for the signature of the Minister.

The portion to be occupied is required for a temporary outlet to the Munni-street to Shea's Creek storm-water channel, pending the construction of the canal, being undertaken by the Harbours and Rivers Department. The whole of this portion will have to be resumed when the canal is continued as proposed, and the temporary occupation will be required till that is done.

C. H. OHLFSEN-BAGGE.

Submitted.—F.C.P., 16/3/91. Under Secretary.—R.R.P.H., 16/3/91. Submitted.—D.C.M'L. (*pro* U.S.), 18/3/91. Letter signed by the Colonial Treasurer and returned herewith.—D.C.M'L. (*pro* U.S.), B.C., 18/3/91. Roads. Letter delivered by Messenger F. Walsh, 19/3/91. Mr. Davis to note.—F.C.P., 24/3/91. Noted.—J.D., 24/3/91.

Permission

Permission to enter properties for the construction of the Munni-street and Macdonaldtown Park Storm-water Sewer. From the report made by Mr. Liddell, it would seem that Mr. J. R. Hill, attorney for Mr. Wm. Cooper, is the only owner on the line of the Munni-street sewer who refuses permission to enter. The other owners and Mr. Cooper's tenants have all given written permission.

I presume that over the portions not under lease temporary occupation will have to be taken, and I would recommend that a tracing and notice should be served on Mr. Hill at once.

JAMES S. MOLLISON,  
12/1/91.

Mr. Bagge.

Mr. Mollison to prepare the necessary tracings and papers.—C.H.O.-B., 12/1/91.

### Minute Paper.

*Subject* :—Lands along the course of the Macdonaldtown Storm-water Sewer.

Department of Public Works, Sewerage Branch, Sydney, 6 January, 1891.

THE names of the owners and occupiers of private land through which the line of the proposed Macdonaldtown storm-water sewer passes have been ascertained, and the parties have been interviewed after considerable trouble, and I have to report as follows :—

1st. The land coloured brown on the accompanying tracing is part of the Waterloo Estate, in the borough of Alexandria. It is the property of Mr. Wm. Cooper, for whom Mr. J. R. Hill, of the United Chambers, corner of George and Hunter Streets, is the agent and attorney.

2nd. The occupiers are Messrs. Eaves Bros. (boiling-down), W. Wilkinson (carter), and Thos. Green and Sons (boiling-down). I obtained the consent of Green and Sons and W. Wilkinson to the use of their holdings for the purposes of the construction of the sewer, and their written consent is appended. Messrs. Eaves Bros. promised to give every facility for carrying on the work, but would not give a promise in writing, as they are only tenants at will. Their holding is very little affected by the course of the sewer.

3rd. I waited upon Mr. J. R. Hill, the attorney for Mr. Cooper, and requested permission to open up and cart over that portion of the Waterloo Estate through which the sewer passes, and explained fully to him the objects and advantages of the work, and also pointed out that the surplus material excavated would be used for filling in the creek and drains and equalising the surface of the ground. Mr. Hill admitted that the estate, in common with adjoining properties, would benefit largely by the work, but nevertheless refused emphatically to give the required permission, saying that "he would make no concessions to the Government other than those which the law would compel him to make."

4th. The land coloured pink on the accompanying tracing is the property of Mr. Stephen J. Bryen, of "Lynwood," Avoca-street, Randwick, and is occupied as a grazing paddock by Mr. H. Knight. Mr. Knight promised to give every facility for carrying out the work. I then called upon the owner, Mr. Bryen, at Randwick. He promised to consider the matter and communicate with me yesterday (5th instant), but up to the present has not done so.

5th. The land intervening between Toogood-street and Campbell-street, coloured blue on the tracing, is the property of Mr. Jno. Goddard, of Harold-street, Macdonaldtown, and is mortgaged, I am informed, to Mr. C. B. Pitt, solicitor, of Tattersall's Chambers, Hunter and Castlereagh Streets. Mr. Pitt expressed himself willing to consent to Mr. Goddard granting the permission required. I waited on Mr. Goddard, who would not do anything in the matter without consulting Mr. Pitt. Mr. Goddard requested me to meet him at Mr. Pitt's office at noon to-day (6th instant).

6th. I have examined the deed of grant of Cooper's Waterloo Estate, and find that the watercourses are included in the grant. There are certain conditions attached to the grant, one of which reserves to the Crown the right to a highway through the estate, but none of them cover any drainage or sewerage rights.

7th. I suggested to the Mayor and Council Clerk of Macdonaldtown, in the first instance, that they should conduct negotiations with the people through whose land the sewer passes, but they stated that owing to somewhat unfriendly relations existing between the Borough Council and the parties concerned it would be better for the Department to deal with them.

I have, &c.,  
AND. T. LIDDELL.

### No. 5.

### Minute Paper.

*Subject* :—Contract No. 72, Sydney Sewerage Works.

Department of Public Works, Bonds and Contract Branch, Sydney, 19 March, 1891.

THE bond herein duly prepared has been executed by the contractors, Messrs. Carter & Co., and stamped, and may now be forwarded to the Engineer-in-Chief for Sewerage. The tender and all other papers herein are sent herewith.

HAROLD F. NORRIE,  
Officer-in-Charge.

Commissioner for Roads.—D.C.M'L. (*pro* U.S.), B.C., 19/3/91. Mr. Davis to see.—F.C.P., 20/3/91.

### TENDERS FOR PUBLIC WORKS.

Department of Public Works, Sydney, 13 February, 1891.

Tenders will be received at this office for the public works specified in the Schedule hereunder, up to 11 o'clock a.m., of the various dates set forth in the second column.

All envelopes containing tenders must be addressed to the President of the Tender Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Tenderers may be in attendance when the tenders are opened, and the name of the lowest tenderer will be announced, if possible, before the duties of the Board have terminated.

The following conditions will have to be strictly complied with, otherwise the tenders will not be taken into consideration :—

- 1st.—Each tender must state the time within which it is proposed to complete the work, and in every instance the full name or names of person tendering, also the names in full, occupations, and addresses of proposed bondsmen.
- 2nd.—At the foot of every tender there must be a memorandum, signed by the party tendering and two responsible persons as sureties, agreeing to be answerable for the due performance of the contract, in the event of the tender being accepted; and undertaking, in that event, that they will severally execute and deliver a bond to Her Majesty, in the penal sum mentioned in the specification, or otherwise arranged, for securing such performance.
- 3rd.—No tender will be considered which shall have been received after 11 o'clock a.m. on the day upon which tenders are to be received, unless there are circumstances which, in the opinion of the Board, render it desirable that it should be received.
- 4th.—Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

|   |         |
|---|---------|
| For amounts up to £500 inclusive .....                    | £5 0 0  |
| For amounts exceeding £500 and not exceeding £1,000 ..... | £10 0 0 |

For all sums over £1,000, 1 per cent of the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the manager of the bank upon which it is drawn, or a bank draft.

- 5th.—Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal and rejected accordingly.

6th.—

- 6th.—In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account of such contract shall be absolutely forfeited to the Crown, and shall be paid to the credit of the Consolidated Revenue of the Colony.
- 7th.—Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted, but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.
- 8th.—In the event of any contract being tendered for at a schedule of rates, the approximate quantities as given of each item must be worked out and a total sum shown.

All deposits, with the exception of that of the lowest tenderer, when practicable, will be returned to the persons entitled thereto, immediately after the Board shall have adjourned; and the deposit made by the successful tenderer shall be returned to him on executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200, the deposit with tender will not be returnable until the service is satisfactorily completed.

It is to be understood that the Government does not bind himself to accept the lowest or any tender; and no tender will be accepted until the head of the branch under whose directions the work is to be carried out has reported upon the whole of the tenders received.

BRUCE SMITH

“C.”

TENDER FOR CONTRACT NO. 72, SYDNEY AND SUBURBS STORM-WATER DRAINAGE.

To the Honorable the Minister for Public Works, Bridge-street, Sydney, N.S.W.

We, the undersigned, do hereby tender and offer to construct, completely finish, and maintain the various works for Contract No. 72, Sydney and Suburbs storm-water drainage, in accordance with the conditions of contract, specifications, and drawings prepared for that purpose in your department, for or at the rates particularly entered in the accompanying schedule of prices, and enclose herewith Treasury deposit, as required by clause 20 of the General Conditions.

Should this tender be accepted, we undertake to lodge with the Under Secretary for Public Works, within seven days from the date of notification of acceptance of this tender, a bank deposit receipt, in the name of the Secretary for Public Works, for the sum of £900 sterling, as security for the due performance of the contract.

In the event of our failing to do so, or to sign the required contract within the time specified in clause 20 of the General Conditions, we hereby distinctly agree to forfeit to the Queen the sum deposited with this tender.

CARTER & CO.,  
St. John's-road, Glebe.  
JOHN CARTER,

| 34                 | Three months' maintenance after formal delivery of works  | lump sum    |                   |               | 20 7 7            |
| <b>Total</b>       |   |             |                   |               | <b>20 650 0 0</b> |

## Notes

1 All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification

2 The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer

3 Prices for items Nos 29, 30, 31, 32, and 33 are to be for such as are able bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night work being ordered, it is to be paid for at 25 per cent advance on the time rates set down for day work

4 The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting watercourses and surface water, diverting and maintaining the traffic along roads, crossing over pipe sewers, disposal and removal of surplus soil, reinstating all roads and other surfaces, &c, and any other thing necessary in executing and completing each respective item, in accordance with plans and specifications

5 Tenderers are to state prices for all items, whether quantities are given or not

This is the schedule of quantities and prices referred to in our annexed agreement with Her Majesty the Queen, dated the 16th day of March, A D 1891.

SPECIFICATION of the several works required in the construction of a storm-water channel commencing at junction of Union and Munni streets, and extending, more or less, along the line of creek to Macdonald-street and along this street; thence south along the course of the creek to its intersection with Mitchell Road; thence again in a southerly direction along the course of the creek to the northern angle of a Chinese garden, and thence in an easterly direction across a slight ridge to Shea's Creek, being a total distance of 77·38 chains, together with all manholes, junctions, &c., connected therewith, in accordance with the accompanying drawings, with such extensions or omissions as may be ordered in writing, viz. :—

1. *Description of Drawings.*

1. Drawing No. 1.—General plan and longitudinal section.
- „ No. 2.—Cross sections.
- „ No. 3.—Details of inlets, cross sections of channel, manholes, outlet-end, piling, plank-floor, &c.
- „ No. 4.—Details of large junction, intersection with 18-inch pipe-sewer, inlets, &c.
- „ No. 5.—Details of wrought-iron girder, cast-iron ventilating and other gratings.

2. *Extent of Contract.*

2. The works comprised in this contract consists in the necessary excavation, shoring, timbering, piling, unwatering, concrete, brickwork, stonework, rendering, re-filling, pipe-laying, carpenter's work, ironwork, pitching, paving, ballasting, metalling, leading surplus materials to spoil, &c., required in the construction of the following, viz. :—

|                      |           |   |                                 |
|----------------------|-----------|---|---------------------------------|
| From Shea's Creek to | 20 chains | open channel  | 11 ft. 6 in. x 7 ft. 6 in.      |
| „ 20 chains to       | 28 „      | oval sewer  | 10 ft. 6 in. x 6 ft. 6 in.      |
| „ 28 „ to            | 39·12 „   | „ „   | 10 ft. 6 in. x 6 ft.            |
| „ 39·12 „ to         | 39·77 „   | junction of two creeks, with flat concrete decking between wrought iron rolled girders. |                                 |
| „ 39·70 „ to         | 48·17 „   | oval sewer  | 7 ft. 2 in. x 6 ft.             |
| „ 48·17 „ to         | 58 „      | circular sewer of   | 6 ft. internal diameter.        |
| „ 58 „ to            | 62·50 „   | „ „ of  | 5 ft. 10 in. internal diameter. |
| „ 62·50 „ to         | 66 „      | „ „ of  | 5 ft. 2 in. internal diameter.  |
| „ 66 „ to            | 72 „      | „ „ of  | 3 ft. internal diameter.        |
| „ 72 „ to            | 76·58 „   | „ „ of  | 2 ft. 6 in. internal diameter.  |

in open cutting in mud, sand, loam, clay, shale, and ironstone, as shown on longitudinal section, and as shall be directed, with all branches, junctions, curves, manholes, flushing chambers, sub-ducts, road-making, and all other works in connection with those herein enumerated, and the maintenance of the whole of the works for a period of three months after they have been formally taken over by the Engineer.

3. It is to be understood that the lower 13 or 27 chains of the channel shall not be constructed until the Engineer gives a written order to that effect; and the Engineer shall have the power to suspend the execution of these portions of the work, or any other part of the contract, or to reduce the length of the contract by the extent of the said 13 or 27 chains, or any other part of the sewer shown on the drawings, that he may consider necessary, and the contract shall not thereby be invalidated, nor shall the contractor be entitled to any compensation on account of such temporary suspension of any part or parts of the contract or permanent reduction of same.

4. Supply of materials, &c.—Contractor to supply, at his own expense, all labour, plant, and materials of any sort whatever for the due performance of the contract.

3. *Site.*

5. Access to the site of the works to be had along centre lines where such are shown to be along lines of streets, and along all public roads which cross the centre lines of the Munni-street to Shea's Creek storm-water channel.

6. For the purpose of excavating open cuttings, where ordered, for sewers, &c., and for constructing and completing the various works therein, contractor to have temporary possession of a strip of land the exact widths which in the opinion of the Engineer is required for these works.

7. All areas of strips of land hereinbefore referred to to be set out by the Engineer, to whom written application for their temporary possession must be made by the contractor two weeks prior to the time the said land is required by him.

Such possession, however, not to be exclusive, but subject to the right of entry of the Engineer, his officers, and other persons, carts and horses, &c., required for any purposes of the Government at any time.

8. Any other lands required by the contractor for temporarily depositing materials, or for any other purposes in connection with the contract, he will have to procure at his own cost, in strict accordance with clause 6 of the conditions of contract.

9. The contractor shall provide and erect all necessary fences, temporary bridges over the open trenches, where directed, for the use of residents through whose ground the sewer has to be built, and underneath tramways, footpaths, and streets, hoarding-barriers, &c., wherever directed to do so, and all fences, walls, railings, walks, or streets, metalled, grassed, paved, pitched, or asphalted surfaces, to be left by the contractor at the completion of the works in the same order as they were before the commencement of the works, at his sole cost, in strict accordance with the various stipulations and terms contained in this specification, and in clause 2 of the conditions of contract, to the entire satisfaction of the city or municipal authorities, and of the Engineer-in-Chief.

4. *Lines, Levels, and Setting-out Work.*

10. The centre lines of main sewer and branch sewers are shown on general plan, drawing No. 1, by full red lines, which will be marked on the surface of the ground, the same as on plan, as the works proceed.

After setting out, the centre lines of the works are to be preserved solely by reference to the iron nails, pegs, and other marks and signals which may be placed, fixed, and erected for the purpose of these works along their centre lines.

The gradients and levels of the works are to be preserved by reference to any bench-marks, which the Engineer may deem necessary to establish along the lines of works during the progress of the contract, subject to check and adjustment, as shall be directed, from other bench-marks established beyond the site of the works.

5. *Materials.*

11. All materials, as brick, stone, cement, timber, iron, sand, stoneware pipes, clay, lead, &c., which are to be supplied by the contractor, are to be of the best quality and description of their respective kinds. Samples of each kind to be submitted for the approval of the Engineer, and retained in office; and on approval having been obtained, they are to be delivered on the works ready for use, as per sample.

12. The contractor shall inform the Engineer of the sources whence the various materials are supplied, or of the places of their manufacture, and afford him every facility to inspect their supply or manufacture at any stage of the same.

13. The contractor to make and provide proper and approved gauges or scales for measuring or weighing all materials supplied, whether specified to be broken or delivered to special sizes, and mixed together in stated proportions or not.

14. Bricks to be of well-mixed material of approved quality and uniform fineness, to be new, sound, hard, well-burnt kiln bricks, free from cracks and all other defects, truly rectangular, with sharp arrises, of approved dimensions and form, to be specially moulded where required for arching inner and outer rings of sewer and circular or segmental shafts, and equal to sample bricks to be seen at the Engineer's office and which must be sealed by the contractor and acknowledged as a sample of the bricks to be used throughout the works. Bricks used in these works will be subjected to the following tests, viz. :—

(a) *Tensile strength.*—The tensile strength to be tested, in the departmental testing machine, by laying the brick horizontally on its base of 3 inches between supports 7 inches apart, and the strain applied across the centre of the brick and distributed over a width  $1\frac{1}{2}$  inch. An average breaking strain of twelve bricks to be taken, which must not be less than 8,000 lb.

(b) *Porosity.*—Bricks immersed in water for twenty-four hours must not increase in weight more than 3 per cent.

Should the twelve bricks fracture under the foregoing average strain, or prove more impervious to water than 3 per cent., then the Engineer may reject the whole stack of bricks from which the twelve bricks were taken. The whole of the expense incurred in testing the bricks shall be borne solely by the contractor.

15. In the event of the contractor delivering quantities of bricks on the site of the works for the contract of a mixed description and quality, the officer in charge shall have the power to require of the contractor to have those bricks which, in his opinion, are suitable for the works picked out and stacked where directed, and those defective or unsuitable removed from the site of the contract; and in the event of the contractor refusing or failing to comply with such request within twelve hours from the time it has been made, then in all such cases the Superintending Officer shall have the power of rejecting the whole of the bricks so delivered by the contractor.

16. Stoneware pipes to be of well ground and mixed material, of tough, tenacious, impervious quality, well burnt, sound, hard, uniform in thickness, true in section, straight longitudinally, uniformly glazed both inside and outside, free from fire or other cracks, flaws, and ash-holes, the collar perfectly joined to the barrel, and in every way equal to sample pipe to be seen at the Engineer's office. Paving tiles to be of the same materials as the stoneware pipes, to be uniformly glazed on all sides and of approved size and form.

Pipes to be of the following thicknesses and depth of collar, namely:—

|                         |           |            |                      |                      |           |
|-------------------------|-----------|------------|----------------------|----------------------|-----------|
| Pipes, inside diameter, | 9 inches; | thickness, | $1\frac{5}{8}$ inch; | depth of collar,     | 2 inches. |
| Do                      | do        | 12 inches; | do                   | 1 inch;              | do        |
| Do                      | do        | 15 inches; | do                   | $1\frac{1}{4}$ inch; | do        |
| Do                      | do        | 16 inches; | do                   | $1\frac{3}{8}$ inch; | do        |
| Do                      | do        | 18 inches; | do                   | $1\frac{1}{2}$ inch; | do        |
| Do                      | do        | 21 inches; | do                   | $1\frac{5}{8}$ inch; | do        |
| Do                      | do        | 24 inches; | do                   | $1\frac{3}{4}$ inch; | do        |

All parcels of pipes used in these works will be tested in the departmental testing machine, and submitted to the following crushing strains applied in the centre of the pipe:—

|                          |   |
|--------------------------|---|
| 24-inch diameter pipe at | 110 lb. per square inch of bearing surface. |
| 18-inch do               | 100 lb. do do.                              |
| 16-inch do               | 100 lb. do do.                              |
| 12-inch do               | 100 lb. do do.                              |
| 9-inch do                | 100 lb. do do.                              |

If the Engineer deems it necessary, the pipes will also be tested for porosity. Should the pipes fracture under the foregoing strains, or not prove impervious to water, then the Engineer may reject the whole of parcel from which the pipes were taken. The whole of the expense incurred in testing the pipes shall be borne solely by the Contractor, and all pipes injured or broken by the testing shall be immediately replaced by sound pipes, subject to the foregoing tests, at Contractor's cost.

17. Stone.—All stone used in the construction of these works for pitchers or masonry, unless where otherwise specified, to be sound, solid, hard sandstone, of the best description, free from all defects, and as per sample approved.

18. Broken stone for ballast to be sound, solid stone, as specified in clause 17; to be broken to a size to pass freely with its largest dimensions through a ring of 4 inches in diameter. Broken stone for packing round sewer-lining, above drains, &c., to be sound and solid, and broken to the same size as ballast.

19. Broken stone for bluestone concrete to be of basalt or other similar hard stone of approved quality; to be broken by hand or crushing machine, of a size to pass freely with its largest dimensions through a ring of  $1\frac{1}{2}$  inch in diameter; the whole of the metal to be free from dirt, quarry refuse, &c.; to be screened through a sieve of meshes  $\frac{1}{2}$  inch apart, and then to be washed with fresh water until approved, before it shall be deemed fit and suitable for these works.

20. Sand to be sharp quartz sand of approved quality, free from all carthy, loamy, clayey matter, &c., and washed perfectly clean whenever the Engineer deems it necessary.

21. Cement.—The cement to be used throughout these works to be the best Portland cement, of approved brands and manufacture, free from hard or set lumps, and no barrel or portion of same to be used until it has been examined and approved by the Engineer. Samples from each parcel brought on the works to be submitted for testing:—The weight per struck bushel not to be less than 100 lb., and not to exceed 116 lb. The specific gravity not to be less than 3.08. The cement, when passed through a wire sieve of 2,500 meshes per square inch, to leave a residue of not more than 10 per cent., through a sieve of 5,800 meshes not more than 25 per cent., and through a sieve of 14,400 meshes not more than 40 per cent. The cement, when mixed neat with  $16\frac{1}{2}$  per cent. by weight of water, to give a tensile strength of not less than 250 lb. per square inch after three days' setting in water, 445 lb. after seven days, and 550 lb. after twenty-eight days. The cement is to be "slow setting" unless a quick setting cement is specially ordered. The cement, when mixed in the proportion of 1 of cement to 3 of standard sand, and 10.6 per cent. of the total weight of water, to give a tensile strength of not less than 100 lb. per square inch at seven days, and from 200 to 230 lb. at twenty-eight days. The tensile strength will be ascertained in the departmental testing machine, with the load increasing at the rate of 200 lb. per minute, and the average breaking weight of six briquettes will be taken for each test. Should the sample fail in any or all of these tests, or not show a proper progressive increase in strength with age of briquette, then the Engineer may reject the whole parcel from which the sample was taken, and the Contractor shall at once remove the said parcel of cement from the site of the works at his own expense; failing which, the Engineer may have it removed at the Contractor's cost without further notice. Empty casks to be destroyed, as provided in clause 14 of the General Conditions. To facilitate the gauging of cement throughout the Contract, cement casks will be taken as equal to holding 4 cubic feet, otherwise the Contractor to provide and make approved gauge boxes, holding exactly 4 cubic feet, for measuring cement. Cement of a lighter weight than herein stipulated, but otherwise equal to the specified test, may be permitted to be used in the works, subject to the decision of the Engineer-in-Chief, and provided that the deficiency in weight is made up in quantity.

22. Mortar.—The mortar to be used in these works to be composed of one part of Portland cement and of two parts of clean washed sharp sand, as described in clauses 20 and 21, the proportion of each to be correctly ascertained by measurement; the whole to be mixed with fresh water, as may be directed, to be well incorporated, and to be used fresh. Any mortar which has become hard or set to be at once rejected. All mortar to be mixed upon approved sawn timber platforms, close to where it is required.

23. Special mortar, composed of one part of cement and one part of sand, and prepared as before described, to be provided and used in all portions of the work where especially specified and directed.

24. Grout.—The grout to be made of mortar, as described in clause 23, to be mixed fluid in tubs close to where it is required, and to be used fresh.

25. Bluestone concrete.—The concrete to be used in these works to be composed of 1 part of Portland cement, 2 parts of sand, and 4 parts of bluestone metal.

26. Special concrete, if required, to be composed of 2 parts of Portland cement, 3 parts of sand, and 7 parts of bluestone metal.

27. Sandstone concrete, where ordered to be used in these works, to be composed of 1 part of Portland cement, 2 parts of sand, and 5 parts of sandstone (as specified under clause 17) metal, free from dirt, quarry refuse, sieved (as specified in clause 19), washed, and of a size to pass with its largest dimensions through a ring of 2 inches in diameter. All materials to be mixed in the same manner as hereinafter specified for concrete.

28. Puddle to consist of the best clay to be obtained in the district within a radius of 5 miles; to be carefully turned over and mixed with fresh clean water, as shall be directed, until the clay, in the opinion of the Engineer, has become of one even and uniform colour and plasticity.

29. Hardwood timber to be ironbark, blue or red gum, box, or other approved colonial hardwood, of the best description, sound, straight, free from sap, wanes, shakes, gum-veins, cores, or other defects; to have clean sharp arrises, and to be of the fullest dimensions shown or specified; in round timber, the diameter given is to be measured at the smallest end, exclusive of bark.

30. Wrought-iron.—All wrought-iron work to be of the best description, quality, and workmanship, with square arrises, and of the exact dimensions and forms shown on Drawings. All wrought-iron to be double H. or B.B. Crown brand, and all ironwork, when finished, to be heated and then dipped in or coated with gas-tar.

31. Bluestone road-metal.—The stone used for metalling to be basalt or other similar hard stone of approved quality; to be broken to angular fragments of a size to pass freely with their largest dimensions through a ring  $2\frac{1}{2}$  inches in diameter, and to be free from dirt, quarry refuse, &c.

32. Bluestone.—All bluestone used in the construction of these works for pitchers or masonry to be of the best description of basaltic bluestone obtainable, free from honeycomb and all defects, and as per sample approved.

6. General.

33. Earth-borings have been taken along or close to the line of sewer, the results of which are described on drawing No. 1; but no guarantee is given that the ground to be excavated will be free from subsoil water, or that the proportion of materials will correspond with that shown on longitudinal section, or that there will be more or less subsoil water than indicated.

34. Diverting surface water and unwatering.—The prices set forth in schedule accompanying tender for the works comprised in this contract to cover and include the cost of all materials and labour, and everything that is necessary for executing the works of every description required for the proper and effectual deviation of all creek, surface, and subsoil drainage from the sites of the works; in constructing temporary coffer or other dams across the low-lying ground above and below the site of the works; in diverting said creek, subsoil, and surface water, from time to time, as the progress of the contract may require; in providing and constructing adequate and secure fluming, pumping apparatus, &c., for conducting undisturbedly all freshets, and the usual quantity of water flowing in the existing creek, across the site of the works on or near lines of lowest ground; in keeping all trenches and excavations constantly unwatered, and in preventing any injury to the same by floods or any other cause.

35. Diversion of sewage of existing sewers during the construction of the works.—During the construction of the works in general, and of all points of intersection of existing and new sewers, and until completion of all works connected therewith, the contractor to provide all materials and labour and everything that may be necessary, and execute all the works of every description required to prevent (and be solely responsible for) all damage and injury which may occur to private property or to the existing or new works by floods, flooding with sewage, choking and bursting of sewers in consequence of insufficient and inadequate pumping apparatus, tanks, dams, fluming, &c., or any other cause, and erect and construct suitable tanks, pumps, watertight temporary dams across existing sewers above and below points of intersection, and watertight adequate and secure fluming for the purpose of conveying constantly the whole of the sewage which may flow in sewers at any time across said points of intersection, at his sole cost, to the entire satisfaction of the Engineer-in-Chief.

36. The contractor to adopt every precaution and provide all materials, piling, planking, shoring, labour, &c., and carefully execute, erect, and construct, at his own cost, any timbering and shoring wherever required and directed; and also watertight temporary coffer or other dams at junctions of creeks across outlet end of sewer, &c., or to prevent effectually the water from other creeks and from Shea's Creek at low or high water level from entering the site of the works, or such portions of same that may be operated upon at the time, during the term of the contract or as shall be directed, as the contractor shall be held solely responsible for all damage and injury which may occur to private property, to existing or new works, by floods, in consequence of insufficient and inadequate piling, timbering, pumping apparatus, dams, sluices, fluming, or any other cause.

7. Excavation.

37. The excavations for sewers, manholes, junctions, curves, &c., to be executed to the depths, widths, and gradients shown on longitudinal and cross sections, and according to the nature and solidity of the ground.

38. All trenches excavated in rock to be taken out to the exact cross-sections of the concrete work, as shown on drawings, while in compact, loamy, clayey, or other material of sufficient solidity; all trenches to be excavated at bottom level transversely, and 6 inches wider at each side than the exact width required for the concrete, and the sides from bottom of trench to surface of ground to be excavated with a batter of one in eight, unless otherwise directed.

39. In less compact or soft ground the trenches for foundations of sewers, manholes, &c., to be excavated to such depths and widths as shall be directed and determined during the progress of the works. The excavation for foundations of sewers, manholes, &c., may therefore vary in depths and widths from those shown on drawings, but the exact cross-sections of all excavations will be determined by the engineer as the works proceed. All excavations to be taken out to the widths and depths herein specified, clear of any shoring and timbering wherever such may be required.

If the 13 or 27 chains of the outlet end of proposed storm-water sewer (as provided in clause 3) should not be excised from present contract, then pending the completion of proposed ship-canal to its junction with proposed storm-water sewer, an open channel, when ordered, to be excavated to such gradients, depths, and cross-sections, from the junction of the two channels to the present heap of said ship-canal, a distance of about 32 chains, as shown on drawing No. 1, and as shall be determined at the time.

40. The excavation in "solid rock" for pipe-trenches shall have vertical sides, and shall be of the following sizes, viz. :—

|   |                   |
|---|-------------------|
| For 24-in. diameter stoneware pipe-sewers ..... | 3 ft. 9 in. wide. |
| 21-in. do do do .....                           | 3 ft. 4 in. do    |
| 18-in. do do do .....                           | 3 ft. 0 in. do    |
| 15-in. do do do .....                           | 2 ft. 6 in. do    |
| 12-in. do do do .....                           | 2 ft. 0 in. do    |
| 9-in. do do do .....                            | 2 ft. 0 in. do    |

41. When timbering is not required in excavation in all other ground for pipe-trenches, the trenches shall be of the same widths as those in "solid rock." Where timbering is required, the excavation for pipe-trenches 8 feet deep and under shall have vertical sides, and shall be of the following sizes to the outside of the polling-boards, viz. :—

|   |                   |
|---|-------------------|
| 24-in. diameter stoneware pipe-sewers ..... | 4 ft. 0 in. wide. |
| 21-in. do do do .....                       | 3 ft. 7 in. do    |
| 18-in. do do do .....                       | 3 ft. 3 in. do    |
| 15-in. do do do .....                       | 2 ft. 9 in. do    |
| 12-in. do do do .....                       | 2 ft. 3 in. do    |
| 9-in. do do do .....                        | 2 ft. 3 in. do    |

42. Where timbering is required, the excavation for pipe-trenches about 8 feet deep shall have vertical sides, and shall be the widths given in clause 41 for the lower 8 feet, and for any depth over and above 8 feet the trenches shall be of the following sizes to the outside of the 1½-inch polling-boards, unless otherwise ordered in writing, viz. :—

|   |                   |
|---|-------------------|
| 24-in. diameter stoneware pipe-sewers ..... | 4 ft. 9 in. wide. |
| 21-in. do do do .....                       | 4 ft. 4 in. do    |
| 18-in. do do do .....                       | 4 ft. 0 in. do    |
| 15-in. do do do .....                       | 3 ft. 6 in. do    |
| 12-in. do do do .....                       | 3 ft. 0 in. do    |
| 9-in. do do do .....                        | 3 ft. 0 in. do    |

43. Shoring, timbering, and temporary bridges.—During the excavation for sewers, branch sewers, and pipe-sewers, in open cuttings, for junctions, points of intersection, flushing chambers, pipe-trenches, curves, manholes, crossing over or underneath existing road bridges, existing gas, water, and sewer pipes, and oval or circular brick sewers, &c., the contractor to adopt every precaution, as specified in clause 36, and provide all materials, as planking, strutting, shoring, timbering, &c., and labour, and carefully execute and construct, at his own cost, wherever considered necessary by the engineer, and to his entire satisfaction, temporary bridges underneath Mitchell Road and other lines of streets or footpaths, so as to ensure during the period of the contract the undisturbed traffic along said streets, &c.; and execute approved strong and secure shoring and strutting and underpinning where the sewer passes under existing pipes and brick sewers, and in sandy or loose soil close timbering, or any other work that may be required to prevent any buildings over and adjacent to the line of sewer, and all other superstructures, road-surfaces, earth, rock, or other materials at top and sides of excavations from settling, cracking, being shaken, slipping, or falling in.

As the works proceed, all shoring, timbering, temporary bridges, &c., shall be withdrawn except in cases where, in the opinion of the engineer, the withdrawing of the same is impracticable, or would endanger the safety of the works and buildings, existing pipes, sewers, &c., streets, and other surfaces, over and adjacent to same, when the contractor must obtain an order, signed by the Engineer-in-Chief, to the effect that shoring, timbering, &c., may be covered up, with a statement of the quantities, which shall be measured before being covered up, and paid for at schedule rates.

44. Pipe-sewers.—Transverse and other checks to be excavated to receive pipe sockets and junctions, and for the purpose of making joints. No portion of pipe-trench to be opened up anywhere until a sufficient number of pipes are on the ground ready for laying, and no greater length of the trench to be opened up at any time, at any place, than into which pipes can be laid and jointed during two working days.

45. If the contractor has exceeded the sectional area of excavation as shown, he shall remove such extra material and make good and fill in same at sides of trench with good material, and at bottom with sand filling or concrete, as may be directed, at his sole cost.

46. The contractor will be paid only for the actual excavation done, not exceeding that due to the widths, batter, and dimensions, described in clauses 33 to 42. Any increase in width or batter which the contractor may think fit to take out for his own convenience, or which he may be compelled to take out by force of circumstances, will not be measured, but shall be covered by schedule prices. If, however, under the written authority of the engineer, any portion of the excavation has been deepened or widened out on account of bad foundation or for other purposes, the extra excavation so ordered will be paid for at schedule rates.

47. Disposal of soil.—Any sludge, filth, or other objectionable matter that may be met with in the excavations, shall not be used for refilling, but shall be kept separate from the approved soil, loaded into covered carts during the same day on which it is excavated, and disposed of as directed—to be paid for as specified under refilling, clauses 60 and 61.

48. No concrete-work or pipe-laying shall be commenced until the portion of excavation to be operated upon has been cleaned and levelled, and until the engineer or superintending officer has examined and approved of same; and no work shall be covered up until it has been examined and approved, and its covering up has been authorised by the engineer or superintending officer.

49. Sumps.—Any sumps which the contractor may think fit to sink on line of sewer for his own convenience during the construction of these works are to be filled in with concrete, as specified, and the cost of sinking, timbering, unwatering, and filling in concrete and removing the materials, &c., to be entirely borne by the contractor.

50. Removal of road metal, pitching, rubble masonry, timber-decking, &c.—Prior to commencing any excavation for a manhole, junctions, concrete or pipe sewers, road or street intersection, &c., in open cutting (in accordance with the various stipulations and conditions contained in this specification and in clauses 6 and 11 of the conditions of contract), the sites for each work to be prepared by the removal of all road-metal, ballast pitching, asphalted, existing stone abutments, of bridges, timber-decking, &c., where such occurs, as shall be directed. The materials so removed in the first instance to be laid and stacked aside, as the engineer may direct, in different spoil-banks; and as the works proceed, the said materials, if approved of, to be used in reinstating the metalled, pitched, and paved road-surfaces, as the case may be, and those not approved of to be carted away to such places as shall be ordered, the cost of such work to be included in the price for one cubic yard of excavation.

51. All sods, road-metal, pitching, ballast, &c., removed and damaged, injured, or otherwise not approved of as fit for relaying, placing, setting, and fixing in the reformation and reinstatement of the various road and other surfaces, to be replaced by contractor with new, sound, and approved materials of their respective kinds, and therewith to reinstate and maintain during continuance of contract, the various road and other surfaces, at his sole cost, as provided in clause 9, in a sound and satisfactory manner, in accordance with clause 11 of the general conditions of contract, and to the entire satisfaction of the municipal authorities and of the Engineer-in-Chief.

52. It is to be distinctly understood that when excavating for the foundations of the works and open channels where ordered, the materials excavated and raised to the surface of the street, or other ground, are to be at once removed from off the same; and when building materials, &c., are to be conveyed to the works, that the same, on arrival at open cutting, must be at once conveyed to the works in the same, as no allowance can be given to contractor to disturb or impede the usual traffic in the streets, or the usual occupation of the ground by the owner or the public beyond being in possession for the time of a strip of land of the exact width required for the works, as described in clause 6, except in all cases where the contractor has obtained the necessary permission to occupy larger areas, in strict accordance with the provisions contained in clauses 6 and 11 of the conditions of contract.

53. The different materials as sludge, filth, sods, road-metal, ballast, mud, sand, loam, clay, shale, and ironstone, masonry, timber-decking, &c., met with in all excavations for the construction of these works, shall in the first instance be put aside beyond actual site of the works in separate spoil-banks; they are to be measured and paid for under one item as "general excavation," and then to be used in filling in round concrete and over same, and filling into abandoned portions of existing open channels, as hereinafter specified in clauses 55 to 62, and as shall be directed.

54. The price of one cubic yard of excavation for all sewers, manholes, junctions, curves, open channels, &c., shall include the cost of all labour, tools, implements, plant of every description, timbering, shoring temporary bridges underneath streets, lanes, roads, &c., diverting surface water, unwatering, putting all excavations in the first instance to temporary spoil-banks, reinstating all fences, walls, walks, streets, roads, metalling, grassed, paved, or asphalted surfaces, as they were before the commencement of the works, and completing these works in strict accordance with plans and specifications.

#### 8. Refilling, Road Restoring, &c.

55. Refilling.—Unless otherwise directed, sand, clay, loam, pipeclay, and soft rock of approved quality only shall be used in refilling the spaces between the sides of pipes, sewers, &c., and sides of excavation, and over pipes, sewers, &c. The refilling to be done in level layers, spread 6 inches thick, each layer to be carefully and separately rammed as hereinbefore specified. The lower layers up to level of top of pipes to be carefully packed and rammed solidly under and at sides of pipes and socket-joints with spades or other narrow tools. The filling to be done, as above described, to such a distance below the level of the street, road, path, &c., as the case may be, to admit of the ballasting, metal, or other covering being replaced. Only iron-shod rammers of not less than 10 lb. weight, of approved pattern, to be used, and one man to be employed in ramming to each man to be employed in filling. Filling into embankments and into abandoned portions of existing open channels to be done as above described, except that the layers shall be 9 inches thick, and all slopes of embankments to be dressed to such inclines as shall be directed.

56. Road restoring.—After the filling-in of sewer-trenches has been consolidated and approved, as specified, the surfaces of roads, streets, paths, &c., to be at once formed or restored, as the case may be, in the manner hereinafter described, viz., in the case of roads and streets which are ballasted and metalled, 9 inches of ballast shall be laid thereon, and after this has been blinded with selected and approved material, the metal put aside, as specified in clause 54, shall be evenly spread and rammed until approved; in the case of roads or streets which are ballasted only, 9 inches of ballast shall be laid thereon, and blinded with selected and approved material; and in the case of other coverings the surfaces to be restored to the same condition as they were before the commencement of the work. Any additional ballast which may be required over and above that found on the site of the excavation, and referred to in clause 50, to be supplied by the contractor, and the cost of same to be included in schedule items for filling.

57. Cleaning streets.—Immediately the pipes are laid, or concrete and other work in connection with manholes, lampholes, &c., are executed, and the ground filled in over any length of sewer, it is to be distinctly understood that all surplus material is to be carted away, the road cleaned until approved, and the road and other surfaces to be made good, flush with surrounding surfaces of roads, paths, &c., to the satisfaction of the municipal authorities and the engineer, in accordance with the specification; and if the contractor fails to do this the engineer shall be at liberty, without further notice, to get the roads cleaned, and the road and other surfaces made good at contractor's cost.

58. Maintenance of streets.—The contractor shall maintain the surface of the roads, streets, &c., after the trenches have been filled in, where the streets, roads, &c., have been broken up or injured during the progress of the work, during the period of the contract time, and afterwards during the period of maintenance, and shall from time to time make good any sinkings in the surface, and shall provide any additional metal, ballast, or other material that may be necessary during these periods, in accordance with clause 9.

59. If required by the engineer, the contractor shall, at the termination of the period of maintenance, procure certificates from the municipal authorities concerned, that the roads, &c., in their respective districts are in a satisfactory condition.

60. The price of one cubic yard of filling round all concrete and brickwork of sewers, curves, junctions, manholes, into old creek channels, embankments, &c., from all excavations, and any other sources outside the limit of the contract, shall include the cost of all labour, tools, implements, and plant of every description, carriage from temporary spoil-banks, or getting additional materials from other places outside the contract, excavating, filling-in, ramming, watering, and completing all filling-in in strict accordance with plans and specifications. It shall also include the removal and disposal of all rubbish, sludge, and other objectionable matter, as well as any excess of material beyond that required for refilling; these materials to be immediately removed from site of works and deposited in such places as shall be approved.

61. All refilling to be measured the net dimensions of excavation, less the actual net displacement of the permanent works.

62. Where it is found necessary to carry the excavation deeper than the underside of concrete foundations, in order to obtain a compact solid bottom, the portion so excavated to be filled in to the underside of concrete foundation with good quarry-filling (which shall be provided by the contractor), in level layers 6 inches thick, rammed and watered until approved. The price per cubic yard of such filling in to be one cubic yard of "filling-in" as described in clauses 60 and 61.

*Turfing.*

63. On completion of all refilling and filling at sides of concrete-work, and pitching, into abandoned open channels, and where ordered, all top surfaces and slopes to be protected by sodding. Prior to sods being laid, all surfaces to be levelled off, trimmed, and dressed to such level or inclined planes or slopes as shall be directed. The sods to be the best obtainable within a radius of 5 miles, of approved quality, not less than 3 inches in thickness and 10 inches square at top and bottom, full cut, with square arrises, to be laid in approved bond on their own flat beds, close-jointed, over all top surfaces of filling, to be beaten down as the work proceeds with proper tools, as shall be directed, and when finished to present throughout perfectly smooth and plain surfaces. If the season requires it, the turfing to be properly and regularly watered to ensure the grass taking fresh root. The levelling and trimming of the ground and the turfing to be carried out simultaneously, and no greater area to be levelled and trimmed at any time than can be covered with turfing during two working-days.

*IX.—Timber, Stone, Cement, Sand, Appliances, Plant, &c., to be on the ground ready when required.*

64. No excavations to be commenced on any portion of the contract until, in the opinion of the engineer, sufficient quantities of piles, sheet-piles, shoring, staging, scaffolding, stone, bricks, cement, sand, or other materials are on the ground, together with the necessary appliances and plant, to ensure the uninterrupted progress and continuance of the works, after they once have been commenced, at any locality, without any delay or stoppage. Delays and stoppages in the progress of the works arising from disputes as to quality of materials, and from insufficient supply of any materials, plant, &c., and any damage or injury caused to the works in consequence of such stoppage and delay, shall be entirely and solely at the risk and cost of the contractor.

*X.—Subducts.*

65. Where ordered, subducts to be constructed in hard-wood boxes, along lines of open trenches, 24 inches below invert of sewer, or as shall be directed at the time. The said boxes to be laid straight and true to levels decided upon, and 6-inch pipes to be laid therein, upon and surrounded by sandstone chippings and quarry refuse. Dry stone packing to be put over pipes, as specified in clause 18.

*XI.—Storm-water Channel, &c.*

66. Manholes and flushing-chambers to be built with sandstone concrete, to the forms and dimensions shown on Drawing No. 2, as may be ordered at the time.

67. Junctions and points of intersection, where ordered, to be formed in sides of manhole-chambers and sewers, &c., and worked into sewer-channel with such curves, shapes, forms, centre piers, arches, &c., as shown on drawings. Step-irons of  $\frac{3}{4}$ -inch round iron to be built into the concrete 15 inches apart, vertically, for giving excess to manholes. Grooves to be formed for flushing-boards and flushing-valves, to be built in where directed.

68. A cast-iron ventilating-grating to be placed over each manhole-flush with the surface of the street, and surrounded to a width of 9 inches with sandstone pitchers, bedded on paving-sand, set with full joints, and well rammed, cast-iron gratings to be placed over all manholes on line of sewer in open ground, flush with the formed surface of same, to be surrounded with pitchers as before.

69. After the cross-section and depth of trench for each respective length of sewer, according to the more or less solid nature of the ground, has been determined, excavated, cleaned, and approved, the sewers, together with the manholes, flushing-chambers, junctions, curves, &c., to be built therein with sandstone concrete in the manner described in clauses 78 to 95.

70. Where the ground is found to be very bad, the contractor shall, upon being ordered in writing to do so, construct timber platforms. The whole of the timber used in this work to be coated with two coats of the best kerosene tar. Transverse ground sleepers 12 in. x 12 in., spaced 6 feet from centre to centre, to be laid to exact depths and levels, and longitudinal sleepers 10 in. x 10 in. to be laid on top of same with butt joints, with 10 in. x 4 in. fish-plates 3 feet long underneath each joint, and bolted to the sleepers with two  $\frac{3}{8}$ -inch drift-bolts. The planking to consist of planks 9 in. x 3 in. sawn hardwood the width of the sewer, or longer if required, and spiked to sleepers with 7-inch spikes, one to each bearing; the spikes to be drifted down and cleaned off. All timber split, from whatever cause, to be replaced with sound timber. Before the plank-floor is laid down the spaces between ground and longitudinal sleepers to be filled in with sand, well rammed and watered, as shall be directed.

71. Guide-piles, walings, and sheet pilings at outlet end of channel, and where ordered.—Hardwood piles, 12-inch diameter at small end, to be provided, and to be driven perfectly plumb to a depth as shown on drawings, and as shall be directed. Any pile out of line, or split during driving, to be drawn and another sound one driven in its place. Piles to be fitted with wrought-iron, steel-pointed shoes, weighing 28 lb. each, of approved pattern, secured to piles with  $\frac{1}{2}$ -inch round iron spikes. The piles to be driven with a ram weighing 20 cwt., with fall when in position of not less than 5 feet, the fall to be increased as the pile is driven, as the case may require, and as may be directed. The side surfaces of piles to be adzed to a flat face for sheet piling to butt against, and the top shouldered to receive walings. Double walings, each 10 in. x 6 in., and central walings 10 in. x 10 in., to be provided and secured to piles by 1-inch galvanised bolts. Sheet piling, 3 in. by 9 in., to be provided, and to be placed between walings and driven down to the depths shown on drawings, and as shall be directed; to be driven close and wedged up. All piling badly driven to be drawn and fresh piling substituted. The guide-piles to be rung with 3 in. x  $\frac{3}{4}$  in. rings, and sheet piling with  $1\frac{1}{2}$  in. x  $\frac{1}{2}$  in. hoops. The plank floor of 9 in. by 3 in. planks over heads of piles to be provided and constructed as specified in clause 70.

As the contractor must provide all coffer-damming at his own cost, the above-described work may form part and be in conjunction with any timber-work for same, but only such piling and timbering described in clauses 47, 70, and 71, as ordered, will be paid for under schedule rate.

*Pipe-sewers.*

73. Foundation.—In clay or similar soil the pipes to rest direct and solid upon the soil. In rock, they are to be laid on a 1-inch bed of poor mortar; cost of same to be included in items for pipe-laying. In loose sand and other soil liable to be scoured out or easily shifted, they shall, if directed by the engineer, be laid on and surrounded by sandstone concrete, as ordered.

74. Laying.—In every case they shall be laid in such a manner that their barrels shall bear firmly and evenly on their bedding material, the sockets being entirely free from pressure in the joint-hole, and the spigots concentric with the sockets, and to be jointed, viz. :—

75. The 6-inch pipes with tarred gasket,  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 9-inch pipes with tarred gasket,  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 10-inch pipes with tarred gasket,  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 12-inch pipes with tarred gasket,  $\frac{3}{8}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 15-inch pipes with tarred gasket,  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 16-inch pipes with tarred gasket,  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 18-inch pipes with tarred gasket,  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{3}{4}$  inch deep within socket of pipe; the 24-inch pipes with tarred gasket,  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{3}{4}$  inch deep within the socket of the pipe.

76. After the tarred gasket has been placed in position and set tight round the pipe, and after the joint above has been cleaned and wetted, stiff special cement mortar to be packed in solidly, splayed off outside and finished with a carefully struck and cut joint, after which the inner joint between two pipes to be likewise carefully filled with special cement mortar all round, neatly wiped off as a finish. Each pipe length when thus finished to be carefully cleaned out before another pipe length is added.

77. Junction-pipes of any desired size are to be laid into the line of pipe-sewers wherever required by the Engineer. The socket ends of all junction-pipes, junction-blocks, junction-holes, and dead-ends are to be protected against the ingress of foreign substances, and made easily accessible for effecting future connections, by being closed with earthenware discs having a temporary watertight joint all round.

*Concrete-work.*

*Concrete-work.*

78. The concrete to be used in these works to be sandstone concrete of the quality specified in clause 27.
79. The contractor to find, provide, and make, at his own cost, all concrete-boxes, centres, staging, shoring, planking, &c., of the exact forms, shapes, curves, &c., required in a proper, secure, and substantial manner, due allowance being made for  $\frac{5}{8}$  inch thick cement facing over all internal exposed surfaces of concrete-work, and great care being taken that all centering and concrete-boxes can easily be withdrawn, except where otherwise directed. The designs for centering, concrete-boxes, &c., are to be approved by and to the entire satisfaction of the engineer. After completion of any portion of the concrete or brickwork, the concrete-boxes and the centering, as the case may be, shall not be removed until the Engineer or his superintending officer, has given written permission to that effect.
80. The concrete to be prepared on a clean timber platform of the necessary size. The stone to be well washed when put on the platform and levelled on top; the sand to be placed on top of stone, and cement on top of sand; the whole is then to be carefully turned over three times while dry, and then mixed with clean fresh water applied from a rose, as shall be directed; to be thoroughly incorporated before being used, and to be used fresh.
81. If the concrete is made by machinery, all materials to be prepared as previously described; then to be mixed dry, and afterwards with fresh clean water, as may be directed, and as shall be approved of; to be used fresh.
82. The concrete, after it has been approved of, to be conveyed to the work as may be directed, and as shall be approved of, and tipped into same and upon the surface of each layer from a height not exceeding 18 inches. Commencing at each part of the work at lowest level of excavation, the concrete to be brought up in horizontal and even layers, and on lines of sewer, branch and pipe-sewers, manholes, junctions, ventilating-chambers, &c., unless where otherwise directed, in even layers, parallel with specified longitudinal gradients of works. Each layer when spread to be 9 inches thick throughout before ramming, and, after spreading, to be quickly and evenly rammed all over until approved of, and then allowed time to set before the succeeding layer is put on.
83. After the contract has been carried up to the level of springing, all concrete arches to be commenced at both walls or abutments simultaneously, and carried on towards centre line in radiating parallel strips, spread 9 inches thick, of the whole width of arch, or in lengths as specified in clause 95 and as shall be directed at the time, and rammed as before described, and, where the arch is thicker than 9 inches, the lower layer to be completed throughout, and then allowed time to set and harden before the succeeding layer is put on.
84. After completion of the brick closing arch, all concrete work above springing of same, at sides of arch, in man-hole-chambers, shafts, &c., to be carried up in the same manner as specified in clause 82, and of exact dimensions, curves, and thicknesses, &c., as shown on drawings.
85. No portion of the concrete-work described in the previous clauses (unless otherwise directed in writing) to be covered up with earth or brickwork until it has been examined and approved of by the engineer. Any leakage that may appear in each layer to be carefully attended to, and be made good and repaired at the time, as shall be approved, before each succeeding layer is put on.
86. All end faces of layers of concrete to be stepped back at each respective length of sewer or other work, as shall be directed; to be carefully washed clean with fresh water, and then to be grouted prior to each layer of the adjoining length being commenced and joined on to the same.
87. After the lower layer has set to the satisfaction of the Engineer its top service to be carefully washed until approved, and then to be grouted all over prior to each succeeding layer of concrete being put on.
88. In the event of any stoppage occurring to the work, from whatever cause, or in anticipation of rainfall, the contractor, before temporarily stopping work, shall finish it off at whatever level the work may be raised at the time, by thoroughly grouting the whole of the surface with cement-grout. The contractor also to provide and have always on hand approved tarpaulins for the purpose of covering therewith, where and whenever directed by the engineer to do so, all fresh concrete-work and brickwork, when ordered, so as to protect the same, during all stoppages in the day-time and at night, from sun and rain, and during hot or dry weather to keep said tarpaulins watered to prevent the concrete-work from cracking and setting too quickly on the outside.
89. In all cases where a layer at mid-day or at evening is left incomplete, the said layer shall not be continued after any stoppage until the surface of the lower and the end of the upper layer have been washed clean and then grouted with cement grout.
90. At the sites of all flushing-valve or stop-board frames, cast-iron covers over manholes, ventilating-chambers, &c., after the concrete has been built to the exact height and gradient (leaving sufficient space for jointing), the whole of the cast-iron work, after having been washed clean with fresh water, is to be truly laid and jointed or set perfectly plumb or otherwise, as the case may be, and as shall be directed, in the exact positions, lines, and gradients, on fillets of mortar; and as the concrete rises against and around the castings, leaving a space of not less than  $\frac{1}{2}$  inch all round between the concrete and iron, this space round the invert, or underneath bottom of plates, as the case may be, to be filled in with special grout, or mortar, as shall be directed at the time, whilst above the springing line the outer surface of the castings to be grouted with special grout, and then to be covered with a coat of special mortar  $\frac{1}{2}$  inch thick before the concrete is built on to and around said pipes, castings, and frames.
91. The junction of the two creeks between 39.12 chains and 39.77 chains to be constructed with such curves, shapes, forms, flat arches between wrought-iron rolled girders, &c., as shown on drawings. On completion of junction to exact level of underside of transverse iron girders, the latter to be laid transversely over side walls of junction, bedded in and upon special cement mortar,  $\frac{1}{2}$  inch thick, truly parallel to each other, and spaced 4 feet from centre to centre, after which the cement filling alongside walls between and over ends of girders to be completed. The arches of 4 feet span, with a rise of 5 inches in centre, between the girders, to be commenced from north end, and to advance to the south end of junction (all girders being carefully stiffened and held in position by props as shall be directed) with not less than 11 centres of the exact width of junction between side walls. The arches to be built as specified in clause 83, and on completion to form a level concrete decking 3 inches above level of top of girders.
- The intersecting point of proposed 18-inch diameter sewer, passing transversely through new storm-water channel near Mitchell Road, to be constructed and formed by said storm-water channel being gradually widened from its proper width of 10 ft. 6 in. above point of intersection to 15 ft. 6 in., and again drawn in to its proper width of 10 ft. 6 in. below said point of intersection (on a total length of 24 feet) with a pier 18 inches thick in centre, as shown on drawing, care being taken that the same cross-section area is maintained throughout the length of the intersecting chamber; 2 ft. x 2 ft. openings to be left at present in side-walls and centre pier of sewer for insertion of said 18-inch diameter pipe-sewer, said openings to be temporarily closed with brickwork in cement 9 inches thick.
92. All anchor-bolts in connection with cast-iron frames to be placed in the exact positions required, to be washed clean, wetted, bedded upon, and surrounded with special mortar, in each case before the concrete is built round same.
93. All stoneware pipes, where they are shown to be or ordered to be surrounded with concrete, to be clean washed with fresh water, to be truly laid and jointed in the exact lines and gradients on fillets of mortar, and to be grouted all round with special grout as the concrete is being built all round same.
94. On completion of concrete-work, and after the boxes and centering have been removed, the outer faces shall present compact, solid, even, plain surfaces. All faulty portions, cavities, holes, or other defects shall be at once repaired by the contractor, at his own cost, with concrete or mortar, as the case may require, to the satisfaction of the engineer.
95. The concrete of sewers in open trench to be commenced in accordance with clauses 2 and 116 in the different lengths of open trenches, and to be carried up in each and from each end of same simultaneously, in not less than three continuous lengths of 40 feet each (unless otherwise directed),—that is to say, when the arching-in of the first 40 feet commences the next length of 40 feet must be completed up to the springing of arch, and the third 40 feet length must be in progress, and the latter so timed that the work is raised up to springing of arch by the time the closing in of the adjoining length commences.

*Brickwork.*

96. The brickwork required in sewers, &c., to consist of the materials and mortar described under clauses 14, 15, 20, 21, and 22. All circular work to be built of radiating bricks, unless otherwise directed. All bricks to be thoroughly soaked in clean fresh water for not less than five minutes immediately before being used. All work to be built with whole bricks, and all walls in English bond, with  $\frac{1}{4}$ -in. joints, in alternate courses of headers and stretchers, each brick to break joint with the one above and underneath, and to be set full and rubbed in cement mortar. Every course to be carefully and thoroughly grouted, and well wetted before the succeeding course is put on. All work, wherever directed, to be finished on all outside and inside faces with a neatly-struck joint. The brickwork of sewers, &c., to be of the thickness, dimensions, curves,

curves, and gradient shown on longitudinal and cross sections, and as shall be determined and directed from time to time by the engineer as each portion of excavation becomes ready for concrete or brick lining. Wherever brick lining for sewer is ordered it shall be built in radiating courses in  $4\frac{1}{2}$ -in. rings, each brick to be set full and rubbed in cement mortar, with joints not exceeding  $\frac{1}{4}$  in. in thickness, in approved bond, the bricks of each course to break joint over the centre of those of the adjoining course. On completion of each ring of brickwork its whole surface to be carefully and thoroughly grouted, and then covered with a coat of cement mortar, collar-joint  $\frac{1}{2}$  in. thick. Before commencing each succeeding ring the surface underneath to be well wetted and grouted to ensure the thorough bonding of the joints. At completing any length of brick lining, the courses at end of same to be stepped back as shall be directed, and the end face of each ring or course to be well wetted and then grouted prior to each ring of the succeeding length being commenced.

97. The brickwork of sewer to be carried on in conformity with clause 95, and in such a manner that when the arching-in of one length of 40 feet commence the lining of invert of the next 40 feet in length must commence at the same time, and as the arching-in of the one length is completed the adjoining length must be completed up to the springing of arch.

98. Wherever concrete is to be built on to and against brickwork, or brickwork on to and against concrete, the latter in each case to be well wetted and grouted, and then to be covered with a coat of cement mortar, collar joint  $\frac{1}{2}$  in. thick, before the concrete or brickwork is built against it.

99. Prior to commencing any concrete or brickwork which has to be built on to and against rock faces, all shaken and loose rock to be removed, all rock surfaces to be well cleaned, washed, and wetted, and all beds, open joints, and spaces between concrete or brickwork and rock faces to be carefully filled in with cement mortar, and flushed and grouted every course as the brickwork proceeds; and the cost of thus preparing rock faces, washing, grouting, flushing, &c., to be included in, and covered by, the schedule price per cube yard for the concrete and brickwork herein referred to.

#### *Pyrmont Sandstone.*

100. Pyrmont sandstone ashlar of the quality specified in clause 17 to be provided where ordered in any situation in the construction of these works, to be worked, pierced, dressed, picked to the exact sizes, dimensions, forms, and shapes as shown on drawings or as may be directed, to be set full upon and in cement mortar, and to be finished, when directed, with a neatly cut and struck joint.

#### *Bluestone Ashlar.*

101. Bluestone ashlar, of the quality specified in clause 32, to be provided in blocks or otherwise when ordered, in any situation in the construction of these works, to be worked, pierced, grooved, picked, axed, and dressed to the exact sizes, dimensions, forms, and shapes, as shall be shown on detail drawings, or as may be directed; to be washed clean and well wetted before setting, and to be set in the exact positions required, truly level, on fillets of mortar, under the four corners of each stone, or under and between outer edges of joints as may be directed at the time, after which all joints between stones and between stones and concrete to be filled in with grout. All joints to be  $\frac{3}{8}$  inch wide, to be carefully raked out  $\frac{3}{4}$  inch deep, and filled in solid with special mortar, neatly pointed, finished flush with exposed faces of stones.

#### *Ironwork.*

102. Rolled girders, sheared, or cut, as shown on drawing No. 5, to be supplied, delivered, and fixed, as specified in clause 91, and to be paid for at per cwt. under schedule item No. 18. The contractor to provide means of weighing same in the presence of the inspecting officer. Should the girders be below the specified weights, payments will be made on actual weights, but any weight above that specified will not be paid for.

The following will be required :—

| Depth of Girder. | Width of Flange. | Thickness of Web.   | Length of Girder.                | Weight in lb. per foot run. | Number required. |
|------------------|------------------|---------------------|----------------------------------|-----------------------------|------------------|
| 14 inches.       | 6 inches.        | $\frac{3}{4}$ inch. | Varying from 12 feet to 18 feet. | 60                          | 10               |

103. All girders that are bent or twisted shall be heated and straightened.

104. The wrought-iron in girders must be free from scales, blisters, laminations, and all other defects, of approved manufacture, and equal in quality to the best Staffordshire plate. The ten lengths of the girders are respectively as, viz.:—12 feet, 12 feet, 12 ft. 3 in., 12 ft. 9 in., 13 ft. 6 in., 14 ft. 3 in., 15 ft. 3 in., 16 ft. 6 in., and 18 feet.

105. The test for wrought-iron shall be as follows :—A piece of 1 inch sectional area, of such shape and cut from such a bar as may be determined, with a length of at least 7 inches, under tension shall bear a strain of—

|   |
|---|
| 18 tons without elongation exceeding $\frac{1}{8}$ inch ; |
| 21 " " " " " " $\frac{1}{4}$ "                            |
| 23 " " " " " " $\frac{1}{2}$ "                            |

and to elongate  $\frac{3}{4}$  inch with a strain of 24 tons before fracture.

106. The whole of the wrought-iron work to be properly cleaned and then heated, and while hot to be dipped or coated with two coats of hot gas-tar, to be applied with brush.

107. The girders to be solidly bedded in the concrete on a  $\frac{1}{2}$ -inch joint of special mortar, and finished off inside and outside with a neat cut and struck joint.

108. The castings to be provided of the grates and frames, &c., shown on drawing No. 5, to be cast of No. 2 pig-iron or of a proper mixture of No. 1 and No. 3 pig-iron, according to the quality of the iron and the nature of the pattern; said iron to be of the best quality, tough, close-grained, and capable of being chipped and drilled without difficulty, perfectly sound, free from all cold shuts, honeycomb, holes, or other defects; to be cast in dry sand moulds, unless where otherwise directed; and the whole of the castings of the pipes, plates, ventilating and other grates and frames, as soon as they have been cast, to be properly cleaned and then heated, and whilst hot to be dipped or coated in gas-tar.

109. All castings to be true in sectional form, straight longitudinally where shown to be so, or of such shapes, projections, curves, angles, and forms as shown on drawings; and each portion of such castings to be of equal strength and of the specified thickness throughout its respective length. The ventilating grates to be complete with tarred sawn iron-bark wood-bricks fitted into panels of covers, as shown.

110. The external and internal surfaces of all castings to be perfectly clean and smooth, and in strict accordance with sections.

111. The cast-iron work hereinbefore specified to be completed in the most workmanlike manner in strict accordance with the drawings and dimensions figured thereon, and such directions and other details which the engineer may provide during the progress of the works; and all grates, &c., with all wrought-iron work, to be left in perfect working order.

#### *Cement Coating.*

112. The whole of the internal and external surfaces of sewers, manholes, chambers, &c., where such is shown on plans, and where directed, to be protected by a cement coating, to be put on in two thicknesses, consisting of mortar of one part of cement to two parts of clean sharp sand. The coating throughout, when finished, to be  $\frac{3}{8}$  inch in thickness.

113. All surfaces to be well watered before mortar is applied.

#### *Sandstone Pitching.*

114. Contractor to provide and find, where ordered, squared sandstone pitchers 9 inch deep throughout, no stone to be less than 9 inch x 9 inch x 9 inch, but to be larger and longer, if ordered, curved and radiating, as shall be directed; to be worked, fitted, and set in sand, one ring round all manhole covers, with  $\frac{1}{2}$ -inch joints between pitchers and cast-iron frames, as ordered.

*Existing*

*Existing Gas, Water, or Sewer Pipes and Sewers.*

115. During the excavation and construction of these works the contractor is to take every precaution to prevent damage or injury to existing gas, water, or sewer pipes and sewers. Such pipes and sewers on being met with at sides, over, or crossing the excavations of these works, to be carefully and securely protected and supported, as the case may require, by chains, timbering, strutting, and under-pinning, &c., to prevent said pipes or sewers from being shaken, bent, or broken, and the contractor to provide all materials, plant, and labour required for said timbering, strutting, and under-pinning, &c., and maintain the same at his sole cost until, in the opinion of the engineer, the refilling of excavation and the general progress of the works render further precaution unnecessary.

*XII.—General Progress and order of Works.*

116. The contractor, immediately after he gets possession of the ground, shall commence the sewer throughout the length of the contract, unless otherwise directed, and proceed with the earthwork, concrete, and other works connected therewith in the manner described in clause 95. The progress made every working week with excavation, filling in, concrete, pitching, roadwork, &c., required in the construction of the sewer and all other works, shall not be less than 160 feet of sewer complete.

*XIII.—Notice for Inspection.*

117. The contractor will give notice to the engineer of the commencement or completion of the undermentioned work, and formally submit it for inspection before proceeding to place, execute, or cover it up, viz. :—

Excavation of trenches.  
Excavation for foundations.  
Withdrawing of timber in open excavation, &c.  
Laying of foundation.  
Laying of pipes or subducts.  
Placing centering in position.  
Keying of arches.  
Striking of centres.  
Shifting of concrete boxes.  
Filling in round concrete and pipe-sewers and manholes into open trenches, sumps, &c.

*XIV.—Power to use any part of the Work.*

118. The Engineer-in-Chief shall have the power, at his discretion, without vacating this contract to enter upon, by himself or his agents, and make use of any part or parts of the work comprised under this contract, and his doing so shall in nowise be held as a waiver of the responsibility of the contractor in respect to his contract, except in so far as any injury may accrue to such work so entered upon by reason of any proved carelessness of any employé of the Government, in which event the contractor shall be free from liability on account thereof, but not otherwise.

*XV.—Maintenance.*

119. The contractor will be bound to maintain the works for a period of three months after their final completion and use by the Government; and if any part should within that period show signs of weakness or of giving way, or should any defective workmanship or materials be detected, the contractor, when called upon to do so, shall make good same at his own cost, to the satisfaction of the Engineer-in-Chief, before the reserve balance will be paid. It is to be distinctly understood that the Government shall have the full, free, and unrestricted use of the said works, without any interference whatever on the part of the contractor, during the currency of this period of maintenance; and such use of the said works on the part of the Government shall not be held as relieving the contractor of any liabilities or obligations whatever in respect of his contract.

*Conditions of Contract.*

120. The special and general conditions attached to this specification shall be held binding on all matters relating to this contract as far as the Engineer-in-Chief may deem the same applicable.

This is the specification marked "A," referred to in our annexed agreement with Her Majesty the Queen, dated the 16th day of March, A.D. 1891.

Witness,—HAROLD F. NORRIE, J.P.

JOHN CARTER.  
D. G. SNODGRASS.  
GEO. FORREST.

"B."

*1. Interpretation of Terms.*

Whenever the terms, hereafter explained in the present clause, occur in the conditions of contract and in the specification, they shall be held to mean, and shall mean as follows :—

- "Minister" shall mean the Secretary of Works of the Colony of New South Wales for the time being, or any person legally acting for him.
- "Engineer" shall mean the Engineer-in-Chief duly appointed by the Minister to have principal charge of the works.
- "Assistant Engineer" shall mean the person duly appointed by the Engineer-in-Chief to act in his behalf.
- "Superintending Officer" shall mean any person who may from time to time be notified to the contractor by the Engineer-in-Chief as being entrusted with the local superintendence of the works.
- "Overseer" shall mean any person who may from time to time be appointed by the Engineer-in-Chief to supervise the works or any part thereof under the immediate direction of the superintending officer.
- "Contractor" shall mean "Contractors" when two or more persons have tendered or contracted jointly for the work.
- "Special Conditions" shall mean the "Special Conditions" hereto attached and forming part of the contract; such special conditions shall be deemed to be, and shall be, incorporated with the general conditions.
- "Schedule Price" shall mean the rate at which the contractor has offered and agreed to execute the kind of work under consideration.
- "Contract Sum" shall mean the sum total, resulting from the finally certified quantities, ascertained in the manner provided in clause 16, and calculated at the schedule rates or arranged prices.
- "Drawings" shall mean and include any plan, section, general or detail drawing, sketch, or illustration referring to the works and explanatory of, or supplementary to, the specification.
- "Extra Work" shall mean any kind or description of work, not comprised in the "Schedule of Prices," and other than those, the distinct mention of which may have been inadvertently omitted in the specifications or drawings, and for which provision is made in clause 3 of these conditions.
- "Labour."—All cartage and haulage, and work done or to be performed by machinery, shall be included in the term "Labour."
- "Plant" shall mean and include all tools, utensils, stores, sheds, timber, scaffold, centres, moulds, templates, coffer dams, cordage, chains, tackle, boats, punts, rafts, sleepers, rails, waggons, trucks, trollies, engines, water and air pumps, boring and ventilating apparatus, signals, lights, diving bells and dresses, and every other thing necessary for the security, proper execution, completion and specified maintenance of the several works.

2. *Extent of Contract.*

The contractor shall, except in so far as the specification may expressly state to the contrary, provide at his own cost and expense all labour, material, and plant, and everything else necessary for the proper and complete performance of the contract. Supply of labour, materials, and plant.

All works described in, or implied, by the specification, or shown in any of the drawings, or set forth in any lists or tables thereof, or attached thereto, as well as those expressly herein provided for under clauses 3 and 4, are to be made and executed in every detail conformably to the several drawings already prepared, or that may be prepared hereafter for the purpose of this contract, in strict accordance with the provisions of the specification and conditions, both general and special, and to the entire satisfaction of the engineer. Execution of works.

Should any work be not so executed, it shall be at the sole risk of the contractor, and shall be immediately altered and amended at the contractor's cost and expense.

The contractor shall, at his own expense, set out accurately and to the satisfaction of the superintending officer, all the works comprised in this contract, in strict accordance with the drawings and specifications, and shall be solely responsible for their being so set out and executed, and that notwithstanding the superintending officer or overseer may have assisted the contractor in setting out the same. Setting out.

Contractor shall also at his own cost and expense at any time—by day or by night, either on working days or on Sundays or holidays—render all such assistance, and supply all such labour, plant, and lighting, as the engineer or superintending officer may require to check such setting out, or to inspect any portion of the works, which must for that purpose be left clear and free from any obstruction or impediment. During and for the performance of those operations contractor shall be obliged to suspend any or all of his work, if required to do so by the superintending officer, and without having any claim for loss or damage on account of such temporary suspension.

All bench marks, pegs, and signals on the surface, and all alignments and level marks underground, put in by the engineer or superintending officer for the purpose of checking the contractor's work, will be pointed out to the contractor and confided to his care. He shall, at his own expense, take all proper and reasonable precaution and care to preserve and maintain them in their true positions; in the event, however, of their being disturbed or obliterated by accident or from any other cause whatever, they shall be replaced by the engineer or superintending officer at the contractor's expense, and the cost thereof deducted from any moneys, then or thereafter due to the contractor. Protecting and maintaining signals and marks.

If two different contractors execute simultaneously two adjoining sections of the works, they shall be held jointly and severally responsible for effecting a proper junction of the sections. Junction of different contracts.

During the whole time of construction and during the "period of maintenance," referred to in clauses 10 and 18 hereof, and more particularly described in clause 3 of the special conditions, contractor shall keep and maintain in good and sufficient repair all the works, executed or in course of execution, and make good all injury or loss, which may happen or occur to them, or to any materials, or plant, or anything else in connection with the works under this contract. Maintenance.

4. *Specification and Drawings.*

The specification and the drawings (if any), referred to in the specification, shall be taken to explain each other; and anything contained in the specification or in any of the drawings shall be equally binding on contractor, as if it were contained in all. Specification and drawings to explain each other.

Any dimensions, written or figured on the drawings, shall usually be taken in preference to measurements by scale; but in cases of doubt in this respect, or in case of any discrepancy between the drawings, specifications, and conditions, or any ambiguity or defective description in them, such doubt, discrepancy, ambiguity, or defective description shall not invalidate the contract, but shall be rectified by the engineer if he deem it requisite, and the contractor shall have no claim for compensation for damages on account of such discrepancy, ambiguity, or defective description. Written dimensions to be preferred to scaling.

If neither specification nor drawings contain any mention of minor parts of works, which are reasonably and obviously necessary for the satisfactory completion of the works, such parts are to be provided, made, and executed by the contractor, without any extra charge, as if they were specially mentioned, and shall be deemed to be, and hereby are, included in the several schedule prices. Omission of minor parts.

It is hereby expressly understood, that the contractor is bound to completely and thoroughly inform himself of every circumstance connected with, or relating to, the work, and of the correctness or otherwise of any information contained in, or supplied by the drawings or specification, as he shall have no claim on account of any errors, omissions, or inaccuracies that may be found in those documents after the contract shall have been signed, and since he has to provide in his tender for every contingency that may arise. Errors of information at contractor's risk.

A copy of the conditions, specifications, and drawings will be furnished to contractors free of charge, but he must himself compare the same with the original, as no claim will be allowed for any errors therein. Supply of drawings and specifications.

All copies of drawings, &c., supplied to contractor are to be returned to the engineer on completion of contract.

4. *Increase or Decrease of Works.*

The contractor is to execute in like manner and with the same quality of materials, as provided for the works, expressly mentioned in specification and drawings, any extensions, additions, deviations, alterations, or extra works which the engineer may require by an order in writing. Quality.

The work executed under this clause will be measured up and paid for at schedule rates in the same manner as provided for the other works under this contract; and if it comprise any work not specified in contract and in schedule of prices a special agreement shall be made between the engineer and the contractor, and signed at the time of giving the order for such work. Quantity. Prices of extra works.

In case the above-named parties shall be unable to agree on the value of such extra work, the engineer shall be at liberty and fully authorised to have it executed by whomsoever he may think fit. If value cannot be agreed upon.

No extra work, extensions, or any additions, deviations, or alterations whatever, which may be claimed by contractor, will be recognised or admitted under any circumstances if done or executed without, or contrary to, an order in writing from the engineer as aforesaid, and the production of such order shall be a condition precedent to contractor receiving payment for them.

The Minister, or the engineer, acting on his behalf, may from time to time, by writing under his hand, require the omission of any particular portion or part of the works described in the specification or shown on drawings; and the contractor shall have no claim for loss of profit, sustained damage, or other compensation on account of any such omission. Omission of portion of the work.

5. *Possession of Lands.*

The Minister shall, within one month from the date of the signing of the contract by the contractor, put the latter in possession of such parts of the land required for the execution of the permanent works and spoil banks, or access to either, as in the opinion of the engineer may be necessary for their commencement. And the Minister shall also from time to time put contractor in possession of such other parts of the land as may, in the opinion of the engineer, be necessary for the vigorous prosecution and timely completion of all the works. Lands to be provided by the Minister.

The contractor must, however, procure for himself all other land which he may deem requisite for any temporary purposes or for his own convenience; but the Minister will, at the expense of the contractor, and only to the extent of any legal powers possessed by the Governor or Minister, assist the contractor in procuring such land or in procuring materials suitable for the construction of the works from any adjoining lands. Land to be provided by Contractor.

Should any delay take place in giving to the contractor possession of any land required for the construction of the works aforesaid, such delay shall not be deemed a breach of contract, or give contractor any claim for compensation, but the contractor shall be entitled to a commensurate extension of time for the completion of the whole works. Delay in getting possession.

Nothing herein contained shall at any time prevent the Minister or any person duly authorised by him from entering upon and making use of such lands or any portion thereof for any purpose whatever. Possession not exclusive.

6. *Trespass.*

The contractor shall not enter upon any lands outside the limits of the lands defined by and held in possession by him under clause 5 hereof for the construction of the works or for any purpose whatever in connection with this contract, without the distinct consent in writing of the occupier and owner of such lands, and shall not, without the permission in writing of the engineer or superintending officer, remove any trees or structures within the limits of the lands defined in said clause hereof. Private lands. Nor

- Cutting of trees.** Nor shall he open or throw down any part of a fence without making sufficient provision by temporary fences, gates, or other necessary accommodation, to be erected and maintained at contractor's cost, for preventing persons or animals from trespassing or straying from, or into, any enclosure affected thereby.
- Roads.** Nor shall he interfere with any private or public road without making proper temporary provision for the convenience of owners or users thereof.
- Damage caused.** Any costs or damages incurred by the Government through any legal process on account of any trespass caused by the act or negligence of the contractor or his workmen shall be considered as payment made to the contractor under this contract, and shall be deducted accordingly at the time of final payment to him.
- If not fenced by contractor, engineer to have power to do so.** Should the contractor refuse or neglect to erect and maintain, either or both, any such temporary fences or other necessary accommodation, it shall be lawful for but not obligatory on the engineer after having given to the contractor twenty-four's notice in writing of his intention to do so, summarily and without further process to cause any such temporary hoarding, fences, gates, bridges, or other accommodation to be erected and maintained, which he may deem necessary for the proper protection either of such lands or of the adjoining lands, or for the safety of the property of the owners and occupiers thereof or of the general public, and the cost of so doing shall be deducted as provided hereinbefore.

#### 7. *Sub-letting, Assigning.*

- No sub-letting or assigning.** The contractor shall not sub-let any portion of the works, nor enter into any sub-contract for the execution thereof or any portion thereof, nor shall he assign all or any of the moneys payable or to become payable under the contract, or all or any part of any other benefit whatsoever arising to him or which may arise under the contract without the consent in writing of the Minister; and no assignment without such consent shall have any effect or be in any way recognised.

#### 8. *Progress of Works.*

- Work to be carried out under the direction of the Engineer.** It shall be lawful for but not obligatory on the Engineer or Superintending Officer to direct in writing the contractor to carry out the works in such order and in such manner as he shall deem fit; and
- If the contractor shall fail to make such progress with the works, as the Engineer or the Superintending Officer shall deem sufficient to insure their completion within the specified time; or
- If he refuse or fail in the opinion of the Engineer or Superintending Officer to use due diligence in carrying out any particular part of the work, which the Engineer or Superintending Officer shall have directed him in writing to carry out forthwith; or
- Non-compliance.** If he shall use or employ bad or insufficient material, or shall execute any work in an imperfect manner or not to the satisfaction of the Engineer or Superintending Officer; or
- If he shall fail or neglect to take down or remove such work, or to rectify any such work for seven days after being required to do so in writing by the Engineer or Superintending Officer; or
- If he shall fail to employ what, in the opinion of the Engineer or Superintending Officer, is a sufficient number of men on the works; or
- If he shall suspend work without the Engineer's order or sanction in writing; or
- If the contractor shall in the judgment of the Engineer commit a wilful breach of the contract;
- Then, in any of such cases, it shall be lawful for the Minister to do at his option any of the following things, that is to say:—
- (a) The Minister or the Engineer may, on giving written notice to the contractor of his intention so to do, forthwith cause additional men to be employed and additional materials and plant to be purchased, and the cost of so doing may be deducted from any moneys then due or which may thereafter become due to the contractor.
- (b) Or the Minister may, by notification in writing under his hand, delivered to the contractor, absolutely determine this contract without further process; and from and after the delivery of such notice as aforesaid, the contract shall be absolutely determined, and on such determination the money, which shall have been previously paid to the contractor under the contract, shall be deemed to be the full value of the work executed, and shall be taken and accepted by the contractor in full payment and satisfaction of all claims and demands under the contract; and the balances retained, including amount deposited as security, together with all materials and plant, then being in or near or upon the works for the purpose of being used or employed in or about the same, shall remain the absolute property of Her Majesty, and may be disposed of as the Minister may think fit.

#### 9. *Bankruptcy.*

- Bankruptcy.** If the contractor shall become bankrupt or insolvent, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Minister, on behalf of Her Majesty, by notice in writing under his hand, to determine the contract by such notice, and for Her Majesty either to carry on the works under the Engineer's direction or to re-contract with another contractor to proceed with and complete the same upon such terms, stipulations, and conditions, as shall be deemed expedient by the Minister; and all the then remaining materials and plant may be used in, and applied for the purpose of, the works; and on the final completion of the works the surplus of such materials and plant shall be delivered to the contractor's assignees or trustees, but without any payment or allowance for any loss or diminution, wear, tear, or injury they may have sustained in the meantime; and any losses, damages, costs, or expenses, which shall, in the opinion of the Engineer, have been sustained by Her Majesty by reason of the premises, shall be deducted from the deposit money and the balance retained after payment of the progress payment; and the residue of such deposit money and percentages (if any), or any securities, in which the same may be invested (but without any interest thereon), shall belong and be paid or delivered to the said Assignees or Trustees; and if there should be no residue, but a deficiency, the amount of such deficiency may be proved for as a debt against the estate of the contractor.

#### 10. *Suspension and Completion.*

- Completion.** The whole of the works under this contract shall be completed on or before the day set forth in clause 1 of the special conditions as the "Date of Completion of Contract," and formally delivered up to the engineer in perfect order and repair, and to his entire satisfaction.
- Extension of time.** In the event of any alterations, deviations, additions, or extra works being required to be executed by contractor, or in the event of any delay arising under this clause, or under clauses 5 and 15 hereof, the engineer may allow such an extension of time (if any), as he shall think adequate for the proper carrying out of such alterations, deviations, additions, or extra works, or for the delay caused (if any).
- Liquidated damages.** The Minister, on behalf of the Queen, shall be entitled to deduct or set off for each and every week's delay after the date mentioned as the date of completion of contract, or after the expiration of the "extension of time" (if any), allowed under this clause, as and by way of liquidated damages, the sum mentioned in clause 2 of the special conditions.
- Such damages shall be deducted from the final balance and the cash security lodged by the contractor in accordance with clause 20 of these conditions and with clauses 5 and 6 of the special conditions, or, at the option of the Minister, from any other moneys payable to the contractor under this contract.
- Suspension.** On receiving a written notice to that effect from the engineer, contractor shall suspend the whole or any portion of the works, as may be directed in such notice. He shall have no claim for loss or damage on this account, unless the suspension exceeds one month, and such suspension shall in no wise vitiate the contract, but a commensurate extension of time for completing the works will be granted to the contractor.
- Testing.** When, in the judgment of the engineer, the whole of the works appear to be completed, they shall be tested or examined, as may be provided in the specification; if the result of the test or examination be satisfactory, they will be formally taken over by the engineer, or will issue a certificate to that effect, whereupon the period of maintenance shall begin.
- Maintenance.**

#### 11. *Safety of Works and Persons.*

- Reinstating defects.** Contractor shall be liable for the reinstating or making good of anything whatsoever, which may be removed, displaced, damaged, or destroyed during the performance of the works, or by reason of the same; and he shall also be solely responsible for all defects to, and failures in, the works, during the whole time of construction and the period of maintenance, whether the said defects arise from insufficient foundations, defective construction, bad materials, or any other cause within the contractor's control, or from the inclemency of the weather, landsprings, or similar cause.

Contractor

Contractor shall also provide and maintain all hoarding-barriers, night-lights, and properly-ballasted temporary roads, Hoardings, required by any municipal or other authorities having charge or control of streets or roads, or which may be required for the convenience or safety of the public; and he shall also make all arrangements by temporary roads or bridges or otherwise, roads, &c. which may be required by any local authorities or by the engineer, to prevent stoppage or delay of public traffic or any avoidable inconvenience to the public.

During the whole time of construction of the works, and during the period of their maintenance, contractor shall be liable for any accident, damage, or injury whatsoever to the public or to any individual, which may be caused by his operations or his neglect, and also for the safety of any adjacent roads, streets, cellars, vaults, pavements, walls, houses, and buildings, and shall be bound to remove any scaffolding, timbering, &c., as occasion may require or when ordered by the engineer to do so; and in case of emergency or probable danger to life or property the engineer, without notice to contractor, may there and then provide or employ, at contractor's cost, such labour, materials, and plant, as may be necessary to meet the exigency, of which the engineer himself shall be the sole judge. All such cost to be deducted from any sum then or thereafter due to the contractor under this contract. Liability for accidents, &c.

No opening is to be made in any street until a sufficient quantity of approved bricks or other material is on the ground to complete the length to be opened. Should any delay or dispute arise as to the supply of bricks or material, to prevent inconvenience to the public, the engineer shall have power to direct any opening made to be filled up and the surface restored at contractor's cost, amount to be deducted from any money due to the contractor.

#### *Agency, Notice, Right of Entry.*

When the contractor is not personally present on the works he must at all times during their progress have a responsible agent on the ground, who shall be deemed to be and shall be authorised to represent him for all purposes of this contract. Agency.

In case the contractor or his responsible agent shall not be immediately available at any point of the works, the instructions given by the engineer, in writing, to any overseer, foreman, or workman, employed on the works by contractor, shall have the same effect as if they were given to the contractor or his authorised agent.

Any written instrument or notice to be given or delivered to the contractor under this contract shall be deemed to have been so given or delivered when it is given or delivered to the contractor or his representative on the works, or left at the contractor's usual or last-known place of abode or business. Delivery of notice.

The engineer, and any other person duly authorised by him, shall have power at all times to enter upon all or any portion of the works; and to travel by any engine, lift, cage, carriage, truck, trolley, or other vehicle, which the contractor may be using on, or near, or in connection with the works; and to make examination of any work, fixed or unfixed, or in any state of progress, and of any materials or plant in use or intended to be used for the purposes of this contract; and the contractor shall give or afford facility for the exercise by the engineer and other duly authorised persons of the powers given under this clause, and shall for that purpose cause the motion of any vehicle, engine, or other machinery to be arrested when requested so to do. Entry on works.

Due notice shall be given by contractor to the superintending officer or overseer before any piles are swung and commenced to be driven; on the completion of all excavations for foundations, or otherwise, and before any foundations are laid therein; when foundation-rings for wells are to be laid, and before the well-sinking commences; before the filling in of the wells, of other structures, or of sewer or pipe trenches is proceeded with; before centres are struck; before and after tunnel soles are laid, and at such other stages of progress of the works, as may be specially directed in the specification. Progress notice.

#### *13. Dismissal and Mode of Payment of Men.*

The engineer or superintending officer may, for incompetency or misconduct, or inattention to orders, or other sufficient cause, require the dismissal within twenty-four hours by the contractor of any agent, overseer, foreman, workman, or other person, employed by him on the works; and in the event of the contractor refusing or neglecting to comply with such requisition all further payments on account of the contract may be stopped until such dismissal is carried out. Dismissal.

The workmen, tradesmen, and labourers of every class or kind, employed on the works under this contract shall be paid their wages or other earnings in full in money, current coin of the Colony, at least once in every fortnight, and no ticket or other system of payment by goods of any sort, provisions, or liquor will be allowed on any pretence whatever. Cash payment

Nor shall the contractor or any person employed by him, or in any way connected with him, establish any shop for the supply of liquors, provisions, or goods, nor shall the contractor cause or oblige his workmen to take their necessaries or goods of any kind from any person in particular. Truck system.

The workmen or labourers of every kind or class shall be paid on the works (if it be possible) or in some building adjoining; and in no case shall they be paid at a public-house or other place where spirituous or fermented liquors or refreshments are sold.

Before the payment of any money to the contractor, the Minister may require from the contractor a statutory declaration that the tradesmen and labourers of every kind employed on the works to which these conditions refer have been paid their wages and claims of every kind in full money, the current coin of the Colony, and to the latest date to which such wages or claims are due; and the Minister may withhold the payment of any money that may be due or become due to the contractor until such declaration shall have been made and delivered to him. Statutory declaration.

#### *14. Material.*

All approved materials, plant, and prepared work brought upon the ground for use in or on the works shall be considered, and shall be the property of Her Majesty the Queen until completion of contract; and contractor shall not take away, remove, or dispose of any such material or plant or prepared work without the written authority of the superintending officer. Ownership.

All materials supplied by contractor for, and used in, the works shall be the best of their respective kinds, and in conformity with any further particular direction that may be contained in the specification. Quality.

Due notice shall be given by contractor to the superintending officer and overseer when any material is bought on the ground, all of which must be neatly stacked in regular heaps, submitted for approval, and approved of in writing by the superintending officer, before it may be used in the works; none but that so approved shall be used. Arrival on ground.

The contractor, if so directed, shall remove entirely off the ground any inferior or improper material, or alter or remove any improper or unworkmanlike work at his own expense within twenty-four hours after a written notice in that behalf shall have been served upon him by the engineer or superintending officer. Approval.

After the expiration of the time stated in such notice, it shall be lawful for, but not obligatory upon, the engineer or superintending officer at any time to remove and, if necessary, to destroy any such material, or to pull down or alter any such work, and to replace or rebuild the same. The expense of so doing shall be deducted from any moneys then due, or that may thereafter become due, to the contractor under this contract.

Cement is to be brought on the ground in quantities of not less than fifty barrels, at least ten clear days before it is intended to be used in the works, and kept in weather-tight sheds under lock and key. After having been tested and approved of, the approved barrels will be marked on the outside, and their contents may be used. After they are empty, they shall, in the presence of the superintending officer or any person deputed by him, be broken up, and thereupon removed off the works. Storing.

The use by the contractor on the works of blasting-powder or any other explosive material shall be confined strictly to the limits, which will be set by an order in writing of the engineer as to locality, time, quantity, particular kind of material, and precautions to be taken during its use. Explosives.

In any case, no larger quantity of explosive material shall be taken underground than is likely to be used during any current shift. Quantities.

Storing of explosive material underground shall be, and hereby is, absolutely prohibited; and for its storage on the surface special directions will from time to time be issued by the engineer in accordance with the provisions of the Act regulating storage and conveyance of explosives. Storing underground prohibited.

Should contractor exceed the limits of such order, or not strictly observe the special directions in regard to use, the engineer shall have power to appoint, at the contractor's expense, inspectors of powder, in whose presence alone explosives may be made use of, and who shall have entire charge of all matters connected with their storage or supply to the works. Inspectors of powder.

**Reduced prices.** If the contractor shall be found to have supplied materials or executed work not in accordance with the true intent and meaning of the specification and conditions of this contract, and if the engineer shall elect to allow such materials to be used or such executed work to remain, he shall have power to fix the price to be paid for any such material or work, and contractor shall be bound by the engineer's valuation.

#### 15. Government Property.

**Delivery.** Should the Minister furnish to the contractor for the purposes of this contract, any materials, or plant, or other article of value, all of which are hereafter in this clause and in the specification included under the term "Government property," the contractor shall give a detailed receipt in writing to the superintending officer at the time of delivery and before taking possession thereof.

**Protecting.** If required to do so by the superintending officer, contractor shall erect, at his own expense, sheds or other covering to protect such property from the weather or from theft.

**Repairs.** He shall likewise make good any loss or injury which may happen to it from any cause whatever, and shall keep it in good and sufficient repair and renew all moving and working parts, which may have become worn out, to the satisfaction of the engineer or superintending officer during the whole time it is under his care.

**Returning.** On the completion of the contract, all such property shall be returned to the engineer, unless otherwise directed in the specification; and for that purpose shall be removed, after having been put into a thorough state of repair, to the place or places mentioned in the specification, and there neatly stacked or arranged, as the superintending officer may require.

**Discharge.** The latter shall thereupon give a detailed receipt in writing for everything so returned, and until such receipt shall have been given the property shall be deemed to be, and shall be, under the care of the contractor.

**Delay in delivery.** Should any delay occur in supplying contractor with any drawings, or specifications, or any Government property which may be specified to be supplied or delivered to contractor by the Minister, the contractor shall have no claim for compensation for any such delay other than that (if any) particularly set forth in the specification; but the contractor shall be entitled to such reasonable extension of time for the completion of the works as shall be fixed by the engineer.

#### 16. Measurements, Quantities, and Accounts.

**Net measurements.** Except in cases for which the specification distinctly prescribes another method or rule of ascertaining measurements or weights, the *net* measurements, according to the actual dimensions or weights, will always be taken, notwithstanding any custom to the contrary. The surplus soil to be removed shall be calculated as equal to the volume of the soil actually displaced by the foundations, sewers, shafts, or other works.

**Quantity.** The distance of removal shall be measured from top of shaft or end of open cutting to centre of spoil-bank or other place of deposit. The schedule price for excavation shall cover all haulage in tunnels or cuttings, unless otherwise specified.

**Lead.** The contractor shall be present at all measurements, and, if required, assist in making the same. If he fail to attend after twenty-four hours' notice in writing has been delivered to him of the superintending officer's intention to take measurements and clearly setting forth the locality of such intended operation, the measurements made by the superintending officer shall be binding on the contractor.

**In contractor's presence.** On the satisfactory completion of any part or portion of the works, and at all other suitable times, the dimensions of such piece of work shall be measured by the superintending officer, recorded on drawings, kept or to be made for the purpose, and the quantities ascertained therefrom and entered into a quantity book, to serve as basis for arriving at the contract sum on completion of the contract.

**Time.** Within forty-eight hours of such measurement having been effected, contractor shall furnish to the engineer an account of the work, thus intended to have been finally measured up, showing in detail the dimensions, quantities, prices, and value, specifying day of measuring, in whose presence measured, and signed by contractor.

**Check accounts.** For the purpose of making progress payments the dimensions of still unfinished, but otherwise satisfactorily performed, portions of the work will be measured in a summary way monthly, or as near as may be, but without prejudice to the ultimate acceptance or rejection of such portions of work.

**Progress measurements.** On the day following the conclusion of such summary measurement, contractor shall furnish to the superintending officer an account of all work done during the preceding month, giving detail, quantities, prices, and approximate value of all unfinished work, and, for every structure separately, total quantities, prices, and exact value of all completed work.

**Monthly accounts.** Any final account to be presented by the contractor must be on similar form, and under the same heads as the printed tender form, with additional items at foot of same.

**Final account.**

#### 17. Jobbing.

**Jobbing.** When desired by the superintending officer so to do, contractor shall furnish to said officer any skilled artisans, labourers, or carts with horses and drivers, for the performance of such services as the aforesaid officer may desire to be performed in connection with, for, on, or near the works under the contract.

**Paid monthly in full.** Contractor shall supply those artisans, labourers, &c., with the necessary plant and lighting, and shall be paid for all services thus rendered the full amount, provided therefor in the schedule of prices, under the head of "jobbing," at the end of every month, or as nearly as may be thereafter. The accounts for this "jobbing" shall, however, be rendered by contractor to the superintending officer or overseer in half-weekly intervals, that is to say, during the forenoon of every Monday and Thursday, failing which he shall lose all claim to payments for the jobbing performed by him during the preceding three days.

**Half-weekly accounts.**

#### 18. Progress and Final Payments.

**Monthly progress payments.** No payments shall be legally due to contractor until after the entire completion of the contract; but progress payments on account, subject to all deductions, herein provided for, will be made monthly, or as nearly so as may be, during the continuance of the contract, on the certificate in writing of the engineer, at rates not exceeding those stated in clause 4 of the special conditions.

**Balance.** The balance of the moneys due for works executed under this contract, less 5 per cent., and less the deductions properly to be made hereunder, will be paid within thirty days, or as nearly as may be, after the engineer shall have certified under his hand that all the works under the contract, less those of maintenance, have been fully and satisfactorily completed, and that such balance, less the 5 per cent., is due to contractor.

**Insufficient balance.** Provided that if the amount for maintenance, as entered by contractor in his tender, shall appear to the engineer to be insufficient, the Minister may retain, on the declaration to that effect in writing by the engineer, either the whole or any part of the sum, otherwise deemed payable to contractor, till all the works under the contract, including those of maintenance, shall have been finally and satisfactorily executed.

**Final payment.** The said five (5) per cent., together with the "cash security," provided for in clause 20 of these conditions, will be retained until after the expiration of the "period of maintenance," more particularly described in clause 3 of the special conditions, and shall be paid to contractor (less the costs of any repairs or defects, should the contractor fail to execute the same), on the production of a certificate from the engineer, that all the works under the contract, including those of maintenance, have been finally and satisfactorily executed.

**No progress payment after expiration of contract time.** No progress payments will be made after the date specified for the completion of the contract, until the whole of the works shall have been properly completed to the satisfaction of the engineer.

**Suspension of payment.** If, in the opinion of the engineer, further inquiry is desirable or necessary, before payment is made on any certificate, the engineer shall have power to suspend the payment of all or any part of the amount mentioned in any such certificate, for a period not exceeding one month from the date at which, in the ordinary course, the money would have been paid, and no interest shall be due or accruing on any money, the payment of which shall have been so suspended.

**Certificates without prejudice.** No certificate, given to the contractor for any purpose whatever during the progress of the work, shall prevent the engineer, at any time before the final payment, from rejecting any unsound material or improper workmanship, which may be discovered in the work, or from requiring the contractor to remove or amend at his own cost any work which may be found not to have been performed in accordance with the contract, or from deducting from any money, which may be due or become due to the contractor, the whole amount, which may have been paid to the contractor for such material or work.

**No claim without certificate.** The obtaining of the engineer's certificate that all the works under the contract, including those of maintenance, have been finally and satisfactorily executed, shall be a condition precedent to any claim or cause of action in respect of work done, as well as to the final payment to be made hereunder.

19. *Arbitration Clause.*

1. All questions or disputes which shall arise respecting the true construction or meaning of the drawings or specification, or the quality of the workmanship, or quantity or quality of materials necessary for the whole or any part of the contract, and all questions and disputes respecting the matters next hereinafter mentioned, when the aggregate amount claimed in respect of such last-mentioned matters shall not amount to the sum of one thousand pounds, shall be decided by the Engineer-in-Chief for Roads, Bridges, and Sewerage, whose decision shall be absolute and final.

2. But all questions as to the cancellation of the contract, as to the right of the contractor to extension of time, as to the infliction of penalties, as to the true value of any extra work that has not been previously agreed upon, or as to the value of work omitted from the works specified to be done under the contract, shall, if the aggregate amount of the claims in respect of such matters shall be one thousand pounds or upwards, upon the completion of the works under the said contract, and before payment of the retention money and the money deposited as security for the due carrying out of the contract, be fixed and determined by arbitration as hereinafter provided.

3. If the contractor, or the Minister in charge of the department under which the works in the contract have been or are being carried out, considers that he has claims in respect of the several matters mentioned in paragraph 2, as those in which arbitration may be claimed, he shall furnish to the other of them full particulars in writing of such claims, breaches, doubts, disputes, and differences in respect of which he desires arbitration, giving distinct and separate items, and the amount, if any, claimed under each item; and the other party may thereupon furnish particulars of all claims he has in respect of such matters, irrespective of the aggregate amount of such claims; and the party furnishing the same shall be bound by such particulars; and no claim not included in such statement shall be taken into consideration at such arbitration, or become subject of arbitration or action; and the claim or respective claims so made as aforesaid shall be determined by arbitrators, to be appointed as hereinafter provided, that is to say—

4. If the Engineer-in-Chief for Roads, Bridges, and Sewerage, and the contractor concur in the appointment of a single arbitrator, then the matter and question aforesaid shall be referred to and decided by such single arbitrator; but if the Engineer-in-Chief for Roads, Bridges, and Sewerage, and the contractor cannot concur in the appointment of a single arbitrator, each party, on the request in writing of the other party, shall, by writing under his hand, nominate and appoint an arbitrator, to whom the said questions and matters shall be referred. Every such appointment shall be delivered to the arbitrator, and be deemed a submission to arbitration on the part of the party by whom the same shall have been made, and neither party shall have power to revoke the same without the consent in writing of the other, nor shall the death of either party operate as a revocation.

5. And if, for twenty-one days after the notice in writing by the contractor or by the Engineer-in-Chief for Roads, Bridges, and Sewerage, that the contractor and the Engineer-in-Chief for Roads, Bridges, and Sewerage cannot agree shall have been served, and for seven days after a request in writing to appoint an arbitrator shall have been served by the one party on the other, such last-mentioned party fail to appoint such arbitrator, then, upon such failure, the party making the request, and having himself appointed an arbitrator, may appoint such arbitrator to act on behalf of both parties; and the arbitrator may proceed to hear and determine the matter or question between the contractor and the engineer aforesaid, and in such case the award or determination of such single arbitrator shall be final. If, before the matter so referred shall be determined, either arbitrator shall die or become incapable, the party by whom such arbitrator was appointed may nominate and appoint some other person as arbitrator to act in his place; and if, for the space of seven days after notice in writing from the other party for that purpose, he fail to do so, the remaining or other arbitrator may proceed *ex parte*; and in case the matter in dispute shall stand referred to a sole arbitrator in default of the appointment by the other party, and such sole arbitrator shall die, the party by whom he was appointed shall appoint another sole arbitrator in his place; and every arbitrator so to be substituted in either of the cases aforesaid shall have the same powers and authorities as were vested in the former arbitrator at the time of his death or disability.

6. If more than one arbitrator shall be appointed, such arbitrators shall, before they enter into the matter or question referred to them, nominate and appoint, by writing under their hand, an umpire to decide on the matter so referred; and if such umpire shall die or become incapable of acting, they shall forthwith, after such death or incapacity, appoint another umpire in his place, and the decision of every such umpire on the matters referred to him shall be final.

7. If, in either of the cases aforesaid, the said arbitrators shall refuse, or shall, for seven days after request of either party, neglect to appoint an umpire, a Judge of the Supreme Court, upon application made to him by either party, shall appoint an umpire, whose decision shall be final.

8. If a single arbitrator shall be appointed, and he shall die or become incapable to act before he shall have made his award, the matters referred to him shall be determined by arbitrators appointed hereunder as if the arbitrator so dying had not been appointed.

9. If more than one arbitrator be appointed, and either of them shall refuse, or for seven days neglect to act, the person by whom such defaulting arbitrator was appointed shall, within seven days after notice in writing, proceed to appoint another arbitrator to act for the arbitrator so refusing or neglecting, or the other arbitrator may proceed *ex parte*; and the decision of such other arbitrator shall be as effectual as if he had been the single arbitrator appointed by both parties.

10. If more than one arbitrator shall be appointed, and neither of them shall refuse or neglect to act as aforesaid, then if such arbitrators shall fail to make their award within thirty days after the day on which the last of such arbitrators shall have been appointed, or within such further time as may be granted by a Judge of the Supreme Court on application by either party, the matters so referred to them shall be determined by the umpire appointed as aforesaid.

11. The arbitrators, or any two of them, shall have power to hear, receive, and examine evidence; and the witnesses on any reference herein may be examined on oath and affirmation. Neither of the parties hereto shall be at liberty to appear before the arbitrators by counsel or solicitor.

12. The award of the arbitrator or arbitrators or umpire shall be in writing, ready to be delivered to either party within the time appointed for making the said award. This submission may be made a rule of the Supreme Court. The amount of costs, umpire's and arbitrators' fees, shall be decided by the arbitrators, arbitrator, or umpire; the amount of costs including arbitrators' and umpire's fees and witnesses' expenses, the items thereof being shown in the account annexed to said award.

13. If upon an arbitration in respect of claims made by the contractor the sum awarded to the contractor shall be less than one-half of the amount of his said claim, all the costs, charges, and expenses of and incident to the said arbitration and award shall be borne and paid by the contractor; but if the amount awarded shall exceed one-half of the amount of the said claim, then each party shall pay his own costs and one-half of the arbitrator's and umpire's fees.

14. It is to be distinctly understood that all claims by the contractor or by the Minister to have any of the matters which under paragraph No. 2 may be submitted to arbitration so dealt with, must be made upon the whole of the work being completed, and before payment to the contractor of the retention money or of the money deposited as security for the due performance of the contract, and that the acceptance by the contractor of payment of the retention money in cases where a bond to secure the completion of the works has been given, and in other cases of the retention money or of any balance thereof, and of the money deposited as security for the due performance of the contract, shall be conclusive proof that the contractor has no such claim or claims.

15. The Engineer shall not be required to defend or answer, or be made a party to, any bill, claim, or action, or other proceedings at law or in equity at the instance of the contractor. Engineer no party to lawsuits.

16. The exercise by the Minister, Engineer, or Superintending Officer, of any of their respective powers shall not relieve the contractor from any liability, to which he may be subject for any breach of the contract. Liability to remain.

17. None of the clauses or provisions of the specification, or of these conditions, or of any other part of this contract, shall be varied, waived, discharged, or released, either at law or equity, unless by the express consent in writing of the Minister. Provisions not to be varied.

20. *Tender, Cash Security, &c.*

Tenders to be sent in on a private form, accompanied by the printed schedule of prices, with all the blanks properly filled in, and addressed, as directed in the advertisement, calling for tenders. Form of tender.

The approximate quantities only are given as a guidance to intending contractors, and the contract being at a schedule of prices, will be subject to such extensions, extras, additions, deductions, enlargements, deviations, alterations, and omissions as therein provided. The Minister will be only liable to pay for the actual measured quantity of each respective kind of work done and ordered at the rates set forth in the schedule, and if there be no rate in the schedule for any that may be ordered, then at such rate as shall be fixed by the Engineer-in-Chief, whether such measured quantities shall be less or more than the quantity stated in the schedule of quantities and prices. Schedule rates of contract.  
Every

Deposit with tender.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—For amounts of £300, and up to £500, £5; for amounts exceeding £500, and not exceeding £1,000, £10; for all sums over £1,000, 1 per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a Treasury deposit receipt, or a cheque in favour of the President of the Board, endorsed by the manager of the Bank upon which it is drawn. Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

Returning of preliminary deposit.

All deposits, with the exception of that of the lowest tenderer, when practicable, will be returned by the Secretary to the persons entitled thereto, immediately after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract.

Cash security.

Within seven days from the date of notification in writing to any tenderer of the acceptance of his tender by the Minister, the successful tenderer must lodge with the Colonial Treasurer in cash, the sum named in clause 6 of the Special Conditions, which sum will be retained as security for the due performance of the contract, until after the expiration of the "period of maintenance," and returned to the contractor (if at all) only on the day of final payment, and less any deductions, which hereunder may properly be made therefrom.

Signing of contract.

Within three days after lodging the aforesaid deposit, the successful tenderer shall attend at the office of the Crown Solicitor, and execute the contract.

Forfeiture of cash security.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, all moneys deposited by him on account of such contract shall be absolutely forfeited to the Crown, and shall be paid to the credit of the Consolidated Revenue of the Colony, and the Minister shall be at liberty to accept next lowest or invite fresh tenders.

Lowest or any tender.

The Board shall not be bound to accept the lowest or any tender.

Stamps, fees, &c.

The contractor shall bear and pay all duty stamps, licences, building, or surveyor's fees, or other charges or fees whatsoever, legally demanded by any municipal or other authorities; also the amount of all patent rights and royalties, due to any patentee.

Commencement of work.

No tenderer will be allowed to proceed with the work tendered for until he shall have signed the required contract.

ROBT. HICKSON,  
Engineer-in-Chief for Sewerage.

Department of Public Works, Sewerage Branch,  
Sydney, 22nd January, 1891.

These are the General Conditions marked "B" referred to in our annexed Agreement with Her Majesty the Queen, dated the 16th day of March, A.D. 1891.

Witness—HAROLD F. NORRIE, J.P.

JOHN CARTER.  
D. G. SNODGRASS.  
GEO. FORREST.

"D."

#### SPECIAL CONDITIONS.

##### Clause 10 of General Conditions.

1. The "date of completion of contract" shall be eight months from the date of acceptance of tender—that is to say, the 28th day of October, 1891.

##### Clause 10 of General Conditions.

2. The sum to be deducted or set off as or for "liquidated damages," shall be £20 sterling a week.

##### Clauses 2, 10, and 18 of General Conditions.

3. The "period of maintenance" shall be three calendar months from the date of the certificate of the engineer that all the works under the contract, less those of maintenance, have been fully and satisfactorily completed.

##### Clause 18 of General Conditions.

4. The "rates of progress payment" shall be 90 per cent. of the value of work actually done, performed, and delivered, as the engineer may approve of as fit and necessary for the work.

##### Clause 20 of General Conditions.

5. The "Treasury deposit receipt" to accompany the tender shall be as required by clause 20 of the general conditions.

6. The sum to be lodged with the Under Secretary for Public Works as security shall be a Bank deposit receipt, in the name of the Secretary for Public Works, for £900 sterling.

##### Clause 2 of General Conditions.

7. Even after the expiration of the period of maintenance, contractor will still be held liable for all defects in the works which were not visible, or which may have been kept secret, at the time of the works being taken over by the engineer, since he is, and hereby distinctly agrees to be, *responsible for all faults or neglects of, or all deception practised by, his agents, overseers, or workmen, irrespective of the time at which such faults, neglects, or deceptions may be detected.*

##### Clause 3 of General Conditions.

8. Although the information in possession of the Government has been freely placed at the disposal of the tenderers, by being noted on the drawing or otherwise, the Government undertake no guarantee whatever regarding the kinds of soil that will be met with, or the firmness or stratification of the ground to be excavated, or the amount of unwatering to be done, or the strength of the timbering that may be required, or the nature and extent of other precautions which may have to be adopted.

##### Clause 4 of General Conditions.

9. Contractor shall not be entitled to claim or receive any compensation whatever over and above payment for the actual increase of quantities at schedule rates, and where there are no schedule rates, at such rates as shall be determined at the time by the Engineer-in-Chief, for any additions to, deviations from, or alterations of the various designs comprised in this contract. These conditions shall also apply to, viz., variations in manholes, flushing chambers, &c., and in consequence of meeting with any existing gas, water, or sewer pipes or sewers, as referred to and in accordance with clause 115 of the specification, the position of which it is impossible to ascertain until the ground for the construction of the works comprising this contract is opened up,—

Variations in inclination of slopes and gradients.

„ lengths of open trenches.

„ depth, shape, or size of excavation for sewer, &c.

„ depth, shape, or size of concrete of sewers, manholes, flushing chambers, &c.

„ internal diameter of pipe sewers.

„ alteration or extension of sewer lines.

Any decrease in quantities to be deducted as provided for.

##### Clause 14 of General Conditions, paragraph 6.

10. Cement is to be brought on the ground in quantities not less than fifty barrels, provided that this quantity is sufficient for fourteen days' supply, but in no case is less than fourteen days' supply (whatever that may prove to be) to be brought on the ground in one parcel; nor is the supply stored on works to be at any time less than fourteen days' supply.

Clause

Clause 8 of General Conditions.

11. Suspension of works and non-compliance with clauses 64, 95, and 116 of the specification on the part of the contractor shall constitute a wilful breach of contract.

Clause 18 of General Conditions.

12. The acceptance by contractor of the final payment shall be deemed equivalent to a distinct declaration on his part that he has no further demands on the Government in respect to this contract.

These are the special conditions marked "D," referred to in our annexed agreement with Her Majesty the Queen, dated the 16th day of March, A.D. 1891.

Witness.—HAROLD F. NORRIE, J.P.

JOHN CARTER,  
D. G. SNODGRASS,  
GEO. FORREST.

TENDER FOR CONTRACT No. 72, SYDNEY AND SUBURBS STORM-WATER DRAINAGE.

To the Honorable the Minister for Public Works, Bridge-street, Sydney, N.S.W.

I [We], the undersigned, do hereby tender and offer to construct, completely finish, and maintain the various works for contract No. 72, Sydney and Suburbs storm-water drainage, in accordance with the conditions of contract, specifications, and drawings, prepared for that purpose in your Department, for or at the rates particularly entered in the accompanying Schedule of Prices, and enclose herewith Treasury Deposit as required by clause 20 of the General Conditions.

Should this tender be accepted I [we] undertake to lodge with the Under Secretary for Public Works, within seven days from the notification of the acceptance of this tender, a bank deposit receipt, in the name of the Secretary for Public Works, for the sum of £900 sterling, as security for the due performance of the contract.

In the event of my [our] failing to do so, or to sign the required contract within the time specified in clause 20 of the General Conditions, I [we] hereby distinctly agree to forfeit to the Queen the sum deposited with this tender.

CONTRACT No. 72.—Schedule of quantities and prices for constructing and completing concrete and stoneware pipe storm-water sewer, from Munni-street along Macdonald-street to Mitchell Road and Shea's Creek, with manholes, flushing chambers, junctions, &c., subject to omissions, additions, deviations, or alterations, as provided. The quantities in this schedule are not guaranteed as correct, but are merely given for the guidance of intending contractors, this being a Schedule of Prices Contract.

| No. of Item.     | Description of Works.  | Unit.       | Probable Quantity. | Rate per unit. | Amount. |
|------------------|--|-------------|--------------------|----------------|---------|
| 1                | General excavation in open trenches for sewers, junctions, curves, manholes, pipe-drains, &c., including grubbing, clearing, timbering, unwatering, road restoring, coffer-dam, removing of old stone abutments and timber-decking of existing road bridge, depositing the excavated materials beyond actual site of works in separate spoil-banks, complete, as specified in clauses 34 to 36, and 37 to 54 inclusive   | cubic yard  | 26,200             | ...            | £ s. d. |
| 2                | Filling in below, at sides, and over sewers, junctions, curves, manholes, into abandoned open channels, road embankment, &c., including the providing of quarry filling, lead from sites of excavations or temporary spoil-banks, or any other sources outside the limits of this contract, to the place of permanent deposit, breaking, road restoring, ramming, watering, leading surplus and rejected material to spoil, as specified in clauses 47, 50, 51, 53 to 62, inclusive..... | "           | 12,000             | ...            | .....   |
| 3                | Sodding at both sides of new channels, and where ordered, complete, as specified in clause 63  | square yard | 1,000              | ...            | .....   |
| 4                | Brickwork, any thickness, shape, arched, &c., where ordered, in any situation, as specified in clauses 96 to 99.....   | cubic yard  | 110                | ...            | .....   |
| 5                | Sandstone concrete, any shape, form, thickness, arched, &c., where ordered, in any situation, as specified in clauses 78 to 95, inclusive  | "           | 8,100              | ...            | .....   |
| 6                | Cement facing $\frac{5}{8}$ in. thick, where ordered, in any situation, as specified in clause 112   | square yard | 11,600             | ...            | .....   |
|                  | Providing, laying, and jointing glazed stoneware plain pipes, in trenches, and where ordered, including fixing discs, as specified in clauses 16, 40 to 42, 44, and 73 to 77 :—  |             |                    |                |         |
| 7                | 24 in. internal diameter   | lineal feet | 250                | ...            | .....   |
| 8                | 21 in. " "   | "           | 20                 | ...            | .....   |

## Notes.

- All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.
- The above Schedule Prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.
- Prices for items Nos. 29, 30, 31, 32, and 33 are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.
- The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centring, concrete boxes, unwatering, coffer-dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads, crossing over pipe-sewers, disposal and removal of surplus soil, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specifications.
- Tenderers are to state prices for all items, whether quantities are given or not.

## No. 6.

## The Supervising Engineer to The Principal Assistant Engineer for Sewerage.

Contracts Nos. 72 and 75.—Arrangement for passing through Cooper's land.

Roads and Bridges and Sewerage Branch, Sydney, 25 March, 1891.

I HAVE had two interviews with Mr. R. J. Hill respecting the Munni-street to Shea's Creek and the Macdonaldtown Park stormwater sewers, Contracts Nos. 72 and 75, which pass through Cooper's Estate. I also went over the ground with Mr. Fisher, surveyor to the Cooper estates. Mr. Hill informed me at the second interview that he had no objection to these stormwater sewers being constructed as proposed through the Cooper Estate without the land being resumed, provided:—

- That arrangements be made in the sewer to turn the Macdonaldtown stream to M'Namara's wool-washing establishment when it is required; and
- That the Alexandria stream be flumed over the sewer and allowed to flow to M'Namara's wool-washing establishment as at present.

I recommend that such a letter as the one I have drafted and attached be forwarded to Mr. Hill asking him to give the permission in writing.

J. DAVIS.

## No. 7.

## A. J. M'Cormack, Esq., to The Water and Sewerage Board, Sydney.

Sydney, 8 April, 1891.

I have been informed by Mr. Henry M'Namara, of this city, that his fleeces and skins at his wool-washing establishment at Clear Valley, Alexandria, have been damaged, and in some cases rendered useless, owing to the smoke and smut from fires made by your employees in connection with the works at Shea's Creek.

He has also been seriously hampered in his business of wool-washer at that place.

He has, therefore, instructed me to ask for compensation, and unless a fair and reasonable compensation is offered, my instructions are to commence legal proceedings without further notice. An early reply will oblige.

Yours, &amp;c.,

A. J. CORMACK (per E.H.G.).

Refer to Engineer-in-Chief for Harbours and Rivers and inform accordingly.—W.B., B.C., 9/4/91. Informed, No. 758 of 9/4/91. Mr. Williams,—Please report at once for Engineer-in-Chief.—J.McL., 13/4/91. Separate report herewith.—A.W., 14/4/91.

## Minute Paper.

Subject:—Respecting the complaint of Mr. Henry M'Namara that the fires made by the men employed at Shea's Creek interferes with his wool-washing.

Department of Public Works, Harbours and Rivers Branch, Sydney, 14 April, 1891.

I BEC to report that all the men employed by this department are working only in widening and embanking Ricketty-street, which is half a mile from this wool-washing establishment; and that no fires are made, not even for boiling water for the men's tea is made, anywhere near these works.

I think this application refers to a party of men employed under contract by the Sewerage Department.

To the Engineer-in-Chief.

ALFRED WILLIAMS.

Forwarded for information. The matter herein referred to apparently comes under the Roads Branch.—C.W.D., B.C., 14/4/91. Under Secretary. Mr. Hickson.—D.C.McL. (per U.S.), B.C., 16/4/91. Urgent. Mr. Bagge.—R.R.P.H., 17/4/91. Report herewith.—J.D., 20/4/91.

No. 8.

## No. 8.

## Report by Resident Engineer Boys.

*Re* alleged Damage by Smoke to MacNamara's Wool, at Shea's Creek.

Sir,

Sydney, 19 March, 1891.

In accordance with your instructions, inquiries were made into the burning of rubbish at Shea's Creek Canal.

The contractors for the construction of Munni-street to Shea's Creek storm-water sewer (Contract 72) lit a fire to burn the reeds soon after commencing their contract, on or about March 20th.

The foreman of the wool-washing works came over and requested the burning to be stopped. This was done at once. His yard was full of wool at the time. No damage was done.

The foreman stated at the time to the contractors that there would be no harm done if they lit their fires when the wind blew away from the wool-works, namely, from the west, north-west, and north. Fires were lit since then with wind from specified direction.

On one occasion, about three weeks ago, the wind changed after a fire was lighted, and the fire was put out as quickly as possible, by the contractors' orders.

An accidental fire also occurred about this time—not lighted by the contractors—but was put out by them, the wind at the time being towards the wool-works.

A fire, lit by the Chinese who rent land on the eastern side of canal, to burn weeds, caught some of the reeds, but was put out by the contractors' orders, the wind at this time being towards the wool-works. This happened ten days ago.

I have, &amp;c.,

J. W. T. BOYS.

Forwarded with my report.—J.D., 20/4/91.

## No. 9.

## The Supervising Engineer to The Principal Assistant Engineer for Sewerage.

It appears that the contractors have made fires for burning the weed that had to be cleared from the swamp along the storm-water channel on the proposed line of Shea's Creek canal, but care seems to have been taken by the contractors that the weed should only be burnt when the wind would blow the smoke away from Mr. McNamara's works.

If Mr. McNamara has sustained any damage from the fires lighted by our contractors, they, according to the third paragraph of Section 11 of General Conditions, are liable.

I intend seeing Mr. McNamara with the contractors, but in the meantime I recommend that the contractors should be instructed, in future, not to burn the weed referred to.

J. DAVIS.

Submitted.—F.O.P., 20/4/91.

For the information of the Engineer-in-Chief, Mr. Davis's suggestion at end of his report seems necessary to avoid further trouble. I think contractor should have asked permission to burn weeds, &amp;c., before he commenced it, as the specification only provides for the removal of all rubbish, &amp;c.—C. H. OHLFSEN-BAGGE, 20/4/91. Engineer-in-Chief.

Inform contractor, and to resubmit after seeing Mr. McNamara.—R. R. P. H., 20/4/91. Contractors informed, and Mr. McNamara asked to see me on Wednesday morning at 10'30.—J.D., 20/4/91. Further report herewith.—J.D., 1/5/91.

## No. 10.

## Messrs. Carter &amp; Co. to The Supervising Engineer for Sewerage.

Sir,

St. John's Road, Glebe, 29 April, 1891.

We have the honor to acknowledge the receipt of your letter of 23th April, *re* damage caused by fires at Shea's Creek, Contract No. 72, and in reply to state that we recognise no liability in the matter.

We have, &amp;c.,

CARTER &amp; CO.

This letter is in reply to one I addressed to contractors informing them that Mr. McNamara assessed his damage at £200, and asking them if they would be willing to pay that amount in order to settle the matter.—J.D., 30/4/91. Mr. Bagge.

## No. 11.

## The Supervising Engineer to The Principal Assistant Engineer for Sewerage.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 16 May, 1891.

MINUTE-PAPER.

*Subject* :—Contract No. 72. Munni-street to Shea's Creek Stormwater Sewer. Arrangement for carrying sewer through Mr. W. C. Cooper's land.

WHEN Mr. Hill gave permission for the sewer to be constructed through Mr. W. C. Cooper's land at Alexandria, without the land being resumed, he stipulated that :—

1. Stop-boards, &c., were to be provided for turning the Macdonaldtown Creek to M'Namara's wool-washing establishment.
2. A flume over the new channel was to be constructed, so that the water flowing in the Alexandria Creek should, as at present, flow to McNamara's wool-washing establishment.
3. A portion of the channel, 2½ chains long, passing through a sandhill, should be covered.

The extra expense that this work will necessitate is estimated to cost £609 1s. 10d.

The Engineer-in-Chief's approval is required for this amount to be spent.

J. DAVIS,

16/5/91.

Mr. Bagge.

The conditions herein described and stipulated by Mr. Hill were, in fact, originally intended to be included in the contract, but were afterwards omitted when it was intended for the present to leave out the outlet end. This, however, was afterwards found to be impracticable; the outlet end had to be built first, and hence the items of works described by Mr. Davis have now become necessary, and a proportionate length of the inlet end of sewer will have to be built at some future time to meet the present unavoidable expenditure of the £609 1s. 10d.—C. H. OHLFSEN BAGGE, 18/5/91. Engineer-in-Chief.

Recommended. The £600 is not, strictly speaking, an extra, as if the land had to be resumed the cost would have been more.—R.H., 27/5/91. List.—J.P., 27/5/91. Approved by Minister, Order No. 1843.—D.C. McL., 5/6/91. Roads.—J.B., B.C., 6/6/91. Messrs. Bagge and Davis to see.—F.O.P., 8/6/91. Seen.—R.H., 8/6/91. Seen.—J.D., 9/6/91. Seen.—C.H.O.B., 9/6/91.

## No. 12.

## The Supervising Engineer to The Principal Assistant Engineer for Sewerage.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 11 June, 1891.

MINUTE-PAPER.

*Subject* :—Contract No. 72. Munni-street to Shea's Creek Stormwater Sewer. Quantity of earth washed into finished open channel.

DURING the heavy rain on Monday night last a large quantity of earth from the swamp above our works was washed into the earth open channel which has been excavated along the line of the proposed Shea's Creek Canal. This has been caused, I have no doubt, not by the ordinary flow of water across the swamp, but by the woolwashers, who have dams across the creek, above our works, opening their sluices, and as, it appears, the sluices are all opened at the same time, a very large quantity

quantity of water rushes across the swamp into our works. The woolwashers have been seen with a view of getting them to allow the water to escape gradually, but they state that when rain comes on, as they have no overflows, they are obliged to open the sluices.

The contractors had finished the excavation of the open channel on the line of the canal.

I am of opinion that it will be best to allow the channel to remain in its present condition until the swamp has had time to thoroughly drain.

Mr. Bagge.

J. DAVIS.

It would be unfair for us to ask the contractor to clean this debris and sediment collected in the various wool-wash dams away after every heavy rain. I believe now that we should finish our storm-water channel which, during very rainy weather, will carry sufficient water to scour the northern channel and form its own outlet now.—C. H. OHLFSEN BAGGE, 11/6/91. Engineer-in-Chief.

Appd.—Resubmit when contract is completed, unless in the meanwhile there seems a probability of the channel filling up.—R.H., 19/6/91. Messrs. Bagge and Davis to note.—F.C.P., 19/6/91. Noted.—J.D., 19/6/91. Saw Engineer-in-Chief, and he thinks that this matter stand over for the present.—J.D., 25/1/92.

No. 13.

The Supervising Engineer for Sewerage to Resident Engineer Boys.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 26 June, 1891.

MINUTE PAPER.

Subject:—Contract No. 72. Filling in and surplus material.

THE contract provides that all abandoned open channel shall be filled in, and that any excavation which is not occupied with permanent works shall also be filled in, and that the price for filling in shall include the carting away and depositing surplus material. Unless it is distinctly understood what filling we require done into abandoned open channel there may be some dispute afterwards when we have to make the final measurement, and I, therefore, wish Mr. Boys to give directions in each case where he requires such filling done; and before the filling is put in hand to take cross-sections if they have not already been taken of the parts to be filled in.

Mr. Boys.

J. DAVIS.

Noted.—J.W.T.B., 26/6/91. This might be put aside for the present.—J.D., 27/6/91. Mr. Piper.

No. 14.

B. C. Simpson, Esq., to The Engineer-in-Chief for Sewerage.

113 Phillip-street, Sydney, N.S.W., 19 October, 1891.

My dear Sir,

I have been consulted by Messrs. Carter & Co. respecting their claim for compensation on account of the cancellation of that portion of sewerage contract No. 72 between 41'30 chains and 76'58 chains.

They state that the portion of the contract executed is the most difficult portion, and the least remunerative to them, and that the large section of the work now withdrawn is that on which they calculated on making their profit from this work, and that moreover they have already entered into contracts for the supply of the material.

I have examined the specification and conditions of contract, and it appears to me that clause 3 of the former empowering the engineer to make any reduction in the length of the sewer that he may consider necessary, could not be held to authorise the cancellation without compensation of so large a portion of the contract after materials have been ordered, but must be held to refer to such alterations of the work as may be considered necessary for its greater efficiency, and to protect the department from captious claims on account of minor works omitted on account of alteration of design.

As it appears to me that the extent and the time of the cancellation must very materially enter into the equitable reading of these clauses of the contract, I have advised Messrs. Carter & Co. that, in my opinion, they have in this case an equitable and legal right to compensation.

I shall, however, be very glad to call upon you and discuss this matter, and do what I can to effect a settlement satisfactorily to you and to them, if you will kindly make an appointment for this purpose.

Yours, &c.,

B. C. SIMPSON.

Appoint Wednesday at 10 a.m.—R.H., 19/10/91.  
postpone till he hears further from me.—R.H., 21/10/91.

Memo. sent.—F.C.P., 19/10/91.  
Memo. sent by Engineer-in-Chief.

Ask Mr. Simpson to

No. 15.

The Council Clerk, Macdonaldtown, to The Minister for Public Works.

Sir,

Council Chambers, 17 November, 1891.

I have the honor, by direction of the Mayor, to draw your attention to the intended stoppage of the construction of the storm-water sewer along Macdonald-street to Munni-street, in this municipality.

This is a most important public work, and one that affects the health of thousands of inhabitants, who will be greatly benefited by the construction of this sewer, which will not only remove the nuisance arising from open drains in this municipality, but will relieve a very large and populous district from being flooded during heavy rains.

Trusting that the necessity for the stoppage of this most important public work may be averted.

I have, &c.,

WILLIAM F. BRAY,

Council Clerk.

The Council Clerk, Newtown, to The Under Secretary for Public Works.

Sir,

Borough of Newtown, Town Hall, 18 November, 1891.

I have been instructed by the Council to bring under the notice of the Hon. the Minister for Public Works, the fact that the storm-water sewer, which was promised to carry on to the foot of Munni street, being the boundary between this borough and Macdonaldtown, has stopped a long way short of this place.

I wish to point out that the great quantity of storm-waters which flow from this borough into the flat portion of Macdonaldtown, has for many years been a great source of trouble and annoyance between the councils, and, some two or three years ago, a deputation from the councils was promised that, as soon as possible, the storm-water sewer should be carried to Munni-street.

Trusting this matter will receive the consideration that the necessities of the case demand.

I have, &c.,

JESSE COWLEY,

Council Clerk.

Commissioner for Roads.—D.C.M'L. (pro U.S.) B.C., 19/11/91. Mr. Bagge.—F.C.P., 20/11/91.

Joseph Abbott, Esq., M.P., to The Minister for Public Works.

The Hon. W. J. Lyne, Esq., Minister for Public Works,—

Parliament House, Sydney, 19 November, 1891.

Dear Sir,

I am requested by the Macdonaldtown Council, within my electorate, to invite your attention to the importance of having the construction of the stormwater sewer along Macdonald-street to Muuni-street completed as soon as practicable. It is reported that there is some intention to suspend the work, but the cause is not stated. If you will have this matter looked into I shall be much obliged.

I am, &c.,

J. ABBOTT.

Mr. Hickson.—D.C.M'L. (pro U.S.), B.C., 20/11/91. Mr. Bagge.—F.C.P., 20/11/91.

No. 16.

## No. 16.

## The Principal Assistant Engineer for Sewerage to the Engineer-in-Chief.

*Subject* :—Extension of the Sheas Creek Storm-water Channel from the Macdonaldtown Park Branch Channel to Munni-street.

THESE three letters (91/2,793, 91/2,802, and 91/2,816) all refer to the same subject, namely, the extension of the Sheas Creek storm-water channel from the Macdonaldtown Park branch channel along Macdonald-street to Munni-street.

I quite agree with the writers that the work is most important, and the question of constructing this extension is now before the Minister [see papers 91/2,424] for the purpose of procuring funds.

C. H. OHLFSEN BAGGE,  
21/11/91.

This matter also refers to Mr. Molesworth's, M.L.A., letter (91/2,896) received to-day.—C.H.O.B., 23/11/91.

See previous papers (91/2,424 and 91/2,819). Forwarded.—U.S., 23/11/91. R.R.P.H.—24/11/91.

## MINUTE PAPER.

*Subject* :—Contract No. 72, Munni-street to Sheas Creek storm-water channel, recommending that the balances of votes available from completed storm-water channels be used to finish Contract No. 72 to Macdonald-street junction.

THE amount of tender for Contract No. 72 was £20,650, but it was accepted conditionally upon the contract being reduced by £3,000.

It is advisable that Contract No. 72 should be continued, so as to give an outlet to Contract No. 75.

| Amount required to finish Contract No. 75 ..... | 9,087  | 11 | 1  |
| Amount available from vote.....                 | 5,754  | 0  | 0  |
| Balance to be provided .....                    | 3,333  | 11 | 1  |

See particulars attached.

I beg to suggest that this amount be paid from the following votes, viz. :—

|   |        |   |   |
|---|--------|---|---|
| There will probably be a balance of £2,000 from the Macdonaldtown storm-water channel vote after that channel has been paid for, which might be used for Contract No. 72, which is part and parcel of the same work ..... | 2,000  | 0 | 0 |
| The following amounts, being balances left from votes from the undermentioned storm-water channels, might also be used for this purpose :—  |        |   |   |
| University storm-water channel .....  | 131    | 0 | 0 |
| Phillip-street, Alexandria, storm-water channel .....   | 815    | 0 | 0 |
| Pymont Bridge Road storm-water channel .....  | 265    | 0 | 0 |
| Alexandria Park storm-water channel .....   | 57     | 0 | 0 |
|   | £3,268 | 0 | 0 |

Mr. Bagge.

J. DAVIS.

## No. 17.

E. W. Molesworth, Esq., M.P., to The Under Secretary for Public Works.

Sir,

18, Loftus-street, Sydney, 20 November, 1891.

I desire to bring under your notice the enclosed communication from the Municipality of Macdonaldtown, in re the completion of the storm-water sewer along Macdonald-street to Munni-street, and to ask that the work may not be suspended, as it would be a great calamity to the district if allowed to remain unfinished.

Yours, &c.,

E. W. MOLESWORTH.

Commissioner for Roads.—D.C.McL. (per U.S.), B.C., 21/11/91.

Sir,

Council Chambers, 17 November, 1891.

I have the honor, by direction of the Mayor, to ask you to be good enough to use your influence with the Honorable the Minister for Works, to induce him to proceed with the construction of the storm-water sewer along Macdonald-street to Munni-street, which has lately been commenced.

It is intended to stop this most important work shortly, and I need hardly point out to you the inconvenience that will be caused to a very large number of the surrounding inhabitants by this work being stopped.

I have written to the Minister for Works, drawing his attention to the matter, and requesting him, if he possibly can, to allow this work to proceed.

Trusting that your efforts in this matter may be attended with success.

I have, &c.,

WILLIAM F. BRAY,  
Council Clerk.

E. W. Molesworth, Esq., M.P., Newtown.

## No. 18.

B. C. Simpson, Esq., to The Engineer-in-Chief for Sewerage.

My dear Sir,

113, Phillip-street, Sydney, N.S.W., 10 December, 1891.

Messrs. Carter & Co. have again seen me respecting their claims for compensation on account of the withdrawal of the most profitable portion of their sewerage contract No. 72, concerning which claims I wrote to you on the 19th October.

Mr. Piper, of your department, called on me on the 3rd ultimo, and stated that you agreed with him as to the contractors' right to complete their contract, but pending this completion, Messrs. Carter & Co. allege that they are being put to continued expense, and desire that a settlement of the question should be arrived at. They appear to want only what is fair, which I am quite sure you will be willing to give them, and I shall be pleased if I can assist in a satisfactory settlement. I shall be glad to call on you at any time that will be convenient to you.

Your, &c.,

B. C. SIMPSON.

Ask Mr. Simpson to call on Monday at 11 a.m.—R.R.P.H., 11/12/91. Mr. Piper. B. C. Simpson, Esq., 11/12/91.

## No. 19.

The Supervising Engineer to The Principal Assistant Engineer for Sewerage.

THE £100 overtime penalty referred to by the contractors was deducted in the usual way from the progress return made on the 30th November.

The contractors undertook to execute £20,650 (the amount of their tender) of work in eight months. At the time of the last progress return the amount of the work executed was £18,045 19s. 1d., so that the contractors had not completed work to the amount of their tender by £2,604 0s. 11d. I consider, therefore, that to deduct the time penalties is only conforming to the terms of the contract.

I recommend that the contractors be informed the time penalties will be deducted, in accordance with the terms of the contract, and that at the completion of the work ordered to be executed the matter will be further considered.

J. DAVIS.

Let me see previous papers.—R.R.P.H., 4/1/92. 91-3,024 herewith; 91-2,819 to Under Secretary, 23/11/91; and 91-2,826 to Under Secretary, 24/11/91. Papers now attached.—F.C.P., 5/1/92. For the consideration of the Engineer-in-Chief.—C. H. OHLFSEN BAGGE, 4/1/92. Approved.—R.R.P.H., 5/1/92. Carter & Co., 6/1/92.

Sewerage Contract No. 72 (Shea's Creek).

Sir,

St. John's Road, Glebe, 22 December, 1891.  
We have the honor to inform you that the sum of £100 has been deducted from progress payment No. 8 in this work, as penalty for alleged non-completion of contract within contract time; and to notify you that the payment of £965 1s. 3d. is accepted by us under protest, we not admitting our liability to any such penalty.

We desire to again bring under your notice that the proposed withdrawal of the most profitable part of our contract will cause us loss and inconvenience, besides the loss of profit thereon, for which we consider we have a legal and equitable right to compensation; and, moreover, that this withdrawal, and the delay in laying out the upper portion of the work to the original point of termination of our contract, have caused us to work at a disadvantage from the lower end only, thereby causing the delay for which the penalty of £100 has now been deducted.

We have, therefore, the honor to submit that under these circumstances this deduction is a breach of the conditions of our contract, and to request that you will be good enough to authorise the supplementary payment of the £100 in question.

R. Hickson, Esq., Engineer-in-Chief for Sewerage, Sydney.

We, are, &c.,  
CARTER & CO.

For report.—R.R.P.H., 23/12/91. Mr. Davis.—C.H.O.B., 23/12/91. Report herewith.—J.D., 4/1/91.

## No. 20.

The Supervising Engineer to The Principal Assistant Engineer for Sewerage.

MINUTE PAPER.

Subject:—Contract No. 72, stop-board for open channel at M'Namara's woolwashing establishment.

Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 11 January, 1892.

THE contractors have offered to provide a stop-board as shown on supplemental drawing for use in this storm-water channel for the following:—

|                                     |   |          |
|-------------------------------------|---|----------|
| Oregon, 41·47 cubic feet, 10s. .... | = | £20 15 0 |
| Ironwork at schedule rates .....    | = | 2 16 1   |
|                                     |   | £23 11 1 |

I consider that 10s. per cubic feet for worked Oregon is far too much, and I would recommend that the timber be ordered, and that our carpenter do the work. If this is done the cost will be under 4s. per cubic feet.

J. DAVIS.

For the approval of the Engineer-in-Chief.—C. H. OHLFSEN BAGGE, 11/1/92. Approved.—R.R.P.H., 11/1/92.  
Noted.—J.D., 11/1/92.

## No. 21.

Minute by The Under Secretary for Public Works.

Shea's Creek Canal.

MR. WILLIAMSON has called here to complain on behalf of Mr. M'Namara, that we are working beyond the limit laid down in the Supreme Court Injunction in connection with the above work, whereby all the water supply to the woolwashing establishment has been run off, thereby inflicting serious damage to his client. I can hardly think this can be the case. Does Mr. Darley know anything about it, certainly no orders have been given by the minute? Very urgent.

J. B., 6/1/92.

I can state that no man working for this branch has interfered in any way with the water-courses, or the land, above the line marked out as a limit for the works connected with the Shea's Creek Canal.—ALFRED WILLIAMS, 7/1/92. Seen. Forwarded for information.—A. DARLEY, 8/1/92. B.C., Under Secretary, Public Works. Mr. Williams for report E-in-C. Jno.—P., 8/1/92. J.B. Mr. Hickson. How does the matter now stand? I think the whole affair has been clearly explained, it was sewerage work.—J.B., 9/1/92. Let me have papers in connection with this matter.—R.R.P.H., 12/1/92. Papers 91/1286 herewith.—F.C.P., 12/1/92. The accompanying correspondence will show that full authority was given by the landlord, through his agent Mr. Hill, to carry out this work in a certain manner, which has been done, any claim M'Namara may have seems therefore to be against his landlord.—R.R.P.H., 12/1/92.

## No. 22.

The Council Clerk, Alexandria, to The Supervising Engineer for Sewerage.

Sir,

Town Hall, Borough of Alexandria, 15 January, 1892.  
It having been intimated to this Council that it is intended to block the eastern end of Munni-street storm-water sewer, traversing through Macdonaldtown Park, and discharging into Shea's Creek, for the purpose of diverting that water to Mr. H. M'Namara's woolscouring works, if such is the fact this Council protests against such a course being adopted, as it will cause an accumulation of stagnant water in that open sewer, thereby giving forth an effluvia which will be detrimental to the health of a large body of people living adjacent thereto.

I remain, &c.,  
M. J. MADDEN,  
Council Clerk.

Seen.—R.R.P.H., 16/1/92.

Ack., 18/1/92.

## No. 23.

Messrs. Williamson and Williamson to The Secretary for Public Works.

Temple Court, King-street, Sydney, 13 January, 1892.

The Honorable W. J. Lyne, Minister for Works, Sydney,—

Sir,

On the 30th of April last Mr. Henry M'Namara obtained an injunction in the Supreme Court against Mr. Bruce Smith, then Minister for Works, restraining the department from interfering with the water supply to our client's woolwashing establishment. Since then your officers have cut a trench to the north of the dam, with the result that the subterranean water supply has been diverted, and the dam emptied. The rain during the last few days has slightly filled it, but towards the end of the present week it is anticipated our client will have to cease operations.

Considering that Mr. M'Namara is killing 10,000 sheep every week, the loss in wool and basils is of no small amount, as there is no possibility of continuing work there, our client is agreeable to refer the question of compensation to arbitration, which would not occupy more than two days.

Would you kindly give the matter your immediate attention, as every day's delay is of consequence to Mr. M'Namara.

We have, &c.,  
WILLIAMSON and WILLIAMSON.

Mr. Hickson.—D.C.McL. (per U.S.), B.C., 14/1/92. Received by me, 19/1/92. See previous papers, 92/42, sent Works, 13 Jan., 1892.—R.R.P.H., 19/1/92. Under Sec. Submitted.—J.B., 19/1/92. Resubmit when we hear further.—11/2/92.

No. 24.

## No. 24.

B. C. Simpson, Esq., to The Under Secretary for Public Works.

Dear Mr. Barling,

113, Phillip-street, Sydney, N.S.W., 25 January, 1892.  
 You will remember my speaking to you respecting Messrs. Carter & Co.'s contract (Shea's Creek sewerage). They have, I hear, seen Mr. Hickson this morning, and he has suggested their talking some matters over with the Minister, in the hope of coming to a settlement. Will you kindly get them an interview?

Yours, &c.,  
 B. C. SIMPSON.

Seen; put with the papers.—J.B., 25/1/92.

## No. 25.

The Council Clerk, Macdonaldtown, to The Under Secretary for Public Works.

Sir,

Council Chambers, Macdonaldtown, 24 February, 1892.

I have the honor, by direction of the Mayor, to ask you to be good enough to inform me if the Hon. the Minister for Works will be pleased to receive a deputation from this Council on the subject of the stoppage of the construction of the storm-water sewer along Macdonald-street to Munni-street.

Trusting that the Council's application will be favourably received.

I have, &c.,  
 WILLIAM F. BRAY,  
 Council Clerk.

May perhaps be informed that there is no need for a deputation, and that as soon as the additional money required is voted the work will be proceeded with.—J.B., 25/2/92. Approved.—W.J.L., 5/3/92. Information sent these Members.—J.B., 5/3/92. F. Cotton, T. Hindle, J. Abbott, E. W. Molesworth, Esqs., Ms.P., 12/3/92. Seen.—R.R.P.H., 14/3/92.

## No. 26.

Joseph Abbott, Esq., M.P., to The Secretary for Public Works.

My dear Mr. Lyne,

Parliament House, Sydney, 22 February, 1892.

Some time since I brought under your notice the urgent necessity there was for proceeding with storm-water sewer along Munni-street to Macdonaldtown, and under date of 20th November you promised to get a report and advise me further, since which time I have had no communication on the matter. If you will cause inquiry to be made I think you will find the matter one of urgency. Relying upon your good offices.

I am, &c.,  
 J. ABBOTT.

Informed as directed.—J.B., 23/2/92. Has this been done? Seen.—R.R.P.H., 26/2/92. Under Secretary. Attach copy of our letter.—D.C.McL., 29/2/92. Mr. Holliman. Copy herewith.—3/3/92. Mr. Hickson. Seen.—R.R.P.H., 5/3/92. Munni-street papers herewith.—5/4/92.

Dear Mr. Abbott,

23 February, 1892.

The sum required to finish the Munni-street storm-water sewer will be placed on the Estimates, but Mr. Lyne desires me to say that he will not be able to deal with the matter until they are passed, which will, however, I presume, be now in a short time.

Joseph Abbott, Esq., M.P.

Yours, &c.,  
 J. BARLING.

## No. 27.

Messrs. Carter &amp; Co. to The Under Secretary for Public Works.

Sir,

St. John's Road, Glebe, 26 February, 1892.

With reference to our interview with you this morning, in connection with Contract No. 79, main outfall sewer, North Shore, we do ourselves the honor to notify you that in consideration of our tender for the same being accepted we are willing, and hereby agree, to forego all claims for compensation on our Contract No. 72, Munni-street storm-water channel, Alexandria.

We are, &c.,  
 CARTER & CO.

Mr. Norrie to prepare the bond at once. Mr. Hickson will explain.—J.B., 25/2/92. Bond for Contract No. 72 herewith.—F.C.P., 29/2/92. Mr. Norrie.

## No. 28.

## Minute.

Contract No. 72, Sydney Sewerage, Munni-street, Redfern.—Carter &amp; Co., contractors.

Public Works Department, Sydney, 29 February, 1892.

THE Bank fixed deposit receipt for £900, lodged in connection with the above contract, will mature on the 10th proximo. Should it be renewed?

The Commissioner for Roads. B.C., 29/9/92.

D.C.McL. (*pro* U.S.)

Mr. Davis.—F.C.P., 1/3/92.

## No. 29.

The Supervising Engineer to The Principal Assistant Engineer for Sewerage.

THE work on this contract has been satisfactorily finished, and the measurements made by the branch have been accepted by the contractor, so that now there is no matter in dispute. If the fixed deposit be returned there will still remain in the hands of the department the retention money and lump sum for maintenance, amounting to £950 12s. 9d., until the period of maintenance expires.

I recommend that the contractors' request be granted.

J. DAVIS.

Recommended.—R.R.P.H., 2/3/92. Under Secretary. List.—D.C.McL. (*pro* U.S.), 3/3/92. Approved by Minister, Order No. 794.—D.C.McL., 7/3/92. J.B. Return deposit.—J.B., 8/3/92. Messrs. Carter & Co. to call.—8/3/92. Received security referred to herein.—CARTER & Co., 10/3/92. Roads.—D.C.McL. (*pro* U.S.), B.C., 10/3/92.

## No. 30.

The Council Clerk, Alexandria, to The Supervising Engineer for Sewerage.

Memorandum.

Sir,

2 March, 1892.

I am directed by resolution of Council to call your attention to the fact that a settlement has taken place in the storm-water sewer which crosses Mitchell Road at Sparkes' Bridge of about 2 feet; and this settlement is filled by offensive matter, which requires to be removed. Your kind attention to this matter will greatly oblige.

I am, &c.,  
 M. J. MADDEN,  
 Council Clerk.

Will Mr. Boys please get this attended to at once, and report.—J.D., 3/3/92. Mr. Boys. Council Clerk informed the matter will receive immediate attention.—J.D., 3/3/92. The contractors will attend to this on 7th March, 1892.—J.W.T.B., 4/3/92. Mr. Wagg to report when done.—J.D., 4/3/92. No settlement whatever has taken place, nor have any holes been filled in with offensive matter on any part of the works. The Council's inspector informed me that it must be an error on the part of Council Clerk.—GEO. WAGG, 7/3/92. Council Clerk informed.—J.D., 8/3/92.

## No. 31.

Messrs. Carter &amp; Co. to The Engineer-in-Chief for Sewerage.

Contract No. 72 (Shea's Creek).

Sir,

Alfred-street, North Sydney, 25 March, 1892.

We have the honor to ask you to be good enough to remit the time penalties imposed on the above contract. Our reasons for asking this are: That additional work, viz., the cutting of half a mile of canal at commencement of contract, was ordered and executed; and that during nearly the whole progress of the work exceptionally wet weather prevailed, which considerably impeded operations. Trusting this may meet your favourable consideration,

We are, &c.,  
CARTER & CO.

I think there will be no necessity to take any action on this letter. Since the date of it the Minister has approved of Messrs. Carter & Co. completing the work to Munni-street, and the time for the completion of the contract has been extended to the 18th of August next.—J.D., 30/5/92. Engineer-in-Chief. I concur.—R.R.P.H., 1/6/92.

## No. 32.

Agreement.

MINUTE PAPER.

*Subject:—Re Extension of Time, Munni-street Sewer, Contract No. 72.*

Department of Public Works, Bonds and Contract Branch, Sydney, 28 May, 1892.

THE memo. of agreement herein duly prepared has been executed by the Honorable the Minister and the contractors, Messrs. Carter & Co., and stamped, and may now be forwarded to the Commissioner and Engineer-in-Chief for Sewerage. The tender and all other papers herein are sent herewith.

H. F. NORRIE,  
Officer-in-charge (*pro* V.C.L.)

## MEMORANDUM OF AGREEMENT.

MADE this 19th day of April, in the year of our Lord 1892, between the Honorable William John Lyne, the Minister for Public Works, in and for the Colony of New South Wales (hereinafter referred to as "the said Minister"), of the one part, and John Carter, David Graham Snodgrass, and George Forrest, of North Sydney, in the said Colony, contractors, carrying on business together under the name, style, or firm of "Carter & Co." (and hereinafter referred to as "the said contractors"). Whereas by a certain agreement in writing, bearing date the 16th day of March, 1891, the said contractors covenanted with Her Majesty the Queen, her heirs or successors, to find and provide all the materials, tools, plant, labour, and every other thing requisite and necessary for, and performance of, the various works required in and about the full and proper construction, erection, and completion of Munni-street, Macdonald-street, Mitchell Road to Shea's Creek storm-water channel, known as Contract No. 72, Sydney and Suburbs Storm-water Drainage, in accordance in all things with the printed notice, tender, specification, general conditions, and special conditions thereunto annexed, and the plans or drawings relating thereto, and therein referred to, and to complete and finish the whole of the said works on or before the 28th day of October, 1891. And whereas the said works are still unfinished and not completed, and the said contractors have applied to and requested the said Minister to extend the time for the completion of the said works until the 18th day of August, 1892, which the said Minister hath consented to do. Now these presents witnesseth, that in consideration of the premises the said Minister, acting on behalf of the Government of the said Colony, doth hereby extend the time for completion of the works in the said agreement, tender, specification, general conditions, and special conditions, mentioned or referred to, until the 18th day of August, 1892, and that the said contractors do hereby jointly and severally covenant, promise, and agree with the said Minister that they, the said contractors, shall, and will, well and truly complete the whole of the works mentioned in the specification, general conditions, and special conditions, and the plans or drawings therein referred to, mentioned, or shown, in accordance in all things with the said tender, specification, general conditions, special conditions, and plans or drawings, on or before the 18th day of August, 1892; and further, that at all times hereafter the said agreement shall be read and considered as if the said 18th day of August, 1892, had been named in and by the said agreement, tender, specification, general conditions, and special conditions, as the day on or before which the said works were to be completed and finished by the said contractors; and that the said agreement shall not be considered as altered, or the stipulations, provisoes, and agreements therein or in the said specification, general conditions, and special conditions, in any way barred, waived, or departed from in any respect, other than as to the time within which the said works are to be completed, but that Her Majesty the Queen, her heirs and successors, the said Minister and his successors in office, and the Government of the said Colony, shall have all and every the rights, powers, and authorities, cause and causes of action, and suits, claims, and demands, given to or vested in her, or them, in and by the said agreement, tender, specification, general conditions, and special conditions in all respects against the said contractors, and each and every of them, as if the said 18th day of August, 1892, had been the day or time originally named in and appointed for the completion of the said works; and that all and singular the penalties, forfeitures, sum or sums of money, rights, and privileges which would accrue to, or vest in Her said Majesty the Queen, her heirs or successors, the said Minister and his successors in office, or the Government of the said Colony, for or by reason, or on account of the said works not being completed and finished within the time named, and according to the said tender, specification, general conditions, special conditions, and the said agreement shall accrue to, or vest in Her said Majesty, her heirs or successors, the said Minister and his successors in office, or the Government of the said Colony, if the said works shall not be completed and finished in all things on or before the 18th day of August, 1892; and that the said agreement shall at all times be read and considered as if the said 18th day of August, 1892, was, and is, the time therein named for the completion of the said works, instead of the said 28th day of October, 1891; and, lastly, that in consideration of such extension of time, as aforesaid, the said contractors shall not have any claim or demand against the Crown, or the Colonial Government, or the said Minister, for any alleged failure or delay on the part of the said Government in not setting out the said works, or furnishing plans or detailed drawings, or in not supplying machinery or materials, or otherwise arising out of any supposed failure, neglect, or default on the part of the said Government; and all such claims and demands are hereby expressly waived and surrendered. In witness whereof the said parties to these presents have hereunto set their hands and seals the day and year first before written.

Signed, sealed, and delivered by the said William John Lyne, the Minister }  
for Public Works in and for the Colony of New South Wales, but not }  
so as to incur or come under any personal liability in respect of the }  
premises, in the presence of,—

J. BARLING.

GEO. FORREST.

Contract

Contract No. 72.—Munni-street Storm-water Sewer.

Sir,

Box No. 10, North Sydney Post Office, 30 May, 1892.

We have the honor to ask you to be good enough to refund to us a sum of five hundred pounds (£500) of the retention money held by you on the above contract.

The total retention money amounts to nine hundred pounds (£900), and as the work is approaching completion we trust that you will see fit to grant our request.

J. Davis, Esq., Sewerage Department.

We are, &c.,  
CARTER & CO.

Report herewith.—J.D., 1/6/92.

## No. 33.

The Supervising Engineer to The Principal Assistant Engineer for Sewerage.

## MINUTE PAPER.

*Subject*.—Contract No. 72.—Munni-street Storm-water Channel—Recommending that £500 retention money be returned. Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 1 June, 1892.

WHEN the Minister approved of Messrs. Carter & Co. completing this storm-water sewer they had completed the lower portion of the work, and maintained it for three months, in accordance with the contract, with the exception of some slight repairs to the rendering. The value of this completed work is £18,605 3s. 5d., and the amount retained of it is £930 5s. 2d. The contractors ask that £500 of this sum be returned pending the execution of the upper portion of the channel to Munni-street. I do not see any objection to the request of the contractors being complied with, as we have £212 17s. 6d., which has been retained on the upper portion, in addition to the £930 5s. 2d. mentioned above, making a total in the hands of the department of £1,143 2s. 8d.

J. DAVIS.

Mr. Davis to see me with present and previous vouchers.—R.R.P.H., 1/6/92. Progress returns herewith.—F.C.P., 2/6/92. Recommended. If the extension of this contract (£7,000) had not been gone on with contractors, would have been entitled to the return of the whole of the retention money.—R.R.P.H., 3/6/92. Under Secretary. Submitted.—J.B., 4/6/92. Approved.—W.J.L., 6/6/92. Roads.—D.C.McL. (*pro* U.S.), 6/6/92. Noted.—R.R.P.H., 7/6/92. Inform contractors, and then to Mr. Davis for voucher.—F.C.P., 8/6/92. Carter & Co., 8/6/92. Voucher herewith.—J.D., B.C., 10/6/92.

## No. 34.

The Supervising Engineer to The Principal Assistant Engineer for Sewerage.

## MINUTE PAPER.

*Subject*.—Contracts Nos. 72 and 75, Shea's Creek Sewer—Further with reference to repairing rendering in invert of sewer which was washed away in March last.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 8 September, 1892.

WHEN the sewer was finished from the eastern boundary of the Macdonaldtown Park to the open concrete channel below Mitchell Road, a length of about 44 chains, the stormwater had to be turned through before the rendering in the invert of the sewer had been allowed time to harden. It was absolutely imperative that the water should be turned in when it was, because, in consequence of the flood water not having a proper channel, properties were being damaged. Through this large quantities of the rendering were washed away, and before the work can be considered perfect, or in such a state that it can be taken over from the contractor, the invert must be repaired.

I saw Mr. Snodgrass (Messrs. Carter & Co.) and Mr. Farley (Messrs. Parry and Farley) this morning, on the ground. They appear to think that there will be considerable difficulty in keeping the water off the invert of the sewer a sufficient length of time to admit of the rendering hardening so as to resist the wash of the water. With this I agree.

In order to get over this difficulty they propose that 18 inches of the sandstone concrete be cut away along the invert of the sewer, and brickwork be substituted. The contractors, I understand, are willing to turn the water out of the sewer to enable them to effect the repairs, cut out the concrete, and substitute brickwork, provided they are paid for the brickwork at their schedule rates. This would make the extra cost as follows, viz. :—

|   | £    | s. | d. |
|---|------|----|----|
| Messrs. Carter & Co., 17 cubic yards, at 80s. ....    | 68   | 0  | 0  |
| Messrs Parry and Farley, 23 cubic yards, at 61s. .... | 70   | 3  | 0  |
|   | £138 | 3  | 0  |

Considering that the contractors were obliged to use the sewer before it was properly finished, and as a consequence the repairs are necessary, and that the brickwork would make a more durable job than the sandstone concrete and rendering it is proposed to renew, I would recommend that the proposals made by the contractors, Messrs Carter & Co. and Messrs. Parry and Farley, be approved.

J. DAVIS.

When once storm water and household water has passed for a time over concrete work, rendering will not bond with concrete, hence the bricklining would certainly be the best and only remedy. I, therefore, recommend Mr. Davis' proposition to the favourable consideration of the Engineer-in-Chief.—C. H. OHLFSEN BAGGE, 9/9/92. The Engineer-in-Chief. Appd.—R.R.P.H., 9/9/92. Messrs. Carter & Co. and Messrs. Parry and Farley informed.—J.D., 10/9/92.

This work has now been finished, and vouchers are being prepared, but in the case of Parry and Farley, I understand that Mr. Farley waited upon the Engineer-in-Chief and pointed out that their price for brickwork was only 61s. per cubic yard, against 80s. paid to Carter & Co., and asking that they be paid at the same rate as Carter & Co. Will the Engineer-in-Chief please say whether Parry and Farley's brickwork is to be paid at 61s., their schedule rate, or 80s., Messrs. Carter & Co.'s schedule rate?—J.D., 28/11/92.

As the schedule rate (61s.) is a low price, and the repairing referred to in the within minute is something beyond the ordinary brickwork, as it includes excavating some of the cement work, I approve of the schedule rate for this special item being increased by 25 per cent.—R.R.P.H., 28/11/92.

Mr. Weedon to include in voucher.—J.D., 28/11/92.

## No. 35.

Messrs. Carter &amp; Co. to The Supervising Engineer for Sewerage.

Contract No. 72, Shea's Creek Sewerage.—Iron Gratings for Gully Shafts.

Sir,

Box No. 10, North Sydney, 1 November, 1892.

Eleven of the above gratings remain on our hands after completing our contract.

These were ordered as per the original schedule quantity,

From various causes, such as alterations in the design, &amp;c., a fewer number than this quantity was required.

Seeing that these can be used on other of your contracts, and are of no use to us, we would be glad to dispose of them to your department at less than cost price to us (say), £2 10s. each, delivered in good order and condition to your dépôt at Camperdown.

We are, &c.,  
CARTER & CO.

There were thirty-two of these gratings given in the schedule as the probable number required, but only fifteen were used. It appears the contractors procured eleven more than were used. The schedule rate for providing and fixing is £4 10s.; but they offer to deliver to Camperdown store for £2 10s. The price being paid to Messrs. Hoskins for the supply and delivery of the same article is £2 10s., and I think, therefore, considering we shall have to cart the gratings from Camperdown to the contract where they may be required, we could not afford to pay more than 45s. I recommend that the eleven gully gratings be taken over at this price.—J.D., 2/11/92. Mr. Bagge. These

These gratings are frequently required on the works, and might, I think, be safely taken from the contractors. The price (45s.) is very low.—C. H. OHLFSEN-BAGGE, 3/11/92. Engineer-in-Chief. Will we require these gratings? If so, why should we take them at less than their value?—R.R.P.H., 3/11/92.

We shall require the gratings. We can get gratings delivered where they are required for 50s., and to allow for the cost of carting these from Camperdown store, I am proposing to give Carter & Co. 45s. each.—J.D., 7/11/92. Engineer-in-Chief. Approved.—R.R.P.H., 7/11/92. Carter & Co., 8/11/92.

Gentlemen,

8 November, 1892.

In reply to your letter of the 1st instant, offering to sell to the Government eleven gully gratings which remain in your hands after completing Contract No. 72, at (say) £2 10s. each, I have the honor to inform you that I am willing to take the gratings over from you at £2 5s. each, delivered in good order and condition at the depôt at Susan-street, Camperdown.

I have, &c.,

ROBT. HICKSON,

Engineer-in-Chief for Sewerage.

Messrs. Carter & Co., Contractors for Contract No. 72.

No. 36.

Messrs. Carter & Co. to The Supervising Engineer for Sewerage.

Contract No. 72, Shea's Creek Stormwater.

Sir,

Box No. 10, North Sydney, 12 November, 1892.

On our last progress certificate for the above contract the sum of £100 has been deducted for five weeks time penalty.

As the time allowed (four months) for the completion of this work was extremely limited, and seeing that the contract was carried out as expeditiously as possible, to which your supervising officers can testify, we respectfully ask you to be good enough to remit the said penalty.

We are, &c.,

CARTER & CO.

No. 37.

The Crown Solicitor to The Under Secretary for Public Works.

MACNAMARA v. SMITH.

Sir,

Crown Solicitor's Office, Sydney, 1 March, 1894.

As it now appears that the land on which the works are proposed to be carried on has not yet been resumed, and as the works cannot be carried on until the resumption is made, I have granted the plaintiff a postponement for a fortnight, as by that time the resumption will be completed, and the Government will be in a better position to have the injunction dissolved.

Please let me have a copy of the *Gazette* Notice of Resumption as soon as it is issued, as I think it would be advisable to have same before the Court on the application.

I have, &c.,

ERNEST A. SMITH,

Crown Solicitor.

I regret that the Crown Solicitor agreed to a postponement for a fortnight, as it causes great inconvenience, and upsets many arrangements in connection with this department.—W.J.L., 2/3/94. I explained to the Minister that this arose on account of the Crown Solicitor not having been informed, as he should have been, of the fact of the land not having been resumed. We are making arrangements to have this done early next week.—J.B., 3/3/94. Re-submit.

MACNAMARA v. SMITH.

Sir,

Crown Solicitor's Office, Sydney, 28 February, 1894.

In answer to your telephone message of this morning, I think it would be unwise to give any undertaking of any kind as a condition for obtaining the consent of Macnamara to the dissolution of the injunction.

The injunction was obtained before the resumption, and now that the *Gazette* Notice has issued, it is quite clear that the constructing authority has full power under the Act to construct these works.

The injunction, in my opinion, ought to be dissolved absolutely.

I have, &c.,

ERNEST A. SMITH,

Crown Solicitor.

The Under Secretary, Department of Public Works.

Submitted.—J.B., 1/3/94.

No. 38.

The Crown Solicitor to The Under Secretary for Public Works.

MACNAMARA v. SMITH.

Sir,

Crown Solicitor's Office, Sydney, 20 March, 1894.

I have the honor to report that the motion to dissolve the injunction granted herein came before His Honor Mr. Justice Owen yesterday and to-day, and after hearing argument His Honor dissolved the injunction, the Minister, by his Counsel, submitting to pay any damages that may be assessed in respect of any injury done to the plaintiff by the works at Shea's Creek previously to the resumption of the land in the *Gazette* on the 6th March instant. His Honor also awarded such damages (if any) to the plaintiff, and directed that the amount of such damages should be assessed by a jury before him on the 14th May next; the costs of this application to be paid by the Crown.

The order was made in this form, because the plaintiff alleged (what was, however, denied on behalf of the Minister) that the department had, previous to the resumption, some eighteen months ago, proceeded with the work, and this caused the plaintiff much injury.

I thought it better to let the order go in this form, as the judge was disinclined to dissolve the injunction without reserving to the plaintiff his right to compensation for any prior damages done to him by the action of the Government.

I return the papers temporarily herewith, and I shall be glad to have the same back as soon as possible, with full instructions as to the action of the Government before the resumption, in order to enter a defence to the action set down for the 14th May.

I have, &c.,

ERNEST A. SMITH,

Crown Solicitor.

Submitted.—J.B., 22/3/94. Seen.—Let all necessary steps be taken to defend this claim. Mr. Darley, be sure to have the evidence very carefully prepared. I think any serious claim most unwarrantable.—W.J.L., 22/3/94. Mr. Darley.—J.B., 22/3/94. Very urgent.

So far as this branch is concerned, I am not aware on what grounds any claim can be based, but the Sewerage Branch cut a drain through the swamp some time back, and it may be this drain the claimant is referring to. Perhaps the papers had better be referred to Mr. Hickson, so that he may have the matter looked into, and a report obtained from his officers as to how far the work referred to can have injured Macnamara.—C.D., 27/3/94. The Under Secretary for Public Works.

Mr. Hickson, please consult with Mr. Darley upon this matter, which is very urgent.—J.B., B.C., 28/3/94.

Mr. Darley and myself went over the ground this morning, and are therefore seized with all the facts of the case. The papers might now be returned to the Crown Solicitor, and a conference arranged for at an early date.—R.R.P.H., 29/3/94. Papers 92/490 attached. Under Secretary.

Crown Solicitor.—J.B., B.C., 30/3/94.

## No. 39.

## Summing up of His Honor the Chief Judge in Equity.

MACNAMARA v. SMITH.

Before His Honor the Chief Judge in Equity and a Jury of four.

Thursday, 14th June, 1894.

*His Honor*: I find on looking through the exhibits that the statement of claim and the original decree are not in evidence. I do not know whether it is absolutely necessary that they should be in evidence, but it is impossible to find out what the injunction was that was dissolved unless the pleadings are in evidence. I want to refer to these, and I think that these documents ought to be in evidence. The order dissolving the injunction was put in, but it is nonsense standing by itself.

*Mr. Pilcher*: I do not think there could be any possible objection to these documents going in, and these are issues in the suit.

*Mr. Owen*: If your Honor thinks they ought to go in, we have no objection.

*His Honor*: Are they to be defendant's exhibits?

*Mr. Pilcher*: It does not matter an atom. [*Statement of claim and decree put in, Exhibits 21 and 22.*]

*His Honor*, in summing up, said: Gentlemen of the Jury, the issues before you have been referred from the Court of Equity under these circumstances:—In 1889 the Government have constructed a canal up to a point somewhat south of the plaintiff's dam; and the plaintiff, anticipating some possible injury from the construction of the canal, and ascertaining that the Crown had not resumed the land for the purpose of constructing this work, instituted proceedings in Equity against the defendant, the Minister for Works, asking for an injunction to restrain the defendant from continuing the construction of the canal, and from interfering with the water in an ancient watercourse. He states in his statement of claim that through the land which he rented from Mr. Cooper "a certain ancient watercourse runs, and has run from time immemorial, which said watercourse supplies the water necessary for carrying on the said wool-scouring works; and the plaintiff charges that he is well entitled to be unmolested in the use of the water that flows thereby." He then refers to the works that are being carried on by the Government, and says he believes "that it is the intention of the defendant to continue, and is now in the act of continuing, the said watercourse above the lands so leased by the plaintiff, and thereby to draw off and divert the whole of the water which flows and has flowed along the said ancient watercourse through the plaintiff's said land." Of course none of these works now referred to had then been constructed, but what he anticipated was that they would affect the water supply. The Government had not then resumed the land, and there was no evidence before the Court, as there is now, of their having obtained leave or license from the owner of the property to construct these works. The Court in 1889 granted an injunction in these terms: "This Court doth order that the defendant, his officers, contractors, servants, workmen, and agents be hereby restrained from proceeding with the works in the statement of claim mentioned to the north of a line drawn from east to west running through a point two and a half chains south by the southern boundary of the plaintiff's dam." That was the injunction the plaintiff got in 1889 to restrain the defendant from dealing with the canal works, and prevent him from diverting the water in the watercourse. Matters remained in abeyance until 1891, when the Government had it in contemplation to make a storm-water sewer in connection with the general scheme of sewerage for that part of the suburbs of Sydney. For the purpose of constructing this storm-water sewer they proposed to take part of the channel of the old Macdonaldtown Creek, and to run the storm-water sewer, which was to be made of cement, along the old course of the Macdonaldtown Creek. Then there was to be an outlet from that sewer so as to enable the storm-water that came down that sewer to get away, and that outlet was made along the line of what has been spoken of in these proceedings as the extension, so that the water coming down the storm-water sewer would get away through the extension into the canal, which has been formed by the Government, and ultimately find its way into the sea. The extension was not a continuation of the canal, although no doubt the canal itself is ultimately intended to be made along the line of the channel which has been made to carry off the storm-water that came down the sewer. I draw your attention to this because the learned counsel for the plaintiff spoke at one stage of the case of the high-handed action of the Government. He seemed to imply that the Government was defying the Court—acting in a high-handed way, and disregarding the rights of the owners of the property. As far as the injunction of the Court was concerned there was no disregard of that whatsoever. What the Court restrained them from doing was from continuing the canal or diverting the water from the watercourse referred to. Neither of these things were affected by the work directly at any rate or intentionally, which they were then carrying on. So far as the Court was concerned, there was no flying in the face of its jurisdiction. When the Government contemplated the construction of this work there were two courses open to them: They might have resumed the land and paid compensation which would have had to come out of the pockets of the taxpayers, or they might get the leave and license of the owner to make these works. They adopted the latter course, and it appears to me they were doing what a careful and prudent Government certainly ought to have done to save the taxpayers' pockets. They got leave and license from Mr. Cooper without resuming or paying compensation. Having got that leave or license, or thinking that they had got it, they then proceeded with the work. I want to draw your attention to the way in which this leave and license was obtained. Mr. Cooper, the owner of the land, resides in England; and Mr. J. R. Hill represents him here under power of attorney. The power of attorney was put in evidence, and according to my construction of that document, as far as the law is concerned, it did not appear to me that Mr. Hill had authority under it to bind Mr. Cooper in giving this leave to the Crown; but Mr. Hill, when examined, pointed out that as far as he had been able to ascertain, Mr. Cooper had left the entire management of his estate to him. He said that on several occasions he had written to Mr. Cooper to obtain his directions and advice as to things to be done in connection with his estate, but Mr. Cooper had invariably written back to him and said he had left it entirely to him, and trusted entirely to his discretion. Mr. Hill therefore considered that he had power to act for Mr. Cooper, and to give leave and license which Mr. Cooper, if he had been here, might have given. As far as the authority of Mr. Hill is concerned, I think you need not trouble yourselves about it. The leave was given early in 1891, the work was constructed in that year, and finished in September of that year. As far as the evidence goes, there has been no indication that Mr. Cooper has ever repudiated the action of his agent, and therefore, for the purpose of considering this matter, I think you may take it that Mr. Cooper has ratified the action that has been taken by his agent. That possibly might not be the case if this were a contest between Mr. Cooper and the Government, that is to say, that Mr. Cooper might say to the Government, "Mr. Hill had no authority to give this leave, I must insist on your resuming the land and paying me compensation." I think that in a case of that kind Mr. Cooper might set up that he was not bound by Mr. Hill's action. Here, however, it is a question as to how far the Government were acting with due regard to the interests of the property-holders, in carrying these works through their land without resuming it, in the ordinary way under the Act. When the matter was referred to Mr. Hill he consulted Mr. Fisher, who is the surveyor in connection with the Cooper estate. Mr. Fisher went out to the land and examined it carefully with a view, as you will see from the document to which I will refer presently, to a great extent in determining whether this proposed work of the Government would interfere with the water rights of the tenants of Mr. Cooper, because if it did, it might possibly bring Mr. Cooper into conflict with his tenants. Of course Mr. Cooper was anxious that his tenants should have no molestation as to their rights which they might have as tenants from him. You will remember that Mr. Hill said in the witness-box that he impressed it upon the Government that nothing was to be done which would interfere with the water rights of the plaintiff or the other tenants. Accordingly Mr. Fisher went out to look at the proposed work which the Government had in contemplation, and on the 23rd March, 1891, he sent in this report to Mr. Hill. [*Reads Mr. Fisher's report.*] That was the report that was sent in by Mr. Fisher under the directions which he received from Mr. Hill, in order to give Mr. Hill the material for determining whether he would consent to these works or not. Then the next document which was received was a letter from Mr. Hickson, the Engineer-in-Chief for Roads, Bridges, and Sewers, dated the 26th March, 1891. [*Reads letter.*] These are the terms which the Government say they were prepared to carry out, and practically they are the same terms as mentioned in Mr. Fisher's report. On the 31st March Mr. Hill replied to that letter. [*Reads Mr. Hill's letter.*] So Mr. Hill gives his consent to the Government taking this land, so long as the water that flows to Macnamara's establishment is allowed to flow there, and the provisions referred to by Mr. Hickson are carried out. Those provisions were to carry the water over the Macdonaldtown Creek when required to do so, and to carry Shea's Creek across the sewer in a wooden flume. Now that has been carried out to the letter by the Government, with one exception, that they have put a cemented flume instead of a wooden one. In every other case the requirements of Mr. Hill, which were made with a view of safeguarding the plaintiff's water supply, have been.

been carried out by the Government. That shows that, so far, at any rate, from acting in a high handed way, and disregarding the rights of the proprietor, the Government did not interfere with the injunction which the Court granted, nor have they disregarded the rights of the owners of the property. It may be, when you come to consider the evidence, you may find that the plaintiff has suffered injury nevertheless. It may be, that carrying out these works, however carefully the Government may have constructed them, that you may come to the conclusion that the plaintiff has suffered injury, and the arrangement made between Mr Hill and Mr Hickson would not prevent you from returning a verdict in favour of the plaintiff. I bring these matters under your notice to show that the Government have not acted in any way in a high handed manner, so far as the requirements of Mr Hill are concerned, because the Government have carried them out to the letter—and better—by giving a cemented flume instead of a wooden one. Having got this leave and license from Mr Hill in March, 1891, the Government commenced to construct these works, and in September, 1891, they were completed. Early in 1894 the defendant applied to the Court to dissolve the injunction that had been granted, pointing out that when the injunction was granted, the land had not been resumed, but that the Government had, or were about to resume the land. As a matter of fact, the Government did resume the land on the 6th March last. In dissolving the injunction, in order to safeguard any possible right the plaintiff might have against the Government for constructing this work, counsel for the defendant submitted that if any injury had occurred to the plaintiff, the Government was admittedly responsible for it, but I want you distinctly to understand that there was no admission in any shape or form of any liability whatsoever on the part of the Government. All they said was that if injury was proved to be sustained by the plaintiff for which defendant was liable, he submitted to pay what damages might be assessed in respect of that injury. Upon that submission the Court directed that these issues should be tried, (1) whether the plaintiff has sustained any damage in respect of the matter referred to in the order of the 20th March mentioned, and (2) what is the amount of such damage. These issues have been referred to you in order that you may inform the mind of the Court by your findings upon them. Before I go into these issues there is one matter which I wish to mention without laying any stress upon it myself, but merely for the purpose of showing what has been referred to by counsel for the defendant, leaving it to you to give it as much consideration and weight as you may think it entitled to, and nothing more than that—and that is, the delay on the part of the plaintiff in bringing forward his claim. You will remember that the counsel for the defendant spoke of the plaintiff lying by. You know that the plaintiff had an injunction in 1889 for anticipated injury, not real injury, because the works had not been constructed. In the beginning of 1891 he must have known that the works of which he now complains were being constructed. We know, as a matter of fact, that there were interviews with the Government with reference to them. If the plaintiff was so alarmed at anticipated injury when the works had not been done, it may be said that as soon as the works were commenced again he might have taken action, and if it did not fall strictly within the terms of the injunction it was open to him to institute new proceedings and ask for an injunction to restrain the defendant from proceeding with these works. The works were finished in 1891. In the beginning of 1892 the plaintiff says he began to suffer damage, and that this damage continued all 1892, the whole of 1893, and the first four months of 1894, without any action being taken by the plaintiff at all. Even then he does not come into Court to ask for its interference. It is the defendant Minister who comes to ask for the injunction to be dissolved. You have to take these facts into your consideration and give them as much weight as you think they are entitled to. Of course mere delay does not prevent a plaintiff from obtaining a remedy if he is wronged. At the same time you have to consider how far the plaintiff has suffered and whether it really was a serious interference with his business. You will take into consideration that he saw the works going on in 1891, and for nearly two and a half years afterwards without taking any action against the Government. These are matters more with regard to the *bona fides* of the claim than as to the rights of the parties. Notwithstanding that, if you think the plaintiff has really suffered an injury his rights would not be interfered with by this delay. The plaintiff's claim is a peculiar one, and it is a little complex. It was said by one of the witnesses on behalf of the defendant that the plaintiff had said to him that he did not claim for loss of water but for the pollution of the water. Now the pollution complained of is not the act of the Government in dirtying the water. It is not as if the Government were carrying on a business of some filthy description such as boiling down, and that they deposited filth from their works into the stream. What the plaintiff says is that the water originally came into his dam in a cleaner condition than now, for two reasons, one that there was a greater quantity of water in the channel, and the other that there was a greater quantity of water in the swamps surrounding the channel, consequently the water that came into the dam was more diluted. Now he says all this water supply has been cut off, and the water comes into the dam in an undiluted form. Therefore the question of loss is really the pollution of the water. So far as that is concerned he does say that there is a diminution in the supply, but the great point is that it is more polluted. In one respect it is more polluted by the diminution of the water in the swamp, and on the land surrounding the creek, which water formerly diluted the stuff, therefore made it more fit for woolwashing. He says that in this swamp there was a mass of reeds, rushes, flags, water grass, and impure water passing through that became filtered, because the reeds and vegetation arrested the solid matter which was held in suspension and precipitated it to the bottom of the swamp, so that when the water flowed into the dam it came in a cleaner and purer state than it would otherwise have done. The plaintiff says that that is the injury which he has suffered so far as Shea's Creek is concerned. As far as Macdonaldtown Creek is concerned, the plaintiff says that the whole of that water is cut away from him. The present sewer which runs at right angles to the creek cuts off the liquid—I can hardly call it water—that used to come down the creek, and the plaintiff says that the result of the defendant's work has been to alter the position of Shea's Creek. He says that Shea's Creek, before the work was commenced by the Government, stood on lower ground than the present extension, and in consequence of defendant's work the ground between Shea's Creek and the extension has shrunk, consequently Shea's Creek is higher than the extension, and that has had the effect of drawing off the water from Shea's Creek to the extension. He also says that that had the effect of drying up the ground between the creek and the extension, and destroying the reed beds, which he says acted as a filter. The plaintiff further states that as far as the channel of Shea's Creek is concerned the water in the swamp used to act as retaining water—that is to say, there being water on both sides of the channel, that water retained the water in the channel of Shea's Creek, but that water being drained away the ground became dry, and instead of the water being maintained in the channel of Shea's Creek it percolated and ran away to the lower ground, and so diminished the supply that came into the plaintiff's dam. Then there is the further claim which was not much relied upon by counsel, but was mentioned by the witnesses, that a supply of water in heavy rainstorms used to overflow the banks into the swamps, ultimately getting into the dam. The plaintiff relies on the position of the reed beds, and he also says that the sewer which runs at right angles to Shea's Creek diverted the storm water that overflowed the banks and spread over the country to the north of the sewer, so that this water instead of passing into the plaintiff's dam fell into the sewer. There is one other matter which the plaintiff refers to as adding to the impurity of the water, and that is from the diminished supply he was not able to flush out the dam as effectually and as often as he would otherwise have done. The plaintiff says that in former times they could open the sluice gate, and the rush of water carried away the filth in the bottom of the dam, and the dam was kept cleaner than at present. I intend to refer briefly to the way the defendant meets these claims. As far as Macdonaldtown Creek is concerned you have to bear in mind that the sewer which has intercepted the flow that came down the old Macdonaldtown Creek has taken away from the dam the stuff that came down the creek, which has been described as being sewage of the most offensive character. You have to consider whether it really would be an advantage to the plaintiff to have that filth coming down to his dam in dry seasons, and, whether seeing that the plaintiff is claiming more on account of the pollution of the water than of loss of the supply, whether the cutting off of this flow would lead to the pollution of the water in the dam, and make it worse than it would be by having this filth taken away. Of course, if you add dirty water to dirty water you increase the quantity, but you cannot improve the quality. Then there is this paragraph in Mr Fisher's report, in which he says that the overseer of the works is of opinion that it will be decidedly to their advantage to be able to shut off the dirty Macdonaldtown water and only let the stormwater in. Of course, in rainy seasons there would be a considerable flow of water coming down the Macdonaldtown Creek, which would be a good deal diluted, and it might be a great advantage to get that supply into the dam, and the defendant says that Mr Fisher recommended, and Mr Hill insisted upon, stop-gates being put into the sewer by which they could arrest the flow of the stormwater and divert it in the plaintiff's dam. The defendant says that these stop gates were put there, and it was part of the arrangement that they were only to be used when the plaintiff required them, and he had not so required them. The defendant says that if this filth were allowed to run down the Macdonaldtown sewer into the dam, the plaintiff's position would be worse instead of better, but if he wants the stormwater, they have the gates there to throw it off into his dam. That is how the claim as to the Macdonaldtown Creek was met. It is said that some correspondence took place between the department and one of the municipalities in reference to this sewer. If this water was thrown back, as of course it would be if the stop gates were put in, it would possibly do an injury to some of the municipalities adjoining this sewer, and it might lead to litigation. I do not think

you have anything to do with that whatever. No action ever was taken, and it is a mere correspondence between the Government and a municipality. If the Government are willing to run that risk, I do not see that the plaintiff has anything to do with it. If the plaintiff had gone to the Government and said, "Put these stop gates up, as I want the stormwater," and the Government said, "We are quite willing to do so, but the municipality objects to it, therefore we will not do it," the case would be entirely different. No application was ever made to the Government, and there was no refusal on the part of the Government. Now we come to the claim as to Shea's Creek, and one of the first points taken with regard to that was whether that creek was natural or artificial. Neither council seemed to think it was a matter of very great importance; at the same time it is an issue put before you and it is a matter you will have to consider; in fact, it is one of the questions I will ask you to answer for me. If it is an artificial channel there is no evidence to show when it was made, or by whom. The only evidence that I am aware of that in any way bears on it, as far as date is concerned, is furnished by the maps, one of which was prepared in connection with the Sewerage Commission of 1875, in which this creek appears without any name, but there is a channel that appears to run into the swamp before it comes to Eve's. There is another map made by Mr. Parrot, one of the plaintiff's witnesses, which appears to show that at the time that map was made the present channel was not in existence. It appears to me that that is the only evidence when the creek was made, if it is an artificial channel. On the other hand you have a mass of evidence given on behalf of the plaintiff by a large number of witnesses, some of whom have known the channel as far back as fifty years, and they say that the position of the channel of Shea's Creek is the same as it was when they remember it first. The only witness who appears to bear out the statement that it was known as an artificial creek was Mr. William Foster, who was called up on behalf of the plaintiff. He said he never knew it as a creek or a river, but as the Big Swamp or the Little Swamp. You have heard the evidence, and it does not follow that because I cannot recall any other evidence on this point that you cannot, but it is the only evidence that I can remember that in former times there was no channel. Then you have these two maps to which I have just referred—that prepared in connection with the Sewerage Commission, showing the position of the channel above Eve's, and a huge swamp in front of it coming all the way down to the plaintiff's dam. Then the engineers and surveyors, called on behalf of the defendant, say that it must be an artificial channel mainly for two reasons, one is that it stands at a higher level than the surrounding country and the other that on the eastern side of the channel there is an artificial bank. These witnesses comprise a large number of gentlemen who know the locality well and they have been out several times. They say that the bank on the eastern side is formed of the material dug out of the race or channel and thrown up to keep the water in. The plaintiff's witnesses say that that is a natural rise in the ground and that the top of that stuff was taken out in cleaning the creek and not in making it. The plaintiff says that originally Shea's Creek, was lower than the swamp and that the water therefore did flow in its natural way along the lowest part of the ground. The defendant's witnesses say that at any rate as far back as 1889, that is before these were commenced at all, Shea's Creek stood higher than the ground in the swamp where the extension now is, and consequently it must be artificial. Everyone knows that the tendency of water is to flow to the lowest level and it will not unless some artificial means is used, keep on the high ground, so that if you are looking for the old immemorial channel of the stream you always go to the lowest ground. The question whether it was relatively higher in 1889 is one which must be determined by the levels. Mr. Parrot, one of the plaintiff's witnesses, says that when he went out in 1889 the ground was all under water, and a swamp, so that he took no levels; but before that the Government sent out Mr. Halligan, and he took all the levels for the proposed extension, which you have plotted upon Exhibit 3. These levels were taken in 1889. If you believe these levels to be correct, and to have been taken at the time stated, they will solve a great many of the questions arising in this case. You have levels taken along the course of the creek to the point where it debouches into the swamp, and down to the extreme end of the extension. You can compare the levels in the bed of the creek with the levels where the proposed canal was to go, and where this extension now goes, and they will tell you exactly what the levels were if you believe the evidence in respect to them. One of the defendant's witnesses says that the swamp is not a dead level, but that there are little hills and hollows in it, though they are mere depressions. You will bear that in mind in comparing these different levels, when in one place they appear to be a little lower than another. That may arise from the fact that the general level of the ground is not different, but that there is a slight elevation at that particular point. It appears to me that the fairest way is to take the levels all through, and to determine generally what the flow of the water was. I do not want to express any opinion as to the levels, because the figures are before you. It appears that in 1889, except in the part nearest to the storm-water sewer, the land that was on the higher level than the level of the proposed extension. Mr. Hickson, and one or two other witnesses called for the defendant, stated that, although they could not take levels on account of the ground being covered with reeds and water, they could see the water flowing from Shea's Creek to the extension. If you see water flowing in a particular direction from one place towards another, you come to the conclusion that the point from which the water is flowing is higher than the other. It appears to me that, although the difference does not appear to be very great, a comparison of these figures bears this out. It is quite possible that the difference may be so slight as in no way to lead you to suppose that this is an artificial channel. However, that is a matter you have to determine yourselves. Then, it is said, there is a break away at a point marked 200 yards north of Eve's, and from that it appears to be the lowest level. You have seen the place yourselves, and you are better able to form an opinion than I. You have seen the position of the bank which, it is said, was put there to restrain the creek in this channel, and you will be able to say whether it really exists, or whether it can be otherwise accounted for. It was said by one of the defendant's witnesses that there was an old channel there, but that is a matter for your observation. You remember Mr. Godfrey's evidence that what is carrying part of the water there was made by him as late as four or five years ago. I do not think I need trouble you any further on the question as to whether the stream is natural or artificial. The most important question, to my mind, is as to whether there was any loss of water in the channel of the creek or not. I want you to distinguish carefully between loss of water in the channel itself and any loss of water through draining the swamp or diminution of any other water in any other way. The greater part of the defendant's case went to show that as far as the channel was concerned there was, as a matter of fact, no loss. The first point taken in the evidence was as to the flume, which is the only place where any alteration has been made in the creek. The question is whether the flume will carry all the water that the channel will carry. The water may flow over the banks and come back again into the channel, but the question you have to decide is only as to the water that can flow into the channel without overflowing the banks. If you are satisfied that there is no loss of water there, that is an entirely distinct question from any loss of water that may arise from the draining of the swamp. I will deal with the question as to the size of the flume. We have a diagram in evidence, prepared by Mr. Halligan, showing the area of the stream 25 yards north of the flume, 15 yards north of the flume, and 15 yards south of the flume, and showing the area of the flume itself. If you believe this diagram to be correct, it appears to me to be absolutely conclusive of this point. The whole capacity of the flume is 60 12 feet; 25 yards north of the flume the area of the creek is 60 27, and at 15 yards north it is identically the same as the flume itself, namely, 60 12. The area 15 yards south of the flume is 60 27, but that makes very little difference. Then Mr. Gribben, the plaintiff's engineer, who has been there since 1888, says it carries just about the same quantity as before, except when the flume was broken away and allows the water to escape. So far as the flume is at present constructed, I have shown you from the actual measurements that it is exactly the same size as the creek 15 yards north, and we have the evidence of one of the plaintiff's employees to the effect that just about the same quantity of water passes over the flume as along Shea's Creek before the flume was put up. Then, there is the evidence of Mr. Parrot, one of the plaintiff's engineers, on this point. He says he thinks there is about the same quantity of water flowing into the creek in 1894 as in 1892. He is a scientific witness, well acquainted with the locality, he having been there when he prepared the map for Colonel Scratchley. Before I go into the actual tests, I think there is one general observation I ought to make. The plaintiff says that this soil is naturally porous, and consequently the water escapes from the channel of the creek. The Government have not made this soil porous. It is the natural character of the soil, and if that is so, surely a certain amount of percolation must have been going on at all times. If you find from actual test that there has been a certain loss, you must not consider that that loss has been necessarily caused by the Government works, because if a certain amount of percolation has been going on from time immemorial owing to the nature of the soil it would not be fair to attribute it to the canal works. You may consider that although it has been going on from time immemorial the Government works have increased it, and, of course, you are entitled to so find. There is another remark that has no doubt occurred to you, and that is that if the effect of the Government works was to drain away the water, how is it that the swamp as it at present exists is there? If the effect of the Government works is to draw all the water off, one would have thought that the effect would have been to drain this swamp also. However, this is a question for you to consider, and you know a great deal more than I do, because you have been out there. I throw this out merely as an observation, to which you can give what weight you think it is entitled to. It is said that originally there was a swamp all round this channel, and that this swamp had the effect of retaining the water in the channel. That depends on the condition of things before the extension

extension was made. As far as I have seen from the evidence, there appears to be very little conflict as to that, because Mr. Davis says that before he went there there was a swamp within a few feet of the creek, right up the whole of the creek to where the sewer comes down. Mr. Parrot, who drew these maps which were so much before you, showed upon one of them where these waters were in 1889, and he showed that the swamp went up as far as Mr. Davis said it went. I do not think there can be any conflict as to the position of the land now; you know more about it than anybody that has been there lately, and you will be able to contrast what was there in 1889 with the state of things existing now. Although the water may be drained away from the swamp, it does not at all follow that the water has been in any way diminished in the channel, because the question whether there has been percolation or not is really one of tests, or, you may think, of theory; but if the test show that there has been no percolation, that is conclusive, because fact must always conquer theory. Then comes this question of the difference between the engineers as to the gauges. If you believe the gauges taken by the Government officers, they establish not only beyond all controversy, as far as their gauges are concerned, that there has been no loss of water in this channel, but a gain. They gauged the channel in a great number of places from beyond the flume to the dam, and although in one gauging there was some loss, in all of the others there was an actual gain. That may possibly appear to throw some doubt on the accuracy of the gaugings, but I do not see why it should, because they say that the increase would be water percolating into the channel from the swamp, which, of course, they could not in any way gauge. There is a distinction between the quantity of water coming in from the swamp and the quantity actually flowing along the channel. If you take their gaugings as correct as far as the bed of the channel is concerned there was no loss of water at all. Not satisfied with that they took gaugings in the extension itself, right from a point above the junction with the sewer to about half way along the extension, and there they have determined whether or not there is any gain of water in the extension, because the theory of the plaintiff is that there is a loss in the creek, and the ground in the extension being lower, the water percolates from the creek into the extension, and, therefore, must appear in the extension. If that is so, there would be an increase of water in the extension, whereas these gentlemen, the defendant's witnesses, prove that there was no loss in the creek, and in the extension there is no gain. Further, they have put down certain test holes, and they say that if the water was percolating from the creek towards the extension it would appear in the sides of the test holes, whereas there is none. Mr. Simpson and Mr. Cardew, engineering witnesses, on behalf of the plaintiff, took gaugings, and the result of them was that there was a very great loss of water in the channel, and a very great gain of water in the extension. As far as the extension is concerned, I will deal with the evidence of the plaintiff's witnesses first, because it appears to me that their evidence is, at any rate, rather strange. All they did was to take gaugings about the middle of the extension. They found the quantity of water flowing there to be 1,766 gallons per minute, and they said a very small portion of that came from the sewer, and all the rest of it must have come from Shea's Creek. When the Government witnesses go there they see that there are no less than four different places where the water comes into the extension in addition to the sewer; it makes just all the difference. I will refer to Mr. Simpson's evidence, because it appears to me that I am right in what I stated. [*Reads Mr. Simpson's evidence, at page 219.*] Then Mr. Cardew, who took the gaugings with Mr. Simpson, says exactly the same thing. You see, they say distinctly that they do not know how much water came from the Macdonaldtown sewer, but it was very small, and no other source of water was coming into the extension, with the exception of percolation from Shea's Creek. Therefore the great bulk of the 1,700 gallons must have been percolation from Shea's Creek. When you come to the gaugings on this extension you find that they, the Government officers, gauged at six different places from H 1 to H 6, and also two overflows that came from the flume at the Chinaman's gardens, at G 3 and G 2. At H 1 there were 825 gallons per minute passing, and at H 5, which was the outfall of the Macdonaldtown sewer, there were 322 gallons per minute passing. Mr. Simpson takes only in two places; he takes the total and the quantity from the Macdonaldtown sewer. He does not gauge the quantity in the Macdonaldtown sewer; he guesses it. When you come to the actual gauging of the defendant's witnesses the outflow from the Macdonaldtown sewer was 322 gallons. That left about 500 gallons to be accounted for. According to Mr. Simpson, that must come by percolation from Shea's Creek. The defendant's engineers say no, there are a whole lot of other sources you have not taken into consideration; for instance, H 6, which is the water that comes down from Godfrey's at the junction, and that is 279 gallons, and this was wholly ignored by Mr. Simpson, as were the flows from G 3 (131 gallons), at G 2 (42 gallons), and three others, amounting to 10, 3, and 14 gallons respectively, so they actually gauged every source of water coming into the extension, and they find it comes to 810 gallons, as against 825 gallons going out. If Mr. Simpson's gauging is taken it really appears to me to be no test. He does not give any quantity of water coming down the Macdonaldtown Creek, and he wholly ignores these other sources of supply. It appears to me that there can be no doubt whatever that it is no test at all. If you take the gauging by the defendant's witnesses there is only a difference of 15 gallons out of 825 gallons, and that 810 gallons flow in from the creeks, watercourses, and streams coming down on the surface. Therefore, there was no addition to the extension according to their evidence. Now, I come to the gauging on Shea's Creek. Mr. Cardew's evidence, which I think is practically the same as Mr. Simpson's, shows that 2,222 gallons were passing at the flume, and that there was an actual loss of 557 gallons in the channel of Shea's Creek. On the 15th May there were 1,151 gallons per minute passing in the flume, and at a point 250 feet further down in the channel 891 gallons per minute, showing a loss of 258 gallons in that distance. If you take the evidence of these gentlemen as correct, there was a very considerable loss of water in Shea's Creek. Mr. Simpson makes it a little less. He says it was 541 gallons on the first day, instead of 557, as given by Mr. Cardew, and on the second day 248, instead of 258. The gaugings were taken on behalf of the defendant by Messrs. Carleton, Davis, Grimshaw, Chamier, Napier Bell, and Stayton, and although the results are very much the same, they do not actually coincide. With the exception of one of these gaugings, they all show a gain of water. Then comes the question which of these two gaugings is the more reliable. Properly speaking, this is not a question for you to answer, because it is really a scientific matter, but a great deal of evidence has been given upon it, and as the question is really thrown upon you, you will have to answer it. The mode adopted by the plaintiff's engineers was to take the sectional area of the creek, and what was ascertained to be the velocity of the stream by multiplying one with the other. They say that that gives the best results in this creek, because they say that, in the mode of gauging adopted by the Government, namely, that by weir, there is apt to be a loss of water through percolation getting under the weir or round the weir at the side. Therefore, the weir mode in a channel like this is not so satisfactory as that adopted by the plaintiff's engineers. The plaintiff called Mr. Knibbs, a gentleman who occupies the position of lecturer at the University, a gentleman who has no doubt considerable theoretical knowledge, and is, I have not the slightest doubt, a very able man. Mr. Knibbs says, "In my opinion the most accurate method of gauging would be to find the velocity on the surface and the sectional area, and then to multiply each factor into the sectional or into the symmetrical line on each side of it, and then to multiply the velocity by '9.' You find the surface velocity in the centre filament of the stream of a given sectional area. You multiply the velocity by '9.' Assuming that Mr. Simpson and Mr. Cardew did not multiply by '9,' their calculation would be in excess, I should say, by a maximum of 10 per cent. That is what Mr. Knibbs says is the proper method, but it is not the method adopted by the plaintiff's witnesses. Mr. Knibbs says: "The result of multiplying the sectional area by the velocity should be multiplied by '9,'" so that the plaintiff's engineers left out one multiplier altogether in their calculations, the result of which, Mr. Knibbs says, was to make their calculations in excess by 10 per cent. Mr. Stayton was afterwards called, and he said he had actually made this calculation, and that it throws Messrs. Simpson and Cardew's calculation out 28 per cent. Mr. Knibbs was then asked about the weir system, and he said that it would be inapplicable to that particular stream. Although the weir system gives a far better result, in his opinion, there would be a loss of water from what he saw of the banks of the stream. If that is so, it becomes a question of fact whether the weir system is adapted to the stream. You have heard the evidence as to what was done by the defendant's witnesses, and it is a question of fact clearly, because, if they could make the weir absolutely water-tight, it undoubtedly, according to Mr. Knibbs, would give the best results. I will also refer you to the evidence of Mr. Grimshaw, who fixed these weirs and took the gauges, and also to the evidence of Mr. Davis, to show how the gauging was done. [*Reads Mr. Grimshaw's evidence as to the fixing of the weirs.*] If you believe Mr. Grimshaw's evidence, there was no possibility of any escape. Mr. Davis gives a description of what was done a little more in detail, because he speaks of puddling. It is for you to consider the question of fact as to whether the weir was put down properly, so that water could not escape. Of course, if there is an escape of the water the weir system must be absolutely fallacious in this case. Then you have, in addition to the evidence which I have already read from, what Mr. Knibbs said, the practical experience of Messrs. Carleton, Davis, Grimshaw, Chamier, Napier Bell, and Stayton, that the weir system is the best for that particular stream, and you also have the evidence of Mr. Darley, the Engineer-in-Chief for Harbours and Rivers, and of Mr. Hickson, the Engineer-in-Chief for Roads, Bridges, and Sewerage, and they also say that it is the best for this kind of stream. Mr. Hickson says that to have a true test in the way in which the plaintiff's engineers have proceeded you must have a uniform section, such as in a sewer, and then the question was asked whether the flume would not furnish such a section, but Mr. Hickson said

it would be as far as it went, but it did not go far enough, because, in order to get a proper estimate, you must have at least 40 or 50 feet to get a reliable result, whereas there was only 20 feet in the flume. In addition to this, you have the authority of certain writers whose names I do not remember, who all speak of the weir system as the best. That appears to me to be the whole of the evidence on this question of gauging. It is for you to determine which was most applicable for this stream and which gives the most reliable results. If you adopt the mode used by the plaintiff, there was a considerable loss of water in the channel of Shea's Creek and a gain in the extension; if you take the defendant's method, there was practically no loss in the channel, and in the extension there was practically no gain. The only other two matters are with reference to the swamp and the reed bed, and, as I said, that depends on the condition of things in 1892 and at the present moment. I need not trouble you on that point, because that is a matter within your cognisance, and you will be able to determine it. On the other point as to whether the plaintiff had the water to flush out his dam, there is the evidence that as it is at present the dam will fill in eleven hours. That is sworn to by the man who watched it, and also by Mr. Davis. If you come to the conclusion that this could be done, it becomes a question whether the plaintiff could not have flushed out his dam if he had wanted to have done, and whether he could not have flushed it out on Saturday night and filled again and ready for work on Monday morning. On the other hand it is said that if all the mud were cleaned out it would take as much as fifty hours to fill. I do not think you have really got to deal with that, because the question is whether, from 1892 up to the present, he could have gone on flushing the dam so as to clear out the dirt that came in in that time, he could not expect to make his dam cleaner than it was in 1892, and if he could have relieved it of the impurities that came in since that time, and he did not exercise that power, he cannot come against the Government for that. Then there is one general remark with reference to this alleged pollution of the water which I think I should make, and that is, that if these reed-beds and places really do act as a filter, it appears to me that the filth must have gone on accumulating from year to year. These works have been there for a very long time. The plaintiff has had them for thirteen or fourteen years, and a great many people had them before him. If these reed-beds have been filtering the water for fifteen years or more, must that not have made them more and more filthy, so that every year the water coming into the dam would become more and more impure? I do not think there are any other matters I wish to draw your attention to. Mr. Smith, the counsel for the plaintiff, has gone at very great length into the plaintiff's evidence, quoting from it; and I should only be wearying you by drawing your attention to it again. Because I do not do so, do not imagine that I pass the evidence of these gentlemen over negligently; what they said is fresh in your memory, and you will give it all the weight you think it deserves. Then as to the question of damages, it appears to me that the only way in which the defendant met this part of the case was by the evidence of Mr. Robertson, the accountant, and Mr. Hawksworth. As far as Mr. Robertson is concerned, he said simply that the books referred to him did not enable him to make out all the particulars of the plaintiff's claim. Whether they do or do not, you have the evidence of the plaintiff's witnesses as to the amount of wool treated and sold, and as to the quality of the wool previous to 1892 as compared with the quality since that time, and from that evidence you can form your opinion. Although the books may be badly kept, and it may be impossible for a skilled accountant to trace every item, it is a matter for you to consider whether the fact that the evidence was not in the books is evidence of the non-existence of the item. You can prove it outside the books as well as inside the books. A great deal has been said about the account sales, but it appears to me that if they had been put in they would not have proved anything. When a plaintiff gives particulars of his claim the case is entirely different from one wherein damages are sought for trespass or libel, and the jury are simply asked to give what they think fit. But here the plaintiff has claimed that he actually suffered certain specified injuries. Of course, if he wants to establish these he must prove them, and if he does not prove them you may take it that there is no evidence on the subject. If you see that the plaintiff has suffered some injury and he is entitled to some damages, you may discard the particulars altogether and give him what you think he ought to have. These account sales were simply a report made by the agent of the bare results of the sale. If the bare results were given by a witness in the box there would be no real difference, because, as was pointed out to you, the value of wool fluctuates so. You have to get all the circumstances attending the sale, whether there was a large attendance or a small attendance, and whether there was a demand or not for that particular kind of wool, or fifty other different things. For instance, inferior wool might sell on Tuesday at a much higher price than the very best wool sold on Monday. You are entitled to bear this in mind, that when these two classes of wool were submitted to Mr. Moore and the other experts they said that one wool was superior to another, and they valued one wool as so much and the other at so much, and they said there was a loss in the quality of the wool of so much. Then, on the other hand, there is the evidence of Mr. Hawksworth, who says that he got a bottle or two of this water out of the dam. There is no question as to its being a fair sample. He says he washed two samples of the wool in that water. One of them undoubtedly is very dirty, but the other is a good colour. He was asked how he got that good colour, and he said that he washed it in the water at a temperature of 95 degrees with a good deal of soap. If you are satisfied that that result was fairly obtained with the water, and that the plaintiff could have done the same but did not do so, he cannot claim anything from the Government for that. Mr. Moore was called to examine the quality of the wool by Mr. Hawksworth, and he said that he did not think it was good, but was tender, and consequently depreciated in value. He seemed to think that the extra scouring had caused it. That appears to be all the evidence on these questions. Having thus pointed out what appears to me to be the salient points in this case, I will leave the whole matter in your hands as regards the facts, but as there may be points of law, and I understand that there will be, I want you to answer certain questions, and to assess the damages separately. Of course, the first question is whether the plaintiff has suffered damage, and it comes to a question of ascertaining damages. I will ask you to assess them, so that if the points of law are decided one way or the other it will not be necessary to go back to a jury. For instance, if the Court were to think that, with reference to one part of the claim, the plaintiff is not entitled to succeed, the amount you award as to that will be struck out and the remainder stand. I take it that the points of law will be with reference to the water in the channel, the water in the swamp, and the reed-bed. I want you to answer these questions separately. I want you to assess the damages separately arising from the water in the Macdonaldtown sewer. My last words of these matters are that they are entirely for your determination alone. You must not imagine that I am expressing or intimating any opinion. Of course, it is very hard to refer to the evidence on one side or the other without appearing possibly to express an opinion in favour of one side or the other. That may arise possibly through mere intonation. You will understand that I have neither expressed nor intimated an opinion of my own. I leave the whole matter in your hands, and I have no doubt you will be able to answer these questions for me, so that if any points of law arise they can be decided.

The jury retired at 12.15 p.m., and at 7.30 p.m. returned to Court, and the foreman intimated that they found for the plaintiff, damages £10,000.

The questions submitted by His Honor were as follows:—

1. Is Shea's Creek natural or artificial? Natural.
2. Is there now as full a supply of water in the channel of Shea's Creek as before the extension and the sewer were constructed? No.
3. Has the work of the extension had the effect of drying the ground to the east of Shea's Creek, between the creek and the extension? If so, has there been any consequent diminution of water going into plaintiff's dam? Yes.
4. Has the area of the reed-bed between the extension and Shea's Creek been diminished by these works? Yes.
6. If so, has it had the effect of making the water in the dam less pure? Yes.

The damages were distributed as follows:—

|  |        |
|--|--------|
| 1. Arising from loss of water in the channel of the Macdonaldtown Creek and Shea's Creek ..... | £3,000 |
| 2. From loss of storm-water overflowing the banks of these creeks, or either of them .....     | 1,000  |
| 3. The loss of water from diminution of the swamp .....  | 4,000  |
| 4. From loss of reed-bed .....   | 2,000  |

His Honor thanked the jury for their patient attention to the case, and said he would fix an early day for hearing the argument.

The Court then adjourned.

## No. 40.

H. S. Williams, Esq., to The Secretary for Public Works.  
Macnamara v. The Minister for Works.

Dear Sir,

39, Castlereagh-street, Sydney, 26 October, 1894.

My client has desired me to prepare and forward to you a short summary of the facts of this case, as set forth in the official report of the proceedings, in the hope that a thoroughly impartial statement of the facts may lead you to see the plaintiff's position from a more favourable standpoint.

He ventures to think that hitherto you have depended for your information as to the nature of the proceedings upon the reports of the officers of your department, who obviously take a partisan view of the facts, and it is hoped that the course indicated may serve to satisfy you that the judgment of the Chief Judge in Equity is one that ought to be regarded as a final solution of the matters in dispute.

You are, of course, aware that so far back as 1889, Mr. Macnamara predicted all the difficulty which has since arisen, and gave your predecessor (Mr. Bruce Smith) due notice of those anticipations in his statement of claim, which was filed in Equity on the 27th of April of that year.

Shortly summarised, that statement of claim alleged that for more than twenty years certain wool-scouring works had been carried on on the property leased by him, that a certain ancient watercourse had run through the property from time immemorial, and that he was entitled to the unmolested use of that watercourse. It was further stated that your predecessor (Mr. Bruce Smith), by his servants, had caused a canal to be made through certain lands adjoining the land leased by him, and that he was then informed that it was the intention of your predecessor (Mr. Bruce Smith) to continue the work, which was then proceeding, to a point above his leased lands. The statement further set forth that the bottom level of the canal was below the bottom level of the said watercourse, and that the effect of the said canal would be to wholly divert the water, which then flowed on to the plaintiff's leased land, so as to wholly deprive him of the source of water supply for his wool-scouring works, and stop the industry he was carrying on.

I am desired to direct your attention to the fact that this fear was deliberately expressed five years ago, and at a time when the damage complained of had not actually taken place.

The statement referred to concludes by pointing out to the Court that, as due notice to desist had been given and disregarded, the plaintiff had no alternative but to ask the Court to restrain the defendant, your predecessor (Mr. Bruce Smith), from continuing the canal works.

The whole matter was by this statement of claim placed clearly before the Chief Judge in Equity, who, on the 30th April of the same year, 1889, after hearing counsel for the plaintiff and counsel for the defendant (Mr. Bruce Smith), restrained the latter from proceeding with the work or from otherwise diverting the water from the watercourse mentioned, leave being then reserved to the defendant to come in at any time and move that the order should be dissolved.

Five years were allowed to elapse before any further legal proceedings were taken; but, meanwhile, portion of the work complained of had been proceeded with, and the waters of the Macdonaldtown Creek had been diverted from the plaintiff's dam and carried into the then terminus of the canal, the further construction of which had been stopped by the Court.

In February, 1894, notice was given to the plaintiff of an intended application to the Chief Judge in Equity for the purpose of dissolving the injunction of the Court.

By this time your predecessor (Mr. Bruce Smith) had been succeeded first by yourself and afterwards by Mr. W. J. Lyne, who sought to proceed with the work, and with that view to remove the restriction which the Court had imposed. Counsel were again heard on both sides; and on the 20th March of this year the Chief Judge in Equity dissolved the injunction which had hitherto stopped the progress of the works; but the action of the Chief Judge was so taken on the distinct agreement between the parties, put into the form of a submission, by counsel for your predecessor, Mr. Lyne, that the question of damage as predicted in 1889, and as alleged in 1894 to have taken place, should be assessed by a jury before the Chief Judge in Equity. The issue then settled was "whether the plaintiff has suffered damages by reason of the matters in the order of the 24th March mentioned, and, if so, what is the amount of such damages."

Pursuant to the statement of this issue, the plaintiff was called upon to file particulars of his claim, which he accordingly did, under three heads, viz., damage to wool, damage to skins, &c., and general and incidental damage. Under the first head the plaintiff claimed that between the 1st January, 1892 (three years after the injury had been predicted), and 5th March, 1894 (the date of resumption), the wool scoured on the plaintiff's premises had suffered a deterioration of one halfpenny per lb., and that extra cost to the extent of one farthing per lb. had been involved in consequence of the pollution of the water by the lessening of the quantity running into the dam.

It was claimed that on the 8,779 bales (the quantity which had been dealt with by the plaintiff between the dates mentioned) the loss and extra cost amounted to £7,147. Under the second head it was claimed that between the same dates a loss of upwards of £3,000 had resulted in connection with skins, pelts, and basils; and under the third head it was claimed that £3,000 had been lost in various ways, therein set out in detail.

On these particulars the assessment of damages (if any) by the jury was commenced on the 14th May, 1894.

The Chief Judge in Equity pointed out, before the evidence was entered upon, that the submission by the Minister was only to pay the damages assessed in the event of any damage being found to have been caused by the works in question. That position was at once acquiesced in by the leading counsel for the plaintiff.

Without attempting even to summarise the immense mass of evidence which was gone into during the nineteen days which preceded the addresses of counsel, it may not be out of place to state for your information that the principal cause of loss, viz., the deterioration in the quality of the wool between the dates mentioned, was evidenced by Mr. Moore, the manager of Messrs. Harrison, Jones, and Devlin (Limited), who had passed through his hands for many years the whole of the wool fellmongered at the plaintiff's works, and who was therefore able to swear positively to the sudden and distinct falling off in quality from a certain date, at which the damage was alleged to have begun to operate. That evidence was practically uncontradicted.

At the end of nineteen days counsel began their addresses to the jury. A large part of these nineteen days was occupied by a purposeless conflict of professional testimony as to the most trustworthy method of gauging streams, in which conflict many engineers were involved on both sides, and many engineering treatises were produced and commented upon. This controversy, however interesting to the professional men engaged in it, had very little bearing upon the alleged facts as to the practical effect of the works upon the plaintiff's water supply, but it certainly stirred up an immense amount of professional feeling, especially on the side of the engineers who espoused the departmental cause, who seemed to forget the practical issue which was at stake in their endeavour to vindicate their professional superiority over the opposing witnesses. My client cannot resist the conclusion that the feeling engendered by this professional controversy lies at the root of the disinclination to recognise the justice of his claim.

In addition to the evidence of a theoretical and practical character, which was placed before the jury, the jury had several opportunities of visiting the locality and the works, and of seeing for themselves the various features which had been so frequently referred to by numerous witnesses.

Putting counsel's addresses out of the question, which of necessity were partial in their character, I desire to draw your attention to the summing up of the Chief Judge in Equity, the impartiality of whose attitude is best testified to by the fact that he desired that even his "mere intonation," if it appeared to the jury to favour one side or the other, should be disregarded. That learned Judge told the jury how the issue which they had to try had come to be placed before them. He explained that the Minister for Works had "submitted to pay whatever damages might be assessed in respect of the injury done"; and he added, "upon that submission the Court has directed that these issues should be tried—1st, Whether the plaintiff has sustained any damage in respect to the matters referred to in the order of the 20th March mentioned; 2nd, What is the amount of such damage?" "These issues," he said, "have been referred to you in order that you may inform the mind of the Court by your findings upon them."

After dealing most exhaustively with the mass of engineering evidence referred to, he said, "Of course the first question is whether the plaintiff has suffered damage, and it comes to a question of ascertaining damages. I will ask you to assess them so that if the points of law are decided one way or the other it will not be necessary to go back to a jury. For instance, if the Court were to think that with reference to one part of the claim the plaintiff is not entitled to succeed, the amount you award as to that will be struck out and the remainder stand . . . I want you to answer these questions separately."

"My last word on these matters is that they are entirely for your determination alone."

The

The questions then submitted by His Honor were as follows, to which are appended the answers given to each and all of them by the jury :—

1. Is Shea's Creek natural or artificial? Natural.
2. Is there now as full a supply of water in the channel of Shea's Creek as before the extension and the sewer were constructed? No.
3. Has the work at the extension had the effect of drying the ground to the east of Shea's Creek, between the creek and the extension? Yes.
4. If so, has there been any consequent diminution in the quantity of water going into the dam? Yes.
5. If there is any diminution in the quantity of water, has such diminution had the effect of making the water in the dam less pure? Yes.
6. Has the area of the reed-bed, between the extension and Shea's Creek, been diminished by the works? Yes.
7. If so, has it had the effect of making the water in the dam less pure? Yes.

The damages found in plaintiff's favour were distributed as follows :—

|  |        |
|--|--------|
| 1. Arising from loss of water in the channel of Macdonaldtown Creek and Shea's Creek ..... | £3,000 |
| 2. From loss of storm-water overflowing the banks of these creeks, or either of them ..... | 1,000  |
| 3. The loss of water from diminution of the swamp .....                                    | 4,000  |
| 4. From loss of reed-bed .....   | 2,000  |

His Honor then thanked the jury for their patient attention to the case.

On the 15th June, 1894, the plaintiff gave the defendant notice of his intention to move for a decree upon the findings of the jury, while the defendant gave the plaintiff notice, on the 16th June, of his intention to move for a new trial. The grounds on which the application for a new trial was made to the Chief Judge in Equity were :—

1. That there was no evidence, or not sufficient evidence, that the plaintiff suffered any damage at law.
2. That the findings of the jury were against evidence and the weight of evidence.
3. That the damages were excessive.

Arguments of counsel on these two motions lasted several days, both matters being dealt with together. On the 25th June, arguments of counsel being concluded, the Chief Judge in Equity said, "I uphold and repeat my decision, that all through this case it has been assumed that the defendant is the Minister for Works, acting on behalf of the Crown. \* \* \*

"I have said over and over again that when a Minister is sued he should not be sued in his own name, but as the Minister for Works, or the Attorney-General, as the case may be. \* \* \* Some questions of law might arise if that point were taken at the proper time, but both parties throughout this case, not merely on the trial of the issues, but before the issues were settled, when the injunction was applied for, and in all other proceedings, treated the action as being against the Minister for Works. I allow an amendment by striking out the name of the Honorable Bruce Smith."

He said further, in reference to the propriety of interfering with the finding of the jury :—"If, therefore, the Judge thinks that the matter has not been investigated properly by the jury, he has power to refer it to another jury; in other words, to grant a new trial with much greater latitude than the Court of common law possesses. \* \* \* It appears to me that the true limitations which govern the Court are as follows. \* \* \* If the Judge sees that the question is one of grave doubt—one on which different minds might come to different conclusions; that the facts were all put fairly to the jurors, so that it must be assumed that they fully understood them; that there was no misdirection; and that the Judge properly explained to them the points on which they were to decide, then the Court, directing the issue, would pause before it would order a new trial. These appear to me to be the principles on which the Court should act in determining whether a case is one in which it ought to grant a new trial. \* \* \* However, all these matters were before the jury, and the jury came to the conclusion that the plaintiff's witnesses were right. \* \* \*

"If the verdict of the jury had in every instance to be such a verdict as the Judge himself would have brought, it would be a farce to refer the matter to the jury; it would be much simpler for the Court itself to decide the matter in the first instance. Where it is a matter of doubt, and the whole matter has been fully before the jury, I think the Court ought to refuse to interfere with the verdict. That being the only matter upon which a question of new trial arises, I must dismiss the application for a new trial, with costs."

Again, dealing with the manner in which the issue had come to be submitted to the jury, His Honor made the following observations, and as the facts which these express constitute the kernel, so to speak, of these proceedings, I desire, on behalf of my client, to bring them most prominently under your notice :—"When the defendant applied to the Court to have the injunction dissolved, it was pointed out that the Crown had resumed the land necessary for the construction of the canal, and therefore the plaintiff could not retain the injunction; all he could do was to claim compensation for any injury he had suffered. It was then pointed out that already, owing to the construction of the works, he had suffered great damage, and then counsel for the defendant submitted to pay whatever compensation the plaintiff was entitled to in respect of these works. That is the way the matter comes before me. \* \* \* It arises out of the submission of counsel for the Minister for Works to pay whatever compensation the plaintiff might be held to be entitled to. That also gets over the difficulty which has occurred to me, as to how far the plaintiff, who is only a tenant, can claim for the injury alleged to be done to the land. It appears to me that but for the submission I have just referred to, there might be a question raised on that point. But if there is anything in that point it appears to me to be cured by that submission. \* \* \* I am satisfied that it is necessary for the plaintiff to establish a right for which an action would have lain independently of the statute, before he could show that he was entitled to any compensation."

The last words of the quotation will satisfy you that the plaintiff had been subjected in the Judge's mind to the most rigid test in the proof of the defendant's liability.

In dealing with the four heads of damage under which the jury had distributed the £10,000 (the amount at which they estimated the plaintiff's loss), the Judge disallowed the second, £1,000, the third, £4,000, and the fourth, £2,000 for each of which he practically held the defendant could not be made legally liable; but with regard to the first head, His Honor said "so far as the plaintiff's application is concerned, I think he is entitled to damages to the extent of £3,000, which is the amount the jury have assessed for the loss of water in the channel of Shea's Creek and Macdonaldtown Creek," and he concluded his judgment by saying "I, therefore, make a decree for the plaintiff for £3,000 damages, the defendant to pay the costs of the issues."

I desire now to point out to you, on behalf of my client, that this matter is in the nature of a reference to arbitration, to which your predecessor (Mr. Lyne) voluntarily submitted, as a condition to the plaintiff withdrawing his opposition to the dissolution of the injunction; if the matter had been referred by the parties in the ordinary way to one or more arbitrators, finality would have been provided for by some clause in the reference. Here, however, it must be obvious that by the mere fact of submission to the finding of a jury, whether for better or for worse as regards the result, your predecessor bound himself to accept the conclusion which that jury should arrive at.

If there were any doubt about the matter having been put fairly before the jury, or about the jury having understood the evidence, or if the matter had not been fully gone into on both sides, my client could understand your hesitation to abide by the result; but no such objection can be taken. The Judge himself, one of the ablest upon our Bench, considered that everything that could be done to fully elucidate the questions involved had been done; he himself said that if the Judge thinks that the matter has not been investigated properly by the jury, he has power to refer it to another jury—in other words, to grant a new trial with much greater latitude than the Court of common law possesses. He said, further, "that where it is a matter of doubt and the whole matter has been fully before the jury, I think the Court ought to refuse to interfere with the verdict." As a fact, His Honor refused to grant a new trial, upon the ground that no reason had been shown why such an application should be acceded to, so that the proceedings as a whole show first, the submission of your predecessor to the finding of the jury; second, the finding of the jury; third, the confirmation of that finding by the Judge to the extent of the amount for which he gave judgment.

On behalf of my client, I submit that the rights and dignity of the department have been sufficiently vindicated by the jury, with whom the Judge himself could find no fault, and whose finding has been confirmed by the Judge, one of the ablest and most impartial on our Bench, as a finding which is supported by law.

Allow me to express the hope that after the trouble I have taken to summarise the salient features of this long and wearisome inquiry you will give the above your careful perusal and impartial consideration, and thus perhaps lead to a satisfactory settlement of the whole matter.

In conclusion, I should like to remind you that, although the Chief Judge in Equity, having regard to the strict legal limitations which surround the plaintiff's claim, has reduced the amount of damages to £3,000, the jury themselves, with whom the Judge can find no fault, and to the finding of which your predecessor agreed to submit the case, found that my client had actually suffered damage to the extent of £10,000.

The absence of a legal right for the £7,000 by which the finding of the jury was reduced by the Judge does not alter the fact that the loss has been suffered by the plaintiff, and by no fault of his own. Seeing this, it appears to be reasonable that my client should look upon the £3,000, amount of decree as, after all, only a small compensation for the damage he has suffered by reason of the action of the department.

I have, &c.,  
H. S. WILLIAMS.

Acknowledged.—J.B., 30/10/94. Before dealing with this the Minister will be obliged if the Crown Solicitor will kindly give him the benefit of his views on the statements made herein.—J.B., 30/10/94.

No. 41.

The Crown Solicitor to The Under Secretary for Public Works.

Macnamara v. The Minister for Works.

Sir,

Crown Solicitor's Office, Sydney, 13 November, 1894.

I have the honor to acknowledge the receipt of your B.C. communication of the 30th ultimo, forwarding a letter from Mr. Williams, solicitor for the plaintiff in this suit, purporting to be a summary of the facts in this case, and requesting to be furnished with my opinion thereon.

After a careful perusal of the letter it seems to me to have been written, and naturally so, entirely from the plaintiff's point of view of the case. Although it cannot quite be said that it amounts to a misstatement of the facts, it certainly does contain a very garbled interpretation of the merits of the case.

I disagree entirely with Mr. Williams in his allegation that the department's officers are influenced by partisanship. On the contrary, I must state that in my opinion the verdict in this case was, to use the words of Mr. Pilcher, Q.C., "a wicked verdict." Had the matter been fought out between private parties, I have not the slightest hesitation in saying that the plaintiff would not have been awarded by any impartial jury one farthing's damages; but in the unfortunate state of things which exists it is, as I have before pointed out, almost impossible to obtain a verdict where the Government is defendant.

Much stress is laid by the plaintiff upon the fact that the Minister consented, by his counsel, to pay any damages that may have been incurred by the plaintiff, but this only amounted to a consent to pay any legal damages which he could have recovered by any other proceedings, and not, as in this case, damages which, as the defendant contends, he had not incurred, nor for which he had no right to claim compensation, he not being the owner of the land.

Mr. Williams' statement of the facts is in the main correct, if the incorrect construction put upon them is disregarded, but they are all contained in a very clear manner in the Appeal Book, of which the Minister has a copy.

I may state, however, that the contention as to the method of gauging adopted by the plaintiff's and defendant's witnesses respectively was not immaterial, as Mr. Williams suggests, but, on the contrary, was most important, as going to show the primitive and utterly unreliable way in which the plaintiff's expert witnesses attempted to support their evidence. For the time taken up by this controversy the plaintiff's leading counsel is chiefly responsible, as indeed he was for the greater part of the time absolutely wasted in the case, and I submit that any impartial person, upon perusal of the evidence as to the method of gauging adopted by the plaintiff's and the defendant's witnesses respectively, could not but be convinced that the latter's method was the correct one, and consequently that the evidence upon the loss of water in Shea's and Macdonaldtown Creeks, the only items upon which the plaintiff could recover, falls to the ground, and the verdict should have gone to the defendant, and I am of opinion, upon a careful perusal of the summing up, that this was also the opinion of the Judge, but he was reluctant to interfere with the finding of the jury, who had had the same facilities of hearing the evidence as he had, and should have been able to come to a correct conclusion upon the same, and as you are aware, from seeing the grounds of the appeal, the contention of the defendant is that the Judge should have disregarded entirely the verdict of the jury, opposed as it was to the evidence and the weight of evidence, and given a verdict for the defendant; and this view I think—and I am strongly supported by the defendant's counsel—to be the correct one.

As to the evidence given by Mr. Moore, the manager for Messrs. Harrison, Jones, and Devlin, I can only say it is not in any way correct that his evidence was "practically uncontradicted." On the contrary, the evidence of Mr. Hawksworth, the wool-expert of the Hawkesbury Agricultural College, went wholly to contradict it, and I may add that conclusive evidence in support of Mr. Hawksworth, and in flat contradiction of Mr. Moore, could have been given by one of the most eminent experts in Sydney had he not been unwilling to give it, and in fact refused to go into the box and attest to what he had previously told my clerk, owing to the fact, I presume, that the plaintiff is one of the largest wool suppliers in Sydney, and he did not wish to run counter to him. The fact that Messrs. Harrison, Jones, and Devlin are the sole agents for Mr. Macnamara also greatly tends to prejudice the evidence given by Mr. Moore.

In conclusion, though I do not wish to be too diffusive on this matter, I feel it my duty to say, in reply to Mr. Williams' most unwarrantable assertion with regard to the evidence given by the Government officers and the defendant's professional witnesses that their evidence was given in the fairest possible manner, and that the statement "that the professional feeling stirred up by the controversy as to the gauging is at the root of their disinclination to recognise the justice of the plaintiff's claim" is as unjust as it is untrue. In my opinion, their views of the case were not warped in the slightest degree, and the evidence given by them conclusively proves that the case got up by the plaintiff was purely a try-on, and it should be resisted to the utmost.

A perusal of the Appeal Book will, I am sure, bear out the view which I have taken of the case, and in which, as before mentioned, counsel for the defendant heartily concurs.

I return Mr. Williams' letter herewith.

I have, &c.,  
GEO. COLQUHOUN,  
Crown Solicitor.

Submitted.—J.B., 14/11/94. Forwarded for the perusal of my hon. colleague, the Premier.—J.H.Y., 14/11/94.  
Under Secretary, Finance and Trade.—J.B., B.C., 14/11/94. Seen.—G.H.R., 19/11/94. Return to the Public Works  
Dept.—G.H.R., 19/11/94. The Under Secretary for Public Works.—F.K., 19/11/94. Shall any reply be sent to Mr.  
S. H. Williams?—J.B., 20/11/94. Not at present.—J.H.Y., 20/11/94.

No. 42.

Précis.

MACNAMARA v. THE MINISTER FOR WORKS.

THIS suit was commenced on the 27th April, 1889, by the plaintiff, Henry Macnamara, filing a statement of claim in equity against "The Honorable Bruce Smith, Minister for Works, defendant," asking for an injunction to restrain the defendant from diverting the water from Shea's Creek, so as to prevent same from flowing on the plaintiff's land and from continuing the canal so as to diminish the flow of water on the said land. (*See Statement of Claim, Appeal Book, p. V.*)

The defendant appeared to this Statement of Claim, but owing to the fact that the Government of the day was not in a pecuniary position to go on with the works, and accordingly had no objection to the injunction going, the defendant, by his counsel, Mr. A. H. Simpson, consented to the injunction, leave being reserved to the defendant to come in at any time and apply to have same dissolved, and an order to that effect was accordingly made on 30th of April, 1889. (*See Order for Injunction, Appeal Book, p. VII.*)

The matter rested here till 27th February, 1894, when the then Minister, Mr. Lyne, wished to go on with the work, and applied to have the injunction dissolved. On the argument on the matter it was contended by the plaintiff that much damage had already been done to his property by the canal, and that the Government had, in spite of the injunction, gone on with the canal, which had had the effect of diverting the water from Shea's Creek, from which he got his water supply.

The

The plaintiff was a monthly tenant of the Cooper Estate, under lease from Mr. J. R. Hill, and carried on a wool-washing establishment at Shea's Creek. Mr. A. H. Simpson, counsel for the defendant, said that the land having been resumed since the order for the injunction was made that injunction must inevitably be dissolved, but the defendant was willing to pay any damages that might have been done to the land. An order, dated 20th March, 1894, was accordingly made by consent dissolving the injunction (*see Appeal Book, p. 9*), "the Minister for Works, by his counsel, submitting to pay any damages that may be assessed in respect of any injury done to the plaintiff by the works at Shea's Creek, previously to the resumption of the land in the *Gazette* on the 6th day of March instant," and the assessment of the damages was set down for 14th May, before the Chief Judge in Equity and a jury of four. The issues fixed were—(1) Whether the plaintiff had suffered damages by reason of the matters in the order of 24th March mentioned; (2) and, if so, what is the amount of such damages.

The plaintiff filed particulars of claim (*see Appeal Book, p. 10*), amounting to £13,614 14s. 7d., claiming for depreciation in wool for damage to skins on account of impure water and for loss of water caused by the canal and incidental expenses and interest.

The case duly came on for hearing on 14th May, and the taking of evidence lasted till 14th June, when an immense amount of evidence was taken on both sides. The case for the plaintiff, shortly, was that the digging of the canal had had the effect of draining off the water from Shea's Creek and from a swamp from both of which he got his supply, and to prove this he brought expert witnesses to prove that a canal would have this effect—that Shea's Creek was a natural water-course—to gauge the flow of the water, and to speak as to the nature of the ground which was peat and, as he averred, extremely porous. He also brought forward old residents, who spoke to the former bountiful supply of water, and his wool agents to prove the loss of wool, &c.

The defendant's evidence consisted mainly of levels which were taken at different times before the statement of claim was filed, and at the present time, and which showed that the land through which Shea's Creek ran was higher than that where the canal was situated, and, therefore, the making of the canal could not have the effect of draining the supply of water of Shea's Creek. That the soil was very retentive of water—that by different gaugings taken it was clear no water could have been lost—that the evidence of damage was unsatisfactory—that the water was still adapted for wool-washing—that Shea's Creek itself was an artificial channel. A great deal of time was taken up by a controversy as to the different methods of gauging adopted by the plaintiff's and defendant's witnesses. The former using the float and velocity method—the latter the weir method. On 14th June, his Honor summed up to the jury. The tendency of this summing-up was in favour of the defendant, but a verdict was returned for the plaintiff in the sum of £10,000 made up as follows:—

1. Arising from loss of water in the channel of Macdonaldtown Creek and Shea's Creek, £3,000.
2. From loss of stormwater overflowing the banks of these Creeks or either of them, £1,000.
3. The loss of water from diminution of the swamp, £4,000.
4. From loss of reed-bed, £2,000.

On 16th June, 1894, the defendant filed a motion for new trial (*Appeal Book, p. 486*), and the suit was set down for further consideration.

On 25th June his Honor made an order that the pleading should be amended by striking out the name of the Honorable Bruce Smith (*see Order Appeal Book, p. 500*), thus leaving the Minister for Works defendant. He also dismissed the application for the new trial (*Appeal Book, p. 499*), and made a decree reducing the verdict to £3,000 (*Appeal Book, p. 500*), holding that the plaintiff could not recover under items 2, 3, and 4, the defendant to pay the cost of the issues, *i.e.* all the issues. From this judgment the defendant filed notice of appeal to the Full Court on the 9th July, 1894 (*see Appeal Book, pp. 3, 5*). The defendant all through the suit having been treated by the Equity Judge as being in reality the Crown, and the pleadings amended with that object it was thought that no security for appeal need be given, the Crown being the appellant and such was accordingly not given, but the other requirements of the 14th section of the Equity Act were complied with.

No written opinion as to the advisability of appealing was given by the defendant's counsel, Mr. Pilcher, Q.C., and Mr. Garland, but the notice of appeal was lodged as a matter of course, both counsel being greatly dissatisfied with the verdict, and strongly advising an appeal. Mr. Pilcher in particular characterised the verdict as a monstrous one, and in several consultations which we had with him he expressed the opinion that the defendant would succeed on the appeal. Sir Julian Salomons and Mr. A. H. Simpson, who were briefed on the appeal, also gave opinions in consultation that the defendant had a good chance of succeeding, but Sir Julian was not as confident as the other counsel.

On the motion for appeal coming on before the Full Court, on the 14th August, the Court refused the same, with costs, they being of opinion that the defendant should have given the security required by the Equity Act. The Court said that in this case the defendant was not the Crown, as the proceedings had not been properly instituted in the first instance under the claims against the Colonial Government Act, and no submission to pay by counsel could make the Crown liable, nor had the Judge any power to make an order to that effect. The verdict was, therefore, against the Minister for Works as such, and he should accordingly have lodged a security.

As the case now stands, therefore, it is submitted that plaintiff cannot recover anything unless the Government thinks fit to pay, and his verdict is practically useless to him. A final order for leave to appeal to the Privy Council from the judgment of the Full Court was obtained on the 13th November instant, and the transcript is now being prepared.

The plaintiff lodged no notice of appeal against the reduction of the verdict to £3,000.

It has been suggested by counsel (Sir Julian and Mr. Pilcher) that instructions should be given to the home agent of the Crown that if the appeal is dismissed on the point of security a petition should then be filed for leave to appeal direct to the Privy Council on the merits of the case.

The evidence given at the hearing was of such immense length that it is impossible to give even a summary of the same without covering many pages of foolscap, but it may be shortly stated that the evidence for the plaintiff was, for the most part, flatly contradicted by the witnesses for the defendant, and the case resolves itself simply into the question as to which side the jury should have believed.

Counsel for the defendant impressed upon the Judge that the Jury were only there to satisfy the conscience of the Court, and if he was not satisfied in every particular with their verdict he should disregard it, and give a decree accordingly. His Honor, however, held that such a state of the law would make the presence of a jury useless, and the only ground upon which a Judge could disregard their verdict would be if it was clearly and demonstrably wrong, being the same principle as that upon which the Court will grant a new trial at Common Law.

The fact of the Judge not having seen fit to find a decree for the defendant appears to be the strongest argument against the appeal.

A perusal of the grounds of appeal on page 3 of the Appeal Book, and of His Honor's summing up on page 469, and judgment, page 490, will show more fully the chances of success or otherwise of the appeal.

I may also add that immediately after the judgment of the Full Court was delivered, dismissing the appeal for want of security, a consultation was held with the Crown counsel, Sir Julian Salomons, Mr. Pilcher, Mr. A. H. Simpson, and Mr. Garland, when they all expressed a strong opinion that an appeal to the Privy Council upon the point of the security would be upheld, but that at any rate if such appeal was dismissed the Privy Council would certainly, owing to the peculiar position and the importance of the case, entertain an application for special leave to appeal upon the merits of the case from Mr. Justice Owen's judgment. It might be mentioned that when the matter was before the Full Court Sir Julian during the argument pointed out to the Judges the peculiar position in which the case would be left if they gave the judgment before mentioned, and the Chief Justice, I think it was, incidentally mentioned that he did not think the Privy Council would refuse an application for special leave to appeal if the circumstances of the case were pointed out to them.

It is unfortunate that the Equity Act does not provide for an extension of time for payment of security in special cases, but in the recent case, *Rodd v. Municipality of Hamilton, S.C.W.N.*, vol. x, p. 91, where the bond was filed a day late, the Court held that they had no power, however much they might wish to do so, to entertain the appeal, the Act having taken the matter out of their hands. I do not think there would be any difficulty in getting the other side to consent to waive the point of the security, seeing that it is to their interest to get the appeal heard, and allow the Full Court here to decide the appeal if the Court would do so, and a suggestion to this effect was thrown out by Mr. Langer Owen, counsel for the plaintiff, after the judgment of the Full Court had been delivered, but pending the proposals for a settlement the matter had not yet been definitely settled.

The plaintiff's taxed costs of the issues would probably amount to £2,500, as fully £1,500 were incurred for counsel's fees, and the witnesses' expenses were very heavy.

Costs of the appeal on the point of security should not amount to more than £300, as to save expense the transcript is being prepared by my office and the department.

But see memo. of Crown Solicitor of 3rd December, 1894, post, as to Privy Council appeal. G.B.S., 17/12/94.

See memo. of Crown Solicitor of 3rd December, 1894, post. G.B.S., 17/12/94.

Interlocutory

Interlocutory costs, amounting to £107 12s., have already been taxed (under protest), but the plaintiff has not brought in his bill for the cost of the issues.

The interlocutory costs were for the costs of having the injunction dissolved, which, of course, had to be paid by the defendant (£92 0s. 6d.), and the costs of an application by the defendant for further and better particulars of plaintiff's claim, which was dismissed with costs (£15 11s. 6d.)

The question as to whether or not an appeal should be made direct to the Privy Council, supposing that the Crown's appeal upon the point of security is not dismissed, was not discussed with counsel. It was presumed that the appeal would be relegated to this Court.

An appeal could, of course, be made direct to the Privy Council, but it would, I think, have to be done by special petition. The 79th section of the Equity Act of 1880 shows that an appeal may be taken direct, and this has been acted upon (see notes to section 79 in Walker and Rich's Equity Practice, page 91).

I cannot say whether or not the Court here could or would adopt the course suggested by Mr. Langer Owen, viz., if the other side waived the question of security, and consented to the appeal being heard, the appeal might be heard by our Supreme Court sitting as an Appeal Court. The Court might be induced to do this, but my own opinion is that our Court has no power to hear the appeal in the manner indicated.

See Crown  
Solicitor's  
memo., 3/12/94,  
post.—G. B. S.

Sir Julian Salomons, Mr. Pilcher, Q.C., Mr. A. H. Simpson, and Mr. Garland all advised that the Crown have a good chance of succeeding if the Supreme Court will entertain the appeal, but Sir Julian was not so confident as the other counsel.

All the above counsel have advised that the Crown ought to succeed on the question of security before the Privy Council.

No express opinion was obtained as to the chances of success before the Privy Council upon the merits, but it is presumed that if the Crown has a good chance on the appeal here, it would have the same before the Privy Council.

The whole amount of fees paid out of pocket up to date is as follows:—

|  | £           | s. | d. |
|--|-------------|----|----|
| Counsels' fees.....  | 1,201       | 0  | 6  |
| Shorthand notes, half cost .....                                   | 258         | 4  | 9  |
| Typewriting, copying Judge's notes, and other small expenses ..... | 18          | 8  | 1  |
| Jurors' fees .....   | 48          | 6  | 0  |
| Cost of transcript .....   | 20          | 0  | 0  |
|  | £1,545 19 4 |    |    |

£300 has also been paid into Court as security for costs, which will be paid out if the Crown succeeds before the Privy Council.

The above sum includes the briefs delivered on the appeal before the Full Court, which, of course, has not been heard. It must be borne in mind that, in addition to the sum of £1,545 19s. 4d., the department has had to pay heavy costs for payment of expert witnesses, but the amount I cannot state, as the payment did not come through this office.

Amended précis  
submitted,  
28/1/94.—GEO.  
COLQUHOUN, C.S.

I am unable to give very exact particulars of the different costs, as the bills are not made up in this office until the Crown is successful, and they have to be prepared for taxation.

A perusal of

of 26th October, and my report thereon of 13th November, is suggested.

GEO. COLQUHOUN.

The costs of the appeal to the Privy Council upon the point of the security should not amount to more than £200 for each party.

The costs of an appeal to the Privy Council direct upon the merits from the judgment of Mr. Justice Owen, supposing that the appeal on the point of security is dismissed, would be about £500 for each party.

Having attended a consultation in the presence of the Attorney-General, and between him and Sir Julian Salomons, Mr. A. H. Simpson, and Mr. Garland, I find that my impression of the opinions of the different Crown counsel, expressed in the first paragraph of page 7, requires some modification.

Mr. A. H. Simpson does not think that the Crown would succeed before the Privy Council on the point of security, he being of opinion that the Crown ought to give security, but Sir Julian Salomons and Mr. Garland think the Crown has a fair chance of success.

Mr. Pilcher has expressed a very strong opinion that the Crown will succeed.

All the counsel agree that the Full Court were wrong in holding that the Minister for Works was not the Crown.

Mr. A. H. Simpson is also doubtful that the Privy Council would grant special leave to appeal direct to them upon the merits, if the appeal on the question of the security is dismissed, but the other counsel are of opinion that such leave would probably be granted.

GEO. COLQUHOUN,  
Crown Solicitor.

3rd December, 1894.

**Appendix No. 77.**  
PAPERS—CONTRACT No. 79A.

No. 1.

E. M. Clark, Esq., M.P., to The Under Secretary for Public Works.

Sir,

Legislative Assembly, N.S.W., Sydney, 6 March, 1894.

As the portion of the North Shore sewerage works contained on Messrs. Carter & Co.'s contract is now nearly completed, I desire to bring under the notice of the Minister for Works that this work will be perfectly useless until that portion connecting Milson's Point, at Jeffrey-street, is completed, and to urge upon him the necessity for at once carrying out this part of the work. I may point out that it will serve a very large population, besides assisting to get rid of the offensive matter now finding its way into the harbour through the storm-water sewer at Careening Cove and other places becoming more offensive every day, and a source of very numerous complaints. I understand that Messrs. Carter & Co., having the plant, would be able to carry out this work on very advantageous terms, to provide work for a large number of men now employed on their present works, who will otherwise be thrown on an overcrowded labour market by the completion of their present contract. As this work is absolutely necessary to the completion of the North Shore sewerage scheme, I would urge its being put in hand at once.

Yours, &c.,  
EDWARD M. CLARK.

Commissioner for Roads,—D. McL. (for U.S.), B.C., 7/3/94. For report.—R.R.P.H., 9/3/94. Report here with.—O. BAGGE, 15/3/94.

No. 2.

The Principal Assistant Engineer to The Engineer-in-Chief for Sewerage.

Necessity for doing that portion of the North Shore Sewerage Works which connects Milson's Point at Jeffrey-street. THE present contract, No. 79, comprising a length of 1 mile 25·3 chains of the main North Shore outfall sewer from Willoughby Bay to junction of Alfred and Mount Streets is the first section of the North Shore sewerage works.

The second section should be the "Outlet Works," and the third section, which might be proceeded with simultaneously with the outlet works, would be the extension of the main outfall sewer now asked for, from junction of Alfred and Mount Streets southwards to the junction of Campbell and Jeffrey Streets, being (including some minor branches) a total length of about 76·90 chains.

By way of comparison, I have prepared an office estimate of the cost of this extension, according to present prices, amounting, as per detail statement attached, approximately to £12,831 19s. 6d., and an estimate of the same work in accordance with the contract prices of Contract No. 79 of the main outfall sewer in progress, which, as per detail statement attached, amounts approximately to £16,307 17s. 8d.

The detail plans of the outlet works are unavoidably very intricate, and it will take at least another month (if no other works come between) to complete the quantities.

The designs of the main outfall sewer extension between Mount and Jeffrey Streets, excepting general plan and section, have not yet been commenced.

15 March, 1894.

C. H. O. BAGGE.  
There

There is no reason why this extension should not be gone on with at once; I cannot, however, see my way to recommend that it be carried out as an extension of the existing contract, which at schedule rates would amount to £16,307 17s. 8d., whereas the office estimate is £12,831 19s. 6d. The greater part of this difference lies in one item—"excavations in shafts"—which in present contract, owing to their great depth, carries a very high price, viz., 78s. per cubic yard. This Messrs. Carter & Co. are prepared to reduce to 40s. per cubic yard, which would reduce the total cost to £13,700, or about £1,000 above the office estimate. I believe, however, if tenders were invited, we could get the work done under the office estimate.—R.R.P.H., 22/3/94. Under Secretary. Submitted.—J.B., 28/3/94.

Referring to the Minister's intimation this morning that he was prepared to let Messrs. Carter & Co. carry out this work as an extension of their present contract, provided they agreed to do so for the departmental estimate of £12,831 19s. 6d., no claims whatsoever to be made for extras, and all payments to be made at the allowed schedule rates, I have had an interview with Mr. Carter, who is prepared on the part of his firm to comply with the Minister's decision. Submitted for formal approval.—R.R.P.H., 29/3/94. For approval.—J.B., 30/3/94. Approved.—W.J.L., 30/3/94. Accept.—J.B., 30/3/94.

## No. 3.

## OFFICE ESTIMATE.

Proposed Contract No. 79, extension from Mount-street to Junction of Campbell and Jeffrey Streets, with branches.

SCHEDULE of quantities and prices for constructing and completing 76-90 chains, more or less, of the main outfall sewer extension, North Shore, branch and pipe sewers, shafts, junctions, &c., subject to omissions, extras, extensions, additions, enlargements, deviations, or alterations, as provided by the conditions of contract.

The quantities in this schedule are not guaranteed as correct, but are merely given for the guidance of intending contractors, this being a schedule of Prices Contract.

| No. of Item. | Description of Works.  | Unit.       | Probable Quantity. | Rate. | Amount.          |

## NOTES.

1 All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the specification.

2. The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

3. Items Nos 31, 32, and 33 to include the cost of conveying the Government property from the contractor's store or field office to the various sites of works along line of main and branch sewers, at manholes, gas-check, and shaft-chamber, &c.

4. Prices for items Nos. 36, 37, 38, 39, 40, 41, 42, and 43 are to be for materials in strict accordance with specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the Contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other source, and the contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

5. Prices for items Nos 44, 45, 46, 47, and 48 are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

6. The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete-boxes, unwatering, dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over main and pipe sewers, reinstating all road and other surfaces, &c., or any other thing necessary in executing and completing each respective item, in strict accordance with plans and specifications.

## No. 4.

## The Supervising Engineer to The Engineer-in-Chief for Sewerage.

Minute Paper.

*Subject* :—Contract No. 79A, North Sydney. Recommending that 33 feet of the High-street branch be driven in conjunction with this contract.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 22 November, 1894. In constructing the main sewers it is usual, in order to prevent the concrete and brickwork being damaged by blasting, to drive at least 33 feet of tunnel for the branch sewers at the same time as the tunnel for the main sewer is driven.

In the case of High-street, North Sydney, this appears to have been overlooked when the contract drawings were prepared. The cost of driving 33 feet at schedule rates will be £31 12s. 6d., and I recommend that at least this length should be done. J.D.

Approved.—R.P.H., 22/11/94. Mr. Weedon to note.—J.D., 23/11/94. Noted.—S.H.W., 26/11/94. File.—J.D., 26/11/94. Messrs. Carter & Co., 28/11/94. Mr. Weedon to note.—J.D., 28/11/94. Previously noted.—S.H.W. File.—J.D., 30/11/94. What will driving alone cost per chain for High-street Branch at schedule rates, Contract No. 79A?—J.D. The cost of driving alone for sewer 3 ft. 3 in. x 2 ft. 2 in. will be £63 5s. (if 4-inch charges of powder are allowed) per chain.—W.E.A., 21/11/94. Mr. Bagge. The lining is taken at 4½ inches thick, for the excavation, beyond the 3 ft. 3 in. x 2 ft. 2 in. sewer, in rock.—C.H.O.B., 21/11/94. Mr. Davis.

## No. 5.

## The Supervising Engineer to Messrs. Carter &amp; Co.

Gentlemen,

Public Works Department, Sewerage Branch, 28 November, 1894.

Referring to the conversation I had with your Mr. Snodgrass relative to doing a portion of the High-street branch in connection with your sewerage contract No. 79A, and to your offer to drive the same at your schedule price No. 3, I have the honor to inform you that the Engineer-in-Chief has approved of this being done. Will you please proceed with the tunnel for at least 33 feet for a 3 ft. 3 in x 2 ft. 2 in. sewer, allowing for a 5-inch lining.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

## No. 6.

## Messrs. Carter &amp; Co. to The Engineer-in-Chief for Sewerage.

Sir,

North Sydney, 10 January, 1895.

Being anxious to complete Contract No. 79A, North Sydney Sewerage, as quickly as possible, we have to ask your permission to drive the tunnel from No. 12 shaft on Contract No. 79 towards shaft No. 13 on Contract No. 79A.

As shaft No. 12 is built up in brickwork, we are willing to excavate 33 feet from the end of the drive from No. 12 by guttering and gadding to remove the risk of damage to completed work.

We are, &amp;c.,

CARTER, GUMMOW, &amp; CO.

Register.—J.D., 12/1/95.

## No. 7.

## The Supervising Engineer to The Engineer-in-Chief for Sewerage.

Minute Paper.

*Subject* :—Contract No. 79A, North Shore Outfall. Contractors write asking that they be allowed to drive from shaft at foot of Mount-street.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 15 January, 1895. THE shaft at the foot of Mount-street, referred to in the contractors' letter, was built under Contract No. 79, and 5 feet of sewer lining was put in on the south side of the shaft. The tunnel was driven 50 feet beyond the lining. The contractors ask that they be allowed to continue the drive from this shaft, and undertake to gutter and gad the first 33 feet. I think the request might be granted, as it will greatly facilitate the completion of Contract No. 79A, conditionally, however, upon the contractors consenting to use no blasting powder in excavating the tunnel until they have driven 99 lineal feet from the south end of the lining, and further undertake to leave the sewer and shaft constructed under Contract No. 79 in the same condition as they are at present. J.D.

Approved.—R.P.H., 16/1/95. Messrs. Carter & Co., 16/1/95. Mr. Weedon to see.—J.D., 16/1/95. Seen.—S.H.W., 17/1/95. Mr. Davis. File.—J.D., 18/1/95.

## No. 8.

## The Engineer-in-Chief for Sewerage to Messrs. Carter &amp; Co.

Gentlemen,

Public Works Department, Sewerage Branch, 16 January, 1895.

In reply to your letter of the 10th instant, asking permission to drive the tunnel from the shaft at the foot of Mount-street, I have the honor to inform you that you may do as you ask, conditionally upon your completing the driving of the tunnel to 99 feet south of the sewer lining without the use of blasting powder, and leave the sewer and shaft constructed under Contract No. 79 in the same condition as they are at present.

I have, &amp;c.,

ROBERT HICKSON,

Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage.

## No. 9.

## Messrs. Carter &amp; Co. to The Supervising Engineer.

Sir,

North Sydney, 1 March, 1895.

Seeing that certain drives on Contract No. 79A, North Sydney Sewerage, will not be completed for some months, and having gathered from a conversation with you that the length along High-street might be completed to advantage at the present time, we hereby offer to complete such work at the present schedule rates for Contract No. 79A.

We are, &amp;c.,

CARTER &amp; CO.

Will Mr. Weedon please let me have tracing and estimate of the High-street branch to open cutting?—J.D., 1/3/95. Mr. Weedon.

## No. 10.

## The Supervising-Engineer to The Engineer-in-Chief for Sewerage.

Minute Paper.

*Subject* :—Contract No. 79A, North Shore—High-street extension.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 12 March, 1895.

THE contractors write offering to construct at their schedule rates for Contract No. 79A, 13 chains of the High-street sub-main.

It seems to me that it will be advisable to have this length of sewer constructed as proposed by the contractors. By doing so one shaft will be saved, which will cost £163, in addition to which it will enable the reticulating sewers for a large district to be proceeded with at an earlier date than they otherwise would be.

Although

Although Contract No. 79A is a lump sum contract, there is a schedule of prices attached thereto, which would apply to the whole of the work comprised in the proposed extension.  
The cost, as per estimate attached, will be about £1,800. The schedule rates are reasonable, and as low as would probably be obtained if tenders were invited.

Recommended.—R. R. P. H., 14/3/95. Will Mr. Davis please see me.—J. B., 15/3/95. Seen.—R. R. P. H., 19/3/95.  
For approval.—J. B., 16/3/95. Approved.—J. H. Y., 18/3/95. Mr. Hickson, B. C., J. B., 18/3/95. Please hand attached letter and tracing to contractors.—J. D., 27/3/95. Mr. Weedon. Accordingly.—S. H. W., 28/3/95. Mr. Davis. File.—J. D., 29/3/95. Mr. Griffith.—J. D., 8/4/95. Seen. See the contractor is informed.—C. D., 11/4/95. Action completed. File.—J. M. S., A. E. in-C., 16/4/95.

## No. 12.

## Messrs. Carter &amp; Co. to The Engineer, Board of Water Supply and Sewerage.

North Sydney, 1 July, 1895.

Contract, No. 79A, North Sydney Sewerage.

Sir,

We desire to draw your attention to the fact that the above contract is almost completed, the value of the remaining work not exceeding £1,000 ; which with the sum of £8,514, received by us as progress payments makes a total of £9,514, against our lump sum price of £12,831 19s. 6d, a difference of £3,317 19s. 6d.

You also hold our fixed deposit security of £650 as a guarantee for this work.

Under these circumstances, and seeing that we have been carrying on the contract at a direct loss for some time back, we ask you to be good enough to pay us a sum of £3,000 from the above amount of £3,317 19s. 6d.

Trusting that you will grant our request.

We are, &c.,  
CARTER & CO.

Forwarded to Engineer-in-Chief, Metropolitan Construction.—Mr. Cook could report on this application.—J. M. S., 2/7/95. Mr. Cook informed me about a week ago that he estimated that about £1,800 would complete the works.—MR. SMAL. Bond herewith.—S. A., 25/7/95. This contract, according to the bond, is for a "lump sum" of £12,831 19s. 6d. with a schedule of rates marked G, in which progress payments were to be made. The progress payments made under contract to date of application aggregated £8,514 which is assumed to be on the basis of the above schedule of rates. The District Engineer estimates that the cost of completing the works will be £1,800. The financial statement of the contract stands thus:—

|  | £      | s. | d. | £      | s. | d. |
|--|--------|----|----|--------|----|----|
| 1. Amount of contract "lump sum" ..... | 12,831 | 19 | 6  |        |    |    |
| ,, cash deposit .....                  | 650    | 0  | 0  |        |    |    |
|  |        |    |    | 13,481 | 19 | 6  |
|  |        |    |    |        |    |    |
|  | £      | s. | d. |        |    |    |
| 2. Amount paid to contractor .....     | 8,514  | 0  | 0  |        |    |    |
| Value of work to be completed .....    | 1,800  | 0  | 0  |        |    |    |
|  |        |    |    | 10,314 | 0  | 0  |
|  |        |    |    | £3,167 | 19 | 6  |

Would recommend that £2,000 be advanced to the contractors as a progress payment.—J. M. S., 2/8/95. Engineer-in-Chief, Government Construction Works. Approved.—C. D. Mr. Cook to prepare voucher.—M. S., 6/8/95. Voucher herewith.—M. S. Engineer-in-Chief, 13/8/95. Voucher herewith.—W. E. C., 13/8/95.

## No. 13.

## The Supervising Engineer to The Engineer-in-Chief for Sewerage.

Department of Public Works, Engineer-in-Chief's Office, Sydney, 28 August, 1895.

Minute Paper.

Subject:—Contract 79A, North Sydney Sewerage.

As these works have exceeded the estimated cost, it would be as well to have the papers approving of the extensions in High-street at schedule rates.

T. GRIFFITHS,  
Supervising Engineer, Metropolitan Sewerage Construction.

Mr. Adams.—Obtain and attach papers.—C. D., 28/8/95. I have tried to get these papers from the Works Department, and was told they cannot be found.—S. ADAMS, 28/8/95. The Engineer-in-Chief. Are the papers with the Board? Let me see the contract documents.—C. D., 29/8/95. The Under Secretary, Public Works. Mr. Davis for papers required by Mr. Darley.—Jno. P., 29/8/95. On inquiry I find that the bond referred to was handed over to the Metropolitan Board of Water Supply and Sewerage, with others, on 28/6/95.—T. P., Principal Assistant Engineer, Country Towns Water Supply and Sewerage, 3/9/95. Engineer-in-Chief, Metropolitan Sewerage Construction. As the papers cannot be found we must pass in the voucher without them.—C. D., 5/9/95. Vouchers herewith.—T. G., Supervising Engineer, Metropolitan Sewerage Construction, 7/9/95. Engineer-in-Chief, Metropolitan Sewerage Construction. Voucher for £194 15s. 2d. forwarded to the Treasury on 10/9/95.—S. A.

## The Supervising Engineer to The Engineer-in-Chief for Sewerage.

## MINUTE PAPER.

*Subject* :—Contract No. 79A, North Sydney. Messrs. Jones and Jones—Further *re* damage to Mr. Foster's property, Broughton-street.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 25 August, 1894.

MESSRS. Jones and Jones' first letter was replied to on the 16th inst. It would appear that the letters crossed.

With reference to the blasting being more severe than when they wrote their first letter, I can only say that on the occasion of our inspection on the 13th inst. one of the tenants stated that there had been an improvement since the Italians had been driving the tunnels.

I scarcely think the letter requires an answer, except an acknowledgment.

J.D.

File.—R.R.P.H., 27/8/94.

## No. 15.

## The Supervising Engineer to The Engineer-in-Chief for Sewerage.

## MINUTE PAPER.

*Subject* :—Contract No. 79A, North Sydney. Alleged damage by blasting to Nos. 1 and 3, "Viola Cottages," Broughton-street.

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 15 August, 1894.

MR. BAGGE and I examined these cottages on Monday last, which it is alleged have been damaged by the blasting in the tunnel running down the street in front of the cottages.

At No. 1 cottage slight cracks were pointed out to us in the plastering under the windows in the front, and a crack in the cornice in the front sitting-room, which had been caused, it was said, by a gas explosion, but the crack had extended, it was stated, since the commencement of the blasting. In the back sitting-room and kitchen there are slight cracks in the ceiling, and in the bedroom off the kitchen a small portion of the ceiling has been down, and had been repaired some time before the commencement of the sewerage works.

The tenant in No. 3 cottage pointed out small cracks in the plastering under the front windows similar to those in No. 1 cottage. The lath and plaster wall in the front sitting-room was cracked, and there were slight cracks in most of the ceilings. In the back bedroom the partition wall was cracked, and about 3 feet by 1 foot of the ceiling in the bedroom off the kitchen had fallen, it was stated, about two weeks ago.

From the careful examination that we made we are decidedly of opinion that the whole of the cracks are old, and have been caused by settlement and shrinkage which usually occurs in lightly built houses of this description, and have not been affected by the blasting. The blasting may have caused the ceiling in the bedroom off the kitchen to fall in cottage No. 1, but even this, judging by the condition of the ceiling, is improbable.

There is no evidence that the property has been injured by the sewerage works.

I attach a draft letter, which might be forwarded to Messrs. Jones and Jones.

J. DAVIS.

I concur with Mr. Davis.—C.H. OHLFSEN BAGGE, 16/8/94. Write.—R.R.P.H., 16/8/94. Messrs. Jones and Jones.—J.D., 16/8/94. Mr. Weedon. Noted.—S.H.W., 25/8/94. Mr. Davis,—I find that I was mistaken *re* having returned the first papers from Jones and Jones; will attend to your instructions in the future.—S.H.W., 25/8/94.

## No. 16.

## Messrs. Jones and Jones to The Secretary, Board of Water Supply and Sewerage.

Sir,

Lincoln's Inn Chambers, 38, Elizabeth-street, Sydney, 3 August, 1894.

We are instructed by Mr. Robert Foster, of Annandale, that owing to the very careless and negligent manner in which the sewers in Broughton-street, St. Leonards, are being executed and constructed, the ceiling in Nos. 1 and 3 of his cottages, known as Avolia Cottages, have come down, the walls cracked, cornices damaged, and the property shaken to its very foundations, whereby he has been considerably injured and damaged. Unless, therefore, such damages be made good, and compensation paid our client for any other loss he may have sustained, with £1 ls. costs, legal proceedings will be instituted against your Board without further notice.

Yours, &c.,

JONES & JONES.

Sewerage Engineer.—W.H., 4/8/94. This refers to works now being constructed by Government Sewerage Branch Engineer.—T.G., 6/8/94. Should be forwarded to Mr. Hickson.—J.M.S., 6/8/94. Secretary. Forward to Engineer-in-Chief for Sewerage, and inform.—W.H., 7/8/94. Informed.—No. 768, of 7/8/94. Engineer-in-Chief for Sewerage, 8/8/94. Mr. Davis for report.—R.R.P.H., 10/8/94.

Sir,

16 August, 1894.

We are in receipt of your letter herein, of the 7th instant, intimating, *inter alia*, that our letter of the 3rd instant had been referred to the Engineer-in-Chief for Sewerage, but beyond that we have heard nothing further of the matter. Our client has called upon us, and has instructed us again to communicate with you, and inform you that since the date of our letter to you the sewerage work complained of has gone on much more negligently and carelessly than heretofore. The outer walls of two of the cottages have thereby been cracked from the foundations to the windows, and thence to the roof, as also the inner partitions of the bedrooms.

We understand that he has remonstrated with the men on the work, most of whom are Italians, without avail. Unless the property be reinstated, and all damages made good at once, and our former demand complied with in other respects, our instructions are to initiate proceedings in the Supreme Court, or otherwise, as counsel may advise.

Yours, &c.,

JONES & JONES.

To Reginald Bloxome, Esq.,

Secretary, Metropolitan Water and Sewerage Board, 341, Pitt-street, Sydney.

Previous papers, 94/1396, Mr. Davis, 10/8/94.—F.C.P., 23/8/94. Let me have papers. Mr. Weedon to return papers as soon as possible after receipt of same.—J.D., 23/8/94. Accordingly.—S.H.W., 25/8/94.

## No. 18.

## The Supervising Engineer for Sewerage to Resident-Engineer Boys.

Department of Public Works, Roads, Bridges, and Sewerage Branch, Sydney, 12 June, 1894.  
 GEORGE GEAR, J. W. Thornton, R. Wakefield, and G. W. Bowen called this morning from Contract No. 79A, to represent that they had been employed on this contract as miners, and that they had not been paid for the last fortnight's wages. It appears that a man named Stoddart had received the pay for the work that these men had been doing, and had left without paying them. They inform me that they have seen Mr. Carter, and that he has refused to pay, and that he merely offered them the retention money—£3 10s.—whereas £20 12s. is due. Will Mr. Boys please make full inquiries, and have the report with me by 9 o'clock to-morrow, as the men are to call again? He had better see Mr. Carter, and tell him I shall be obliged if he will give the necessary information. J.D.

## No. 19.

## Resident-Engineer Boys to The Supervising Engineer for Sewerage.

*Subject:*—George Gear, J. W. Thornton, R. Wakefield, and G. W. Bowen state they have not received last fortnight's pay on this contract for sinking part of shaft at 74·07 ch., Contract 79A.

Department of Public Works, Roads and Bridges and Sewerage Branch, 12 June, 1894.  
 GEORGE GEAR and party made complaint to Mr. Boys at his office that a man named Stoddart had drawn their fortnight's money with his own, and could not be found.

Messrs. Carter & Co. inform me that at the beginning of May, 1894, Stoddart and another started sinking the shaft in Fitzroy-street, at 74·07 chains, and that these two men continued the work until the end of May, 1894, drawing two fortnightly pays.

Stoddart and another then took in three other men to help them, making the arrangement amongst themselves; and these three men made no arrangement with the contractors.

It is the custom on all the shaft and drive work for one man in a gang to go to the contractor's office and receive the pay for all, and divide it with his mates; the contractors do not divide the money unless especially requested to do so. Both the contractors and the men inform me that Stoddart received the money for the last fortnight's work.

The amount of the pay was £13 15s.

I would also mention that Stoddart and one of these men were working together as mates for two or three months on the Western Suburbs Sewerage, sinking Shaft No. 5, for Messrs. Carter, Gummow, & Co.'s present contract.

J. W. T. BOYS.

The department cannot interfere in this case.—R.R.P.H., 13/6/94. Mr. Boys to see.—J.D., 13/6/94.

## Appendix No. 78.

## The Acting Secretary, Australian Gas-light Company, to The Engineer-in-Chief for Sewerage.

Sir, Australian Gas-light Company's Office, Sydney, 13 October, 1894.

I do myself the honor to acknowledge the receipt of your letter of the 12th instant, on the subject of the removal of a 9-inch gas main which crosses the Illawarra Road at its intersection with Addison Road, Marrickville, and to inform you that it shall have attention without unnecessary delay.

I have, &c.,

R. J. LUKEY,  
 Acting Secretary,  
 (per J.W.J.)

## Resident-Engineer Millner to The Supervising Engineer for Sewerage.

Resident Engineer's Office, Arncliffe, 8 October, 1894.

Contract No. 69.—Raising Gas Main at Illawarra and Addison Roads, Marrickville.

THE 9-in. gas main crossing the Illawarra Road, at its junction with Addison Road, will require to be raised as per accompanying tracing. W. J. MILLNER.

This was shown to be raised in contract drawings. The Gas Company might be instructed to do the work.—J. D., 9/10/94. Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage. Write.—R.H., 10/10/94. Mr. Davis.—Australian Gas Company, 11/10/94. Mr. Millner to see.—J.D., 12/10/94. Seen.—W.J.M., 22/10/94. File.—J.D., 26/10/94.

## Appendix No. 79.

## E. M. Clark, Esq., M.P., to The Under Secretary for Public Works.

Sir, Legislative Assembly, N.S.W., Sydney, 18 September, 1895.

Referring to my former letter on the subject of the extension of Carter, Gummow, & Co.'s contract at Marrickville, I should be glad to know what has been done in this matter, as the people in my electorate requiring this kind of work are still unemployed. I have spoken to Mr. McLean, M.P., who is also interesting himself on the extension referred to, and he is anxious that the work should be pushed on, in connection with this particular scheme, as speedily as possible. I understand it would also give employment to a large number of men in his own and the adjoining electorate.

Yours, &c.,

EDWARD M. CLARK.

A similar reply to that authorised to be sent to Mr. McLean on the 17th instant (see 95-823), may be forwarded to Mr. Clark.—J. BARLING, Under Secretary for Public Works, 20/9/95. Approved.—J.H.Y., 23/9/95. Inform.—23/9/95. E. M. Clark, Esq., M.P., informed.—24/9/95. Mr. Darley for U.S.—Jno. P., 25/9/95. Seen.—C.D., 27/9/95.

## E. M. Clark, Esq., M.P., to The Under Secretary for Public Works.

Sir, Legislative Assembly, N.S.W., Sydney, 21 August, 1895.

In view of the fact that a large number of sewerage labourers, living in my electorate, are at present idle, I would respectfully urge that something might be done to facilitate the necessary work for this kind of labour. I understand that the only work of the kind immediately available is an extension of the Northern Branch of the Western Suburbs at Marrickville. As this would absorb nearly 250 men, and the present adjoining contractors—Messrs. Carter, Gummow, & Co.—have all the necessary plant available, I would suggest they be allowed to extend their present contract as in the case of the North Sydney work early last year. If this were done I am sure it would be appreciated by a large number of men especially suited for this kind of work, and remove them from competition with less skilled labour.

Trusting you will give this matter consideration.

Yours, &c.,

EDWARD M. CLARK.

Mr. Darley for report.—J.B., 23/8/95. For report, when can the plans for first section of the extension be ready.—C.D., 26/8/95. The Supervising Engineer. See action in 95-438 herewith.—T.G., 12/9/95. Engineer-in-Chief Metropolitan Sewerage Construction.

## F. E. McLean, Esq., M.P., to the Secretary for Public Works.

Sir,

I desire to urge upon your notice the importance of proceeding with that portion of the western suburbs sewerage scheme, which may be described as the northern branch, extending from Premier-street, Marrickville, to the Old Canterbury Road. I may point out that the present contract is now so nearly completed that a number of men have been paid off and are now idle. If the northern branch is proceeded with at once a large number of these men will receive early employment.

Marrickville, 26 August, 1895.

I have, &amp;c.,

F. E. McLEAN.

The Hon. Minister for Public Works.

Mr. Darley for report.—J.B., 29/8/95. For report.—C.D., 31/8/95.

Permanent surveys have been prepared of the portion referred to, and contract drawings for same might be gone on with; but as a modification of the system embraced by northern and western branches is now being considered, it is very probable that the size of sewer will be altered from that originally designed, and it would not therefore be advisable to take action before the modified scheme has been finally considered.—T.G., 12/8/95. Supervising Engineer, Metropolitan Sewerage Construction. Engineer-in-Chief, Metropolitan Sewerage Construction.

Forwarded for the information of the Minister. I found it necessary to delay proceeding with the main northern branch to enable me to reconsider an alteration to the western branch, which may necessitate a modification of a portion of the northern branch. I am now looking into the question, and soon after it is decided we can invite tenders for the first section.—C.D., Engineer-in-Chief, Metropolitan Sewerage Construction, 13/9/95. The U.S., P.W.

May be so informed.—J. BARLING, Under Secretary for Public Works, 16/9/95. Approved.—J.H.Y., 17/9/95. Inform, 17-18/9/95. E. M. Clark, Esq., M.P., and F. E. McLean, Esq., M.P., informed, 23/9/95.

## Appendix No. 80.

## The Supervising Engineer to The Engineer-in-Chief for Sewerage.

MINUTE PAPER.

Subject:—Contract No. 69, Eastern Branch, Western Suburbs, Surplus Material.

Department of Public Works, Roads and Bridges and Sewerage Branch,

Sydney, 18 January, 1894.

THE surplus material from the excavation of shafts, open cutting, and tunnels is not required by the department. I beg to recommend that the contractors be informed that they may dispose of it as they think fit, and that they shall be paid for the work under schedule item No. 43.

J. DAVIS.

Approved.—R.H., 19/1/94. Messrs. Carter, Gummow, & Co.—19/1/94. Mr. Millner to note.—J.D., 19/1/94. Noted.—W.J.M., 23/1/94.

## Appendix No. 81.

## The Accountant, Department of Public Works, to The Acting Engineer-in-Chief, Board of Water Supply and Sewerage.

Contract No. 69.

Sydney, 29 May, 1895.

|   | £       | s. | d. |
|---|---------|----|----|
| Value of Work to date of last measurement (20/5/95) ..... | 47,841  | 17 | 3  |
| Amount of contract as per tender .....                    | 45,207  | 3  | 11 |
| Excess .....  | £ 2,634 | 13 | 4  |

It will be necessary to obtain Ministerial authority for the excess, or the vouchers will be in danger of being returned by the Treasury.

E. HUNGERFORD.

Urgent. Will Mr. Griffiths report as to cause or particulars *re* excess over contract.—J.M.S., 30/5/95.

The original estimate was based on the assumption that the work would chiefly be in rock, whereas it has been in soft ground, necessitating a larger amount of excavation to provide for timbering, &c. This applies specially in tunnel work, where the price is high.—T.G., 3/6/95. Supervising Engineer, Metropolitan Sewerage Construction. Acting Engineer-in-Chief, Metropolitan Sewerage Construction.

## The Acting Engineer-in-Chief, Metropolitan Sewerage Construction, to The Under Secretary for Public Works.

MINUTE PAPER.

Subject:—Contract No. 69, Western Suburbs Sewerage Scheme.

Department of Public Works, Engineer-in-Chief's Office, Metropolitan Sewerage Construction,

Sydney, 3 May, 1895.

It will be necessary to obtain Minister's approval before Treasury will pay the enclosed progress payment on above contract.

|   | £       | s. | d. |
|---|---------|----|----|
| The aggregate amount of original tender is .....                            | 45,207  | 3  | 11 |
| The value of work on last measurement, 20/5/95, at schedule rates, is ..... | 47,841  | 17 | 3  |
| Being an excess of .....  | £ 2,634 | 13 | 4  |

Of this amount it is proposed to advance contractor £2,420.

The Supervising Engineer reports that the excess is due to the contract quantities being based on the assumption that work would be chiefly in rock, whereas it turned out to be in soft ground, necessitating a larger amount of excavation, the excess being chiefly on the item for tunnelling, where the rate was high. As the contract is at schedule rates, the actual amount of contract cannot be finally ascertained until final adjustment of quantities is made, when a full report will be submitted. I recommend payment of this advance.

J. M. S.,

Acting Engineer-in-Chief, Metropolitan Sewerage Construction.

For approval to pass this excess pending a full report.—J. BARLING, Under Secretary for Public Works, 4/6/95. Approved.—J.H.Y., 5/6/95. B.C., Mr. Smail.—J.B., 5/6/95. Voucher forwarded to the Treasury, 6/6/95.—S. ADAMS. Mr. Griffiths to note.—J.M.S., 6/6/95. Noted.—T.G., 6/6/95.

This contract is now approaching completion. I estimate that about £2,000 more will complete the works.

|                        | £      | s. | d. |
|------------------------|--------|----|----|
| Total cost (say) ..... | 51,370 | 0  | 0  |
| Estimate .....         | 45,207 | 3  | 11 |

Excess over estimate .....

£ 6,162 16 8

T.G., Supervising Engineer, Metropolitan Sewerage Construction, 8/7/95.  
Engineer-in-Chief, Metropolitan Sewerage Construction.
